19. Provider Payment Provisions

C.19. PROVIDER PAYMENT PROVISIONS

a. **Describe the Vendor's claims adjudication process and capabilities in maintaining high standards in claims processing.**

b. **Provide information about the Vendor and any entity proposed to process and pay claims. As part of the response, address the following:**

   i. Policies and procedures to meet performance standards and prompt pay requirements for all provider types.

   ii. Market specific strategies for addressing potential provider payment issues, including underpayments, overpayments, pre-and post-claims editing policies and provider billing education.

   iii. Proposed average days to payment from claims submission for the Vendor's proposed claims platform for medical and pharmacy claims. Provide the Vendor's last calendar year's report on the "average number of days to pay providers."

c. **Describe the Vendor's methodology for ensuring claims payment accuracy standards will be monitored and improved through audit. At a minimum, address the sampling methodology, the process for auditing the sample, documenting of results, and activities conducted to implement changes or required corrective actions.**

C.19. PROVIDER PAYMENT PROVISIONS

WellCare of Kentucky will comply with the Department of Medicaid Services' expectations and requirements as specified in Section 29 Provider Payment Provisions and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

a. **Describe the Vendor's claims adjudication process and capabilities in maintaining high standards in claims processing.**

WellCare has more than 30 years of experience in the successful and timely processing of claims and paying providers accurately. This commitment is reflected through our efforts in helping our network providers and enrollees by completing the cycle of service from provider to enrollee, and back to the provider in the form of timely and accurate payment. As an incumbent in Kentucky for 8 years, WellCare has an ongoing effort to improve provider satisfaction related to claims processing by improving the electronic claims submission process, thereby reducing manual intervention and sustaining consistent, accurate payment. The success of this effort is evident through our high auto-adjudication rate **(90.27% for Kentucky Medicaid claims in 2019),** which supports efficiency. WellCare of Kentucky proposes to pay or deny professional medical claims within 10 calendar days from claim receipt on average and institutional clean claims within 15 days, consistent with our 2019 performance. Our subcontractors that are delegated for claims processing are held to the same high standards and must comply

91.6% of our Kentucky providers would recommend WellCare to other providers.

with all contractual requirements from the Department for claims processing timeframes and payment.

Our claims department includes processors and analysts who understand the impact our claims processing has on the provider network, and our core commitment to our “Enrollees First” philosophy. The leaders of the claims department, Brian Pogue, VP of Payment Integrity and Claims and Thomas Everett, Senior Director of Claims, are highly experienced with Brian and Tom having a combined total of over 40 years of experience in claims processing. Our leaders work in close collaboration with our Kentucky COO, Ben Orris who provides local leadership and oversight to claims processing. Ben is supported by Julie Crousore, Sr. Manager, National Account Management team; who lives in Bowling Green, Kentucky and has been part of our WellCare of Kentucky team since the launch of the managed care program in 2011. Over the past 8 years, Julie has been instrumental is providing operational support and guidance to ensure timely claims processing in Kentucky. She has been closely associated in working with all provider types ranging from hospitals, FQHC/RHC's, non-par providers to behavioral health providers, to resolve any issues related to claims or any operational issues that create provider abrasion. We have several additional roles and associates who work with participating and non-participating providers to submit paper and electronic claims and then process them in a timely and accurate manner. WellCare claims systems, submission control tools, billing and payment applications, and standard operating procedures support claims processing for both participating and non-participating providers. These roles include Provider Relations (PR) professionals, Claims and Configuration staff, and Operations Account Representatives (OAR).

The OAR team, who is managed by Julie Crousore, consists of experienced claims professionals who conduct billing education and are empowered to efficiently resolve issues identified by providers or their PR representatives. The unique engagement of these locally-focused individuals provides high-touch collaborative relationships with our providers to ensure seamless claim submission. They work with providers to educate them on how to submit claims appropriately through a combination of training, education, audits and call campaigns. They also meet with the providers in person to assist them in understanding the system and solve any initial issues they may have regarding claim submission.

In 2018, we encountered IT infrastructure issues impacting timely claim processing for several months. We immediately worked on a root cause analysis and developed a remediation plan to the Department of Insurance. We invested in our tools and processes that allowed WellCare's Claims Operations to emerge as an improved and stronger entity that tracks metrics more effectively and identifies potential issues much earlier in the process. The new addition of our state of the art Claims Command Center also allows us to track claims end to end, in real time and identify issues in workflow from the moment claims come through the door, at insertion to the claims processing system, and all the way through to payment. Additional electronic inventory control algorithms within the Claims workflow system promote a first in, first out methodology that increases urgency as each claim ages. In addition to real-time monitoring, reporting of aging inventory is reviewed multiple times a day by Claims leadership to assure all workflows are operating with maximum efficiency and that there is sufficient staff available to process each day's inventory. The issues were resolved and our performance has met all requirements in 2019.

OUR CLAIMS ADJUDICATION PROCESS AND CAPABILITIES

The key components of WellCare's claims and encounter processing solution, which apply to all service types including participating and non-participating providers (inpatient, outpatient, professional, etc.) include:

Claims Submission: The provider submits claims in either paper or electronic format from a variety of submission avenues. Though we accept paper claims by mail, approximately 94% of our claims are received electronically and we promote electronic submission whenever possible because of the efficiency it offers. We identify the high-volume submitters of paper claims on a monthly basis and target them for individual outreach to educate them on the value of electronic submission. This proactive outreach to providers is performed by our Electronic Data Interchange (EDI)-Operations team and ImageNet (our preferred clearinghouse vendor) to help these providers convert to free electronic submissions. We receive electronic claims from clearinghouses, direct data entry of claims via our web portal, paper claims and Coordination of Benefits Agreement (COBA) claims for enrollees with primary Medicare coverage.

When the paper claims are received, ImageNet scans the paper claims, assigns them a scanning control number (SCN), and converts them to an 837 format established to meet HIPAA requirements for the electronic submission of healthcare claim information. This capture is done by the optical character recognition (OCR) technology and then both the 837s and the scanned images are validated by ImageNet. In this process, the original source data is captured, even if the file or an individual claim/encounter is rejected, and this initial submission becomes the reference point for all tracking and reconciliation functions. This approach ensures that requirements of data needed for clinical purposes as well as reporting needs (such as "Received but Unadjudicated Claims") are able to be met. For non-electronic submissions, we provide acknowledgement of receipt of claims to the provider within 15 days, pay the claim or notify that the claim is denied or contested to the provider within 20 days.

For electronic claims, our secure provider portal is an easy to use, no cost, and direct data entry (DDE) claim submission tool. This tool is currently being used to successfully transition providers that traditionally have submitted paper claims to move to electronic submissions. We assist all providers, including non-traditional providers such as those who provide home modification or pest control services in the use of the electronic tools for claims. The tool collects the required information from the provider to create an electronic claim or encounter that complies with the EDI 837 format and meets the Department's encounter submission requirements. For electronic submissions, WellCare of Kentucky provides an acknowledgement of the receipt of the claim within 24 hours. We send the provider a status through a standard healthcare claim response (277U response).

Front-End Claims Input Business Rules: In this phase a series of steps (edits) is applied to validate that the claim has the right information to process correctly. We utilize Standard National Implementation Process (SNIP) edits which are national standard edits that validate compliance with HIPAA. These SNIP edits include any syntax issues, validation of enrollee, provider, vendor ID, and other critical data elements such as National Provider identifier (NPI) validation. The providers receive an "accepted status" for claims that pass these edits. If claims fail these edits, the providers receive a "rejected status" and the provider can resubmit the

claim. In addition, a rejection details comment is sent (or a paper rejection letter in the case of paper claim submission), advising the provider of the rejection reason, along with other pertinent claim identification information. For electronic claims, providers receive an electronic response real-time.

Pre-Core Processing System: During this phase, all claims that have been accepted go through an additional series of validations to check for logic and clinical consistency. These edits ensure that claims are adjudicated correctly based on commonly accepted and published clinical guidelines. If the claim fails these edits, a manual review is required prior to being sent to the Core Processing System (CPS). The claims which pass the edits are loaded to the CPS for further processing. There are instances in this phase where a claim is also rejected because it cannot be adjudicated due to various reasons such as enrollee ineligibility, enrollee not found, invalid provider information, missing or invalid claim data.

Core Claims Processing: This phase is called the Core processing phase because it is where the full pricing and adjudication of all provider claims is completed. Any pended claim is tracked and routed for resolution within the claims timeliness standards. To ensure correct payment, validations completed in this phase include National Correct Coding Initiatives (NCCI) edits created by CMS to promote national correct coding methodologies and control improper coding and payment, benefit limit and accumulator edits that match against amounts already paid, payment rate determination according to individual provider contracts, coordination of benefits and third party liability coordination, high dollar claim reviews, and other edits necessary to fully adjudicate and determine the payment amount for a claim.

Prepayment Claims Editing - The next phase involves validation of the adjudicated claims. Once the claim is adjudicated we execute a final set of edits checking for clinical consistency, fraud, waste and abuse, and other processing components to ensure and validate proper payment for services rendered.

Provider Payment: The final phase of the claims processing and payment processing is provider payment. WellCare generates payments six days a week for our providers with the exception of a check run that falls on the last day of the month or a closed holiday. The frequency of this payment cycle improves processing turnaround times and increases provider satisfaction. **As evidenced through our quarterly Provider Satisfaction Survey data, with 91.6% of respondents in our 2018 survey stating they would recommend WellCare of Kentucky to other provider practices.** We offer providers a choice to indicate their preference for electronic or paper transactions for payment, so they can be paid by Electronic Funds Transfer (EFT) or a check and the Remittance (835 or Paper). We process a full reconciliation file to ensure that all intended payments were made and track the payment transaction information.

The providers for our delegated subcontractors also have the ability to submit claims via a clearinghouse, data entry into the web portal, or by paper including the standard CMS claim forms (CMS 1500 or UB-04). Our subcontractors have systems that are designed to apply specific specialty benefits, clinical edits (where needed), provider contracts and pricing, data validations, service code verifications and authorization rules to claims. Their claims systems also tie in to claims enrollee eligibility, state specific benefits, frequency limitations and exclusions (where applicable), and enrollee medical diagnoses and history. System adjudication

rules are specific to State requirements and include pre-authorization requirements, clinical review requirements, administration review and/or auto adjudication which helps to ensure that the appropriate amount, duration, scope and medical necessity benefits are applied to each claim and pre-service request. On a regular basis, our subcontractors review their systems and policies for any changes or updates to covered procedure codes and benefits, and make any modifications based on regulatory guidelines.

CAPABILITIES IN MAINTAINING HIGH STANDARDS IN CLAIMS PROCESSING

Increase Auto-Adjudication and Automation For Payment Accuracy

WellCare strives to increase auto-adjudication and automation for medical and behavioral health claims which is a key element to ensuring compliance with prompt pay and accuracy standards. This allows us to handle fluctuations in claims volume receipts and ensure accuracy through consistent and speedy payment. Automation starts with claim receipts where WellCare evaluates critical data elements to ensure the claim as been submitted accurately and should be accepted by Medicaid. This includes validating that the provider is eligible to be paid by Kentucky Medicaid. Additional automation occurs through auto adjudication (AA) by means of our highly configurable claims processing system that allows claims to adjudicate and pay without manual intervention. WellCare also creatively leverages technology to replicate the repetitive processing mechanics on select claim types to achieve our high auto-adjudication rate of 90.27% in 2019.

Our unwavering dedication to automation drives our best practice for high auto adjudication (AA). The AA rate is monitored, reviewed, and reported daily to all levels of management with the purpose of identifying any deviations from the norm. When deviations occur, our Claims Command Center with highly specialized claims subject matter expertise performs a root-cause analysis to identify the drivers and mitigate with the appropriate teams or areas that can influence the metric. In order to meet this initiative, we have several tools and methods at our disposal to improve auto-adjudication rates:

- *Review of claim pend trends:* By analyzing this data, business rules that drive claim pends are evaluated for modification to reduce the number of pended claims
- *Usage of automated scripts (Macros):* Where repetitive claims processor mechanics/steps exist, a macro that mimics the steps a processor takes to un-pend a claim is executed. Claims then adjudicate without manual intervention, thereby increasing the accuracy and consistency of claims processing.
- *Paper to EDI Campaign:* WellCare works with providers who submit paper claims and offers assistance to submit claims electronically. Electronic claims submission reduces the overall time from submission to payment.

As we continue to increase the auto-adjudication rate, we maintain our commitment of accuracy and prompt service to our providers in accordance with 42 C.F.R. 447.46 and 42 C.F.R. 447.45. WellCare has a well-defined strategy we deploy for the claim payment process to ensure it is ready at the time of contract implementation. WellCare has more than 30 years of experience in the successful and timely processing of claims and paying providers accurately.

INVENTORY CONTROLS AND MONITORING

CLAIMS PATH - Claims Path is an industry leading workflow management application that streamlines critical business processes and prioritizes inventory. Our workflow management application is customizable and scalable to meet the business needs. The claims processing system includes applications that control the receipt, adjudication, staging of open claims and assignment to resources. Claims Path increases visibility of work items such as clean and pended claims and reduces effort needed to manage tasks separately. This workflow management system automatically assigns work to skilled processors based on expertise and knowledge. This sophistication allows claims to be processed accurately and timely, ensuring we meet the Department's payment goals. Each type of claim has a profile status and indicators that drive inventory queuing via first in, first out (FIFO) criteria to ensure timely completion. Claims that are at risk of missing prompt pay are reported to Management and sent to a specialized team who provides immediate action and resolution. This oversight ensures all claims are processed in accordance with the Department's prompt pay guidelines.

Capacity Model- Our claims processing workload model ensures that proper capacity is available through well-trained associates to finalize claims in order to meet all state requirements. A variable cost model is used to predict workload and productivity requirements. Important data includes membership, product type, claims per Enrollee, claims per hour, and auto-adjudication rates. Through daily performance monitoring, supported by a suite of reporting tools, and technology to monitor claims, WellCare is diligent in ensuring we have the right capacity to continually meet the claims turnaround times.

Claims Command Center and Inventory Governance

As a way of tracking performance standards and prompt pay requirements, WellCare's Claims Command Center (CCC) monitors claims inventory from end to end as well as in the various phases of the claims workflow. With this workflow management application we successfully identify and address any areas of opportunity (as referenced earlier) in meeting our turnaround time for claims payment. This monitoring includes performance metrics (e.g., month-to-date turnaround time, auto-adjudication rates and production outputs) and ensures acceptable production capacity is made available. This monitoring is important because it ensures that every claim is tracked from receipt through and including load to the Core Processing System (CPS) or rejection , to payment and ultimately to encounter submission. With real time reporting and complete line of sight of all provider claims, WellCare's claims forecasting provides the ability to immediately respond to any situation that might pose a risk.

The CCC developed a specialized claims training and quality curriculum to ensure that staff at all levels are kept abreast of claims improvement initiatives. The team manages all of the step action tables (training documents) based on the state, line of business and specific policies in place based on market and regulatory requirements concerning claim payment. These step action tables are stored online for easy access and are always available. The Claims team uses monitoring tools as leading indicators to improve accuracy and provider satisfaction, including:

- Top denials by provider including dollars and volume - Enables proactive communication to providers to reduce denials.

- Daily monitoring of inventory as compared to prompt pay statutes
- Identification of top providers with the highest clearing house rejection rates – EDI team partners with providers to educate them
- Claims Interest
- Pre-Payment Audits to prevent payment anomalies

Any activities that may affect claims output are addressed at our claims center monitoring meetings that occur three times a week or ad hoc as needed, that include all levels of claims leadership and our analytics team. Monitoring meetings have a prescriptive agenda that addresses trends, current inventory status, claims metric goals and any open issues so they can be resolved quickly to ensure that we meet contractual and regulatory requirements.

b. **Provide information about the Vendor and any entity proposed to process and pay claims. As part of the response, address the following:**

Prompt and accurate payment of claims is essential to maintain strong provider participation and reducing administrative burden. Our approach to meeting the Department's expectations and requirements centers on our mission to serve our enrollees and providers through consistent, prompt, and accurate payment of claims set forth in 42 C.F.R. 447.46 and KRS 304.17A-700-730.

> **On March 1, 2017, WellCare of Kentucky conducted a Provider Focus Group in Lexington, KY. Practice representatives were asked a series of questions relating to their experience in working with us. We got a consistent response of those in attendance that WellCare of Kentucky was the most timely and accurate payer of claims and the plan that was most accessible.**

WellCare views subcontracting as a long-term business strategy where we selectively choose highly qualified subcontractors to complement and enhance the services we provide to our enrollees and providers. Our approach to determining what activities are sub-contracted is strategic, tailored to individual state needs and designed to enhance our operations while protecting enrollees and providers. Our subcontractors are specialists in their respective fields and, because they work frequently with Medicare and Medicaid populations, they demonstrate broad and deep knowledge of the various populations and program requirements. Our ability to create a seamless experience in the delivery of benefits and services through our subcontractors is rooted in our Delegation Oversight Program, which is designed to achieve the WellCare of Kentucky goals related to rigorous oversight of subcontractors.

In order to ensure quality services are provided to enrollees and providers, it is our policy to thoroughly evaluate and certify work performed by subcontractors. Our formal evaluation occurs prior to initiating delegation with a prospective subcontractor and annually thereafter. Our monitoring of subcontractor performance and compliance is a formal, ongoing process that occurs throughout the year. Through our monitoring and oversight, activities we conduct include:

- Evaluating prospective subcontractors' abilities to perform activities to be delegated

- Ensuring subcontractors are financially stable through annual financial solvency audits coordinated by our Delegation Oversight team and conducted by our Finance Department
- Executing written contracts with subcontractors specifying the activities and reporting responsibilities delegated to the subcontractors and providing for the revocation of delegation or other sanctions if subcontractors' performance is inadequate
- Conducting pre-delegation audits after contracting and before the effective date to evaluate if subcontractor's policies and procedures demonstrate the ability to perform activities as per contractual and regulatory requirements coordinated by our Delegation Oversight team
- Monitoring performance with the same rigor previously outlined through our Claims Command Center. Additionally, our subcontractor is held to a minimum quality and accuracy standards. Their compensation structure rewards them for better quality and penalizes them for poorer quality. Monitoring subcontractor performance on an ongoing basis and subject them to formal review according to a periodic schedule consistent with industry standards
- Conducting annual audits that include review of data universes to determine adherence with contractual and regulatory requirements coordinated by our Delegation Oversight team
- Initiating focused audits as risks and/or non-compliance are identified, these audits are conducted by our Delegation Oversight team
- Continuous monitoring of subcontractor's performance and adherence to regulatory requirements through receipt of monthly self-reported scorecards independently evaluated by our Delegation Oversight team
- Identifying deficiencies or areas for improvement and issuing corrective action plans

PHARMACY VENDOR

WellCare's pharmacy operation is a hybrid model with a number of critical pharmacy functions performed in-house by WellCare personnel coupled with services performed by our contracted pharmacy benefits manager (PBM) CVS. Under our hybrid model, we retain in-house responsibility for coverage determinations, redeterminations, formulary development and management, Pharmacy and Therapeutics (P&T) Committee, quality, retrospective drug utilization reviews, rebates, medication therapy management, and enrollee and provider calls. Our PBM is responsible for pharmacy claims, pharmacy network development and explanations of benefits.

MEDICAL AND BEHAVIORAL HEALTH CLAIMS VENDOR

Concentrix, our medical and behavioral health claims processing vendor, uses WellCare's single integrated management information system (MIS) and claims processing workflows are designed to accurately process all claim submissions. WellCare's new claims processing control tool called Claims Path, is designed to prioritize claims according to age, priority with the distinction of Professional and Institutional claims. Through claim prioritization, flexible work queue design, processor skill set matching, and automated work delivery, Claims Path brings greater real time operational efficiencies in day-to-day claims operations. It provides all levels of the management team with improved visibility and control over dedicated claims

management activities and streamlines the claim processors' tasks. Our Claims Command Center oversees and manages our claims turnaround dashboard, to ensure compliance with the required timeframes for claims processing. The dashboard is updated daily upon completion of each check run and reflects the percentage of claims processed within each of the State of Kentucky's timeliness requirements. This capability allows us to meet or exceed timeliness and accuracy standards specifically for our provider claims.

DENTAL AND VISION VENDOR

WellCare has extensive experience coordinating care with entities that have a special expertise in managing dental benefits for Medicaid enrollees. We believe we serve as an asset to our contracted Dental Benefits Manager by leveraging the power of primary care physicians (PCPs) to facilitate strong preventive care and referral to ensure enrollees get the oral and vision health care they need. Day to day operations are managed and overseen by our Network Performance team. In addition, our Delegation Oversight team conducts monitoring through annual audits, focused audits as needed based on risk and identified issues, and review of monthly self-reported metric-based scorecards. Adherence with regulatory requirements, such as timeliness, are independently evaluated by the Delegation Oversight team through file reviews during annual and focused audits. Avesis, our dental and vision vendor reports their performance scores to WellCare of Kentucky monthly to ensure all standards are met.

ENSURING SUBCONTRACTS COMPLY WITH REIMBURSEMENT RATE REQUIREMENTS

Our dedicated Claims Audit unit, a team independent of our Claims and Delegation Oversight teams yet highly integrated, is responsible for ensuring our subcontractors comply with reimbursement rate requirements. They do so using a variety of methods, including:

- *Contracts:* WellCare's contracts contain specific language detailing the requirements for reimbursement rates. The language specifies that subcontractors' contracts must not contain terms for reimbursement at rates that are less than the published Medicaid fee for service rate in effect on the date of service.
- *Contract Enforcement:* WellCare uses the contract to enforce financial and payment accuracy requirements. We develop corrective action plans (CAPs), track adherence to these CAPs, and perform a second audit. Subcontractors who continue to perform poorly are subject to further disciplinary action including revocation of claims payment functions.

ENSURING ONGOING SUBCONTRACTOR PERFORMANCE AND COMPLIANCE WITH CONTRACT STANDARDS

WellCare's success with subcontractor oversight begins with the pre-delegation process and continues with a collaborative performance management system. Delegation Oversight's audit and monitoring activities include, but are not limited to, the following:

- Executing the Delegation Oversight audit and monitoring plan, including cross-functional collaboration to monitor the subcontractor's operational metrics
- Performing analysis and trending of data submitted by subcontractors to identify potential anomalies and areas of non-compliance

- Confirming on a monthly basis that subcontractors remain eligible for participation in the Medicaid and Medicare programs
- Ensuring that written agreements with each subcontractor are maintained and clearly specify the entities' responsibilities, reporting requirements, and appropriate State and Federal clauses

CONTINUOUS MONITORING OF SUBCONTRACTOR PERFORMANCE TO ENSURE CONTRACT COMPLIANCE

WellCare formally monitors subcontractor performance real-time. WellCare monitors and trends transactional data then analyzes results of monitoring and auditing activities and solicits appropriate corrective action plans when deficiencies are identified. WellCare has a suite of reporting tools that allow transparency into monitoring and auditing activities performed, status of audits and monitoring plans, metrics on outstanding corrective action plans, and trending of subcontractor performance through scorecards. This layered approach to oversight allows WellCare to ensure subcontractors are performing in accordance with contract provisions. WellCare conducts monthly Joint Operating Committee (JOC) meetings with national subcontractors to monitor performance with key performance indicators, communicate critical information and provide performance feedback – WellCare to the subcontractor and subcontractor to WellCare. JOC meetings are specific to the functions delegated and include participants from the subcontractor, National Ancillary, Enrollee Services, Encounters, Delegation Oversight, Clinical Services, Claims, and Compliance.

i. Policies and procedures to meet performance standards and prompt pay requirements for all provider types.

WellCare understands that prompt payment of claims is important to our providers. This is evidenced by our 95% compliance rate average (as reported to the Kentucky Department of Insurance for the 1st and 2nd Quarter of 2019) with Kentucky's prompt payment rules. To ensure we continually adhere to Kentucky's prompt pay guidelines, WellCare employs a robust claim adjudication process that incorporates claim editing guidelines ensuring that "clean" claims are paid or denied within the statutorily required 30 day timeframe. We house hundreds of policies and procedures regarding specific Kentucky Medicaid provider types with direct references and links to specific Medicaid billing guidelines and regulations (including prompt pay). These policies and procedures are contained within a central repository for all Claims staff to access. Additionally, all of our Claims staff are notified of any changes to these documents with material information changes communicated by live training and team meetings. Our core policy and procedure for prompt pay is located in **Attachment C.19.b.i Policies and Procedures.**

ii. Market specific strategies for addressing potential provider payment issues, including underpayments, overpayments, pre-and post-claims editing policies and provider billing education.

As an incumbent in Kentucky for the last eight years, we have learned that having a local, high-touch model is critical to addressing provider payment concerns from our providers. Our local

teams, in collaboration with our Claims Department, work diligently to address any issues brought to our attention. Our strategy is focused around our Provider Engagement Model.

Having built and maintained a comprehensive and diverse statewide network of providers over our eight years as an MCO for Kentucky's Medicaid Managed Care program, WellCare of Kentucky has developed a trusting relationship with our network providers by ensuring they have the support they need to provide the highest quality of care to the Enrollees they serve. Over that time we have developed and refined our Provider Engagement Model (PEM), one that combines "high touch" with "high tech" through a combination of the most extensive physical presence of any MCO in the Kentucky Medicaid Managed Care Program along with 24/7 provider support available through multiple channels. It includes:

- Six regional offices throughout the Commonwealth staffed with experienced and dedicated provider relations representatives who live in, work in, and understand the communities they serve
- Quality and Operations staff dedicated to supporting network providers and available to assist in meeting program quality goals and resolving payment issues at the individual provider or system level

The centerpiece of the WellCare Provider Engagement Model is the Provider Relations (PR) Representative. Our PR Representatives are based throughout the state, working out of our six regional offices. These individuals serve as the primary point-of-contact for network providers focusing on primary care, behavioral health, and specialty care. Every provider has a dedicated PR representative responsible for supporting his or her practice or center.

Understanding that different types of providers face unique challenges, WellCare of Kentucky has four specialized PR representatives called Hospital Service Specialists (HSS) dedicated solely to supporting the 149 hospitals in our network. HSS team members are typically recruited from institutions so they are more familiar with their operating model and their unique support needs. The HSS team typically conducts monthly Joint Operating Committee (JOC) meetings with each institution in which an interdisciplinary team from both the institution and WellCare work collaboratively to review financial performance, quality metrics, pharmacy utilization, and any potential provider payment issues, including but not limited to underpayments, overpayments, pre-and post-claims editing policies and provider billing education.

To ensure effective and efficient support of all issues, PR representatives and HSSs engage various professionals at WellCare of Kentucky who are tasked to perform specific functions on behalf of network providers. In addition to Operations Account Representatives (OARs), this includes Patient Care Advocates (PCAs), Provider Operations Coordinators (POCs) and the Claims Resolution Team:

- *Operations Account Representatives (OARs)* are experienced claim professionals who conduct billing education and are empowered to efficiently resolve issues, including the ability to perform real-time, on-site claims adjustments at provider offices. OARs monitor claim utilization and denial rates and provide one-on-one training when billing errors are identified. The OAR team in Kentucky is led by Julie Crousore. This team attends calls with

providers and meets face-to-face during events like our Provider Summits to make adjustments and correct issues in real-time if possible.

- *Provider Operations Coordinators (POCs)* led by our Director of Provider Operations, Pat Russell in Kentucky, work to assure accurate and timely loading of all provider contracts and demographic data. They routinely reconcile provider rosters with our systems to make updates needed to provider records. They interface directly with providers along with PR representatives.
- *Claims Resolution Team* members research complex claim issues including applicable state and federal policy to ensure the market is accurately applying claims policies. The team, under the leadership of Elizabeth Caudill, is engaged any time we encounter a claims dispute trend where there is conflicting information or ambiguity on how the policy should be applied and we need to perform more comprehensive research on the appropriate implementation of payment policy.

It is this dedication to prompt, direct, and accountable provider service--from a coordinated team of highly skilled, locally-based provider relations representatives--that has resulted in WellCare of Kentucky earning the highest provider satisfaction of any MCO in the Commonwealth. Going forward, we are committed to maintaining that standard and continuing to look for new ways to better support our providers and resolving any potential provider payment issues as expeditiously as possible.

UNDERPAYMENTS, OVERPAYMENTS, PRE-AND POST-CLAIMS EDITING POLICIES AND PROVIDER BILLING EDUCATION

WellCare utilizes claims editing technology through industry-leading partners, Optum and Cotiviti, for payment accuracy solutions. By evaluating medical claims prior to the check cycle against the thousands of correct coding edits maintained by our vendors, we achieved $8.90 in savings (avoided overpayments) per member per month in 2019 across all Medicaid markets. We established claims editing policies which include:

Auto Denials – Edits based on industry standard correct coding, state, and national policy to detect claims that deviate from established payment policies.

Pre-Pay Analytics – Predictive analytics engine that generates a quantifiable improper payment risk score for every claim submitted. Examples include NCCI, MUE, duplicates and established payment policies. Simultaneously, it utilizes multiple improper billing variables to compare provider billing practices to peers as well as their own previous billing history.

Provider Peer Review – Board Certified physicians using an advanced analytic engine look at our historical professional claims data and identify providers with high cost surgical claims or that have atypical billing patterns based on targeted CPT codes and request medical records for review.

Fraud Waste and Abuse (FWA) - Methods are in place to detect and prevent waste and error through auto denials, prepay analytics (algorithms, provider flags, predictive modeling, medical record review), provider peer review (specialized medical reviews addressing atypical billing patterns). A component to our FWA detection is the continuous ideation cycle that evaluates claims payment trends for new and questionable billing practices.

Overpayments- In addition to the edits which are in place prior to claim payment for correct coding, clinical edits, and fraud, waste, and abuse edits, WellCare's overpayment identification process continually reviews claims for potential overpayments. This process includes determining whether other primary coverages (coordination of benefits) may exist for the enrollee, our post-payment fraud, waste, and abuse validations, and other payment review processes to identify overpayments and potentially fraudulent submissions. The recovery team tracks and reports on all claims in both detailed (claim level) and aggregate levels. WellCare understands and will meet the requirements of overpayments as specified in 42 C.F.R. § 438.608(a) (2). We will coordinate with the Department to ensure overpayment and underpayment recovery is accurately reflected in Medical Loss Ratio (MLR) calculations and capitation rate setting. An overpayment can occur due to reasons such as retroactive enrollee termination, inappropriate coding, duplication of payments, non-authorized services, erroneous contract or fee schedule reimbursement, and non-covered benefit(s) among others. WellCare proactively identifies and attempts to correct inappropriate payments. In situations when the inappropriate payment caused an overpayment, we follow the contracted time frame for participating providers, for non-participating providers we follow DHHS recovery guidelines. In all overpayment instances, we send out a notification letter to providers before recovery. To remain compliant at all times, WellCare will report overpayments of potential fraud promptly to the state according to 42 C.F.R. § 438.608(a) (2).

Underpayments - In the instances that underpayments are identified due to retroactive rates, enrollee eligibility, or notification of other insurance, WellCare of Kentucky processes adjustments in compliance with state regulations to ensure providers are made whole. Our comprehensive claims processing system has the ability to do mass adjustments of adjudicated claims with any specified criteria either at the Department's request or WellCare of Kentucky's discretion.

Provider Billing Education

Understanding the unique billing issues faced by providers transitioning from fee for service to managed care, we employ our "high tech, high touch" Provider Engagement Model (PEM) as discussed in detail above, which combines extensive local staff supports, meeting providers where they are, with high-tech web-based tools.

High-Touch: The centerpiece of the WellCare Provider Engagement Model is the locally based Provider Relations representative (PR Rep). These individuals live in their assigned region and serve as the primary point-of-contact for network providers. Our PR Reps are supported by our local Operations Account Representatives (OAR), who are experienced claim professionals who conduct billing education for all providers through in-person classroom, Webinar, and on-line training to ensure that all providers understand how to effectively process and submit clean claims. OARs are empowered to efficiently resolve issues, including on-site claims adjustments at provider offices. When a provider presents a claims issue to his or her Provider Representative, the Representative is able to access an OAR team member to address the issue. If the matter can be resolved with no additional research, the OAR team member has the authority to immediately process the claim for adjudication. If further research is required, the OAR team member handles the matter until it is resolved, keeping both the provider and PR

Representative informed of the actions being taken. In addition, if further training of the provider or staff is required the OAR arranges for and performs the training until the provider is confident they understand how claims submission works and is successful in the process.

The OAR team specializes in Operational issues related to the provider. The OAR team strives to ensure that Providers are being reimbursed accurately for their services. What makes the OAR team unique is their ability to process adjustments on claims locally in the market. This allows the provider to receive quick and efficient turnaround time. In addition, to prevent errors from reoccurring, they can analyze, identify and correct the root cause in some cases or work directly with the teams that can make the correction. The OAR team member handles the matter until it is resolved, keeping both the provider and PR Representative informed of the actions being taken. In addition, if further training of the provider or staff is required the OAR arranges for and performs the training until the provider is confident they understand how claims submission works and is successful in the process. With the support of the OAR team, our year to date Claims Adjustments Rate for Kentucky is 2.45%.

Finally, we also have a dedicated Provider Claims Services Center for telephonically handling most claim disputes and provider billing inquires with the ability to make adjustments in real time with no additional transfer or callbacks required. This service is readily available to all providers. Provider Support Service associates receive an additional 160 hours of training specific to claims and can make real time adjustments to a claim if an error is detected. The success of our "one-touch" process is demonstrated by our year to date first call resolution rate of 92.9% in Kentucky, 91% in Nebraska and 90.6% in Missouri.

A large orthopedic practice in Northern Kentucky submitted a termination notice siting numerous unresolved claims issues with WellCare. The OAR team along with the PR team held numerous onsite and teleconference meetings with this provider and assisted their billing team with each claim to determine if there was an error in the payment or an error in the billing. Within a few weeks of these meetings occurring, the practice rescinded their termination notice and the relationship strengthened. The OAR team was able to adjust some claims for the Practice as well as share educational opportunities with the Practice so that they could submit corrected claims for payment. The OAR and PR team continues to meet monthly with this group, however there are minimal concerns brought to the meetings

High-Tech: We use our on-line tools and resources for provider education to support our PEM. Our approach to provider education is thoughtful and delivered using the same formats we use for our own associates. They have access to a library of self-directed on-line training including billing procedures, claims processing, and payment timeframes (how to file a claim, how to submit a correct claim, electronic funds transfer, and electronic remittance advices for claims payment), dispute resolution process and timeframes (how to file an appeal if a claim is denied, complaints and grievances). Our enhanced provider portal includes a "chat session" feature, allowing providers to obtain assistance in real-time with claims or other issues. We take a consultative and supportive approach with providers, offering them Performance reporting such as Provider Report Cards and Portal Claims Interface Reports (this interface allows medical

homes to view all claim data at the Enrollee level for each service provided in any modality.), which they can access anytime through the portal.

iii. Proposed average days to payment from claims submission for the Vendor's proposed claims platform for medical and pharmacy claims. Provide the Vendor's last calendar year's report on the "average number of days to pay providers."

MEDICAL

WellCare of Kentucky proposes to pay or deny professional medical claims within 10 calendar days from claim receipt on average. WellCare of Kentucky proposes to pay or deny institutional medical claims within 15 calendar days from claim receipt on average. Last calendar year, 2018, WellCare of Kentucky had an average of less than 10 calendar days for professional claims and less than 15 calendar days for institutional. We are confident we can meet or exceed this goal based on our experience doing so across our 12 existing Medicaid programs. We leverage our mature processes and systems, as described above, to pay claims accurately and timely and in compliance with the Department's prompt pay standards.

PHARMACY

We propose to pay or deny pharmacy claims within 10 calendar days from claims on average. Our pharmacy provider payment process is automated so that we adhere to all state and federal prompt pay guidelines. In the event a claim is paid beyond those guidelines, applicable interest is automatically calculated and paid.

LAST CALENDAR YEAR'S REPORT

Attached please find our Claims Report in **Attachment C.19.b.ii Claims Report** reflecting our Claims processing time and our TAT for 2019.

c. Describe the Vendor's methodology for ensuring claims payment accuracy standards will be monitored and improved through audit. At a minimum, address the sampling methodology, the process for auditing the sample, documenting of results, and activities

PROCESS OF AUDITING CLAIMS

A critical component of continuous claims process improvement is our auditing function. We perform claims audits in accordance with all applicable rules and regulations. The audit program is designed to minimize risk by increasing the accuracy of claims processing through performance feedback and root cause analysis. This program identifies deficiencies and works to resolve them for improved claims processing and payment. A dedicated Claims Audit team is responsible for reporting the financial accuracy of medical claim payments. This internal control activity supports early detection and corrective action of potential financial risk. Our independent registered accounting firm (Deloitte & Touche, LLP), internal audit team and senior management of WellCare monitor the findings. The objectives of the Claims Audit team are to provide reports that assist in effectively trending payment accuracy, to identify payment

and financial accuracy measures for root cause analysis, and to request and monitor corrective actions.

Our skilled Claims Audit Specialists audit pre- and post-adjudicated claims against processing requirements that vary by audit type referenced below. In addition to being master researchers, our auditors are specialists in the market they are auditing. Annually, our Claims Audit team performs a financial accuracy audit of all subcontractors' delegated claims payment. As part of this review, the Claims Audit team checks for proper reimbursement at rates specified by the provider contracts and the contract with WellCare. If the subcontractor's financial accuracy and payment accuracy scores do not meet expected performance levels of 99% and 95%, respectively, a second audit is performed. If the reaudit produces unacceptable accuracy scores, the subcontractor is placed on corrective action and monitored through the Delegation Oversight Committee. Claims to audit are assigned by state, product and audit type. Audits are assigned and stored in our audit repository. Auditors assess errors of three different types: financial (dollar impact), payments (incorrect payment results) and clerical (non-financial) levels.

The following types of audits are performed by the WellCare Claims Audit team:

Sarbanes-Oxley Compliance Audit (SCA): The SCA process is designed to ensure the system logic complies with state and federal guidelines, designated contracts, changes approved by management (in the form of business decisions) and department processes and procedures. The SCA process also ensures that decision documents are approved within our compliance guidelines and that all items are implemented appropriately.

User Compliance Audit (UCA): UCA's are conducted to identify opportunities to improve financial accuracy through the clarification of training and desk procedures and staff training as well as associate performance management.

Targeted Compliance Audit (TCA): TCA's are performed on new operating activities or areas of concern.

High Dollar: This audit is a pre-payment review on claims with a net paid amount of over $100,000 and is performed to minimize the financial risk on high dollar claims by validating the payment amount before the claim adjudicates.

Delegated Entity (DE): The DE audit works directly with the Delegation and Oversight team to ensure payment accuracy for our delegated vendors. We monitor compliance with applicable standards in accordance with federal and state requirements. WellCare has established the Delegation Oversight Committee (DOC) to be responsible for functions that we delegate to third parties. The DOC must ensure appropriate performance measures are in place to ensure we can accurately assess whether delegated entities are in compliance with federal and state requirements.

SAMPLING METHODOLOGY

Our Claims Audit sampling methodology varies by audit type to ensure proper monitoring and drive improvement.

Sarbanes-Oxley Compliance Audit (SCA): A statistically valid sample of paid and denied claims determined with a ninety-five percent (95%) confidence level, +/- five percent (5%), assuming an error rate of three percent (3%) in the population of managed care claims comprises the monthly audit sample. The additional level of stratification by dollar amount allows a complete representation to ensure all claims according to amount paid are equally reviewed.

- Sampling methodology for Sarbanes-Oxley Audit:
- 80 claims per State are selected randomly based on the prior month universe of claims
- The sample is stratified to include 20 claims by claim type and dollar stratum:
    - 20 Professional Claims </= $100 Paid
    - 20 Professional Claims > $100 Paid
    - 20 Institutional Claims </= $1000 Paid
    - 20 Institutional Claims > $1000 Paid

User Compliance Audit (UCA): A statistically valid sample of paid or denied claims is pulled for both WellCare of Kentucky claims examiners and subcontractors. The sample for our internal staff is pulled weekly, by associate, to be able to give timely feedback on quality. A Quality goal of 99% financial accuracy is part of each associate's performance rating. Claims examiners that meet the quality and productivity goal are provided bonus quarterly. Our subcontractor UCA sample is pulled monthly by subcontracted site.

Targeted Compliance Audit (TCA): Methodology and sampling varies based on the target being performed. Target audits are generally based on a statistically valid sample of both paid and denied claims talking into account a ninety-five percent (95%) confidence level and assumption error rate of five percent (5%).

High Dollar: The sample includes 100 percent of Pre-paid claims with a paid amount greater than $100,000.

Delegated Entity (DE): A random sample of 200 claims is selected for each entity. The sample time period is from the time of the last sample through current.

DOCUMENTING RESULTS

At WellCare, we have multiple methods for monitoring performance and ensuring transparency. These include Operation dashboards, Reports sent to Senior Management and the comprehensive scorecards generated for individual markets.

In an effort to assist the operational units with the management of identified claims risk, the Claims Audit department uses an application to record mitigation plans. Payment errors are logged and tracked in the centralized audit tool called the Audit Workbench to ensure corrective actions and mitigation plans have been provided. A report of all affected claims is also created and tracked to verify that appropriate action was taken on all impacted claims.

This application is used by all areas of operations in tracking the root cause and mitigation plan for claim payment errors identified through our audit processes. The application includes a module for generating control reports to identify the final disposition and corrective action of the error.

The process used to record the error disposition and action plan within the application is as follows:

- The Claims Audit team enters payment errors daily.
- The operational unit responsible enters the root cause and mitigation plan for each error.
- The overall dollar amount and claims volume resulting from the error are entered to determine the impact and track the correction of the erroneous payments. Each mitigation plan explains the process of updating or adjusting the correct claim payments in WellCare's system, and if necessary, the Payment Recovery Team will issue a work order ticket to collect any erroneous payments.
- Errors will remain open until the mitigation plan has been completed and all necessary claim adjustments have been made.

Claims Audit associates validate that risk mitigation plans are complete which are important elements in completing corrective actions are. All of this activity is captured in the Audit Workbench tool. Depending on the severity of the risks, a mitigation process is planned. Once the risks are identified, weekly meetings are held by the Claims Audit and Operations teams to review the status of necessary actions. The pending risks are presented to area management or senior management for mitigation. Finally our IT department completes a monthly report that tracks mitigation plan action log activities and open items.

Overall, the audit results can lead to adjustment of claims, root cause determination and corrective action plans. The action plan and the claims to be adjusted are monitored through the Open Action Log and adjustment reports.

Claims Financial Accuracy

Claims financial accuracy measures the accuracy of dollars paid to Providers. It is measured by evaluating dollars overpaid and underpaid in relation to total paid amounts taking into account the dollar stratification of claims. WellCare of Kentucky has a goal of ninety nine percent (99%) financial accuracy. We have successfully met this goal for our KY SCA sample with a 99.1% in 2018 and 98.5% year to date in 2019.

Claims Payment Accuracy

Claims payment accuracy measures the percentage of claims paid or denied correctly. It is measured by dividing the number of claims paid/denied correctly by the total claims reviewed. WellCare of Kentucky has achieved 96.25% payment accuracy in 2018 and 96.9% payment accuracy year to date 2019 for our KY SCA sample.

Corrective actions

Our Claims Audit department is a key control to mitigating claims financial risk in coordination with Internal Audit. Quarterly, a risk area summary report is reviewed by the Risk Champion (the area leader champions the mitigation plan) to ensure that WellCare's Enterprise Risk Management (ERM) plan is up to date. The ERM report shows that in our risk assessment management plan each risk event has a representative risk mitigation activity, key performance indicators and acceptable range or target to measure success. The Claims Audit department, in

its monthly executive performance report, will rely on corrective action management reports to document and direct corrective actions. The errors are identified in the dashboard which is shared with Operations and Executive teams monthly as it relates to identified claims accuracy errors controlled through an Audit Tool. The log of claim errors that have mitigation plans on file and those that have yet to be completed is also shared with the Executive team.

C.19 Provider Payment Provisions

State Addendum E:	Kentucky
Policy Name:	Prompt Pay
Policy Number:	C6-CL-MD-006
State Approval Date:	N/A

Kentucky State Specific

Definitions:

Claim: A "claim" means any: bill for services, line item of service, or all services for a Member within a bill.

Clean Claim: Pursuant to Kentucky Revised Statute (KRS) 304.17A-700, "Clean claim" means a properly completed billing instrument, paper or electronic, including the required health claim attachments, submitted in the following applicable form:

1. A clean claim from an institutional provider shall consist of:
    a. The UB-92 data set or its successor submitted on the designated paper or electronic format as adopted by the NUBC;
    b. Entries stated as mandatory by the NUBC; and
    c. Any state-designated data requirements determined and approved by the Kentucky State Uniform Billing Committee and included in the UB-92 billing manual effective at the time of service.
2. A clean claim for dentists shall consist of the form and data set approved by the American Dental Association.
3. A clean claim for pharmacists shall consist of a universal claim form and data set approved by the National Council on Prescription Drug Programs.
4. A clean claim for all other providers shall consist of the HCFA 1500 data set or its successor submitted on the designated paper or electronic format as adopted by the National Uniform Claims Committee.

Policy:

A. In accordance with the Balanced Budget Act ("BBA") Section 4708, WellCare shall implement Claims payment procedures that ensure 90% of all Provider Claims for which no further written information or substantiation is required in order to make payment are paid or denied within thirty (30) days of the date of receipt of such Claims and that 99% of all Claims are processed within ninety (90) days of the date of receipt of such Claims. In addition, WellCare shall comply with the Prompt Pay statute, codified within KRS 304.17A-700-730, as may be amended, and KRS 205.593, and KRS 304.14-135 and 99-123, as may be amended. Any conflict between the BBA and Commonwealth law will default to the BBA unless the Commonwealth requirements are stricter.

In accordance with Kentucky Managed Care Organization (MCO) Contract Section 30,2, "Prompt Payment of Claims", in accordance with 42 C.F.R. 447.46, WellCare shall comply with the timely claims payment requirements of 42 C.F.R. 447.45. WellCare shall implement Claims payment procedures that ensure 90% of all Provider Claims, including to I/T/Us, for which no further written information or substantiation is required in order to make payment are paid or denied within thirty (30) days of the date of receipt of such Claims and that 99% of all Claims are processed within ninety (90) days of the date of receipt of such Claims. In addition, WellCare shall comply with the Prompt-Pay statute, codified within KRS 304.17A-700-730, as may be amended, and KRS 205.593, and KRS 304.14-135 and KRS 304.99-123, as may be amended. The date of receipt is the date the MCO receives the claim, as indicated by its date stamp on the claim or other notation as appropriate to the medium used to file a claim and the date of payment is the date of the check or other form of payment. WellCare shall notify the requesting provider of any decision to deny a Claim or to authorize a service in an amount, duration, or scope that is less than requested. Any conflict between federal law and Commonwealth law will default to the federal law unless the Commonwealth requirements are stricter.

In accordance with Kentucky MCO Contract Section 30.1, "Claims Payments", WellCare shall only accept from providers the uniform claim forms approved by the Department and completed according to Department guidelines.

B. Claim payment time frames pursuant to KRS 304.17A-702:

1. Except for claims involving organ transplants, WellCare shall reimburse a provider for a clean claim or send a written or an electronic notice denying or contesting the claim within thirty (30) calendar days from the date that the claim is received by WellCare or any entity that administers or processes claims on behalf of the WellCare. Clean claims involving organ transplants shall be paid, denied, or contested within sixty (60) calendar days from the date that the claim is received by WellCare or any entity that administers or processes claims on behalf of WellCare.

2. Within the applicable claims payment time frame, WellCare shall:

   a. Pay the total amount of the claim in accordance with any contract between WellCare and the provider;

   b. Pay the portion of the claim that is not in dispute and notify the provider, in writing or electronically, of the reasons the remaining portion of the claim will not be paid; or

   c. Notify the provider, in writing or electronically, of the reasons no part of the claim will be paid.

C. WellCare shall pay interest if it fails to pay, deny, or settle a clean claim as required pursuant to KRS 304.17A-730. The interest obligation shall not apply if the failure to pay, deny, or settle a claim is due to, or results from, in whole or in part, acts or events beyond the control of WellCare, including but not limited to acts of God, natural disasters, epidemics, strikes or other labor disruptions, war, civil disturbance, riot, or complete or partial disruptions of facilities.

D. Acknowledgment of receipt of claim, inaccurate or insufficient claim information, and claim status information pursuant to KRS 304.17A-704:

1. Within forty-eight (48) hours of receiving an original or corrected claim submitted electronically, WellCare, its agent, or designee shall acknowledge the date of receipt of the claim by an electronic transmission to the provider, its billing agent, or designee that submitted the claim;

2. Within twenty (20) calendar days of receipt of an original or corrected claim submitted by mail or other non-electronic means, WellCare, its agent, or designee shall acknowledge the date of receipt of the claim to the provider, its billing agent, or designee that submitted the claim.

   i. For claims containing all necessary information and having no errors, WellCare shall make available confirmation of receipt of the claim to the provider, its billing agent, or designee that submitted the claim. Acknowledgment may be in writing or WellCare, its agent, or designee may list the claim and date it was received on a file that can be accessed electronically by the provider, its agent, or designee.

   ii. Claims that contain errors or lack necessary information shall be acknowledged by an electronic transmission or in writing to the provider, its billing agent, or designee that submitted the claim.

3. At the time of acknowledgment under paragraph (a) or (b) above, WellCare, its agent, or designee, shall notify the provider, its billing agent, or designee that submitted the claim, in writing or electronically, of all information that is missing from the billing instrument, any errors in the billing instrument, or of any other circumstances which preclude it from being a clean claim.

4. When WellCare, its agent, or designee has notified a provider, its billing agent, or designee that submitted the claim, that a claim contains errors, upon receipt of a corrected clean claim WellCare shall adjudicate the corrected clean claim within the applicable claims payment time frame for a clean claim established in KRS 304.17A-702.

5. WellCare shall inform providers of the status of a claim either through:

   - Notation on the remittance; or
   - Allowing providers to check claim status electronically at any time following an electronic submission of the claim to WellCare, or by contacting WellCare for claims submitted non-electronically.

E. Ninety five percent (95%) of all clean claims shall be paid or denied within 30 calendar days of receipt of the claim. Ninety-nine percent (99%) of all clean claims shall be paid or denied within 90 calendar days of receipt of the claim. Claims paid beyond the 30th day shall be subject to interest payments beginning the 31st day, with the exception of claims involving organ transplants.

F. Pursuant to KRS 304.17A-730, payment of Interest on Clean Claims, with the exception of clean claims involving organ transplants, shall be as follows:

1. For claims that are paid between one (1) and thirty (30) days from the date that payment was due under KRS 304.17A-702, interest at a rate of twelve percent (12%) per annum shall accrue from the date payment was due under KRS 304.17A-702;

2. For claims that are paid between thirty-one (31) and sixty (60) days from the date that payment was due under KRS 304.17A-702, interest at a rate of eighteen percent (18%) per annum shall accrue from the date payment was due under KRS 304.17A-702; and

3. For claims that are paid more than sixty (60) days from the date payment was due under

   KRS 304.17A-702, interest at a rate of twenty-one percent (21%) per annum shall accrue from the date that payment was due under KRS 304.17A-702.

G. Clean claims involving organ transplants:

In accordance with 806 KAR 17:360, WellCare shall be in compliance with KRS 304.17A-702(1) for a clean claim involving an organ transplant if the claim is paid within:

(a) Sixty (60) days of receipt of the claim; or

(b) Three (3) business days of the check date if the check issued for payment of the claim is dated on the 58th, 59th, or 60th day after the claim is received.

Clean claims involving organ transplants shall be paid, denied, or contested within sixty (60) calendar days from the date that the claim is received by WellCare or any entity that administers or processes claims on behalf of WellCare.

H. Payment of Interest on clean claims involving organ transplants:

- Twelve percent (12%) annual interest is to be paid on all clean claims paid between the 61st and 90th date of receipt.
- Eighteen percent (18%) annual interest is to be paid on all clean claims paid between the 91st and 120th date of receipt.
- Twenty-one percent (21%) annual interest is to be paid on all clean claims paid on or after the 121st date of receipt.

Summary of Applicable Guidelines and Procedures:

- Claims are to be processed in accordance with the terms of the member's plan of benefits, the provider's contract with WellCare, and WellCare authorization requirements. The Benefits Master List ("BML") can be accessed at the below link:

  http://wellcareportal.wellcare.com/Operations/BenefitsDetermination/Pages/Home.aspx

- Authorization requirements may be found in the:
  - Quick Reference Guide (QRG) located at:

    https://www.wellcare.com/Provider/QuickReferenceGuides

  - Authorization Lookup Tool located at:

    https://www.wellcare.com/Kentucky/Providers/Authorization-Lookup

20. Covered Services

WellCare®
Beyond Healthcare. A Better You.

C.20. COVERED SERVICES

a. **Provide a detailed description of how the Vendor's operational structure and practices will support integrated delivery of services (i.e., staff, contractors, systems, calls centers, etc.). In addition, the Vendor's response should address:**

   i. Innovative approaches to ensure Enrollees experience whole-person care that integrates their medical and behavioral health benefits and addresses social determinants of health.

   ii. Approach for coordination with carved-out services (e.g., transportation and transitions to long term supports and services).

   iii. A description of any value-added services the Vendor proposes to provide to Enrollees.

b. **Provide the Contractor's approach to assisting Enrollees to access direct access services and second opinions, and referrals for services not covered by the Contractor.**

c. **Describe the Vendor's proposed approach to the following:**

   i. Interfacing with the Department and Department for Behavioral Health, Developmental, and Intellectual Disabilities.

   ii. Coordinating with the Department to establish collaborative agreements with state operated or state contracted psychiatric hospitals and other Department facilities that individuals with co-occurring behavioral health and developmental and intellectual disabilities (DID) use. Describe potential challenges and methods to address such challenges.

   iii. Complying with the Mental Health Parity and Addiction Equity Act.

d. **Describe initiatives the Contractor will implement to identify trends in provider-preventable conditions and to educate providers who are identified as possibly needing support in better addressing those conditions.**

C.20. COVERED SERVICES

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 30 Covered Services of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in Attachment X Contract Compliance Matrix, provided electronically. Through our partnership with DMS since 2011, we have provided covered services for Enrollees in the Commonwealth as a leading managed care organization (MCO). As such, we will continue to provide or arrange for the provision of covered services to Enrollees in accordance with the state Medicaid plan, state regulations, and policies and procedures applicable to each category of covered services. Our commitment to coordinated care ensures that the care of new Enrollees is not disrupted or interrupted, including the continuity of care for new Enrollees receiving healthcare under fee-for-service (FFS) or transitioning from another MCO prior to enrollment with WellCare of Kentucky.

Today, we proudly serve more than 430,000 Enrollees, their families, and caregivers through six Regional offices across the Commonwealth. The following section describes their covered services and additional areas of Care Coordination support provided by the WellCare of Kentucky team.

a. Provide a detailed description of how the Vendor's operational structure and practices will support integrated delivery of services (i.e., staff, contractors, systems, calls centers, etc.). In addition, the Vendor's response should address:

Since the beginning of managed care in the Commonwealth, our operational structure and practices have supported the integrated delivery of services across our staff, contractors, systems, call centers, and all available resources to provide a seamless experience for our Enrollees, providers, and DMS. Even back in 2011, we knew that producing the best clinical, quality, and cost outcomes for the Commonwealth required a fully integrated model of care for our Enrollees. That goal meant developing an in-house behavioral health team to better guide the comprehensive care of our Enrollees across the healthcare continuum. Today, our operational structure and integrated care team continues to deliver significant results through this fully integrated approach to care that covers the physical, behavioral, pharmacy, and social services needs of our Enrollees. We accomplish this through our intentional, thoughtful, and local model that addresses the following:

- *Structure and staffing:* Our locally staffed health plan and call centers have been serving Enrollees in Kentucky since 2011. As the largest MCO in the Commonwealth, we have focused since the beginning on a collaborative and transparent partnership with DMS, our providers, community partners, subcontractors, and other MCOs to ensure the highest quality care delivered in the right setting at the right time for all Medicaid Enrollees. This experienced local team is supported by our corporate parent, WellCare Health Plans, Inc. (WellCare) bringing scalability, quicker implementation, and best practices gathered from our 30 years' experience serving Medicaid Enrollees in 12 states. All purpose built to deliver the best outcomes for Enrollees.
- *Integrated technology and data sharing platform:* Our innovative, fully integrated data platforms, CareCentral Care Management system and provider portal, share data in real-time from all internal and external systems, a single claims processing system, e.g., pharmacy, medical, behavioral health data), authorizations, advanced analytics, care plans, care opportunities eligibility, and Admission, Discharge, and Transfer (ADT) feeds, encounters, social determinants of health (SDOH) issues, and our Community Connections database. Single sign on systems and our Enrollee 360 view ensures that everyone who touches an Enrollee understands their whole person needs. We can share data with providers to enrich care plans, value-based contracting, and improve quality.
- *Engagement:* Early, frequent, high touch engagement is core to our model and key to delivering the best outcomes to our Enrollees. We understand that it is critical to find all Enrollees to be able to serve them and we accomplish this early engagement through our Enrollee welcome, on-boarding and initial assessment including engagement of the family or caregiver where applicable. For those Enrollees who are hard to reach or locate we engage our REACH (Unable to Contact) program.

- *Programs:* We deliver rich population and person-centered programs to Enrollees through multiple channels that include medical, behavioral, and social aspects. By in sourcing BH, pharmacy, UM and Enrollee calls our face-to-face programs are custom built for Kentucky based on our in market experience since 2011 partnering and collaborating with DMS, incorporating stakeholder feedback gathered from deep relationships throughout the Commonwealth, participating in multiple high touch forums, summits, and advisory councils. This deep local experience is augmented by our unique, industry leading system custom-built for Medicaid from our 30 years' national experience and includes our unique risk stratification model.

We have One Team and One Goal—to treat the whole person. This approach goes beyond a diagnosis by leveraging our unique Community Connections program to support Enrollees requiring assistance with their social needs (e.g., finances, housing, utilities, group support) to focus on improving their health.

Under the guidance of our leadership team, which includes our Medical Director, Dr. Howard Shaps, and our Behavioral Health Medical Director, Dr. Marketa Wills, the WellCare of Kentucky team leverages both our administrative and clinical expertise through the following operational structures and practices to support the integrated delivery of services.

WELLCARE OF KENTUCKY STAFF

Integrated Care Team (WellCare at Home)

Our fully integrated in-house WellCare at Home care team is cross-trained to manage co-morbid conditions and serve as the Enrollee's whole-person healthcare guide as they navigate and address their physical, behavioral, pharmacy, and social needs. The integrated care team, depicted in **Figure C.20-1**, documents, reviews, and refers to clinical information CareCentral—our integrated clinical platform. A key feature of the platform that aids integration is our Enrollee Care Compass profile, a 360-degree Enrollee view that allows us to address issues with evidence-based interventions and help providers close critical care gaps. We assist Enrollees to access whole person care. This includes accessing their Primary Care Provider (PCP), mental health counselors, opioid use disorder and substance use disorder (OUD/SUD) treatment providers, local pharmacists, and of course, connecting them to vital community resources through our Community Connections program. Community Connections goes beyond traditional managed care to address Enrollees' SDOH needs for housing, healthy food, education, and transportation. Through a single, integrated technology system, we are better able to determine where the most critical needs exist throughout the Commonwealth and improve the lives of our Enrollees.

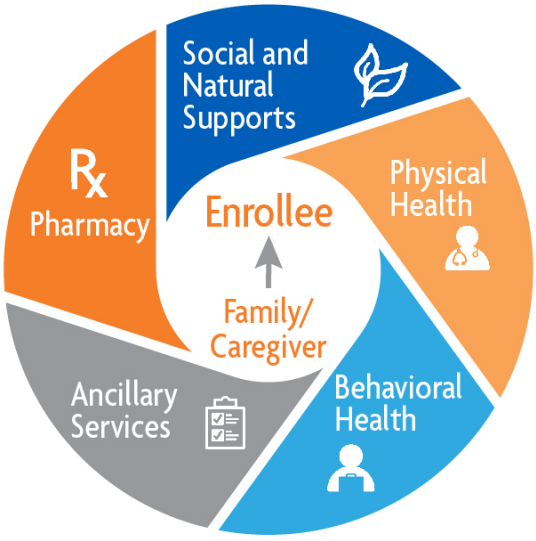

Figure C.20-1 Integrated Care Team

WellCare at Home: Driving Integration

Through coaching and education, Enrollees in care coordination experienced a 22% reduction in emergency department utilization 12 months following their enrollment compared to the 12 month period prior to their enrollment.

Care Coordinators, licensed mental health clinicians (LMHC), work with a multidisciplinary team (MDT) of provider partners, Community Mental Health Centers (CMHC), Federally Qualified Health Centers (FHQC), and hospitals to coordinate follow-up care and facilitate the Enrollee's integrated whole-person needs through a comprehensive, Enrollee-focused care plan. These Enrollee-driven care plans are available in CareCentral and on the provider portal for easy access. Our regionally based integrated care team pods include pharmacists, prevention and population health coaches, community health workers (CHW), quality practice advisors (QPA), patient care advocates (PCA), and community advocates. Our PharmDs collaborate with the utilization management team for Enrollee discharge planning and support Care Coordinators with medication management reviews.

Our goal, while working alongside the Enrollees, PCP, family, specialty providers, OUD/SUD treatment providers, behavioral health counselors, psychiatrists, and others, is to create and maintain an integrated and supportive approach that addresses the Enrollee's complete set of needs, which means not just behavioral health issues but their physical health issues as well. This includes the following:

- *Health Promotion and Wellness.* Our Enrollee-driven prevention education and engagement programs help promote and reward continued healthy lifestyle decision-making as well as encourage those to start. Each prevention and population health program includes foundational elements, such as telephonic and in-person coaching, mailers and reminders, health education information on our website, the Enrollee portal, and MyWellCare smartphone application; text message and email reminders; and social supports through our Community Connections Help Line (CCHL).
- *Assessments and Screenings.* We immediately identify Enrollees who require Care Coordination and disease management using our initial health screening questionnaire. Identified Enrollees then receive a Health Risk Assessment (HRA) to help us accurately capture their information, needs, and care gaps. The HRA is provided on inbound and outbound phone calls including the welcome call as well as on the Enrollee portal. Subsequently, an Enrollee Needs Assessment (ENA) includes a more in-depth, complex screenings for children and adults, assessing them for physical and behavioral health conditions (e.g., depression, anxiety, ADHD, SUD), as well as unmet social needs that may be affecting their health and quality of life. Enrollees identified with serious mental illness (SMI) or serious emotional disturbance (SED), and those with co-occurring OUD/SUD, mental health, and medical needs are automatically enrolled in Care Coordination.
- *ID/Strat and Data Analytics.* Our ID/Strat algorithm uses predictive technology to identify at-risk Enrollees and direct them to the appropriate level of care based on a risk-level of high, medium, or low; variables taken into account include re-admission risk, HRA results, SDOH needs, chronic diagnoses, claims, medication adherence, pharmacy history, and demographics. This confluence of information allows us to identify and connect to Enrollees

using any or all of this data including information like HRAs and medications that are more timely, coupled with less timely but more comprehensive administrative data. We share this data with the MDT through the secure provider portal. Providers have access to care gap and HEDIS quality reports, clinical practice guidelines (CPG) tailored to treating co-morbidities, and receive support, training, and education from our provider engagement team on providing integrated services for our Enrollees.

- *Managing the Multidisciplinary Team (MDT).* Using the Enrollee Care Compass and person-centered care plan as the guide for the whole-person care experience, our CMHC, FHQC, and other provider partners work alongside our integrated care team to provide face-to-face Enrollee Care Coordination interactions whenever possible, participate in MDT meetings and rounds, coordinate referrals across all types of providers (e.g., physical and behavioral, primary care, and specialty care), monitor adjustments to the care plan, and collaborate with community and social support providers.

UTILIZATION MANAGEMENT TEAM

Often, when a company carves out behavioral health, utilization management decisions are determined strictly by mixed-services protocols leading to denials based on silos of care (i.e., the need being labeled as a physical health need or a behavioral health need.) This fragmentation can leave the provider with difficulty navigating between multiple entities and the Enrollee lacking needed care. At WellCare of Kentucky, we do things differently. Our UM nurses and social workers look at Enrollee needs holistically. If a provider is requesting inpatient psychiatric care, we train and alert our social workers to co-morbid physical conditions that may be triggering the Enrollee's psychiatric condition. Our system shows a real-time, single integrated view of the Enrollee regardless of their primary condition. Our UM staff are then able to confer with the MDT of nurses, psychiatrists, and other medical professionals to help the provider determine the best course of treatment and ensure the Enrollee receives clinically guided care to match their specific co-morbidities. And upon discharge, the integrated discharge team creates a plan that addresses both physical and behavioral health needs. Because of our single integrated platform and integrated staff, we can establish medical necessity and facilitate Enrollee transitions without further burdening the providers or Enrollee in the process.

LOCAL LEADERSHIP TEAM

Our leaders remain deeply committed to empowering our regional teams with decision-making authorities based on local knowledge and expertise. The majority of our team that started the managed care program in 2011 remains intact to this day, living and working in the communities we serve. Together, we established our in-house behavioral health team in 2013 and helped DMS expand covered services for the behavioral health community, ensuring that the people of Kentucky in all regions have better access to comprehensive, whole-person care. We broadened the delivery system by bringing CMHCs into our network and educated providers on our new services and claims processes. Today, our colleagues at DMS know our leadership staff, just as our Enrollees know their Care Coordinators and field teams in their local communities.

