

Population Insights Compass

An effective way of supporting and simplifying value-based care

Humana's Population Insights Compass is a population health management platform that eases friction in care by steering healthcare teams around data silos and providing reliable insight into value-based care.

Population Insights Compass benefits:

Simplifying the Experience

Empowers providers to return to their mission of serving patients by reducing administrative burden

Connecting Healthcare

Fosters collaboration between payers, providers and patients by breaking through data silos for better cost and health outcomes

Personalizing Care

Manages care and provides timely interventions to increase healthy days by leveraging data-rich patient insights

Population Insights Compass simplifies value-based care by providing the needed information in the right place, and at the right time.

Key features:

- **Access multiple sources of data from one location**, including medical and pharmacy claims, financial data, Healthcare Effectiveness Data and Information Set (HEDIS) opportunities, clinical programs and predictive models data
- **Track key performance metrics and trends**, including ER data, readmissions rates, Star scores and preventive screenings
- **View financial performance** relevant to value-based contracts, and identify opportunities for patient satisfaction and quality improvement
- **Identify cost saving opportunities** related to alternative prescription options, identification of non-emergent ER visits, authorizations to non path-to-value providers and utilization trends by leveraging the various reports available
- **Prioritize interventions** leveraging predictive modeling to identify patients with specific conditions, increased utilization or who face the likelihood of an adverse event
- **Improve care management** by identifying patients eligible for preventive services and helping them maximize their healthcare benefits
