### 2.3 Additional NCPDP Post Adjudication Transaction Standard Version 2.2 File Information.

Following is a list of the field, use, field name and values/comments for Kentucky Medicaid using the batch NCPDP Batch Transaction Standard Version v1.1 and Telecommunication Standard Version v5.1.

The following definitions are given to ensure consistency of interpretation:

- **Field** – The Post Adjudication Transaction Standard Version 2.2 field number;
- **Field Name** – The Post Adjudication Transaction Standard Version 2.2 field name;
- **Mandatory or Situational** – Field designation, Indicates whether a field is mandatory or situational. Mandatory fields may be mandatory by the NCPCP Post Adjudication Transaction Standard Version 2.2 and/or required by the processor. If a field is situational and data does not exist for the field, the field **MUST** be populated with the appropriate padding;
  - a. M – Mandatory field;
  - b. S – Situational field;
- **Source** – Data source;
  - a. C – Submitted Claim or the Processor’s response to the Submitted Claim;
  - b. P – Processor/Payer;
- **Format** – Field format values;
  - a. A/N – Alpha/Numeric, upper case when alpha, always left justified, space filled, upper case, printable characters and default values of spaces;
    - i. Example: X(14) represents “1234ABC44bbbb”;
  - b. N – Unsigned Numeric, always right justified, zero filled and when used for dollar fields, have default values of zeros;
    - i. Example: 9(7)v999 represents “999999999”;
  - c. NX – Numeric Extended, are always right justified and zero filled, with the right most position reserved for the sign. The field must be blank when not reported. The symbol “b” indicates a “blank” or a “positive” value. The symbol “-“ indicates a negative value. Zeros represent a valid numeric value and do not mean “null”. All decimals are implied not explicit;
    - i. Example: 9999v99- represents a negative 9999.99  
9999v99b – represents a positive 9999.99.
  - d. R – Numeric 0 – 9 with decimal point;

For numeric values that have a varying number of decimal positions, a decimal data element may contain an explicit decimal point and is used. This data element type is represented as “R.”.

The decimal point always appears if it is at any place other than the right most position. If the value is an integer (decimal point at the right most position), the decimal point should be

omitted. For negative values, the leading minus sign (-) is used. Absence of a sign indicates a positive value. The plus sign (+) should not be transmitted. Leading zeros should be suppressed unless necessary to satisfy a minimum length requirement. Trailing zeros following the decimal point should be suppressed unless necessary to indicate precision. The use of triad separators (for example, the commas in 1, 000, 000, 000, 000) is prohibited. The length of a decimal type data element does not include the decimal point. A value of 12345.67 is valid in a field defined with a maximum length of 7.

- i. Example: A transmitted value of 12.34 represents a decimal value of 12.34  
a transmitted value of 25.4 when applied to a monetary use represents \$25.40.

- **Size** – The field length size;
- **Start** – The starting position in the record of the field;
- **End** – The ending position in the record of the field ; and,
- **Values/Comments** – Defines the Kentucky Medicaid required values or default values for each field.