Our local Kentucky leaders and regional teams across our six offices, depicted in Figure **C.20-2,** have the authority and autonomy to make rapid-cycle decisions, allowing us to be responsive to the comprehensive needs of our Enrollees. For example, the scope of decision-making includes the following:

- Deploying staff and resources throughout the local market to support our Enrollees and providers as we coordinate integrated services for physical and behavioral health, such as field Care Managers, QPAs, PCAs, and provider network professionals
- Managing our provider network to expand access to behavioral health providers, medication-assisted treatment (MAT), and dental services, to name a few
- Allowing for flexibility in the channels of care delivery and communication based on regions and community variances
- Making decisions about value-based purchasing (VBP) programs with our providers to incentivize co-located services that address Enrollee co-morbidities and chronic conditions

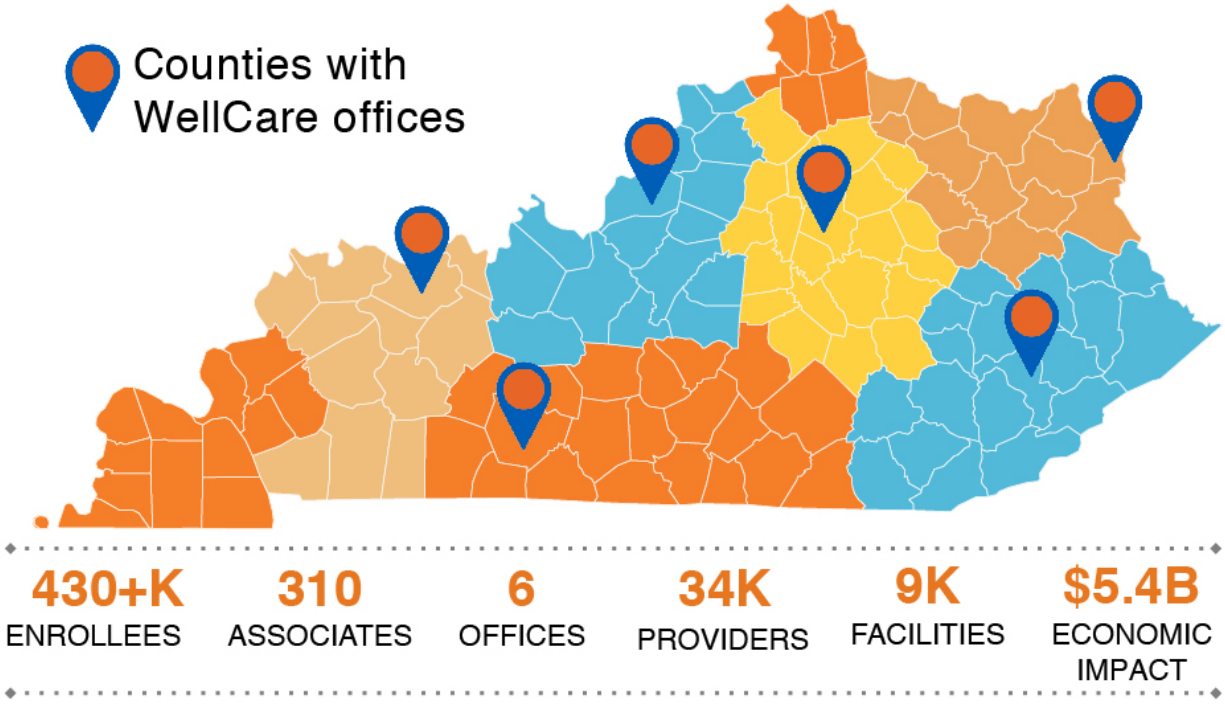

Figure C.20-2 WellCare of Kentucky Integrated Support across the Commonwealth

WELLCARE OF KENTUCKY SUPPLEMENTAL SERVICES

When we made the commitment to develop an in-house behavioral health team back in 2013, WellCare of Kentucky created the capabilities of providing the integrated delivery of services in collaboration with our providers to meet the whole-person needs of our Enrollees. Our highly qualified supplemental service partners complement and enhance the services we provide. We integrate these service providers into WellCare of Kentucky's operational structure to ensure a streamlined experience that addresses their comprehensive, whole-person needs, such as dental and vision.

Our integrated care team coordinates services with local partners when an Enrollee has a need and works to ensure that services with the local provider meet their satisfaction. We store all Enrollee data, including appointments and services provided by local partners in CareCentral, updating the Enrollee's care plan to make it available to the entire MDT. Our Chief Operating Officer (COO), Benjamin Orris, and our Chief Compliance Officer (CCO), Rebecca Randall, oversee the functions and services supplied by our local partners and work to establish processes for the two-way coordination of services and secure exchange of information. For clinical functions, Dr. Wills, Dr. Shaps, and our directors of pharmacy, behavioral health, quality, and population health, work with local partners on the design of a coordinated system to ensure that all parties involved in the care process, including the MDT, access the latest Enrollee date and are working to help them achieve their personal goals and meet their healthcare needs.

For example, since 2011, we have partnered with Avesis Incorporated to coordinate and provide comprehensive dental and vision services for our Enrollees. As these services play a critical role in the overall health of our Enrollee population, our Care Coordinators proactively identify their needs in these areas, particularly for those individuals who have not received dental work or vision correction assistance in the past. We connect them to Avesis services and ensure that we document Enrollee appointments and results in CareCentral. In addition, we co-develop initiatives with our local partners that focus on addressing the integrated clinical needs of our Enrollees. Through a quality outreach program with Avesis, we provide a monthly list of Enrollees who have not received a diabetic retinal eye (DRE) exam. Avesis engages the Enrollees in telephonic outreach and mailings that promote vision health and provide instructions for connecting with their team to receive the annual eye exam.

WELLCARE OF KENTUCKY SYSTEMS

Our fully integrated data platforms, CareCentral and the provider portal, share data in real-time from all internal and external systems, including claims (e.g., pharmacy, medical, behavioral health data), authorizations, care plans, care opportunities eligibility, and Admission, Discharge, and Transfer (ADT) feeds, encounters, SDOH issues and our Community Connections database. We developed CareCentral in house to meet our specific needs and store all behavioral health, physical health, utilization management, and authorizations into a single 360-Enrollee profile view we refer to as Enrollee Care Compass. As depicted in **Figure C.20-3,** the Enrollee Care Compass provides a complete view of the Enrollee's health journey, including medication history, social service needs, claims history, authorizations, personal goals, assessments, interventions, and care plans. Our Care Coordinators and utilization management staff have one-click access to this complete picture of an individual Enrollee's needs across the entire spectrum of care when considering authorization decisions and utilization trends. We pay all behavioral and medical claims for all services out of a single multi-purpose claim system. Enrollee data from CareCentral updates the provider portal, allowing an Enrollee's MDT members to view their information and make updates to the care plan.

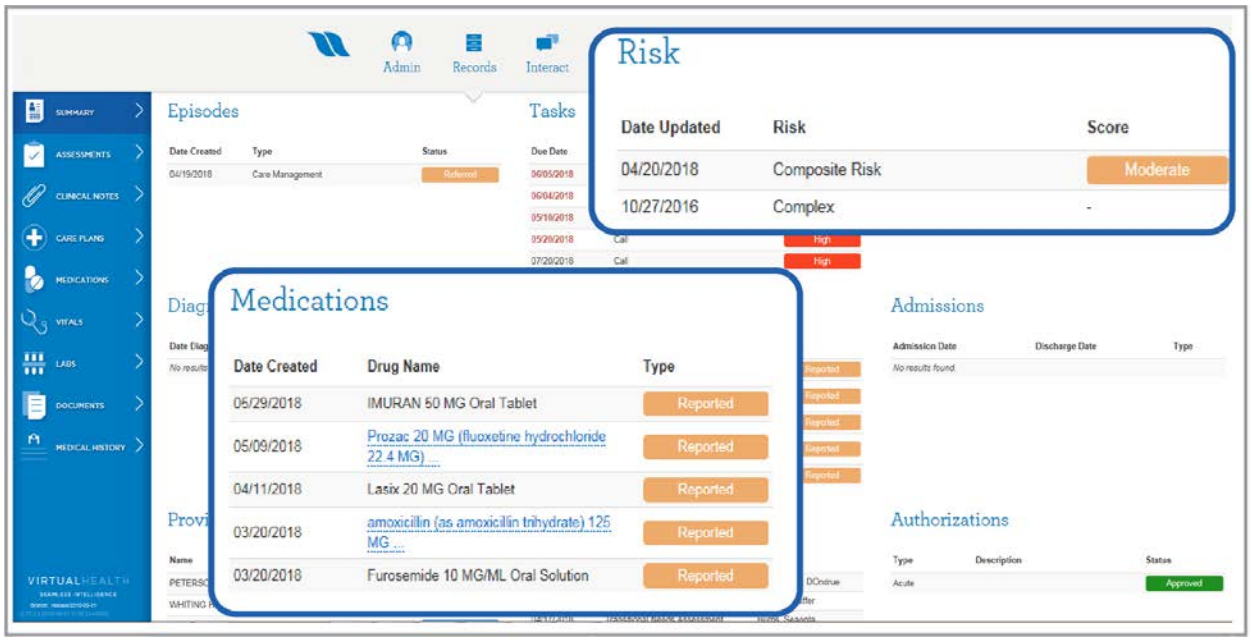

Figure C.20-3 CareCentral Clinical Platform

WELLCARE OF KENTUCKY CALL CENTERS AND ENROLLEE SUPPORT

Our Enrollee Call Center, Nurse Advice Line (NAL), and Behavioral Health Services Line all play an important role in the integrated delivery of services and support for whole-person care across behavioral, physical, pharmacy, and social needs. Our dedicated staff of professionals are educated on the Kentucky-specific Medicaid program and cross-trained to identify both physical and behavioral health issues for referral to the appropriate Care Coordination staff member for follow-up engagement that addresses their comprehensive needs.

As our Enrollees' first point of contact, our Enrollee Service Representatives (ESRs) are key to ensuring we deliver whole-person care. Using our sophisticated ESR tools including our knowledge management platform, CAREConnects, integrated platforms and interactive analyzer, our ESRs get a complete picture of our Enrollees' healthcare needs. Our **knowledge management platform** uses a response algorithm to help ESRs identify resources such as transportation partners specific to Enrollee needs. Our premier **CAREConnects** customer service tool provides ESRs with a complete view of the Enrollee's needs and the capabilities to meet them. Our **integrated platforms** with bi-directional information feeds enable coordination of Enrollee needs across all domains, providing all Enrollee-facing staff with the comprehensive, holistic view of their medical, pharmacy, behavioral health, and social needs including demographics, medical history and clinical and behavioral health information. Our interaction analyzer recognizes word and phrase combinations signaling a possible crisis situation, and alerts the ESR to take appropriate action such as keeping the caller on the line, alerting a supervisor, and engaging the NAL or Behavioral Health Services Hotline. ESRs begin training on their first day of hire and build upon their knowledge and skills through ongoing training courses related to both customer service skills and knowledge of Medicaid covered benefits. The rigorous training requirements through our learning and education hub—WellCare University— include more than 160 training hours and a score of 85% or higher on all

assessments to successfully become a certified ESR supporting our Enrollees in the Commonwealth. In addition, all ESRs receive training to recognize critical behavioral health issues and connect them to crisis services. We have a high level of overall responsiveness due to our “no-wrong door” point of entry for phone calls, whether a call is from an Enrollee, provider, or caregiver. To ensure each crisis was managed and to assess for any other needs, a local behavioral health Care Coordinator follows up within 24 hours (next business day) of a crisis line call, after the original reason for the call has been addressed.

We staff the NAL and Behavioral Health Services Line with qualified healthcare professionals, including registered nurses, social workers, and LMHCs who understand the importance of addressing an Enrollee's whole-person needs. Once a caller's needs have been identified, we determine the appropriate acuity level and follow standard protocols for routine, urgent, emergency, and crisis situations. Call center representatives have full access to the Enrollee Care Compass, which includes the Enrollee's integrated care plan, medications, interventions, assessments, and personal goals, enabling them to grasp the caller's background and determine steps to address their immediate needs and engage them in further assistance through their integrated care team.

Understanding the Enrollee's background through the context of their Care Compass profile, our integrated care team members provide follow-up support that takes into consideration their complete medical history and current interventions and medications for both physical and behavioral health. As an extension of our Care Coordination services, call center staff can assist with appointments and transportation requests, enroll individuals into our Healthy Rewards program, and reach out to Care Coordinators when additional support is required.

COMMUNITY CONNECTIONS PROGAM

Developed to support the integrated delivery of services in the Commonwealth in 2011, the Community Connections program addresses our Enrollees' SDOH needs to improve their quality of life, sustain well-being, and allow them to focus on improving their health. Our Community Connections program leverages a rich registry of community supports, secure connections, community engagement and the Community Connections Help Line to remove social barriers to health care. Our CCHL is staffed with peer coaches who provide information about community social service organizations, guide and encourage individuals to access community resources, and develop the Community Connections database. This detailed database now consists of over 70 social service categories available for our Care Coordinators and CCHL staff to assist Enrollees with removing social barriers to achieve positive health outcomes.

i. Innovative approaches to ensure Enrollees experience whole-person care that integrates their medical and behavioral health benefits and addresses social determinants of health.

Since 2011, WellCare of Kentucky has been a leader in removing social barriers to care. We have maintained that reputation by implementing innovative approaches that ensure Enrollees experience whole-person care that integrates medical, behavioral health, pharmacy, and SDOH needs. We know that the most significant barriers that keep people from accessing their covered medical and behavioral health benefits are the things that impact their lives outside of the doctor’s office. A mom who cannot buy groceries this month is not thinking about follow-up

for her son's ADHD medication. That is why we integrate social determinants of health into every aspect of our approach ensuring Enrollees experience whole person care that integrates their medical and behavioral health benefits. We do that by making sure our internal staff, providers and other stakeholders have access to our propriety, locally developed database of available community services beyond Medicaid covered services to address SDOH, including transportation, housing and food insecurity, utility assistance, interpersonal violence, and more.

Enrollees often need help accessing these social services, therefore we added the CCHL – a peer-staffed call center for all community members to help access social services and to track referrals to make sure callers get the services they need. Often it is not enough just to connect Enrollees to services because in many cases those services are limited or challenged with their own funding reductions. This is why our Community Connections model was built to go beyond a referral program to addressing sustainability of the social safety net through the use of Community Impact Councils (CIC) and targeted Community Health Investments. Both of these program work within our communities to identify gaps in the social safety net and find sustainable solutions to solving those gaps so our Enrollees have access to all the services they need to experience whole-person care and improve their health outcomes. A more detailed discussion of CICs and the Community Health Investment program is available in our response to question C.24 Population Health Management.

Enrollees experience streamlined, whole-person care guided by a single integrated care team, using one set of common clinical systems, tools, and data. Enrollee SDOH needs are stratified into our Identification and Stratification process described below, helping our integrated Care Coordination team to identify individual SDOH needs, which are included in the Enrollee care plan and in CareCentral. Our Enrollee Services Representatives use this information as well as other Enrollee care need information prioritized by need and grouped by family to provide personalized assistance when Enrollees call our Enrollee Service line. As the single accountable entity, WellCare of Kentucky provides a consistent framework for the model of care, ensuring data sharing across provider partners (e.g., CMHCs, FQHCs, state agencies, PCPs). Working together to support the Enrollee, the multi-disciplinary team (MDT) removes the fragmentation that Enrollees face, and a single Care Coordinator helps them navigate what can be a complex healthcare system. Through this person-centered model, we help Enrollees advance on their journey toward better health facilitated by a single local Care Coordinator, a single ID card to use, a single care plan, and a single phone number to call when they need help or have questions.

In 2018, we invested more than $531,000 in community health initiatives in Kentucky, with particular focus on access to healthcare, nutritious food, and transportation. We are proud to have piloted this Community Connections model first in Kentucky in 2011 and witnessed firsthand its positive impact on the Commonwealth. Our community engagement partners work with local organizations to address social barriers and provide a deep, supportive safety net infrastructure for those who need it most—including individuals who are not WellCare Enrollees. Due to the program's success, WellCare has adopted the Kentucky model at their health plans nationwide.

Making a Local Impact on SDOH

Since launching the Community Connections program in Kentucky, we have connected more than 31,000 people to 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program, including a 26% reduction in emergency department visits, and a 53% decrease in inpatient spending.

The following section describes our innovative approaches to ensuring a whole-person care experience for our Enrollees—which remains the cornerstone of our model of care—through the domains of Enrollee, provider, and system transformation.

INNOVATIVE APPROACHES FOR THE ENROLLEE WHOLE-PERSON CARE EXPERIENCE

Act for Opioids Program

Developed in 2019, WellCare now offers a fully integrated, comprehensive ACT for Opioids Program, which includes a full suite of components that help us prevent and treat OUD for our Enrollees. In fact, the OUD program is a direct result of the hard work, dedication, and success of the pharmacy "lock-In" program implemented in Kentucky back in 2016—now referred to as our One Provider-One Pharmacy Program. Our new innovative approach expands Enrollee eligibility to include frequent ED use in addition to the standard 3 scripts, 3 MDs, 3 pharmacies.

It Takes a Village: Tackling the Opioid Epidemic in Kentucky

Today, we offer a brand new ACT for Opioids Program powered by the innovation and resources of WellCare Health Plans, Inc. Realizing that it takes the effort of an entire community to make impactful change, we partner with the Department, DHBDID, the 14 regional CMHCs, and local treatment providers to help Enrollees with OUD address ALL of their whole-person needs. To contribute, WellCare of Kentucky donated $100,000 to Volunteers of America to build a new addiction treatment program for new and expectant mothers in rural areas with no resources. We also provided hyper-local grants totaling $35,000 to OUD Recovery Programs across Kentucky such as Addiction Recovery Care (ARC).

The ACT for Opioids program strives to decrease inappropriate opioid use, identify at-risk Enrollees and abnormal prescribing patterns, effectively treat and manage those diagnosed with OUD, and drive down costs through a combination of evidence-based interventions and testing of new, innovative opportunities. We simplify the sometimes complex messaging to Enrollees, providers, family members, and friends while giving communities a rallying cry. We recognize that there is no magic bullet—yet—and commit to the relentless pursuit of answers

to this debilitating and costly national epidemic. For our Enrollees, we deliver comprehensive education, benefits, services and supports in a respectful, stigma-free approach that ensures those struggling with physical and emotional pain are offered pathways to responsibly pursue a confident, "better you," from prevention through recovery.

To date, we have experienced great results in Kentucky that show we are headed in the right direction—including the following downward trends in utilization of services:

- Inpatient admissions for Enrollees has decreased by 5%
- ED visits for Enrollees ages 19-30 decreased by 9.5%
- Inpatient costs for Enrollees ages 19-30 decreased by 29%

In 2018, WellCare of Kentucky saw a 27% drop in opioid utilization, with a 47% increase in MAT services, a 25% increase in maintenance medications, and a 33% decrease in emergency department (ED) utilization. In addition, WellCare now supports more than 12,000 high-risk Enrollees nationwide enrolled in the One-Provider-One Pharmacy program to monitor opioid utilization and guide their treatment and recovery with the support of specialized Care Coordination services. **Table C.20-1** describes our alignment with DMS for tackling the opioid epidemic and the new components of our ACT for Opioids Program.

Table C.20-1 ACT for Opioids Program

WellCare of Kentucky	ACT for Opioids Program Components
Alignment with: • Department and DHBDID Goals • Local stakeholders, such as the University of Kentucky (UK) and University of Louisville • CHFS' Kentucky Opioid Response Effort (KORE) • State Health Improvement Plan (SHIP)	In preparation to implement our new ACT for Opioids Program components, our Kentucky leadership team has reviewed both the Cabinet for Health and Family Services' Kentucky Opioid Response Effort (KORE) goals and the goals set forth by the Department of Public Health's State Health Improvement Plan (SHIP). As our team is rolling out new components, and planning on additional rollouts as soon as possible, we align with the KORE's mission and five major goals, which include preventing opioid-related overdoses and helping the following groups of Enrollees: those who survived opioid-related overdose, pregnant and parenting women, justice-involved individuals, children, transition-age youth, and families. Our programs, including specialized Care Coordination initiatives, tailor to the needs of special populations, such as high-risk pregnant Enrollees at risk of Neonatal Abstinence Syndrome (NAS), and children and youth in the foster care system. To support SHIP goals, we have components in place that support drug takeback programs and increase access to lifesaving medications and MAT across the Commonwealth.
New Program Implementations	WellCare of Kentucky will be rolling out the following new initiatives: • Predictive Analytics for the early identification of Enrollees at-risk of OUD based on the industry standard 3-3-3+ED protocol

WellCare of Kentucky	ACT for Opioids Program Components
	• Low Back Pain Management Program to support prevention and treatment protocols for the leading cause of opioid use • Expanded One Provider-One Pharmacy Program referral to integrated Care Coordination • Improved access to MAT providers • Partnership with the Kentucky Court Appointed Special Advocates (CASA) Network to help children in foster care and their families • Expanded use of the Screening, Brief, Intervention, and Referral to Treatment (SBIRT) model, which guides providers to rapidly assess the severity of OUD, engage in immediate feedback, and refer the Enrollee to a local treatment program • cCBT platform known as MyStrength, which provides Enrollees with interactive clinical programs and self-management tools empowering them to reduce the self-destructive cognitive and behavioral patterns caused by OUD • Clinical first fill edits for tighter review (except for cancer and other appropriate diagnoses) • Provider profiling on MEUs • Enhanced access to Narloxone
Additional Programs for Future Implementation	WellCare's ACT for Opioids Program offers an extensive suite of programs that our leadership team is evaluating for implementation in the Commonwealth as they become available, including: • Prescription Disposal Program through a partnership with DisposeRx • Alternative Pain Management Treatment Program (e.g., acupuncture, chiropractic services) • Peer Support Program that provides financing to train and match individuals with peers with lived experience to increase their engagement with OUD, physical, behavioral health, and pharmacy providers and social services • OUD-targeted P4Q programs to incentivize providers for OUD identification, treatment support, and referrals • On-demand mobile peer support for substance use through MAP Health
Community Connections in Kentucky	Our Community Connections model partners with local social services to eliminate daily stressors that serve as catalysts for substance use as well as barriers to treatment. The SHIP acknowledges income, education, and access to care as the three underlying SDOH leading to substance abuse. These partnerships address a spectrum of needs, including childcare challenges, housing instability, food insecurity, domestic violence, literacy challenges, and unemployment.
Funding for OUD/SUD Community-Based	WellCare of Kentucky has provided and continues to provide grant funding for over 20 different local programs, organizations, and CMHC

WellCare of Kentucky	ACT for Opioids Program Components
Organizations	initiatives, including the following: The Healing Place; Operation UNITE; Children, Inc.; Chrysalis House, Inc.; Knott Drug Abuse Council; UK Faces of Abuse Conference; Brighton Center; Audubon Area Community Services; Independence House; The Ridge Behavioral Health System Winter Workshop; Bluegrass Care Navigators Healthy Start Project; The Gene Duffy Foundation; Four Rivers Behavioral Health Moms Bridging Gaps Program; Project Daris; Twenhofel Middle School Youth Center; and Volunteers of America.

WellCare's Specialized OUD Care Coordination: From Addiction to Recovery

A 49-year old Enrollee was referred to Kentucky's specialized care coordination program after six treatment attempts for heroin addiction. Our care coordinator met the Enrollee at a residential treatment program, continued telephonic check-ins, and maintained contact as the Enrollee moved to a sober-living program. The care coordinator encouraged provider visits to follow up on hepatitis and routine medical care. The Enrollee has maintained sobriety post-discharge and is attending an intensive outpatient program, daily self-help groups, medical appointments, and is now actively seeking employment to re-enter the workforce.

ENROLLEE IDENTIFICATION AND STRATIFICATION ALGORITHM (ID/STRAT)

WellCare of Kentucky is better able to target and customize our Care Coordination process through our data-driven engine that enables us to facilitate the right care, at the right time. Our proprietary risk scoring and stratification process quickly and efficiently identifies Enrollees with a high level of physical, behavioral, and pharmacy need to be enrolled in Care Coordination services that address the whole person. Through rapidly assessing a variety of variables and Enrollee information from across our integrated data platforms, the ID/Strat algorithm identifies priority populations, such as those with emerging risk factors or high-risk needs (e.g., high-risk pregnancy, OUD/SUD). Driven by our predictive algorithm, the system automatically processes an Enrollee's re-admission risk, HRA results, chronic diagnoses, co-morbidities, medications, claims data, location, race, and ethnicity when identifying those who require more intensive Care Coordination support. **Figure C.20-4** highlights the ID/Strat process for which Enrollees are assigned a risk score of low, medium, or high.

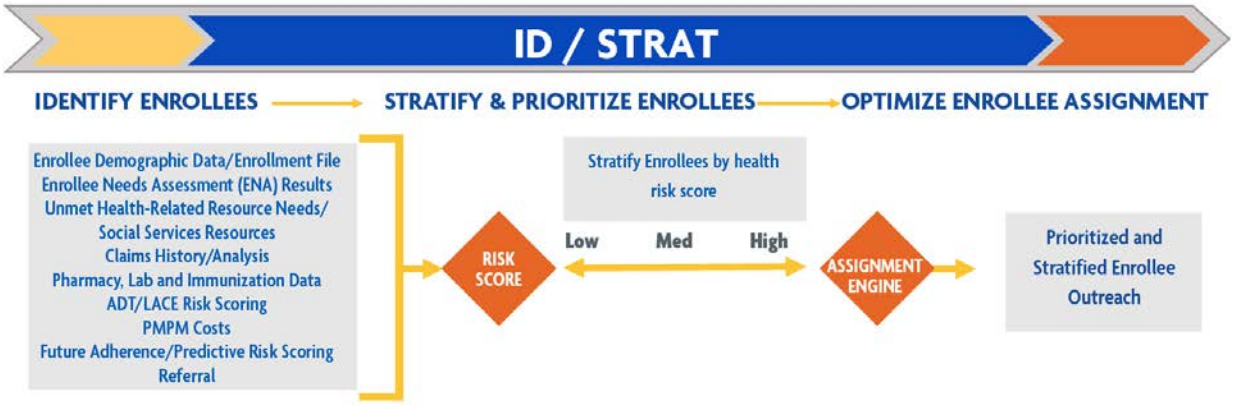

Figure C.20-4 Identification and Stratification Process (ID/Strat)

These identification methods apply a combination of screening assessments, data aggregation, and analytics combined with predictive analysis and risk scoring. An additional advantage of the tool is its capability to identify behavioral health risks often overlooked by more traditional identification models and in-person screenings. The system builds on information that is presented over time, creating a complete picture of Enrollee needs while providing insights in the meantime, using early indicators like HRAs and Rx, which are supplemented with more complete information from claims, and SDOH needs. The following describes additional features of the ID/Strat algorithm:

- Our modified LACE+ Index Scoring Tool for Risk Assessment of Hospital Readmission system alerts our clinical staff about an Enrollee's condition. Updated at the time of admission with the latest information, the LACE+ score helps to identify Enrollees most at risk for readmission and those that would benefit from enhanced discharge planning and community supports
- An emerging feature of our ID/Strat tool includes social service risk determined through our unique approach to cataloging and tracking Enrollee utilization of social service resources. We leverage this data to stratify Enrollees based on the severity and complexity of their health needs, and coordinate care that addresses their comprehensive physical, behavioral, pharmacy, and social needs

CARE COORDINATION/QUALITY MEASURES FOR SMI AND CO-MORBIDITIES

Our integrated care team and executive leadership team continually strive to identify new initiatives and programs that facilitate innovative solutions to treating Enrollees with co-morbidities that include serious physical health issues. In 2014, WellCare of Kentucky initiated a co-management program monitoring physical and behavioral health conditions for Enrollees with SMI and five or more chronic medical conditions—the SMI+5 Program. With a focus on the reduction in preventable Emergency Department visits and admissions associated with behavioral health needs and improving 7-day and 30-day follow-up rates, as well as improving physical health outcomes for individuals with SMI, the SMI+5 Program targeted adult Enrollees with SMI and five additional chronic medical conditions (e.g., asthma, COPD, diabetes, hypertension, heart disease, and AIDS).

SMI+5 Integrated Program Success

Now a fully integrated part of our care coordination process, the results of the original SMI+5 program were significant, including a 31% decline in total cost of care for Enrollees, driven largely by a 66% decrease in inpatient expenses and a 10% decrease in ED visits.

With an emphasis on local, face-to-face, integrated Care Coordination, we reduced Enrollee Emergency Department utilization, as well as hospital admissions and readmissions, and improved Enrollee frequency of visits to the Primary Care Provider and psychiatrist (as well as medication adherence). All Care Coordinators participating in the SMI+5 program received training on motivational interviewing, Enrollee safety, and documentation, as well as condition-specific training (e.g., schizophrenia, bipolar disorder, anxiety, depression, suicide assessment and prevention, OUD/SUD, asthma, COPD, diabetes, hypertension, and obesity). This program supported targeted and high frequency interventions for medication management, home delivery of medication, and monitoring of compliance through home health providers. Throughout the process, we emphasized the importance of addressing SDOH, ensuring that services were identified and accessed, with further intervention taking place if necessary.

Today, our integrated care teams apply these strategies throughout our regional pods located across the Commonwealth. As a result, our Enrollees have experienced positive physical health outcomes, including **a 44.3% reduction in pneumonia admissions; 17.2% reduction in COPD admissions; 64% reduction in admissions for children with asthma; and a 51.8% reduction in admissions for adults with asthma.**

Included within this approach, we track, monitor, and engage our providers to close Enrollee care gaps for the following HEDIS measures:

- *APP.* Metabolic Monitoring for Children and Adolescents on Antipsychotics with two or more antipsychotic medications (can be the same one filled twice) should have HbA1C test or blood glucose test and LDL-C or cholesterol panel completed annually.
- *AMM.* Antidepressant Medication Management for Enrollees diagnosed with major depression, treated with medication, and remaining on medication for at least 12 weeks or six months.
- *SAA.* Adherence to Antipsychotic Medication for Individuals with Schizophrenia who are dispensed medication and remain on it for at least 80% of their treatment period.
- *SMC.* Cardiovascular Monitoring for People with Cardiovascular Disease and Schizophrenia should have an LDL-C test annually.
- *SMD.* Diabetes Monitoring for People with Diabetes and Schizophrenia should have an LDL-C test and HbA1C (not blood glucose) test annually.
- *SSD.* Diabetes Screening for People with Schizophrenia or Bipolar Disorder Using Antipsychotic Medications should have an annual diabetes screening (HbA1C or blood glucose test).

Integrated Support for Enrollee with Hypertension and Depression

In 2018, a 58-year-old WellCare of Kentucky Enrollee was admitted to a behavioral health inpatient facility after increasing feelings of depression leading to suicidal thoughts. The Enrollee was feeling hopeless due to grief over the loss of her significant other and several of her friends. Unfortunately, she was also out of work with no job prospects, causing her to worry that her sister would ask her to leave the household for not contributing to the rent and other expenses. After learning about her situation, our integrated care team spoke with her, listened to her needs, and set a path forward to help her address her issues step-by-step. We began the process by connecting her to a qualified therapist to help her understand and treat the ongoing grief she was feeling. We then connected her to several local job training programs using the Community Connections database, helping give back some of that hope she had previously lost. With a diagnosis of hypertension, we also treated her physical health needs and saw that she received a home blood pressure monitor and education on using the device to assist her with managing the condition. Lastly, we provided education on diet and exercise plans, which helped her develop healthy habits while learning new coping skills in therapy to manage her grief.

ENHANCED CLINICAL PHARMACY PROGRAM

As part of the integrated care team, our clinical pharmacists and pharmacy technicians, led by our Pharmacy Director, Thea Rogers, PharmD—who specializes in psychiatry—lead our Enrollee medication management reviews. Our PharmDs collaborate with the utilization management team for the discharge planning process and support field-based Care Coordinators performing medication reviews. To support our Enrollees' pharmacy needs and to ensure we approach the management of their medications as a team from a whole-person care perspective, we developed a behavioral health polypharmacy program within our already robust pharmacy services. On a monthly basis, we identify Enrollees with more than one antipsychotic medication. This process takes into consideration an Enrollee's age—for example, we identify elderly Enrollees with conditions, such as dementia, who are prescribed multiple antipsychotics. Once identified, we collaborate with their PCP and the prescriber to request a medication review. **In 2018, we targeted over 400 Enrollees with a success rate of 60% -- meaning approximately 250 Enrollees no longer met the criteria**. In addition, our Pediatric Antipsychotic Utilization Program identifies potential drug therapy issues, including excessive doses and multiple medications for children ten years or younger. When an issue is identified, we engage the provider with evidence-based recommendations and guidance. **In 2019, we performed targeted medication reviews for over 850 Medicaid Enrollees under the age of ten.**

Pharmacy Integration Makes a Difference

In addition to our behavioral health focused pharmacy programs, we offer a robust suite of clinical services, such as medication adherence outreach for physical health issues (e.g., such as asthma and diabetes), our Healthy Living Medication Management Therapy (MTM) Program, and access to the prevention and treatment services driven by WellCare's national ACT for Opioids Program. Also, in Kentucky, 95% of pharmacies are on the EQuIPP (Electronic Quality Improvement Platform for Plans and Pharmacies) network—a pharmacy benchmark system that provides performance data associated with quality measures. Compared to the national benchmark, our local pharmacies on the EQuIPP platform performed better in improving medication adherence for diabetes in the Medicaid population.medication adherence for diabetes in the Medicaid population.

COMMUNITY CONNECTIONS PROGRAM TO ADDRESS SDOH

Identifying and addressing SDOH through our Community Connections program is a critical element of the whole-person care experience and care planning process. The program, led by Elizabeth Starr, Enrollee Services Manager, partners with community-based social services in Kentucky to help Enrollees eliminate daily stressors that serve as barriers to treatment, such as childcare challenges, housing instability, food insecurity, domestic violence, literacy challenges, and unemployment.

We incorporate the SDOH needs identified during the assessment process into the person-centered care plan within the Enrollee Care Compass in CareCentral. Care Coordinators use motivational interviewing skills to help each Enrollee and their families or caregivers set personal goals and develop an action plan inclusive of their SDOH needs. As we guide the Enrollee through the Care Coordination process to address their physical, behavioral, and pharmacy needs, we simultaneously leverage the Community Connections database to connect them to local social services provided by community and faith-based organizations across the Commonwealth.

All Enrollees (regardless of enrollment in Care Coordination) can call our toll-free CCHL at any time for assistance accessing the nearly 330,000 Kentucky resources listed to mitigate the Enrollee's social barriers to health. Our 'close-the-loop' process ensures Enrollees receive the recommended services with the desired impact on clinical and non-clinical goals. The database organizes community resources by zip code and county, based on 70 categories of potential social need. We leverage education materials (flyers and cards) to target our Enrollees and inform them of this free service, though we will assist anyone who calls, even if they are not a WellCare of Kentucky Enrollee. The hours of the CCHL are Monday through Friday, 9 a.m. to 6 p.m., across all U.S. time zones.

Helping Enrollees Manage Chronic Conditions Through Transportation Access

Since launching the Community Connections model in Kentucky, our team has made over 48,000 referrals to transportation services across the Commonwealth. Over 25,000 of those referrals were made for trips to grocery stores, employment, and assisting those with accessing necessary resources such as food pantries, and agencies that may assist with financial assistance for rent and utilities. Continually voted a top priority and need across different counties at our Community Impact Councils (CIC), we know that Enrollees with whole-person care needs, such as chronic physical health conditions like diabetes, hypertension, and asthma, need to consistently attend medical appointments with their care team and PCP to properly manage their conditions and behavioral health diagnoses. The CIC hosted in Muhlenberg County resulted in a medical voucher program (MVP) in partnership with Pennyrile Allied Community Services, Inc. (PACS), which was later extended to the remaining PACS service regions. On average, we found that Enrollees accessing PACS transportation services have 3.5 chronic conditions, including 66.2% with hypertension; 34.1% with asthma; 35.9% with diabetes; and 31.4% with obesity. In addition, we found Enrollees to have 1.5 behavioral health conditions, including 42.8% with depression, 53.4% with a mental illness, 18.0% with severe mental illness, 12.4% with bipolar disorder, and 16.2% with substance use issues.

Upon one year of increased transportation services in the region for Enrollees with diabetes, we found a 17.4% reduction in emergency visit costs; 12.6% reduction in emergency visits; 41.4% reduction in non-emergent emergency visits; 38.9% reduction in inpatient admissions; and 36.3% reduction in hospital stay days. For Enrollees with asthma, we observed a 43.2% reduction in inpatient admissions, 63.9% reduction in hospital days, and 72% reduction in visits related to asthma exacerbations.

MOBILE HEALTH APPLICATIONS FOR SELF-DIRECTED CARE

We believe Enrollees should be able to access care when they need it, where they need it. For that reason, WellCare of Kentucky has invested in mobile solutions that provide services such as self-directed care and computerized cognitive behavioral therapy (cCBT) to address their physical and behavioral health needs.

MyStrength. An online, evidence-based behavioral health therapy platform, in **Figure C.20-5**, MyStrength provides Enrollees with interactive clinical programs empowering them to address depression, anxiety, stress, substance use, chronic pain, and sleep challenges, while also supporting the physical (e.g., smoking cessation, diabetes) and spiritual aspects of whole-person care. MyStrength's integrated model includes computerized cognitive behavioral therapy (cCBT), mindfulness, motivational interviewing and Assertive Community Treatment (ACT) protocols with personalized pathways that facilitate user interaction, mood trackers, and additional tools to measure effectiveness and improvement. **MyStrength has shown the following benefits upon implementation: a 43% rapid symptom reduction within the first two weeks of engagement, 83% as effective as face-to-face therapy at a fraction of the cost, and a 70% cost reduction in total expenses for Enrollees.**

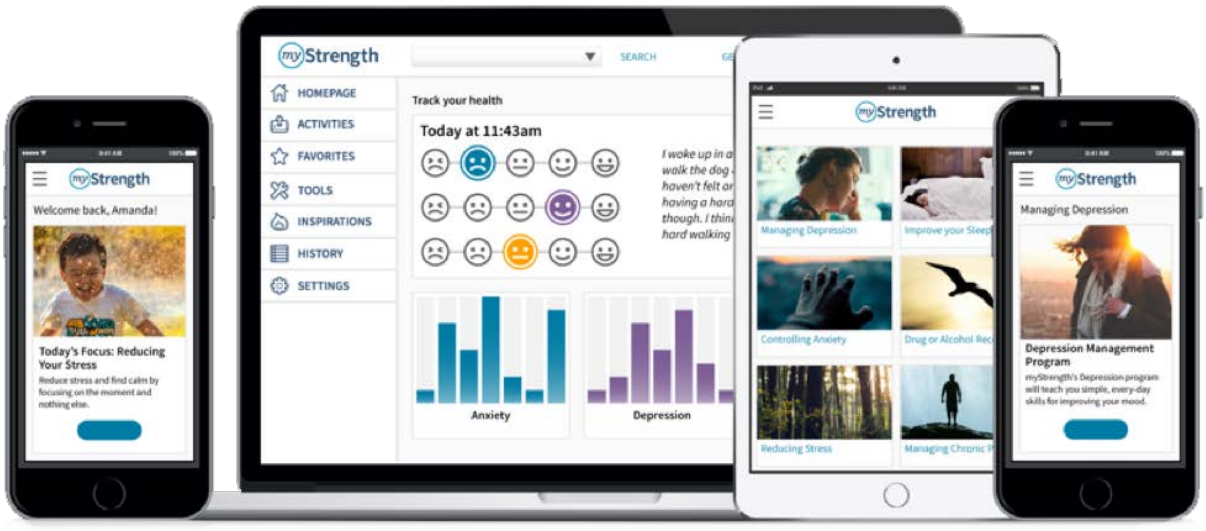

Figure C.20-5 MyStrength Behavioral Health Therapy Platform

Baby's First Text Messaging Program. Baby's First is our text messaging program. Mothers can easily sign-up with the help of their Care Coordinator or by texting BABY1 to 52406. Enrollees receive up to six text messages per week that provide guidance from birth to 15 months postpartum. Program guidance includes links to videos, questionnaires, and other resources that cover topics, such as child development, daily care tips, vaccinations, wellness visit reminders, breastfeeding instructions, home safety measures, nutrition and healthy eating, and developmental milestones, to name a few.

"The Baby's First program conveniently connects new mothers who are on the go to the tools they need to ensure their babies have the best start in life. It also supports new mothers who face barriers to certain resources due to social determinants of health, such as lack of transportation or food insecurity, that impact health outcomes. Now they can access the support they need anywhere at no cost to them, which helps to eliminate obstacles and promote healthier communities."

– JESSICA ANDERSEN, QUALITY IMPROVEMENT
MATERNAL CHILD PROJECT MANAGER, WELLCARE OF NEBRASKA

JOOL Health Coach. Last year, we collaborated on a new program for our foster care youth with JOOL Health Coach, a personal coaching smartphone application that encourages youth to check in with their peers and engage in healthcare services. With tailored tracks specific to different populations, Enrollees have access to a transition-aged youth pathway for those with OUD/SUDs. JOOL includes OUD/SUD assessments, resources, and referral information to help youth and their families easily learn about their conditions and the local treatment options available in their community.

Maternity Smartphone Application (Pacify). At the touch of a button, our new app, Pacify, offers expecting and new mothers unlimited 24/7 video access to certified dieticians and lactation consultants. Enrollees receive breastfeeding support and guidance from these specialized providers for any health issues their babies may be experiencing such as colic, digestion, and transitioning to solid foods, to name a few. As part of our ongoing focus on continuous quality

improvement and ensuring Enrollees receive the care they need, Pacify aims to improve health outcomes while also reducing costs to the healthcare system. Push notifications include helpful alerts for health and safety tips beneficial to both mothers and their babies.

AbleTo. The AbleTo program is a virtual CBT solution providing weekly coaching sessions with a coach and professional therapist to handle the behavioral health components of co-morbidities. The team helps the Enrollee set goals and build a program tailored to their personal needs. Coaching sessions occur twice a week at a time convenient to the Enrollee.

Fit4D. Supporting youth and adolescents with Type 1 and Type 2 diabetes, Fit4D is a support tool that includes chat messaging and push notifications. Through personalized education and coaching services, Fit4D supports Enrollees by teaching self-management behaviors and guidance for following treatment and care plan recommendations, as well as participating in preventive services. Health coaches speak to both the guardian and the Enrollee, or for older participants, help supplement diabetes treatment and education as Enrollees learn to manage treatment on their own.

MAP Health Management. This tool provides mobile peer support for SUD. MAP is a national vendor that matches Enrollees with a peer with the same lived experience as they go through detox and need support for their triggers. Addiction is a chronic disease—MAP's peer recovery support services extend the care continuum to match the chronic nature of the disease. Following are the goals for the tool:

- Improve long-term engagement across SUD Enrollee populations to facilitate early intervention, motivate Enrollees to seek treatment when appropriate, reduce the impacts of relapse, and direct care needs such as readmission when appropriate
- Reduce out of network utilization for SUD treatment
- Capture and report on longitudinal outcomes data, including social determinants of health, on SUD populations and treatment programs

We understand that Enrollee engagement is key to recovery success, which is why providing this real-time, 24/7 access to support and ability to triage for additional services is critical. This connectedness helps Enrollees feel less alone and isolated.

PEER SUPPORT PROGRAM

Based on WellCare's national model, our peer support program provides financing to train and match individuals to peers with lived experience who facilitate increased engagement with the Enrollee's physical, behavioral, and OUD/SUD services. Peers have the ability to help Enrollees make their own decisions on a day-to-day basis—relating to them in a way that a clinician or therapist may not be able to—and work with them to stay on track with their medications and treatment plan. WellCare's health plan in Hawaii recently funded training for eight peer specialists, and we welcome the opportunity to apply this model in the Commonwealth.

DIGITAL LIBRARY

Using the Enrollee portal, WellCare of Kentucky website, or the MyWellCare mobile smartphone application, Enrollees, families, and caregivers have access to our digital library, which includes information on mental health, substance use, self-help tools such as cCBT, and

our vignette series of People Like Me that provides stories from those with lived experience with mental health and substance use.

INNOVATIVE APPROACHES FOR PROVIDER TRANSFORMATION

Led by our provider engagement team, we support and guide our providers, which includes CMHCs, Federally Qualified Health Centers (FQHC), physician practices, and hospital partners, along the complex continuum of integrated services. We help providers who take the initiative to evolve their practices into co-located offices or advanced Behavioral Health Homes (BHHs). This innovative approach to provider transformation leverages collaboration between our quality team and provider representatives, process support from data analytics and project managers, and ongoing team meetings between WellCare of Kentucky and the provider to implement the transformation plan.

VALUE-BASED PURCHASING (VBP) CONTRACTS FOR INTEGRATED SERVICES

We incentivize providers and CMHCs through VBP contracting and alternative payment models (APMs) that promote, track, and reward whole-person care integration activities, such as using PCP-behavioral health integration toolkits, applying preventive measures and behavioral health screenings, facilitating access to care for physical and behavioral health conditions, managing chronic conditions (e.g., HbA1c control, medication adherence), and meeting HEDIS measures. **Table C.20-2** describes the integrated physical and behavioral health HEDIS quality measures of our current Kentucky Pay-For-Quality (P4Q) Program that providers receive financial compensation for when meeting compliance standards for assigned Enrollees.

Table C.20-2 VBP HEDIS Measures and Participating CMHCs

VBP HEDIS Measures	Participating CMCHC Partners
• AMM—Antidepressant Medication Management • SAA—Adherence to Antipsychotics • FUH—Follow-up after BH Hospitalization • SMC—Cardiovascular Monitoring for Enrollees with Schizophrenia • SMD—Diabetes Monitoring for Enrollees with Schizophrenia and Diabetes • SSD—Diabetes Screening for Enrollees with Bipolar Disorder or Schizophrenia Taking Antipsychotic Medications • APM—Metabolic Monitoring for Children taking Antipsychotics	• Four Rivers Behavioral Health • Pennyroyal Center • River Valley Behavioral Health • Centerstone of Kentucky • Communicare Mental Health Center • Lifeskills • Adanta Group Behavioral Services • Bluegrass • North Key Community Care • Pathways • Comprehend • Cumberland River Behavioral Health • Mountain Comprehensive • Kentucky River Community Care

All CMHCs, FQHCs, and providers receive a tip sheet, and ongoing care gap reports to help them meet the required standards of care. In addition, the P4Q Program allows providers to earn incentive payments for closing care gaps, ensuring medication adherence, and engaging in preventive health services. **Through education and support, CMHC providers have contributed to helping WellCare of Kentucky close over 730 Enrollee care gaps from January through March of 2019, which will result in nearly $30,000 of financial incentive payments to our providers.**

INTEGRATED PROVIDER PLATFORM

Our fully integrated provider portal includes advanced reporting tools that share meaningful and actionable Enrollee data to support CMHCs, FQHCs, and behavioral and physical health providers as they facilitate integrated services. Our Care Management platform, CareCentral, includes our Enrollee Care Compass application—a 360 view of the Enrollee, which includes the person-centered care plan, care gaps, interventions, medications, SDOH, and utilization history that is pushed out to the provider portal. Through integration of Enrollee data with our network providers, they have access to Enrollee data and the ability to update care plans using the provider portal, which is then accessible in the Enrollee Care Compass' person-centered care plan and available to the entire MDT. The Enrollee 360 profile reflects the results of the initial HRA, and the Enrollee Needs Assessment (ENA), which includes behavioral health and SUD

WellCare of Kentucky supports providers with reporting tools to help them facilitate the whole-person care experience, such as care gap heat maps to identify health issues by zip code, care gap reports and appointment agendas with potentially missed diagnoses, and a scorecard that assesses their performance providing integrated services and a whole-person care experience.

screenings, care needs, co-morbidities, and identifies high-risk Enrollees with serious mental illness (SMI) or serious emotional disturbance (SED).

CareCentral uses branching logic to automatically generate interventions and action steps for the Care Coordination team based on the results of these assessments. Through the portal, the entire MDT stays connected through a unified workflow centering on the updated care plan and interventions tailored specifically to each Enrollee. Alerts for overdue and follow-up actions are sent out to ensure providers stay on track and perform the necessary steps toward meeting the Enrollee's health and personal goals. In addition, we have aligned our metrics and reporting capabilities to track and analyze integrated, whole-person services for utilization, HEDIS measures, claims data (e.g., medical, behavioral, pharmacy), readmissions, ED use for all diagnoses, cost of care, and shared savings.

PROVIDER INTEGRATION SUPPORT AND TRAINING

We support the progression toward a co-located, integrated medical office, or a more advanced BHH. In some cases, this approach involves leveraging the industry best practice referred to as the Collaborative Care Model. This model evolves the whole-person care experience to the next level by creating a formal MDT led by the PCP and supported by a behavioral health Care Coordinator and network psychiatrist to treat mental health and substance abuse conditions using evidence-based diagnoses, treatment, and follow-up care. **Table C.20-3** describes the support, training, and resources for our partners and other network providers.

Table C.20-3 Provider Resources

Resources	Description
WellCare Of Kentucky Staff	Our support team proactively guides providers as they advance to a co-located office or BHH. We meet them at their offices to engage in training and conduct readiness assessments. Our provider services team includes a wide array of subject matter experts who work together to support the transformation process, including medical directors, quality practice advisors (QPAs), field Care Managers, operations account representatives, practice transformation specialist, claims specialists, behavioral health coordinators, pharmacists, and staff specializing in electronic medical record (EMR) integration and reporting.
Provider Training	Our training program includes a readiness assessment that outlines the different phases of the process, including milestones and key change concepts based on patient-centered care, continuous quality improvement, and sustainable business operations. We help each practice analyze their current workflow to reduce unnecessary testing, facilitate smart referrals for whole-person support, and leverage their Enrollee data to gain insights into quality, cost, and utilization performance. We work with each practice on quality improvements, educating providers on the VBP contract and tracking whole-person HEDIS

Resources	Description
	quality measures, such as LDL Cholesterol, Follow-up within 7 days after Mental Health Hospitalization, and Diabetes Screening for Enrollees using Anti-Psychotics. Training includes the use of integrated screening tools, clinical practice guidelines (CPG), Care Coordination and management, working with the MDT, participating in cross-training for physical and behavioral person-centered care, and caring for Enrollees with co-morbid conditions. In addition, we train providers on identifying the social support needs of our Enrollees using reports that track social data and care needs and plugging the Enrollee into community resources through our Community Connections model and closed-loop referral system.

Leveraging Lessons Learned and VBP Incentives from WellCare Health Plans

In Arizona, WellCare implemented a shared savings arrangement with Catalytic Health Partners that aligned with the Substance Abuse and Mental Health Services Administration's (SAMHSA) six levels of behavioral health integration. This partnership has resulted in improved outcomes for Enrollees receiving whole-person care, including a 36% decrease in ED visits, a 47% decrease in PHQ-9 depression scores, a 91% increase in blood pressure improvements, and an estimated $1.1 million in medical and pharmacy savings.

INNOVATIVE APPROACH TO SYSTEM TRANSFORMATION IN KENTUCKY

WellCare of Kentucky has been a pioneer in system transformation since 2011. Our infrastructure includes an extensive network of qualified, experienced behavioral health providers and relationships with the CMHCs, FHQCs, and other providers in each region of the Commonwealth. This network ensures that Enrollees have access to an environment that proactively encourages and supports a fully integrated experience for whole-person care. As the healthcare system in the Commonwealth continues to evolve, we continue to promote innovative approaches that improve the whole-person care experience for our Enrollees, including co-located offices and BHHs. Along with some of our most progressive and highest performing provider partners in the Commonwealth, we believe in a shared vision for the future state of behavioral health environment, in which "reverse integration" at an Enrollees behavioral health provider facilitates access to mental health care as well as Primary Care Providers and even specialists to treat their co-morbid physical health conditions, such as Hepatitis C, diabetes, asthma, and hypertension. We offer practice transformation teams that guide the transition to a BHH through an implementation plan, project managers, a readiness

Figure C.20-6 P4Q Incentives

assessment, quality tracking and HEDIS measures, literature, a sample is illustrated in **Figure C.20-6**, and a thorough evaluation of current business practices.

These BHHs will give our providers the ability to coordinate true, whole-person care for Enrollees with severe behavioral health conditions, OUD/SUDs, and intellectual and developmental disabilities (IDD). In addition, we can facilitate direct access to our Community Connections program and database from the BHH, enabling providers treating the comprehensive needs of our Enrollees to connect them to local partners in their community that address SDOH.

Our current BHH initiatives are driven by VBP P4Q contracts that incentivize behavioral health providers, FHQCs, and CMHCs through a per member/per month (PMPM) payment for coordinating integrated services that facilitate a whole-person care experience. We also understand that this can be a daunting task for individual providers and even large provider groups, which is why we remain flexible with our support options. For example, if a provider lacks the time, energy, or resources to transition their practice to a BHH, we encourage them to implement partial system transformation, such as the addition of a co-located therapist in a PCP office to support their Enrollees behavioral health needs.

WellCare's Behavioral Health Home Model Sees Impactful Results in Florida

WellCare's health plan in Florida was the first MCO in the state to remove contract barriers for integrated providers, allowing behavioral health providers to bill for PCP services delivered through their programs. Through a partnership with the Peace River Center, WellCare supports the state's first Behavioral Health Home (BHH) backed by a VBP contract, applying a monthly PMPM payment to incentivize coordinating medical and behavioral health care for comorbidities. As a result, 100% of Enrollees with comorbidities received behavioral health screenings and referrals, 100% received depression screenings, 68% of Enrollees with hypertension had their symptoms adequately controlled, and 78% documented body mass index (BMI) scores.

ii. Approach for coordination with carved-out services (e.g., transportation and transitions to long term supports and services).

WellCare of Kentucky coordinates with carved-out services, such as transportation and transitions for long-term supports and services, with DMS and community organizations that provide support for our Enrollees through our Community Connections program. In addition, our fully integrated Care Coordination team provides comprehensive guidance and support for physical health, behavioral health, pharmacy, and SDOH, working closely with our Enrollees to identify gaps in care, and when applicable, to coordinate their carved-out services managed by DMS or other local organizations. We track access to carved-out services in CareCentral,

Transportation Helps Enrollees Adhere to Medical Appointments

Today, WellCare of Kentucky provides referrals to over 220 organizations providing NEMT, with 48,000 total referrals made to date, helping ensure that our Enrollees maintain their treatment plans and attend appointments that help them treat chronic medical conditions.

ensuring that the Enrollee's person-centered care plan accurately reflects the services they have received. We share the care plan with state agency care managers, local health departments, and other entities supporting our Enrollees, including waiver programs.

Our goal is to always assist Enrollees through identifying, coordinating, and referring them to the appropriate carved-out service and incorporate their activities, information, and results into their person-centered care plan within the CareCentral platform. This approach includes the following components.

Enrollee Engagement and Education. We inform Enrollees of the carved-out services available to them through a variety of communication channels including direct outreach to the Enrollee, the Enrollee portal, the WellCare of Kentucky website, the MyWellCare smartphone application, and the Enrollee Handbook. The Enrollee Handbook includes guidelines describing the available carved-out services, accessing those services, and coordinating services. The provider engagement team informs providers in each region of the Commonwealth about accessing carved-out services for our Enrollees, enabling them to facilitate referrals and engage in educational opportunities when applicable. Enrollees can contact their Care Coordinator, the Enrollee Services Line, or CCHL to discuss accessing their carved-out services. As stated, our Care Coordinators understand the needs of our Enrollees, and typically know when an individual requires access to a service not covered by WellCare of Kentucky.

Community and Stakeholder Relationship. Our leadership team manages carved-out services at the local level with our partners and community organizations in Kentucky. The Community Connections program, which connects our Enrollees to community resources and support, was piloted when we launched it in Kentucky in 2011. It has now evolved into one the most significant initiatives for WellCare across the country. WellCare of Kentucky's community engagement staff live and work in the regions they support to develop and maintain partnerships with peer organizations throughout the Commonwealth, including schools, faith-based organizations, and food pantries.

WellCare Staff Training. We train all Enrollee-facing staff on managing carved-out services and coordinating Enrollee benefits and all provider-facing staff on the authorization and referral process. We regularly update staff and our subcontractors in the Commonwealth on changes in benefits, and carved-out services as they occur. By streamlining training for all internal departments, including Enrollee Services, Utilization Management, Care Coordination, and Provider Relations, our staff fully understand the available carved-out services and the coordination process to support integration.

Table C.20-4 describes our approach to providing a few of the specific carved-out services mentioned by DMS.

Table C.20-4 Kentucky Carved-Out Services

Carved-Out Service	Description
Transportation	As Non-Emergency Medical Transportation (NEMT) is currently facilitated by the Kentucky Transportation Cabinet, Office of Transportation Delivery (contracted by DMS) and not the MCOs, we have a process in

Carved-Out Service	Description
	place to seamlessly coordinate services that enable our Enrollees to easily access transportation. As our goal is to prevent appointment cancellations, and help our Enrollees manage their chronic conditions, we assist them with the required paperwork, information, and sending their transportation requests to DMS. Understanding that sometimes, an Enrollee may not qualify for NEMT services, we leverage our Community Connections team to connect the Enrollee with external, non-profit community agencies that provide transportation to medical appointments. We also engage the Enrollees friends and family, if available, to find the best and most easily accessible option. **Today, we offer referrals to over 220 organizations providing NEMT, with 48,000 total referrals made to date.** In addition, we believe that the direct-to-consumer telehealth model taking effect in July will help alleviate some of the transportation burden through easier access to care. **We also believe that when the direct-to-consumer telehealth model becomes effective in July, this may alleviate some of the transportation burden.**
Long-Term Support and Services (LTSS)	With the understanding that LTSS is not managed by the MCOs in Kentucky, we coordinate services for our Enrollees and cover services for 30 days while they transition back to their community. Our Care Coordinators assess Enrollees for comprehensive needs (including LTSS) and make the appropriate referral to the FFS program where they are put on a waiting list. We coordinate PCP sign-offs for home care, coordinate covered and LTSS services, and educate providers and LTSS providers of the Enrollee's needs. We also coordinate with the providers regarding alerts for emergency department or inpatient admission or when Enrollee needs are not being properly met. Following acute events, we help Enrollees transfer to their least restrictive setting of choice and re-engage the community LTSS system where appropriate. In addition, we identify and assist Enrollees through covered services that support and sustain their living situation at home, such as durable medical equipment (DME), nurse aids to assist with activities of daily living (ADL), wheelchair ramps, and safety devices.
Specialized Kentucky Programs (e.g., HANDS, First Steps)	Our Care Coordinators assist Enrollees with accessing special state programs, such as Kentucky's Health Access Nurturing Development Services (HANDS), a home visiting program for expecting mothers and new parents, and the First Steps early intervention program for children with developmental delays. We connect Enrollees to programs, such as HANDS, through our Baby Steps maternity program described in Section 20.a.iii. To coordinate these services, we make a referral directly to the service provider and assist the Enrollee with the scheduling and logistics of the evaluation.

Carved-Out Service	Description
	Through the Community Connections database, our Care Coordinators provide referrals to over 150 parenting resources and 290 different parenting-related activities, such as Free Healthy Baby Classes. **In 2018, we made over 5,000 referrals to local parenting resources.** In addition, we offer referrals to five organizations offering autism services and connect Enrollees to autism-related activities, such as Autism Safety Day and an Autism Support group.
Waiver Service Programs	For Waiver Service Programs, we educate our Enrollees about the different programs, and at the Enrollees request, we coordinate with the Home Health Agency in their community that performs waiver assessments through a referral that allows them to begin the process of qualifying for the program.

iii. A description of any value-added services the Vendor proposes to provide to Enrollees.

As an experienced managed care partner to the Commonwealth, we offer access to an extensive suite of Value-Added Services (VAS) for our enrollees. At the heart of our integrated whole-person care model, these services help our Enrollees fill in critical gaps and support structures typically not covered under the umbrella of traditional benefits. Our thoughtful selection is tailored to the Kentucky population and represents what we believe are the best services capable of supporting the at-risk populations in the Commonwealth and addressing their whole-person needs for them and their families.

We develop VASs through an ongoing assessment of our Enrollees' needs—a process supported by our corporate partners at WellCare and our Community Connections model that addresses the social determinants of health having an impact on our Enrollees at a regional level. Feedback from our network of providers informs VAS development. Our VASs meet unmet social needs while focusing on education and prevention, helping individuals avoid unnecessary visits to the ED or the local hospital, and thrive through accessing resources available in the local community, thus improving health outcomes.

These services help Enrollees prevent chronic health conditions, support positive behaviors that may prevent or delay chronic disease, and improve their overall quality of life. As stewards of our Enrollees' health and satisfaction of services, our fully integrated Care Coordination team is responsible for identifying an individual's needs and helping them access the appropriate VASs. We guide them along the continuum of care, engaging them with physicians to address their whole-person needs, de-escalate health crises, and connect them to local peer and support networks, all of which is supplemented by VASs that contribute to overall health and well-being.

The following section describes the VASs provided to our Enrollees in the Commonwealth:

IMPROVING HEALTH OUTCOMES

Boy Scouts of America (BSA). As one of the largest youth organizations in the United States, the BSA operates through more than 2.4 million youth participants and nearly one million adult volunteers. We facilitate a free annual membership for Enrollees ages 6-18 to the BSA, which includes the member fee for health and accident insurance, as well as $25 toward uniforms. The goal of the BSA is "to train youth in responsible citizenship, character development, and self-reliance through participation in a wide range of outdoor activities, educational programs, and, at older age levels, career-oriented programs in partnership with community organizations."

Scouting values and education incorporate trustworthiness, good citizenship, and outdoor skill development. Local educational and club memberships such as the BSA help children, youth, and young adults develop a positive self-image, self-esteem, and healthy behaviors. In addition, young adults and scout leaders serve as mentors for younger children enrolled in the program, helping to teach positive behaviors that they can leverage in other areas of their life, such as school and sports programs.

Behavioral Health Services Hotline. The service hotline provides Enrollees with 24-hour support with drug and alcohol abuse and behavioral health concerns. Applying a person-centered approach to service, our hotline representatives provide crisis triaging to assess the Enrollee's need for crisis services, urgent care, or connection to their Care Coordinator and MDT for immediate engagement. Our high level of overall responsiveness rests on our "no-wrong-door" point of entry for phone calls, regardless if a call comes from an Enrollee, provider, or caregiver. To ensure we manage the crisis and assess for any other needs, we follow up with Enrollees within 24 hours (next business day) for all calls made to the hotline.

Girl Scouts of America (GSA). GSA is a youth organization for children in the United States and American girls living abroad. We provide our Enrollees ages 6-18 with a free annual membership, as well as for adult Enrollees seeking to become a troop leader or participate in GSA activities. We provide $25 toward uniforms. The GSA prepares girls to empower themselves and promotes compassion, courage, confidence, character, leadership, entrepreneurship, and active citizenship through activities, such as camping, community service, and learning first aid.

Home-Delivered Meals Program. Enrollees discharged (within 14 days) from an inpatient hospital, rehabilitation, skilled nursing facility, or behavioral health facility can receive ten meals per authorization. Home delivered meals help Enrollees support a healthy lifestyle through nutritious "whole" food to help with the recovery process following discharge.

Maternity Smartphone Application. At the touch of a button, new mothers have unlimited video access, 24/7, to certified dieticians and lactation consultants. Enrollees receive breastfeeding support and guidance from these specialized providers for any health issues their babies may be experiencing such as colic, digestion, transitioning to solid foods, to name a few. As part of our ongoing focus on continuous quality improvement and ensuring Enrollees receive the care they need, while the app aims to improve health outcomes while also reducing costs to

the healthcare system. Push notifications include helpful alerts for health and safety tips beneficial to both mothers and their babies.

MyStrength. An online, evidence-based behavioral health therapy platform, MyStrength provides our Enrollees with interactive clinical programs empowering them to address depression, anxiety, stress, substance use, chronic pain, and sleep challenges, while also supporting the physical (e.g., smoking cessation, diabetes) and spiritual aspects of whole-person care. MyStrength's integrated model includes computer-based cognitive behavioral therapy (cCBT), mindfulness, motivational interviewing and Assertive Community Treatment (ACT) protocols with personalized pathways that facilitate user interaction, mood trackers, and additional tools to measure effectiveness and improvement.

JOOL Health Coach. We are piloting a personal coaching smartphone application that encourages youth to check in with their peers and engage in healthcare services. It is tailored to specific populations and gives Enrollees with an SUD access to a transition-aged youth pathway. JOOL includes SUD assessments, resources, and referral information to help youth and their families learn about their SUD and the local community treatment options available.

Figure C.20-7 MyWellCare Smartphone Application

MyWellCare Smartphone Application. Our free MyWellCare mobile smartphone application, compatible with Apple and Android devices and shown in **Figure C.20-7**, enables Enrollees to assume more responsibility for their health through familiar tech capabilities and functions. Enrollees can call the Enrollee service number on the back of their ID cards if they have questions or require assistance downloading the application. Enrollees can view open care needs displayed together with their provider's phone number, which they can tap to call and schedule appointments. We continually add new functionalities to our digital applications to keep pace with our Enrollees' increasing utilization and feedback regarding their online experience. In 2018, as a result of **our proactive approach and updated functionality, WellCare of Kentucky experienced a YoY increase of 476% in downloads of the mobile app for Kentucky Medicaid Enrollees from 2017-2018. The top features used in 2018 were Find A Provider, Messages, and ID card.**

Over-the-Counter (OTC) Benefit. Each head of household is eligible to receive $10 worth of OTC items each month. Enrollees can choose from over 150 items to be mailed directly to their home with no prescription required. This benefit is intended to promote self-directed prevention, reduced unnecessary use of the ED, and on-going medical management. The OTC benefit includes traditional products (e.g., pain relievers, vitamins) but also includes eyeglass kits, reading glasses, and assistive aid devices such as pill containers or magnifying glasses to improve medication adherence and avoid errors in taking medications, which could result in preventable hospitalizations. In addition, by offering mail-order OTC delivery, we can provide

expanded access and time-saving opportunities for our Enrollees. **Nationally, over 230,000 Enrollees access OTC benefits, resulting in home supply deliveries for an average annual spend of $25 million.**

Respite Services. Caregivers of Enrollees receive 200 hours of in-home respite services and a maximum of five days out-of-home respite per plan year. This program supports the caregivers of chronically ill Enrollees who require relief from the responsibilities and stress of caring for their loved ones. Time away combined with in-house assistance helps relieve the caretaker's burden, providing them with the ability to maintain a healthy lifestyle, attend work, and address their personal needs that are often sacrificed based on their level of support as a caregiver.

Sports Physical. We offer sports physicals, which consist of a visit to a medical doctor for an examination to assure that Enrollees are in adequate physical condition to play a sport that interested them. Children and youth receive one free sports physical per plan year, provided by a PCP, to encourage improvements in health and wellness, and connection to friends.

Vision Benefit. Enrollees age 21 and over receive a pair of glasses every 12 months.

Healthy Rewards Program. Our Healthy Rewards Program rewards Enrollees who complete preventive health, wellness, and engagement milestones with their choice of a reloadable debit card, gift card, or e-gift card. The program serves to improve health outcomes through cash-value incentives for managing their health needs and risks. The Healthy Rewards debit card is credited upon completion of specific activities and services, thus increasing the availability of funds to be used for the Enrollee's overall healthcare.

WellCare Of Kentucky's Healthy Rewards program is available to all our Enrollees across the Commonwealth. Nationally, as many as 200,000 Medicaid Enrollees are engaged in the program, with 50,000 activating their Healthy Rewards Accounts (25% overall utilization).
To date, Enrollees have received over $1 million in redeemed rewards.

Bonus Rewards for Expecting Mothers

We incentivize our pregnant mothers with rewards for completing pregnancy and postpartum care visits with their providers and maintaining overall health throughout their pregnancies. As part of our Healthy Rewards program, pregnant Enrollees receive bonus rewards, which they can apply to receive a stroller, pack-n-play, car seat, breast pump, or six-packs of diapers. At a national level, we currently have more than 50,000 Enrollees participating in the Prenatal Incentives Rewards program — equating to over $200K used for the purchase of maternity-related items.

In addition to the foregoing Value Added Services, WellCare's core programs include services that are available to selected Enrollees to improve health status, increase self-sufficiency and reduce disparities, including the following:

Disease Management Programs. Our disease management programs support Enrollees with the following health conditions: asthma, coronary artery disease (CAD), congestive heart failure (CHF), chronic obstructive pulmonary disease (COPD), depression, diabetes, HIV, and high blood pressure. We assign our Enrollees to the appropriate disease management program based on their chronic conditions to monitor their health and maintain well-being. We provide support services, health coaching, and coordination with local programs and support groups that help them address the condition and improve their quality of life.

Maternity Care Program. The WellCare Baby Steps program improves maternal health and birth outcomes through the delivery of services by multidisciplinary, integrated Care Coordination and Care Management services team for all pregnant Enrollees, regardless of risk level, from conception and up to a minimum of 60 days postpartum. The program covers a variety of services to manage Enrollees who are pregnant and deliver positive birth outcomes for both the mother and the infant, including a reduction in preterm births, NICU admissions, NAS newborns, and Caesarian section (C-section) rates. Program interventions include Enrollee education and incentives, OB provider education and incentives through our value-based payment arrangements, BH integration, and partnerships with community organizations, including WIC and HANDS.

Progeny NICU Program. We partner with Progeny Health to improve the health outcomes of our NICU population in Kentucky to assist in maintaining exceptional quality for our tiniest Enrollees. Progeny assists in streamlining the care plan and service provision for the NICU population while also providing support through the first year of life. Our experience with our Progeny partnership has seen a positive trend in readmissions and reduction in average length of stay.

INCREASE SELF-SUFFICIENCY AND REDUCE HEALTH DISPARITIES

College-Bound Dormitory Room Items (Foster Care). Provides dorm room items to foster care children who are college bound. Items include bedding, flatware, bathroom items, etc. This benefit is also available to children in the foster care system who are continuing their educating and attending college.

College Scholarship. Scholarship award for Enrollees age 18 and up who are entering college. We award ten $1,000 scholarships per year (includes trade schools, college, and universities). This benefit is also available to children in the foster care system who are continuing their educating and attending college.

Criminal Record Expungement. Through this benefit, we pay for the $40 certification fee required to file for the expungement of an Enrollee's minor felony or misdemeanor charge from their record. This benefit helps the Enrollee obtain a fresh start in their community, such as with obtaining employment that requires a background check.

Foster Care Transition Kit. Provides a travel bag to Enrollees that they can use when they transition from a foster home, including toiletries, pajamas, and a book. The transition kit helps children in the foster care system transitioning into another foster home facility.

IMPROVE HEALTH OUTCOMES AND REDUCE HEALTH DISPARITIES

SafeLink Smartphone Program. Our SafeLink program provides our Enrollees with modern technology capable of facilitating an easier communication process with their WellCare of Kentucky team, local physicians, and community support resources. While many Enrollees can afford smartphone technology, we do realize that both phones and monthly data plans can be expensive and that some Enrollees may not have the means to consistently afford a smartphone or have restrictions that limit their ability to engage with their team.

The program includes the following features:

- Care Coordination support, including reminders for health appointments, wellness screenings vaccines, and immunizations, and assistance with appointment setting. This is particularly important for our high-risk pregnant Enrollees and those with chronic conditions.
- A free smartphone that includes 1000 monthly calling minutes; unlimited text messages; 1GB of monthly data; voicemail, caller ID and call waiting; technical support; direct access to our Enrollee Services Call Center; and direct access to 911.

IMPROVE HEALTH OUTCOMES AND ADDRESS SOCIAL DETERMINANTS OF HEALTH

Community Connections Help Line (CCHL). Our Community Connections model, led by Elizabeth Starr, partners with nearly 335,000 community-based social services in Kentucky to help Enrollees eliminate daily stressors that serve as barriers to treatment, such as childcare challenges, housing instability, food insecurity, domestic violence, literacy challenges, and unemployment. The CCHL, open 9am-6pm EST, Monday through Friday, connects Enrollees and non-WellCare individuals to these services.

- *WellCare Works.* As part of our Community Connections program, we offer employment assistance through WellCare Works.
- *WellCare Works Employment Tools* are designed to help Enrollees jump-start their job search, secure their GED or fill a digital gap for Enrollees who might not be able to use physical job sites.
- *WellCare Works Volunteer Opportunities* have been identified by our Local Community Engagement team. **This includes over 226unique activities and 64,000 volunteer opportunities in 2020**.
- *Local Community Engagement Partners* work directly with WellCare of Kentucky Enrollees every day and are our "feet on the street" for WellCare Works. **Since January 2019, 725 community partners have been trained and 13 partnerships across the Commonwealth have been built to help connect Enrollees to WellCare Works. Year to date WellCare Works has been accessed by 850 WellCare of Kentucky Enrollees across 109 Kentucky counties.**

Steps2Success. The Steps2Success program provides education and reading mastery benefits for Enrollees that help prepare them for success in school, academics, and a lifelong learning experience. Having the advantage of extensive knowledge, vocabulary, and the test-taking required in the school system to succeed, skilled readers and learners can carry these skills forward through college, adulthood, and their working life. Success in reading and academics helps improve self-esteem, and health literacy expands participation in health activities and positive behaviors. The Steps2Success program includes the following components:

- *Job Training and Financial Education.* We provide job training and financial education classes for Enrollees to address education, employment, and economic barriers. This includes 12 tutoring services for children, youth, and adults up to age 21.
- *Reading Scholarships.* We award 200 reading scholarships to Enrollees in pre-Kindergarten through the 12th grade to help them improve reading skills.
- *General Education Development (GED) Exam Preparation Program.* We provide a free GED Exam for Enrollees age 16 and over, not currently enrolled in high school, not a graduate from an accredited high school, and have not received a high school equivalency certificate or diploma. To help ensure testing success, Enrollees must complete the required GED coursework at an adult testing center.

Steps2Success Program Helps Enrollee Take First Step Toward A Nursing Career

A WellCare Enrollee learned about our GED Exam Benefit during a community event in Georgia hosted by the Savannah Housing Authority. Prior to the event, the Enrollee wanted to become a Certified Nursing Assistant (CNA) but learned that a high school diploma would be required before she could be accepted into the CNA training program. During the event, a WellCare team member spoke about the GED exam preparation program and using one of our vouchers, the Enrollee signed-up for her GED exam. After passing the exam, she enrolled in the CNA training program and graduated three months later. She then transitioned to a two-year program at Savannah Technical School to earn her Associate's Degree in surgical technology.

XtraSavings Program. Our XtraSavings Program provides Enrollees with access to monthly discounts not available to the general public. This program includes the following benefits:

- *OTC4Me.* Discounts on more than 500 OTC items our Enrollees use every day, such as vitamins, toothpaste, diapers, and more. Enrollees enjoy a 20% discount on their first order and then receive a 10% discount on each subsequent order.
- *CVS Discount Card.* The CVS ExtraCare Health Card saves Enrollees and families 20 percent on thousands of CVS pharmacy brand health-related items. The 20 percent discount applies to regularly priced items of $1 or more purchased at any CVS pharmacy location or online.

b. Provide the Contractor's approach to assisting Enrollees to access direct access services and second opinions, and referrals for services not covered by the Contractor.

WellCare of Kentucky follows a standardized, well-defined approach for assisting Enrollees who need access to direct access services, second opinions, and referrals for services not covered by WellCare of Kentucky. In this section, we describe our approach to adhering to the contract

requirements of Section 30.2 Direct Access Services; the contract requirements of Section 30.3 Second Opinions, including routine network evaluation to enlist in-network or out-of-network providers with the qualifications and expertise to meet an Enrollee's need for a second opinion; and the contract requirements of Section 30.6 Referrals for Services Not Covered by Contractor, including processes and procedures to refer Enrollees to services covered by Medicaid fee-for-service (FFS) providers and programs, such as non-emergency medical transportation (NEMT).

As is the intent of our coordination for carved-out services and our suite of VASs, our goal is to provide Enrollees with access to services for their whole-person service needs and to make sure they feel comfortable with the providers providing those services and know how to access or ask for assistance with accessing services covered by FFS programs and providers.

We educate Enrollees about accessing direct access services with the Welcome Call, one-on-one interactions with their Care Coordinator, the Enrollee Handbook, Enrollee portal, Enrollee newsletter, the MyWellCare smartphone app, and when they call the help line. We assist Enrollees with information about provider office locations, languages spoken, gender preferences, and contact information. We support access to medical appointments by assisting with appointment scheduling and referrals to non-emergency transportation (NEMT) to the desired provider, as well as connecting Enrollees to local social resources, such as childcare.

WellCare of Kentucky maintains an open network and our Enrollees can see any in-network provider. We ensure direct access and do not restrict the choice of a qualified provider by an Enrollee for the following services within our network:

- Primary care vision services, including the fitting of eye-glasses, provided by ophthalmologists, optometrists, and opticians
- Primary care dental and oral surgery services and evaluations by orthodontists and prosthodontist
- Voluntary family planning in accordance with federal and state laws and judicial opinion
- Maternity care for Enrollees under 18 years of age
- Immunizations to Enrollees under 21 years of age
- Sexually transmitted disease screening, evaluation, and treatment
- Tuberculosis screening, evaluation, and treatment
- Testing for Human Immunodeficiency Virus (HIV), HIV-related conditions, and other communicable diseases as defined by 902 KAR 2:020
- Chiropractic services
- Specialists as appropriate for an Enrollee’s condition and identified needs for Enrollees with special health care needs requiring a course of treatment or regular care monitoring
- Women’s health specialists

Second Opinions. Enrollees have a right to obtain a second opinion in or out of WellCare of Kentucky’s Provider network and to receive information on obtaining second opinions related to surgical procedures and to complex and/or chronic conditions. We inform Enrollees, in writing, at the time of Enrollment, of an Enrollee’s right to request a second opinion. At an Enrollee's request, we provide for a second opinion related to surgical procedures and the diagnosis and treatment of complex or chronic conditions within our network or arrange for an

Enrollee to obtain a second opinion outside the network without cost. Often, when seeking medical advice or treatment for conditions ranging from mild to a potentially life-changing event, it can be daunting or confusing for an Enrollee to receive a new diagnosis. In these situations, we recognize that our Enrollees and their families only want to find the best possible medical opinions and treatment options available. As such, all Enrollees may request a second opinion when there is a question or dispute with either the Primary Care Provider, or a decision made related to the necessity of surgical procedures or the diagnosis and treatment of complex or chronic conditions. It is perfectly acceptable for a member of the healthcare team, parents, guardians, or a social worker to make the request on behalf of an Enrollee.

Our Enrollee Services representatives assist Enrollees with identifying a second opinion provider and with scheduling the appointment. Subject to an Enrollee's consent, the representative contacts the Primary Care Provider. In addition, we use all Enrollee touchpoints as an opportunity to discuss with and educate Enrollees regarding their concerns, including how to request a second opinion.

We handle requests for second opinions using the following methods:

- *In-Network Providers.* Enrollees receive a second opinion at no cost by a qualified healthcare professional within our existing provider network. WellCare of Kentucky has in place a robust provider network throughout the Commonwealth, which includes pediatricians and specialty care providers capable of assisting with second opinions, while also working with our staff to coordinate services with the Primary Care Provider.
- *Out-of-Network Providers.* If there is not an in-network participating provider with the expertise required for the medical condition available, then a non-participating provider provides the second opinion at no cost to the Enrollee. Enrollees may elect to have a second opinion provided by an out-of-network provider located in the same geographical service area. On a case-by-case basis, we negotiate a single case agreement with out-of-network providers to avoid balance billing and ensure these providers meet Medicaid requirements.

It is the responsibility of the Primary Care Provider to coordinate tests ordered for a second opinion with participating providers and to develop a treatment plan for the Enrollee after review of the second medical opinion. We educate Primary Care Providers about second opinion processes and their responsibilities during provider orientation and in the Provider Manual.

Referrals for Non-Covered Services. We acknowledge that certain Medicaid services are excluded from the Kentucky Medicaid Managed Care benefits package, but continue to be covered through the traditional FFS Medicaid Program. Our customer service and field-based staff receives annual training and have reference documents available to them to assist Enrollees and coordinate with DMS' providers in the delivery of these services to our Enrollees.

When an Enrollee needs to receive a Medicaid service outside the scope of our covered services, we refer the Enrollee to a qualified healthcare provider in the Medicaid FFS program and/or to needed services covered by the FFS Medicaid Program—as directed by DMS. We have written policies and procedures for the referral of Enrollees for non-covered FFS Program services, including transition to a qualified healthcare provider and assistance with obtaining a

new Primary Care Provider and for accessing FFS services, such as NEMT. When referring Enrollees to needed services not covered by WellCare of Kentucky, we track the referrals and services being provided by a FFS provider or program in the Enrollee's record in CareCentral, making sure an Enrollee's person-centered care plan accurately reflects the services and this information is available to the entire MDT. Our of our Care Managers, Care Coordinators, integrated care team, Enrollee Services representatives, and the CCHL staff complete training on MCO-covered and FFS Program covered benefits and services and know how to refer, connect and coordinate Enrollee care and services to FFS providers when necessary—including engagement and coordination with carved-out FFS service providers, local community partners, and programs run by DMS and other state agencies. The Community Connections program tracks Enrollee services provided in the community through our local partnerships to address SDOH and other needs. Our local Care Coordinators maintain knowledge of services outside the scope of WellCare of Kentucky and proactively discuss referral options for our Enrollees' person-centered needs.

c. Describe the Vendor's proposed approach to the following:

i. Interfacing with the Department and Department for Behavioral Health, Developmental, and Intellectual Disabilities.

WellCare of Kentucky has routinely worked alongside DMS and DHBDID in the form of ongoing meetings to collaborate on the leading behavioral health issues facing the Commonwealth and our Enrollees. With the establishment of the new collaborative workgroups, Lori Gordon, the future SKY Executive Director, or her designee will meet no less than quarterly to discuss State Mental Health Authority and Single State (substance abuse) Agency (SSA) protocols, rules, and regulations. As part of this process, CareCentral enables us to make the Enrollee's person-centered care plan available to the MDT and state agency staff when working together on transitions of care and other Enrollee-facing activities.

Historically, WellCare of Kentucky has been viewed as a leader in the field of integration and behavioral health care. Leveraging our experience as one of the only MCO's in the Commonwealth to provide in-house behavioral health services, we have always responded to requests by DMS, DBHDID, and other state agencies for recommendations and guidance with the expertise of our integrated care team. This input includes our lessons learned through trial and error, pilot program ideas and results, and evolving best practices within the industry that we regularly apply throughout our Care Coordination program.

Topics for Discussion. Through this collaborative process, we will speak to the topics of SMI and SED; other priority populations; Targeted Case Management (TCM); Community Associate and Peer Support provider certification training and processes; satisfaction survey requirements; priority training topics (e.g., trauma-informed care, suicide prevention, co-occurring disorder, evidence-based practices); the Behavioral Health Services Hotline; and behavioral health crisis services, as specified by DMS.

As requested by DMS, WellCare of Kentucky and our behavioral health team will coordinate the following processes:

Enrollee Education Process. Specific to individuals with SMI and children and youth with SED, we will provide DMS and DBHDID with our proposed education materials and protocols. In addition to education provided by the Enrollee's Care Coordinator, we typically address SMI and SED topics using education materials such as the Enrollee newsletter, Enrollee portal, and Enrollee Handbook. DMS approves our Enrollee Handbook and all other educational materials, as required under the current contract. In addition, we regularly identify Enrollees experiencing or at-risk of SMI or SED through the HRA, the Enrollee Services Call Center, the NAL, CCHL, and our REACH (Unable to Contact) program for hard-to-reach Enrollees. Each of these channels triggers an actionable engagement by an assigned Care Coordinator, who educates and guides the Enrollee's whole-person care experience when receiving treatment for their comprehensive needs. In addition, our provider engagement team works closely with our provider network to educate them on the importance of identifying and referring Enrollees with SMI or SED to WellCare of Kentucky for enrollment in Care Coordination and a qualified behavioral health specialist. Our provider education tools include PCP-behavioral health toolkits, which contain evidence-based screening tools and CPGs that assist them in the support process for specific SMI and SED issues, **Figure C.20-6**, and integration with support for physical health needs.

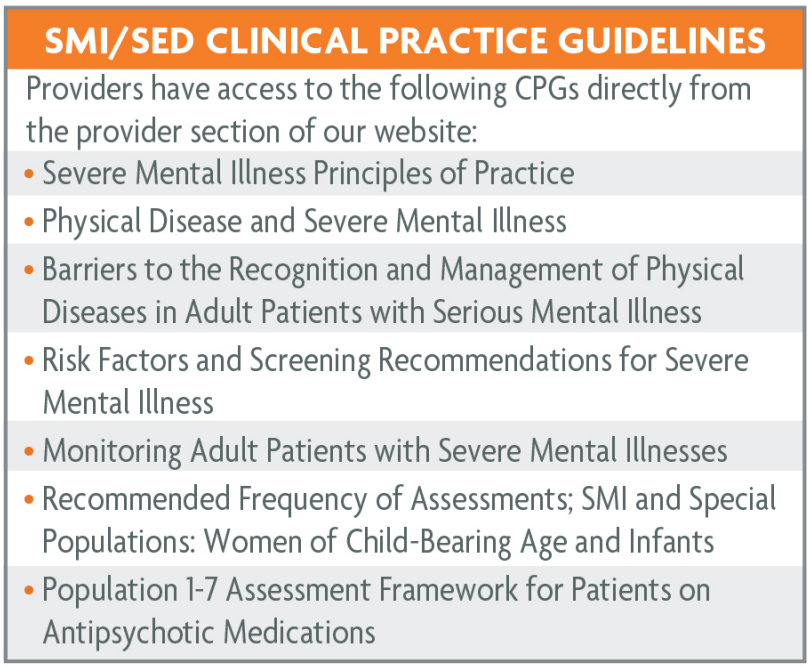

Figure C.20-6 SMI/SED Clinical Practice Guidelines

To encourage referrals and immediate action, we educate providers on implementing the Screening, Brief, Intervention, and Referral to Treatment (SBIRT) model, helping providers rapidly assess the severity of a behavioral health condition, engage in feedback, and identify and refer the Enrollee to an appropriate local treatment provider. Once the Enrollee is identified, WellCare of Kentucky sends them a welcome packet, which includes the Enrollee Handbook that addresses accessing benefits and services for behavioral health and crisis situations.

Integrating Behavioral Health Services Hotline. We recognize that DMS is seeking to streamline the disjointed mobile crisis support system in the Commonwealth. In addition to financial contributions, we would propose working with the MCOs to develop a single, accessible hotline capable of routing all Enrollees to the appropriate MCO Behavioral Health Services Hotline. This would eliminate the confusion sometimes caused by multiple numbers, and simplify the system

down to a single, easily identifiable number to support Enrollees behavioral health needs and crises. In the meantime, we educate Enrollees on how to access our Behavioral Health Services Hotline, which supports emergency and crisis situations by trained personnel, 24 hours a day, seven days a week, 365 days a year, toll-free throughout the Commonwealth. Adhering to the contract requirements, WellCare of Kentucky will continue to implement our approved processes along with DMS, DHBDID, and the CMHCs for our integrated service lines that route Enrollees to the appropriate hotline based on their immediate needs, as seen in **Figure C.20-7**.

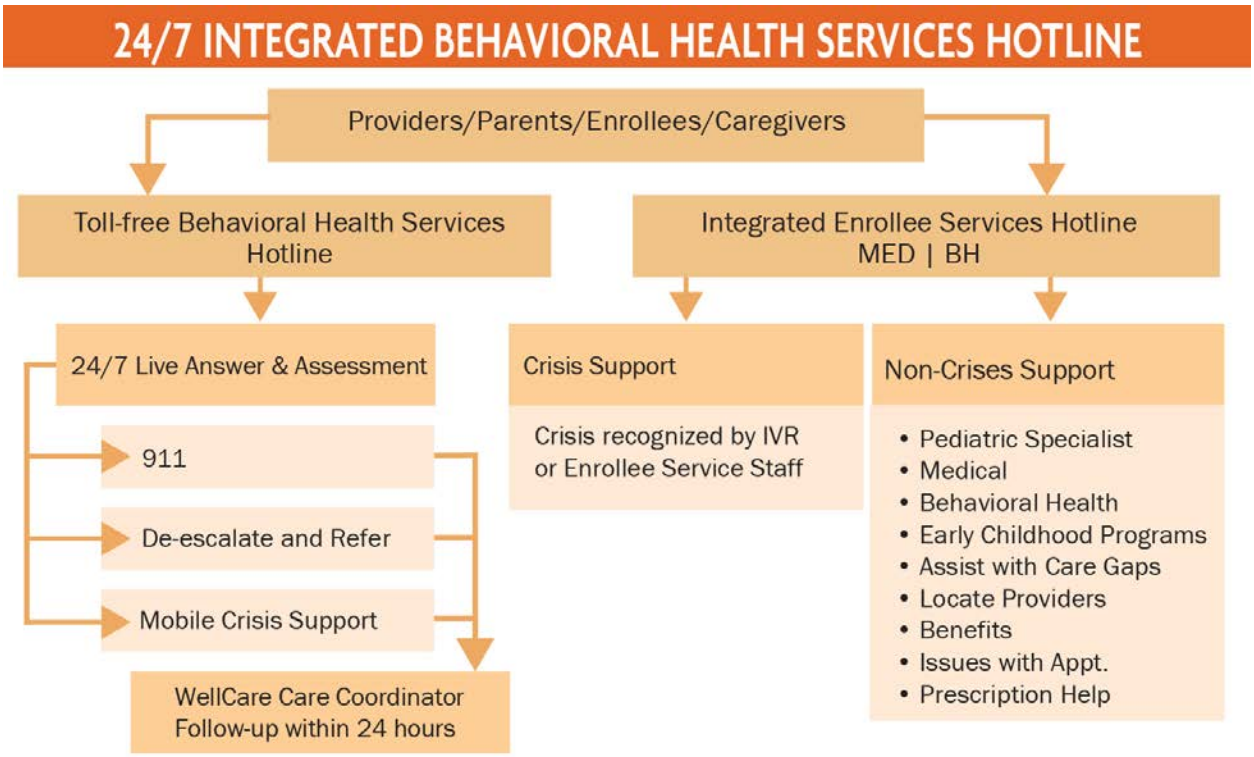

Figure C.20-7 Behavioral Health Services Hotline Routing Procedures

Our dedicated Behavioral Health Services Hotline staff are licensed professionals, including LMHCs, licensed clinical social workers (LCSW), as well as registered nurses and developmental and intellectual disabilities (DID) professionals with advanced behavioral health training. They intervene, de-escalate, and support Enrollees in emergent situations. In 2018, the national hotline supporting WellCare health plans nationwide received over 10,000 Enrollee calls, with nearly 1,000 coming from the Commonwealth.

In addition to our dedicated Behavioral Health Services Hotline team, we train each member of our Enrollee Services staff to respond to the unique physical, behavioral, pharmacy, and SDOH needs of our Enrollees for their whole-person care experience, including assessing the need for a crisis response. We provide our Enrollees, DMS, DHBDID, providers, FHQCs, and CMHCs with information regarding the hotline and how to access it. This open communication process ensures that our Enrollees learn about our hotline resources through multiple channels and feel comfortable reaching out for support when necessary.

Collaborative Agreements. As we have successfully championed for over eight years, WellCare of Kentucky will continue to work with DMS on establishing collaborative agreements with state-operated or state-contracted psychiatric hospitals, as well as with other Department facilities for individuals with co-occurring behavioral health and DID. We have described this process more in-depth in the response to the following question.

ii. Coordinating with the Department to establish collaborative agreements with state operated or state contracted psychiatric hospitals and other Department facilities that individuals with co-occurring behavioral health and developmental and intellectual disabilities (DID) use. Describe potential challenges and methods to address such challenges.

WellCare of Kentucky continues to coordinate with DMS to establish collaborative agreements with state-operated or state-contracted psychiatric hospitals and other Department facilities that support individuals with co-occurring behavioral health and DID. Since 2011, we have participated in collaborative transition of care meetings for our Enrollees to assist with the development of the transition plan as they prepare to return to their home or community setting. Our goal is to work with the CMHCs to ensure our Enrollees have the opportunity, resources, and support to live independently in their communities.

We participate in transition planning and ongoing Care Coordination for these Enrollees, many of whom have SMI and are transitioning from a licensed Personal Care Home (PCH), psychiatric hospital, or other institutional settings to integrated, community-based housing. Adhering to the contract requirements, we participate in and have attained full compliance with all IPRO Medicaid compliance audits through our participation and contribution to the transition of care process.

The following describes our processes:

- *Regional Transition Committee Meetings for State Hospitals.* Our Care Coordinators attend monthly Regional Transition Meetings held at the state hospitals across the Commonwealth. Coordinated with DHBDID and community mental health providers, we review the list of identified WellCare of Kentucky Enrollees, current treatment issues, barriers to receiving treatment services, and the transition plans to move Enrollees to community-based housing. In addition, we participate in bi-monthly Interim Settlement Agreement (ISA) meetings.
- *Continuity of Care Meetings.* Our Care Coordinators attend the quarterly Continuity of Care meetings to identify and review Enrollees with rapid re-admissions, and identify all Enrollees with DID diagnoses. Facilitated by DHBDID, these meetings take place at the state hospitals and include the ombudsman, MCOs, and CMHC staff to ensure every individual is being supported by CMHC resources upon discharge.
- *Enrollees Living in PCHs.* We assign a Care Coordinator to each of the state facilities to engage Enrollees and their caregivers whenever an individual is identified who would like to transition to community-based housing. CMHCs are required to perform outreach visits to the PCH and determine if an Enrollee prefers to live independently in the community with supports from the CMHC. Our Care Coordinators communicate with each of the CMHCs

across the Commonwealth through email on a bi-weekly schedule to identify Enrollees transitioning from the PCH to independent living.

- *Care Coordination Enrollment.* If we identify an Enrollee for transition within the next 30 days, we automatically enroll them in Care Coordination and collaborate with the appropriate CMHC staff and Enrollee. We collaborate with CMHC staff on a weekly basis to review the Enrollee's status and obtain a copy of the Person-Centered Recovery Plan developed by the CMHC provider.
- *Comprehensive Assessment.* Within 14 days of the transition from the psychiatric hospital or PCH into community-based housing, we meet with the Enrollee and perform a comprehensive assessment to ensure their physical, behavioral, pharmacy, and SDOH needs are met.
- *Ongoing Support.* Based on the results of the assessment, we may enroll the Enrollee into the Care Coordination program for ongoing support. We also attend regular meetings with the CMHC to discuss the Enrollee's status. During this time, we complete a PHQ9 and CAGE assessment along with the SF-12. We incorporate the Enrollee's Person-Centered Recovery Plan into their WellCare of Kentucky care plan documented in CareCentral.
- *Enrollees with DID.* Enrollees with DID admitted to state hospitals are identified in Continuity of Care meetings and by CMHC care managers. During this meeting, all Enrollees that require outreach are discussed, and a transition plan is developed. All Enrollees with DID receive the same dedicated Care Coordination support we provide all individuals under our care.

As Enrollees with co-occurring behavioral health and DID conditions require specific supports and resources to maintain well-being and live independently, our integrated Care Coordination team strives to engage Enrollees in face-to-face visits to better understand their needs and personal goals. By meeting with them in their environment, we can assess their needs and identify resources that will help improve their quality of life and ability to live independently. The following includes examples of our support for Enrollees with DID:

- Referrals to the Commission of Children with Disabilities, Brain Injury Services, and resources for Enrollees with vision or hearing impairments.
- Grant funding to local agencies to help address specific DID needs, facilitated by ongoing communication between our Care Coordinators and the agencies.
- Partnering with the Office of Vocational Rehabilitations to facilitate Enrollee assessments and referrals to local agencies that assist with employment opportunities and connections, such as the Opportunity for Work and Learning (OWL).
- Connecting children to the Kids SpOt Center for the evaluation and assessment of disabilities, and coordinating services for occupational, physical, and speech therapy.
- Referrals to the Human Development Institute (HDI) Center for Assistive Technology (CATS) to obtain DID-related equipment such as talking boards or text, telephone, and typewriting (TTY) devices that help Enrollees maintain independence in the home. HDI CATS is the regional Assistive Technology Regional Center (ATRC) serving Lexington and the surrounding region.

CHALLENGES AND METHODS TO ADDRESS SUCH CHALLENGES

One of the major challenges of the discharge and transition planning process that our team experienced is the communication between our Care Coordinators and the CMHCs supporting our Enrollees. From discharge to the transition to a PMH, we need to know where our Enrollees are located so we can provide assistance and ensure they experience a comfortable, seamless transition. To address this challenge, we developed a new communication process with the CMHC liaisons, which includes weekly or bi-weekly email communication that helps us identify whether or not any new WellCare of Kentucky Enrollees are transitioning. This high-touch communication helps us stay informed in between the Regional Transition Committee meetings.

Helping Enrollee with Autistic Disorder Obtain Community Living Waiver (SCL)

The state guardian for a 25-year-old Enrollee with autistic disorder requested assistance from the assigned WellCare of Kentucky care coordinator. Sadly, the Enrollee's biological family was deceased, forcing the Enrollee's entry into adult guardianship. Previously, the Enrollee had been sheltered at home and never received any behavioral health services prior to this time. The guardian recommended that the Enrollee receive psychiatric testing. To coordinate, we collaborated with the Pennyroyal CMHC and the Enrollee's PCH to engage in psychological testing. Based on the results, the guardian was able to apply for a Support for Community Living (SCL) waiver, which provides Medicaid-paid services to adults or children with intellectual or developmental disabilities. These supports include updates to an individual's home or vehicle to ensure personal safety; personal assistance with tasks such as bathing, dressing, grooming, housework, laundry, and meal planning; positive behavior supports to identify and reduce behaviors that interfere with activities of daily living (ADL) and social interaction; and residential support services that help individuals live as independently as possible.

iii. Complying with the Mental Health Parity and Addiction Equity Act.

We fully support parity for mental health and addiction to help our Enrollees live a better and healthier life. Our integrated model of care with one integrated care team covering all care needs, including physical, behavioral, pharmacy, and unmet social needs, focuses on the delivery of whole person care. With behavioral health care available as an essential and covered benefit, we improve health outcomes by reaching additional people with prevention, wellness promotion, and early intervention and treatment of mental health and substance use disorders (SUD). WellCare of Kentucky and our providers comply with the contract requirements in 30.9 Mental Health Parity and the Mental Health Parity Addiction Equity Act (MHPAEA) of 2008 and 42 C.F.R 438 Subpart K, including the requirements that treatment limitations applicable to mental health or substance use disorder benefits are no more restrictive than the predominant treatment limitations applied to substantially all medical and surgical benefits covered by WellCare of Kentucky and there are no separate treatment limitations that are applicable only with respect to mental health or substance use disorder benefits. As evidence of our ability to comply with mental health parity requirements and regulations, refer to **Attachment C.20.c.iii WellCare Parity Submission Form - KY – Final,**

provided electronically. WellCare submitted our CMS Toolkit Parity document to DMS in August 2017. DMS had some questions, which were addressed. We continue to update our submissions as required by CMS and as benefit plan designs may change by the Commonwealth – remaining in compliance with mental health parity per CMS guidelines.

We continually support compliance with mental health parity by:

- Making sure our utilization grids comply with mental health parity
- Providing ongoing expert consultation and recommendations regarding compliance with MHPAEA as specified in the benefit plan
- Verifying medical management techniques applied to mental health or SUD benefits are comparable to and applied no more stringently than the medical management techniques that are applied to medical and surgical benefits
- Ensuring the criteria for medical necessity determinations for mental health or SUD benefits are available to Enrollees, potential Enrollees, and network providers by making our level of care and coverage determination guidelines available online
- Ensuring plan benefits include a clear description of the behavioral levels of care and covered services
- Maintaining a clear and easily accessible process for filing appeals and complaints, which complies with regulatory requirements
- Offering robust provider network and monitoring the availability of providers
- Providing a clear reason to Enrollees and providers for any denial of reimbursement or payment with respect to mental health or SUD benefits

From how we authorize services to how we monitor and evaluate services, our utilization management program complies with federal laws and regulations on mental health parity, including MHPAEA. We do not require referral for routine outpatient behavioral health services. We ensure Enrollees have access to a mental health or substance dependence assessment without requiring prior authorization. Specialty services like psychological testing require authorization, which similar to authorization for medical specialty providers. To ensure ongoing compliance with parity requirements, we established and maintain a cross-functional task force with executive leadership support that audits, monitors compliance, and collaborates to ensure behavioral health and substance use disorder services remain in parity compliance with physical health services. The task force conducts a thorough review of the impact of MHPAEA to all key functions covering our benefits, clinical management processes, and network contracting.

In 2017, WellCare developed a template analysis document, using the Centers for Medicare & Medicaid Services (CMS) Parity Compliance Toolkit, published in January 2017 as a guide. The document is the basis for assessing our compliance with the MHPAEA. Within it, there are five sections, each addressing a specific parity component: Benefit Classification; Analysis of Financial Requirements, Quantitative Treatment Limitations (FRL), and Aggregate Lifetime and Annual Dollar Limits; Non-Quantitative Treatment Limits (NQTL); and a Compliance Monitoring Plan. Our internal audits have shown we are consistently within parity along each domain.

d. Describe initiatives the Contractor will implement to identify trends in provider-preventable conditions and to educate providers who are identified as possibly needing support in better addressing those conditions.

Under the leadership of our CEO, Bill Jones, WellCare of Kentucky follows CMS guidelines for provider-preventable conditions (PPC) and has processes in place through our provider and clinical teams, along with our Medical Director, Dr. Howard Shaps, and the vice president of health services, to educate providers who require enhanced support and guidance for addressing certain conditions. PPCs include health care-acquired conditions (HHAC), other provider-preventable conditions (OPPC) and "Never Events," which refer to significant preventable medical errors that our Enrollees should never experience.

In our experience, the most effective strategy for reducing PPC involves extensive training of hospital staff, education, and safety-oriented process design. We require all providers to report PPCs associated with claims for payment or Enrollee treatment for which payment would otherwise be made. WellCare of Kentucky will report all identified PPCs in a form and frequency as specified by DMS.

The following describes our processes to identify PPCs, deny payments when appropriate, and educate our providers to prevent PPCs from occurring:

Defining a Provider Preventable Condition. In accordance with Section 2702 of the Patient Protection and Affordable Care Act of 2010, we follow the required non-payment policies for PPCs, including HCACs. We consider a PPC to be any condition in a healthcare setting resulting in a negative consequence, such as an infection, a preventable surgical complication, or poor glycemic management. We consider an unexpected death or serious disability resulting from a surgical or invasive procedure or any event deemed preventable using medical literature review by a qualified professional to be a Never Event. Never Event errors include surgical or other invasive procedures resulting in a different procedure altogether; the correct procedure but on the wrong body part; or the correct procedure on the wrong patient, to name a few.

PPC Coding. The first step in ensuring non-payment for a PPC is to identify those conditions that fall into the PPC category. We identify codes using our core processing system that matches the conditions for which there will be no payment made to the provider. The codes automatically deny PPC events pending additional clinical information by system adjudication and configuration set-up parameters in the claims system.

Identification of PPC and Quality Improvement Review. Our utilization management nurses and Care Coordinators working directly with Enrollees and local providers complete training on quality concerns, which includes PPCs, HHACs, and Never Events. When a WellCare of Kentucky team member, quality staff member, or family member identifies a potential PPC, they refer the quality of care issue (QOC) to the quality improvement (QI) team for further investigation.

We define a QOC issue as a break in the standard care process that may or has led to a negative Enrollee health outcome. Additional QOC issues include delays or omissions of care, medication issues, patient safety events that cause Enrollee harm (e.g., faulty equipment, infection,

restraint-related falls), and post-operative complications causing an increased length of stay or readmission.

Example of how identifying PPC events and then educating providers reduced PPC events in Kentucky. Our WellCare of Kentucky quality team received multiple QOC concerns from both our utilization management and Care Coordination teams regarding post-operative infections from a single hospital located in Eastern Kentucky. As part of our internal process, our Medical Director, Dr. Howard Shaps, reviewed each case and decided to "track and trend" the facility in question to identify future cases. Over the subsequent months, the quality team received additional cases for a total of 15 reported concerns. Upon further review, we identified a trend that showed the majority of cases occurred following sterile surgery, such as a laminectomy.

During the review of these cases, Dr. Shaps discovered avoidable post-operative complications, such as spinal abscesses experienced by our Enrollees. Due to concerns for Enrollee safety, a team of WellCare of Kentucky quality specialists and Dr. Shaps conducted a visit to the facility to discuss their findings and educate the provider team on methods to mitigate future risk to our Enrollees. Since the intervention, we have seen a significant decrease in these cases.

Denial of Payment. We train and educate our providers, provider representatives, finance staff, utilization management nurses, and quality team on the meaning and identification of all PPC conditions that would cause a denial of payment. While we do everything in our power to ensure a safe healthcare experience for our Enrollees to avoid PPCs, we ensure no payments are made when these rare but unfortunate events do occur. In adherence with Section 30.8 "Provider Preventable Diseases," WellCare of Kentucky will not pay a provider for a PPC that meets the defined criteria, which includes the following

- Identified in DMS' Medicaid plan
- Has been found by DMS, based upon a review of medical literature by qualified professionals, to be reasonably preventable through the application of procedures supported by evidence-based guidelines
- Has a negative consequence for the Enrollee
- Is auditable
- Includes, at a minimum, wrong surgical or other invasive procedure performed on a patient; surgical or other invasive procedure performed on the wrong body part; surgical or other invasive procedure performed on the wrong patient.

As stated, our claims payment system is configured to deny payment for any service falling in a PPC category consistent with federal regulations. We are acutely aware of the seriousness of patient safety and adverse events and have policies, procedures, and systems in place to avoid paying for these events. In addition, whenever a potential PPC is identified but not specifically auto-denied, a referral is sent to the QI team for further investigation. All QOC concerns are used in quality committee discussion and for the credentialing and re-credentialing process for our providers.

Provider Manual and Contract. Our provider contracts reinforce the definition of a PPC and our process for automatic denial of payment whenever a PPC occurs. The Provider Manual describes our process, which prevents providers from billing, attempting to collect from or

accept any payment from WellCare of Kentucky for non-covered procedures. We remain committed to removing unnecessary, ineffective care while promoting the importance of strict patient safety measures and processes at all times. In addition, we adhered to the CMS requirement regarding a present on admission (POA) field to document the presence of anything that could become confused with a PPC. For example, if an Enrollee enters the hospital with a urinary tract infection (UTI), the POA field is used to capture the diagnosis at the time of admission so that upon discharge the hospital is not held responsible for the UTI. We ensure that providers understand the POA requirement and the need to complete that field for each WellCare of Kentucky Enrollee admitted with a condition that applies.

C.20 Covered Services

- Attachment C.20.c.iii WellCare Parity Submission Form - KY – Final (Provided Electronically)

21. Pharmacy Benefits

C.21. PHARMACY BENEFITS

a. Describe the Contractor's proposed approach to administration of pharmacy benefits and related pharmacy services, including the following in its response:

i. If using a Pharmacy Benefit Manager (PBM), provide a copy of the Subcontract, approach to integration with other services, as well as assuring transparency in pricing and reporting.

ii. Methods to ensure access to covered drugs and adherence to the preferred drug list.

iii. Responsibilities and composition of the P&T Committee.

iv. Proposed DUR Program, including approaches to collaborate with the Department on pharmacy initiatives.

v. Proposed Maximum Allowable Cost (MAC) program.

vi. Approach to operation of a pharmacy call center.

b. Describe the Contractor's pharmacy claims payment administration, including an overview of the Point of Sale (POS) system and processes for complying with dispensing fee requirements.

c. Describe the Contractor's processes and procedures to provide timely, accurate and complete data to support the Department's rebate claiming process and ensure the Department maintains current rebates levels

d. Describe the Contractor's processes and procedures to provide data and support Department-based efforts and initiatives for 340B transactions.

e. Describe the Contractor's pharmacy Prior Authorization process, including the following as part of the response:

i. Transparency in communicating the conditions for coverage to providers.

ii. Required credentials for staff reviewing, approving and denying prior authorization requests.

iii. Use of pharmacy and/or medical claims history to adjudicate prior authorization requests.

C.21. PHARMACY BENEFITS

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 31 Pharmacy Benefits of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. As such, all covered outpatient drugs, over-the-counter drugs, and compounded prescription services are provided for our Enrollees as defined by the Preferred Drug List (PDL) in conjunction with standards provided for by 42 U.S.C. § 1396r-8, as applied to Medicaid managed care in accordance with 42 C.F.R. § 438.3(s) and 438.210(a).

a. Describe the Contractor's proposed approach to administration of pharmacy benefits and related pharmacy services, including the following in its response:

As an experienced leader in the Commonwealth, and a fiscally responsible partner to DMS since 2011, WellCare of Kentucky's pharmacy program is led by our Pharmacy Director, Thea Rogers, PharmD, and Pharmacy Manager, Ayonna Tolbert, PharmD. Together, Dr. Rogers and Dr. Tolbert have worked alongside DMS and our managed care organization (MCO) counterparts to identify critical issues and develop new programs and initiatives to meet the needs of our Enrollee population across the Commonwealth. Our pharmacy program plays a significant role in maintaining the health of our Enrollees by helping manage their conditions and improve their quality of life. We leverage the deep experience of our parent organization, WellCare Health Plans, Inc. (WellCare), providing pharmacy benefits and integrated clinical services in 12 state Medicaid programs through a hybrid model in which we maintain responsibility for clinical decision-making on behalf of Enrollees and providers, instead of outsourcing this critical function to a Pharmacy Benefits Manager (PBM). WellCare is on track to administer approximately 240 million claims annually, see **Figure C.21-1**.

Over 60 Million Kentucky Claims Paid Since 2012	
Year	**Rx Count**
2012	3,253,533
2013	5,045,311
2014	8,130,368
2015	9,776,462
2016	10,523,387
2017	10,474,490
2018	10,469,280
2019	10,224,485
Total	**67,897,316**

Figure C.21-1
Pharmacy Claims

Through ongoing collaboration with our partners, prescribers, and network pharmacies across the Commonwealth, Dr. Rogers and Dr. Tolbert, along with our provider engagement team, ensure that our Enrollees receive the highest standard of local support, guidance, and reliable access to all their medications. As pharmacy management continues to play an ever-increasing role in health status through integration with physical and behavioral health services, we incorporate pharmacy into our overall clinical approach and share Enrollee pharmacy data through CareCentral, our Care Coordination platform, with pharmacists, nurses, and other clinicians. Our suite of clinical components includes programs for polypharmacy, management of antipsychotic medications for children, medication adherence and reconciliation, medication therapy management, and our One Provider-One Pharmacy program currently **helping over 2,800 Kentuckians with results from 2018 that include a 27% drop in opioid utilization, a 47% increase in Medication-Assisted Therapy (MAT), a 25% increase in maintenance medications, and a 33% decrease in Emergency Department utilization to date.**

The following section describes our proposed approach to the administration of pharmacy benefits and related pharmacy services.

i. If using a Pharmacy Benefit Manager (PBM), provide a copy of the Subcontract, approach to integration with other services, as well as assuring transparency in pricing and reporting.

WellCare of Kentucky uses a hybrid pharmacy management model that enables our team to perform the majority of critical functions and processes in-house while providing integrated support and oversight of the services performed by our PBM vendor—CVS Caremark. Our

expansive network includes more than 1,400 contracted pharmacies, with more than 1,100 located across the Commonwealth and approximately 300 out of state.

Unlike many of our competitors, **we do not outsource quality initiatives, clinical programs, prior authorizations, formulary development and maintenance, or call center management to the PBM partner.** This hybrid model promotes administrative efficiency by providing our pharmacy team with control and management of coverage determinations, redeterminations, formulary management, Pharmacy & Therapeutic (P&T) Committee responsibilities, quality measures, Drug Utilization Review (DUR), and Enrollee and provider calls. Refer to **Attachment C.21.a.i Pharmacy Benefit Manager Subcontract Copy**, provided electronically, for review.

The following components of this model allow us to maintain a strong partnership with the PBM while consistently monitoring the services they provide.

Approach to Integration. To support shared responsibilities, our delegation oversight and auditing functions diligently monitor and review PBM responsibilities, such as the development and management of the pharmacy network and the processing of claims. It is the policy of WellCare of Kentucky to conduct an annual audit of its PBM, to monitor performance and ensure that contracted services are performed in compliance with our policies and regulations from the Centers for Medicare and Medicaid Services (CMS). We also conduct weekly auditing and validation of the PBM's invoices to ensure that invoice charges accurately correspond to actual Enrollee utilization, and review PBM management reports to measure performance. Working together, we run disruption analysis reports when implementing PDL updates or adhering to new state requirements, as well as prior authorization transition reports for Enrollees transferring from the Fee-for-Service (FFS) program or another MCO.

In Kentucky, we shall submit monthly reports of capitation payments made to the PBM. Working closely with Dr. Rogers and Dr. Tolbert, WellCare Health Plan's Vice President of Pharmacy Benefit Relations, Robert Champagne, oversees the internal and external PBM operations for all PBM-related activities to ensure that state contract requirements are being met and that our pharmacy network is successful in their submission of claims.

Transparency in Pricing and Reporting. We consider transparency the most critical element of our integration with a PBM partner. Our contract requires the PBM to follow a strict pass-through pricing model in regards to the pharmacy network (including rebates and network discounts)—spread pricing is never allowed nor considered an acceptable practice. We provide full disclosure of all payments to and from the PBM. As a MCO leader in the Commonwealth since 2011, we have always followed a pass-through pricing model by paying the PBM a direct single source of revenue in the form of a flat administrative fee. As a result, there is no difference between the PBM to pharmacy payments and the MCO to PBM payments made for pharmacy claims. We report this process and the results to DMS through encounter submissions. In addition, as our relationship with the independent, local pharmacies in Kentucky remains a critical

A Fiscally Responsible Partner

WellCare of Kentucky has never condoned or practiced a spread pricing model during our time in the Commonwealth. Other MCOs in the state continue to see increased revenues related to spread pricing while we report a clear 0% spread.

cornerstone of our whole-person approach to pharmacy services and support, we remain committed to maintaining strict oversight of the PBM and to our responsibility to meet the contract requirements. As such, we adhere to DMS' requirement that no additional or indirect remuneration fees or any membership fees will be imposed on a pharmacy as a condition of claims payment or network inclusion. In addition, no additional retrospective remuneration models including Generic Effective Rates (GERs) shall be permitted.

Reporting. WellCare complies with all pharmacy benefit reporting requirements and ad-hoc requests for reports and data determined by DMS and applicable statutory or regulatory authorities. In partnership with the PBM, WellCare of Kentucky provides monthly reports to DMS that include our payments to pharmacies in the Commonwealth versus the amount paid to the PBM in administrative fees as part of the SB5 requirements.

At DMS' request, we provide both summary and detailed reports, such as claim level details, PDL compliance, coverage determination turnaround times (TAT), and appeals. In addition, we provide comprehensive formulary management and coverage determination reports on a monthly basis, as well as quarterly pharmacy utilization trends for top drugs at operations meetings with DMS.

For all reporting activities required of the services provided by the PBM, we maintain full responsibility for the reporting measures and compliance with the requirements of the contract. Per the requirements, annual reports will be delivered no later than August 15th of each contracting year, which includes reports and information required through KRS 205.647 and all additional requests made by DMS.

ii. Methods to ensure access to covered drugs and adherence to the preferred drug list.

Decreasing Costs through Generics
The generic equivalent prescribing rate increased from 77.5% in 2012 to 91.25% as of April 2019.

WellCare of Kentucky has developed and maintained an approved preferred drug list (PDL) for the Kentucky Medicaid program since 2011, ensuring access to all covered drugs for our Enrollees and adherence to the PDL. Nationally, our experienced P&T Committee manages the PDL for WellCare's 13 health plans across the country. The Kentucky PDL is tailored to the needs and requirements of the local population and DMS, and was developed and continues to be maintained and updated on an ongoing basis through input provided by local prescribers, continuous research of new medications, regulatory requirements, and product utilization. Our pharmacy benefits model ensures access to all medically necessary outpatient drugs consistent with Section 1927 of the Social Security Act (SSA). Adhering to the contract requirements in Section 32.12 Covered Drugs, our PDL will continue to not be more restrictive than FFS coverage of outpatient drugs. The following processes describe how we provide access to covered drugs for our Enrollees and maintain adherence to the PDL.

ENSURING ACCESS TO COVERED DRUGS

In accordance with 42 C.F.R 438.10 (h), we regularly engage our Enrollees to help them understand their pharmacy benefits and to provide medication-related clinical services that promote appropriate medication use and adherence. Our multiple engagement methods and

communication channels include Welcome calls by our trained pharmacy support team, the Enrollee WellCare of Kentucky ID card, Enrollee Handbook, inbound and outbound Enrollee calls, the WellCare of Kentucky website, face-to-face care management, the MyWellCare mobile smartphone application, Enrollee Services Call Center support, and quarterly newsletters. The following processes describe additional support for helping our Enrollees access covered drugs through open communication.

Face-to-Face Engagement. In our eight years' of experience in Kentucky, we know that face-to-face engagement at the local level with our network pharmacies and providers can have a significant impact on the quality of support experienced by our Enrollees. Through ongoing education and training, we employ local pharmacists to meet with providers to supply them with the necessary knowledge and tools to help them educate Enrollees about their pharmacy benefits, options, and access. Leading this community-based effort, Dr. Rogers and Dr. Tolbert perform in-person visits to our local prescribers, pharmacies, and independent pharmacies to educate them on accessing the PDL, the appropriate use of medications, and the prior authorization process.

MCO Training at the Pharmacy

In 2018, our Pharmacy Director, Thea Rogers, PharmD, and Pharmacy Manager, Ayonna Tolbert, PharmD, conducted a total of 547 provider meetings engaging over 1,300 providers in the Commonwealth to provide education and one-on-one training.

PDL Disruption Analysis. Before a major update to the PDL occurs, we run a disruption analysis report that identifies all Enrollees likely to be impacted by changes to the list or prior authorizations (PA) or step therapies. This is a critical step that ensures our team alerts the Enrollee and facilitates the appropriate adjustments with the prescriber prior to the Enrollee's next medication refill to proactively prevent gaps in medication therapy, reduce the prescriber burden for unnecessary PAs, and ensure continuous adherence to the PDL.

Provider Education Program. Supporting the efforts of Dr. Rogers, our provider engagement team engages local prescribers through education in the convenience of their own offices. Training includes using the provider portal to help streamline the Enrollee’s experience and accessing information to help inform the Enrollee of the details of their pharmacy benefit. We also provide guidance on pharmacy use, cost trending, Enrollee care gaps related to medication prescribing, and adherence. Tailored prescribing reports help our providers modify their prescribing behaviors and make adjustments to better promote evidence-based drug therapies and best practices. During these sessions, we deliver evidence on the comparative efficacy, safety, and cost-effectiveness of commonly used therapies in medical practices.

Community Support. Understanding that the people of Kentucky prefer personable interaction and service from their preferred, local pharmacists, we inform Enrollees that they always have a choice of pharmacy providers. Our Care Managers, Enrollee Services Call Center, and Pharmacy Help Desk are always available to assist Enrollees with any questions or concerns they may have regarding their pharmacy benefit. For Enrollees requiring assistance getting to their local pharmacy, our community engagement team can assist them with obtaining transportation to and from the pharmacy at a time convenient to their schedule.

ENSURING ACCESS TO THE PDL

Our methods to ensure adherence to the PDL begin with our pharmacy leadership team of Dr. Rogers and Dr. Tolbert, who have established strong relationships with their colleagues at DMS to coordinate state-required benefits, necessary clinical services, and local policies. Following their leadership, and through engagement with the P&T, WellCare of Kentucky uses the following methods to ensure adherence to the PDL under the contract requirements and provide access to covered outpatient drugs and biological products:

1. Review electronic format of preferred vs. non-preferred designations by National Drug Codes (NDCs), Generic Product Identifiers (GPIs) or therapeutic class
2. Document requirements and coverage criteria by program, such as PA criteria, step-therapy guidelines, quantity level limits, age limits
3. Forward to the PBM for programming
4. Perform test claims to ensure the PDL is properly programmed prior to go-live

Testing Accuracy. We have established and proven processes to continuously receive, load, and test PDL changes that respond to changing drug introductions, generic conversions, and pricing changes. On an ongoing basis, we use the PDL test files to ensure processing accuracy for the daily pharmacy PDL interface files with the NDCs and utilization management (UM) criteria provided by our formulary team. **In 2018, WellCare generated more than 170,000 test claims to validate the accuracy of the uploaded files across their national health plans.**

Developing New Prior Authorization Criteria. When new drugs come to market, new safety concerns are reported, or new guidelines are established we collaborate with our P&T Committee, led by Dr. Cynthia Miller (Senior Pharmacy Medical Director at WellCare Health Plans) to develop PA criteria with the goal of protecting the health and safety of our Enrollees and to prevent inappropriate medication usage. For example, we update our PA criteria based on annual reviews of industry standard guidelines, such as the American Association for the Study of Liver Diseases (AASLD) for Hepatitis C, as well as the American Academy of Pediatrics (AAP) guidelines and the Center for Disease Control's (CDCs) respiratory syncytial virus (RSV) surveillance data for the drug, Synagis.

Establish and Maintain PA Requirements. In collaboration with our contracted practitioners, our DUR and P&T Committees establish and maintain all PA requirements. The committees structure our PA rules to ensure alignment to standards of care, enable the delivery of care by providers, support Enrollee navigation through the healthcare delivery system, and prevent risk of over-utilization of services. We use a variety of data sources to evaluate our PA rules and determine where to add, remove, or change PA requirements. These include state and federal requirements; national publications and peer-reviewed journals; nationally recognized treatment guidelines; quality performance measures; requirements for emerging technologies and medication; utilization and claims data; and approval and adverse determination data.

Developing Prior Authorization Criteria

Our DUR Committee reviews the practices and policies of formulary management activities for clinical appropriateness, such as PAs, step therapies, quantity limitations, generic substitutions,

and other drug utilization activities that affect medication access. In cases where a drug poses potential efficacy, toxicity, or over or under-utilization challenges, the DUR Committee establishes criteria to promote appropriate use. Preliminary drug use criteria are developed at the time that a drug is proposed for consideration to the PDL. We review all criteria and submit revisions based on recommendations on an annual basis.

WellCare does not require PA for drugs exempted by state or federal laws and regulations. We establish utilization management edits for drugs that tend to have a high degree of clinical variability and efficacy. We develop and review PA protocols at least annually and provide criteria to meet for the drug authorization—such as specific diagnoses, lab values, trial and failure of alternative drugs, and allergic reaction to preferred product. Our PA is necessary to verify clinical appropriateness; ensure drug safety; prevent fraud and diversion; detect Enrollees receiving duplicate or unnecessary medication therapies from multiple prescribers; detect and prevent substance abuse; and allow coverage for medications not listed on the PDL.

The PA process is available for requests that fall outside established UM parameters, including the following areas:

- *Step Therapy.* We implement step therapy when there are several different drugs available on the PDL for treating a particular medical condition. This method encourages the use of therapeutically equivalent, lower-cost alternatives (first-line therapy) before moving to more expensive alternatives. Providers seeking to prescribe outside of the step therapy guidelines may request an exception through the PA process. We do not implement step therapy (or generic first) for drugs excluded by DMS, including drugs in the following classes: HIV/AIDS, hemophilia, multiple sclerosis, cancer, and end-stage renal disease (ESRD).
- *Quantity Limits.* We implement quantity limits to minimize inappropriate utilization, waste, and stockpiling of drugs, ensuring quantities supplied are consistent with FDA-approved clinical dosing guidelines. We use quantity limits to prevent billing errors. Providers seeking to prescribe a higher quantity may request an exception through the PA process (e.g., changes to opioid limits).
- *Generic Utilization.* Generic medications are a critical component to cost containment of the pharmacy benefit. We promote generic utilization in accordance with Medicaid policy. Coverage of a brand-name drug may be excluded when an A-rated generic substitute is available and the brand-name drug is not on the PDL. Providers seeking to prescribe the brand-name drug when a generic is available may request an exception through the PA process. In 2019, the generic equivalent prescribing rate increased from 77.5% in 2012 to 91.26%.
- *Age Limits.* Some medications have an age limit associated with them. We impose PA requirements for providers seeking to prescribe a drug falling outside of the age limit. For example, we send antipsychotic medications for children under ten for further clinical review to ensure appropriateness.

We use point-of-sale step therapy edits in place of required PAs for products where we only need to verify historical utilization of a first line drug or a diagnosis. One example is the newest diabetic agent, which is second-line behind metformin per the ADA guidelines; when the

Enrollee's claims history shows metformin was tried, the second-line agent pays at the point of service.

iii. Responsibilities and composition of the P&T Committee.

WellCare's P&T Committee serves to improve the quality of care provided to our Enrollees by promoting appropriate prescribing and drug selection through establishing standard of care practices and managing the cost of pharmaceutical care. Adhering to contract section 31.7 Pharmacy and Therapeutics Committee, WellCare of Kentucky uses a P&T Committee in accordance with KAR Title 907. The P&T will meet in Kentucky periodically throughout the calendar year as necessary and make recommendations for changes to the PDL or drug formulary. As an advisory committee to a public body, we acknowledge that the P&T Committee is subject to Kentucky's Open Meetings Law in KRS 61.800 to 61.840. Through our contract with DMS, we will provide notice of the time, date, and location of all P&T meetings.

RESPONSIBILITIES OF THE P&T COMMITTEE

Meeting at least quarterly, the P&T makes recommendations for changes to the PDL and is responsible for the activities described in **Table C.21-1**.

Table C.21-1 P&T Committee Responsibilities

P&T Responsibilities	Description
PDL Development and Drug Selection Determination	Serving as the official organizational liaison between the medical staff and the pharmacy program, the P&T Committee develops its preferred drug list (PDL) recommendations and determines drug selection by considering the drug's efficacy, safety, side effects and cost-effectiveness profile.
Review and Approval of Medications	All matters pertaining to the use of medications are reviewed and approved through the P&T Committee—an advisory, educational, and quality improvement council.
Ongoing Review and Maintenance of the PDL	The P&T Committee is responsible for the initial and all subsequent reviews of the PDL including reviewing each major therapeutic class annually and as new pharmaceutical information becomes available.
Establish and Maintain PA Requirements	The P&T Committee collaborates with the DUR Committee to establish and maintain prior authorization requirements. We structure our PA rules to ensure alignment to standards of care, enable the appropriate delivery system, and prevent risk of over-utilization of services.
Advisory Role	The committee recommends the adoption of, or assists in the formulation of, broad professional policies regarding evaluation, selection, and therapeutic use of drugs by the physicians in our provider network. Decisions on which drugs to include in

P&T Responsibilities	Description
	formularies are made by the P&T Committee.
Educational Programs	The committee recommends or assists in the formulation of programs designed to meet the needs of the physician and pharmacy providers of the network regarding complete current knowledge on matters related to drug use.
Quality Improvements	Our Pharmacy Quality Oversight Committee (PQOC) assists in the design of quality improvement programs to detect potential drug therapy problems. The PQOC committee reports directly to the P&T Committee.

In addition, we host a quarterly local P&T Forum, an event open to the public that creates a space for prescribers, Enrollees, and pharmaceutical manufacturers to discuss clinical topics and related drug categories with specific consideration given to the impact of these on our Kentucky Enrollees.

COMPOSITION OF THE P&T COMMITTEE

The composition of the P&T Committee, in **Figure C.21-2**, adheres to the contract requirements and includes a Kentucky licensed physician and a Kentucky licensed pharmacist currently providing services to Kentucky Medicaid recipients. Led by Dr. Cynthia Miller, a Senior Pharmacy Medical Director at WellCare Health Plans, Inc., the P&T also includes key staff members from WellCare's Pharmacy, Formulary, and Rebate team. Dr. Rogers and Dr. Tolbert provide their input and recommendations to ensure that all decisions made by the P&T Committee are appropriate for our Enrollees in the Commonwealth.

Figure C.21-2 P&T Structure

Leveraging the expertise of specialists spanning across WellCare's national health plans, the composition of the P&T committee includes 23 voting members from five different states. This diversity provides our pharmacy program with valuable insight that we leverage to tailor our services for the Commonwealth. The physicians and pharmacists comprising the committee specialize in various fields, including geriatrics, pediatrics, emergency medicine, osteopathy, surgery, nephrology, internal medicine, genetics, gastroenterology, pediatric endocrinology, psychiatry, behavioral health, and oncology. Annually, **the P&T Committee reviews 89 drug classes for our Medicaid programs leveraging the expertise and participation of over 30 WellCare licensed pharmacists** who provide recommendations to voting committee members.

Additional components of our program serving under the leadership and oversight of the P&T Committee include the following:

Pharmacy Quality Oversight Committee (PQOC). The PQOC serves to improve the quality of care pertaining to pharmacy services through the oversight of all WellCare pharmacy-related quality processes and initiatives. These quality initiatives may include drug safety initiatives, clinical improvement interventions, appropriate prescribing and drug selection, establishing and adopting standards of care practices regarding medications, and Enrollee satisfaction. The purpose of PQOC is to improve the quality of care of pharmaceutical services.

Drug Utilization Review (DUR) Committee. The DUR Committee is a pharmacy review committee established by the P&T Committee. The purpose of the committee is to ensure that we conduct appropriate concurrent and retrospective drug utilization reviews, such as ensuring that drug therapy meets current standards of care, preventing medication-related issues, evaluating the effectiveness of drug therapy, controlling drug costs, and identifying areas of practice that require further education of network practitioners.

iv. Proposed DUR Program, including approaches to collaborate with the Department on pharmacy initiatives.

Our drug utilization review (DUR) program provides Enrollees with the best quality prescription drug benefit at the lowest possible cost while ensuring appropriate access to medically necessary drugs. Under the direction of the DUR Committee, our pharmacy program features a comprehensive, prospective, concurrent, and retrospective review of the Enrollee's pharmacy data to ensure that appropriate medication decision-making results in positive health outcomes. To supplement the DUR Program, we provide extensive medication-related clinical services and programs to promote medication use and adherence.

Our PBM implements WellCare's prospective DUR tools at the point of sale for over 60,000 contracted pharmacies nationwide by using the National Council for Prescription Drug Program (NCPDP).

Prospective DUR. Our PBM's claims system provides a central electronic repository for capturing, storing, and updating prospective DUR data. The claims processing system assesses each active drug regimen for our Enrollees in terms of therapeutic duplication, drug to drug interactions, drug to age contraindications, drug to gender limitations, drug to pregnancy contraindications, drug-to-disease contraindications, over and under-utilization, and other clinically appropriate evaluations.

Concurrent DUR. Our PBM maintains a profile of each Enrollee's medication history. Through real-time claims screening and application of our DUR criteria, the PBM system identifies potential adverse drug events (ADEs) for every prescription adjudicated. The system returns an alert, when appropriate, based on the severity level through the online claims adjudication system. We engage our network pharmacies to evaluate the alerts and potential ADEs for each prescription adjudicated. When we identify a potential conflict, we deliver one of the following interventional messages:

- *Messaging:* Alerts to network pharmacy during prescription processing to inform the pharmacist of a potential drug conflict.
- *Soft Messaging:* Alerts to the network pharmacy that may be overridden at the POS. Pharmacists are required to review the potential medication conflict, take action, and enter standard NCPDP conflict, intervention, and outcome codes for prescription adjudication.
- *Hard Messaging:* Alerts that do not allow an override at the POS. The pharmacist must contact us with supporting information to receive an override for the claim to process.

Retrospective DUR. We execute our retrospective drug utilization reviews (rDURs) with routine examination of claims data and other records through computerized drug claims processing and information retrieval systems to assess the clinical quality of prescribing and dispensing of medications. Our rDURs identify patterns of fraud, abuse, gross overuse, or inappropriate or medically unnecessary care among physicians, pharmacies, and Enrollees associated with specific drugs or groups of drugs.

DUR Reporting Requirements. WellCare of Kentucky will continue to provide a detailed description of the DUR program to DMS on an annual basis to assist in compliance with and timely submission of the CMS Annual DUR Report. We will provide all data necessary for appropriate CMS Annual DUR Report submission, including our portion of the annual report template from CMS.

INTEGRATED CLINICAL PHARMACY PROGRAMS

Led by the clinical pharmacy team, our medication-related clinical services promote medication use and adherence through programs designed from our national, multi-year experience and delivered in collaboration with local resources. WellCare Health Plan's Vice President of Pharmacy Clinical Programs, Angel Ballew (MTMP), is an active member of the FDA Advisory Board for Medication Adherence and represents WellCare's membership within the Pharmacy Quality Alliance (PQA), which includes over 240 organizations helping to advance the quality of medication adherence, safety, and use. Dr. Rogers and Dr. Tolbert work closely with Dr. Ballew to implement the programs described in **Table C.21-2** in the Commonwealth.

Table C.21-2 WellCare Clinical Pharmacy Programs

Clinical Program	Program Description
Enrollee Engagement	WellCare of Kentucky performs ongoing Enrollee outreach to promote medication use and adherence, ensuring Enrollees understand the importance of taking their medications as directed through texting reminders, outreach, calls, and mailings. Through ongoing adherence reporting, we identify at-risk Enrollees and enroll them in our Healthy Living Program (see below) for additional and comprehensive support. For those Enrollees identified with quality needs (e.g., statin use in persons with diabetes (SUPD), corticosteroid inhalers, anti-depression compliance), we enroll them in the associated quality outreach program to ensure ongoing adherence to their prescribed medications. Our multi-disciplinary (MDT) care management team conducts

Clinical Program	Program Description
	ongoing reviews with pharmacists regarding Enrollee medication regimens whenever utilization patterns cross a specific medication adherence threshold.
Medication Synchronization	Our medication synchronization process reduces unnecessary pharmacy visits, relieves transportation burdens, and promotes medication adherence by providing Enrollees the ability to synchronize the fill date for multiple prescriptions. This functionality prevents Enrollees from having to make multiple trips to the pharmacy each month and is particularly beneficial for Enrollees taking maintenance medications.
Polypharmacy Interventions	We have two programs within our DUR activities focused on polypharmacy or therapeutic duplication. Our point of sale (POS) program, which is managed by the PBM, has an alert that checks for two or more medications from the same therapeutic class. When this occurs, a message is provided to the pharmacist filling the claim. We review these alerts quarterly to identify any global trends. In addition, we have a behavioral health polypharmacy program. Monthly, we identify any Enrollee who may have more than one antipsychotic medication or any elderly Enrollee with dementia who has one or more antipsychotic medications. Once identified, we send a letter alerting the provider and request a formal review of the individual's medication profile. We perform a follow-up review of the Enrollee's medication profile during the next three months to determine whether a change has occurred. A letter was considered a success if the Enrollee no longer met criteria for the same measure in the three-month follow-up. **In 2018, successful outcomes were achieved for 60% of Enrollees targeted through the program.**
Managing Antipsychotic Medications for Children	Our Pediatric Antipsychotic Utilization program identifies potential drug therapy issues, including excessive dose and multiple medication therapies for children ten and under in the Medicaid population. When drug therapy issues are identified, recommendations are suggested to the provider via outreach. The program goal is to identify antipsychotic use in Enrollees less than ten years old as well as identify potential drug therapy problems. Communication is directed at the provider level to inform prescriber for Enrollees with potential therapeutic opportunities. **In 2019, WellCare of Kentucky performed targeted medication reviews for 616 Medicaid Enrollees under the age of 10.**
Healthy Living Program (Medication Management Therapy)	For our high-risk Enrollees, The Healthy Living Program includes MTM activities that proactively ensure medication use and adherence. The program includes the following components: • Physician alerts through faxes and pharmacist phone calls specific to Enrollees with gaps in care related to one of six designated chronic conditions to ensure Enrollee use and adherence • Targeted provider outreach and education regarding overuse and inappropriate us of antipsychotic medications

Clinical Program	Program Description
	• Interventions implemented by clinical pharmacists for Enrollees that use more than 10 prescriptions per month to address drug therapy issues related to medication use, duplication of therapy, safety, effectiveness, and compliance Clinical pharmacists and concurrent review specialists work with hospitalized Enrollees to reconcile their medications as a part of our comprehensive discharge planning process
Provider Engagement	Our provider relations team trains providers with face-to-face pharmacy educational sessions at their offices to discuss medication adherence best practices, the Healthy Living Program, and Enrollee outreach efforts. **In 2018, Dr. Rogers and Dr. Tolbert conducted a total of 547 provider meetings with 1330 provider contacts** either in person, telephonically, or through the Independent Practice Association (IPA) management to address PDL issues, respond to questions, and to provide feedback on individual prescribing practices to quality outcomes. We perform education efforts for network pharmacies to discuss medication topics, including use and adherence. In addition, we facilitate Enrollee use and adherence to medications using provider interventions, including deploying clerical support in physician offices, fax reminders, pharmacist calls to physician practices, HEDIS and adherence profiles on the provider portal, and Enrollee heat maps and lists that identify specific regions in the community where medication adherence needs to be addressed.
EQuIPP (Electronic Quality Improvement Platform for Plans and Pharmacies)	Pharmacy Quality Solutions (PQS) administers EQuIPP, a pharmacy benchmark system that provides performance data associated with quality measures to health plans and community pharmacy organizations. EQuIPP allows community pharmacist providers to identify non-adherent Enrollee opportunities, collaborate with provider practices to close care gaps, and improve medication adherence. Currently, the EQuIPP network includes 95% of all pharmacies nationwide, with 90% of these pharmacies used by WellCare Medicaid Enrollees. **In Kentucky, 95% of pharmacies participate in the EQuIPP network.** WellCare is the first health plan to launch the HEDIS measures, Antidepressant Medication Management (AMM), Medication Management for People with Asthma (MMA) and Adherence to Antipsychotic Medications for Individuals with Schizophrenia (SAA), within the EQuIPP platform in an effort to engage pharmacies with medication-related quality measures. Additionally, WellCare is the first health plan to launch the HEDIS measure, Statin Therapy for Patients with Cardiovascular Disease (SPC), and the PQA measure, Concurrent Use of Opioids and Benzodiazepines (COB), within EQuIPP for their Medicaid population. **In comparison to the national benchmark, WellCare of Kentucky pharmacies on the EQuIPP platform performed better in improving medication adherence for diabetes in the Medicaid population.**

Clinical Program	Program Description
PBM Pharmacy Advisor Support (PAS) Program: Medication Adherence and Care Gaps	Our PBM supports WellCare of Kentucky Enrollees through their Pharmacy Advisor Support (PAS) program, which promotes medication adherence and closing care gaps based on clinical quality measures. The PBM sends tailored messages via fax to our providers regarding key points in the therapy process for Enrollees with chronic conditions, such as diabetes, asthma, high blood pressure, depression, etc. Messages target Enrollees not adhering to their medication regimen (late-to-fill) or provide clinical considerations and recommendations that will help close a care gap, such as adding a statin for Enrollees on anti-diabetic medication. **Through these outreach efforts, the PAS program sent more than 16,500 messages for adherence to asthma medication, more than 7,000 messages for care gaps related to asthma, more than 23,500 messages for adherence to diabetes medication, and more than 1,500 messages for gaps in care related to diabetes.**
One Provider-One Pharmacy Program	As part of WellCare's new, national ACT for Opioids Program, we identify Enrollees with relevant behavior patterns by analyzing high numbers of controlled substance claims; multiple prescribers of controlled substances; prescriptions filled at multiple pharmacies; excessive utilization; Emergency Department utilization; and the geographic distribution of controlled substance prescribers and pharmacies. Once we identify an at-risk Enrollee, we enroll them in the One Provider-One Pharmacy program, where they are "locked-in" to one prescriber and one pharmacy for controlled substances categorized as opiates or benzodiazepines. **In 2018, the WellCare of Kentucky program enrolled over 2,800 Enrollees into Care Coordination. This resulted in a 27% drop in opioid utilization, a 47% increase in Medication-Assisted Therapy (MAT), a 25% increase in maintenance medications, and a 33% decrease in Emergency Department utilization.**
Medication Reconciliation	Our WellCare of Kentucky pharmacists contact Enrollees post-discharge telephonically or through support of their local integrated Care Coordinator. Our pharmacists work with the Enrollee's PCP as they perform medication reconciliation to ensure appropriate medication adherence and eliminate dangerous or unnecessary prescriptions. We also connect the Enrollee with our WellCare of Kentucky discharge planners and Care Coordination team. When necessary, our Care Coordinators call a Pharm.D. to support the process.

Collaborative Initiatives with DMS

As part of our DUR activities, WellCare of Kentucky will continue to work collaboratively with DMS on related pharmacy initiatives, such as the universal policy implementations, the pharmacy lock-in program, buprenorphine provider programs, and other initiatives. Through our partnership with DMS since 2011, Dr. Rogers and her pharmacy team have collaborated on many initiatives with DMS and other MCOs that have led to the identification and resolution of common issues and priorities for the Kentucky Medicaid Pharmacy Program.

In our experience, the current Pharmacy Director Workgroup has been one of the most successful ongoing collaborations between DMS and the MCOs in the Commonwealth. Our Pharmacy Director, Dr. Rogers, has participated in these ongoing monthly meetings and seen firsthand the importance of working collectively to identify common issues and develop collaborative solutions that benefit the Medicaid Enrollees throughout the Commonwealth. With the focus on helping the people of Kentucky receive better care and access resources that improve their quality of life, we have learned that regular contact with our peers sustains the ongoing critical discussion that helps us identify serious issues and develop solutions based on the input and expertise of every committed stakeholder involved in the process.

The following examples describe the successes of this collaboration experienced by Dr. Rogers, DMS, and our MCO peers:

- *Uniform Prior Authorization Criteria.* The workgroup collaborated on developing uniform prior authorization criteria for buprenorphine and Hepatitis C products to streamline the process and approach for managing these particular therapies. The project began when Dr. Rogers communicated with the state Medical Director, who had concerns about Enrollees access to these medications. We identified a region of the Commonwealth that had little to no access to specialists required for prescribing based on our Hepatitis C criteria. With further investigation and community outreach, we later found that there were some local providers who received additional education and training to obtain the necessary certifications, this information was not readily available using the standard NPI credential search. Dr. Rogers worked with the Medical Director and our prior authorization review team to develop a solution that would facilitate access to these medications for our Enrollees. As a result, prescribers now provide attestation for their training and receive prior authorization approval for prescribing these medications.
- *Pharmacy Management Dashboard.* The workgroup collaborated on the development of a pharmacy management dashboard that contains a set of consistent metrics used to compare trends across the pharmacy program.
- *Streamlined Policy Communications.* Understanding that it can sometimes be difficult for local pharmacists to understand and begin implementing new policies, the workgroup met to develop a standardized communication approach to educate Kentucky pharmacists about the new cost share requirements. This issue was brought to our attention by a WellCare of Kentucky Enrollee who needed their medication but did not have the ability to meet the costs of the associated co-payment. As a result, the communication letter that we used to address this issue with our pharmacy network was brought to DMS and approved for use by

all MCOs regarding filling medications for Medicaid beneficiaries at or below the Federal Poverty Level (FPL).

Most recently, we have contacted DMS to begin working on an issue regarding cost outliers. Certain cost outliers identified through pharmacy reporting may be impacting pharmacy cost trends for the FFS program and the MCOs in the Commonwealth. The discussion includes evaluating less costly alternative medications to use instead of expensive pharmacy products that may be contributing to wasteful spending practices for the Medicaid benefit.

v. Proposed Maximum Allowable Cost (MAC) program.

Adhering to the requirements of the contract and Kentucky Senate Bill 5 (SB5), WellCare of Kentucky will establish and maintain a generic drug Maximum Allowable Cost (MAC) program to promote generic utilization and cost containment. The program will comply with all maximum allowable cost laws and administrative regulations promulgated by DMS or by state or federal law.

Our PBM uses an analytical process to establish a MAC at a product level for generics and multi-source brand products. The analytical process involves a review of marketplace dynamics, product availability, and different pricing sources. Pricing sources may include Medi-Span (or any other similar nationally recognized reference), wholesalers, MAC lists published by CMS, the National Average Drug Acquisition Cost (NADAC), and retail pharmacies. MAC prices are subject to change, which can occur at least on a weekly basis, and are based on marketplace trends and dynamics, and price fluctuations. For any MAC price change greater than five percent or drug new to the MAC list, the PBM will submit the price change request to DMS for approval in accordance with SB5 as outlined in KRS 205.647.

The MAC price appeal process shall meet the following requirements:

- A 60 day limitation on provider's right to appeal following the initial claim
- PBM will investigate and resolve the appeal within ten (10) days
- If the appeal is denied, the PBM shall provide the reason for the denial and identify the national drug code of a drug product that may be purchased by contracted pharmacies at a price at or below the MAC
- If an appeal is granted, the provisions of 304.17A-162(2) shall apply. Ky. Rev. Stat. Ann. § 304.17A-162.

Providers may appeal the MAC price paid by the PBM at a product level. Submission of a paid claim by the provider is required for this process and they must notify the PBM within the period required by applicable Law, and provide all of the following information: date of fill, prescription number, Enrollee name, pharmacy NCPDP/NABP number, chain/affiliation code, phone number, email address, and RXBIN. Chain and Pharmacy Services Administration Organization (PSAO) pharmacies will submit MAC paid claim appeals through their respective chain or PSAO headquarters, which will then submit appropriate data to the PBM. Independent pharmacies (those that are not affiliated with a PSAO for contracting purposes) will submit MAC paid claim appeals using the Caremark Pharmacy Portal.

Provider may access the PBM pharmacy portal to obtain current MAC prices and upcoming MAC prices based on their price update schedule.

WellCare's PBM oversight team routinely reviews claims data and meets with the PBM to ensure the MAC program complies with SB5 requirements.

vi. Approach to operation of a pharmacy call center.

WellCare operates a toll-free pharmacy call center and provides support through live agents, 24-hours a day, seven days a week to respond to inquiries from pharmacies and providers regarding Enrollee Medicaid prescription drug benefits. The pharmacy call center responds to inquiries concerning claims processing, benefit coverage, claims submission, claims payment, exceptions and prior authorizations, and medication appeals. A quality assurance team monitors calls, and scores agents on accuracy, compliance, and completeness of assistance. We welcome DMS to monitor the call center through a review of statistical reports, telephone calls, or onsite visits. Our system tracks each call and retains information collected by the supporting agent, which is retrievable based on Enrollee information. In addition, we provide a pharmacy call center quality assurance program subject to DMS' approval, with monitoring results made available to DMS on a monthly basis, see **Figure C.21-3**.

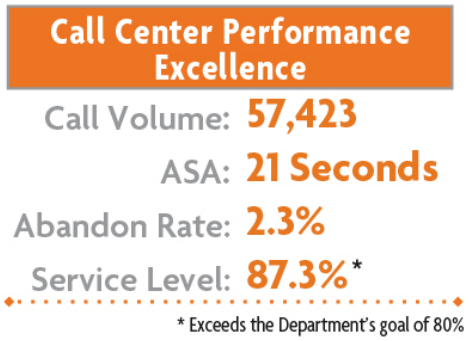

Figure C.21-3 Call Center Performance

Table C.21-3 describes the components of the call center that ensure a high level of service for all inquiries, questions, and assistance.

Table C.21-3 Pharmacy Call Center

Component	Description
Hours of Operation	WellCare's pharmacy call center provides support 24 hours a day, seven days a week. Our regular business hours are from 8 am to 9 pm Eastern Time, Monday through Friday. WellCare and our PBM collaborated to establish after-hours call practices to ensure that Enrollees and providers receive access to accurate information and necessary medications. Calls received outside of regular business hours (including weekends and holidays) are handled by WellCare's PBM. These calls are actively routed by time-of-day routing to the PBM outside of regular business hours.
Agent Support	Our call center agents are trained to expertly handle and support providers for the following topics: cost exceeds maximum rejections; Zyvox authorizations; questions related to narcotic medications (including reason for denial of coverage); determination requests, reversal of prescription claims; backdating of approved coverage determinations for LTC pharmacies; and emergency overrides and approval for up to a seven day supply. For complex calls or inquires that require escalation to our internal pharmacy team at WellCare, agents are instructed to route calls to our

Component	Description
	pharmacy technicians who are capable of providing support and resolution for the topics listed above, as well as injectable questions; lost or stolen medications; calls regarding medication appeals; and requests to speak directly to a Medical Director.
Call Center Reporting	The pharmacy team runs monthly data reports as requested by CMS or DMS. Reports include the following information: the total number of calls received; total number of abandoned calls; the average hold time to reach an associate; the number of calls answered in less than 30 seconds; and the average call handling time. Our call center managers and leadership team leverage these reports to track the performance and quality level of our pharmacy support and determine actions, remediation, or changes in allocation that need to be performed.
Call Center Forecasting	Each month, we perform a model forecasting of the expected call volume for the next month using historical data to forecast how many calls WellCare could receive. Once the forecast is calculated, it is forwarded to the manager of the Pharmacy Call Center for review. The manager, determines if the forecast is accurate based on any anticipated call center or pharmacy department activities (such as outbound notification campaigns). Once adjustments are made, the forecast is approved.
Agent Training	Our pharmacy team provides the following types of training for all pharmacy associates and call center agents in a live classroom setting or online training. • *New Hire Training (3 weeks)*. Consists of learning how to navigate and use the WellCare systems, details of quality assurance guidelines, and roles and responsibilities. Upon completion, agents understand how to use the pharmacy systems and resources to answer questions and concerns from callers. • *Update Sessions.* In-depth training for changes and updates provided by WellCare to ensure that processes are clearly communicated. • *Team Meetings*. Monthly team meetings held by the Call Center and internal expert pharmacy technicians covering areas of opportunity identified by our dedicated quality staff members and department managers. Team meetings help reinforce processes and enhance the associates' knowledge of concepts and processes. • *Train the Trainer Sessions*. An industry standard method of training used to train the vendor call center trainers. The pharmacy trainer meets with the trainers from the vendors to review any training materials and present new material. After the Train the Trainer session is completed, the vendor trainers individually train associates at the vendor sites. All new hire and ongoing training requires call center agents to complete an assessment and pass the assessment with a score of 90% or higher.

Component	Description
	Agents who do not successfully complete the new hire assessment are given a supplemental quiz after further coaching and training provided by the trainer or supervisor.
Quality Assurance	WellCare is committed to providing callers with knowledgeable answers to all their questions and concerns. Our dedicated quality team monitors calls and provides constructive feedback and guidance for all call center agents. A dedicated quality specialist monitors calls and provides call feedback to management for further training. In addition, we leverage a monitoring tool that identifies tone and negative words automatically. Feedback is provided to associates through group calibrations and individual monitoring processes. Call agent supervisors coach our agents based on monitored calls through the following process: asking the agent for their personal feedback about a call; providing positive aspects of the call; areas for improvement; emphasizing the importance of immediate improvement; providing the team managers with an assessment of the quality of work; and developing an individual developmental action plan (IDP) based on performance.

b. Describe the Contractor's pharmacy claims payment administration, including an overview of the Point of Sale (POS) system and processes for complying with dispensing fee requirements.

WellCare of Kentucky's pharmacy claims payment administration, including the Point of Sale (POS) system and processes for complying with dispensing fee requirements, adheres to Section 31.8 Pharmacy Claims Payment Administration. All claims adjudicated as payable are for our eligible Enrollees, to enrolled providers, for approved services, and in accordance with the payment rules and other policies, regulations, and statutes of DMS. **Since the beginning of managed care in the Commonwealth, we have paid more than 67 million claims. Table C.21-4** illustrates our claims payment metrics in 2019, which show that our average days for claims paid of 9.8 meets and exceeds the contract requirement of 21 days.

Table C.21-4 Claims Payment Metrics

Month 2019	Total Number Claims Pad	Average Days Paid	Claims Processing Speed (within four seconds)	% System Availability
January	931,840	9.93	99.98%	99.97%
February	846,084	9.8	99.98%	100%
March	885,988	9.79	99.97%	100%
April	887,529	9.79	99.98%	100%

Month 2019	Total Number Claims Pad	Average Days Paid	Claims Processing Speed (within four seconds)	% System Availability
May	880,272	9.78	99.98%	100%
June	1,993,394	9.81	99.97	100%
July	838,578	9.68	99.97	100%
August	868,993	9.78	99.98	100%
September	841,968	9.79	99.98	100%
October	897,647	9.78	99.98	100%
November	832,861	9.78	99.97	100%
December	883,599	8.89	99.98	100%

Our claims processing system performs eligibility verification, claim adjudication, provider validation, duplicate claims edits, and concurrent DUR edits online, in real time. Additional edits include Enrollee cost share calculation, incorrect price, expiration date, and claim cost. The POS system maintains complete Enrollee history and updates plan and eligibility specifications in real time.

The following claims data can be used to screen claims for possible duplication:

- Enrollee identification number
- Date of fill
- National Drug Code (NDC) number/Generic Code Number (GCN)
- National Council for Prescription Drug Program (NCPDP)
- Refill code
- Prescription number

These system edits, applied at the point of service, automatically manage, monitor, and ensure compliance with program parameters before a prescription is dispensed. This comprehensive set of online electronic claims verification and authorization edits, combined with extensive pharmacy desk audit and field audit capabilities, provides a full-scale operational platform for all claims payment administrative processes.

The following describes additional components of our POS administration process:

POS System Requirements. WellCare of Kentucky ensures that our POS system satisfies the functional and informational requirements for claim submissions from local pharmacies 24 hours per day, seven days a week, and 365 days per year. The POS system has the ability to apply an Internal Control Number (ICN) to each claim and its support documentation to track claims, conduct research, perform reconciliations, and for audit purposes. All Enrollee

information is protected by the appropriate HIPAA safeguard, and the POS system is capable of adding, changing, or removing claim adjudication processing rules to accommodate state and federal required changes to the pharmacy program within 30 days.

Complying with Dispensing Fee Requirements. We will incorporate a standard process for reviewing dispensing fees as part of the daily claims review. The assigned WellCare PBM coordinator reviews for proper claim adjudication and escalates to the PBM if errors are identified.

Pharmacy Claims Payments. We process, adjudicate, and pay pharmacy claims, including voids and full or partial adjustments, using the online, real-time POS through the following methods:

- *NCPDP Format.* We use the specified current NCPDP format and provide updates to this format at no cost to DMS. A "clean claim" refers to a properly completed paper or electronic claim submitted in compliance with NCPDP standards and approved for payment.
- *Denied Claims.* We identify and deny claims that contain invalid provider numbers, including when the taxonomy or National Provider Identifier (NPI) or provider number is missing or invalid. WellCare of Kentucky advises the provider whenever a submitted claim has been denied and specify the reason for the denial.
- *Third-Party Liability.* We identify any liable third party and ensure Medicaid is the appropriate payer of last resort. We pay our providers in full satisfaction of the clean claim or give them a credit against any outstanding balance previously owed.
- *Claim Resubmission.* When a claim is resubmitted with additional information or documentation, it requires a new claim for the purposes of establishing the time frame for claims processing.

Claims Processing. We provide the ability to process claims on batch electronic media and paper claims submitted directly for process. Paper claims may include those submitted when an Enrollee has to visit an out-of-network pharmacy in an emergency. Paper claims can be submitted on the NCPDP Universal Claim Form (version D.0). Adhering to contract requirements, we will process and adjudicate paper claims within ten days of receipt; assign ICNs to all batch claim within 24 hours of receipt; maintain an electronic backup of batch claims; and adjudicate electronic claims through the same processing logic as the POS claims.

Significant Impact Issues. We will notify DMS in writing no later than one day from discovery of any POS processing or claims adjudication issues that is or has the potential to significantly impact processing time for claims submission, adjudication, accuracy, or continuity of Enrollee drug therapy. As stated in the contract requirements, we consider a "significant impact" to mean a threshold of 100 or more Enrollee claims. Following notification, we will provide the root cause and corresponding corrective measures to prevent future issues from occurring.

Claims Processing Numbers. We establish a unique Medicaid-specific Processor Identification (BIN) and Issuer Identification Number (IIN), Processor Control Number (PCN), and Group Number combination for POS pharmacy claims processing. This process helps distinguish claims from other lines of business. The BIN/IIN and PCN number appears on all Enrollee identification

cards along with the toll-free phone number for pharmacy provider assistance and Enrollee assistance.

c. *Describe the Contractor's processes and procedures to provide rebate claiming process and ensure the Department maintains current rebates levels.*

Our processes and procedures to provide timely, accurate, and complete data to support DMS' rebate claiming process and ensure DMS maintains current rebate levels incorporates both POS retail pharmacy claims and prescription medication claims (including physician-administered drugs). WellCare of Kentucky has been submitting encounter data—including NDC-level detail—to the Commonwealth since program implementation and supports their rebate process and ability to create invoices for the billing of pharmaceutical manufacturers participating in the CMS rebate program for rebates. **For the past twelve months, our PBM's encounter acceptance rate of 99.98% has enabled DMS to capture rebates and maintain current levels in a timely manner. As a result of this high encounter acceptance rate, we have submitted approximately $663 million in pharmacy encounters in 2019.**

Process and Procedures. We configure our pharmacy and medical claims systems to promote clean encounter submissions, thereby decreasing the number of rebate disputes we receive from the rebate vendors and ensuring DMS maintains current rebate levels. We develop comprehensive reporting in the manner requested by DMS and submit complete utilization files. We send all data files at the required frequency, including the required data elements, format, and layout. Datasets are generated for both the typical POS pharmacy claims, as well as outpatient drugs submitted as medical claims under HCPCS codes (such as "J-Codes"). We work with our providers when rebate disputes arise to correct the claim, engage in resubmission, and ensure the claim for rebate is reflected accurately back to the Commonwealth.

Dispute Resolution Process. If a rebate dispute should arise, Dr. Rogers will assist in the resolution process, and WellCare of Kentucky will provide detailed claim information requested by DMS to support resolution activities and provide support throughout the process. When a pharmaceutical manufacturer submits disputed claims to the Commonwealth or the vendor handling the rebate billing for the Commonwealth, Dr. Rogers should be notified of the dispute. Dr. Rogers will research the disputed claims and contact the providers to determine if they have submitted an incorrect NDC. If it is determined that the pharmacy provider or physician provider billed the incorrect NDC, Dr. Rogers will request that the provider resubmit the claims correctly or WellCare of Kentucky will provide supporting documentation regarding the validity and accuracy of the disputed claim.

Reporting Features. We produce comprehensive and timely drug utilization data for the purposes of rebate reporting necessary for DMS to bill manufacturers for rebates in accordance with section 1927 (b) (1) (A) of the SSA and any Kentucky supplemental rebate program within the designated 45-day time requirement at the end of each quarterly rebate period. We send files at the required frequency (typically quarterly), including the required data elements, and follow strict data format and layout. We generate data sets for the typical point of sale pharmacy claims and outpatient drugs submitted as medical claims under HCPCS codes, such as J-Codes. We similarly notify the Commonwealth of rebates paid directly to WellCare of

Kentucky in the required format (typically an aggregated amount). In adherence to the contract requirements, reporting includes diabetic testing supplies, insulin, and those drug products administered by network providers in an office or clinic. This includes the total number of units of each dosage form dispensed or administered, strength, date of service (date dispensed or administered), paid date (actual date claim was paid), and the NDC of the covered outpatient drug, and the amount paid.

Table C.21-5 illustrates our PBM's acceptance rate for encounters, which facilitates the sending of utilization data to DMS so they can capture rebates and maintain current levels.

Table C.21-5 Encounters Acceptance Rates (April 2018-2019)

Measure	Requirement	Submitted	Met Requirements	Accuracy Rate
Accuracy	Each file submitted meets internal accuracy requirement	494 files	494	100%
Accuracy	Files submitted in appropriate format required by DMS	494 files	494	100%
Accuracy	New encounters are not duplicate of another encounter in the system	10,867,296 encounters	10,867,296	100%
Completeness	Resubmission and attestation of full file rejections	No rejected files in time period requiring an attestation		
Timeliness	Submit encounter file within five days of scheduled submission dates	52 weeks	52	100%
Timeliness	Submit new encounters within 30 days of adjudication date	10,867,926 encounters	10,867,926	100%
Timeliness	Timely Resubmission of encounter errors within 60 days	766 encounters	766	100%

d. Describe the Contractor's processes and procedures to provide data and support Department-based efforts and initiatives for 340B transactions.

Our processes and procedures provide data and support Department-based efforts and initiatives for 340B transactions. In collaboration with the PBM, WellCare of Kentucky supports participating pharmacies and pharmacists enrolled as 340B providers with the U.S. Department of Health and Human Services (DHHS). Together, we maintain the systems capability and methodology to appropriately identify 340B claims in real time, prospectively, and retrospectively with the utilization of NCPDP fields designed specifically for this purpose.

Providers are required to submit the values detailed below to WellCare of Kentucky when submitting claims purchased through the 340B program, in accordance with Department requirements:

- Electronic submissions of 340B claims should include the applicable submission clarification code, ingredient cost, and dispensing fee as a single claim
- Pharmacies must identify 340B claims with "2.0" in the Submission Clarification Code in NCPDP field 420-DK

Table C.21-6 includes a payer field description indicating the value to be used to identify drugs acquired at 340B pricing. Providers may use these fields to indicate claims for which dispensed drugs were acquired at 340B pricing.

Table C.21-6 Payer Field Description

NCPDP Field #	NCPDP Field Name	Value	Segment Summary	Comments
420-DK	Submission Clarification Code	20 = 340B	RW	20 = Required when designating the product being billed was purchased pursuant to rights as a 340B/Disproportionate.
409-D9	Ingredient Cost Submitted	Actual Acquisition Cost + Dispensing Fee	RW	Required when submitting claims acquired through the 340B program. Pharmacies should submit their acquisition cost plus.
423-DN	Basis of Cost Determination	08 = 340B	RW	08 = Required when designating the 340B/Disproportionate Share Pricing/Public Health Service acquisition price.

The fields outlined in **Table C.21-7** will be sent to the Commonwealth on the encounter files to ensure the Commonwealth captures this data.

Table C.21-7 Encounter Record Layout

NCPDP Field Value	NCPDP Field Value Description	340B Claim Identifier
420-DK	Submission Clarification Code	20
CMS-1500 Field Number	CMS-1500 Field Value	CMS-1500 Field Description
24 D	Procedures, Services, or Supplies	CPT/HCPCS Modifier
837P Loop/data element	Electronic Claims Field Description	340B Claim Identifier

NCPDP Field Value	NCPDP Field Value Description	340B Claim Identifier
Loop 2400 SV101-3, SV101-4, SV101-5 and SV101-6	Modifier 1, Modifier 2, Modifier 3, Modifier 4	UD
UB-04 Field Number	Field Description	340B Claim Identifier
44	HCPCS/Rate/HIPPS Code	JG, TB, AY *
837I Loop/ data segment	Field Description	340B Claim Identifier
Loop 2400, SV202-2 (SV202-1=HC/HP)	HCPCS/Rate/HIPPS Code	JG, TB, AY *

*These modifiers are captured for Medicare claims and need to be submitted when present on crossover claims, where applicable.

Adhering to the contract requirements, WellCare of Kentucky will not reimburse a 340B entity for pharmacy-dispensed drugs at a rate lower than that paid for the same drug to pharmacies similar in prescription volume that are not 340B entities. We will not assess any fee, charge-back, or other adjustment upon the 340B entity on the basis that they participate in the program set forth in 42 U.S.C. §256b.

e. Describe the Contractor's pharmacy Prior Authorization process, including the following as part of the response:

WellCare of Kentucky has an average prior authorization turnaround time (TAT) of under 8 hours of receipt.

Our prior authorization (PA) process ensures that Enrollees receive safe, appropriate, and cost-effective medications in a timely and efficient manner without disruption to their care. To facilitate this process, local prescribers have access to a seamless communication and PA experience with their WellCare of Kentucky counterparts and system navigation. Our PA process is compliant with Section 1927(d)(5) of the Social Security Act (SSA) and 42 C.F.R. § 438.3(s)(6) and with all Department requirements.

Across our national health plans, WellCare Health Plan Inc., is compliant with each of the service level agreements in place with our state Medicaid partners for required turnaround times (TAT), processing nearly 100 percent of PA requests within 24-hours when required. On average, we process pharmacy requests under 8 hours of receipt of the request—achieved by operating a clinical pharmacy program (open seven days a week) with WellCare facilities located in Arizona and Florida for business continuity and time zone issues. We date and time stamp all PA requests, ensuring resolution within a 24-hour timeframe—unless additional information is required from the prescriber, and status can be checked online in real time. In addition, we have added a new feature, electronic prior authorization (ePA), for which providers can use a web-based portal to initiate requests.

i. Transparency in communicating the conditions for coverage to providers.

To promote full transparency in communicating the conditions for coverage to providers, we update them to PA policy changes well ahead of implementation, ensuring that PA requests can be submitted in time to avoid disrupting medication regimens for our Enrollees. Our methods for communication include our provider newsletter as well as our formulary change notices and access to our PA criteria through our formulary search tool (**Figure C.21-4**.)

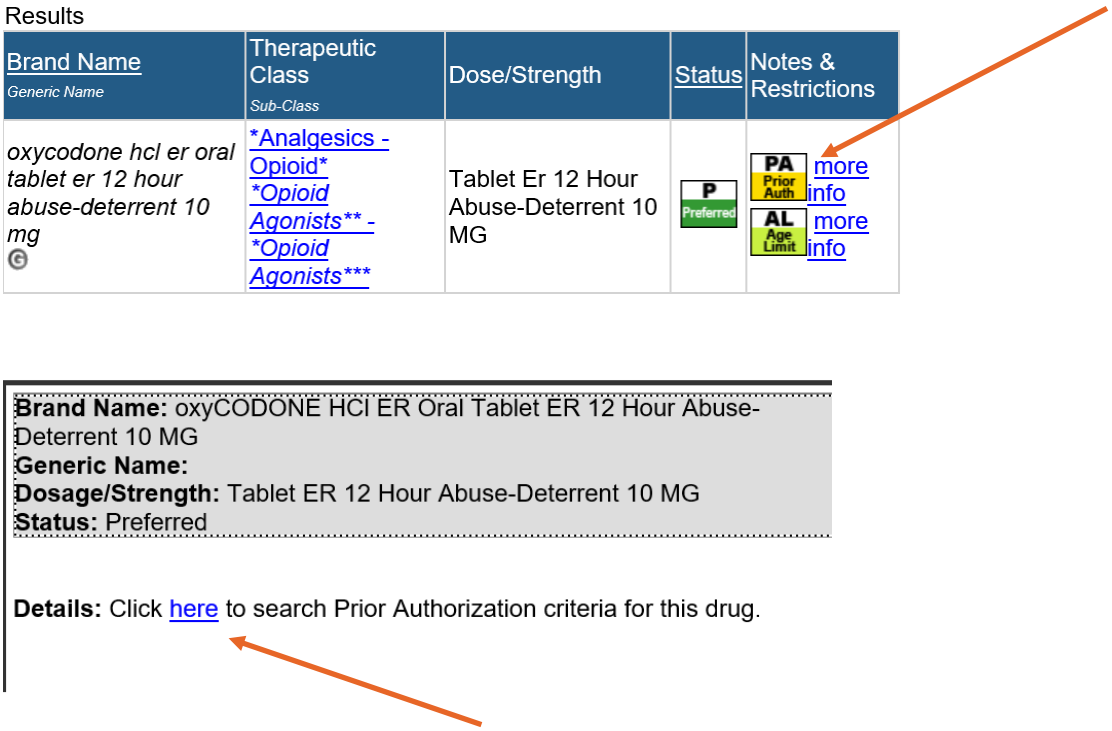

Figure C.21-4 Formulary Search Tool

In addition, electronic Prior Authorization (ePA) lets providers identify the need for prior authorization during the e-prescribing process and submit the prior authorization electronically before sending the prescription to the pharmacy. This significantly decreases the administrative burden and increases understanding of prior authorization requirements, which reduces delays to therapy.

When a manual request is necessary due to complexity, the prescriber may complete the authorization request online using the provider portal, attach any additional documentation, and click submit—on average, we respond to all PA requests within eight hours.

We send a fax to the provider informing them of the outcome of the PA. If there is a denial, we send a letter to the Enrollee. A PA request is only ever denied following a thorough review by a clinical pharmacist and signed off by a medical director. When this occurs, the system generates a DUR letter and automatically transmits it to the prescriber and the pharmacy. The DUR letter includes a clear description of the reason for the denial, preferred alternatives or additional details, and other information that the Enrollee and provider can use to understand the decision. A physician peer review shall be available upon a physician's request for any denial made at a pharmacist review level.

In addition, during provider outreach visits, our pharmacy team shares formulary updates and changes with the provider. Adhering to contract requirements, our process includes the ability for the Enrollee, or the prescriber on behalf of the Enrollee, to appeal a decision or submit a grievance for all PA decisions denied after the final escalated review. Our PA related appeals and grievances are in accordance with Section 24.2 Enrollee Grievance and Appeal Policies and Procedures and Section 27.10 Provider Grievances and Appeals of the contract.

Our multi-level approach enhances the prescriber experience and facilitates ease of use for requesting PA. The PA process uses POS automation and electronic PA (ePA) to streamline the decision-making process, reduce denials, and achieve faster turnaround times. Using the provider portal at the point-of-care, from the convenience of their preferred device (e.g., smartphone, tablet, laptop), providers can easily identify preferred and non-preferred drugs, PA requirements, and preferred drugs that can be substituted for non-preferred drugs. Our ePA platform is a simple to use, web-based portal, or embedded in an electronic health record (EHR), that we co-brand through our partnership with Surescripts.

Leveraging this functionality, we perform a real-time benefit check (RTBC). Prescribers can answer patient-specific questions while the Enrollee is in their office and have the prescription filled before arriving at the pharmacy. Our Pharmacy Help Desk is available seven days a week to address all PA-related questions and requests. The help desk works alongside the PBM team to support complex issues, providing after-hours support for 24/7 coverage. When other services are requested along with a medication (e.g., DME, home infusion, nursing supplies, etc.), our pharmacy team processes all requests within a single authorization, facilitating a seamless PA experience for the provider's office.

Lastly, our provider engagement team educates physicians on key pharmacy resources such as the PDL, PA processes, and our web-based drug search tool. We use this academic, detailed framework to conduct interactive education that provides unbiased, non-commercial, evidence-based information about medications and other therapeutic decisions.

ii. Required credentials for staff reviewing, approving and denying prior authorization requests.

To support our PA program, we staff skilled, licensed pharmacy physicians who use nationally recognized and evidence-based criteria, industry-leading technology, well-documented policies and procedures, and strong clinical oversight. **Today, we staff 12 clinical pharmacists (PharmD), approximately 240 pharmacy technicians (CPhT), and a medical director (MD).**

While we do not require every pharmacy technician to have their CPhT, many of them have obtained that level of training and credentialing.

In addition, our dynamic queue management and workflow tools, including smart processing algorithms, ensure timely and accurate clinical decisions under the guidance of a licensed clinical pharmacist. A PA request is only denied after a thorough review by one of our clinical pharmacists and the Senior Medical Director of Pharmacy, Dr. Cynthia Miller.

iii. Use of pharmacy and/or medical claims history to adjudicate prior authorization requests.

Our policies and procedures were developed in adherence to NCQA standards. Our PA determinations, including those from escalated reviews, are communicated to the requesting provider within 24 hours from the initial request (including weekends) in compliance with the provisions of OBRA 1990 mandate, Section 1927 of the Social Security Act (SSA), and other federal regulations. The following information provides details of our PA processes:

Electronic Prior Authorization (ePA). Our ePA platform is a simple to use, web-based portal, or embedded in an electronic health record (EHR), that we co-brand through our partnership with Surescripts. With no software or applications to download or install, prescribers can easily access the ePA portal online and initiate requests using two methods:

- Initiate a PA using a code provided by the pharmacy through a fax notifying the provider that a PA is needed
- Initiate a PA at the time of prescribing by entering patient, plan, medication, and pharmacy details

From the portal, providers have access to the Enrollee list, where they can create and confirm new patients, fill in prescriptions, confirm prescriptions, and select the appropriate pharmacy. The prescriber then answers a series of questions supplied by WellCare of Kentucky that can lead to an approval, with an authorization placed within 10 minutes—eliminating the need for a paper or manual request. The ePA process incorporates an RTBC to inform the provider of the medications listed on the formulary and the associated utilization management criteria.

A worklist tool provides a centralized view of all tasks that require action for a provider's Enrollees. Available from the worklist, providers view PA information and details, which include the status of the PA response, authorization details, outcome information, Enrollee information, notes, and attachments. Providers have the ability to directly acknowledge an approved PA or electronically file an appeal. The portal saves the complete workflow history of the PA process, allowing providers to view whether or not question sets have been completed, responses have been acknowledged, or if a PA is awaiting a response. By default, the portal displays 30 days of cases but can be expanded to reflect a customized timeline.

Automated Processing. The PBM's pharmacy claims adjudication system enables authorization requests for automatic approval at the POS if certain conditions are met based on pharmacy and/or medical claims history. This system integrates with our historical claims database and our clinical management platform to access information regarding an Enrollee's medical conditions and prior claims history. If the available information (e.g., Enrollee diagnosis) sufficiently satisfies the formulary requirements and PA criteria, the claim processes in real-

time without the need for manual intervention by the prescriber. We also offer automatic batch processing when appropriate, such as during a disaster situation.

Manual Processing. When automated processing is not possible, PA requests are submitted to our Drug Evaluation Review unit and assigned to trained pharmacy technicians. Technicians evaluate each request according to FDA guidelines and clinical protocols approved by the P&T Committee. Our technicians use decision tools as well as pharmacy and medical history when reviewing coverage determination requests, such as for non-PDL drugs or requests outside of step therapy parameters or quantity limits. Authorization requests will be processed, and the prescriber notified of the approval or denial within 24 hours. In the event a prescription is awaiting PA, and the prescribing physician cannot be reached, we authorize a 72-hour emergency supply in adherence to the contract requirements so as not to jeopardize the health or safety of the Enrollee.

We document all PA-related activities and decisions in Compass, our online pharmacy case management system. The Compass system is our comprehensive pharmacy utilization management platform that provides our team with a comprehensive view of the Enrollee. The system includes automated processes, such as ePA, that promotes a more efficient, user experience with faster response times for our providers. The information documented and stored within the Compass system will continue to be made available for immediate review and DMS' request. For documentation purposes, we offer the designated Kentucky Medicaid universal PA form and WellCare's PA form to our providers, both accessible from WellCare of Kentucky's provider website.

C.21 Pharmacy Benefits

- Attachment C.21.a.i Pharmacy Benefit Manager Subcontract Copy (Provided Electronically)

22. Special Program Requirements

WellCare®
Beyond Healthcare. A Better You.

C.22. SPECIAL PROGRAM REQUIREMENTS

Describe the Contractor's approach to meeting the Department's expectations and requirements outlined in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices." The approach should address the following:

a. **Approach to ensuring Enrollees and Providers are aware of special program services.**

b. **Description of medical necessity review process.**

c. **Outreach methods to engage Enrollees.**

d. **Approach to identify, enroll and encourage compliance with lock-in programs.**

e. **Approach to coordination, including referral and follow-up with other service providers, like Women, Infants, and Children (WIC), Head Start, First Steps, School-Based Services, DCBS and the Kentucky Transportation Cabinet Office of Transportation Delivery.**

C.22. SPECIAL PROGRAM REQUIREMENTS

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 32 Special Program Services of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Special program services and knowledge of these services empower and encourage Enrollees to take an active role in their own health and to make informed decisions about their health care. Special program services help to remove barriers to an Enrollee's care like transportation or help an Enrollee attain their health-related goal like going to the dentist. Early and Periodic Screening, Diagnostic and Treatment (EPSDT) screening and special program services promote access to comprehensive health care services to children under age 21. The EPSDT program emphasizes prevention, early detection of physical or mental conditions that can impede children's health and development, and medically necessary treatment to improve a child's health outcomes. By educating and outreaching to Enrollees and families or guardians about the availability of special program services and helping them to effectively use special program services, covered benefits, and other resources available through the Kentucky Medicaid program, WellCare of Kentucky supports DMS' focus on quality goals, closing care needs, and improving health outcomes.

Collaboration among providers, state agency staff, community-based organizations, and our own internal staff, including Enrollee Services staff, care coordination team, and community advocacy staff, ensures Enrollees experience the full benefit of special program services like EPSDT. Our dedicated Quality Improvement leadership team includes Medical Director, Dr. Howard Shaps and Quality Improvement Director, Laura Betten. They lead our efforts to optimize the health and wellbeing of children ages 0-21 through EPSDT program and improve pediatric health outcomes. They oversee quality staff who outreach to Enrollees who have care needs, including children who are overdue for their EPSDT screenings. They also maintain a knowledge base of HEDIS

requirements and implement clinical performance methods to continually improve WellCare of Kentucky's HEDIS performance.

In this section, we:

- Discuss our approach to conducting outreach and education for Enrollees, family/guardians, and providers to increase their awareness of Kentucky Medicaid special program services. Special program services include EPSDT; dental services; emergency care; urgent care and post stabilization care; maternity care; voluntary family planning; and nonemergency transportation services; pediatric Interface, excluding school-based services provided by school personnel; pediatric sexual abuse examination; and the lock-in program.
- Describe our medical review process to ensure Enrollees receive healthcare services that are medically necessary to treat, correct, or reduce illnesses and identified conditions. This sometimes includes authorizing medically necessary services that may not be covered benefits, as determined on a case-by-case basis to address whole-person needs to ensure Enrollee access to medically necessary diagnostic and treatment services.
- Provide an overview our approach to identify, enroll, and encourage Enrollee compliance with our lock-in program and engagement in care coordination services.
- Outline our collaborative approach to coordination with other service providers. This includes referral and follow-up activities with community-based services like Women, Infants, and Children (WIC), Head Start, First Steps, and School-Based Services. We collaborate with and refer Enrollees to state agencies like DCBS and the Kentucky Transportation Cabinet Office of Transportation Delivery. We follow up with state agency staff to make sure Enrollees are participating in and benefitting from special program services.

Evidence of our commitment to promoting Enrollee access to and engagement in care and services, including special program services, is WellCare of Kentucky's excellent quality measures for our comprehensive Quality Management program. **Our program leads the Commonwealth in 24 HEDIS measures for 2019, including all three Well-Child Visit measures and Annual Dental Visits. We have maintained a two-year commendable NCQA accreditation status, earning more NCQA 4 and above ratings than any other Kentucky plan across Enrollee satisfaction, prevention, and treatment measures.**

Describe the Contractor's approach to meeting the Department's expectations and requirements outlined in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices." The approach should address the following:

a. Approach to ensuring Enrollees and Providers are aware of special program services.

WellCare of Kentucky demonstrates Enrollees are our priority by putting our Enrollees first so they can get the care and services they need to stay healthy. We maintain a strong focus on early prevention and treatment. We help Enrollees and their families/guardians effectively use the resources available through special program services. We offer a wide range of educational materials and use numerous and innovative methods to inform Enrollees, families or guardians, and providers

about the availability of special program services. We consistently refer Enrollees to and coordinate with other providers that provide special program services.

EDUCATING ENROLLEES AND FAMILIES OR GUARDIANS ABOUT SPECIAL PROGRAM SERVICES

Enrollees and their families or guardians want to know what benefits and services are covered. We meet Enrollees where they are by offering a multi-modal communication and outreach approach that includes program service descriptions via easily understood written and online materials; verbal explanations from WellCare of Kentucky staff, providers, and community-based organizations; digital communications; face-to-face interactions; and home visits when appropriate. In all Commonwealth regions, Enrollees and community residents who participate in community events and activities can talk to our staff face-to-face and meet with our community partners to learn about improving health and wellness and the features and benefits of special program services.

Parents and guardians have both a responsibility and desire to ensure their children get needed health services, but many need education and support to understand and access EPSDT screening and other special program services like dental services and transportation. We coordinate access to other child-oriented special program services like pediatric sexual abuse examinations. In this case, WellCare of Kentucky staff informs parents that we have providers in our network who have the capacity to perform a forensic pediatric sexual abuse examination and upon receiving a request from DCBS, we coordinate this service. We have an established relationship with DCBS and our staff works closely and collaboratively with DCBS staff to coordinate services for our Enrollees.

METHODS TO EDUCATE ENROLLEES, FAMILIES, OR GUARDIANS ABOUT BENEFITS AND SERVICES

Our experience tells us that Enrollees and their families/guardians have different preferences in how they learn about covered benefits and services. We meet Enrollees where they are and use a variety of methods to continually educate Enrollees and families/guardians about special program services:

- *New Enrollee Welcome Call and Welcome Packet:* We offer a combination of automated and live new Enrollee Welcome Calls, which includes calls to action like asking Enrollees to confirm receipt of new Enrollee onboarding materials, including the Welcome Packet and ID card and reminding them to schedule primary care appointments. In addition to the Welcome letter and other informational items, our Welcome Packet includes information related to special program services, including but not limited to:
    - Message encouraging Enrollees to schedule well checkups
    - Information on the appropriate use of the Emergency Department
    - Healthy rewards program brochure, a program that rewards Enrollees who complete specific preventive health, EPSDT, wellness, and engagement milestones

      We include other tools in the initial welcome packet and in subsequent Enrollee communications. This includes prenatal care materials and important phone numbers, including 24-Hour Nurse Advice Line and our Community Connections Help Line (CCHL)

for assistance with social resource needs. We direct Enrollees to call our Enrollee Services toll-free line to obtain written materials, receive assistance with the Enrollee portal, or to receive assistance on any other matter like help finding a doctor or dentist. All material included in the Welcome Packet is also available on the Enrollee portal.

- *Welcome Video:* Our captioned, dynamic welcome video is a recent innovation to engage our Enrollees through a multi-media version of the written *Quick Start Guide,* included in the Welcome Packet. Enrollees and families/guardians access the video through a link on a new Enrollee welcome text (SMS) message. The four-minute video on WellCare Health Plans, Inc.'s (WellCare's) YouTube channel explains in English, with captioning in Spanish. It educates viewers about resources where an Enrollee can learn about benefits and services, including special services like EPSDT and dental services, the role of a Primary Care Provider with a prompt to schedule an appointment, the purpose of the 24-Hour Nurse Advice Line, and how to reach our CCHL for live assistance with social needs.
- *Enrollee Services Call Center:* WellCare of Kentucky Enrollees can reach our Enrollee Services call center staff at 1-877-389-9457. Enrollee Services representatives are often an Enrollee's first contact with us. When an Enrollee initiates an inbound call and it is their first contact, the Enrollee Services representative helps the Enrollee complete the onboarding process, including completing their initial health risk assessment. They help Enrollees understand benefits and services, and answer questions about how to access services; help Enrollees find a doctor or other providers and schedule appointments; and help Enrollees connect to other health care services like dental services or voluntary family planning services. Depending on an Enrollee's needs, an Enrollee Services representative may help an Enrollee connect to the Kentucky Transportation Cabinet, Office of Transportation Delivery for nonemergency transportation services or help a new mom connect to maternity care.
- *Public Website:* WellCare of Kentucky has a mobile-responsive public website. In 2019, the top three most visited sections of the Kentucky Medicaid website included the Welcome page, the Healthy Rewards Program page, and the Benefits page. Our Healthy Rewards Program provides gift card rewards for Enrollees completing wellness visits and preventive care.
- *Enrollee Portal:* Enrollees can access the portal from the internet or from mobile devices. It provides Enrollees a secure, personalized health care experience and 24/7 access to self-service functions. Within the portal, Enrollees can change Primary Care Providers or check on the status of service authorizations. Enrollee portal features banners, which we can use to call attention to special program services. Our Enrollee portal offers Enrollees and families/guardians the following information:
  - Enrollee-specific care needs and how to close those gaps
  - Electronic versions of Enrollee newsletters, which include articles about the availability of special services programs
  - Find-A-Provider search tool
  - Enrollee rights and responsibilities

- *Enrollee Handbook:* Our Kentucky *Enrollee Handbook* contains information to help Enrollees connect to the care and services they need. Enrollees and families can access the Enrollee Handbook on our secure Enrollee portal at wellcare.com/Kentucky. Through simple navigation and two clicks, Kentucky Enrollees can download the *Enrollee Handbook*, learn about preventive care, and find FAQs in the New Enrollee Quick Tips section. The Find-A-Provider resource is an intuitively designed query tool recently redesigned according to health literacy principles to help Enrollees find physicians using words, such as pediatrician or obstetrician. Enrollees filter and compare search results by languages, gender, accessibility considerations, specialty, and distance from a user-chosen location, such as home, work, or current location. The *Enrollee Handbook* highlights special services program descriptions, including but not limited to:
    - Covered Services, immunizations, pregnancy services, and hospital services
    - WellCare of Kentucky's extra benefits like our Healthy Rewards Program Enrollee incentive program and other value-added services, such as over-the-counter items - $10/month per household and free sports physical, maternity care special program services along with our population health management WellCare Baby Steps maternal and child health program
    - Emergency care, including 24-Hour Nurse Advice Line and out-of-area emergency care; urgent care; and post stabilization care services
    - Dental services
    - Non-Emergency Medical Transportation (NEMT)
    - EPSDT
    - Lock-In Program
- *Digital Engagement:* An effective means of Enrollee engagement, we direct our Enrollees to our digital platforms and demonstrate how to navigate managed care as a convenient way for Enrollees to obtain information or perform self-service functions. Through digital platforms, which comply with Federal Section 508 standards and web content accessibility guidelines, Enrollees learn about benefits and services, how to access care, learn about preventive care, how to self-enroll in our health and wellness programs, and how to order a new ID card. For Medicaid Enrollees with frequent address changes, mailed materials sometimes do not reach them but digital communication are often an effective means of communication. Engaging Enrollees through their mobile devices and helping them to take even small steps, such as downloading our mobile app, is a step toward empowering them to be active participants in their health and health care.
- *MyWellCare mobile app:* Our mobile app makes getting and staying healthier easy. WellCare actively uses our mobile app to communicate important information to our Enrollees and provides easy access to services. In 2018, as a result of **our proactive approach and updated functionality, WellCare of Kentucky experienced a YoY increase of 476% in downloads of the mobile app for Kentucky Medicaid Enrollees from 2017-2018. The top app features used in 2018 were Find A Provider, Messages, and ID card.**

  The MyWellCare mobile app is free and is compatible with Apple and Android devices. This digital engagement tool enables Enrollees to assume more responsibility for their health

through familiar tech capabilities and functions. Enrollees can call the Enrollee Services number on the back of their ID cards if they have questions about the mobile app or need assistance downloading it.

Using the app, Enrollees can view open care needs displayed together with their provider's phone number, which they can tap to call and schedule appointments. They can email their Mobile ID card to providers. We continually add functionalities to our digital applications to keep pace with our Enrollees' increasing utilization and feedback regarding their online experience. **Figure C.22-1** shows the MyWellCare mobile app features.

Figure C.22-1 Using the MyWellCare mobile app, users can use a smart phone or tablet to pull up their ID card, find a provider, and more.

We align monthly health messaging with general, non-PHI messages, or push notifications that mirror the inbound IVR route messaging and the public website.

- *Inbound caller IVR route messaging increase health and wellness awareness:* We create IVR route messaging that inbound callers hear as their calls transfer to our staff. Route messages rotate from month to month and focus on specific health and wellness topics. For example, in 2019:
  - **March:** Dental health for you or your child is important. Ask your customer advocate about your dental benefits. He or she can help set up a visit with your dentist. WellCare of Kentucky is your partner in preventive health!
  - **April:** April 22 to April 26 is Every Kid Healthy Week. Help your kids eat healthy and stay active all year long. Do you want to learn about nutrition and healthy habits? Ask your customer advocate to set up a visit for you and your doctor! WellCare of Kentucky is your partner in preventive health!
- *Outbound calls regarding Enrollee care needs:* WellCare of Kentucky quality staff, Field Outreach Coordinators, and Care Managers make outbound calls to Enrollees and families or guardians to close gaps in care, including overdue EPSDT screenings or immunizations. Our staff provides reinforcement and support, such as assistance with scheduling appointments for needed services like well-child visits, immunizations, or blood lead screening as well as for annual adolescent and dental screenings. As an example, our quality staff initiated an Enrollee outreach campaign from October 2017 to December 2017 to increase well-child and dental visits. **Quality staff called 10,573 Enrollees. Of those calls, we successfully reached 3,226 Enrollees and closed 681 additional care gaps.** This had an impact on the following quality measures: our Adolescent Well Care measure improved by 31.57%, our Well Child visit measure for children 3-6 years old improved by 25.96%, and the Annual Dental Visits measure improved by 11.59%. In addition, Adolescent Immunizations, Combo 2 improved by 5.67%.

- *Mailings in the form of annual/seasonal prevention written reminders and newsletters:* We send to Enrollees and families/guardians an EPSDT guide and birthday cards to remind Enrollees about the screenings and preventive services they should receive during the year. Birthday cards, as in **Figure C.22-2**, encourage Enrollees to reach out to their Primary Care Provider to schedule a check-up and receive screenings and/or preventive services. We send targeted reminders, e.g., reminding Enrollees that February is Oral Health Month to encourage Enrollees to use dental services. Enrollee newsletters (mailed and electronic on the Enrollee portal) contain benefit updates and details, highlight new services, communicate outreach events in specific communities, and present fitness and health education.

Figure C.22-2 Birthday Postcard

- *Outreaching and Educating Enrollees at Community Events:* We share a common goal with our community partners to improve the lives of the people in Kentucky communities. We engage with Enrollees in their own neighborhoods through our Community Connections Program and our comprehensive Enrollee and Community Education and Outreach Program. **In Kentucky in 2019, WellCare of Kentucky staff completed 1,409 community activities, reaching 37,509 community stakeholders.** Our Community Education and Outreach Program includes creative collaborations with various entities, including schools, homeless centers, youth service centers, family resource centers, public health departments, school-based health clinics, chamber of commerce, faith-based organizations, and more. WellCare of Kentucky staff continually seek new opportunities to partner with organizations that share our commitment to helping to build healthier communities. We leverage these partnerships to hold fun and informative health-related events; support women's health; and educate children and youth about how to develop healthy habits related to fitness and nutrition.

  Community events are activities where WellCare of Kentucky staff dedicate time to connect with community agencies or sponsor/host events for the community. Activities include attending interagency council meetings, specific health and social service-focused coalitions, as well as hosting community activities targeted at specific health or social issues. We have a strong commitment to participate in or sponsor local street fairs, health fairs, county fairs, Kentucky State Fair, festivals, and other scheduled and health-related events like community baby showers, which increase Enrollee compliance with and education about the EPSDT program. WellCare of Kentucky community relations team participates in community events that align with special program services and our Population Health Management program focus areas, including:

- Health Education -- Obesity: WellCare attended the YMCA Kids Day community event in Henderson County to promote healthy eating and living with kids. Asthma: Community health fairs in numerous counties across Kentucky
- Maternity Care -- Low Birth Weight and Pre-term Birth: Community baby shower events; Oh Baby Expectant Parent Fair; Parent Empowerment Workshop
- Transportation -- Mental health and substance use/misuse: Third Annual West KY Wellness Summit Community Mental Health and Breaking the Stigma! Mental health was the theme of the 2018 summit. WellCare partnered with the Chrysalis House for the past three years, filling transportation gaps that their women in recovery encounter through taxi vouchers, bus passes, and gas for Chrysalis House's on-site van.

- *Kentucky quality staff and care management staff:* Care coordination staff conduct educational activities that inform Enrollees about special program services and help them access those services. For high-risk Enrollees, they conduct a comprehensive needs assessment that identifies care needs. When identified, they educate the Enrollee about availability and importance of accessing these services, list referrals to special program services in the care plan, and coordinate access to the services. The Care Manager conducts ongoing monitoring and additional education, as needed, to support appropriate access.
- *Triggering events:* Certain events trigger engagement of Enrollees with over or under-utilization of services; Emergency Department over-utilization; discharge planning needs; behavioral health crisis intake; pregnancy; opioid or other controlled substance overdose, etc. Care Managers conduct in-person or telephonic outreach, education about appropriate utilization, assessment, and referrals to special program services, as necessary.
- *Providers and community partners assist us in educating Enrollees:* We educate providers, as described later in this section, to engage their assistance in educating Enrollees when a provider identifies a need for special program services. Our Community Connections team educates our community partners about special program services so that they can reinforce our efforts to increase Enrollee awareness of these services and the benefit of using them.
- *Creative efforts to target outreach and education efforts to Enrollees in harder-to-reach populations (e.g., Hispanic, African American, LGBT community, young adult, and veterans):* Partnering with faith-based and other community organizations, including food banks and homeless shelters, serving specific populations helps us connect with Enrollees in hard-to-reach or hard to engage populations. Individuals in the community trust these organizations. Developing customized outreach materials and resources helps us engage targeted populations in special program services. In Kentucky, our community engagement staff participate in a number of community events that target harder-to-reach populations. This includes events sponsored by Volunteers of America for veterans who may be homeless, resource fairs for grandparents raising grandchildren, and Healthy Start 502 Fathers baby shower for Jefferson County fathers in the African American community. See **Figure C.22-3** for an example of our communications materials from the Father's Baby Shower.

Our staff participated in the World Refugee Day Celebration in Bowling Green, celebrating diversity and cultures of newcomers who arrived through the Refugee Resettlement program. This event highlighted different cultures and provided educational opportunities for attendees to learn about helpful services and programs in the community, including healthcare services. Our staff sat on the committee for a Language Access Forum, an educational event for healthcare staff to learn how to communicate effectively with their patients who have limited English language proficiency. We attended the Americana World Festival hosted by the Americana Community Center of South Louisville and educated Enrollees about healthcare services. Our staff sat on a committee in Perry County for the LGBTQ ALLYance, founded at Hazard Community and Technical College to train organizations how to become a safe space for LGBTQ-identifying individuals, with the hope these individuals will feel safe seeking needed services

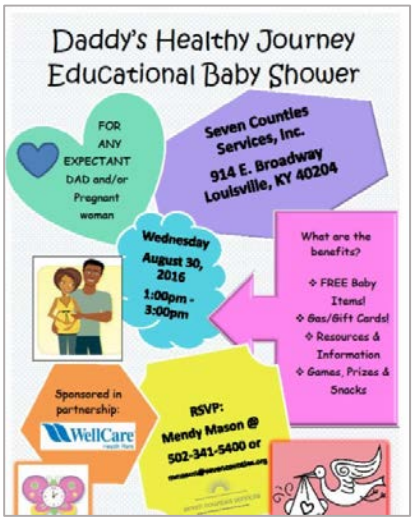

Figure C.22-3 Father's Baby Shower

Our multi-modal approach makes sure all of our Enrollees and/or their parents or guardians are aware of special program services and why these services are beneficial to achieving positive health outcomes. Our special program-specific approach complies with the Draft Contract and includes but is not limited to:

- *EPSDT:* We use a comprehensive approach to educating Enrollees and their families about EPSDT screening and special services, facilitating access and promoting the benefit of preventive services, the availability of screening and medically necessary services, the right to access these services, and how to access EPSDT-related services. We communicate, verbally and in writing, the Enrollee and family's right to appeal decisions related to EPSDT services. During touchpoints with parents and guardians, Kentucky of WellCare staff let them know we are available to assist with scheduling Primary Care Provider appointments, help them access NEMT services for transportation to and from appointments, and provide language assistance services, as needed. We also reward Enrollees with gift cards for completing screenings through our Healthy Rewards Incentive Program--even a small reward can incent change. **Kentucky's EQRO Annual Compliance Review – EPSDT in October 2018 revealed WellCare of Kentucky continued to be fully compliant in 2018 with all elements related to Enrollee education about the availability and benefit of EPSDT services and about how to obtain them. WellCare of Kentucky was also fully compliant with the requirement to inform Enrollees of their right to appeal decisions related to EPSDT decisions.**
- *Dental Services:* Poor oral health has an adverse impact on overall health and well-being of our Enrollees. We subcontract with Avesis Third Party Administrators, Inc. to provide dental services for eligible Kentucky Enrollees. We use various methods to educate and remind Enrollees about the availability dental benefits. We facilitate Enrollee use of these services

by helping them select a dentist and coordinating their preventive and primary care dental services for oral health conditions or illness.

- *Emergency Care, Urgent Care and Post Stabilization Care:* We inform Enrollees that they are entitled to timely emergent, urgent care, or non-emergent care appointments in our *Enrollee Handbook*. We let them know they do not need approval from a Primary Care Provider or from us to use these covered services. We help Enrollees understand when they should use emergency care, which is available to Enrollees 24-hours-a-day, 7 days a week, and when they should seek urgent care services for care for a condition that is not likely to cause death or lasting harm but for which treatment cannot wait for a normally scheduled appointment, i.e., within 48 hours of Enrollee request.
    - *Out-of-Network Emergency Care:* We let Enrollees know that we provide and/or arrange for the provision of emergency care, even when they need these services outside of our Network and that we cover payment for emergency services by a non-contracting provider.
- *Maternity Care:* Data shows us that increased use of prenatal care is associated with positive health outcomes. To maintain the health and well-being of our pregnant Enrollees, our goal is to ensure prompt initiation of a woman's' prenatal care or continuation of care without interruption for those who are pregnant when they enroll with us. We let new moms know that we will make every effort to help her continue access to the same prenatal care provider throughout her pregnancy and that maternity care includes her prenatal, delivery, and postpartum care as well as care for conditions that complicate pregnancies. We let Enrollees know that we cover all newborn Enrollee screening, as specified by the Commonwealth.
- *Voluntary Family Planning:* Family planning has a key role in the prevention of unintended pregnancy, including teen pregnancy. In addition, family planning information, education, and services reduce the incidence and impact of sexually transmitted diseases through screening and treatment. We make culturally sensitive information available and educate Enrollees about the value of planning pregnancies so that our Enrollees can make informed decisions about the use of birth control. We let Enrollees know that they do not need approval or a referral from a Primary Care Provider or from us to use family planning services and related preventive health services, which are available statewide, through qualified family planning providers, which may be local county health departments or contracted agencies. Our staff assists Enrollees with selecting a qualified family planning provider based on their choice and helps them with scheduling a timely appointment within RFP-specified allowable wait times for appointments.

  Our staff reassures Enrollees that family planning services are provided on a voluntary basis in a confidential manner in accordance with applicable federal and state laws and judicial opinions for Enrollees less than 18 years of age. We assure adolescents that family planning services are confidential and that any necessary follow-up care respects an Enrollee’s privacy, yet we cannot absolutely guarantee confidentiality.

- *Nonemergency Medical Transportation (NEMT):* Through the NEMT program, Kentucky Enrollees have safe and reliable transportation to Medicaid covered services. WellCare of Kentucky presents information in the *Enrollee Handbook* and provides educational materials and verbal explanations about the availability of these transportation services. We inform Enrollees how to access NEMT services, which are provided by the Kentucky Transportation Cabinet, Office of Transportation Delivery. When our Enrollee Services and care coordination staff refer Enrollees to NEMT services, they document these referrals in the Enrollee's centralized record. In addition, we inform Enrollees that NEMT services do not include emergency ambulance and non-emergency ambulance stretcher services and that WellCare of Kentucky covers emergency-related transportation, including ambulance stretcher services.
- *Pediatric Interface Services:* Many Enrollees who are children rely on school-based services provided by school personnel and services provided under the Kentucky Health Access Nurturing Development Services (HANDS), which are excluded from our contract. However, we let Enrollees know that we cover other preventive and remedial care services. This coverage includes services provided by the Department of Public Health through public health departments in schools by a physician, physician's assistant, advanced registered nurse practitioner, registered nurse, or other appropriately supervised health care professional. We establish collaborative relationships with Kentucky health department staff and school personnel for our Enrollees who are receiving pediatric interface services.

  We inform the child's parents or guardian that in situations where their child's course of treatment is interrupted due to school breaks, after school hours, or during summer month that we cover all medically necessary covered services for eligible Enrollees. We also inform parents and guardians that we provide palliative hospice services in conjunction with curative services and medications for pediatric Enrollees diagnosed with life-threatening or terminal illnesses.

We offer Enrollees many opportunities to learn about and engage with special program services, which contributes to their satisfaction with their healthcare services. **Compared to other Kentucky Medicaid MCOs, we have the highest Enrollee satisfaction as measured by the CAHPS survey.**

EDUCATING PROVIDERS ABOUT SPECIAL PROGRAM SERVICES

Providers are our partners and have an important role in educating Enrollees about the availability of special program services. Our goal is to maximize collaboration between WellCare of Kentucky and providers to achieve optimal health outcomes for our Enrollees. Providers perform age-appropriate screenings for each EPSDT eligible Enrollee per the AAP/Bright Futures Periodicity schedule.

After executing a contract with a new provider, we send a Welcome Packet and an enrollment notice outlining their effective date, orientation information, and instructions on accessing the Provider Manual and how to login to our secure provider portal. Simultaneously, we assign a provider relations representative (PR rep) who schedules and completes provider orientation and other trainings with provider and office staff, including educating them about the covered

and value-added services we offer. We also educate them about special program services and the importance of the EPSDT program and closing care needs. **In an independent provider satisfaction survey in 2019, Kentucky Medicaid providers ranked WellCare of Kentucky with the highest overall satisfaction of all Medicaid MCOs in the Commonwealth. In that survey, the highest performing composite score of the over 40 questions we asked providers was WellCare Provider Relations Representative's ability to answer questions and resolve problems.**

WellCare of Kentucky requires Primary Care Providers to provide EPSDT services and monitors their EPSDT compliance. Further, we maintain an effective education/information program for providers involved in delivery of EPSDT services. We offer provider presentations on EPSDT health care needs and interventions, a provider tool kit, and conduct successful chart audits of documentation requirements. Our provider education and information program addresses current guidelines for components of EPSDT screening and special services and emerging health status issues that Primary Care Providers need to address as part of EPSDT services, such as early identification and treatment of autism.

Provider trainings include face-to-face interactions with our staff, provider orientations, newsletters, online learning modules, emails, faxes, letters, on-site training, summits, webinars, and more. We make sure providers are aware of special program services using the following approaches:

- **WellCare of Kentucky provider-facing staff educate providers:**
  - **Provider Representatives (PR Reps)** – Our PR reps conduct initial and ongoing provider training to ensure provider compliance with program standards and contractual obligations and to educate providers about special program services. The PR rep makes sure a provider's office can login to the secure provider web portal and can easily access the *Provider Manual*. Ongoing, PR reps provide Enrollee reports, reinforce the need for compliance with HEDIS measures, and discuss the value-based contracting. **In 2019, WellCare of Kentucky PR reps made over 6,600 visits to provider offices to educate providers and their staff.**

  - *Quality Practice Advisors (QPAs) –* Our QPAs are part of our quality team. They remind providers about the availability of special program services to address care needs. QPAs provide education regarding American Academy of Pediatrics guidelines/Periodicity Schedule. They work with providers to identify and close care needs related to preventive care visits, provide care gap reports, assist with EMR information through the pseudo-claims process, and provide educational material to remind office staff of the standards of care as outlined in HEDIS specifications (HEDIS Toolkits). **In 2018, WellCare of Kentucky QPAs made 4,748 Medicaid-related, 1,270 Medicare-related, 39 OB-related, and 80 behavioral health-related visits to provider offices to educate providers and advance the Commonwealth's quality measures. Continuing these goals in 2019, our WellCare of Kentucky QPAs exceeded 6,000 provider office visits.**
- *Initial provider orientation/provider onboarding promotes knowledge of special program services:* During orientation, PR reps use our Provider portal to navigate training documents.

This helps providers become aware of the various tools and resources available for everyday use. Primary topics discussed during initial orientation include:

- Managed Care Program and Services, including special program services
- Eligibility and Benefits
- Rights and Responsibilities
- Enrollee Care and Quality
- Authorizations
- WellCare's Compliance Program
- Billing, Payment, and Encounters
- Appeals and Grievances
- WellCare's Policies and Procedures
- Telemedicine Services
- Care Model
- Timely Access Requirements
- Continuity of Care and Transition of Care
- Enrollees with Special Health Care Needs
- Review of the Provider Manual
- Specialized Provider Education

For providers providing emergency medical services, we educate them that they have a minimum of 10 days to notify us of an Enrollee's screening and treatment for these services to be covered by WellCare of Kentucky.

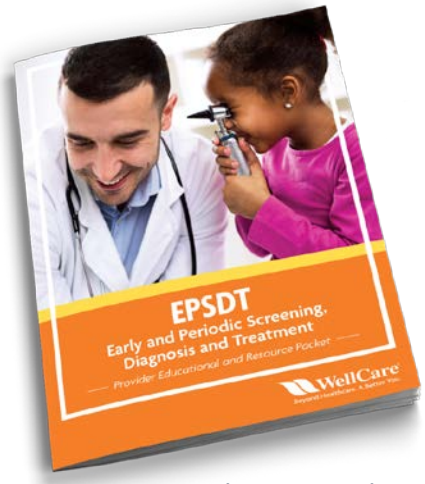

Figure C.22-4 Sample EPSDT Education

To promote EPSDT compliance, we educate providers on HEDIS Child Measures, including:

- Preventive screenings and treatment, as in **Figure C.22-4**
- Immunizations
- Follow-up visits
- Medication guidelines

Partnership

We train providers on and reinforce the importance of EPSDT documentation requirements and using correct coding guidelines to ensure accurate reporting of EPSDT. Provider-facing staff stress the importance of considering all aspects of a child's needs during EPSDT screening, including developmental and behavioral health screenings and substance use disorders. We reinforce that these screenings are essential to identify possible delays in a child's growth and development when steps to address deficits can be most effective.

- **Online training tools and resources available to providers via our 24/7 provider portal:** Our web-based, mobile-enabled provider portal offers 24/7 access to the public so participating and non-network providers can obtain program specific information, such as our *Provider Manual* and other information, within a few clicks. Our Section 508, HIPAA-compliant, and secure provider portal is a hub for physicians and their staff to learn about special program services. They can use tools, such as live chat and email, to process

transactions and to ask questions about special program services. WellCare's provider partners and provider focus groups across the country redefined the features and functions of the provider portal to align with their needs. This new functionality makes navigation more intuitive and enables access by smart phone, computer, or tablet.

- *Provider newsletter:* Kentucky providers can read about targeted topics, including special program services and preventive care requirements, in our quarterly provider newsletter, which is available on the provider portal.
- *Provider Manual:* We develop, maintain, and distribute a *Provider Manual* that offers information and education to providers about WellCare and Medicaid managed care special program services.
- *Other materials:* Various other provider communications include:
  - Quick Reference Guide (QRG) is an easy-to-use, how-to guide, which we update no less than twice yearly.
  - Bulletins provide ad hoc communications that educate providers about program changes and offer links and reminders.
  - Provider Tidbits are ad hoc communications about issues and resource links. PR Reps reinforce this content with providers.
  - Campaigns use multiple methods to disseminate information on specific topics like EPSDT, transportation, and dental services.
  - Email and chat offer secure conversations with WellCare associates via the provider portal. We send written information by email when upon provider request.
- *Ongoing provider education:* Training methods include group orientations, seminars and summits, one-on-one provider sessions, joint operating committee (JOC) meetings, webinars with PowerPoint presentations, phone calls, emails, and more.

b. Description of medical necessity review process.

WellCare of Kentucky is dedicated to quality care and transparency of our medical necessity review process. We continually seek new ways to improve Enrollee health and to better serve our Enrollees. We authorize medically needed special program services, especially for needs or conditions discovered during EPSDT screenings. We look at new treatments and new technologies to see if they will be helpful to Enrollees and families. We give evidence-based information and guidelines to our providers to help them make informed decisions about Enrollee care. On the current contract, our Utilization Management (UM) team responds to provider requests for a written or electronic copy of medical necessity review criteria. **WellCare of Kentucky is ranked first in Enrollee satisfaction, and we have an overall Enrollee voluntary choice rate of approximately 80%. This demonstrates we pay attention to our Enrollee's needs and care.**

WellCare of Kentucky has established and currently maintains a comprehensive UM program. Our UM program includes staff who follow systematic processes based on written policies and procedures to review services for medical necessity and clinical appropriateness of covered and non-covered services. Our Louisville, Kentucky-based Medical Director, Dr. Howard Shaps, MBA,

and his leadership team manages our clinical care operations and programs, including ensuring appropriate utilization and quality of care. Our Medical Director oversees treatment policies, protocols, quality improvement activities, population health management activities, and UM decisions, devoting sufficient time to ensuring timely medical decisions. WellCare of Kentucky's Medical Director is available for after-hours consultation, if needed.

UM staff makes determinations of medical necessity on a case-by-case basis, taking into consideration the particular needs of an individual and guided by information from an Enrollee's health provider(s) and evidence-based clinical standards of care. This applies to the EPSDT program where the determination of whether a service is medically necessary considers:

- All aspects of a child's needs, including nutritional, social development, and mental health and substance use disorders
- Long-term needs, not just what is required to address the immediate situation
- Medical necessity decisions are individualized, therefore flat limits or hard limits based on a monetary cap are not consistent with EPSDT requirements

The benefit of our holistic approach is that UM staff can authorize medically necessary services that maintain an individual in the least restrictive setting possible. We recognize that additional services may be necessary to prevent further advancement of an Enrollee's condition (maintenance or control), to improve the quality of their health, or for corrective treatment. This includes treatment beyond medical necessity to help an Enrollee, including EPSDT-eligible children, reach their age-appropriate developmental level or to avoid institutionalization. Our goal is to ensure Kentucky Enrollees receive services for the treatment of illness, injury, disease, disability, or developmental condition and that these services are medically necessary to correct or ameliorate any identified conditions. This ensures we provide the right care to the right Enrollee at the right time in the right setting. For example, we may authorize a specially adapted car seat needed by a child because of a medical condition to avoid a transportation barrier to care.

Our holistic approach promotes collaboration between our care coordination and UM staff when working with a provider and the Enrollee, parent/guardian, and caregiver to ensure we support the Enrollee and the family. For example, in support of the Family First Preservation Services Act, today we work with providers to ensure families have access to services in their community and can assess unmet social needs, which often drive families into crisis and cause out-of-home placements. Care Managers and UM staff help to avoid an Enrollee's out-of-home placement in a foster care setting or residential treatment setting by authorizing services and supports that wraparound families or the Enrollee's relatives who provide temporary care during crisis. In addition, our Members Empowered to Succeed (METS) Program, which started in Kentucky as a pilot, assists Enrollees in stepping down from intensive services or obtaining more specialized services with extended authorizations for those services. Care Managers and UM staff reach out to providers proactively and work to create an authorization plan that identifies specific goals that demonstrate progress toward achieving treatment goals. The goal of the METS process is to use a collaborative approach to tailor authorizations and services to the person-centered needs of the Enrollee and their family/caregiver, while recruiting natural

and community supports as part of the care plan. METS has delivered meaningful results, including a 6% reduction in Emergency Department use. In Kentucky, our Care Managers with behavioral health expertise join weekly huddle calls to identify Enrollees who could benefit from field-based behavioral health or medical care coordination. Field-based staff collaborate with the METS program coordinators to address any identified barriers, including social needs like transportation or food.

The EPSDT special services program allows benefits not covered elsewhere in Medicaid. Medically necessary services can be preventive, diagnostic, treatment or rehabilitative. Examples include additional pairs of eyeglasses, additional dental cleanings, general anesthesia for dental treatment, or supplemental nutritional products. We identify and link Enrollees to providers who can deliver these services. Our UM program includes procedures for authorization and payment for such services. Enrollees have the right to appeal EPSDT special services denials.

Our UM staff conduct medical management activities that include prior authorization, concurrent review, discharge planning, retrospective review, and provider profiling. UM staff: 1) verify Enrollee eligibility; 2) conduct timely review of the medical necessity of a service; 3) determine the appropriateness of the service being authorized, including place of service to assure the Enrollee receives the right amount of care at the right time; 4) verify a service is covered; and 5) refer Enrollees to appropriate providers. On an ongoing basis, our staff monitors and evaluates the appropriateness of care and services for physical, behavioral health, and social services.

On the new contract, we will expand the description of medical necessity in our *Enrollee Handbook* to let Enrollees know that they can call Enrollee Services to request a written or electronic copy of our medical necessity criteria, as in **Figure C.22-5**.

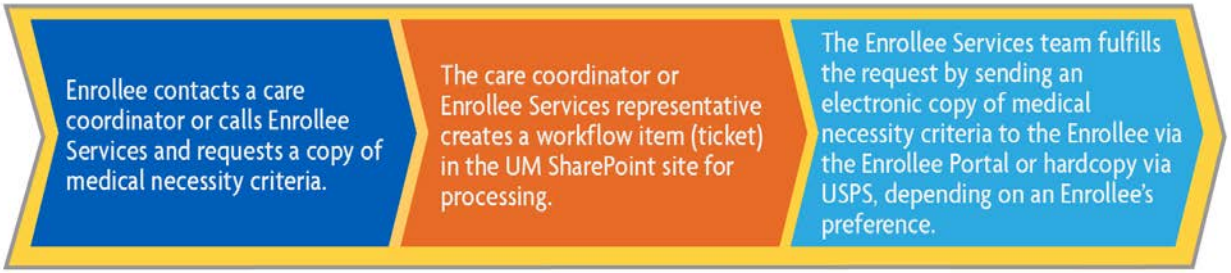

Figure C.22-5 Medical Necessity Criteria Requests

We developed CareCentral, our care management platform, to house all behavioral health and medical UM and authorizations into a single Enrollee view. Fully integrated with our single claims systems, CareCentral shows users an Enrollee's health record, medication history, health-related social resource needs, claims history, authorizations, and care plans. Authorized WellCare of Kentucky staff and providers have access to a complete picture of an Enrollee's needs across the entire spectrum of care when considering authorization decisions and utilization trends.

MEDICAL NECESSITY CRITERIA FOR UM DECISIONS

Our UM program uses nationally recognized review criteria based on sound scientific medical evidence. Physicians with an unrestricted license in the Commonwealth of Kentucky and professional knowledge and/or clinical expertise in the related healthcare specialty actively participate in the discussion, adoption, application, and annual review and approval of all utilization decision-making criteria. UM staff uses numerous sources of information including but not limited to the following when making coverage determinations:

- InterQual Criteria (We also have the capability to use MCG or Milliman Care Guidelines based on a State's requirements or preference.)
- WellCare Clinical Coverage Guidelines
- Medical Necessity
- State Medicaid Contract
- Kentucky Clinical Coverage Policies
- State Provider Handbooks, as appropriate
- Local and Federal Statutes and Laws
- Medicaid and Medicare Guidelines
- Hayes Health Technology Assessment

The clinical reviewer and/or medical director involved in the UM process applies medical necessity criteria in context with an Enrollee’s unique circumstance, collaboration with providers, and the capacity of the local Provider delivery system. When medical necessity criteria do not address an Enrollee’s needs or unique circumstance, the medical director uses clinical judgment in making a determination.

WellCare of Kentucky complies with federal and state regulations for the medical necessity criteria we use. As required by the current Kentucky Medicaid contract, our UM staff uses InterQual as our primary medical/surgical criteria for medical necessity. On the new contract, we will continue to align with the Commonwealth's preference and use InterQual as our primary medical/surgical criteria for medical necessity. We use the American Society of Addiction Medicine (ASAM) for substance use. If InterQual does not cover a behavioral health service, we adopt the following standardized tools for medical necessity determinations:

- Adults: Level of Care Utilization System (LOCUS)
- Children: Child and Adolescent Service Intensity Instrument (CASII) or the Child and Adolescent Needs and Strengths Scale (CANS); for young children; Early Childhood Service Intensity Instrument (ECSII)

With regard to medical necessity criteria not addressed for a service or for a specific population, we submit our proposed medical necessity criteria to DMS for review and approval by DMS subject to the guidelines specified in Section 4.4, Approval of Department. The Commonwealth permits use of CMS-recognized guidelines, national coverage determinations

(NCDs), and local coverage determinations (LCDs) when other criteria do not specifically address a provider request. We maintain written policies for applying the criteria based on an assessment of the local delivery system. At its discretion, DMS may require us to use of other criteria that it creates or identifies for services or populations not otherwise covered by the named criteria in the Draft Contract. Our UM staff uses medical necessity criteria that is based on established scientific evidence and is referenced in our documentation. Our UM staff incorporates local factors, such as Kentucky's demography, epidemiology, or provider network attributes.

We agree to implement Department-approved criteria within **90 days of receipt** of notice from DMS. Our medical necessity criteria is transparent and meets all relative documentation requirements as required by DMS, the Kentucky Department of Insurance, CMS, or other relevant regulatory agencies. Our Kentucky medical necessity criteria is available for review by DMS or the public by request and is available to providers The review criteria and guidelines are available to the Providers upon request and are posted on WellCare of Kentucky's provider portal.

UM staff who make service authorization decisions use written policies, procedures, and mechanisms to ensure consistent application of review criteria to process requests for initial and continuing authorization of services. Our written clinical criteria and protocols provide mechanisms to obtain all necessary information, including pertinent clinical information and consultation with the attending physician or other health care provider, as appropriate.

WellCare of Kentucky has a review body that includes representation by Kentucky licensed health care professionals who review medical necessity criteria at least annually. We attest on annual basis to the criteria used by our UM staff for medical necessity decisions. As an incumbent, we received DMS' approval for our current medical necessity criteria. On the new contract, we agree to submit our criteria to DMS for its review and approval to ensure compliance with new Contract requirements.

MEDICAL NECESSITY CRITERIA FOR UM DECISIONS RELATED TO DENTAL SERVICES

On the current contract, WellCare of Kentucky has medical necessity criteria specifically for dental services and uses it for the provision of dental services. WellCare of Kentucky's Dental Director Dr. Jerry Caudill is actively involved in all WellCare of Kentucky oral health programs and devotes adequate time to ensuring timely oral health decisions. Dr. Caudill makes sure our dental vendor's utilization review activities conform to our protocols, the Commonwealth's requirements and timeframes, and professional standards. Further, Dr. Caudill is available for after-hours consultation, if needed. On the new contract, we will submit our medical necessity criteria for dental services to DMS for its review and approval in accordance with Section 4.4 Approval of Department.

REQUIRED MEDICAL NECESSITY AND SERVICE AUTHORIZATION REVIEW TIMEFRAMES

WellCare of Kentucky makes prior authorization determinations in a timely and consistent manner so our Enrollees with comparable medical needs can and do receive comparable and consistent levels, amounts, and duration of services as supported by an individual's medical

condition, records, and previous affirmative coverage decisions. On the current contract, we track our adherence to medical necessity and service authorization timeline requirements. **Table C.22-1** shows evidence of WellCare of Kentucky's ability to comply with the Commonwealth's standard and expedited the medical necessity and service authorization timeline requirements 99 percent of the time during May 2019:

Table C.22-1 standard and expedited Timeline Adherence

Medicaid	Kentucky	Grand Total
Expedited		
Auth_Count	421	421
% TAT in Goal	99.0%	99.0%
AVG TAT Overall	0.41	0.41
TAT SLA	2	
Standard		
Auth_Count	11828	11828
% TAT In Goal	99.0%	99.0%
AVG TAT Overall	1.00	1.00
TAT SLA	2	

On the new contract, we agree to meet all Draft Contract-specified timelines for conducting medical necessity and service authorization reviews, including:

- *Standard Service Authorization:* We provide a service authorization decision as expeditiously as the Enrollee's health condition requires and within the Commonwealth-established timeframe, which is within **two business days of receiving the request**. WellCare faxes an authorization response to the provider fax number(s) included on the authorization request form. The Commonwealth may grant an extension for an additional 14 days if the Enrollee or his or her provider requests an extension, or if WellCare staff justifies in writing to DMS a need for additional information and specifies how the extension is in the Enrollee's best interest.
- *Expedited Service Authorization:* In the event the Provider indicates, or if we determine, that following the standard timeframe could seriously jeopardize an Enrollee's life or their health or ability to attain, maintain, or regain maximum function, we complete **an expedited authorization decision within 24 hours and then provide notice as expeditiously as the Enrollee's health condition requires**. We ask providers and train them how to request expedited decisions for prior authorization by telephone, not by fax or using our secure, online provider Portal. Providers can refer to WellCare's *Quick Reference Guide*, which providers can find on our website, for contact information for the UM Department via Provider Services. WellCare of Kentucky and providers will continue to consider a request

for authorization or preauthorization for treatment of an Enrollee with a diagnosis of substance use disorder (SUD) as an expedited authorization request. **In 2018, we had a total of 974 expedited authorization requests for all behavioral health levels of care. Of those, 337 Enrollees had a primary diagnosis of SUD.**

- *Post-Service (Retrospective) Review:* WellCare of Kentucky reviews post-service requests for authorization of inpatient admissions or outpatient services. **We complete retrospective review requests within 14 days.** If an Enrollee or the provider requests an extension or if we justify in writing to DMS a need for additional information and how the extension is in an Enrollee's best interest, retrospective review requests may extend up to an additional 14 days. The review includes making coverage determinations for the appropriate level of services, applying the same approved medical criteria used for the pre-service decisions, and taking into account the Enrollee's needs at the time of service. WellCare identifies quality issues, utilization issues, and the rationale behind any failure to follow WellCare's Prior Authorization/pre-certification guidelines.
- *Written Confirmation:* Upon an Enrollee or provider request, we provide written confirmation of our decision **within three business days** of providing notification of a decision if the initial decision was already not in writing. We provide written confirmations in accordance with Enrollee rights and responsibilities.

MEDICAL NECESSITY RELATED TO COURT-ORDERED PSYCHIATRIC SERVICES

WellCare of Kentucky does not deny, reduce, or controvert the medical necessity of inpatient psychiatric services provided pursuant to a Court-Ordered Commitment for Enrollees under the age of 21 or over the age of 65. We agree to present any modification or termination of services to the court with jurisdiction over the matter for determination. WellCare of Kentucky agrees to provide inpatient psychiatric services to Enrollees under the age of 21 and over the age of 65 for individuals who have been ordered to receive the services by a court of competent jurisdiction under the provisions of KRS 645, Kentucky Mental Health Act of The Unified Juvenile Code and KRS 202A, Kentucky Mental Health Hospitalization Act.

MEDICAL NECESSITY RELATED TO ENROLLEES WITH SERIOUS MENTAL ILLNESS WHO ARE RESIDING IN INSTITUTIONS OR AT RISK OF INSTITUTIONALIZATION

We agree to provide services recommended in an Enrollee’s person-centered recovery plan and those services that meet medical necessity criteria for individuals with serious mental illness (SMI) and who are residing in institutions or those who are at risk of institutionalization. Our UM and care coordination staff participate in transition planning and continued care coordination for Enrollees with SMI who are transitioning from licensed personal care homes, psychiatric hospitals, or other institutional settings to integrated, community-based housing. A Care Manager conducts a comprehensive needs assessment (CNA) of medical and behavioral health needs to support an Enrollee’s successful transition to community-based housing within 14 days of the transition. To perform this assessment, our staff reviews the Enrollee’s Person-Centered Recovery Plan and level of care determination developed by the provider agency in tandem with our routine UM procedures.

c. Outreach methods to engage and empower Enrollees.

Our multimodal approach to Enrollee outreach provides many opportunities for Enrollees and their families to learn about and participate in special program services. Outreach activities engage and empower Enrollees and families by educating them and assisting them to connect with targeted services based on Enrollee need, while building healthy behaviors and improving health outcomes. As described in detail earlier in subsection a., we use the following outreach approaches to engage Enrollees and families:

- *New Enrollee onboarding materials,* including the Welcome Packet, ID card, and a message that encourages Enrollees/families to schedule well checkups.
- *Welcome video* that supports written onboarding materials.
- *Enrollee Services call center* with Enrollee Services Representatives who engage Enrollees and families by helping Enrollees complete their onboarding process and understand benefits and services. Enrollee Services Representatives also answer questions about how to access services, help Enrollees find a doctor or other provider and schedule an appointment, and help Enrollees connect to other services.
- *Digital engagement* is an effective means of Enrollee engagement. We direct our Enrollees to our digital platforms and demonstrate how to navigate managed care as a convenient way for Enrollees and their families to obtain information or perform self-service functions.
- *My WellCare mobile app.* This digital engagement tool enables Enrollees to assume more responsibility for their health through familiar tech smartphone and tablet capabilities and functions. Using the mobile app, Enrollees and families can:
  - Search for a provider by name, ZIP code, or location with our “Find a Provider” tool.
  - Find a hospital or urgent care facility with the “Quick Care” tool.
  - See preventive care an Enrollee may be missing in the “Wellness Services” section.
  - Use the “ID Card” tool to see their ID card. Show it to a provider on screen. Enrollees can even email or fax their ID card, as needed.
  - Get health-related messages like flu shot reminders.
- *Public website,* WellCare of Kentucky's mobile-responsive public website provides useful information to users.
- *Enrollee portal.* Enrollees can access the portal from the internet or from mobile devices. It provides Enrollees a secure, personalized health care experience and 24/7 access to self-service functions.
- *Enrollee Handbook.* Our Kentucky Enrollee Handbook contains information to help Enrollees connect to the care and services they need.
- *Direct-to-Enrollee household and targeted mailings.* We send annual/seasonal prevention written reminders and newsletters.
- *Outreach through collaboration with network providers.* We engage providers' assistance in educating Enrollees and families when a provider identifies a need for special program services.

- *Face-to-face outreach at community events.* Community events are activities where WellCare of Kentucky staff dedicate time to connect with community agencies or sponsor/host events for the community. Activities include attending interagency council meetings, specific health and social service-focused coalitions, as well as hosting community activities targeted at specific health or social issues. We have a strong commitment to participate in or sponsor local street fairs, health fairs, county fairs, Kentucky State Fair, festivals, and other scheduled and health-related events like community baby showers.
- *Outreach* through collaboration with faith-based and community organizations, such as food banks and homeless shelters.
- Telephonic and in-person outreach by WellCare staff. In Kentucky, all health care is local. Our local staff, including quality staff, Field Outreach Coordinators, and Care Managers, conducts multi-channel outreach activities to close gaps in care, including those related to EPSDT screenings and dental care. The key to empowering Enrollees is to engage them. We facilitate Enrollee engagement and participation in EPSDT screenings, special program services, and care coordination activities. We connect Enrollees to the special program services they need like EPSDT, NEMT, dental services, family planning services, Lock-In program, and more.

Care coordination and quality staff outreach to Enrollees to close care needs and connect Enrollees to special program services: To ensure Enrollees receive required EPSDT screenings and special services as well as provider-recommended treatment, WellCare of Kentucky established an effective and integrated care coordination function that includes field-based and telephonic outreach and a quality team that outreaches to Enrollees to close gaps in care. We maintain written policies and procedures for the provision of care, including dental services.

Care coordinators and Care Managers provide education and counseling to Enrollees and families/guardians regarding compliance with EPSDT visits and prescribed treatment and with the provider's treatment plan and referrals--and, sometimes this requires us to conduct a home visit to educate an Enrollee and family. Care Managers work with Enrollees and families/guardians to develop a plan for improving an Enrollee's oral health, a frequent care need for children and individuals with special health care needs or Enrollees located in residential treatment facilities. Care Managers outreach to Enrollees assigned to the Lock-In Program in advance of the lock-in to provide education and engage them in care coordination. Our care coordination staff makes referrals to family planning services and helps Enrollees coordinate timely appointments.

We provide Enrollees with support for transportation, appointment scheduling assistance, and connections to other supports, including services offered by the WIC program and other state and federal programs. Quality staff, Field Outreach Coordinators, Care Coordinators, and Care Managers follow up with Enrollees when they do not complete recommended screenings and treatment or follow-up with referrals, including EPSDT-related or social service referrals. Our staff works with Enrollees and families to identify and remove barriers to accessing care like transportation. We document all referrals in an Enrollee's CareCentral record.

Our integrated CareCentral care coordination system provides an integrated summary of Enrollee care needs: We maintain a single and centralized Enrollee record in CareCentral, our claims-fed care coordination system. Enrollee-facing staff document outreach efforts, information received from providers, assistance with scheduling appointments, assessment data, health history, all necessary diagnosis and treatment, receipt of EPSDT special services, and follow up. We track an Enrollee's referral compliance in their CareCentral record by means of claims submission and encounters as our tracking system for Enrollee acceptance or refusal of EPSDT services.

Our Community Connections team partners with community-based organizations, outreaches to Enrollees and non-Enrollees to educate the community about special program services, and educate them how to call our CCHL line to access social resources: Our Community Connections program links Enrollees and non-Enrollees to social services, such as food banks or meal delivery, housing assistance, financial assistance, transportation, education support, legal assistance, and employment services. We designed the Community Connections program to partner with community resources and help individuals navigate the local social support network to receive the care and services they need. A program priority is to identify local, community-based solutions to fill gaps in the network of social services. Care coordinators and Care Managers and other WellCare staff refer Enrollees and families, as needed or requested, to the CCHL team for assistance connecting to social services. We train care coordinators and Care Managers and give them the capability to access and search the Community Connections database of community-based organizations, which includes organizations like SNAP, WIC, and Head Start. They refer Enrollees and families/guardians to community-based resources and follow up to measure the impact of these services on our Enrollees' health outcomes as part of our closed-loop referral process. When we connect Enrollees to the social services they need, they are 5X more likely to schedule and go to their annual PCP visit, resulting in vital preventive care and screenings. **As validated by Robert Wood Johnson Foundation's Center for Public Health Systems and Services Research at University of Kentucky in 2015, there is $450 savings in healthcare costs per social service accessed.** This aligns with DMS' goal to help improve health outcomes for our Enrollees and lower the overall cost of health care.

d. Approach to identify, enroll and encourage compliance with lock-in programs.

As part of WellCare's new, national ACT for Opioids Program, we identify Enrollees with relevant behavior patterns by analyzing high numbers of controlled substance claims; multiple prescribers of controlled substances; prescriptions filled at multiple pharmacies; excessive utilization; Emergency Department utilization; and the geographic distribution of controlled substance prescribers and pharmacies. Once we identify an at-risk Enrollee, we enroll them in the One Provider-One Pharmacy Lock-In Program, where they are locked-in to one prescriber and one pharmacy for controlled substances categorized as opiates or benzodiazepines. We expanded our pharmacy Lock-In Program to address over-utilization of Emergency Department services.

Pharmacy Director Thea Rogers, Pharm.D., coordinates, manages, and oversees the provision of pharmacy services to Kentucky Enrollees. She provides clinical pharmacy direction for the

Kentucky managed care program, including, but not limited to medical economics, pharmacy, utilization, and quality management. After the success of the Kentucky Pilot Lock-In Program, WellCare implemented the Lock-In Program as best practice throughout the states where WellCare serves as an Medicaid MCO. WellCare manages our national Lock-In Program through our Tampa-based shared services department. Dr. Thea Rogers reviews complicated Enrollee cases and all appeal cases.

WellCare of Kentucky's Lock-In Program supports adult Enrollees (18 years old and older) who need help managing their health care needs. It limits overuse of medical and pharmacy benefits by making sure an Enrollee receives these benefits at an appropriate frequency and by ensuring care and services are medically necessary. Locking-in Enrollees to a specific provider and one pharmacy helps us closely monitor the services an Enrollee receives. **In 2019, 5,890 WellCare of Kentucky Enrollees were active participants in the Lock-In Program.**

The benefits of our Lock-In Program include:

- Protect an Enrollee's health and safety through tighter access to high-risk medications
- Facilitate effective utilization of services and improve quality of health care services for high-risk Enrollees through enhanced care coordination
- Decrease fraud, waste, and abuse of benefit resources
- Provide continuity of medical care
- Avoid duplication of service by providers
- Reduce inappropriate or unnecessary utilization of Medicaid medical and pharmacy benefits, including avoiding non-emergent care provided in an emergency setting
- Avoid excessive utilization of prescription medications obtained through multiple visits to physicians, specialists, and pharmacies
- Enhance quality of care by fostering stable relationships between Enrollee/physician and Enrollee/pharmacist

With the goal of reducing utilization of opioids and overdose-related deaths, in 2016 WellCare of Kentucky initiated our company's first pharmacy Lock-in Program. As a result, in 2017 in Kentucky we saw a 55% drop in opioid prescribing, a 35% reduction in cyclobenzaprine prescriptions (a common muscle relaxant), and a 30% reduction in benzodiazepine prescriptions. **In 2018, Kentucky's Lock-In Program achieved a 27% drop in opioid utilization, with a 47% increase in medication-assisted therapy (MAT) services, 25% increase in maintenance medications, and 33.3% reduction in Emergency Department visits.**

We piloted our initial lock-in program in Kentucky, achieving a sharp decrease in opioid utilization for Enrollees who were locked-in to one provider and one pharmacy. Positive results the first year of implementation included:

- Utilization of hydrocodone/acetaminophen and oxycodone/acetaminophen decreased by over 55% versus the baseline
- Benzodiazepine use decreased by over 30%

- Neurontin use decreased by over 30%
- Muscle relaxer use decreased

IDENTIFICATION OF AN ENROLLEE FOR THE LOCK-IN PROGRAM

WellCare of Kentucky uses retrospective claims review to identify Enrollees who are candidates for our Lock-In Program.

Lock-In Program Enrollment Criteria: We optimized our enrollment criteria to capture Enrollees at greatest risk for preventable outcomes from controlled substance/opioid abuse and misuse and those with unnecessarily fractured or duplicative pain management care. We identify Enrollees for the Lock-In Program through our 3+3+3+ED risk protocol. The criteria used for identification and enrollment of an Enrollee in the Lock-In Program during the retrospective review process includes Enrollees who:

- Excessive use of provider services
  - Fill prescriptions at least three or more pharmacies within 30 consecutive day period within a 180 lock-back
  - Use three or more physicians to obtain prescriptions
  - Use more than three controlled substances in a 30-day period
- Excessive use of Emergency Department services
  - Claims for six or more Emergency Department visits encompassing three or more unique Emergency Department facilities over a rolling 12-month timeframe
- Receive duplicative drug therapy from different physicians

Referrals: We review claims for Enrollees to determine candidacy for the Lock-In Program upon referral or reports of fraud, abuse, or misuse from providers, pharmacies, law enforcement agencies, or WellCare staff. This includes identifying Enrollees engaging in “doctor shopping” to get prescriptions from multiple doctors. Once we receive a referral, we review 12 months of pharmacy claims to determine the appropriateness of pharmacy utilization. The pharmacy team may recommend one of the following courses of action:

- Enroll Enrollee in a single pharmacy and Primary Care Provider Lock-In Program for 24 months.
- Send an intervention letter to the Enrollee.
- Send a warning letter to the Enrollee.
- Send a notification letter to the pharmacy.
- Enroll the Enrollee in WellCare’s Care Coordination program for education And reinforcement of safe and appropriate medication use and appropriate disposal of unused medications.
- Opioid misuse affects the whole family, therefore the Enrollee's Care Manager assesses caregiver burnout and coordinates resources for the Enrollee's family and/or caregiver.

- If medical justification is received, we take no action.

The pharmacy team logs all documentation related to Lock-In Program determinations. We maintain and update monthly a list of Enrollees enrolled in the Lock-In Program.

We use the Kentucky All Schedule Prescription Electronic Reporting (KASPER) tool: As part of the lock-in determination for Enrollees who appear to be over-utilizing controlled substances, our pharmacy lock-in team accesses the KASPER tool to investigate beyond retrospective claims review and include data on products for which the Enrollee may have paid cash.

Sound clinical judgement is essential: As needed, our pharmacy lock-in team uses sound clinical judgement to guide appropriate determinations related to over utilization and duplicative drug therapy.

Department approval: WellCare of Kentucky will continue to submit our Lock-In Program description to DMS for approval subject to Section 4.4, Approval of Department.

ENROLLMENT OF ENROLLEES IN THE KENTUCKY LOCK-IN PROGRAM

WellCare of Kentucky's Lock-In Program enrollment process includes the following features:

- *Written Notice via Automated Letter Generation:* Thirty days prior to lock-in, we send to Enrollees a letter of intent notification about their enrollment in the Lock-In Program. This letter explains the restriction that will be applied and how an Enrollee can request an appeal if they wish to contest the decision for enrollment into the program. All Enrollees have the right to appeal.
- *Lock-In Primary Care Provider/Pharmacy Selection:* Aligning with our one provider/one pharmacy approach, we lock the Enrollee to his or her Primary Care Provider on file in our XCelys claims and encounter system. In Kentucky, we select the designated lock-in pharmacy in accordance with the Geographic Access Requirements of the Kentucky contract. The designated Lock-In Program is geographically situated to give an Enrollee with limited mobility or transportation reasonable access to his or her providers. Thirty days prior to lock-in, in addition to sending a letter to the Enrollee, we send a letter to inform the Enrollee's provider and their pharmacy informing them of the Enrollee's lock-in status and their role.
- *Initial Care Coordination Outreach:* A Care Manager contacts the Enrollee prior to initiating pharmacy and prescriber edits. Initial Care Manager outreach includes: review of medical and pharmacy history; establish face-to-face or telephonic contact with the Enrollee; confirm accurate provider and medication list; explain the purpose of the Lock-In Program; notify pharmacy of any necessary updates; and conduct a comprehensive needs assessment to determine an Enrollee's whole-person needs. The Care Manager uses our substance use disorder (SUD) checklist, assists the Enrollee with other chronic conditions, and collaborates with medical and behavioral health staff, as needed.
- *Engage Enrollees in Support through Ongoing Care Coordination in Conjunction with Primary Care Providers:* For all Enrollees enrolled in the Lock-In Program, we refer them to WellCare’s case management team and connect them to a Care Manager to educate

Enrollees, coordinate their services, remove barriers to care, and monitor health outcomes. Care Managers help Enrollees identify the reasons for any over use of medical and pharmacy services. They help define person-centered goals and educate Enrollees about health-related social resources.

- *Enrollee Refusal to Participate:* Our care coordination team outreaches to all Enrollees assigned to the Lock-In Program. We advise the Enrollee that they are locked into one provider and one pharmacy but participation in care management services is optional. For Enrollees who refuse to participate in the care management program, we provide them with a phone number to reach us if they decide to participate later.
- *Lock-In Status Review:* For Enrollees enrolled in the Lock-In Program, while the Enrollee has lock-in status, he or she is restricted to one pharmacy and one Primary Care Provider to obtain prescriptions for a 24-month lock-in period. The pharmacy lock-in team reviews Enrollees enrolled in the Lock-In Program at least once during the 24-month lock-in period. If, after review of an Enrollee's drug-usage profile, we determine lock-in restriction and participation in the Lock-In Program is no longer appropriate, then we remove the restriction.

ENCOURAGE ENROLLEE COMPLIANCE WITH WELLCARE'S LOCK-IN PROGRAM

As part of our multidisciplinary approach to case management, the Enrollee's assigned Care Manager, Primary Care Provider, and pharmacist collaborate to oversee the healthcare needs of an Enrollee who is enrolled in the Lock-In Program. They make sure the Enrollee receives all medically necessary care for which the individual is eligible. The Care Manager keeps the Primary Care Provider and pharmacist informed about an Enrollee's whole health needs as well as the care and services the Enrollee is receiving, including social services. They educate the Enrollee about appropriate use of medical and pharmacy services.

Monitor and Follow Up: For Enrollees in the Lock-In Program, the Care Manager monitors his or her drug utilization as well as the Enrollee's current health status, their needs, and the services currently in place to address Enrollee-specific needs. Care Managers have access to and conduct a review an Enrollee's claims, including pharmacy and Emergency Department usage. The Care Manager measures and evaluates an Enrollee's progress toward his or her person-centered care plan goals, including education. They discuss major health issues and any barriers to attaining goals, including transportation or inability to access medications. The Care Manager assesses whether provider services and social services are being implemented in accordance with the care plan. The Care Manager follows up by adjusting care and services as needed to meet an Enrollee's needs and help them achieve Enrollee-defined care plan goals.

Lock-In Program Monitoring and Evaluation: At the corporate level, WellCare's Medical Economics team compiles detailed Lock-In Program data (e.g., number of Enrollees actively engaged in the Lock-In Program, pharmacy usage, non-emergent and Emergency Department usage, opioid use reduction, and cost savings) on a quarterly basis specific to WellCare's Medicaid line of business. They sort this data at the individual state Medicaid program level. After Quality Affordability Initiative staff reviews and validates the Lock-In Program data, the Medical Economics team approves the data for dissemination. The Medical Economics team

distributes quarterly Lock-In Program data to each of our state pharmacy directors. In Kentucky, Pharmacy Director Dr. Thea Rogers presents quarterly Lock-In Program data to the WellCare of Kentucky's leadership team.

Table C.22-2 presents positive outcomes for WellCare of Kentucky's Medicaid Lock-In Program, as of Q1 2019 for 1,112 actively engaged Enrollees during the six-month period from May 2018 - October 2018. **Opioid utilization reduced by 27.4%, representing a cost savings of $1.77 PMPM. Enrollee MAT use increased by 47.1% and use of maintenance medications increased by 25%. Providers who treat Enrollees who use opioids test them for HepC, accounting for a 7.4% increase in HepC prescription fills.** Overall, Lock-In Program pharmacy total costs increased by 54.9%, indicating a positive trend in Enrollees' appropriate use of MAT, HepC, maintenance medications, and other medications for diagnosed conditions. The data suggests improved Enrollee adherence to provider-recommended medication regimens, leading to improved health outcomes. Lock-In Program savings resulted from a reduction in opioid prescription fills and a reduction in emergent and non-emergent Emergency Department utilization.

Table C.22-2 Medicaid Lock-In Program Outcomes

Rx PMPM Breakout	Before	Enrollment	After	PMPM Change After vs Before	% Change After vs Before
Opioid Rx PMPM	$6.46	$4.58	$4.69	($1.77)	-27.4%
MAT Rx PMPM	$11.67	$20.26	$17.17	$5.50	47.1%
HEPC Rx PMPM	$16.59	$59.33	$17.81	$1.22	7.4%
Maintenance Rx PMPM	$188.98	$203.76	$236.27	$47.30	25.0%
Other Rx PMPM	$64.89	$131.75	$170.95	$106.07	163.5%
Total Rx PMPM	$288.58	$419.69	$446.89	$158.32	54.9%

In addition, our Lock-In Program data from the same time period shows:

- ***34.3% reduction** in non-emergent Emergency Department visits/1,000*
- ***31.7% reduction** in emergent Emergency Department visits/1,000*
- ***33.2% or $96.78 PMPM savings** in Emergency Department costs*

The following Enrollee story demonstrates how the Lock-In Program improved Enrollee outcomes by proactively prevented potential misuse and overutilization of controlled substances through education and care coordination.

Kentucky Enrollee Successful Experience with the Lock-In Program

In June 2018, our Enrollee, a 58-year-old male from Jackhorn, Kentucky, suffers from chronic pain and has diagnoses for disc degeneration, pulmonary hypertension, and chronic obstructive pulmonary disease (COPD). Retrospective claims review flagged him for review for the Lock-In Program due to meeting program criteria, which included receiving prescriptions fills for three unique controlled substances prescribed by three different providers within a 30-day period. He filled three controlled substance prescriptions at two different pharmacies during this period. This Enrollee's pharmacy utilization pattern put him at risk of poor health outcomes.

Thirty days prior to the Enrollee's enrollment in the Lock-In Program, WellCare sent a Lock-In Program notification to the Enrollee, his assigned pharmacy, and his Primary Care Provider on file. Concurrently, Lock-In Program staff referred this Enrollee to WellCare of Kentucky's care management staff for outreach to discuss the Lock-In Program and to facilitate the Enrollee's participation in care management to coordinate his care and remove any barriers to accessing the care and services he needs. A Care Manager called the Enrollee and explained the Lock-In Program. The Enrollee mentioned he changed Primary Care Providers. His current Primary Care Provider is not comfortable prescribing controlled substances and referred the Enrollee to a pain clinic for prescriptions for controlled substances. The Enrollee said he is currently taking prescribed medication for hypertension. The Enrollee agreed to participate in the care management program.

The Care Manager updated the Enrollee's centralized record in CareCentral. She documented the Enrollee's new Primary Care Provider and pain clinic physician's names and notified our pharmacy escalation team to update his Lock-In physician preferences so that the Enrollee would not experience an interruption in his medications. The adjustments were completed timely, and the Enrollee experienced a smooth transition to the Lock-In Program. The Enrollee stated he appreciated the Care Manager's personal touch in coordinating his services, handling issues, and educating him about the Lock-In Program. After almost a year in the Lock-In Program, this Enrollee has consistent and regular fills of his opioid medication from one provider and one pharmacy. We anticipate this Enrollee will successfully graduate from the Lock-In Program after 12 months.

WellCare of Kentucky delivers fully integrated, whole-person care through the coordination of physical health, behavioral health, social needs, and complex care models with the goals of improved health outcomes and more efficient and effective use of resources. Our Kentucky experience provides valuable insight into the utilization patterns and population health needs for Kentucky Medicaid Enrollees. This includes a wide range of individuals, such as moms and babies, adults with chronic conditions, adolescents and children with complex or comorbid needs, justice-involved individuals, and individuals with substance use disorders or serious mental illness.

e. Approach to coordination, including referral and follow-up with other service providers, like Women, Infants, and Children (WIC), Head Start, First Steps, School-Based Services, DCBS and the Kentucky Transportation Cabinet Office if Transportation Delivery.

APPROACH TO COORDINATION WITH OTHER SERVICE PROVIDERS

When providers and other entities involved with the health care delivery system work together for the benefit of the Enrollee and populations served. Coordinated care improves an Enrollee's experience with the system of care and his/her outcomes as well as reduces wasteful spending by avoiding duplication of care and services. Our approach to care coordination assures assistance with navigating multiple programs and community-based services, timely Enrollee assessment, development of a care plan that includes referrals to needed services and promotes optimal independence and Enrollee self-responsibility, and completion of monitoring and follow up activities. Care Managers identify and coordinate services and supports required to address an Enrollee's needs and goals, regardless of which program provides the benefit or service. **Coordination activities include referral and follow-up with other service providers like Women, Infants, and Children (WIC), Head Start, First Steps, School-Based Services, DCBS, the Kentucky Transportation Cabinet Office of Transportation Delivery, and more.** Care Managers educate Enrollees and families or guardians about the availability of special program services, including NEMT and family planning services. Enrollees who are not enrolled in our care coordination program can receive assistance with referrals to WIC, NEMT, and other social services by calling Enrollee Services or the CCHL. All referrals are documented in the Enrollee's centralized record. CCHL staff identify community-based resources to help Enrollees and work with them to develop an action plan that encompasses social needs to help them overcome health risks and improve outcomes.

Our care coordination platform, CareCentral, facilitates assessment, referral management, and interventions related to services provided by other providers and social resources provided by community-based organizations. This single, integrated clinical platform, fed through our single operating and claims system, is accessed by associates with diverse clinical and operational backgrounds and disciplines who all work for the same organization. Using CareCentral's Member Care Compass module, users have an integrated view of an Enrollee’s whole-person needs, including history and needs related to medical, behavioral health, medications, and social needs and referrals to special program services.

IDENTIFICATION OF ENROLLEES NEEDING SPECIAL PROGRAM AND SOCIAL RESOURCE SERVICES

Our approach to coordinating special program and social services begins with screening and identifying Enrollees who have these needs. We encourage all Enrollee-facing clinical and support staff, including MSRs, to routinely screen Enrollees for special program and social needs, including transportation, during interactions with Enrollees.

Predictive Modeling: We use predictive modeling to risk stratify Enrollees using multiple data sources and assign a risk score to each Enrollee. In an emerging feature of our ID/Strat tool, we include social service risk determined through our unique approach to cataloging and tracking

an Enrollee's utilization of social service resources. This utilization includes access to healthy food or non-benefited housing supports.

Health Risk Assessment (HRA) and Comprehensive Needs Assessment Tool: Like the HRA tool, our Comprehensive Needs Assessment tool includes questions that help Care Managers identify an Enrollee's whole person needs. It includes supplemental assessments that trigger when a social resource need is identified. They ask Enrollees if they are already receiving services from other programs like WIC, SNAP, Head Start, First Steps, or school-based services.

Referrals: Enrollee self-referrals and referrals from family, care coordinators, Care Managers, Primary Care Providers, other providers, CCHL staff, Commonwealth staff, WIC, school personnel, and social services staff or even a referral after a hospital discharge help us identify Enrollees with special program or social resource needs and/or those who may need care management. We educate community-based organizations on how to refer individuals to our CCHL.

Ongoing Identification: During interactions with Enrollees, clinical and non-clinical staff asks the Enrollee and family if they have any urgent or unmet social resource needs like food, shelter, transportation, or personal safety and promptly takes steps to address these needs. During a Care Manager's regular touchpoints with an Enrollee and during the Comprehensive Needs Assessment reassessment process, the Care Manager may identify a new social resource need, update an Enrollee's record, and make referrals.

COORDINATION, REFERRAL, AND FOLLOW UP WITH OTHER SERVICE PROVIDERS

WellCare of Kentucky begins the coordination process by establishing and maintaining collaborative relationships with other service providers like WIC, Head Start, First Steps, School-Based Services, DCBS, and the Kentucky Transportation Cabinet Office of Transportation Delivery, and the Kentucky community organizations that provide the social resources our Enrollees need, such as Low Income Home Energy Assistance Program (LIHEAP), HANDS program at local health departments, ARC Pregnancy Centers, and HEAR NOW. We train all of our Enrollee-facing staff, including Enrollee Services staff, Field Outreach Coordinators, Care Managers, and CCHL staff how to respond to Enrollee requests for help, e.g., food and transportation, available from WIC, Head Start, First Steps, School-Based Services, DCBS, and the Kentucky Transportation Cabinet Office of Transportation Delivery, and other Kentucky community organizations. We maintain contact information for these entities in our Community Connections database, for example, we include the phone number and address for WIC offices throughout all regions of the Commonwealth. Enrollee-facing staff document all Enrollee interactions and referrals in the Enrollee's record in CareCentral. This facilitates appropriate monitoring and follow up activities to make sure the services that other service providers deliver are meeting Enrollee needs and goals.

As part of our multidisciplinary approach to case management, their Care Manager convenes a multidisciplinary care team, which includes Primary Care Provider and may include representatives from other entities or state agencies, or community-based programs collaborate to oversee the healthcare needs of an Enrollee. With an Enrollee or

family/guardian's permission, we request state agency staff or other individuals engaged in an Enrollee's care, such as DCBS or school-based services personnel, participate on a multidisciplinary care team, engaging them in care planning and coordinating care in a manner that complements, yet does not duplicate, the Enrollee's care plan, services, and supports. They make sure the Enrollee receives all medically necessary care for which the individual is eligible. The Care Manager keeps the multidisciplinary care team informed about an Enrollee's whole health needs as well as the care and services the Enrollee is receiving, including social services. The Care Manager documents multidisciplinary care team recommendations and referrals in the Enrollee's record in CareCentral. Our staff follows up on Enrollee referrals, adjusts referrals as necessary to meet Enrollee needs, and measures an Enrollee's health outcomes related to social service referrals.

We have experience working with the following service providers and have learned best practices working with these entities and coordinating their services for Enrollees, including:

- *WIC:* Our Community Connections database includes contact information for WIC offices throughout Kentucky. When Enrollees call us for a referral to WIC or when it is listed on an Enrollee's care plan as an intervention, we can quickly provide the Enrollee and family with accurate information for local WIC offices. Our staff helps Enrollees complete applications for WIC services and SNAP (food stamp) benefits.
- *Head Start:* Every child deserves the right to arrive their first day of school ready to grow, learn, and succeed. We collaborate with families, early child and education provider, school staff, and community partners. Our staff coordinates referrals for our young Enrollees throughout Kentucky to participate in the Head Start program and follows up with a child's progress.
- *First Steps:* We routinely refer our medically complex children and foster care children to the First Steps program. WellCare worked with DCBS and foster parents to help set up these services. These services are appropriate for children less than 2.5 years old. After that point, we refer children to the Head Start program.
- *School-Based Services:* We frequently interact with school-based services. Some of our Enrollees receive behavioral health services through community mental health centers (CMHCs) embedded within a school. Often, our staff bridges the service components provided in the school with the other health-related and social services. We facilitate communication among families, therapists, and other providers.
- *DCBS:* We have many examples of our collaboration with DCBS. Today our regional teams of associates live and work in the regions and districts where DCBS offices are located. We assign a local WellCare of Kentucky foster care coordinator to each DCBS Service Region. This foster care coordinator meets with his or her assigned Service Region and county level offices to establish and maintain internal relationships with DCBS staff. For our medically complex individuals, we work hand in hand with DCBS and the Office of the Commission for Children with Special Health Care Needs to coordinate service delivery for children with complex needs. We work with DCBS and the Children’s Review Program and providers to coordinate discharge-planning efforts for children in acute level, subacute level, and

residential levels of care. We work with DCBS on the polypharmacy issues of children and youth. We work with DCBS and providers when an Enrollee needs additional services. DCBS staff outreaches to our staff to request assistance with locating specific service types. We then work with both DCBS, caregivers, and the identified provider to coordinate those services. **In 2018, our care coordinators held almost 1,000 care-planning meetings with DCBS and DJJ staff for our Enrollees in foster care.**

- *Kentucky Transportation Cabinet Office of Transportation Delivery:* We routinely refer Enrollees and families/guardians to Kentucky Transportation Cabinet Office of Transportation Delivery for NEMT transportation services. For Enrollees who have transportation needs that do not meet the criteria for coverage by the NEMT program, we coordinate transportation services offered by community-based organizations, as seen in the following Enrollee success story.

Care coordination and CCHL staff successfully refer Enrollees in western Kentucky counties to transportations services offered by Pennyrile Allied Services, Inc. (PACS).

Transportation Success Story - Pennyrile Allied Services, Inc.

WellCare established a partnership with PACS, a nonprofit community action agency, whose mission is to reduce and eliminate poverty. In 2015, community stakeholders identified transportation as the most urgent service gap for health in the region through a WellCare-led Community Impact Council held in Muhlenberg County. WellCare of Kentucky gave a $25,000 grant to support safe and reliable transportation options in the region. PACS' transportation voucher program has expanded to nine western Kentucky counties. Residents with limited incomes use vouchers for non-billable medical transportation to get to dental, vision, hearing, pharmacy, and behavioral health appointments. These vouchers give people regular, reliable access to healthcare to help them address their health concerns quickly, instead of delaying care until travel is convenient or affordable. By reducing health risks early, access to transportation can slow disease progression and help prevent future hospitalizations. From July 1, 2017 through March 31, 2019, 1,614 WellCare of Kentucky Enrollees received 36,969 total services from PACS, with 90% of referrals for transportation. Health outcomes for our Enrollees who used PACS services showed:

41% reduction in non-emergent Emergency Department visits for those with diabetes
41% reduction in inpatient admissions and 64% reduction in hospital days for those with asthma
41% reduction in visits related to acute lower respiratory infections

23. Behavioral Health Services

C.23. BEHAVIORAL HEALTH SERVICES

a. Provide a comprehensive description of the Contractor's proposed Behavioral Health Services, including the following:

i. Current or planned delegation to delegate all or part of the provision of Behavioral Health Services to another entity.

ii. Process for monitoring and evaluating compliance with access and care standards.

iii. Proposed innovations to develop and maintain network adequacy and access.

iv. Process for follow-up after hospitalization for Behavioral Health Services within the required timeframes.

v. Process for ensuring continuity of care upon discharge from a Psychiatric Hospital.

b. Describe the Contractor's approach to meeting the Department's requirements for operating seven (7) days a week, twenty-four (24) hours a day emergency and crisis hotline as defined in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

c. Describe the Contractor's approach to coordination and collaboration between the Contractor, Behavioral Health Providers and the PCP as defined in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

C.23. BEHAVIORAL HEALTH SERVICES

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 33.0 Behavioral Health Services of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

Since our program inception in 2011, WellCare of Kentucky has recognized the prevalence of behavioral health issues in the Commonwealth, particularly substance use disorder (SUD), and has championed the importance of having programs that engage and empower individuals in recovery and resiliency while enhancing and supporting the system that serves them. WellCare of Kentucky provides a comprehensive behavioral health program that serves the continuum of conditions and focuses on the issues most impacting Kentucky.

Our experience tells us that people with behavioral health conditions have a higher incidence of unmet medical needs and addiction to tobacco, alcohol, opioids, and other substances. Furthermore, people with behavioral health conditions are more likely to be homeless or housing insecure. Without attentive and coordinated discharge planning to transition from inpatient to outpatient, Enrollees with significant mental health conditions risk readmission for potentially preventable events, and may also have difficulty stabilizing or taking new medications if there is a delay in getting treatment from a new provider.

We provide a program that meets these challenges through:

- Integration to address both physical and behavioral conditions

- Coordinating elaborate partnerships with behavioral health and medical providers to create a high touch, integrated health system
- Supporting integrated care with social programs that improve Enrollees' outcomes and reduce medical costs
- Person-centered care management
- A provider network that supports the continuum of care for Kentucky's most prevalent disease states.
- Acknowledging and addressing the challenges of coordinating with state psychiatric hospitals, CMHCs, and SUD/treatment providers

Under the leadership of Behavioral Health Director, Dr. Marketa Wills and Senior Director of Behavioral Health, Lori Gordon, LCSW, MBA (who will be named Executive Administrator for the Kentucky SKY program), we have maintained the largest behavioral health network, which today includes more than 2,300 behavioral health professionals. Additionally, we have sustained a community presence across the Commonwealth that includes six regional offices to ensure our ability to maintain close contact with our Enrollees and local stakeholders, particularly community mental health centers (CMHCs). **This community presence has been a significant factor in our achieving status as the highest rated managed care organization (MCO) in the Commonwealth on the NCQA behavioral health metrics.**

Upon launching the program, we engaged with Kentucky's behavioral health community in an intentional process that continues today to ensure that Enrollees would have access to services and that key stakeholders would have relationships enabling collaboration and coverage. In 2012, WellCare of Kentucky was the only MCO to maintain a contract with Appalachian Regional Hospital (ARH) to continue serving Enrollees and providers in Region 8.
To ensure community voice in our behavioral health program, we developed the **Behavioral Health Clinical Advisory Council (BH-CAC),** which collaboratively monitors and improves WellCare of Kentucky's behavioral health program, helping us understand provider and Enrollee needs. It is comprised of 10-15 clinical leaders from multidisciplinary and diverse backgrounds in the Commonwealth, including inpatient and outpatient providers and advocates. This group represents diverse licensures, expertise, geographies, and populations. The BH-CAC has had quarterly meetings for eight years and continues to do so, guiding WellCare in all areas of the behavioral health program. The expansion of behavioral health services in 2013 is an example of the work of the Council. Through discussions with the advisory council and twice monthly meetings with CMHCs, we recognized, along with DMS', the need to expand the continuum of care within these vital provider organizations. WellCare of Kentucky expanded the services and developed a commensurate fee schedule for CMHCs to include a full range of services, adding many additional service codes such as intensive outpatient services and expanded in-home services well before they were covered benefits. After being the first to implement this program, we later helped roll it out across the Commonwealth. We continue to work with the CMHCs and the expanded behavioral health provider network to ensure access and improve quality, as we realize this is essential for the program to fulfill its mission.

WellCare of Kentucky has demonstrated its commitment to work collaboratively with DMS' and the Department for Behavioral Health, Developmental and Intellectual Disabilities (DBHDID) to

ensure that quality Behavioral Health Services . We are committed to the integration of physical health, behavioral health, pharmacy, and social supports for Enrollees. It is the foundation of our care model and our integrated CareCentral clinical platform and permeates the entire company.

a. Provide a comprehensive description of the Contractor's Behavioral Health Services

WellCare of Kentucky recognizes that the best path to improved outcomes for individuals with behavioral health needs and substance use disorders is a holistic approach that helps them navigate the broad range of services available across the continuum of care. We recognize that Enrollees with chronic health conditions may also experience depression, anxiety and other disorders secondary to their health diagnoses which , may impede the patient's activation and adherence and treatment of medical conditions. In 2018, 28% of our Kentucky population had diagnoses for both a behavioral health and medical conditions. Given that prevalence, we integrate behavioral health into every part of our approach to care, including Enrollee engagement, broad access to care, clinical programs, and social programs including value-added benefits. In our design and operation of behavioral health services we incorporate the four core values defined by DMS' in Section 33.2 of the Draft Contract.

WellCare's model is results oriented, intensive, ongoing, and focused on Enrollee and provider satisfaction. Our behavioral health plan is overseen by our medical directors, Howard Shaps, MD, MBA (physical health), Dr. Marketa Wills (behavioral health), and Thea Rogers, Phar.D. (pharmacy) who are each deeply committed to supporting our program. The behavioral health team is diverse, comprised of representatives from population health solutions, provider relations, operations, and quality. This integrated team has demonstrated behavioral health program success. Our success in integration is the result of our proactive, multifaceted approach that includes the fundamental components of WellCare operations as well as Enrollee and provider- facing initiatives, described below**.**

ENROLLEE-FACING INITIATIVES

Individuals with mental health and substance use diagnoses require substantial support services for recovery and resilience. In 2018, 36.6% of our Kentucky Enrollees had a behavioral health diagnosis. Our primary goal is to identify and engage Enrollees in their own health using a variety of innovative approaches. Our comprehensive, integrated behavioral health program features a variety of activities and programs aimed at improving outcomes for Enrollees with behavioral health conditions. We engage Enrollees in the program through health coaching, face-to-face meetings, peer support, and value-added services to support healthy lifestyle changes. We also leverage technology and app-based approaches to Enrollee engagement.

Clinical Programs: WellCare of Kentucky is aligned with DMS' efforts to drastically improve outcomes for a variety of healthcare conditions and to empower individuals to improve their health and engage in their healthcare. Several of our national programs originated in Kentucky. We have developed comprehensive programs to address Opioid Misuse Prevention and Opioid Use Disorder Treatment, Adverse Childhood Experiences (ACEs), and Severe Mental Illness (SMI). Each of these programs include person-centered supports that focus on the whole

person, addressing physical health, behavioral health, pharmaceutical, functional, and social needs.

Care Coordination and Case Management Program: WellCare at Home is the centerpiece of our Care Management approach in which field-based care managers including more than twenty licensed behavioral health clinicians that engage Enrollees and their families in person at a time and place most convenient to the Enrollee. Bring able to see an Enrollee's challenges first-hand allows our care managers to better help address barriers to positive health outcomes. WellCare at Home remains one of our most successful programs. In an analysis of Enrollees enrolled in Complex Care Management receiving WellCare at Home interventions, in a one-year period, we saw their **ER use decline 21%, their inpatient admissions decline 27%, with corresponding increases in pharmacy spend of 16% and specialist visits of 27%.** This tells us that members are taking their prescribed medications and maintaining appointments with their physicians and therapist.

Identifying Enrollees: There is no wrong door for Enrollees to access our care management program. Referrals for care management identify Enrollees for the program. Every Enrollee-facing associate (e.g., care management, Enrollee Services, customer service, UM, discharge planning staff, and other Enrollee-facing staff) and Provider receives training to identify needs and make direct referrals to care management. Enrollees may self-refer or their family/legal representative may refer an Enrollee at any time. We can receive referrals from providers; the 24-hour Nurse Advice Line; BH Crisis Line; State staff; community partners; hospitalists; and other PHPs. In addition, WellCare has designed our stratification process with predictive analytics specific to the Medicaid population, which allows us to better identify emerging risks as well as behavioral health and substance use risks that are often masked in traditional cost-based stratification models. Our Opioid risk identification and stratification process, for example, can identify, after the first opioid prescription is written, who is at risk for misusing that drug. We assign Enrollees a Risk of Unsafe Use Score™, which identifies Enrollees at risk of unsafe use of prescription opioids and predicts the likelihood that an opioid user will be diagnosed with unsafe opioid use in the next one-year period. This allows us to intervene early with specially trained care managers to prevent Opioid misuse. Generally, our risk stratification methodology allows us to determine the risk of our overall population and identify Enrollee risk levels.

Care Needs Screening and Assessment: Once identified, our approach begins with an integrated screening and comprehensive health risk assessment, which identifies both medical and behavioral health conditions. The CareCentral assessment includes a dynamic, configurable comprehensive needs assessment. Care Managers can also use supplemental assessment for individuals with special health care needs. This assesses their immediate, current and past healthcare, mental health, and substance use history and needs; psychosocial, functional, and cognitive needs; social determinants of health, including employment and housing; ongoing conditions or needs that require treatment or care monitoring; current care being received; current medications; and their support network. The goal of the Enrollee Needs Assessment is to gain a whole-person understanding of the individual's goals, strengths, needs, preferences, abilities, functional needs, and physical and behavioral health status. Care managers, document

the findings from the assessments in the CareCentral system, which provides a 360-degree view and begins the integrated plan of care.

Care Planning: WellCare is committed to person-centered, integrated care planning process where the Enrollee voice is central to the process. Our care managers are trained to build relationships that elicits what is important to the Enrollee and family. Enrollees define the care team and the care plan goals. Our behavioral health care managers facilitate a collaborative multi-disciplinary team approach to develop an individualized plan of care. We develop enrollee-centered plans of care that include measurable goals, outcomes, interventions, supports, and services for the Enrollee's condition(s) and needs. Ongoing coordination with the PCP and behavioral health specialists is part of the care planning and monitoring processes. The care manager assesses the Enrollee for progress on the care plan goals and address any identified or potential obstacles to success. This can include issues such as limited transportation, lack of understanding of the condition, lack of motivation, as examples. The care manager guides and supports the Enrollee using motivational interviewing and teach-back techniques to empower them to realize their health improvement and recovery goals. . CareCentral empowers real-time collaboration among MDT members. Workflows extend beyond shared notes and secure text messages to incorporate multi-dimensional media, video-conferencing, shared dashboards and reports, and alerts. Care managers make personal contact with an Enrollee’s suggested MDT members to explain their responsibilities on the team and its importance to the Enrollee’s care. The care manager provides a copy of the care plan to MDT members and ensures they know how to access the Enrollee’s information via CareCentral’s secure Provider Portal.

Follow Up: Enrollee outreach frequency depends on their identified needs and risk level (Health Promotion and Wellness, Management of Chronic Conditions, or Complex Care Management). The care manager links Enrollees to necessary services and monitors their provision. This includes, for all risk levels, making referrals, coordinating care, promoting communication, ensuring continuity of care, and conducting follow-up. Through implementing the Enrollee's care plan, WellCare aims to enhance the Enrollee's health literacy to the greatest extent possible, and to help them become self-directed and compliant with their healthcare regimen. The care manager also:

- Facilitates Enrollee referrals to resources and follows up to determine whether Enrollees act on the referrals
- Monitors the Enrollees through implementation and interventions of the care plan, collaboration with MDT and the Enrollee ember or caregiver
- Monitors the Enrollee throughout the implementation of coordination activities and goal achievement, assesses progress against care plan goals, and makes necessary modifications
- Educates Enrollees on disease process/condition and promotes self-management.
- Provides Enrollees with nationally-recognized and approved educational material; coaches toward adherence to monitored treatment plans; develops and communicates Enrollee-specific self-management plans; and documents in the Medical Management Platform, during each contact with the Enrollee

- Understands Enrollee's care needs and circumstances may change; the care manager must continually evaluate the care plan to update and/or revise to accurately reflect the current Enrollee needs.
- Assisting Enrollees through Transitions of Care including, but not limited, to hospital to home and pediatric to adult care.

Enrollee Materials: As a fully integrated health plan, WellCare of Kentucky includes behavioral health specific information in all Enrollee materials and customer service scripts to educate Enrollees on the behavioral health benefit, the network, and how to access services. WellCare of Kentucky includes behavioral health specific information in all Enrollee materials and customer service scripts. Our Enrollee newsletter features behavioral health topics that focus on a specific part of the program. As an example, information on how to identify a behavioral health crisis, and how to access emergency behavioral health services, has been included as a way to address Kentucky's growing suicide rate.

Community Engagement: Community engagement partners work with social resource organizations to address social barriers at the individual Enrollee level while supporting the community through helping to secure the safety net infrastructure. The Community Engagement team in Kentucky is the largest across the company and has provided **6,446 community activities reaching 4,075,014 individuals or connections**. Our Community Engagement team engages Enrollees at our sponsored health fairs, back-to-school events, and other community events throughout the Commonwealth to educate them about their benefits, covered services, population health programs, and community resources. Often we learn at these events that Enrollees do not have a comprehensive understanding of the services they are entitled to, including access the Community Connections Help Line (CCHL), available health and wellness programs, or coordination support with non-covered services. The Community Connections Help Line includes peer support specialist that refer Enrollees (and non-Enrollees) to our community partners to address their social determinants of health.

Care Managment: Building a Skills Toolboxwith Community Support

In January of 2017, a Case Manager was connected with a 24-year-old member living in Louisville, KY. The member had been experiencing ongoing suicidal ideations, which resulted in rapid readmits every other day. At the time, the case manager shared that the member had a plan and means to execute, but kept reaching out. Our case manager treated every suicidal ideation as though it was the first, and worked with the member to build a "skills toolbox" so the member would have a viable solution for any issue that may arise. For example, if the member was concerned about how they were going to eat food that week, the case manager had a left St. Stephen's Food Pantry and Clothes Closet as a tool in the member's skill toolbox, and had showed the member how to use that tool. The member was taught how to utilize the tools available to them in the community, which resulted in the member taking the lead in their own health. In addition, our case manager worked with Bridgehaven and their staff to make sure that the staff was aware of the needs of the member and could assist in the total scope of care for this individual. For the member to have their full needs met, the care manager had to always consider "What is the next step or the next need? How can I assist the member with this next step?" The case manager's efforts went "Beyond Healthcare" to provide "A Better You" for this member, who previously relied on others to find solutions to their needs. Now, this member is aware of resources available to them in their community, and also knows how to utilize them when necessary.

Quality Program - Kentucky Behavioral Health, Enrollee Engagement, and Health Coach Team: A focused team of Quality Improvement coordinators, Health Coaches, a Patient Care Advocate (PCA) supervisor, and regionally located PCAs. Our current team includes:

- *Health Coaches that conduct continuous outreach* to Enrollees. Since beginning the program in February 2019, they have made more than 13,000 outreach calls to provide education on recommended critical behavioral health screenings and preventive services. In 2018, Deloitte Center for Health Solutions published a study indicating the top things Enrollees want to use smart phones for are recognizing depression or anxiety, and for health coaches.
- *Patient Care Advocate (PCA) team*, co-located in provider offices to help assist Enrollees in scheduling appointments and enrolling in care management through telephonic outreach and face-to-face engagement. If needs are identified the PCA may directly refer to the care management program.
- Kentucky-based **member outreach coordinators,** who use our Unable to Contact (UTC) program, REACH, to locate Enrollees for whom we have incorrect or missing contact information. We know when we can locate an Enrollee who was previously unable to contact, we increase quality and reduce medical costs by as much as 19.4%.
- *Telephonic Resources:* A live person answers WellCare of Kentucky's **Behavioral Health toll-free crisis services hotline** 24 hours per day, seven days per week, year round. With a person-centered approach, hotline associates provide crisis triaging to assess Enrollees' behavioral and physical health, pharmacy requirements, and social determinants of health needs, including their need for crisis services. Each crisis line associate are specifically trained to recognize critical issues; as well as, local community resources. To ensure each

crisis was managed, and to assess for any other needs, a local behavioral health care coordinator follows up within 24 hours (next business day) of a crisis line call, after the original reason for the call has been addressed. Our **24-hour Nurse Advice Line (NAL)** is staffed by highly qualified physicians, physician assistants, and nurses, who all know and understand how to educate Enrollees, how to find and select the right provider specialist for them, and how to quickly identify and take action for those in crisis; and direct those who are not in immediate distress to an appropriate level of care. They do so using sophisticated software that recognizes signs and signals of distress through word recognition.

- *Web-based Education and Resources:* WellCare offers an array of supportive and educational resources to address the healthcare needs of Enrollees, and their families. These include **mobile peer support** for substance use via MAP Health, our **Enrollee portal**, which provides access to education, highlights care gaps for Enrollees, helps them make appointments, and offers self-service tools and links to supports such as a pharmacy and provider search. We provide easy-to-understand **Krames health education materials** that support Enrollees in their self-care journey. Our health education programs, including Krames tools, are informed by our integrated clinical practice guidelines (CPGs) that cover both healthy individuals and those with acute and chronic conditions. Our **MyWellCare Mobile App** provides access for Enrollees, families, and caregivers to a digital library of mental health and substance use information, self-help tools, and our vignette series of People Like Me - stories of individuals with lived experience with mental health and substance use.

PROVIDER-FACING INITIATIVES

WellCare views our providers as key partners and stakeholders. We are committed to ensuring that providers have the resources and tools necessary to develop, implement, and successfully maintain our accreditation-based integrated provider models. We work with all providers, including Federally Qualified Health Centers (FQHCs), Community Mental Health Centers (CMHCs), Behavioral Health Services Organizations (BHSO), Multi-specialty Groups (MSG), Independent Practice Associations, and PCPs, to support Enrollees receiving integrated and holistic care.

In 2012, WellCare implemented an internal operational structure using a fully integrated behavioral and physical care model for all organizational functions. At that same time, we made it a priority to promote integration within our provider network. With expertise from across Kentucky and our national enterprise, our clinical leaders began discussions with our larger Community Mental Health Centers regarding models of integration.

These collaborative discussions led to the development of provider “Report Cards”, individualized reports for each provider, outlining the full complement of services their Enrollees with a serious mental illness received from WellCare (e.g., behavioral health, physical health, specialty care, hospital and where available, social services).

Using a data-driven approach, opportunities to improve health outcomes, divert avoidable ER and inpatient admissions and fully integrated care for our most vulnerable Enrollees were identified on a provider-by-provider basis. Following these discussions, WellCare asked providers to recommend key elements to promote integration in their practice. To support

these efforts, WellCare also introduced key providers to each other locally and facilitated professional collaborations regarding potential models.

Strong Collaboration with Behavioral Health Providers: In addition to the collaborative efforts described above, our Kentucky-based provider relations team facilitates monthly provider education sessions via WebEx, and regular in-person training to address any identified gaps. We also collaborate with providers through participation in clinical rounds with medical directors and other specialists. WellCare of Kentucky works with our community mental health program partners to expand suicide prevention efforts and increase awareness through our use of nationally recognized programs including **Mental Health First Aid (MHFA) and ZeroSuicide.** WellCare has committed to having every non-clinical, Enrollee facing associate trained in MHFA in 2019. We also support activities such as a "Train the Trainer" series whereby a cadre of community mental health programs, primary care offices, and community staff are trained to offer Mental Health First Aid seminars throughout the year in their communities and schools; and leadership seminars in ZeroSuicide practices for schools and community partners. WellCare will offer provider incentives for having member facing, non-clinical associates trained in MHFA. WellCare is engaging with ZeroSuicide, as one of the first insurers nationally, to conduct an organizational self-assessment and collaborate with ZeroSuicide on the results. The results of our organizational assessment will further advance and refine our integrated care practices.

We also support our network providers in establishing nationally accredited Behavioral Health Homes (BHH) in the mental health community. BHH standards recognize the importance of integration between medical and behavioral services and improve access to care to minimize the impact of adverse social determinants of health. They include clinical standards; infrastructure requirements; reimbursement policies to support integration; core performance measures using nationally recognized HEDIS® and other indicators; and financial incentives. Our model, including a provider readiness review tool, was informed by emerging practices nationally, evidence-based care guidelines, and actionable feedback from our Kentucky providers. We have worked with several CMHC providers to implement this model in Kentucky.

We continue to support these efforts with “Strategic Integration Sessions” to solicit provider input and to foster professional collaboration and implementation of a provider incentive for achieving accreditation as a BHH.

Our **provider portal** houses fully integrated information on best practices including behavioral health clinical practice guidelines for depression and anxiety behavioral health referrals, care gaps, the prior authorization look-up tool, Provider Relations Representative contacts, reference materials, and compliance resources. We distribute our **Behavioral Health Toolkit and quality scorecards** to providers and make them available online. The toolkit includes evidence-based screening tools for psychiatric conditions, depression, and suicidal ideation, among other key indicators—this includes information on psychiatric interventions as well as local, service area referral information to close potential gaps in care. The toolkit also outlines Behavioral Health HEDIS® measures that incorporate physical health screens, including those for diabetes and hypertension. Our **provider training** and **Provider Handbook** ensure that providers are familiar with contractual requirements, as specified in Section 33.7 of the Draft Contract.

WellCare of Kentucky also uses a **Gold Card Program** to reward behavioral health inpatient facilities based on their performance ensuring access to care. Facilities that meet minimum volume targets, with demonstrated quality performance as measured by their compliance with ambulatory follow up after hospitalization, and demonstrated efficient management of length of stay, earn Gold Card designation, so that they need only receive approval for an initial admission. Facilitating integration, our integrated platform, CareCentral, captures utilization, claims, assessments, care plans, goals, and diagnoses in a complete, 360-degree view of the Enrollee providers can access.

Our behavioral health provider engagement extends to the clinical authorization process. We make behavioral health outpatient services as readily available to Enrollees as possible by not requiring authorization for therapy services and auto-authorizing the first 220 units of support services (over 50 hours). After that, our clinical team reviews the medical record from our clinical provider to determine medical necessity. Additionally, based on feedback of our provider partners, WellCare of Kentucky implemented a 24/7 telephonic authorization process that includes outpatient services in 2017.

INTEGRATED COMPONENTS OF WELLCARE OPERATIONS

WellCare of Kentucky integrates behavioral health into every aspect of our approach to care. The primary elements that comprise our internal behavioral health operations include:

- *CareCentral*, our single system for managing behavioral health, pharmacy, utilization management, care management and claims that feeds the provider portal and provides a complete view of the Enrollee's health history, including care gaps. It also houses an integrated care plan addressing health needs and care gaps across the continuum, including social determinants of health.
- *Behavioral health expertise for collaboration in integrated departments:* Product, Regulatory, PR, Network, Health Services (UM and CM), Quality Improvement, and Pharmacy.
- *Integrated WellCare at Home teams that provide in-home care management services* include behavioral health clinicians and nurses; with pharmacy and Community Connections support.
- *Integrated interdisciplinary teams for individuals with complex needs* that provide a rich source of clinical expertise. These include physicians, RNs, LCSWs, Community Engagement Partners, Liaisons for Medically Complex Children, pharmacy, UM, and more.
- *Weekly Integration Rounds led by our medical directors* and including individuals in Kentucky that review complex cases using our holistic, whole-person approach – medical, behavioral and pharmacy.
- *Behavioral Health Operations Monthly Meetings* ensuring behavioral health initiatives are communicated and integrated across WellCare of Kentucky's functional organizational departments.
- *Comprehensive Cross-Training:* All staff, including ESRs, our physical health care management professionals, and the 24 licensed behavioral health professionals within our Kentucky-based integrated team, receives training to ensure that Enrollees with behavioral health needs are identified and referred to the appropriate level of care. We work with each

practice on quality improvements, educating providers on the VBP contract and tracking whole-person HEDIS quality measures, such as LDL Cholesterol (medical), Follow-up within seven days after Mental Health Hospitalization (BH), and Diabetes Screening for Enrollees using Anti-Psychotics (medical/BH). Training includes the use of integrated screening tools, clinical practice guidelines (CPG), care coordination and management, working with the MDT, participating in cross-training for physical and behavioral person-centered care, and caring for Enrollees with co-morbid conditions. Customer service representatives and other Enrollee facing associates are also trained on mental health first aid, and Kentucky specific resources. In addition, we train providers on identifying the social support needs of our Enrollees using reports that track social data and care needs and plugging the Enrollee into community resources through our Community Connections model and closed-loop referral system.

- *Members Empowered to Succeed (METS)*: In 2016, WellCare of Kentucky developed the METS program, which is now WellCare's national model. Based on SAMHSA's 10 Fundamental Components of Recovery, this integrated, holistic recovery-oriented program is for Enrollees in care for an extended period with high utilization associated with their services who might be able to graduate to self-care with other supports We assign targeted Enrollees a dedicated, specially trained METS care manager who develops a current clinical picture, including medication history, using information in CareCentral. After establishing a clear clinical profile, the care manager presents the Enrollee in a Treatment Team Review (TTR) meeting. The multidisciplinary TTR meeting identifies barriers, strengths, and other factors to develop the care manager's next steps to follow-up on the Enrollee's case and develop a tailored Roadmap to Recovery. Results for program participants include a 54.7% reduction in total visits, a 6.1% reduction in emergency department use, and an increase in pharmacy use – suggesting improved medication adherence. For these Enrollees, the **total cost for professional behavioral health visits dropped by 35.7%.** By ensuring Enrollees are in the right levels of outpatient care, we are able to free-up the system to manage new Enrollees or Enrollees immediately after crisis in the community.
- *Kentucky Behavioral Health Quality Initiatives:* Three teams of regionally located **Quality Practice Advisors (QPAs)** throughout the Commonwealth assist providers in closing care gaps such as medication adherence for depression and schizophrenia and educate them on HEDIS and Health Plan Review measures. They also emphasize the importance of completing appointment agendas, which allow our physician partners to understand, in a single report, everything that they need to address for each Enrollee during an appointment, and capturing all chronic conditions a patient has annually. QPAs also coordinate with care management and assist provider groups in practice transformation to develop coordination of care for patients. In addition, QPAs are responsible for EPSDT and Ambulatory Medical Record Review (AMRR) audits, reviewing results with providers directly and developing corrective action plans as needed. All of the QPAs are trained on how to discuss behavioral health care gaps with behavioral health providers. We also have four QPAs matched with regional CMHCs to support them in the BH P4Q program. In preparation for the new contract, we are implementing specialized QPAs to provide focused support to specialty providers, including Behavioral Health and OB/GYN. The Behavioral Health QPA will be the primary provider support for care coordination between medical and behavioral

as well as conduct visits with behavioral health providers for education on the Quality Program and performance. Our OB/GYN QPA focus on women's health care needs and will connect directly with providers to also educate about our Quality program and performance.

OPERATIONAL OVERSIGHT

As a fully integrated plan with medical, behavioral, pharmacy and social determinants, WellCare has a unique ability to provide operational oversight, respect, understand, and support providers as they evolve in their role as the Enrollee's health home or medical home, and become the primary source for care: medical, behavioral, pharmacy and social needs.

Provider Collaboration Models

Provider integration is one of WellCare's top priorities. We are committed to helping providers move to a more fully integrated healthcare system. WellCare's model, which is based upon the levels of collaboration and integration defined by the SAMHSA-HRSA Center for Integrated Health Solutions, places providers into one of three combined levels of collaboration:

- Coordinated (e.g., minimal or only basic collaboration, separate systems, and few shared cases);
- Co-Located (e.g., little sharing of systems, some meetings over shared cases, shared office space or located nearby); or
- Integrated (e.g., sharing most if not all practice space, consistent and frequent communication, operates as a complete and single Enrollee care team).

WellCare staff work with providers seeking to become Patient Centered Medical Homes, Behavioral Health Homes or in adopting integrated models of care. Over the last three years, WellCare's active collaboration with our community mental health providers has resulted in integrated behavioral health and primary care contracts for four centers: Adanta, Centerstone, Kentucky River, and River Valley.

To ensure our providers have support in delivering fully integrated care, we solicit input on barriers and work to address them. For example, we recently hosted a series of provider summits in three locations across the Commonwealth —Louisville, Lexington, and Bowling Green—to identify barriers to integrated care and seek provider recommendations on solutions. These strategy sessions directly affect how we approach integration internally.

Provider Contracting

WellCare of Kentucky has extensive experience working with our network providers to develop and implement Value-Based Payment programs. We believe that incenting providers to participate in our quality programs is an effective way to coordinate with them in improving Enrollee health outcomes. We offer provider incentives including our **Partnership for Quality (P4Q)** program that rewards providers for closing care gaps on key HEDIS performance measures and timely completion of appointment agendas; the **Behavioral Health (BH) P4Q program**, introduced in 2019 to align with DMS' goal of improving behavioral health-related outcomes among the people of Kentucky. 2019 care gap data shows that the CMHCs closed 7,039 care gaps **and more than $281,000 in bonus payments were paid out as a result of the**

new BH P4Q program. We will continue the BH P4Q program in 2020 with the CMHCs in Kentucky.

We have supported efforts to remove contract barriers for our integrated providers allowing behavioral health providers to bill for PCP services delivered through their programs. Our behavioral health and physical health providers are fully contracted and credentialed through a single process, and behavioral and medical health claims are processed and paid through the same operating system, which supports our single, holistic view of each Enrollee in real time.

In addition to our care coordination education activities, WellCare's internal interdisciplinary clinical team uses the following methods to help physical and behavioral health providers coordinate care:

- Assistance with discharge planning
- Data sharing strategies through portals, interconnectivity options or various reporting tools including care gap reports and behavioral health scorecards
- Integrated provider engagement team meetings
- Integrated technical assistance calls/webinars
- Integrated clinical case conferences
- Integrated provider advisory committees
- Weekly “Integrated Grand Rounds” on shared cases with complexity and integrated plans of care for more complex Enrollees
- Training and toolkits for both PCPs and behavioral health specialists to help them identify children and adolescents who would benefit from care coordination help them build strategies into their practice, such as internal rounds and consultation, to coordinate care
- Relationship building between our Care Coordinators, Provider Relations staff, Quality staff, Medical & Behavioral Health Medical Directors, Pharmacy Directors and the primary care and the behavioral health care providers.
- Connectivity to social safety net services, family caregiver support and other formal and informal supports through our proprietary Community Connections Model
- Integrated Independent Practice Association and Community Mental Health leadership meetings for Medical and Behavioral Health Directors
- Newsletters and personal physician correspondence

We are the glue between the providers that advocates for the Enrollee. We provide the qualitative Enrollee feedback on their experience through our Care Management outreach. We do not just rely on clinical data but from referrals from any provider or staff member. Our WellCare medical directors, both medical and behavioral Health, as well as our pharmacy team and other clinicians are readily available to consult with providers and help them connect their patients to behavioral health and medical services. In addition, providers have the ability to directly link their Enrollees to our case management services through a single fax number or email box.

i. Current or planned delegation to delegate all or part of the provision of Behavioral Health Services to another entity.

WellCare of Kentucky does not delegate or carve out the provision of behavioral health management as many MCOs do. Instead, we offer a fully insourced model of care that addresses the whole person. Our industry-leading, fully integrated approach is led collaboratively by Medical Director, Howard Shaps, MD, MBA and Behavioral Health Director Dr. Marketa Wills, MD, MBA (behavioral health). It brings together physical health, behavioral health, pharmaceutical, and social supports in a unified approach to caring for the whole person. In 2018, 28% of our Kentucky population had diagnoses for both a behavioral health and medical conditions. Since the outset, we have provided integrated care and we remain one of the only Medicaid plans to offer in-house integration.

ii. Process for monitoring and evaluating compliance with access and care standards.

Our process for monitoring and evaluating compliance with access and care standards meets Section 28.4 of the Draft Contract, including KRS 304. 17A-515, in Kentucky. Provider network monitoring to ensure Enrollees have access is an integral part of our overall approach to meeting care standards. **For 2018, we are ranked first in Enrollee satisfaction and earned the highest possible score of 5.0 on continued follow-up after ADHD diagnosis.**

WellCare of Kentucky recognizes that access to integrated, high quality health care services is crucial to Enrollee health, wellness, and satisfaction. Overall, we have the largest and most comprehensive provider network in the Commonwealth with over 34,500 providers and more than 2,300 Behavioral Health professionals.

Our provider network, quality, and care management teams are fully integrated. During collaborative meetings with other plans and DMS', Dr. Wills shares information with our network relating to updated clinical and department policies. This information flows through our network team and our ongoing provider education. These meetings also provide an avenue to address opportunities and challenges in the delivery of high quality behavioral health services. We use the material from these discussions to inform our network and care management teams, and incorporate significant changes into our provider education and care delivery.

NETWORK MONITORING

We recognize that ongoing monitoring and evaluation is imperative to maintain an adequate network that provides continuum of care to ensure Enrollees have access to care at the appropriate level, in accordance with Section 33.5 of the Draft Contract.

We monitor our network on an ongoing basis and engage in network development activities that expand our network beyond mere compliance with access requirement. Tools include a combination of GeoAccess reports, monthly out-of-network reports, network accessibility audits, open/closed panel reports, provider satisfaction surveys, Enrollee grievances, quality of care issues, utilization trends, HEDIS results, and more.

Over the past eight years, WellCare of Kentucky has built and maintained a network that exceeds DMS' standards for providing timely access to care for all of the Commonwealth's Medicaid Enrollees. Our network includes FQHCs, CMHCs, and BHSOs as the foundation of our network. Continual and consistent monitoring of our provider network is vital to our efforts, enabling us to identify and quickly remediate any gaps to ensure that standards are kept and access to care is maintained. Our comprehensive ongoing monitoring and development of our network providers allows us to maintain and exceed Enrollees' satisfaction, access to care, and comply with Department contract requirements for adequacy and access to care standards.

Assessing the adequacy of our provider network is a continuous process. Our Network Integrity Team performs monthly evaluations of the network using the tools and data sets described below to identify potential gaps and the need for expansion activities. Our ongoing activities allow us to identify opportunities as they arise to respond proactively with enhancement strategies. WellCare's Network Integrity Team is responsible for collecting and analyzing network data, through the methods described below. Our Network Management Team holds monthly Network Management and Development meetings (or more frequently, if needed), where we assess all provider types to identify if there are any issues, gaps in the network or other barriers to accessing care as well as any provider concerns that may impact their ongoing willingness to serve our Enrollees. While our leadership meets monthly to strategically address network compliance, our Kentucky-based staff, including PR Representatives, Service Managers, Enrollee Services and Enrollee Advocates, initiate action immediately to remove barriers to care for our Enrollees. We use the following tools, reports, and resources to monitor our network:

- *Monthly GeoAccess® Reports and Quest Cloud Analysis:* GeoAccess reports evaluate that time and distance standards are being adequately met at the provider level to meet the needs of Enrollees in each region. We run these reports using DMS-defined access standards. GeoAccess results are the key element reviewed during the quarterly Enrollee Access to Care committee meeting and an actionable plan results from the analysis.
- *ZIP Code Analysis for Enrollees without Access:* An analysis of Enrollees without access to specific specialties at the ZIP code level. The ZIP code analysis ensures that potential Enrollees in all applicable ZIP codes can be properly served.
- *Monthly Access Compliance Snapshot:* A drillable GeoAccess dashboard report of the provider network specialties by county. The report is run on a monthly basis using the current provider network and current Enrollee population. Each report is validated and analyzed for provider network trends and then distributed to our Network Management Team for action.
- *Quarterly Exception History Log (EHL):* Records provider network gaps, current patterns of care and narrative justification with steps to remedy each identified network deficiency. Provider network deficiencies are uploaded from the GeoAccess software into the EHL tool, where the Network Management Team writes a narrative describing the plan to fill each deficiency based upon the Network Management Team's research.
- *Out-of-Network Monitoring:* On a monthly basis, the Health Services and Network Teams' out-of-network reports are reviewed to identify any trends that indicate access issues

within the network. In such cases, this information is assigned to Provider Relations for remediation.

- *Enrollee and Provider Feedback:* We monitor Enrollee and provider complaints or grievances as one real time source of feedback on access. In addition, WellCare conducts annual surveys that include key questions about the quality and adequacy of our provider network. Our Quality Improvement Team reviews the results of the survey and shares the results with our Network Development and Provider Relations Teams to identify areas of opportunities for additional contracting and service improvements.
- *Closed Panel Reports:* Our Provider Relations Team review monthly closed panel reports to identify providers with recently closed panels. Provider Relations Representatives outreach to each provider in an attempt to have them re-open their panel. Closed panel percentages are reviewed by specialty to determine if additional providers are needed. Our Provider Relations Representatives also visit our provider groups to review and verify their details, including panel status. We also have a Provider Accuracy Audit in place that samples network data reporting for analyzing and reporting on the information reported to us, including panel status.
- *Out-of-Network Paid Claims:* The Network Development and Provider Relations teams monitor out-of-network paid claim reports to identify providers that are not currently contracted with WellCare. This information is shared with the Network Development Team to target recruitment activities.
- *Knowledgeable Associates:* Our PR Representatives and Community Connections Staff act as key resources for identifying gaps in the network. Our associates know their regions and are encouraged to immediately escalate to leadership any situation in which a provider is not available or does not exist to adequately meet an Enrollee's needs. As a result, we understand the provider landscape across each region of the Commonwealth, and we couple that with our understanding of the basic and specialized needs of our Medicaid Enrollees.
- *Quality Improvement Committee (QIC):* We hold quarterly QIC meetings attended by the following departments: Quality Improvement, Network Management, Regulatory, Health Services, Executive Leadership, Credentialing, Appeals and Grievances, Claims, Compliance, Community Connections, and Enrollee Services. During this meeting the Network Team reports on the state of the Network, including any gaps to be filled and other access and availability issues; provides information on barriers and action plans to address those barriers; and receives feedback from our internal partners on any network concerns. The Network Team uses this feedback to identify areas of opportunity within the management and execution of the Network and, when necessary, implements changes.

REMEDIATION OF ANY DEFICIENCIES

Our Network Management Team works quickly to address any deficiencies identified during the course of our network monitoring activities using a variety of methods:

- *Targeted Outreach:* We outreach to local providers to fill identified network gaps. Our field-based PR Representatives and Network Management staff personally contact non-

contracted providers to determine impediments to contracting and look across borders to recruit out-of-state providers in bordering states with natural referral patterns.

- *Working with Contracted Providers to Expand Access*: As described above, we use Quest Analytics tool to see if there is a Medicare provider of the provider type needed that is not listed on the Kentucky file. If located, we approach the practice by phone or in person to persuade them to see Medicaid patients. If necessary, we may offer an additional financial incentive, including value-based payment (VBP) contracts, to take on the additional population of Enrollees.
- *Offer Incentives:* When deficiencies are related to lack of access to a specific provider type in a specific area, we may initiate an investment opportunity by giving incentives such as VBP contracts to providers to expand into the area. We have also expanded our P4Q program to encompass behavioral health.
- *Single Case Agreements:* Our Network Contracting team fills individual gaps using a single case agreement with an out-of-network provider, seek an alternative delivery method for that service, and work with the Enrollee to find an appropriate alternative. This ensures seamless care for our Enrollees in places where there is a lack of any specific provider contract.
- *Existing Patterns of Care:* Our Network Integrity team closely reviews patterns of care to develop an understanding of provider referrals within each region and outreach to providers outside of those regions to support those patterns.
- *Leverage Provider Partnerships:* Our network development team and provider relations teams use individual relationships as well as provider advisory groups to encourage partner network providers to extend hours and to expand access.

The information and feedback we collect flows through our quality processes for improvement opportunities. Based on the nature of the opportunities presented, we assign actions for improvement to a department to lead those efforts. The progress of improvements are formally tracked through the Quality Department and reported back to all applicable committees and up to Executive Leadership.

PERFORMING DATA ANALYSIS

WellCare of Kentucky consistently invests in the enhancement of our formal Enterprise Information Management (EIM) Solution that supports all of our data needs, including application processing, regulatory reporting, and ad-hoc reporting. Specifically, this includes providing the data analytics and data informatics capabilities needed to drive performance improvement and quality management activities. This comprehensive EIM solution ensures that all data sources (e.g., HEDIS®, CAHPS, Claims, Appeals, Grievances, Rx data, Social, AMRR, Surveys) are captured and catalogued, integrated to enable robust reporting capabilities, and provide the analytic tools needed to identify care gaps and opportunities. Our local, Kentucky based analytic team focuses on trends, outliers and other analytics that inform our program development and improvement efforts.

PERFORMANCE IMPROVEMENT ACTIVITY

Combined with our affiliate health plans we possess broad and rich experience conducting performance improvement projects (PIPs). These achieve significant progress across clinical and

non-clinical areas through our adoption and integration of the Continuous Quality Improvement (CQI) Rapid Cycle Plan-Do-Study-Act (PDSA) methodology. Our PIP guidelines include: activities related to external quality review, mandatory activities, and the CMS guidelines as outlined in the most recent publication EQR Protocol 7 Implementation of PIPs. They also include:

- Specifications of clinical or health services delivery areas to be monitored including objective quality indicators
- A system to achieve improvement in quality
- Methods to evaluate effectiveness of the interventions
- A system to institute planning and initiation of activities for increasing or sustaining improvement

A WellCare PIP focused on managing the physical health of Enrollees with behavioral health conditions has improved our scores over the past three years for Body Mass Index Screening for People with Schizophrenia or Bipolar Disorder and Diabetes Screening for People with Schizophrenia or Bipolar Disorder who are Using Antipsychotic Medications (SSD), exceeding the goal for 2017 with 95.62%.

In addition, our quality team reviews patient safety, critical events, and root cause analyses with our providers on a consistent basis. As an example, we have made more than 150 visits to the top 50 providers across the Commonwealth to discuss adherence to introduce the availability of our BH provider educational resource information packet (available on our website) including screening for co-occurring illness, and a discussion on how we can partner with them to improve Enrollee compliance with blood pressure, diabetes and cholesterol medications for all Enrollees including individuals with behavioral health conditions. Adherence to these medications is key to keeping people healthy and out of the hospital and it is a triple-weighted Star measure. We are now embarking on a similar program for psychotropic medication adherence, recognizing how critical a factor issue of non-adherence to these medications is in relapse.

Provider Resources to Support Improvement Efforts: We offer all providers an array of resources to help them improve Enrollee health outcomes. Through the Provider Portal, they can view all services received by an Enrollee, including physical and behavioral health utilization, laboratory, Medical Loss Ratio (MLR), claims, and quality performance. The portal also offers Heat Maps, which identify Enrollee care gaps by ZIP code drilled down to the provider group, physician, or Enrollee level. Our **UM scorecard** compares provider groups against WellCare key performance indicators including admission and readmission rates, MLR, pharmacy costs per Enrollee, generic dispensing rates and prescription PMPM, allowing providers to manage medical costs and address Enrollee care gaps. **Appointment Agendas** show Enrollee behavioral health care gaps and potentially missed diagnoses that providers can reference during patient visits. They offer providers and WellCare a comprehensive view of our Enrollees' health status to confirm they receive the right level of support for their condition. The **P4Q Portal** gives behavioral health providers a snapshot of the behavioral health care gaps tied to performance payments, so they can prioritize based on the measures that will result in the most improved Enrollee health outcomes. Our proprietary **AccuReports** system gives providers who have entered into a

VBP shared savings/shared risk arrangement with quality incentive payments to view data on readmissions, Enrollees incurring high costs, and pharmacy utilization via a secure site. Large practices participating in shared savings arrangements receive and use detailed claims data feeds to understand their performance and improvement opportunities. To ensure our providers have the most accurate and recent information, and to give them a direct line of communication with us Lori Gordon holds a monthly behavioral health provider call for each type of behavioral health provider. This is an opportunity for them to ask questions, learn about new clinical practice guidelines, and more. Additionally, our local WellCare of Kentucky portal expert conducts a weekly provider portal webinar.

iii. Innovations to develop and maintain network adequacy and access.

WellCare of Kentucky knows firsthand the challenges Enrollees face in accessing behavioral health care in the Commonwealth. We have focused on our relationship with CMHCs since the program launched, even when behavioral health benefits were not fully covered by the program. We also have 100% of the acute care hospitals in our network that were onboarded when we entered the Commonwealth as an MCO. Since 2011, we have continuously applied innovative solutions to developing and maintaining our behavioral health network adequacy and access. Bonnell Gustafson Irvin, MPA, Provider Network Director, and Candice Bowen, Senior Director of Network Management, lead WellCare of Kentucky in continuously developing our provider network. They meet with key stakeholders across the Commonwealth, helping us grow our traditional and supportive services network specific to behavioral health, and applying their unique knowledge of Kentucky's regional nuances to developing and maintaining network access through innovative solutions.

BUILDING CAPACITY OF EXISTING PROVIDERS

WellCare of Kentucky works to improve the Enrollee experience by building the capacity of our existing behavioral health provider network. Some examples of these efforts include:

- Telehealth to expand reach and improve access to care
- Value-based purchasing contracting and incentives to promote, track, and reward whole-person care integration activities, such as using PCP-BH integration toolkits, applying preventive measures and behavioral health screenings, facilitating access to care for physical and behavioral health conditions, managing chronic conditions (e.g., HbA1c control, medication adherence), and meeting HEDIS measures.
- Contracts with licensed independent social workers, clinical nurse specialists, and nurse practitioners who practice in remote locations
- Incentives for providers to participate in the adoption and use of health information technology and implementation of technological solutions to share health information through VBP and WellCare technology solutions.

TELEHEALTH

Telehealth services offer the benefit of expanding access to care for all Kentucky Medicaid Enrollees, including those who live in rural and underserved areas, have complex conditions or schedules that can make travel difficult, or simply prefer the convenience or privacy afforded by

telehealth access. Today WellCare has an established telehealth presence in the Commonwealth. **In 2018, we paid claims to providers for over 6,800 telehealth services for over 20 different types of services, including behavioral health.** We have also been active in the telehealth discussion in the Commonwealth, having participated in Kentucky Telehealth Board meetings for several years as well as the Telehealth Task Force resulting from SB 112, and having provided comments to DMS' regarding its telehealth regulation (907 KAR 3:170).

We support the Commonwealth's objective to increase the use of telehealth in conjunction with the passing of Senate Bill 112 that expands telehealth coverage and payment parity for telehealth services, and are fully prepared to work with DMS toward these goals. **WellCare is particularly excited to leverage telehealth capabilities as a component of substance use disorder (SUD) treatment.** A required component and best practice of SUD treatment for those receiving medication assisted treatment (MAT) is that individuals receive psychological counseling in addition to the medication. Many Enrollees who need SUD treatment are employed (part-time or full-time) or are parents who lack funds to pay for childcare. Some lack transportation or face transportation challenges, even with the non-emergency medical transportation benefit. This makes attending regular, in-person counseling sessions extraordinarily challenging. Our Community Connections program fills these gaps through community partnerships to eliminate barriers.

Bridging Access Gaps with Community Connections

Operation UNITE (Unlawful Narcotics Investigations, Treatment, and Education) was launched in 2003 by US Congressman, "Hal" Rogers, in response to a special report, "Prescription for Pain," which exposed the addiction and corruption associated with drug abuse in southern and eastern Kentucky. The organization hosts coalition meetings in its 32-county service region, which local Community Engagement Partners attend on a monthly or quarterly basis. In 2017, WellCare of Kentucky provided a grant for four youth Enrollees to attend their annual Operation UNITE camp. This is a free, weeklong leadership and adventure program for 200 middle school-age youth. Most of these youth are at high risk for drug use, have an immediate family that has been directly impacted by substance abuse, or are financially unable to afford a summer camp experience.

After providing this grant, we had the opportunity to learn more about their newest project, the Kentucky Help Statewide Call Center, through which individuals can speak to a specialist about available treatment services relevant to their needs. The Kentucky Help Statewide Call Center even links all individuals in Kentucky with available beds if needed. When Community Connection staff met with Debbie Trusty, the treatment director, she identified a barrier that some individuals who face in seeking treatment or assistance. She reported that many of the individuals who call are also seeking assistance with additional resources ranging from transportation to access treatment to fear that, as the family breadwinner, they could afford rent while in treatment. Limited access to these resources was keeping some from even taking the first step.

In response, WellCare of Kentucky collaborated with Operation UNITE to assist the Kentucky Help Statewide Call Center with funding to provide financial assistance for non-billable services including, transportation, housing, and childcare. Nancy Hale, CEO of Operation UNITE, wrote "As a community partner, WellCare is committed to implementing harm-reduction strategies aimed to education and enable citizens to mitigate – or, more important, to prevent – the impacts of substance abuse."

WellCare is aware that DMS' is expanded its SUD treatment scope. Included in this initiative was the creation of Behavioral Health Services Organization (BHSO) Tier II providers who provide outpatient SUD treatment including MAT. One component of this initiative is to enable narcotic treatment programs (NTPs) in Kentucky, which historically have used methadone as the MAT medication, to participate in Kentucky's Medicaid program and be paid for MAT. As part of the initiative, DMS will add methadone to the covered MAT medications.

WellCare intends to utilize the telehealth option for Enrollees receiving SUD treatment (particularly from BHSO Tier II providers) to enable them to receive counseling where most convenient for the Enrollee, including their home, job, or elsewhere. WellCare already covers psychotherapy via telehealth. In partnership with DMS' expanded SUD treatment initiative, WellCare plans to promote (to providers and Enrollees) the option to use telehealth for the counseling/psychotherapy component of SUD treatment.

The possible uses of telehealth are evolving. WellCare has a broad base of experience to draw upon in developing and launching telehealth initiatives. Through our national model for telehealth, we have made investments to educate enrollees on telehealth opportunities and

train providers on telehealth access and reimbursement policies. We will leverage that experience and work with DMS' and our network partners to examine opportunities to promote the expansion of telehealth under the new regulations through direct education of our provider and enrollee communities.

By partnering with a contracted telehealth vendor, WellCare augments its national telehealth coverage and leverages a coordinated system to deliver specific use cases like seven-day and 30-day follow-up after hospitalization visits. We also pay for services through multiple telehealth providers to ensure the broadest possible access to this important resource. Having all providers using the same platform enhances the coordination process and affords on-demand access capabilities, particularly for our physical healthcare needs. Providing this enhanced convenient access helps to avoid high cost, unnecessary emergency room and urgent care services.

WellCare also has experience in delivering telehealth services directly through our board-certified physicians. As a means of ensuring necessary consultations or treatment are delivered in a timely manner, some of our markets are using two-way, real-time virtual technology to deliver quality healthcare themselves. This third model serves as a safety net when needed.

WellCare of Kentucky will use the successful WellCare telehealth pilots in Georgia and South Carolina as models, and will provide funding to implement similar programs in Kentucky.

- Through the **Georgia pilot**, WellCare provided funding to implement a telehealth pilot program in collaboration with local organizations to open two school-based health centers. This helped school nurses connect students in rural areas with behavioral health providers through video conference. Launched in 2015, WellCare provided the funding to equip each school with telehealth systems that allow school nurses to connect students and faculty to healthcare providers at Appling HealthCare System via a video conference. This program was able to help children receive much-needed access to care in rural areas of the state, providing approximately 26,000 services (mainly focused on behavioral health) through 2017. We will use this experience to work with Kentucky schools to provide services to a broader range of students.
- The **South Carolina pilot** is the state's first direct-to-consumer telehealth program. It facilitates services to Enrollees at the setting of their choice, including at home. The Department of Health and Human Services stated, "This is the type of leadership from managed care that we are looking for, and WellCare is the first player to propose a collaboration like this." The pilot program focuses on helping Enrollees access outpatient care and MAT by identifying ED high-utilizers and individuals with serious health risks.

With Kentucky's telehealth expansion, we are very excited about employing what we have done in other markets in the Kentucky market as well as continually exploring new options. We fully embrace telehealth as an effective avenue to care for our Enrollees.

Other innovative technological solutions we will leverage in Kentucky include:

- *ID/Stratification:* Our population health solutions team, in collaboration with our medical economics and reporting and analytics teams and local medical directors, manages our proprietary risk stratification algorithm. With our improved CareCentral, our medical and

behavioral health management platform, **we continuously run this algorithm** against Enrollee data (i.e., claims) to enable timely, proactive outreach and care planning for Enrollees with high needs, or those at risk of future high needs. It uses inpatient, ED, and outpatient claims and encounter data, along with pharmacy claims, ICD-10 coding, health risk assessment responses,, readmission data, readmission risk scores, medical costs, medication adherence, SDOH referrals, and Decision Point Predictive Modeling software. Included in our algorithm are rules for co-morbid behavioral health and substance use disorders, co-morbid physical health conditions, co-morbid physical and behavioral health conditions, and other factors that may necessitate a higher level of care coordination/case management.

- *Biometric patient monitoring,* to watch for changes in Enrollee conditions such as diabetes, hypertension, and asthma. We know that in Kentucky, 14% of the Enrollees with SMI also have type 2 Diabetes, 41% have hypertension, and 12% have asthma.
- *JOOL Health Coach:* We are piloting a personal coaching smartphone application that encourages youth to check in with their peers and engage in healthcare services. It is tailored to specific populations and gives Enrollees with an SUD access to a transition-aged youth pathway. JOOL includes SUD assessments, resources, and referral information to help youth and their families learn about their SUD and the local community treatment options available. It provides Enrollees with an additional link to their provider.
- *MyStrength:* This evidence-based digital behavioral health platform provides interactive clinical programs to empower Enrollees to address depression, anxiety, stress, substance use, chronic pain, and more. It also supports physical (e.g., smoking cessation, diabetes) aspects of care, and includes CBT, mindfulness, motivational interviewing, mood trackers, and tools to measure effectiveness and improvement.

MyStrength has shown a 43% rapid symptom reduction within the first two weeks of engagement and a 70% cost reduction in total paid claims for Enrollees.

FUNDING TRANSPORTATION

From 2015-2019, Community Engagement Partners have facilitated 8 Community Impact Councils (CIC) in counties across the Commonwealth to bring community leaders together who have identified transportation as the most urgent social safety net gap within their county. Using WellCare's internal database, Community Connections has also seen transportation as a top referral in Kentucky and which organizations Enrollees were referred to for service. WellCare has collaborated with Bluegrass Community Action Partnership (BGCAP), LKLP Community Action Agency, Pennyrile Allied Community Services (PACS), and Rural Transit Enterprises Coordinated (RTEC) as local transportation providers who attended the CICs held in their communities.

As a result, WellCare has invested through grants to provide free transportation to individuals in 20 counties: Anderson, Boyle, Christian, Caldwell, Crittenden, Franklin, Garrard, Jessamine, Knox, Laurel, Lincoln, Livingston, Lyon, Mercer, Perry, Scott, Todd, Trigg, Whitley, and Woodford counties. Based on the individuals who participated in the locally facilitated Community Impact Councils, the transportation being provided includes non-billable medical

transportation; such as, trips to dental, vision, hearing, pharmacy and behavioral health appointments. It also includes transportation to education and employment opportunities, grocery stores, pharmacies, the local Farmers Market, and WIC appointments.

Enrollees who accessed Rural Transit Enterprises Coordinated (RTEC) and PACS often have a behavioral health diagnosis, as shown in **Table C.23-1**.

Table C.23-1 Transportation Connections by Diagnosis

	Pennyrile Allied Community Services (PACS)	Rural Transit Enterprises Coordinated (RTEC)
Depression	42.80%	61.80%
SMI	18%	12%
Bipolar Disorder	12.40%	21.3%
SUD	16.20%	34.20%
Other Mental Illness	53.40%	73.30%

LETTER OF SUPPORT FROM CHRYSALIS HOUSE

"Chrysalis House has had the opportunity to partner with WellCare of Kentucky on various projects that have improved our ability to provide services to the individuals served by both agencies. Funding for transportation is a consistent area of need for Chrysalis House; with 62 women, many of whom are either pregnant or have their infants living on site with them, some on MAT and most working, getting everyone to various medical appointments and other ancillary service providers can be challenging and expensive. WellCare has provided grants to assist with transportation, helping Chrysalis House meet the needs of the clients and the costs associated with those services. Chysalis House has also had the pleasure of partnering with WellCare in their pilot WellCare Works program designed to assist clients with locating resources for employment. This partnership compliments Chrysalis House's goal of assisting the clients achieve self-sufficiency in order to support themselves and their children. In addition, WellCare has come on-site to host baby showers for our pregnant women much in need of items to care for their infants, again, assisting Chrysalis House meet a critical need.

Chrysalis House feels extremely fortunate to have a partnership with WellCare and look forward to continuing to collaborate to serve the citizens of Kentucky in the future. We fully support WellCare of Kentucky's effort to be selected as a Medicaid Managed Care Organization under this initiative."

– LISA R. MINTON, EXECUTIVE DIRECTOR

INCREASING ACCESS THROUGH PROVIDER INCENTIVES

Another approach we use to maintain and develop access in Kentucky is to incent providers to offer evening and weekend hours. Our Quality **BH P4Q** program also offers rewards to providers for closing the following behavioral health-related care gaps for Medicaid Enrollees: Antidepressant Medication Management, Medication Adherence to Antipsychotics, Follow-Up after behavioral health inpatient hospitalization, cardiovascular monitoring for Enrollees with schizophrenia, diabetes monitoring for Enrollees with schizophrenia and diabetes, diabetes

screening for bipolar/schizophrenia and diabetes, and Metabolic monitoring for children on antipsychotics.

In Kentucky, we are piloting a P4Q program for 2019 with the 14 CMHCs and 5 behavioral health inpatient facilities. 28.8% of our Enrollees in Kentucky have a behavioral health diagnosis. The majority of these individuals are seen in CMHCs. 2019 data indicates 7,039 gaps closed for those seeking services at CMHCs and $281,000 paid out in bonuses. WellCare of Kentucky also uses a **Gold Card Program** to reward behavioral health inpatient facilities based on their performance ensuring access to care. Facilities that meet minimum volume targets, with demonstrated quality performance as measured by their compliance with ambulatory follow up after hospitalization, and demonstrated efficient management of LOS, earn Gold Card designation so that they receive approval for an initial management.

COMMUNITY PARAMEDICINE

Another innovative approach to enhancing the health and well-being of Enrollees and to improving health outcomes is Community Paramedicine. Community Paramedicine extends access to care by expanding the role of Emergency Medical Service (EMS) personnel to fill gaps in primary care availability and mitigate transportation barriers by providing home-based care. Community Paramedicine providers can provide a number of services including assessment services such as taking vital signs, medication compliance and blood pressure readings; prevention services such as immunizations and in-home fall prevention; and primary treatment such as wound care and medication administration, as well as referral to medical and social services. Among other benefits of community paramedicine, it helps alleviate transportation challenges that can have a significant impact on Enrollee access to all types of care. Our sister plan in Hawaii (Ohana) is piloting a community paramedicine program to increase access to basic health care services. WellCare of Kentucky will monitor the success of that pilot and whether it can be applied to further developing behavioral health access in Kentucky. With the recent passing of House Bill 106, WellCare is excited to support the expansion of Community Paramedicine programs that further extend access to care in underserved areas of Kentucky.

COMMUNITY INVESTMENTS TO INCREASE ACCESS

One thing that truly differentiates WellCare of Kentucky is our commitment to and involvement in the local community. We apply this to developing and maintaining access in the Commonwealth through community investments such as scholarships for nurses and doctors who study at the University of Kentucky and return to rural communities in Eastern Kentucky. We also provide, through our best in class Community Connections Model, community SDOH supports for transportation, homelessness, and food insecurity. WellCare of Kentucky is a recognized and successful contributor to community investments in the Commonwealth.

Between August of 2016 and January of 2019, 859 WellCare Enrollees received 14,743 services, or 17 services per person. On average individuals that accessed services, have 3.1 chronic conditions with 43.4% being

"WellCare understands the importance of meeting individuals where they are, and treats their members with a holistic approach."

– MELISSA COWLES, HOTEL INC STREET MEDICINE COORDINATOR

diagnosed with depression and 31% with SUD.

WellCare has been in partnership with **HOTEL INC** since 2013 addressing everyday issues faced by people in Kentucky living with homelessness. Their successful Street Medicine Program, launched in 2014, helps connect individuals who are homeless with medical professionals for preventive and additional care needs. Of the 425 individuals the program helped in its first year, they identified 66 WellCare Enrollees who had been classified as "unable to contact", and connected them with a behavioral health care manager.

FITT-ACUTE CRISIS INTERVENTION AND DIVERSION PROGRAM

WellCare of Kentucky is committed to developing mobile and in-home services for our Enrollees. To improve access to true mobile crisis treatment, we recently contracted with Lifecare to provide the FITT Program of virtual residential treatment for youth living with caregivers in a community setting. This program has been active in Tennessee for several years and has demonstrated outcomes that WellCare wanted to bring to the Commonwealth. This is an intensive in-home program collaborating with families to resolve crises, avoid out-of-home placement and provide skills for future crisis prevention. It also serves as a step down from inpatient or PRTF; and an alternative for youth at risk of hospitalization and PRTF. Just a few examples of what the FITT Program provides include:

- 24/7 in home mobile crisis services
- Door and window alarms
- Prescription lockboxes
- Respite for parents
- Access to a same-day prescriber
- 24 hour professional supervision in the child's home to monitor safety

iv. Process for follow-up after hospitalization for Behavioral Health Services within the required timeframes.

In Kentucky, we have prioritized follow-up after hospitalization for behavioral health services. We assign a care manager to each known Enrollee admission to a psychiatric bed to ensure they transition to post-discharge services. The care manager will leverage the complete member history and develop a discharge plan that considers risk stratification and available data to align the plan to that member's specific needs at that time. We know how important discharge transitions are and how challenging it is to significantly impact rate of follow-up for Enrollees. Our efforts to affect outcomes over time have made incremental improvements, and we continue to try various approaches to continue this upward trend. In spite of the challenges inherent in moving the needle on follow-up after hospitalization HEDIS measures, **we have achieved and maintained a ranking in Kentucky that is 2nd in the state out of five MCOs.**

In 2015, we implemented a performance improvement project (PIP) on this topic to improve follow-up through increased communication. We first identified facilities that had a combination of 10 or more mental health admissions with a readmission rate of 8% or higher. We then conducted targeted provider outreach, including mailing quarterly letters to hospital administrators documenting their facility's rate for the HEDIS® Specification for Follow-up after

Hospitalization for Mental Illness within seven days. Additionally, each hospital received reports comparing their facility's current rate with NCQA percentiles. A list of non-compliant Enrollees for the seven-day follow-up measure was included in each monthly mailing. In addition, the Behavioral Health Team for all high volume inpatient facilities conducted medical record audits. Interventions targeted to Enrollees included identification of those with discharges from a hospitalization for mental illness so the Behavioral Health Case Management team could conduct targeted outreach within one day of their discharge with ongoing analysis of barriers to discharge planning and access to care. Additional steps were taken including the development and distribution of a Clinical Practice Guideline (CPG) addressing discharge planning and care coordination at transitions and the implementation of process improvements for quicker notification to care managers of discharges from a hospitalization for mental illness. **The two hospitals with the highest overall improvement were The Ridge and NorthKey, increasing from below 25th to the 75th percentile.** Simultaneously, WellCare added the follow up after hospitalization measure to the Gold Card program, allowing facilities with higher rates to be relieved from the prior authorization process. currently, WellCare has 11 hospitals serving behavioral health Enrollees meeting Gold card standards of 50th percentile or greater for the FUH measure.

Our approach is to begin discharge planning for each Enrollee at admission, taking a special interest in behavioral health Enrollees as we look for new solutions to this key aspect of overall care. Through concurrent review, we maintain oversight and evaluation of Enrollees admitted to hospitals, psychiatric facilities, and rehabilitation centers. We begin the concurrent review process upon notification of an admission. This approach enables us to evaluate the admission, monitor the inpatient stay, provide comprehensive and timely discharge planning, and transition coordination to care coordinators for post-discharge care. Using CareCentral, our concurrent review nurses to complete a comprehensive review of the Enrollee's history, needs, and circumstances, which informs our concurrent review, discharge planning, and post-discharge activities. The care manager develops a discharge planning care plan that specifies the Enrollee's goals, problems, and interventions to help with successfully transitioning from the inpatient setting to home or an alternate lower level of care. The discharge planning care plan addresses any service needs, including medication reconciliation, medication adherence, appropriate outpatient care (e.g. therapy, physician visit, outpatient programs); and identifies housing and other SDOH factors. It also ensures the Enrollee has and includes a link to PCP and specific specialists to ensure seven-day follow-up. We have the second highest rating in the Commonwealth on the Mental and Behavioral Health measure of Follow up after hospitalization for mental illness.

In our Hawai'i market, we are launching an innovative program for the seven-day follow-up after hospitalization HEDIS measure. We are collaborating with a local medical center to ensure our Enrollees receive timely, virtual behavioral health care once they have been discharged from a behavioral health hospital stay. Prior to discharge, our WellCare ('Ohana Health Plan) community health worker meets with the Enrollee to provide education about the importance of follow-up care and how telehealth can offer convenient, quality care. During that visit, they schedule an appointment with a telehealth provider for a date post-discharge. The Enrollee receives an appointment reminder from both the telehealth platform and the community

health worker to increase the likelihood of their attending. At the end of the appointment, an appointment for the 30-day follow up may also be scheduled. Once the seven-day follow up appointment has occurred, our 'Ohana Health Plan rewards the Enrollee with a gift card. This is a new initiative launching as we write this proposal, so there are not yet outcomes to report. We will monitor those results and implement a similar initiative in Kentucky if it is successful in Hawaii.

Our Community Connections program, which we developed to support the integrated delivery of services in the Commonwealth in 2011, addresses Enrollees' SDOH needs. It includes a Community Connections Help Line (CCHL) staffed with peer coaches who provide information about community social service organizations, guide, and encourage individuals to access community resources, including transportation to help Enrollees attend follow-up appointments. In Kentucky, CCHL has referred 6,466 Enrollees to 18,955 services. These efforts are specifically designed to support improvements in follow up care post discharge.

Our most recent effort includes seven-day follow-up as a measure defined for VBC and P4Q arrangements for hospitals and behavioral health providers. We are also **piloting a Follow-up after Hospitalization FUH program** that leverages behavioral health care coordinators to ensure Enrollee compliance with their follow-up appointments. As part of the program, and in alignment with the requirements in Section 33.8 of the Draft Contract, behavioral health discharge coordinators help Enrollees access an outpatient follow-up appointment within seven days of discharge if the provider does not schedule one. They also provide telephonic appointment reminders and contact Enrollees who miss an appointment within 24 hours to reschedule.

In January 2019, we implemented a **new program that rewards CMHCs for** each **Enrollee who kept their seven-day post-discharge visit.** Based on 2019 data, a total of 1,347 follow-up after hospitalization (FUH) appointments were kept at CMHCs. Of the five facilities, 602 FUH appointments were kept. This resulted in $53,880 for the CMHCs and $24,080 for the facilities. We have also offered the same incentive to five psychiatric hospitals. Along with the financial incentive, we have provided a care coordinator assigned to each of the facilities to assist with discharge planning.

v. Process for ensuring continuity of care upon discharge from a Psychiatric Hospital.

In accordance with Section 33.10 of the Draft Contract, WellCare of Kentucky coordinates with providers of Behavioral Health Services, and state operated or state contracted psychiatric hospitals and nursing facilities regarding admission and Discharge Planning, treatment objectives and projected length of stay for Enrollees committed by a court of law and/or voluntarily admitted to the state psychiatric hospital. We ensure continuity of care for successful transition back into community-based supports.

WellCare actively participates in coordination of care meetings with Central State Hospital, Western State Hospital, Eastern State Hospital, and Appalachian Regional Hospital. When we receive notification prior to Enrollee discharge we work collaboratively with the hospital to ensure the Enrollee is connected to a case manager to provide basic, targeted, or intensive case management services. During the first quarter of 2019, WellCare successfully engaged 84

Enrollees discharging from a state hospital into our care management program. The challenge to continuity of care is that many discharges take place without communication. During the first quarter, we were not notified of 53% of the discharges. We are excited by DMS' renewed interest in the Kentucky Health Information Exchange (KHIE).We believe the opportunity to leverage the KHIE data repository with these three hospitals to connect Enrollees to care management prior to discharge is an important and positive step in reaching them upon release.

Emily's Successful Transition from Inpatient Psychiatric Care

In January 2017, Emily, a 23-year-old Enrollee in Louisville was enrolled in OB case management after being referred by Jim, a Behavioral Health Advocate in guardianship case management. Emily has a history of substance abuse, prostitution and possible human trafficking, mental illness with a probable diagnosis of borderline personality disorder and pregnancy at approximately 16 weeks gestation. She has also been under State Guardianship for most of her life and remains with a state-appointed adult guardian.

She was first admitted to University of Louisville Inpatient Psychiatric Unit for treatment. Jim, David, the unit staff and Sara, the field case manager worked together to secure Emily a place at Freedom House in Louisville upon discharge, but Emily refused to receive care there and left. This began a transient period for Emily during which communication was sparse, housing was insecure, and most appointments for outpatient therapy and OB care were missed. Jim, David, and Sara continued to work together to maintain contact with Emily throughout. Ultimately, due to concern that Emily was not receiving prenatal care and was engaging in a dangerous lifestyle, state guardianship determined that she would not receive checks without complying with regular prenatal care.

Sara scheduled an appointment with University of Louisville Outpatient OBGYN along with transportation through Bluegrass.org. She and David agreed to accompany Emily to this appointment. During the appointment, Emily reported recent drug use and that her current boyfriend and possibly the baby's father, gave her drugs and made her have sex with people to get money for himself. She also reported that he was physically and mentally abusive. In response, Sara and David contacted law enforcement.

Following this appointment, Emily continued to refuse assistance from anyone. A week later, state guardianship obtained a court order to admit Emily to Good Samaritan Inpatient Behavioral Health Unit, planning to keep her admitted at least until the baby's delivery and Emily's recovery from the immediate postpartum period. Sara visited her there and was impressed with the care she is receiving. She is taking her prescribed medications and the staff helps her work through any outbursts she has or negative news she receives. She has also been through detox, which has helped her to understand that she was in a bad environment complicated by drug use.

Contact between the team and Emily has been consistent since then, and she is agreeable to working with her treatment team, which includes unit staff, Jim, David and Sara, as well as Lisa, WellCare's transitional care coordination nurse, and Mike, the OB care management manager. This team meets every other week to discuss Emily's progress and a safe discharge plan for her and the baby. Emily recently delivered a healthy baby boy and has been discharged from obstetric care. She is currently in an inpatient behavioral unit awaiting discharge to Chrysalis House for further follow-up and treatment. This will allow her to continue to receive behavioral health treatment and a safe place to transition to and develop a plan for long-term care. The baby has been placed in foster care by Child Protective Services, as Emily has been deemed unable to care for him at this time.

WellCare of Kentucky has continuously worked to ensure Emily is safe and progressing toward a more positive lifestyle. Sara calls Emily every weekday and Lisa visits her at least weekly. While Emily has been admitted, Barb, the unit social worker, Karen, the unit doctor, and Sara have had detailed discussions about what OB care and education Emily needs. Mike has arranged for an OB educator to come to the unit and do one-on-one education with Emily when she began to question the labor and delivery process. Jim has kept the whole team informed about guardianship issues. The WellCare team, along with the University of Kentucky staff, has arranged for Emily to have a safe, supportive place to transition in Chrysalis House and their program.

MODEL TO ENSURE CONTINUITY AFTER PSYCHIATRIC DISCHARGES

WellCare of Kentucky ensures all Enrollees continuity of care upon discharge from a psychiatric hospital. Built on evidence-based care and best practices, our discharge planning process uses the Coleman model to address the myriad of changes Enrollees face during discharge, including changes in their physical environment, health status, care regimens, and relationships with providers. The transition of care program is fully integrated for Enrollees receiving care coordination. WellCare of Kentucky policies and procedures, proven management techniques, and targeted initiatives support integrated care delivery. Applied to our population, the discharge planning process we employ ensures seamless, continuous, and appropriate care and services through coordination of care, services, and benefits that enable safe transitions.

Discharge Planning. WellCare of Kentucky utilization care managers begin discharge planning upon admission. When we receive notification from a hospital representative indicating Enrollee admission to or pending discharge from a psychiatric hospital, we send notification to a behavioral health field outreach coordinator to ensure they receive necessary case management services at time of discharge and as they return to the community. We hold regular case conferences to maintain communication and ensure a plan is in place for the Enrollee's transition to outpatient care. The local WellCare of Kentucky care coordinator and other BH providers participate in discharge planning meetings to ensure the Enrollee receives needed supports in the least restrictive environment to meet their whole person needs, including psychosocial rehabilitation and health promotion. WellCare also participates in the quarterly continuity of care meeting among state hospital representatives, CMHCs, and state representatives to discuss Enrollees that have been discharged from each of the four state facilities.

Our local behavioral health care coordinators participate in transition planning and continued care coordination for Enrollees with SMI who are transitioning from licensed Personal Care Homes, psychiatric hospitals, or other institutional settings to integrated, community-based housing. Working from the monthly list that DBHDID provides, behavioral health care coordinators perform a comprehensive physical and behavioral health assessment designed to support the successful transition to community-based housing within 14 days of the transition.

Along with Guardianship Case Management, Behavioral Health Case Management attends monthly Regional Transition Meetings, coordinated by the DBHDID and held at the state hospitals. These meetings focus on reviewing the list of identified individuals, current treatment issues, barriers to receiving treatment services, and transition plans to move these individuals to community-based housing.

Once referred, a care coordinator is be assigned. He or she reaches out to CMHC lead staff and the Enrollee. The care coordinator continues to reach out the CMHC lead staff weekly, or as needed, via email to request updates on Enrollee status. He or she also requests copies of the Enrollee's person centered recovery plan, developed by the CMHC provider, who also provides the anticipated date of transition. Within 14 days after the Enrollee's move/transition from the facility into community based housing, the care coordinator meets with the Enrollee to complete the comprehensive physical and behavioral health assessment. Additional phone calls

and emails are directed to CMHC lead staff to ensure adequate communication is occurring regarding Enrollee needs.

The care coordinator assesses whether the Enrollee needs behavioral health case management services by completing the Health Risk Assessment and the Standard Case Management Assessment (SCM) or Initial Case Management Assessment for adult guardianship individuals. If the Enrollee requires behavioral health case management, the care coordinator completes the following:

- Community Mental Health referral
- PHQ9 and CAGE assessment, along with the SF 12
- Care plan development with the Enrollee and CMHC lead staff, focusing on incorporating the Enrollee's personal recovery plan. The care plan indicates the problem and the goal(s) and objectives of case management for the Enrollee

HARD TO REACH ENROLLEES

Kentucky-based **member outreach coordinators**, who use our Unable to Contact (UTC) program, REACH, to locate Enrollees for whom we have incorrect or missing contact information. The REACH program aims to enroll high utilizers who have either refused to engage in care management or are unable to contact in the case management program. The Member Outreach Coordinator conducts outreach to Enrollees who are identified as the most vulnerable population, as well as providers, and community organizations to support Utilization Management and Case Management. MOCs visit a minimum of 13 PCP offices per month and visit a minimum of seven Enrollees while inpatient. They establish alternative means to engaging Enrollees in care management by meeting with PCPs to flag Enrollee charts, hospital visits (both UM and ED visits), etc.

BEHAVIORAL HEALTH CARE MANAGEMENT FOR ENROLLEES DISCHARGING FROM STATE HOSPITALS

Supported by CMHCs and Kentucky's state hospitals, WellCare of Kentucky's SMI+5 Program is directed at ensuring Enrollees with complex behavioral health care needs and co-occurring chronic medical conditions receive appropriate care and coordination of needed services. It provides behavioral health care management for Enrollees who have severe mental illness. Specific program features include:

- Coordination of seven day follow-up after hospitalization for behavioral health services
- Coordination with providers of behavioral health services, and Commonwealth-operated or Commonwealth-contracted psychiatric hospitals and nursing facilities regarding admission and discharge planning, treatment objectives.
- Participate in transition planning and continued care coordination for Enrollees with SMI who are transitioning from Personal Care Homes, psychiatric hospitals or other institutional settings to integrated, community-based housing.

Through SMI+5, behavioral health care managers ensure delivery of, monitor, and evaluate basic and comprehensive care, treatment, and services for Enrollees. We identify Enrollees for

the program through the health risk assessment, evaluation of claims data, or physician referral.

The mission of the SMI program is to engage in behavioral health promotion efforts, psychotropic medication management, suicide prevention and overall person centered treatment approaches, to lower morbidity among Enrollees with SMI and SED, including Enrollees with co-occurring developmental disabilities and substance use disorders.

Through this program, we have seen a 66% decrease in inpatient expenses and a 10% decrease in ED visits for participating enrollees, while at the same time, visits to PCPs increased as well as pharmacy utilization demonstrating that individuals are starting to seek appropriate care.

Successful Behavioral Health Case Management

Johnny is 58-Year-old black male who has, schizophrenia, seizure disorder, Hepatitis B and C and had not taken any medication for a significant period. He had nine emergency room visits within six months. During the last visit, paramedics took him to the emergency room after he was found on the side of the road laying in a ditch following a seizure. The hospital believed him to be homeless. Member was triggered by ER Over usage, and when trying to contact member, found emergency number for a brother that lived in Texas. His brother was also unable to locate him and was very worried for his safety. Katie, LCSW care manager, called Eastern State and found out that member had been taken to the Hope Center. Member brother flew in from Texas to find member and try to get him help. Member and his brother met with Katie and her colleague Patty, RN. During assessment, member was found that he had not seen his PCP or Neurologist in almost a year and had many bottles of medications, but could not tell what he really was supposed to be taking. Member's schizophrenia and psychosis was very apparent during visit. The comprehensive needs assessment was done with the help of Brother and medical records from prior hospitalization that Johnny had in his backpack. The assessment revealed that Johnny lives alone in his mother's house, does not have a phone, gets food stamps, walks were he needs to go, has been banned from local pharmacies, doctor office, using local transportation and business due to his mental illness and unable to control his anger at times. Member has no local support. Member has never attended appointments at the CMHC.

WellCare care managers were able to set up the following:

- PCP appointment with Dr. Allen
- Neurologist Appointment with Dr. Owens
- CMHC program with ACT Team doing home visits
- Free Cell Phone with Assurance filled out
- Enrolled in transportation in Scott County
- KY Vision project application filled out
- Educated member on local food banks
- Educated on KY Quit Smoking Program
- Referral and visit to Shady Lane Residential Center

Weekly care management visits were made with member to address barriers of the care plan. Over time, Johnny started trusting Katie and Patty. He started taking his seizure medications and keeping a daily log for Patty to check weekly. He would occasionally miss a dose, but overall he was taking his seizure medications more regularly and having less ER visits for seizures. Johnny started working with the ACT team. Six months into the program, Johnny had a psychiatric relapse and was admitted to Eastern State Hospital where medications were evaluated and stabilized.

Upon discharge from Eastern State, ACT meet with member twice weekly and WellCare care managers met with him weekly. For one-year post discharge from Eastern State, Johnny had not had any emergency room visits in several months, had adhered to medications, had consistent ACT team participation, had maintained PCP, Dental and Vision appointments, and had maintained telephone contact with his brother.

b. Describe the Contractor's approach to meeting the Department's requirements for operating seven (7) days a week, twenty-four (24) hours a day emergency and crisis hotline as defined in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

WellCare of Kentucky has maintained a 24/7 behavioral health hotline since 2011 and has consistently met contract standards. **In 2018, the hotline answered more than 900 calls with an average speed-of-answer of fewer than seven seconds. Zero calls were placed on hold and 19 calls were warm transferred to emergency/suicide support services.** In addition to the hotline services, we consistently offer provider and Enrollee support to improve access to crisis and emergency services.

Hotline Hours. A live person answers the WellCare of Kentucky Behavioral Health toll-free crisis services hotline 24 hours per day, seven days per week, year round, throughout the Commonwealth. Enrollees will never receive a busy signal or be placed on hold. The hotline is supported by our fully integrated call centers. Applying a person-centered approach to service, our hotline associates provide crisis triaging to assess Enrollees'' behavioral and physical health, pharmacy requirements and social determinants of health needs, including need for crisis services. Our high level of overall responsiveness rests on our "no-wrong door" point of entry for phone calls, regardless if a call comes from an Enrollee, provider, or caregiver.

Hotline Staffing. Our dedicated behavioral health crisis services hotline staff are licensed behavioral health professionals who hold undergraduate and graduate degrees in social work or a related field, and include Licensed Mental Health Counselors, social workers, as well as registered nurses and IDD professionals with advanced behavioral health training. They intervene, de-escalate and support Enrollees in emergent situations and are available every shift across our integrated call center with additional coverage on our behavioral health crisis line 24-hours a day, seven-days a week, 365-days a year. The Behavioral Health Crisis Line is never answered by automated means.

In addition to our dedicated behavioral health crisis services hotline team, each member of our more than 3,750 Enrollee Services staff is trained to respond to the unique physical, behavioral, pharmaceutical, and social determinants of health needs of our Enrollees, including assessing the need for a crisis response, in the event an Enrollee calls Enrollee Services.

Call Routing Process. When an Enrollee Services Representative (ESR) receives a call on our Enrollee service or designated crisis line, or determines that a caller is in crisis, they never place the caller on hold or transfer them. ESRs follow specific crisis call procedures for all callers in crisis. Behavioral health clinicians make an immediate determination of an Enrollee's acuity level and document as either routine, urgent, emergent or life threatening and follow related protocols until the crisis is resolved. This includes activating emergency services or local mobile crisis providers when available, or helping the Enrollee de-escalate and connect to their Provider, depending on need.

When a call to Enrollee Services is determined to be a crisis, the call representative activates the red crisis button in CAREConnects, our call management platform, which generates emergency/crisis guidance scripts and triggers a licensed behavioral health clinician to immediately join the call. There is no call transfer; instead, a licensed behavioral health clinician

is patched into the call with the Enrollee. The non-clinical staff associate remains on the line and works with the clinician until the immediate situation is safely resolved. Enrollees assessed with emergent needs receive a follow-up call from our service management team within 24 hours after the episode has been addressed.

We train staff to listen for triggering phrases and situations. These include callers directly expressing urges to harm themselves or someone else; suicide attempts; speech that is slurred, tangential or not making sense; Enrollees who are emotionally distressed and cannot be calmed down; and Enrollees unable to be assisted due to disposition. WellCare's word recognition program, Interaction Analyzer, automatically flags calls based on specific keywords that have been identified as high risk. For example, when a Enrollee mentions words or phrases such as "I'm going to kill myself," "I'm having difficulty," "Emergency," or "Having a hard time," the system directs the WellCare staff to immediately escalate the call to a supervisor and the behavioral health crisis services hotline staff for prompt intervention and resolution. Our lexicon includes more than 100 key words and continues to be refined and expanded.

For all other, non-crisis behavioral health calls, our fully integrated call center staff is trained and equipped to address all calls regardless of behavioral, physical, pharmacy, or other need, as depicted in **Figure C.23-1**. This integrated approach promotes a streamlined experience for Enrollees and caregivers.

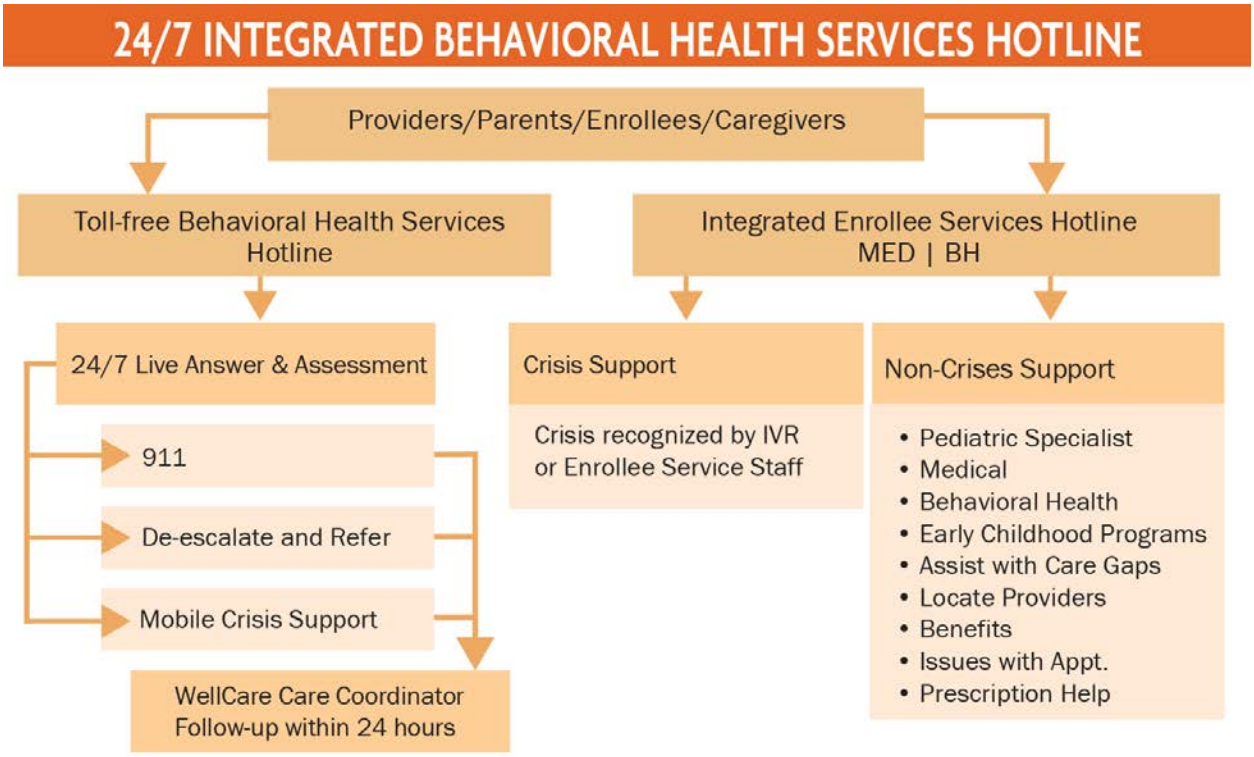

Figure 23-1. Behavioral Health Services Hotline

Hotline Training Curriculum. Through WellCare University, our training and education hub, our Enrollee Services staff train for 160 hours in a blended training environment. Training modules are delivered by Instructor-led Training, E-Learning, and supervised experiential training. We

provide scenario-based training curriculum for all non-clinical behavioral health services hotline staff members, which includes a focus on identifying trigger words and crisis situations, and requires that each staff associate pass an exam before transitioning to live support. The program includes self-led training curriculum and a designated "nesting period" where staff receive one-on-one crisis call coaching by a qualified supervisor. Our behavioral health clinicians also receive training in accessing emergency crisis services and in the treatment and management of behavioral health conditions, including specific behaviors related to Enrollees with IDD.

Enrollee Satisfaction. We administer automated surveys for callers who access support through our integrated Enrollee Services Call Center, as clinically appropriate. Enrollees who receive a behavioral health clinical response for emergent crisis are contacted within 24 hours by a clinical staff and do not receive automated surveys. This direct connection after a crisis is critical to help Enrollees get the follow-up care they need to avoid the next crisis. Our Medicaid **Enrollee post-call satisfaction rate was 94.9%, which exceeded our goal of 90% satisfaction**.

c. Describe the Contractor's approach to coordination and collaboration between the Contractor, Behavioral Health Providers and the PCP as defined in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

Since our program inception in 2011, WellCare of Kentucky has recognized the prevalence of behavioral health issues in the Commonwealth, and the importance of coordination and collaboration in addressing them through a comprehensive set of behavioral health services integrated into the broader continuum care. We have provided truly integrated care from the outset, and we remain one of the only Medicaid plans to offer in-house integration. Through experience, we know that it is essential that providers see the whole person and approach their care in a manner that encompasses their behavioral health needs as vital component of their care plan. WellCare encourages PCPs and physical health specialists to screen for behavioral health conditions by including information about SBIRT during visits from provider relations and Quality Practice Advisors. Additionally, we ensure that physical health clinicians have the tools to feel comfortable with mental health services available for members. This includes incentivizing providers to have staff trained in Mental Health First Aid (MHFA).

There are challenges inherent to coordinating care for individuals with behavioral health conditions, including a higher incidence of unmet medical needs and addiction to tobacco, alcohol, opioids, and other substances, an increased likelihood of being homeless or housing insecure, and more difficulty stabilizing upon transition from inpatient to outpatient care. WellCare of Kentucky provides a behavioral health program that meets these challenges through integration, coordinated partnerships, and collaboration with a comprehensive network of medical, behavioral health, and community service partners. Our behavioral health care managers play a critical role, securing Enrollees to a coordinated care plan for receiving behavioral health, medical, pharmacy, and social services.

We work to identify and develop community alternatives for Enrollees currently receiving inpatient psychiatric facility services who could be discharged if a community alternative were available. Our approach to doing so involves collaborative meetings with CMHCs and provider

summits that bring behavioral health providers and PCPs together. In addition, we offer targeted education for PCPs and behavioral health providers and host coordinated care team meetings to ensure everyone with an interest in the Enrollee's wellbeing remains fully informed and engaged in locating a suitable alternative to inpatient psychiatric care.

- *Collaborative Meetings:* Each year, WellCare hosts four regional provider summits across the Commonwealth. **In 2019, nearly 500 providers attended these summits.** Agendas include general presentations from leadership, presentations from key departments that impact all providers, and breakout sessions about plan highlights such as our work with Community Connections claims adjustments, behavioral health, and quality improvement. We also hold regular medical-behavioral health integration meetings with network providers around the Commonwealth, to continue building our holistic, person-centered model of care. These meetings include executive management, medical directors, network leadership, and behavioral health management.
  Provider summits and CMHC meetings bring entities together, facilitating communication and fostering an environment that develops the necessary relationships for coordinating the best placement for Enrollees with the most complex conditions. **Currently, four CMHCs have signed contracts to include PCPs in their practices*:*** Adanta, Centerstone, Kentucky River, and River Valley. This is in part due to these collaborative meetings.
- *Targeted Education:* Informing PCPs and behavioral health providers is critical to coordination. Our efforts to do so include our Provider Newsletter, Provider Portal, and the Provider Handbook, which requires that behavioral health providers communicate and coordinate care with the Enrollee's PCP at initiation of services and at least every 90 days thereafter. In addition, WellCare of Kentucky conducts comprehensive **provider audit trainings**, during which we emphasize to providers how essential PCP-behavioral health collaboration it is for meeting patients' needs and preferences in the delivery of safe and effective high quality, high-value health care. Following an audit there is a feedback, training, and corrective action processes, which have demonstrated improvement in provider process. **From 2017 to 2018, there was a 34% increase in obtaining consent to communicate with PCPs across inpatient, outpatient, and targeted case management chart reviews. For the same period, there was a 9% increase in provider's having documented communication with the PCP in charts reviewed.**
- *Care Team Meetings:* We host the multi-disciplinary team for coordinated case review meetings, inviting the PCP, behavioral health provider, family, and social workers to participate. Every case is addressed from a multi-disciplinary approach and care teams work together to identify and address comorbid conditions. Every care plan is sent (with Enrollee permission) to both their behavioral health provider and their PCP. The care plan is updated as the Enrollee's health status changes. Our scores for 2018 indicate that this integrated approach is working in Kentucky, including a score of **4.0 for Schizophrenia: Diabetes screening for schizophrenia or bipolar disorder. In calendar year 2018 we also improved on psychosocial counseling before prescribing ADD medication from 3.0 to 4.0.**
- *Local Care Coordinators:* WellCare of Kentucky care coordinators live and work in their communities and are steeped in the local culture and well informed about the provider landscape and the numerous resources available to the Enrollee through their benefit

package, value-added services (VAS), or non-benefitted services and supports through Community Connections. Care coordinators are aware of the nuances of matching an Enrollee to the appropriate resource or treatment as many shelters or treatment centers are tied to diagnoses or the Enrollee's special circumstances. For example, pregnant women who have an SUD diagnosis may be best served in an outpatient facility offering supportive housing, such as HOPE House, Karen's Place, Serenity House, Chrysalis House, or VOA in Manchester.

In accordance with Section 33.7 of the Draft Contract, we:

- Ensure, through contract provisions, that PCPs have screening and evaluation procedures for the detection and treatment of, or referral for, any known or suspected behavioral health problems and disorders.
- Provide training to PCPs on how to screeen for and identify BH disorders.
- Have a referral process for behavioral health services and clinical coordination requirements including training on coordination and quality of care (including BH screening techniques for PCPs and new models of BH interventions).
- Clinical coordination between BH providers and PCPs.
- Requiring BH providers to send initial and quarterly (if clinically indicated) summary reports of an Enrollee's BH status to the PCP, with the Enrollee or Enrollee's legal guardian's consent. We specify this in our provider manuals.

WellCare believes sincerely that a truly integrated medical-behavioral-social model for delivering and managing care is far superior to fragmented care. This is why we don’t subcontract BH, we do have a single CareCentral clinical system that includes real-time medical-behavioral-SDOH-pharmacy information and we do have a statewide presence with six regional offices and dispersed staff across the Commonwealth.

24. Population Health Management (PHM) Program

C.24. POPULATION HEALTH MANAGEMENT (PHM) PROGRAM

a. Provide a comprehensive description of the Contractor's proposed Population Health Management (PHM) Program, including the following at a minimum:

i. Innovations and program elements the Contractor proposes to incorporate into this Program to support the overall goals of improving health outcomes for the population and empowering individuals to improve their health and engage in their healthcare.

ii. The Contractor's understanding of the National Committee for Quality Assurance (NCQA) PHM Model, and components of the Model the Contractor will incorporate into its PHM Program. If the Contractor, holds NCQA PHM Accreditation, describe the Contractor's implementation of related models, lessons learned, challenges and successes.

iii. Plan to ensure high levels of Enrollee participation across all priority populations and conditions, including innovative methods for contacting and engaging Enrollees to initiate completion of Health Risk Assessments and Enrollee Needs Assessments.

iv. The Contractor's approach to each of the three PHM Program defined risk levels: health promotion and wellness, management of chronic conditions, and complex care management. Include information about the following for each risk level:

a. Tools the Contractor will use to identify Enrollees and their risk levels and to support services provided.

b. Risk stratification methodology and descriptions of the types of data that will be used.

c. Methods to identify Enrollees for each of Kentucky's priority conditions or populations.

d. Services and information available within each risk level.

e. Description of the care planning process, including methods to ensure individualized and person-centered care plans, and summary of how the Contractor will include Enrollees, their caregivers, and multi-disciplinary teams.

f. Stakeholder engagement strategies, including involvement of community resources to meet social needs.

g. Technology and other methods for information exchange, as applicable.

h. Frequency of provision of services.

i. Priority areas (e.g., specific health risks, conditions, social determinants of health, etc.).

j. Description of staffing for each risk level, including staff to Enrollee ratios, modes of interface with Enrollees, and use of care managers.

k. If applicable, value-based payment (VBP) or incentive models the Contractor will include in Provider agreements to support involvement in the PHM Program.

l. Methods for evaluating success of services provided.

m. Methods for communicating and coordinating with an Enrollee's primary care provider or other authorized providers about care plans and service needs.

n. Role, if any, the Kentucky Health Information Exchange (KHIE) will play in the Contractor's PHM Program as a resource.

v. Provide the Contractor's proposed approach to coordination with other authorized providers such as the WIC program and others.

vi. Describe the Contractor's approach to ongoing review of its PHM Program, including potential real-time measurement, and how the Contractor will use results to address identified issues.

C.24. POPULATION HEALTH MANAGEMENT (PHM) PROGRAM

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 34.0 Population Health Management Program of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

a. Provide a comprehensive description of the Contractor's proposed Population Health Management (PHM) Program, including the following at a minimum:

Every day, in every corner of the Commonwealth, WellCare of Kentucky staff work with our Enrollees, providers, and community partners to improve health outcomes for the most vulnerable populations while empowering Enrollees to engage in their health care to improve their own health. Our dedication to population health and improving Enrollees' lives and health outcomes has been key to making us the plan of choice for both Enrollees and providers, and the leading managed care organization (MCO) for quality in Kentucky.

Under the leadership of Medical Director, Howard Shaps, MD, MBA, Vice President of Health Services, Terri Flanigan, and Population Health Management Director, Shannon Maggard, and in partnership with our fully integrated leadership team of quality, network and operations executives, our Population Health Management (PHM) program is the centerpiece of our health plan. Many of WellCare of Kentucky's core PHM programs have been leveraged by our affiliate WellCare health plans to evolve WellCare's PHM programs across the country.

Outcomes Matter

Our PHM Program has proven successful. From 2016-2018 our Enrollees participating in our PHM Program (all levels) experienced:

- **13%** reduction in Inpatient readmissions
- **24%** reduction in Hospital Admissions
- **17%** reduction in ER Utilization
- **20%** increase in Specialists Visits

Kentucky faces population health challenges that are varied and deeply entrenched in its culture and environment. Through our early engagement efforts with stakeholders, we recognized early on that these challenges require unique solutions. The prevalence of chronic conditions exacerbated by lifestyle, cultural, and environmental conditions (e.g., smoking, environmental cancers, obesity, and teen pregnancy) prompted us to consider innovative approaches to best serve our Kentucky Enrollees. We spent time learning about the unique obstacles so many individuals face in Kentucky, including entrenched poverty, co-morbid behavioral health and substance use conditions, isolation, lack of education, transportation barriers, food deserts, and food insecurity, all of which ultimately have an impact on overall health. In addition to these challenges, it was clear that providers, our most crucial allies in addressing these challenges, were skeptical of managed care. We knew that we would need to

develop trust with both Enrollees and our provider partners on the front lines of these challenges daily.

Farmacy: A Prescription for Good Nutrition

In 2015, WellCare of Kentucky was a founding partner of Farmacy, an innovative voucher-based nutrition program run by Mountain Comprehensive Health Corporation (MCHC), a Federally Qualified Health Center. Farmacy provides eligible MCHC patients (Pregnant, Type 2 diabetes, obesity, hypertension, at or below federal poverty guidelines) in Letcher County "prescription" vouchers for locally grown fresh fruits and vegetables. Showing positive health trends for weight loss, BMI reduction, and glucose levels after the first market season, WellCare of Kentucky provided further funding for 2016, enabling the program to reach even more individuals. The University of Kentucky Department of Dietetics and Human Nutrition facilitated a survey showing 95.6% of participants ate more fruits and vegetables because of Farmacy and 94.1% were motivated by the program to eat a healthier diet. The Farmer's Markets sales increased by $135,861 when comparing markets held prior to the Farmacy program with the sales of the 2015 and 2016 markets, making a much needed positive economic impact on the local community, which has been hit hard with job loss related to the coal mining industry. In 2017, WellCare provided further funding to expand the Farmacy program to Owsley and Harlan counties in Eastern Kentucky and further west into Warren County where Fairview Clinic, another Federally Qualified Health Center partnered to provide the program for their patients.

Community Farm Alliance has written, "To say the least, WellCare has been a creative, out-of-the-box partner with Community Farm Alliance in addressing nutrition-related health issues."

WellCare of Kentucky understands that regardless of the challenges they face, the people of Kentucky are fiercely loyal to their communities and to one another, and want what is best for their families and neighbors. As a first step toward integrating into the community, we built trust by listening and learning, being present, taking on some of the most challenging cases, and being flexible. We are now a trusted MCO partner in every region of the Commonwealth. To meet the varied population health challenges discussed above, and leverage the strengths of communities across Kentucky, we launched our PHM program with a few key components, which were unique among health plans at the time and are described in more detail in our response to innovations and program elements later in this response. We wanted to be local, integrated, and holistic in our approach; knowing that the only way to succeed is to employ highly skilled and local individuals who worked and lived in the communities we serve. This is what initially prompted us to offer in-person Complex Care Management in Kentucky – a model that WellCare now offers to affiliate health plans in other states.

Person Centered

Additionally, because we are so familiar with the behavioral health landscape in Kentucky, and so committed to an integrated approach, we launched and maintain a fully integrated behavioral and physical health plan. WellCare of Kentucky is the only MCO with a presence in every region of the Commonwealth, including field-

based clinical, provider, quality, and community engagement staff who all support the PHM program through direct engagement with Enrollees, providers, and community stakeholders. We were also the first MCO to introduce a social determinants of health program that supports the larger PHM program by connecting Enrollees to social services that address non-medical drivers of poor health outcomes and by supporting individual communities to build sustainable and expandable programs.

Spreading Innovation with Hotel Inc

The Community Connections program supports organizations who provide services to individuals experiencing homelessness and has funded Kentucky based street medicine programs with organizations like HOTEL INC and Welcome House. WellCare has invested in the growth of HOTEL INC's programming since beginning a partnership in 2013. HOTEL INC provides a food pantry, financial assistance, Transitional Housing, Street Medicine Program, and Respite House. In efforts to end homelessness rather than maintain it, HOTEL INC seeks to serve people who are experiencing homelessness efficiently and effectively. They currently provide program infrastructure that are best practices in the US.

Additionally, the formal adoption of coordinated entry for those applying for housing services has created an organized and effective flow that directs clients from program intake to program exit with aftercare case management. With coordinated entry and case management, it is HOTEL INC's vision to meet the person where they are and then remove barriers to move forward. In 2017, WellCare provided $12,100 to Welcome House of Northern Kentucky to launch the Street Medicine Program across the state after a local homeless health care clinic closed, leaving a gap in services for a vulnerable population. The organization recently received $104,000 in grant funding to create a mobile unit as part of their Street Medicine Program after using data from their initial pilot to apply for the grant funding.

Through WellCare of KY's successful partnerships with Street Medicine, our Hawaii market reached out to see if we had a mentor to refer a community partner in Hawaii to that was interested in launching a similar program. WellCare's Sr. Manager, Elizabeth Starr, connected the Hawaii community partner to Rhondell Miller at HOTEL INC who sent the following thank you after they connected. "Hi Elizabeth, Thank you so much for connecting me with Rhondell, she is amazing! We had a great conversation, she is so easy to talk to and so generous with her time and information." It is great that supporting local Kentucky community agencies in successful innovative programs is having a positive impact in other agencies across the county.

As our PHM program has progressed, we adjusted our focus to address the evolving health care challenges, and continue to do so. There is an increasing need to focus on Substance Use Disorder (SUD) and behavioral health needs, while continuing to address other prevalent conditions including tobacco use and obesity. Through a combination of data analytics and our community collaboration, we actively identify new trends, such as vaping among young people, and the challenges of health care disparities based on region, age, gender, race, and ethnicity. One of the things we are most proud of is our ability to flex and develop the PHM program to meet emerging needs,

pilot new programs, and use data to determine the highest value programs to promote across the Commonwealth. We continue to refine our tools and systems, as described below, to support and promote the use of predictive analytics and health informatics, smart care management assignment and workflows, consistent application of clinical practices, value-based care, prevention and wellness programming, and chronic and complex condition management. What does not change, even as our PHM program becomes more advanced, is the dedication of our local Kentucky staff and our commitment to DMS that our approach to population health remains local, person-centered, integrated, and uniquely tailored.

i. Innovations and program elements the Contractor proposes to incorporate into this Program to support the overall goals of improving health outcomes for the population and empowering individuals to improve their health and engage in their healthcare.

Making a Difference: One Family at a Time

Brandi felt challenged as a mother to her son, Dylan, due to her being deaf, a lack of a natural support system beyond immediate family, food insecurity, and her long-standing chronic stomach condition. Brandi was anxious about being a good mom and chronic pain due to her stomach condition interfered with parenting. Then she met Dewana, a field-based care manager assigned to Brandi to conduct an in-person Enrollee Needs Assessment. During the home visit, Brandi shared with Dewana her concerns about and goals for Dylan, particularly around a better life for him. Assigned to other Enrollees in eastern Kentucky, Dewana knows the financial pressures in this area experience due to the loss of coal mining jobs in the region. Dewana knows the resources available to support Brandi and her family. During collaborative, person-centered care planning, Dewana and Brandi agreed upon the following interventions, including those for their physical health and social service needs:

Interventions for Brandi: Connected her to a specialist for stomach issues and arranged transportation to appointments; helped her apply for Food Stamps; helped her get Dylan into a preschool program; and helped her set up a checking account to deposit Dylan's SSI benefit checks

Interventions for Dylan: Arranged for physical therapy to strengthen his leg muscles; occupational therapy for his fine motor skills; and speech therapy

Today, Dewana feels good about making a difference in the lives of our Kentucky Enrollees. She built on Brandi's strengths, helping her define goals for herself and her son, and connecting Brandi and Dylan to the care and services they urgently needed. Regarding her interactions with WellCare, Brandi says, "I am just so thankful to WellCare. You helped me so much."

WellCare of Kentucky has designed, implemented, and evolved our PHM program over time. The key imperatives foundational to our PHM approach encompass innovations and program elements that collectively support Enrollees across the care continuum. **Table C.24.1** summarizes those imperatives, and related innovations and program elements, each of which is subsequently described in more detail.

Table C.24.1 Innovations and Program Elements

Key Imperative to PHM Approach	Innovations and Program Elements
Understand the population through a combination of data analytics, health informatics, and in-person collaboration with stakeholders.	• Membership Dashboard • Predictive Analytics • Stakeholder Engagement • Identification and Stratification (ID/Strat) Engine • Care Needs Heat Maps • Utilization Reports
Empower and Engage Enrollees by meeting them where they are physically, culturally, and through technology and other modalities that support their engagement.	• High-touch in-person care management • Focused programs for specific conditions/populations • Finding and engaging difficult to reach Enrollees • Addressing Social Determinants of Health • Leveraging new and emerging technologies • Health Coaches to help Enrollees navigate their care • Care Center outbound calls to close care gaps • Educational Materials • Value-Added Services • Community Events and Outreach • Enrollee support for work and community engagement • Transitional Care Coordination
Partner with Providers to help them succeed by streamlining the administrative burden of working with MCOs and empowering them with data and other supports to deliver the highest quality care to Enrollees.	• Supporting Enrollee engagement with their PCP • In-Person Provider Engagement Model • Incentives for high-quality care • Sharing of Enrollee Care Needs • Multi-disciplinary care teams, care planning and engagement • Provider Portal
Integrate a holistic, community-based approach for both individual Enrollees and the community at large to address non-medical drivers of health outcomes.	• Supporting social service • Single whole-person IT platform • Integrated Clinical Guidelines • Integrated Staffing • Integrated Clinical Training

Within each of these key imperatives, we ensure our PHM program remains clinically superior, applying evidence-based programs and gold standard clinical practice guidelines consistently regardless of risk level, Care Manager, or coordinator, provider, or intervention.

We describe just some of the innovations and core program elements within each of these imperatives, followed in subsequent sub-sections by a more detailed discussion of how we apply those innovations and program elements within each defined risk level and along the PHM continuum. Innovations and programs specific to conditions (e.g., asthma remote patient monitoring) or population (e.g., first year of life NICU supports) are outlined in the subsection related to priority areas later in this response.

UNDERSTANDING THE POPULATION

Our innovations to understand the population begin with a combination of stakeholder engagement and data analytics. Data tells us not only about prevalence of conditions and disease states, but allows us to break that down by region and county, age, race and more to help us target the right interventions. It also allows us to test programs and expand those with successful outcomes, which we have consistently done throughout our time in Kentucky. Our personal engagements with stakeholders help us understand the barriers to improving population health. For example, we know that the isolation Eastern Kentuckians face often makes it challenging to attend to preventive care visits, which exacerbates their chronic health conditions. This understanding led us to create new approaches to engagement, such as hiring Enrollee Outreach Coordinators to knock on doors and help connect people to care.

Some of our innovations around understanding the population include the following:

Membership Dashboard: As shown **in Figure C.24-1**, this overall dashboard allows us to break down Enrollee demographics, diagnoses and utilization patterns in a variety of ways to help us understand who our Enrollees are and their basic needs. This information helps us establish priority needs and clinical programs, identify the best value-added services, and develop engagement techniques that meet Enrollees where they are.

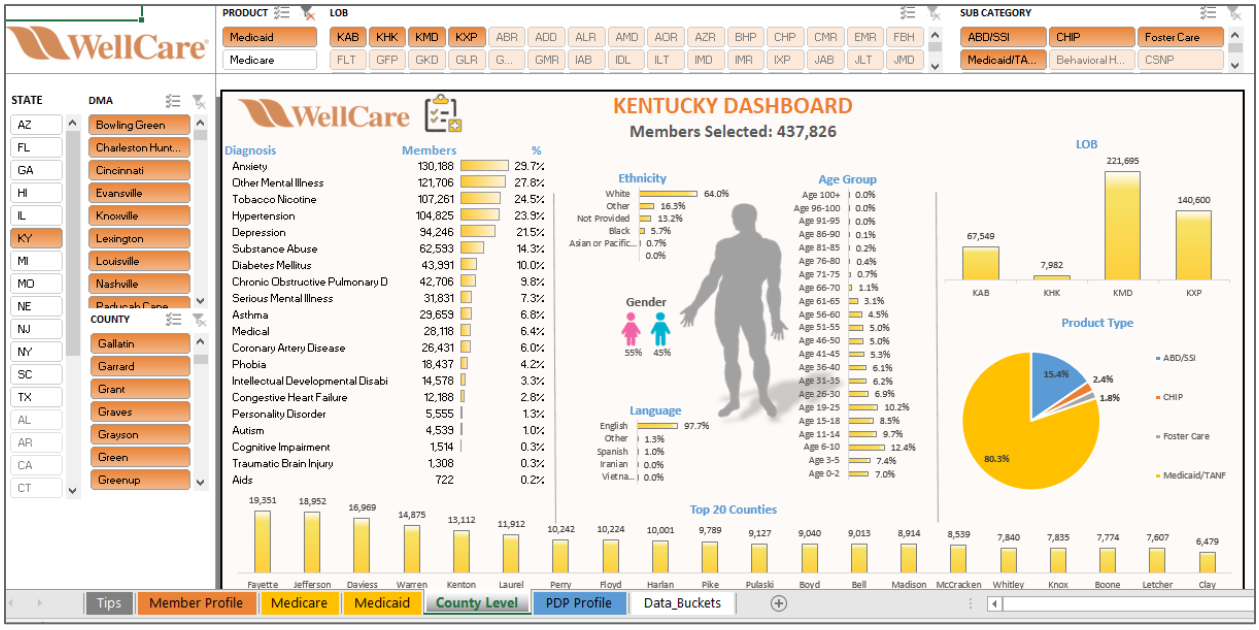

Figure C.24-1 Membership Dashboard

Predictive Analytics: Through several of our program elements (e.g., stratification methodology, targeted Enrollee outreach, and unable to contact initiatives) we incorporate proprietary predictive analytics that look at Enrollee behavioral patterns, demographics, social needs, and other factors to help us best understand which Enrollees will be at the greatest risk for not accessing needed preventive and wellness care or chronic disease management services.

Stakeholder Engagement: Understanding that data only takes us so far, we also use a variety of stakeholder engagements to help us drive continuous improvements in our PHM program. One

example is our Behavioral Health-Clinical Advisory Council (BH-CAC), which we formed because we understood the challenges of behavioral health in Kentucky, such as a lack of available services and shortages of providers. The BH-CAC providers from across the Commonwealth inform our PHM efforts by keeping us up to date on the latest challenges our Enrollees, providers, including social service providers, and the system faces.

In addition to these innovations**, Table C.24-2** shows other program elements that help us understand the populations we serve.

Table C.24-2 Program Elements to Understand the Populations

Program Elements to Understand the Populations	
Program Element/Innovation	**Description**
Identification and Stratification (ID/Strat) Engine	As described in detail below, our ID/Strat methodology helps us determine the risk of our overall population and identify individual Enrollee risk levels.
Care Needs Heat Maps	Care Gap Mining and Sharing: Promotes prevention and wellness. For example, heat maps help create targeted community-level interventions to address prevalent local conditions.
Utilization Reports	As described in our response to question C.10 Utilization Management, we use a suite of over and under-utilization reports both within the health plan and with providers to drive population health programming and interventions, such as the creation of our Transition Care Coordinators, to help ensure Enrollees can get care they need upon discharge from the hospital.

b. Empowering and Engaging Enrollees

From day one, we understood that the best way to engage Enrollees was to be present, which is why we launched, from inception, a field-based care management program, which has now become standard across our affiliates. As we continue to evolve the program, we have broadened our focus beyond the highest-need Enrollees to innovate around chronic conditions and populations as well as broader prevention and wellness activities. Just some of our innovations to empower and engage Enrollees include the following:

High-touch in-person care management: WellCare at Home is the centerpiece of our Complex Care Management approach in which field-based Care Managers (licensed nurses and social workers) engage Enrollees and their families in person at a time and place most convenient to the Enrollee. Being able to see an Enrollee's challenges first-hand allows our Care Managers to better help address barriers to positive health outcomes. WellCare at Home remains one of our most successful programs. In an analysis of Enrollees enrolled in Complex Care Management receiving WellCare at Home interventions, in a one-year period, we saw their **ER use decline 21%, their inpatient admissions decline 27%, with corresponding increases in pharmacy spend of 16% and specialist visits of 27%.**

Focused programs for specific conditions/populations: We continually review data and rely on our experience on the ground to identify areas in need of focused programs. We then build specific condition-based interventions on priority areas and populations that we identify. For example, in March 2019 we rolled out our **Good Measures** diabetes prevention program to our Medicare members. Good Measures empowers participants to better manage their health through food. We saw a 25% decrease in per member per month (PMPM) costs by the end of calendar year 2019 for participants in the program. Considering the success of Good Measures in our Medicare program and prevalence of diabetes among our Enrollees, we are preparing to begin offering the Good Measures program to our Medicaid Enrollees in 2020. We focus on bite-sized goals that are highly personalized based on an Enrollee's preference, location, health status, lifestyle, budget, and access to food. We work closely with Enrollees to set realistic goals that help build confidence and self-reliance so they can make lasting behavior changes that deliver results. Using the Good Measures app, Enrollees can track meals and snacks, physical activity, blood sugar, and medications to learn how different foods, medicines, insulin, and activity affect their blood sugar. The app suggests the best meals and snacks to eat next. Notably, nutrition plays a key role in mitigating side effects and increasing efficacy. As Enrollees begin to understand how food impacts their health and as they begin to feel better, sustainable behavior change occurs. The result: improved health outcomes, Enrollee satisfaction, and Enrollee empowerment.

Finding and engaging difficult to reach Enrollees: The WellCare REACH program, designed to help find Enrollees who are often more transient, is integrated into every aspect of our PHM program, including our wellness and prevention initiatives and complex care management. Described in more detail in our response to encouraging participation in the PHM program, REACH combines high-tech data collection and mining of contact information with personal "feet-on-the street" outreach to find and engage Enrollees. **One innovation to place Enrollee or Member Outreach Coordinators (MOCs) to knock on doors in Region 8 resulted in dramatic improvements in engagement with primary care and prevention services, resulting in a reduction in higher-cost services of more than 16% for those Enrollees served.**

Addressing Social Determinants of Health: WellCare's Community Connections program helps engage and empower Enrollees by giving them real tools to address non-medical drivers of poor health outcomes such as food our housing insecurity. As it relates to Enrollee Engagement, Community Connections offers our social service IT platform and database used by internal teams and by external partners to refer individuals to social resources. It also includes our Community Connections Help Line, one of which is located in Hazard, which is our social service referral line that connects Enrollees to community resources. We track and follow-up to ensure the Enrollees received the needed service. The Robert Wood Johnson Foundation and the University of Kentucky have studied the effectiveness of Community Connections, with

Making a Local Impact on SDOH

Since launching the Community Connections program in Kentucky, we have connected more than 31,000 people to 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program, including a 26% reduction in emergency department visits, and a 53% decrease in inpatient spending.

multiple studies showing a direct impact on population health, including reduced use of high-cost services.

Community Connections: Helping Enrollees with COPD

One of our Enrollees with COPD called the Community Connections Help Line (CCHL) reporting that she could not afford to pay her electricity bill of more than $200, and had received a shut-off notice from her electricity provider. The Enrollee is medically dependent on electricity because of her dependence on an oxygen machine, which helps her to breathe. CCHL provided the Enrollee a referral to the Community Action Council-Fayette West Neighborhood Center to help her access assistance with paying for her utilities. One day after she called the organization to apply, they provided life-saving assistance by paying a large portion of her electricity bill.

Leveraging new and emerging technologies: As more Enrollees, particularly among our younger populations, rely on technology, we are continuing to innovate with web-based and mobile engagement tools. For example, we have implemented a mobile phone app, known as JOOL, for our Foster Care Enrollees to help them life plan for aging out of the system. We also implemented self-help web tools for wellness and chronic condition management, such as MyStrength, which is an evidence-based digital BH platform, empowering Enrollees to address depression, anxiety, stress, substance use, chronic pain, and sleep challenges. It also supports the physical (e.g., smoking cessation, diabetes) and spiritual aspects of whole-person care.

In addition to these innovations**, Table C.24-3** describes other program elements that help us empower and engage Enrollees.

Table C.24-3 Program Elements to Empower and Engage Enrollees

Program Elements to Empower and Engage Enrollees	
Program Element/ Innovation	**Description**
Health Coaches	Enrollee-dedicated coaches guide Enrollees along a path to better health. Health Coaches focus on motivating Enrollees to receive consistent care from their PCP to avoid more costly services, providing education on appropriate prevention services, and maintaining appointment adherence for chronic conditions. They work closely with Enrollees to ensure they understand their care needs and assist with barriers to care through referrals to our care management and Community Connections programs.
Care Center Outreach	Our Care Center is an outbound call center dedicated to contacting Enrollees with open care gaps and alerting them of upcoming recertification deadlines so they do not lose their eligibility and access to health services.
Educational Materials	Available through various modalities (mail, mobile, online, through community partners), we develop culturally appropriate education materials to empower Enrollees to better engage in their health care and

	improve their outcomes.
Value-Added Services	As described in C.20. Covered Services, these additional benefits include bonus rewards for expecting mothers, enhanced vision benefit, the Community Connections Helpline, GED program, Healthy Rewards Program, home-delivered meals, over-the-counter benefits, college scholarships, and more.
Community Events and Outreach	We sponsor and meet Enrollees at events including the Black Gold Festival, Perry County Fair, Mountain Heritage, Poke Sallet, ARH Health Fair, MCHC Health Fair, Poage Landing Days, Grayson Co 1st Annual Mental Health Fair, HOTEL INC Homeless Resource Fair, Recovery Entry Expo, and Feeding America.
Enrollee Support for Finding Employment	Our innovative program, WellCare Works, assists Enrollees in preparing for the workforce and finding employment suited to their experience. We provide one-on-one trainings, including webinars, summits with workforce agencies, and train community partners in an effort to increase education about the program at various Enrollee touchpoints.
Transitional Care Coordination (TCC)	Described in more detail below, our TCC program, places nurses in high-volume hospitals to engage Enrollees before they discharge to support their discharge plan and participation in any one of our PHM programs.

Breaking Barriers to Good Health Empowering Enrollees for a Lifetime

In 2018, Family Health Center in Louisville, KY reached out to WellCare of Kentucky to request education and case management services for their pediatric population with BMI/Obesity concerns that were being identified at well-child visits. Our care manager, Brooke, began enrolling those pediatric Enrollees into short-term pediatric case management to provide education, support, and resources related to nutrition, physical activity, and the promotion of an overall healthy lifestyle. The clinic had limited resources and appointments available with their nutritionist/dietitian therefore case management enrollment allowed these children and their families to receive valuable education to promote healthy nutrition and activity choices they may have otherwise not received. Since Family Health serves a large Spanish-speaking population, all of these particular referrals were for children with Spanish-speaking families. Through the use of an interpreter service, Brooke contacted each family and reviewed their basic knowledge of nutrition and activity, which was consistently lacking. One child Brooke helped was an 8-year-old boy whose BMI was 27.2. His mother was not aware of any nutrition guidelines and did not know how to read a nutrition label or what typically caused weight gain. Brooke discussed with his mother the foods her child typically eats in a day, and she asked her to keep a food log over several days to review at the next call so they could see what food choices they were making and what the typical portion size was. Brooke provided education about reading food labels and discussed the percentage of each that the child should have each day based off of resources from AAP Institute for Healthy Weight and healthychildren.org as well as USDA guidelines. Brooke reviewed limiting sugar, healthy choices and physical activity both verbally and by mailing Spanish-language documents related to nutrition to the family. Brooke also provided education on being physically active 60 minutes per days at minimum, ideas for indoor play and activities such as jumping jacks, run in place, pushups, walking up and down stairs several times, among other options outside. Brooke encouraged family to schedule 10-minute breaks each hour where video games (the child's most time consuming activity) are paused and he gets up and does several sets of these activity options. Brook also encouraged family activity outside such as a walk or time at the park. Through the interventions, the mother reported to Brooke that her son's weight had stabilized and his clothes were fitting better and that she was using what she learned with the whole family.

PARTNERING WITH PROVIDERS

No MCO can operate a successful PHM program without the support and engagement of the provider community. WellCare's approach to provider engagement, quality, and high-performing networks has allowed us to build relationships that best serve Enrollees. Our annual Provider Satisfaction survey shows that **91.6% of our providers would recommend WellCare of Kentucky to other providers** because of our willingness to partner with them to improve outcomes. Just some of our innovations to partner with providers include the following:

Supporting Enrollee engagement with their PCP: Through our engagement with providers, we found many were eager to address gaps in care but lacked resources needed to conduct

Enrollee outreach and follow up. To solve this, we placed Patient Care Advocates (PCAs) in select provider offices to help schedule appointments for targeted Enrollees with identified gaps in preventive and chronic condition care including immunizations, ADHD follow-up, asthma medication adherence, and well child visits. **We have seen compliance in preventive care increase, achieving many HEDIS improvements from 2016 to 2018 including a 27.64% increase in Adolescent Well Care, a 23.83% increase in Well Child Visits in the first 15 months of life, and a 55.11% increase in Weight Assessment and Counseling for Nutrition and Activity for Children with a High BMI. Because of all our improvements, our 2018 HEDIS Scores for Child and Adolescent Access to PCPs for ages 12-24 months, 25 months to six years, and seven to 11 years were all in the 90th percentile.**

In-Person Provider Engagement Model: Co-located with quality and PHM staff, our locally based, high-touch provider relations staff often partner with Care Managers to support PHM initiatives, whether it is training providers how to make a referral to Complex Care Management or sharing new guidelines for Opioid prescribing, for example.

Incentives for high-quality care: Paying for value, as described in more detail in our response on value-based purchasing below, is tightly woven into our overall approach to population health management. Our national WellCare clinical design team even includes specific expertise on incenting high-performing networks to help us achieve PHM goals. While we offer a variety of incentive payment types, our Pay for Quality, or P4Q program, which pays providers bonuses for conducting certain preventive and chronic care services, has been among the most successful. **For example, Comprehensive Diabetes Care - Eye Exams and Cervical Cancer Screens showed improvement through the P4Q program with the former improving 22.2% and the latter improving 18.19% from 2016 to 2018.**

In addition to these innovations**, Table C.24-4** describes other program elements that help us partner with providers.

Table C.24-4 Program Elements to Partner with Providers

Program Elements to Partner with Providers	
Program Element/Innovation	**Description**
Sharing of Enrollee Care Needs	Ensuring Enrollees, particularly those in the Prevention and Wellness risk level, get necessary preventive services is foundational to the PHM program so we use multiple modalities to share care needs, including our "Appointment Agenda," which tells a physician, in one view, everything the Enrollee needs during that visit to be compliant with evidence-based preventive and chronic care clinical guidelines.
Multi-disciplinary care teams, care planning and engagement	Providers play a critical role on an Enrollee's multi-disciplinary care team, helping to ensure complex service needs are met timely and supporting the Enrollee care planning process. We engage them through direct contact and continued follow-up with technologies that allow us to share care plans.

Provider Advisory Panels	Provider Advisory Panels serve as a consulting resource to WellCare of Kentucky in policy and operational matters, and further strengthens the bridge between WellCare and the provider community. We hold quarterly Provider Advisory Panel meetings in each of our six regional offices. WellCare's Kentucky leadership team reviews and considers all panel recommendations and meeting outcomes.
Provider Portal	Our provider portal is connected to our CareCentral clinical platform, which allows us to share the outcomes of health screens, EPSDT information, social determinants of health obstacles, Enrollee assessments, care plans, and multi-disciplinary team contacts with providers. Providers can view open and pending care needs through the portal and notify us when those care needs are closed through encounters, claims, EMR interchange or submission of supplement medical record information.

INTEGRATING A HOLISTIC, COMMUNITY-BASED APPROACH

Whole-person, person-centered care is the hallmark of our PHM program. Our staff, systems, call centers, and other operations are fully integrated, and we engage in our communities in a way unique among MCOs. Just some of our innovations to integrate a holistic approach in our PHM program include the following:

Supporting Social Services: Because non-medical drivers of health are as critical to improving health outcomes as the medical drivers, we consider the work we do in our communities a critical innovation to support the PHM program. As noted above, we use our social services database of more than 330,000 services to connect Enrollees to needed services. The database serves another critical purpose in helping us identify gaps in the social safety net, which ultimately make it difficult for Enrollees to access needed preventive and chronic condition care, leading to poor health outcomes. This knowledge informs our next steps, which is the creation of our Community Impact Councils, where we bring together public health departments, private businesses and community organizations to determine how we can help close the gaps in the social service safety net. Since 2011, WellCare of Kentucky has held more than 100 Community Impact Councils to address a verity of issue from transportation and housing to food insecurity and childhood obesity. We use the Councils to guide our Community Health Initiatives, in which we often partner with a provider group or community organization with an investment to address a specific health problem in that community. All of these efforts to help sustain the social service network and create needed services, is vital to our PHM program because we know that when

> "The insights you share at our monthly partnership meeting and at our special events are invaluable and our partnership Enrollees appreciate your dedication to the cause, especially because you are the only Medicaid provider to have attended our meetings."
>
> – MASON COUNTY TOBACCO FREE PARTNERSHIP

an Enrollee who has a social gap, does not close that gap, ER costs for that Enrollee can increase by 8.5% and they are 4.9 times less likely to see their PCP.

Team Ultra in Marshall County is an example of how we apply the features of our Community Connections program to a specific community initiative by supporting a community-based organization to achieve improved health outcomes. Marshall County is a rural area in Kentucky and the opportunities for after-school activities, outside of organized team sports, are limited. The Marshall County Health Department created Team Ultra in response to a request from the Kentucky Department of Public Health to increase physical activity in school aged children. The mission of Team Ultra is to teach students about physical activity, good nutrition, and upstanding character traits. We collaborate with Team Ultra and provide grants to fill the funding gap to ensure all students in the county who wanted to participate could. The program began with one elementary school and has grown to serve all six of the county's elementary and middle schools. Between September 1, 2016 and January 6, 2019, 136 students received 2,441 total services from Team Ultra. Among the WellCare of Kentucky Enrollees who participated, the average age was 11.5; 53.2% were boys and 46.8% were girls. One-year post intervention, we saw a 35.9% reduction in ED visits and a 98% increase in routine child health exams for those participating.

Single whole-person IT platform: Our integrated CareCentral system supports our PHM program by ensuring a holistic view of each Enrollee. Our Member 360 view provides a full view of an Enrollee's record, risk factors, gaps in care, utilization trends, and disease profile on a single screen with easy-to-read red and green flags to indicate risks. This 360-degree view allows

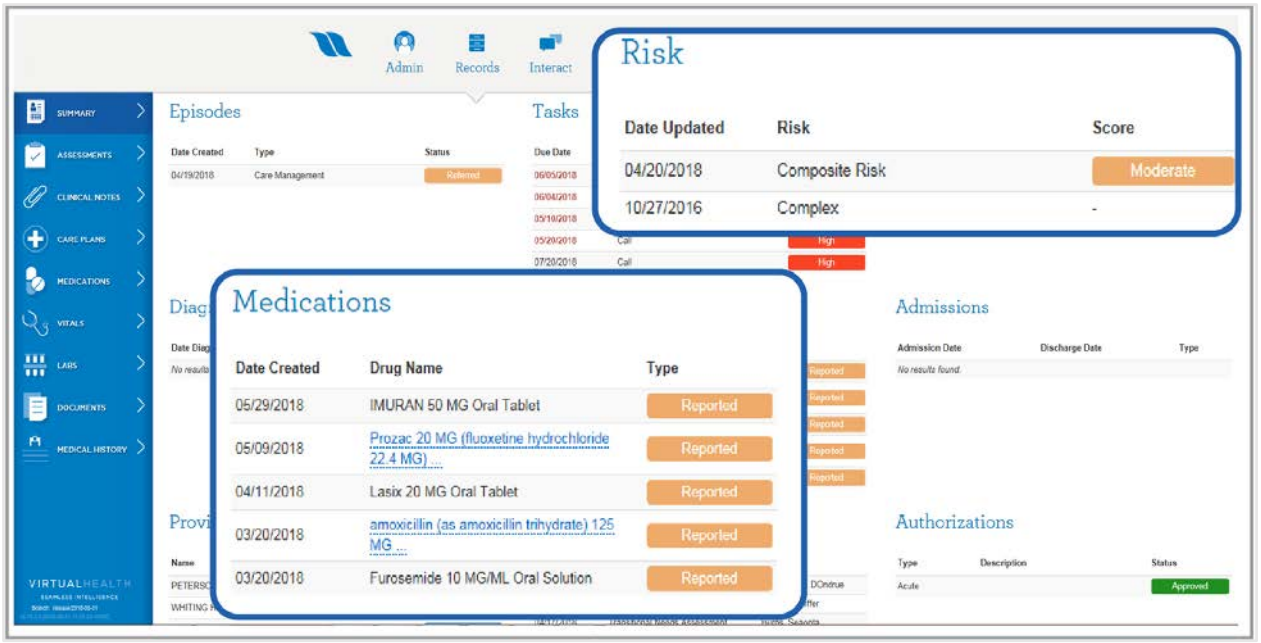

Figure C.24-2 360-Degree View

Enrollee-facing staff to quickly partner with an Enrollee to assess the Enrollee's care needs and risks and then help drive interventions, such as assisting a mom make an appointment to close an EPSDT need or addressing a social service need.

The Member 360-degree view, depicted in **Figure C.24-2**, includes screening results, comprehensive assessment results, admissions/readmissions, diagnoses, medications, eligibility verification, PCP assignment, authorization history and status, claims status, service and benefit limits, care need reports, preferred drug list, important updates and notices, multi-disciplinary team contact information, and population health training materials.

Table C.24-5 Program Elements to Integrate a Holistic Approach

Program Elements that Enable a Holistic Approach	
Program Element/Innovation	**Description**
Integrated Clinical Guidelines	Our PHM staff uses a set of standard and fully integrated clinical guidelines that allow our clinicians to address holistic needs of the Enrollee. These guidelines address co-morbid conditions (e.g., depression during pregnancy) to help guide the right interventions for Enrollees engaged at any risk level.
Integrated Staffing	Nurses and social workers work side by side with engagement partners and quality specialists, under a single integrated clinical leadership team with medical and BH medical directors working hand-in-hand on individual and systemic needs that cut across the continuum of care.
Integrated Clinical Training	WellCare of Kentucky staff, providers, and other stakeholders engage in training that reinforces integrated care delivery to improve the health and well-being of the population. Our fully integrated in-house care team cross-trains to manage co-morbid conditions and guide the Enrollee as they navigate and address their physical, behavioral, pharmacy, and social needs.

In addition to these innovations**, Table C.24-5** shows other program elements that help us integrate a holistic approach.

ii. If the Contractor, holds NCQA PHM Accreditation, describe the Contractor's implementation of related models, lessons learned, challenges and successes.

We understand and comply with NCQA's PHM Model and the requirements outlined in the Draft Medicaid Managed Care Contract 34.1. Our PHM program aligns with the components of NCQA's PHM Model, however we currently do not hold the NCQA PHM. Our PHM model, described throughout this response, addresses NCQA's four areas of focus:

- Keeping Enrollees healthy
- Managing Enrollees with emerging risks
- Enrollee safety or outcomes across settings
- Managing multiple chronic illnesses

The upcoming 2020 KY Health Plan Accreditation will include the new NCQA PHM standards.

WellCare of Kentucky earned #1 NCQA Customer Satisfaction in 2016-2019 among all Medicaid MCOs, has maintained a two year Commendable accreditation status and has the highest NCQA quality ranking in the State Medicaid program at 3.5, see **Figure C.24-3**. As per the new NCQA standards, on an annual basis, we conduct an assessment of Enrollee population characteristics to identify the needs of our Enrollees' including relevant sub-populations. We develop and implement population-based programs in alignment with care management to improve the quality of our Enrollees' lives.

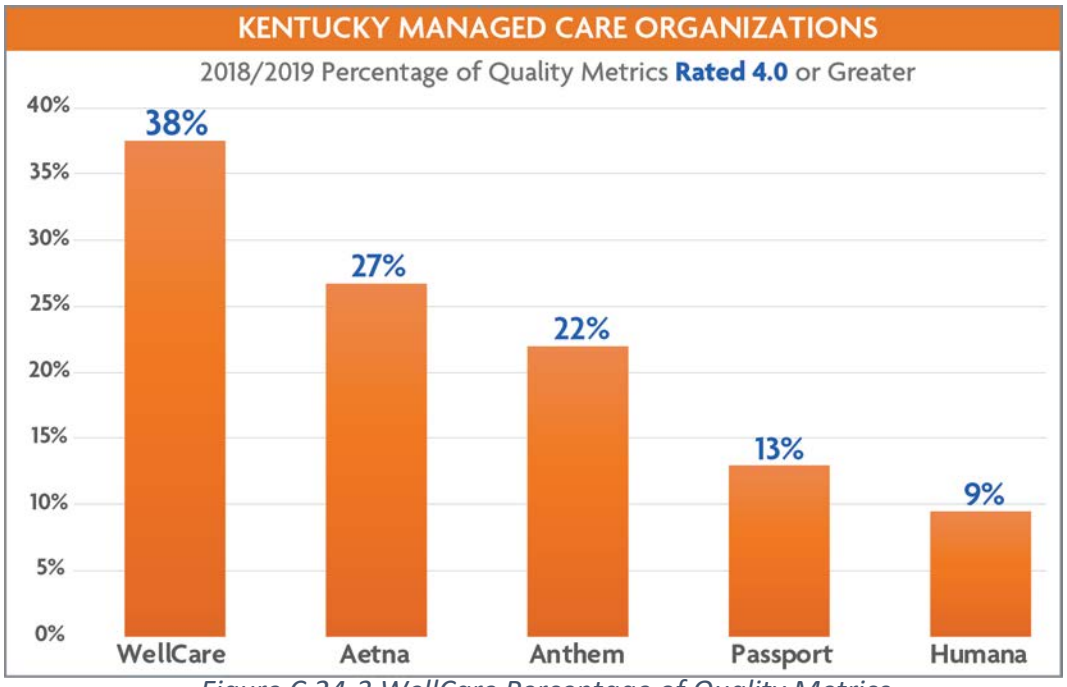

Figure C.24-3 WellCare Percentage of Quality Metrics

Experience developing care management programs has taught us that a field-based team is necessary to positively impact the lives and health of our Kentucky Enrollees. To be most effective, we need to meet face-to-face with our Enrollees, their families, and their providers. We want to ensure that our Care Managers have firsthand knowledge of the communities in which Enrollees live, and understand the challenges our Enrollees' encounter. We have learned through working with vulnerable populations that impacting the lives and health of our Enrollees requires addressing their social determinants of health. Our Care Managers work closely with Enrollees to link them to non-health care related services such as food pantries, heating assistance, housing resources, and transportation to meet their unique individual needs. WellCare of Kentucky Care Managers use our Community Connections database to quickly locate the specific services needed by our Enrollees. We know that Enrollees' basic needs must be addressed before we can effectively address their gaps in care. As our Care Managers work to ensure that all of our Enrollees' needs are met, they also establish trusting relationships with our Enrollees.

WellCare has defined its population health model as:

Driving health care from reacting to individuals' medical needs towards evidence-based, proactive approaches centered on larger, socially grouped medical and behavioral needs and prevention efforts while reducing disparity and variation in care delivery. Analytics allow identification of opportunities to create and implement evidence-based, best practice initiatives delivering excellent and innovative care in the most cost-effective ways.

WellCare of Kentucky's PHM Model is consistent with NCQA PHM standards and encompasses the following key elements:

Improving and Optimizing Health: Most importantly, our programs and measurement metrics are designed to yield the most favorable health status attainable for our Enrollees.

Partnership: We deliver excellent service to our Enrollee, provider and government partners. Enrollees are the reason we are in business; providers are our partners in serving our Enrollees; and government partners are the stewards of the public's resources and trust.

Enrollee Satisfaction: Enhancing Enrollees' experience and satisfaction with their care is essential under WellCare's person-centric approach. Ease in accessing care, satisfaction with the "care experience," and Enrollee/caregiver perceptions of the quality of care received are emphasized, with the Enrollee being the focus and core of the model. WellCare focuses on individualized Enrollee needs and preferences that address social determinants to achieve improved clinical outcomes.

Clinical Integration: All programs use a single integrated care management model. This integrated model strives to increase Enrollee engagement and provide clinical support throughout the care spectrum (crisis to prevention). Staff credentials, culture, and ethnicity reflect the membership served. Care Management is holistic in nature and strives to meet all of our Enrollees' biopsychosocial needs.

Provider Satisfaction and Engagement: Similarly, minimizing providers' administrative burdens and maximizing their satisfaction with WellCare is a key objective of each PHM program component. WellCare connects Enrollees to informed and engaged providers who work to transition Enrollees to high quality, lower acuity settings throughout the care continuum.

Delivery System Alignment: WellCare is striving to transform delivery systems. Our objectives include ensuring our providers work toward the same objectives as WellCare (as well as our shared objectives with our government payer entities). We expect individual provider services to occur in a well-informed environment that achieves whole-person health. This includes assessing and treating (or referring to treatment) all aspects of an Enrollee's health during care, sharing clinical information efficiently among an Enrollee's various providers and with WellCare – as well as similar 360-degree sharing of social determinants of health information (to the extent permissible within confidentiality limitations and requirements).

Through 10 of our national affiliates, we have provided the required documentation successfully for NCQA's PHM standards since the 2018 standards were released. WellCare of Kentucky will be evaluated on these new standards in 2020. We have documented a variety of lessons learned from the challenges we faced in working toward NCQA PHM accreditation and continue to apply those to our PHM program here in Kentucky and beyond. As part of the process, we analyzed our populations and categorized every Enrollee into one or more of

NCQA's focus areas, we identified additional diverse populations of Enrollees. The new NCQA PHM standards have helped us achieve an improved understanding of our membership and afforded us insights to improve our approach to programs based on population specific needs.

WellCare of Kentucky has been improving the lives of Kentuckian's for almost a decade. We will be evaluating our Kentucky-based PHM programs using the new NCQA PHM requirements for effectiveness. We will make any needed adjustments to our programs to continue to support our Enrollees with improving their overall health. In compliance with the Draft Contract, WellCare of Kentucky confirms our PHM Program Plan will be sent to DMS for approval by the end of Q1 2020, and annually thereafter.

iii. Plan to ensure high levels of Enrollee participation across all priority populations and conditions, including innovative methods for contacting and engaging Enrollees to initiate completion of the Health Risk Assessments and Enrollees Needs Assessments.

Our approach to ensuring high levels of participation in our PHM programs across all priority populations and conditions is informed by a deep understanding of how best to identify and engage Enrollees and their families. This understanding is supported by our locally placed clinical and outreach staff, comprising mostly native Kentuckians who know the unique populations they serve.

Enrollees are identified through the Health Risk Assessment (HRA), medical and pharmacy claims, physician referral, or Care Manager referral. Enrollees are stratified by risk according to a proprietary predictive modeling algorithm. Enrollees identified as low risk are enrolled in the educational materials program, where they receive materials and tools to help them understand and manage their condition. Enrollees identified as high and moderate risk, including those who are predicted to experience high utilization or disease progression, are contacted for enrollment in the enhanced program. With the enhanced program, a Care Manager is assigned and assesses the severity of the Enrollee's condition, presence of co-morbid conditions and barriers to care.

Tailored Solutions for Unique Challenges

As the only MCO that maintained a contract with Appalachian Regional Hospital in Region 8 continuously since the program began, we understand the unique challenges faced by the isolation and poverty of the area. After seeing lower than average participation rates in our PHM program in that area, we hired a dedicated team of Enrollee Outreach Coordinators to help us find and engage Enrollees identified with needs for PHM interventions.

In the first year alone, the program resulted in a 19.6% reduction in ER care; 21.4% reduction in inpatient care; and a 16.6% reduction in medical expenses for those served.

Our approach focuses on those Enrollees who are difficult to reach, those in rural, isolated and underserved communities; as well as those with pressing social service resource needs, Enrollees resistant to intervention and Enrollees who have literacy, language, cultural, disability, or other challenges that make engagement and participation more difficult.

The first step to ensure high levels of participation is identifying Enrollees within priority populations and conditions. To do so, we filter our larger population to identify specific needs aligned with interventions, regardless of which risk level the Enrollee falls in.

One method we use is flags built into our enrollment systems. These indicate Enrollees who fit certain priority populations (e.g., Adult Guardianship Enrollees) as they come through on DMS' 834 file. By identifying Enrollees who are part of a priority population, in this way we can move them to automatic Complex Care Management referral and escalate an Enrollee Needs Assessment and care planning process. Subsequently, we use the claims data from the 834 file, augmented with our predictive analytics algorithms, to identify needs specific to priority condition (e.g., an Enrollee with a history of opioid use) that flow through our risk scoring and stratification process.

This effective risk scoring and stratification process ensures Enrollees who need services and support the most receive it quickly. Our ID/Strat process is an innovative multichannel approach that leverages data sources from our integrated platform to identify priority populations, such as those with emerging risk or high-risk needs like pregnancy with substance use disorder. The model can accept inputs of varying frequency. It uses a proprietary predictive algorithm that considers all variables (e.g., readmission risk, Health Risk Assessment results, chronic diagnosis classifications, claims and pharmacy data, pharmacy adherence, ZIP codes, and race and ethnicity) to identify Enrollees at risk early. It then directs them, using our care management assignment logic, to the appropriate intensity of care and the most appropriate Care Manager or other support person based on their hierarchy of condition and specific needs.

We have invested significant resources into our Unable to Contact (UTC) program, known as REACH, to both find and engage Enrollees who are transient or isolated or who do not answer the phone. We offer flexible programs so that Enrollees who may not be quite ready to engage in complex care management still get support because of our close interdisciplinary approach. For example, even if an Enrollee refuses Complex Care Management, the outreach coordinator can help in real time with immediate needs, such as closing a social service need or making an appointment. Additionally, the coordinator provides education about recommended uses of medical services, such as visiting a PCP for non-emergent conditions. They refer Enrollees who refuse Complex Care Management to our Quality team for condition-specific or provider-led interventions to ensure they stay engaged in their care. Finally, we leverage provider and community partnerships to help us engage people in the best PHM program or intervention to meet their specific needs. We recognize many Enrollees prefer to engage in prevention and chronic condition management through their smart phone or web-based applications (e.g., JOOL, MyStrength).

CONTACTING AND ENGAGING ENROLLEES TO INITIATE COMPLETION OF THE HEALTH RISK ASSESSMENT

Our PHM continuum begins with efforts to screen every new Enrollee within 30 days of Enrollment or earlier and every Enrollee annually to assess for new or emerging needs. For current Enrollees we have reason to believe are pregnant, we also reach out to conduct the HRA within 30 days. We use the standardized HRA, as designated by DMS, to determine general needs, including behavioral and physical health, and identify Enrollees who may need an Enrollee Needs Assessment. Contacting and engaging Enrollees to participate in and HRA has traditionally been a significant challenge in the Medicaid population. We have worked to overcome some of those challenges through the following strategies:

Going the Extra Mile to Enable Enrollees with Disabilities to Access Care

Not only do we ensure providers have the proper access for Enrollees with disabilities, we work to make sure Enrollees are able to overcome barriers due to disabilities that prevent them from getting to their appointments. In Region 7, a WellCare Care Coordinator identified an Enrollee who uses a wheelchair for mobility who could not get to her PCP appointments because her house did not have a ramp. Through our Community Connections program, we partnered with a Christian biker group who built a wheelchair ramp onto the Enrollee's home. She can now see her doctor and also attend church and social events.

Partnership efforts like this not only benefit the Enrollee in enabling them to get to their appointments but also benefit providers in reducing no-shows, one of the key reasons why many providers drop out of a Medicaid program. By supporting our networks with community programs that coordinate access, we also sustain and build our provider network.

Contacting Enrollees through multiple modalities: We send a paper version of the initial HRA as part of our Welcome packet to all new Enrollees. We also call Enrollees, making three attempts at different times, to try to engage them to complete the HRA. If an Enrollee calls into our call center, the representative can see if they have had an HRA and can complete one in real time.

Ensuring complete and updated contact information: With expertise in serving Medicaid populations, we know that the first critical step to conducting an HRA is finding our Enrollees. Sometimes more transient or disconnected, Medicaid Enrollee demographic data can be outdated by the time we get it. To help combat this, our REACH program leverages our Enrollee Data Management (EDM) system, which maintains a database of all 834 files ever received, providing us an exhaustive history of Enrollee phone numbers, addresses, and other demographic information we can use at any time. We maintain historical discharge plans and care management notes, allowing us to use artificial intelligence to mine historical files for possible phone numbers or other contact information. We supplement our EDM with external sources, such as the Kentucky Health Information Exchange (KHIE), Lexus/Nexus databases, the Post Office Change of Address database, and the Homeless Management Information System (HMIS) to help us find Enrollees. We extract phone numbers embedded in medical, behavioral and pharmacy claims data to aid in further research. We call providers, pharmacies, and community resources to cross-reference their contact information with our data to update Enrollee information. **The combined approach of data mining and search mechanisms has yielded a 46% success rate in finding previously difficult-to-reach Enrollees.**

Community Partners: Through our community engagement work across the Commonwealth, we have built relationships with social service partners who are often the first line of contact for Enrollees particularly difficult to find, such as transient and homeless Enrollees or those dealing with interpersonal and domestic violence. For example, we are a major partner in Hotel Inc.'s Street Medicine Program in Bowling Green, which includes an arrangement with them to identify our Enrollees they come across when they are working directly with individuals living on the street and making referral for assessment. Because of our support, in part, Hotel Inc. has been able to serve as a model to other similar programs in other cities.

CONTACTING AND ENGAGING ENROLLEES TO INITIATE COMPLETION OF THE ENROLLEE NEEDS ASSESSMENT

Understanding individual barriers to participation is critical to engagement. We have found that local care management delivered in-person in a place most convenient for the Enrollee is the No. 1 method for building trust and dissolving barriers to participation. WellCare of Kentucky has nurses and social workers who live and were raised in the community as our Enrollees, who then connect with Enrollees and their families on a personal level. Other strategies we use to ensure we conduct the Enrollee Needs Assessment within 30 days of identifying the potential need for care management services and continue to improve participation rates include:

Field Outreach Coordinators: Our local Field Outreach Coordinators make the initial outbound call to the Enrollee once identified for needing an Enrollee Needs Assessment. Before they even begin the call, the coordinator looks at the Enrollee's dashboard to understand their conditions, current utilization patterns, fully integrated history, including medications and needs. This allows them to be ready to engage the Enrollee, connect them to the right physicians, and educate them even if they initially decline care management interventions. Field Outreach Coordinators make multiple attempts at different times of the day to try to contact an Enrollee. They leverage the EDM system outlined above to mine different phone numbers and outreach to physicians and pharmacies to get better contact information. The coordinators use KHIE when they struggle finding an Enrollee. Using KHIE resulted in a significant reduction in unable to contact rates. In the first half of 2018, we reduced the number of Enrollees we were unable to contact from more than 2,000 to approximately 1,000.

Education and Smart Coordination with Care Management: Field Outreach Coordinators use every connection with an Enrollee to promote positive engagement in their healthcare. Based on the Enrollee's specific history, the coordinator supports the Enrollee and educates them on the importance of regular PCP visits, preventive care, connections to social services, appropriate emergency department (ED) use and alternatives, and more. Field Outreach Coordinators have learned that one of the key ways to ensure participation in care management is to empower Enrollees to engage in their health care through active Care Management follow-up. For example, if an Enrollee says they need transportation assistance and agrees to talk to a Care Manager, the coordinator encourages the Enrollee to discuss setting up transportation with the Care Manager. In this way, the care coordinator helps to ensure the Enrollee will engage with the Care Manager and assists in establishing a relationship of trust. The Enrollee soon realizes that the Care Manager is a valuable resource who will work together with them to overcome any barriers in meeting their physical health needs.

Supports for Social Service Needs: Through our Community Connections Program, we offer direct connections to thousands of social services to address social determinants of health that may keep someone from participating in Care Management as well as with his/her provider's recommended medical care. For example, a woman dealing with domestic violence may need to find support for that situation before agreeing to have a Care Manager in the home to support a child with a special health care need. In those cases, the Field Outreach Coordinator or Care Manager connects the Enrollee to one of our community partners and follows up to ensure they receive needed services.

Care Manager Training: Care Managers use motivational interviewing and cultural-awareness to help remove barriers that may make Enrollees resistant to care management support. Our Care Managers remain flexible working with individuals on their terms agreeing to meet people when it is most convenient for them, to reach them while hospitalized or in the ED to ensure proper transitions or to use telephonic support based on Enrollees preferences. We provide ongoing training to our Care Managers to consistently improve their ability to use motivational interviewing and provide culturally appropriate care. Independent tests of our scripts and materials identify language and word choice that have the most success in engaging Enrollees in Care Management.

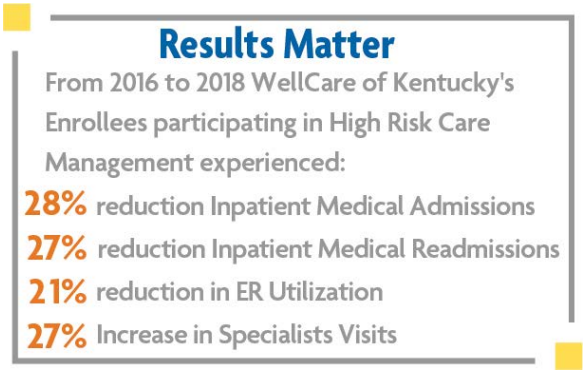
Convenience Technologies: A barrier for some Enrollees is access to a phone or enough minutes on their own phone for regular contact with their Care Manager. We provide SafeLink phones to high-needs Enrollees with pre-programmed phone numbers, and a direct link to the WellCare app, to track care needs, find providers and to get help making and keeping appointments. We provide biometric monitoring to Enrollees with certain chronic conditions (e.g., asthma), as an alternative to traditional care management. This remote monitoring alerts us to an Enrollee's emerging health risk so we can intervene prior to escalation to an ED visit or admission.

OTHER ENGAGEMENT ACTIVITIES

Care Center Outbound Calls: In 2018, we opened our Care Center to support Kentucky HEALTH Enrollees who required assistance with navigating the obstacles of the 1115 Waiver program. With the suspension of the 1115 waiver, we decided to leverage the resources and technology of the Care Center to focus on reaching out to Enrollees with open care gaps or with upcoming recertification deadlines to assist them closing their care gaps and maintaining their enrollment in Medicaid.

Health Coaches: Health Coaches guide Enrollees along the path to better health while providing education on healthy behaviors. Coaches use motivational interviewing techniques to engage Enrollees and develop trust. Our Health Coaches focus on motivating the Enrollee to receive consistent care from their PCP to avoid more costly services, providing education on appropriate prevention services, and maintaining the appointment adherence for chronic conditions. They work closely with Enrollees who have health literacy barriers to ensure they understand their care needs and assist with other barriers to care through referrals to our care management team and the Community Connections program.

Provider Engagement: Our Provider Relations Representatives (PR Reps) partner with our Quality Practice Advisers (QPAs) to educate and help providers engage Enrollees to become active participants in the management of their own care. This ultimately improves quality measures and provides more cost-efficient care. QPAs are trained nurses who review HEDIS measures, clinical practice guides and leave toolkits that support ongoing Enrollee engagement and quality



improvement activities. QPAs and PR Reps frequently meet with providers together to provide the best possible services to providers in their offices in the most efficient manner.

iv. The Contractor's approach to each of the three PHM Program defined risk levels: health promotion and wellness, management of chronic conditions, and complex care management. Include information about the following for each risk level:

Our approach to improving health outcomes and empowering individuals to engage in their health care within each PHM-defined risk level (**Figure C.24-4**) is informed through our understanding of how to best find, identify, stratify, and engage Enrollees in our integrated, person-centered PHM program. Our PHM program is fully integrated and holistic so regardless of where an Enrollee stratifies or tiers within each risk level, they have access to consistently-applied evidence-based interventions and education tailored to their specific needs and conditions, including medical and non-medical drivers of health, with a focus on improving health outcomes and reducing inappropriate utilization and costs. Whether it is holding a community baby shower to encourage healthy pregnancies, collaborating with a local public health department to engage select Enrollees in a year-long diabetes prevention program or sending Care Managers into individual homes to conduct intense complex care management, our approach to each risk level aligns perfectly with the NCQA PHM standards. Additional unique touches built after years of serving Kentucky Medicaid Enrollees, include:

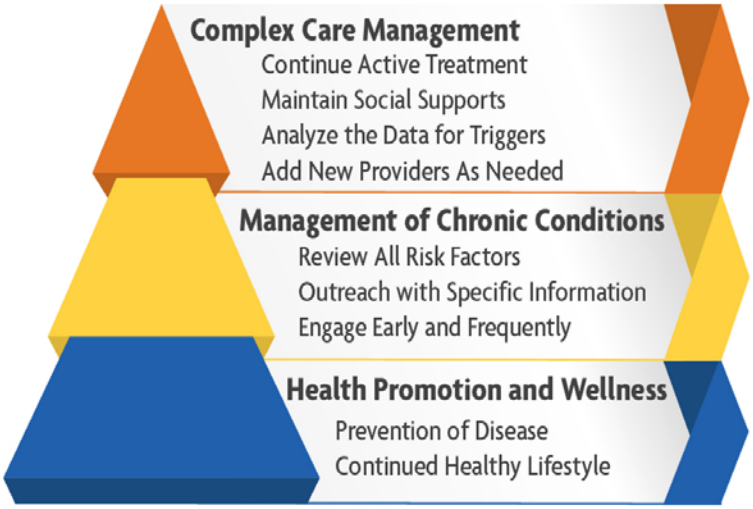


Figure C.24-4 Risk Levels

- Enhanced predictive analytics (including the addition of machine learning and artificial intelligence) to better identify and stratify Enrollees and unmask Enrollees who are often overlooked in traditional stratification models that depend on cost
- Smart assignment for Care Managers to tap into specialties and unique local relationships
- Our intensely local high-touch approach to finding and engaging Enrollees for assessment and screening as well as serving them through care management interventions
- Fully Integrated care planning and multi-disciplinary team approach to engage providers and multiple specialties in individual Enrollee care
- Holistic social services program that not only address individual Enrollee needs, but also broader community needs to improve overall population health
- Strong community and provider partners who support our high-touch model of care

"Pediatric Associates has offices located in Southeastern KY and has had the privilege to serve this area for years. Since the inception of managed care in the state of Kentucky, we have cared for many patients insured by WellCare Health plans. Enrollee health and well-being is a top priority for WellCare and they offer many programs to help support and promote this such as Case Management and Healthy Rewards. ... WellCare has been the most responsive managed care organization to do business with. We consider them to be a partner in improving the overall health and well-being of patients in our community."
– GENE SO, OWNER/OPERATOR, PEDIATRIC ASSOCIATES

a. Tools for identifying Enrollees and their risk levels, and to support services provided

As required in Section 34.3 of the Draft Contract, WellCare of Kentucky uses a variety of tools to support identification of and care for Enrollees within the PHM Program. The tools include our proprietary ID/Strat process and service tiers, the standardized Health Risk Assessment (HRA) tool, and our comprehensive Enrollee Needs Assessment.

We supplement the required tools to enhance identification of Enrollees and stratification of their risk levels as well as to support the services provided within each level with the following:

- Supplemental assessments specific to populations (e.g., a targeted screening for pregnant women and specific assessment for Foster Care children)
- Smart care management assignment algorithms
- Standardized care planning tools guided by integrated and consistent evidence-based clinical standards
- Social Service needs database, assessment, and referrals
- Member 360 degree view for internal staff and through the provider portal for holistic care
- Prevention and wellness education materials through MyWellCare mobile app and online platforms

All of our tools are foundationally supported by our CareCentral Clinical IT Platform and central EIM database that absorbs Enrollee-level data and provides bidirectional data feeds that provide all Enrollee-facing staff with the comprehensive, holistic view of Enrollees' medical, pharmacy, behavioral health, and social needs.

ID/Strat: Risk Scoring and Stratification. Key to the success of our PHM program is how we adapt tools to meet the specific needs of the populations we serve and how we leverage these tools in a fully integrated manner. For example, while all health plans have a risk stratification system as required, WellCare has designed our stratification process with predictive analytics specific to the Medicaid population, which allows us to better identify emerging risks as well as behavioral health and substance use risks that are often masked in traditional cost-based stratification models. Our Opioid risk identification and stratification process, for example, can identify, after the first opioid prescription is written, who is at risk for misusing that drug. We assign Enrollees a Risk of Unsafe Use Score™, which identifies Enrollees at risk of unsafe use of prescription opioids and predicts the likelihood that an opioid user will be diagnosed with unsafe opioid use in the next one-year period. This allows us to intervene early with specially trained Care Managers to prevent Opioid misuse. Generally, our risk stratification methodology allows us to determine the risk of our overall population and identify Enrollee risk levels. As descried in more detail in our response to the next prompt below, our stratification

methodology uses integrated data sources to identify Enrollee needs for services and is run on continuous intervals to ensure new and emerging risks are identified.

Health Risk Assessment. The HRA is a standardized tool, as designated by DMS, which is one way we identify urgent needs to assign Enrollees to one of our PHM programs. We include the HRA in our new Enrollee welcome packet and reach out by phone multiple times at different times to encourage Enrollees to complete the screening within the first 30 days of enrollment. We also do specific outreach within 30 days of identifying an Enrollee who we believe is pregnant and annually for all Enrollees to identify any new needs. With historically low rates of HRA completion across Medicaid populations for all MCOs, WellCare of Kentucky continues to evaluate the best approach to encourage Enrollee completion, such as incentives and different modality options (e.g., mobile).

Enrollee Needs Assessment. We conduct a comprehensive Enrollee Needs Assessment for individuals identified as potentially needing a higher level of PHM program services. This assesses their immediate, current and past healthcare, mental health, and SUD needs; psychosocial, functional, and cognitive needs; social determinants of health, including employment and housing; ongoing conditions or needs that require treatment or care monitoring; current care being received; current medications; and their support network. The goal of the Enrollee Needs Assessment is to gain a whole-person understanding of the individual's goals, strengths, needs, preferences, abilities, functional needs, and physical and BH status. Within 30 days of identifying an Enrollee as part of a priority population, or 30 days from being referred to care management, a local WellCare Care Manager conducts an Enrollee Needs Assessment in a location and manner that meet their needs to validate which level of care management is required for the individual and, if so, the individual's needs.

Our CareCentral clinical IT platform includes a dynamic, configurable comprehensive Enrollee Needs Assessment module that allows us to drill down to specific Enrollee needs. We maintain methodologies and tools for conducting comprehensive Enrollee Needs Assessments for differing demographics and needs while respecting individual choice. Care Managers use supplemental assessments for individuals in priority populations. We share the results of the Enrollee Needs Assessment with the Enrollee and their PCP within 14 days of completion to inform care planning and treatment planning, as consented to by the Enrollee to the extent required by law.

Supplemental Assessments: Variation in the comprehensive Enrollee Needs Assessment tool relies on branching logic. Branching logic streamlines the Enrollee experience and avoids unnecessary questions, which supports completion of the assessment. Supplemental assessments target particular health conditions like diabetes, asthma, depression, or social determinants of health, as well as different priority population needs, such as asking different questions of a woman with a high-risk pregnancy than those asked of a parent for a child under age five with complex needs.

For all Enrollees, as indicated by certain answers, Care Managers can use validated supplemental screening tools:

- CAGE (Drug and alcohol use screening tool for individuals 16+)
- CRAFFT (Screens for high-risk alcohol and other drug disorders for people ages 12 to 21)

- PHQ-9 (Depression screening tool for individuals age 13+)
- AUDIT-C (Alcohol Use Disorders Identification Test) to screen adults for alcohol use
- Edinburgh Postnatal Depression Scale, a screening tool for postpartum depression

In addition, experience in managing individuals with chronic pain has led us to include screening for opioid use disorder. Care Managers can use the Opioid Risk Tool (ORT), which is a brief, validated screening tool to use to monitor the risk for opioid addiction among adults prescribed certain medications. **Table C.24-6** shows other tools to support identifying and stratifying Enrollees to support services.

Table C.24-6 Additional Support Tools

Additional Tools to Support Identifying and Stratifying Enrollees and To Support Services	
Supplemental Tool	**Description**
Smart Care Management Assignment	We generate a daily census report of Enrollees, by risk level, who may benefit from varying levels of PHM intervention. We subsequently segment Enrollees based on risk score and population such as SMI, SED, Disease Management, Behavioral Health, Transplant, Foster Care, etc. to allow for timely referral to the appropriate resource in the field or telephonically within our clinical teams.
Standard care planning tools	Our Care Plans are built in CareCentral guided by standard evidence-based guidelines.
Social Service Needs Assessment, Database and Call Center	Through our database of social service resources, we can track the needs of the population and intervene at the Enrollee, organization and systemic level to support PHM services.
Holistic view of Enrollee needs	As described above, our Member 360 view helps quickly identify Enrollee needs and supports services provided them by showing any Enrollee-facing staff a holistic view.
Provider Portal and Data Exchange Process	Our provider portal is connected to CareCentral, which allows us to share the outcomes of health screens, EPSDT information, social determinants of health obstacles, Enrollee assessments, care plans, and multi-disciplinary team contacts with providers. Providers can view open and pending care needs through the portal and notify us when those care needs are closed through encounters, claims, EMR interchange, or submission of supplemental medical record information.
Mobile and web Prevention and Wellness education	Through digital platforms, which comply with Federal Section 508 standards and web content accessibility guidelines, Enrollees learn about benefits and services, how to access care, learn about preventive care, how to self-enroll in our health and wellness programs, and how to order a new ID card. Engaging Enrollees through their mobile devices and helping them to take even small steps, such as downloading our mobile app, is a step toward empowering them to be active participants in their health and health care.

b. Risk stratification methodology and descriptions of the types of data that will be used.

Our proprietary **ID/Strat** process for risk stratification, in **Figure C.24-**5, generates an aggregate Enrollee risk score through predictive analytics of multiple types of data, which stratifies the Enrollee into risk levels that define the level of intervention they receive.

We created our proprietary Identification and Stratification (ID/Strat) process for our Kentucky market in 2011. Based on its success we have since applied it to all of our health plans and have continued to advance the tools with multiple types of data, including predictive analytics and smart algorithms that go beyond cost-based stratification. This effective risk scoring and stratification process ensures Enrollees who need services and support the most receive it quickly. Our ID/Strat process is an innovative multichannel approach that leverages data sources from our integrated platform to identify priority populations, such as those with emerging risk or high-risk needs like pregnancy with substance use disorder. The model can accept inputs of varying frequency. It uses a proprietary predictive algorithm that considers all variables (e.g., electronic health record (EHR) data, readmission risk, Health Risk Assessment results, chronic diagnosis classifications, claims and pharmacy data, pharmacy adherence, zip codes, and race and ethnicity) to identify Enrollees at risk early. It then directs them, using our care management assignment logic, to the appropriate intensity of care and the most appropriate Care Manager or other support person based on their hierarchy of condition and specific needs.

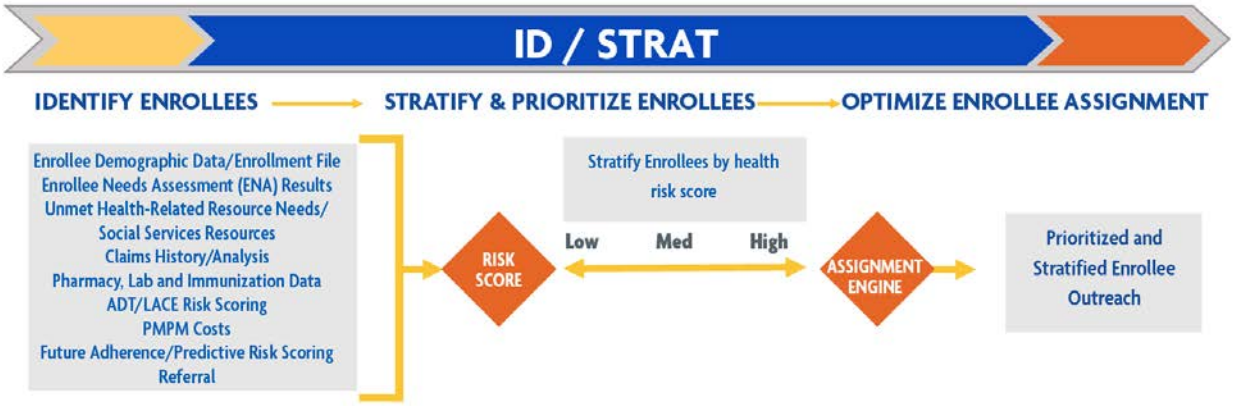

Figure C.24-5 WellCare ID/Strat

Our identification methods are scientifically based and use a combination data aggregation, and analytics combined with predictive analysis and risk scoring to ensure the identification of every Enrollee who needs intervention. The approach analyzes a volume of inputs, the way they combine, and then weighs them in a manner that identifies individuals in priority populations who might be masked by traditional ID/Strat methods. The ID/Strat process leverages our integrated data warehouse as a source of all claims, adherence, and demographic data used as shown in **Table C.24-7**.

Table C.24-7 ID/Strat Data Sources

Types of Data Used in Our Identification and Stratification Tool (ID/STRAT)		
Inputs	**Algorithm**	**Frequency**
Manual Referrals	Care Coordinators, PCPs, community partners, Health Coaches, etc., can flag Enrollee for high risk at their discretion.	Multiple Times Daily
Inpatient authorizations, claims data including Length of Stay, Admission acuity, comorbid conditions and ED use in the last six months	*Discharge Risk Score:* The modified readmission prediction tool improved from the nationally recognized LACE score.	Continuous on-demand at Admission
Enrollee responses to physical and behavioral health screens and supplemental assessments	Care Needs Screenings scored for risk and mathematically validated. The screening identifies health conditions and unmet social resource needs.	Annually or as needed
California Disability Payment System (CDPS) score as an input for the severity of a Enrollee's chronic conditions	*CDPS Risk Score*: Our algorithms also identify specific impactable chronic conditions, behavioral health conditions, asthma, or diabetes, information we use to engage Enrollees in our evidence-based education programs.	Monthly
Per Enrollee Per Month Cost	*PMPM Costs*: Although shown to have a lower predictive power, total PMPM cost can capture some Enrollees who have fewer chronic needs but a sudden, dramatic escalation in care	Monthly
Enrollee claims/encounters, demographics, lab, pharmacy, pharmacy claims	*Decision Point's Predictive Risk Score*: This proprietary algorithm assigns a future risk score based on admission/readmission risk, ER use, and disease progression predictions that estimates Enrollees who will experience a future decline in health	Monthly
Claims for current prescribed medications, adherence to clinical practice guidelines for preventive health	*Value of future adherence/Medication Adherence Risk Score:* This claims-based algorithm calculates a value of future adherence score (VFA) based on the pattern of taking currently prescribed medications. The VFA identifies how active Enrollees are in their health care, the best methods to engage them and their overall responsiveness.	Monthly
Various demographic data	*Propensity to Reach Score:* This algorithm uses Enrollee demographic, income, residence, employment, age, and summarized credit data to predict the likelihood of reaching an Enrollee during outreach.	Monthly

We continuously run our risk stratification algorithm against Enrollee data, such as new claims and authorizations, to enable timely, proactive outreach and care planning for Enrollees with high needs, or those at risk of future high needs. Included in our algorithm are rules for co-morbid behavioral health and substance use disorders and co-morbid physical and behavioral health conditions, and other factors that may necessitate a higher level of Care Management.

Additional Sources of Referral Identify Enrollees for Care Management:

- Enrollment files with special health care needs indicators
- Welcome call to Enrollees
- Incoming Enrollee Services calls
- Geographic population health analysis
- Enrollee or caregiver requests
- Event Triggers
- Provider or caregiver referrals
- Prior authorization referral
- Discharge planning and retrospective review and team rounds
- Community program referrals (WIC, First Steps)
- 24/7 Nurse Line and Behavioral Health Crisis Line
- Our Community Connections line
- Care Center calls

Evidence of Effectiveness of Our Risk Scoring and Stratification Approach

WellCare monitors the effectiveness of our ID/Strat model to confirm our PHM program is engaging the right Enrollees at the right levels of intervention. We also received independent verification of its effectiveness from an outside organization. In particular, we evaluate retrospective data to test the predictive power (using backward testing techniques) of each factor embedded in our algorithm – adjusting the weights of factors as we add new ones, or eliminating factors all together if they are over indexed. This new algorithm is then compared to our prior model to evaluate increased predictive power. We also compare cost and outcomes data for the high-risk Medicaid population engaged in care management with similar cost and quality outcomes data for the high-risk population of Enrollees who choose to not participate in care management. Our cost and quality outcomes for Enrollees across all of our affiliated health plans gives us confidence in the effectiveness of our risk scoring and stratification approach to appropriately identify Enrollees for the right interventions.

c. Methods to identify Enrollees for each of Kentucky's priority conditions or populations

There is **no wrong door** to access our PHM Program for Enrollees in priority populations, such as adults and children with special health care needs or women with a high-risk pregnancy. The same is true for Enrollees with priority conditions, such as Asthma, Heart Disease, Diabetes, obesity, tobacco use, cancer, infant mortality, low birth weight, behavioral health or substance use disorder. In addition to continuously running the ID/Strat engine described above, methods to identify Enrollees include:

- *Enrollment Files:* Certain conditions and populations, such as Enrollees with Adult Guardianship and Pregnancy, appear in enrollment files from the Commonwealth and are flagged automatically for various PHM programming.
- *Referrals:* Every Enrollee-facing associate and all of our providers receive training to identify needs and make direct referrals to a PHM program. Enrollees may self-refer or their family/legal representative may refer an Enrollee at any time. We receive referrals from

providers; the 24-hour Nurse Advice Line; Behavioral Health Crisis Line; Department or Agency staff; community partners; hospitalists; and other MCOs.

- *Diagnosis Flags:* We can identify Enrollees needing condition-specific prevention and wellness education and intervention by identifying diagnoses placed on claims and through exchange of flat files for care needs closures with providers.
- *Enrollee Needs Assessments:* Assessments provide Enrollee-specific and in-depth data about Enrollees and their holistic needs, which allows us to identify priority conditions and populations in real time. Because our condition-specific management is fully integrated within our PHM program, our Care Managers are empowered in real time to provide education and intervention based in priority condition or population without having to pass off to another Care Manager or health coach if the Enrollee has already been identified for Care Manager interventions

d. Services and information available within each risk level.

Table C.24-8 shows the PHM services and information available for Enrollees at each defined risk level. Enrollees with specific priority conditions receive additional services and information specific to that priority condition as outlined in our response to Priority Conditions below.

Table C.24-8 PHM Services and Information Available for Enrollees at Each Risk Level

Risk Level	Risk Level Services Information
Low (Health Promotion and Wellness)	• Transitional care management (e.g., discharge from a hospital or ED), medication reconciliation, and UM/prior authorizations for services or procedures • Enrollee services support with locating an in-network PCP, and immediate connection to an RN/BH specialist during business hours • 24/7 Nurse Line and BH Crisis Line • Wellness promotion and self-management condition-specific educational mailings including EPSDT periodicity and outreach • Care coordination and HRA, including wellness and prevention activities • Healthy Rewards incentive program and value-added services • Healthy Pregnancy support, as needed • Community Connections Help Line and database referrals, including community-based training and coaching • Increased interventions when ID/Strat identifies an emerging risk trend toward Management of Chronic Risk level • Enrollee welcome letter with condition specific educational material to support interventions • On-demand virtual education, coaching, and support for various conditions or populations • Enrollee quarterly newsletter
Moderate (Management of Chronic Conditions	• Includes all low risk interventions • Telephonic care management and coordination • Monitoring and follow-up for indications of increasing risk level • Discharge planning and transitional care management

Risk Level	Risk Level Services Information
Outreach)	• Engagement with a Care Manager whose qualifications align with an Enrollee's medical or BH connections or SUD • Behavior modification education when applicable (e.g., smoking cessation education, healthy weight management) • Person-centered care plan, follow-up and monitoring, and annual reassessment if an Enrollee experiences a change in condition or circumstance • Assistance with integrated care needs • Multi-disciplinary care team (MDT) engagement in care planning • Increased interventions when ID/Strat identifies a high risk
High Management of Chronic Conditions Outreach (Complex Care Management)	• Includes all low and moderate risk interventions and UM/prior authorizations, as needed • In-person interactions in an Enrollee's home or other supplemented by phone contact • More frequent and intense MDT Enrollee engagement with more disciplines involved • Increased interventions when ID/Strat or a Care Manager identifies rising risk toward higher intensity care

e. Description of the care planning process, including methods to ensure individualized and person-centered care plans, and summary of how the Contractor will include Enrollees, their caregivers, and multi-disciplinary teams.

One of WellCare of Kentucky's defining characteristics is our person-centered culture that promotes an integrated care planning process in which the Enrollee is the decision-maker for their own needs and care plan goals. When Enrollees participate fully in the care planning process, they are more likely to meet their health and wellness goals. A person-centered approach means going beyond assessment data to gain in-depth understanding and insight into an Enrollee's needs and goals. Care Managers facilitate development of the care team and the care plan. They guide and support Enrollees, helping them understand the connection between interventions and the interim steps they must take to control their chronic conditions and achieve their desired quality of life. This approach often means focusing on tangible tasks to build on an Enrollee's capacity to change and develop trust. These Specific, Measureable, Attainable/Achievable, Realistic/ Relevant and Timely or Time-framed (SMART) goals are included in each care plan and help the Enrollee stay on track. For example, an Enrollee may have a SMART goal of increasing physical exercise by 10 minutes a day by walking down to the end of the road and back or a SMART goal of scheduling and keeping a PCP appointment.

Care Managers support and empower Enrollees as they navigate the complexities of managing their health through the care planning process. They help Enrollees develop their health literacy to build confidence and gain self-management skills for independent living. Care Managers develop a written care plan for all Enrollees participating in care management. All care plans are stored in our CareCentral platform and are made available to Enrollees and others (with

consent) participating in their care. Flags and triggers within CareCentral help the Care Manager track that indicated interventions are being completed and new risks are identified and addressed timely.

ENSURING DEVELOPMENT OF AN INDIVIDUALIZED AND PERSON-CENTERED CARE PLAN

Our Care Managers facilitate a collaborative multi-disciplinary team approach to develop an individualized care plan with the Enrollee based on individualized needs. The care plan is personalized. It includes Enrollee or caregiver participation, as well as support of the PCP, Behavior Health practitioner, pharmacist, social worker and others, as appropriate. Our fully integrated care plans address physical and behavioral health goals, functional and psychosocial goals, environmental, and social services. Care Managers use findings from the Enrollee Needs Assessment, claims analysis and risk scoring, any available medical records, and condition-specific clinical practice guidelines, to form the basis of an initial care plan.
Care plans are individualized based on engagement with the Enrollee and family, as well as their PCP and other physicians to inform the Enrollee's goals, preferences, and priorities.

Primary care plan components include:

- Prioritized and Measureable Goals: Enrollee-desired or anticipated results based upon identified opportunities and needs. These are person-specific, measurable, achievable, and time-bound.
- Opportunities/Needs: Medical, behavioral, dental, pharmacy, educational, and social service-related resource needs identified during screening, assessments, and conversation with the Enrollee, family, and caregiver.
- Enrollee/Family/Caregiver-Defined Interventions: Steps taken to achieve a goal, remove a barrier, and eliminate a need.
- Intended Outcomes: Expectations the Enrollee would like to achieve are also included. To continue to support them in meeting their identified goals, Care Managers monitor Enrollee progress and identify barriers to goal completion.

The individualized care plan includes the following components in alignment with Section 34.4 of the Draft Managed Care Contract.

- Identification of appropriate medical, behavioral, and social services consistent with the PCP or specialist diagnoses and treatment and recovery plans
- List of medications and documentation of medication reconciliation activities
- Initial assessment of Enrollee risk factors and plans in place to minimize them including detailed crisis plans for Enrollees with a behavioral health risk
- Evaluation of cultural and linguistic needs, preferences, and limitations; visual and hearing needs, preferences, and limitations; available benefits; and community resources
- Description of Enrollee’s psychosocial needs including any housing or financial assistance needs; how such needs will be addressed to ensure the Enrollee’s ability to live safely in the community;
- Prioritized goals taking into effect Enrollee and caregiver goals, preferences, and desired level of involvement in the care management plan
- Timeframe for re-evaluation

- Resources to be used, including the appropriate level of care
- Plans for continuity of care, including transition of care and transfers
- Collaborative approaches to be used, including family participation
- Self-Management Plan of activities for the Enrollee to manage his or her condition based on caregiver instructions or materials. Activities include maintaining a prescribed diet, charting daily readings (e.g., weight, blood sugar), adhering to provider treatment plan, monitoring of all activities and report generation from a common electronic medical record platform.
- All other planned interventions (e.g., agreement to attend an AA meeting or participate in a healthy eating cooking class)
- Development of a schedule for follow-up and communication

IDENTIFYING BARRIERS TO MEETING GOALS OR COMPLYING WITH THE PLAN:

The Care Manager partners with the Enrollee to identify potential obstacles to receiving or participating in the care management plan. This can include issues such as language or literacy; lack of or limited access to reliable transportation; an Enrollee's need for additional education and support on their condition; an Enrollee's need for motivation; financial barriers; cultural or spiritual beliefs, environmental barriers, and visual or hearing impairments.

Care Managers live and work in Enrollee communities, so they are familiar with the community, the culture, and the barriers that the Enrollee faces. We match Care Managers to the most appropriate Enrollees based on their hierarchy of conditions and the Care Manager's individual experience and training. The Care Manager guides and supports the Enrollee using motivational interviewing and teach-back techniques to empower them to realize their health improvement and recovery goals.

SUMMARY OF APPROACH TO INCLUDE ENROLLEES, CAREGIVERS AND MULTI-DISCIPLINARY CARE TEAMS IN THE CARE PLANNING PROCESS

WellCare of Kentucky's fully integrated care model factors in a member's physical health, behavioral health, pharmacy, long-term services and supports (LTSS), and social resource needs under a single fully in-sourced infrastructure with a single line of accountability, single integrated technology system (CareCentral), and an integrated team-based approach. We ground our care model in our organizational mission to help members live better, healthier lives. Person-centered care reflects the choice and voice of each member and their family or caregiver, as applicable, and addresses a member's unique personal goals. Our approach:

- Begins with a clinically robust identification process supported by Enrollee outreach and deep data analytics to stratify the Enrollee by acuity and ensure the right level of intervention based on need, site of care availability and local resource allocation
- Supports a comprehensive assessment process, including identification of social determinant of health needs
- Encourages the involvement of MDTs
- Supports a person-centered approach to care and service planning that is fully integrated addressing Enrollee physical, behavioral, pharmacy, and social service needs as well as long-term supports and services where applicable with a focus on community placement in the least restrictive setting of the Enrollee's choice

- Emphasizes local care and service coordination at the site of care for Enrollees with complex needs
- In addition, our care model offers evidence-based integrated medical and behavioral clinical guidelines and leverages our custom-built clinical platform, CareCentral, to connect the care model through a single integrated IT system.

The MDT wraps around the Enrollee to coordinate the delivery of whole-person care. MDT participants work together to establish the care plan and to monitor and assist in meeting specific goals outlined in the plan. They alert the Care Manager to changes in an Enrollee's health status or needs. CareCentral aids in the formation and operation of the MDT by tracking contacts, sharing information collected through screens, assessments, and reassessments, sharing of care plans (goals, interventions) and integrated workflow management to assign tasks and follow-ups to MDT members.

Creating an MDT: Enrollees choose who they want to be included in the MDT and who gets to speak and advocate for them. As part of the Enrollee Needs Assessment, Care Managers ask Enrollees about trusted providers and specialty providers like pediatric specialists or BH specialists. The core MDT includes the Enrollee, the Care Manager, and the PCP who serve as primary contacts for care. The core MDT engages participation by others involved in an Enrollee's care, such as BH providers, specialists, housing specialist, state agency staff, community support staff, discharge planning teams, housing specialist, pharmacist, nutritionist, school personnel, and more depending on an Enrollee's needs or desires. CareCentral identifies all members of the final MDT and their contact information and their preference for contact.

Engaging MDTs: WellCare makes it easy for MDTs to participate in and stay informed about an Enrollee's care. We meet providers where they are—in offices, hospitals, and nursing facilities—and use technology where available and when appropriate to facilitate meetings to discuss an Enrollee's case. CareCentral empowers real-time collaboration among MDT Enrollees. Workflows extend beyond shared notes and secure text messages to incorporate multi-dimensional media, video-conferencing, shared dashboards and reports, and alerts. Care Managers make personal contact with an Enrollee's suggested MDT members to explain their responsibilities on the team and its importance to the Enrollee's care. The Care Manager provides a copy of the care plan to MDT members.

In addition to creating an MDT for high-needs Enrollees to establish a care plan, a Care Manager may engage the MDT when an Enrollee:

- Undergoes a care transition from one clinical setting to another
- Has a change in level of care, or experiences an unplanned inpatient admission or ED visit
- Is identified by a pharmacist or predictive modeling as being on a high-risk medication regimen, not following a medication regimen, or overusing opioids or other medications
- Experiences a significant change in circumstance or non-health changes, including loss of a caregiver, housing, or other natural or social support
- Wants or needs support to remove barrier(s) to achieving goals

It takes a Village: Working Across Steakholders to Serve Those in Need

A WellCare of Kentucky member in Louisville with limited cognitive function and with a state-assigned financial guardian became a frequent visitor to the emergency room, sometimes having multiple visits a day. When he came to the attention our Care Manager, Mike, the Enrollee had more than 30 ER visits in one month. Mike not only engaged the Enrollee, who suffered with early Alzheimer's, COPD, and chronic asthma, but he engaged a broad MDT to help the Enrollee address the isolation he faced and health conditions driving him to the ER. Mike worked with the coordinator of counseling services at Norton Hospital, the Enrollee's PCP, the Louisville Fire Department's Paramedical unit, the Enrollee's financial guardian, and the APS worker. Over time, the Enrollee's ER utilization waned, but Mike continued to watch closely even after the Enrollee declined further help. After more than a year, when the Enrollee started showing back up in the ER and the hospital, Mike once again engaged with the Enrollee and his MDT to look for better long-term solutions to the Enrollee's living situation and health needs, as his cognitive function and ability to perform activities of daily living independently were continuing to deteriorate. Eventually connecting him with the long-term care program, Mike was able to help the Enrollee stabilize into a program and residence that allows him to be in a safe and caring environment with ample socialization.

f. Stakeholder engagement strategies, including involvement of community resources to meet social needs.

Every element of our PHM program is foundationally supported by our unique approach to stakeholder engagement and involvement of community resources to meet social needs — our Community Connections program. We know through research from the Robert Wood Johnson Foundation and County Health Rankings that the majority of what affects health outcomes occurs outside of the doctor's office. If a family wakes up and their electricity has been cut off, they will not prioritize getting their child to a well-child checkup that day. In turn, this could cost our health care system more, especially if Enrollees are going to the ED just to receive a hot meal and a warm bed to sleep in for the night. We recognized this and created the Community Connections model in 2011, long before addressing social determinants of health became part of standard Medicaid managed care operations. Through Community Connections, advocacy staff and PHM staff partner to engage stakeholders to address both individual Enrollee needs as well as larger population health challenges. We know that serving the community as a whole is not only the right thing to do, but it ultimately affects our Enrollees' wellbeing. To do this, Community Connections focuses on four distinct elements.

Making a Local Impact on SDOH

Since launching the Community Connections program in Kentucky, we have connected more than 31,000 people to 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program, including a 26% reduction in emergency department visits, and a 53% decrease in inpatient spending.

Social Service Database: First, we created a database that our Community Engagement Partners populate on a local level. The database consists of every type of social resource our Enrollees may need, such as food access, transportation, links to services for people experiencing homelessness, etc. We want to have a robust database that can aid our Enrollees in finding what they need with information that is as current and detailed as possible. For someone who has not accessed those services before, it can be daunting and having details only helps break down barriers. For example, food banks often are only open certain days or require certain documentation to be considered eligible for assistance. That is why our local staff works to gather information at the local level about what a resource offers so we can share that information with our Enrollees before they step foot in a community organization's office for assistance.

We do this by keeping a finger on the pulse of what is going on in the community. By working with our community partners to gather what they offer, by being present in the community, we can help our Enrollees more holistically. With our database, we are also able to check back in with our Enrollees to see if they accessed the service to close the loop on the referral and if not, why. This helps us identify what we can do to further help our communities. The most important way we stay connected to our community partners is through participating in community activities, such as coalitions, interagency councils, and sitting on the Boards of Directors of nonprofit agencies.

Building Close Connections through Community Engagement

WellCare's relationship with Prevent Child Abuse Kentucky (PCAK) began through a conversation with a local Community Engagement Partner and PCAK's Engagement Manager during a community coalition meeting. This initial conversation led to a joint meeting with PCAK and WellCare's Community Connections leadership where we brainstormed opportunities to collaborate. Those brainstorms led to various projects including community grants to promote PCAK child abuse awareness events across the state and funding of a Safe Sleep/Abusive Head Trauma video to PCAK for a partnership with Kentucky Hospital Association to show the video to all new moms to help prevent shaken-baby syndrome and other abuse. Through these collaborations PCAK requested Sr. Manager of Community Engagement, Elizabeth Starr join the Board of Directors where she now sits on the External Public Affairs Committee. This partnership also led to WellCare of Kentucky's State President, Bill Jones, providing opening remarks and introducing Gov. Matt Bevin before beginning the Pinwheel Planting on the Capitol front lawn in 2018.

Community Impact Councils: Another way we engage stakeholder is by facilitating Community Impact Council's (CIC). This process brings together different community members to talk about the strengths in the community, but also where there are some opportunities. Local Community Impact Councils are strongly rooted in local communities and CIC membership typically includes individuals who have strong connections in their community, with social and financial capital connected to their community. One particular area of attention is the availability and sustainability of social resource organizations that remove social barriers to accessing health care for our Enrollees. Our goal is to understand the community's existing

services, to pinpoint the most urgent gaps and to identify action steps to address those priorities while seeking creative ways to sustain social resource organizations and the services they provide in local communities.

Social Service Resource Help Line and Call Center: Knowing that the need existed for Kentucky's Enrollees outside of higher risk levels of care management to be connected with social resource organizations, WellCare created the Community Connections Help Line (CCHL) in 2014. In 2018, WellCare opened a Care Center in Hazard, which houses one of the four national locations for the CCHL. This telephonic social service referral line is manned by Peer Coaches and liaisons who assist callers in finding and accessing needed social services. They provide Enrollees with information about available benefits and connect individuals to social resource organizations to address social determinants of health. These peer-support coordinators, hired through workforce innovation represent many diverse cultures including individuals with disabilities, seniors, caregivers, students, veterans and military families. Coordinators have first-hand experience navigating social services or have "lived" experience and can skillfully identify primary cause issues present in individuals' lives. For example, a Peer Coach could uncover that a mother calling for housing support is actually experiencing domestic violence and needs a referral to a domestic violence shelter such as Turning Point in Eastern Kentucky that covers Floyd, Johnson, Magoffin, Martin, and Pike Counties. We also employ Health Coaches, who work closely with Enrollees to ensure they understand their care needs and assist with barriers to care through referrals to our care management and Community Connections programs.

Since launching, 6,466 Enrollees have been referred to 18,955 services in Kentucky through the Community Connections Help Line.

Addressing a Statewide Need, One Community at a Time

From 2015-2019, Community Engagement Partners have facilitated 8 Community Impact Councils (CIC) in counties across the Commonwealth to bring community leaders together who have identified transportation as the most urgent social safety net gap within their county. Using WellCare's internal database, Community Connections has also seen transportation as a top referral in Kentucky. WellCare has partnered with Bluegrass Community Action Partnership (BGCAP), LKLP Community Action Agency, Pennyrile Allied Community Services (PACS), and Rural Transit Enterprises Coordinated (RTEC) as local transportation providers who attended the CICs held in their communities. As a result, WellCare invested to provide free transportation to non-billable medical services as well as to employment and education services, WIC appointments, grocery stores, pharmacies and more to individuals in 20 counties. For Enrollees using PACS, we saw a 12.6% decline in ER use and 29% drop in inpatient admissions among Enrollees with diabetes, as just one example of the success of this collaboration.

Community Investments and Data Exchange Agreements with Partners: Another important part of our program is the investments we make in communities across the Commonwealth. WellCare's Community Connections team leverages the data captured through our internal database along with information gathered from being part of the communities we serve to

determine where the greatest needs are and how WellCare can assist social resource organizations in sustainably providing their programming.

In 2011, we made a conscious choice to invest dollars back in the community instead of using traditional marketing techniques because we saw grant funding to community-based organization's disappearing as the economy was changing. Using the social service data, the Community Engagement team identifies when services are needed and then mobilizes resources to (re)create the needed service by establishing community contracts to assess impact and pilot new outcome-focused payment models with community partners. The savings we see in reduced ER and inpatient use from removing social barriers are reinvested back into the community through investments and contracting designed to increase data-sharing capabilities or sustain critical social services.

In 2018 WellCare learned about the faith based organization Water into Wine Food Pantry located in Magoffin County Kentucky when they were mentioned as a partner of the Christian Appalachian Project in a community meeting. At the beginning of July 2018, the local Community Advocate reached out to Jeff Tackett, Water into Wine's Community Outreach Coordinator, to learn more about their program. After an invitation to visit their campus to see the food pantry and meet the staff that work there every day, Mr. Tackett explained that the federal government released a $50 million grant aimed at subsidizing dairy framers for milk products. In return, this milk was pledged to local pantries to distribute on a monthly basis, yet they did not have the needed refrigeration to maintain such donations. Mr. Tackett stated that the only reliable refrigeration they had at the time was a freezer and expressed a need for refrigerators/coolers for the additional milk that they would soon be given. WellCare was able to provide a grant to Water into Wine to purchase commercial refrigeration to store milk and dairy products, and also assisted in the storage of fresh fruit and vegetables that are susceptible to a short shelf life. Today, they receive close to 50 gallons of milk three days a week. This milk is given to their clients which is increasing the nutritional value of their pantry visit, which ultimately supports better health.

g. Technology and other methods for information exchange, as applicable.

Our PHM staff uses CareCentral, our fully integrated clinical platform, as the single gathering point for all Enrollee-level information. With our implementation of CareCentral, we integrate information from multiple sources in a single source of truth for an Enrollee, including data we get from providers, either directly or through KHIE, such as ADT information. CareCentral stores all authorizations for services, as well as assessments and care plans. We track individual Enrollee utilization and identify gaps in care, which is stored and easily accessible in the CareCentral system. CareCentral then connects to our provider and Enrollee-facing systems to share information as needed and appropriate.

Exchanging information with providers: We provide Enrollee data and care plan access to our network providers using the secure provider portal. Detailed information on individual Enrollees is available through our "Appointment Agendas," which give providers a checklist of things the Enrollee needs based on diagnoses, conditions, and open care needs. We encourage the use of electronic health records (EHRs), using KHIE for provider data exchanges. When the

new contract period begins, we will begin requiring all our network providers to sign a Participation Agreement with the KHIE. Our Network Management, QPAs, and PR Reps will train providers on the benefits of EHR and KHIE adoption in person and telephonically.

We offer a variety of other data sharing modalities, and have recently improved our data analytics capabilities to include more customized provider reports and tools with the ability to:

- Provide actionable data, including reason for non-compliance with A1c Control (e.g. measure is above 9 or the test was not even completed or Enrollee hasn't been seen)
- Customize reporting based on specific measure sets or specific data elements by Enrollee, by provider, or by ZIP code
- Prioritize Enrollees or families based on Quality Stratification Index which identifies Enrollees/families with multiple care gaps or Enrollees with difficult to address care needs
- Create a task at the household, provider or Enrollee level to coordinate across the multidisciplinary care teams, quality and provider relations

Another way we exchange information with our providers is through the Provider Engagement Model (PEM), which includes a dedicated team of regionally dispersed local experts who live and work in the communities they serve. This team helps providers improve performance in VBP arrangements by analyzing provider performance data, sharing this data with providers, assessing opportunities for improvement, recommending ways to improve performance and holding providers accountable for action plans.

EXCHANGING INFORMATION WITH ENROLLEES

We offer Enrollees information, such as care needs, in the secure Enrollee portal and through our mobile Enrollee app. Because not all Enrollees access technology, our PHM staff also prints out materials such as the Enrollee Needs Assessment, care plans, and educational information as needed so that all Enrollees have a complete package of material to guide their engagement in the PHM program.

Our experience in the Commonwealth has taught us that engaging Enrollees in their health care increases the likelihood that they will receive recommended preventive care and improve their health outcomes. When Enrollees receive preventive care, providers are able to close care needs, and manage total cost of care. We have improved our Enrollee engagement through the following programs:

- Our **PCAs** co-locate in provider offices to work side-by-side with practices in accessing our latest Enrollee care needs and provider-based reports and can work inside the practice to engage Enrollees.
- Our **QI Care Needs Coordinator** program conducts continuous telephonic outreach to Enrollees not engaged with a PCA, a **Health Coach,** or **Care Manager.**
- Our Unable to Contact **(UTC) REACH program** is designed to locate hard-to-find Enrollees and connect them with our **Community Connections** resources, such as community supports to promote stable housing, utility assistance, and support groups in addition to connecting to appropriate medical and behavioral health care.
- We are organizing Enrollee focus groups throughout 2020, which our newly hired Director of Enrollee Experience will lead. These forums will help us to continue learning about our

Enrollees' experience and needs, ensuring we invest in resources and drive operational improvement to provide the best managed care environment leading to happier, healthier Enrollees.

- We send **targeted mailings** to Enrollees, reminding them of recommended preventive care including **periodicity screenings** and the importance of medication adherence.
- Our **PSO** outbound Enrollee activation and calling program is informed by advanced analytics, based on open care needs and guided by behavioral analytics of how to best engage Enrollees.
- Our **Healthy Rewards program** offers Enrollees opportunities to receive reloadable debit cards or gift cards (which comply with state and federal guidelines) for stores to purchase needed personal, home, baby, and family-related items that promote good health behaviors for practicing healthy behaviors, such as visiting their PCP for wellness visits. **In 2019 WellCare of Kentucky closed 43,738 care needs using our Healthy Rewards program with $1,018,155 distributed to Enrollees in the form of gift cards.**

QUALITY DEPARTMENT INFORMATION EXCHANGE

In addition to technology-enabled information exchange, WellCare of Kentucky's Quality Department teams, which consist of local experts, from leaders to support staff, who live and work in the communities they serve, collaborate with our Population Health Management department to provide comprehensive and holistic care for our Enrollees. Our integrated and focused regional team of Kentucky-based associates engage our Enrollees, providers and stakeholders through various channels, including:

- *Health Coaches conduct* continuous telephonic outreach to our most vulnerable Enrollees and have made more than 13,000 successful coaching calls to Enrollees, educating them on recommended critical screenings and preventive services, helping to bring awareness to Enrollee health needs and transform Enrollee lives since the program's inception in February 2019. In addition, we will expand our program to include two additional Health Coach teams comprising local experts, focusing on smoking cessation, obesity and pre-diabetes/diabetes.
- *Care Needs Coordinators* continuously outreach to Enrollees telephonically to educate them on recommended care needs and help schedule appointments for those Enrollees not engaged in a PCA practice or in a care management program.
- *Patient Care Advocate (PCA) team* who are co-located in provider offices and assist Enrollees in scheduling appointments through telephonic outreach and direct Enrollee engagement, educate on care needs and assist in removing barriers to care.
- *Member Outreach Coordinators (MOC)* who use our Unable to Contact (UTC) program, REACH, to locate Enrollees for whom we have incorrect or missing contact information. We currently focus out UTC outreach in region 8 due to the prevalence of clinical complexities and social determinants of health that increase the UTC rate in this rural area.
- *Kentucky QPA Teams:* Three teams of regionally located QPAs are responsible for assisting providers in closing care needs. They educate providers on HEDIS and HPR measures and the importance of completing appointment agendas. Appointment agendas allow our physician partners to identify, in a single report, Enrollee chronic conditions and care needs

that need to be addressed during an appointment. QPAs assist provider groups in practice transformation in order to develop coordination of care for patients. In addition, QPAs are responsible for EPSDT and AMRR audits, reviewing results directly with providers and developing corrective action through identifying opportunities to increase efficient and effective use of EMR templates and care alerts, office work flows and coding to improve capture of quality services. In addition, QPAs assist with referrals to and coordination between care management as needed. In preparation of the new contract, we are implementing specialized QPAs to provide focused support to specialty providers, including Behavioral Health and OB/GYN. The Behavioral Health QPA will focus on care coordination between medical and behavioral health needs and the OB/GYN QPA will focus on women's health needs. Both will conduct visits with their respective specialty providers to educate them on performance management and our programs.

h. Frequency of provision of services.

Each Enrollee stratified in the Management of Chronic Conditions and Complex Care Management risk levels and engaged with care management will have a care plan to address his/her individual health related needs. Care plans are highly individualized and establish based on individual needs, individual frequency of interventions and service provision. However, we do establish standards of frequency based on high-level need so we can monitor compliance and efficacy of individual Care Managers and services provided, as described **in Table C.24-9**.

Table C.24-9 Provision of Services

Frequency of provision of services	
Health Promotion and Wellness	Annually through the HRA Access of self-management tools by Enrollee Care gap interface with educational materials and reminders, as needed (e.g., flu shots) New Enrollee welcome kit Quarterly newsletter
Management of Chronic Conditions	Includes all Health Promotion and Wellness service frequency, plus: *Moderate risk stratified* - Initial and monthly telephonic outreach for Enrollees with emerging risk or a chronic condition *High risk stratified* - Up to weekly face-to-face or telephonic outreach, along with coordination of medical, behavioral, pharmaceutical and social needs for Enrollees with emerging risk or one chronic condition
Complex Care Management	Includes all Health Promotion and Wellness service frequency, plus: *Moderate risk stratified* - Initial and monthly telephonic outreach for Enrollees with the complex care factors as stated in the contract *High risk stratified* - Up to weekly face-to-face or telephonic outreach, along with coordination of medical, behavioral, and social needs, for Enrollees with the complex care factors as stated in the contract

i. Priority areas (e.g., specific health risks, conditions, social determinants of health, etc.).

We continually review data and rely on our experience on the ground to identify priority areas to focus on in partnership with DMS. We identify all the priority conditions noted by DMS in Section 34.2 of the Draft Contract**,** and identify additional ones as data and experience informs, such as transplant patients or Enrollees with significant social service needs. We build specific condition-based interventions on priority areas and populations. We also collaborate with the community as described in stakeholder engagement above to identify priority social determinants of health, such as transportation and food insecurity, to focus on our investments and engagement.

PRIORITY CONDITIONS

We understand the prevalence of lifestyle-based conditions across the Commonwealth and have designed a variety of condition-based interventions and programs to help Enrollees regardless of risk level. We continually refine and add specific risk areas, such as our recent emphasis on programming around Opioid Misuse. **Table C.24-10** indicates what our data shows related to prevalence of priority areas across the Commonwealth as well as the success of targeted interventions for each condition.

Table C.24-10 Outcomes by Priority Conditions

Priority Conditions, Populations and Risk Areas

Program	Prevalence	Improvement From 2016 to 2018	
Asthma	18.5%	Inpatient Admits/K ER Non-Emergent Visits/K	Reduced by 10% Reduced by 20%
Heart Disease	20.8%	Inpatient Admits/K ER Non-Emergent Visits/K	Reduced by 6% Reduced by 14%
Diabetes	8.7%	Inpatient Admits/K ER Non-Emergent Visits/K	Reduced by 4% Reduced by 12%
Obesity	27.4%	Inpatient Admits/K ER Non-Emergent Visits/K	Reduced by 2% Reduced by 17%
Tobacco Use	16.3%	Inpatient Admits/K ER Non-Emergent Visits/K	Reduced by 9% Reduced by 16%
Cancer	0.9%	HEDIS 2018 Breast Cancer Screening HEDIS 2018 Cervical Cancer Screening	Increased 10% (Ranked 1st in KY) Increased 18% (Ranked 1st in KY)
Infant Mortality	0.4%	HEDIS 2018 Well-Child 15 (6+ visits in first 15 months)	Increased 24% (Ranked 1st in KY)

Program	Prevalence	Improvement From 2016 to 2018	
Low Birth Weight	5.3%	HEDIS 2018 Timeliness of Prenatal Care	Increased 1% (Ranked 1st in KY)
Behavioral Health and Substance Use	39.4%	Inpatient Admits/K ER Non-Emergent Visits/K	Reduced 6% Reduced 18%

Table C.21-10-a through **Table C.21-10-h** below describes specific condition programming and interventions targeted to the highest risk areas, most prevalent conditions, and DMS priorities.

Table C.24-10-a Population Health Condition Priority: Asthma

Population Health Condition Priority: Asthma	
Our Breath of Life Asthma Program embodies a holistic, comprehensive approach. It promotes wellness, improves chronic condition management, and improves population health through collaboration with communities. Multi-modal, targeted interventions through various channels improve health outcomes through innovative treatment and prevention efforts. The program is working for participants in Kentucky, where we saw a 64% decrease in admissions of children with asthma, and a 51.8% decrease in admissions for adults with asthma in 2018. • *Across Kentucky, we saw improvements on the following measures between 2016 and 2018, indicating a shift from costly, uncoordinated care to more effective coordinated care: ER visits/1,000, Inpatient Admissions/1,000, and Specialist visits/1,000.* • In Region Seven, where 23% of the Enrollee population has an asthma diagnosis, we have seen positive utilization trends: *15.3% reduction in ER visits/1,000, 1% reduction in IP Admissions/1,000, and a 6.6% increase in specialist visits.*	
Interventions	
Enrollee Interventions • Value-Added Services: OTC options; free vacuum cleaner with HEPA filters; hypoallergenic bedding; medical masks • Support and Tools: care plan and appointment reminders; online self-management tools; peer support • Physical Activity: WellCare's Asthma App for Enrollees to update action plan and track medications and activity • Counseling/Consultation Services: Health coaching; in-home assessments for safety; education to family	• Education Materials: Living an active, healthy lifestyle; understand environmental factors; explanation of health conditions; the important of compliance with maintenance medications *Provider Interventions* • Value-Based Payments: Incentives to improve Enrollee asthma outcomes • Tools: RPM for controller and rescue measured dose inhalers and reminder calls; telehealth; MDLive partnership • Education: Educational information through Provider Portal; CareCentral, Provider Manual; Provider Newsletter articles

Population Health Condition Priority: Asthma
Program Goals
• Improved Enrollee perception of health at discharge from care management as evidenced by an increased score in on the short form health survey (SF-12/SF-10) • Positive Enrollee Satisfaction Survey results • HEDIS Care Gap Reduction • Admission and Readmission Reduction • ED Utilization Reduction • Decreased need for rescue medication over a specific period of time after Case Management engagement • Fewer exacerbations requiring acute medical care and intervention
Partnerships and Collaborations
Local Environmental Agencies: Support Enrollees, family, and the community to manage environmental issues and asthma; Indoor, outdoor and worksite air quality; and to emphasize the importance of reducing tobacco use and exposure to secondhand smoke and allergens that can affect the Enrollees breathing such as pets in the home Kentucky Homeplace (KHP): Partnered in 2016 to help remove barriers to access for rural individuals in 30 counties. Individuals with chronic diseases such as asthma, actively engage in a six-week program that includes weekly meetings to learn about and take steps toward improving nutrition, medication use, exercise, communication, and decision-making. American Lung Association: Refer Enrollees to smoking cessation and peer programs.
Innovating to Treat Asthma
WellCare of Kentucky conducted a six-month pilot program through the Boyd County Health Department, which targeted kids with uncontrolled asthma. Healthy Homes 4 Healthy Kids provided multi-level interventions delivered through home visits, follow-up phone calls, and other efforts by staff trained in environmental home assessments and in asthma education and medication. In an innovative approach to empowering Enrollees to engage in their health, we provided iPads for access to online asthma resources and tracking inhaler use.

Table C.24-10-b Population Health Condition Priority: Heart Disease

Population Health Condition Priority: Heart Disease
Our Heart Disease Program (coronary artery disease, congestive heart failure, and hypertension) supports Enrollees' condition management through education, guidance, and support to learn more about their unique health concerns and to increase their ability to self-manage in accordance with their provider's treatment plan. The programs use evidence-based clinical practice guidelines and guidelines from the American College of Cardiology (ACC), American Heart Association (AHA), the American College of Cardiology Foundation (ACCF), and the Institute for Clinical Systems Improvement (ICSI), with additional direction from National Committee for Quality Assurance (NCQA), United States Preventive Services Task Force (USPSTF), National Quality Strategy (NQS), and Agency for Healthcare Research and Quality (AHRQ). **Our HEDIS scores are above average for the**

Population Health Condition Priority: Heart Disease	
Commonwealth on measures related to heart disease, including Controlling High Blood Pressure - Total (CBP18) and Comprehensive Diabetes Care - Blood Pressure Control (<140/90) (CDC18): We rank 2nd in Kentucky for coronary artery disease-related HEDIS measure, Persistence of Beta-blocker treatment after a heart attack.	
Interventions	
Enrollee Interventions • Value-Added Services: OTC options; Healthy Rewards-financial incentives for healthy decisions and care gap closures • Support and Tools: Care gap reminders and care plans; online self-management tools; peer support; provider search • Provider Outreach: Outreach based on risk level • Education and Training: Self-monitoring and reporting; regular provider visits, vaccinations; nutrition/activity guidance	*Provider Interventions* • Value-Based Payments: Incentives to improve Enrollee cardiovascular outcomes • Tools and Support: Provider Portal; CareCentral; locally embedded QPAs • Education and Training: Learn tactics to support Enrollee self-management; early identification and treatment • Coaching: Stress management; medication adherence and timely refills; supporting tobacco cessation efforts • Guidance for Information Sharing: As appropriate when risks are identified
Program Goals	
• Improved Enrollee perception of health at discharge from care management as evidenced by an increased score in on the short form health survey (SF-12/SF-10) • Positive Enrollee Satisfaction Survey results • HEDIS Care Gap Reduction • Admission and Readmission Reduction • ED Utilization Reduction • Improved LDL (target <70); based on provider's goal for Enrollee and Enrollee's personal goal; compare cholesterol lab data pre- and post-engagement at 6-12 months • Improved blood pressure: systolic (target <130) or diastolic (target <80); monitor and compare data sources pre-and post-engagement at 6-12 months • 5% weight loss for overweight members; monitor and compare weight documented in provider records pre- and post-engagement at 12-18 months	
Partnerships and Collaborations	
WellCare of Kentucky Plan President: Enrollee of the AMA board *Community Relations Team:* Participates in community events, including Healthy Hearts Wear Red; AHA Executive Challenge; Go Red for Heart Health - Health Fair; and the Happy Heart luncheon in Boyle County.	

Table C.24-10-c Population Health Condition Priority: Diabetes

Population Health Condition Priority: Diabetes	
Our Diabetes Program aims to prevent diabetes from occurring in at-risk and pre-diabetic Enrollees through diet, exercise, medication adherence, and lifestyle changes, helping empower them to achieve positive health outcomes. We refer Enrollees to local resources through our Community Connection model, which can connect them to area partners for physical activity and healthy eating opportunities, and to community prevention programs with the goal of reducing obesity, diabetes, and heart disease. The program uses evidence-based clinical practice guidelines and guidelines from the American Diabetes Association (ADA), American Academy of Pediatrics (APA), NCQA, USPSTF, NQS, and AHRQ, and specialty association, colleges, and societies. WellCare of Kentucky is a leader among MCO in addressing Diabetes. **We rank first for the following HEDIS measures related to diabetes care, nutrition, and physical activity counseling: WCC Child BMI, Adult BMI Assessment (ABA18), WCC Nutrition Counseling, WCC Physical Activity Counseling, and Comp Diabetes Care - Eye Exams (CDC18).** • **Our rank for the HEDIS Child BMI measure improved by almost 49 percentage points between 2013 and 2018 In 2018, 87% of our Kentucky Enrollees had HbA1c testing (4% above the US average), 92% had kidney monitoring, and nearly 60% had an annual diabetic eye exam. We attribute these successes to our Diabetes program interventions.** • **In Region Eight, where 12% of the Enrollee population has a diabetes diagnosis, we have seen positive utilization trends, including a 6.3% decrease in ER visits/1,000, an 81% decrease in inpatient medical-surgery admissions/1,000 and a 4.9% decrease in inpatient medical surgery 30 day readmissions.**	
Interventions	
Enrollee Interventions • Clean Out Your Pantry Program: Encourage Enrollees to adopt a healthy diet, active lifestyle, and healthy weight management • Fit4D: Diabetes coaching solution that provides personal care through human interaction and technology • Pharmacy Assistance: Pill splitter; home medication delivery; and CVS Pharmacy Advisor Support program • Counseling and Consultation Services: Health coach helps Enrollee understand symptoms, treatment, testing and exams • Value-Added Services: Healthy Rewards-financial incentives for completing preventive care and A1C testing; MyStrength	*Provider Interventions* • Education and Training: Importance of calculating BMI at every Enrollee visit and refer at-risk and pre-diabetic Enrollees to our prevention program. **We rank first among MCOs in the Commonwealth for BMI assessment measures.** • Support and Tools: Access to Prevent Diabetes STAT toolkit from the American Medical Association (AMA), AAP, and CDC
Program Goals	
• Improved Enrollee perception of health at discharge from care management as evidenced by an increased score in on the short form health survey (SF-12/SF-10)	

Population Health Condition Priority: Diabetes
• Positive Enrollee Satisfaction Survey results • HEDIS Care Gap Reduction • Admission and Readmission Reduction • ED Utilization Reduction • HbA1c < 7%; compare lab data pre- and post-engagement at 6-12 months • Maintain healthy diet; compare Enrollee's knowledge and dietary habits pre- and post-engagement at 6-12 months • Glucose control with target range of 80-120 before meals; compare lab data pre- and post-engagement at 12-18 months • Moderate physical activity regimen with minimum 30 minutes on most days; compare level documented pre and post-engagement 6-12 months
Partnerships and Collaborations
Team Ultra: We partner with the Marshall County Health Department to provide Team Ultra programming for school-aged children in the western part of the state. Through Team Ultra, children have access to this social support along with nutrition counseling and physical activity, **which can prevent the onset of diabetes.** ***"For the past three years, my girls have participated in Team Ultra at Central Elementary in Marshall County Kentucky. They love it! It has let them learn about getting more active and eating healthy. My girls always come home telling me what new thing they learn from Team Ultra. I hope that they get to continue to participate in Team Ultra for many years to come.*** ***-Thank you, Kendra James"*** *Kentucky Homeplace:* Links Enrollees in rural Kentucky to medical, social, and environmental services; Barren River District Health Department (BRDHD): Pilot to enroll Enrollees into a Diabetes Prevention Program (DPP) which is not currently covered by Medicaid; Come-Unity Cooperative Care: Operates a food pantry in Laurel County

Table C.24-10-d Population Health Condition Priority: Healthy Weight Management

Population Health Condition Priority: Healthy Weight Management
Our Healthy Weight Management Program embodies a holistic, comprehensive approach to addressing one of the most common chronic diseases in Kentucky and is a major risk factor for development of debilitating diseases, such as diabetes and cardiovascular disease. In 2018, 31% of adult Enrollees had an obesity diagnosis. **WellCare of Kentucky is a leader among MCOs in addressing Obesity. We rank first for HEDIS measures related to adult BMI and nutrition and physical activity counseling. We attribute these successes to our program interventions, particularly provider education.** Across Kentucky, we have seen improvements since 2016 that indicate a shift from costly, uncoordinated care to more effective coordinated care**. In Region Eight, where 36% of the Enrollee population has obesity, we have seen positive utilization trends, including a 5% decrease in inpatient admissions/1,000 and a 5% increase in outpatient visits/1,000. ER visits/1,000 showed a 11% decrease and specialist visits/1,000 increased by 8%, indicating a move to lower cost more appropriate places of service overall.**

Interventions	

Enrollee Interventions
• Enrollees enrolled in our six-month Healthy Weight Management Program work with a health coach and:
  o Learn to cook culturally sensitive healthy meals, and develop healthy lifestyle habits (e.g., weight loss)
  o Receive education materials on healthy eating choices, the benefits of exercise, diabetes symptom identification
• Healthy Rewards: Provides financial incentives for completing preventive care and A1C testing
• MyStrength: Online health coaching and support
	Provider Interventions
	• Education and Training: Importance of calculating BMI at every Enrollee visit and refer at-risk and pre-diabetic Enrollees to our prevention program. **We rank first among MCOs in the Commonwealth for BMI assessment measures.**
	• Support and Tools: Access to Prevent Diabetes STAT toolkit from the AMA, AAP, and CDC

Program Goals

- Improved Enrollee perception of health at discharge from care management as evidenced by an increased score in on the short form health survey (SF-12/SF-10)
- Positive Enrollee Satisfaction Survey results
- HEDIS Care Gap Reduction
- Admission and Readmission Reduction
- ED Utilization Reduction
- HbA1c < 7%; compare lab data pre- and post-engagement at 6-12 months
- Maintain healthy diet; compare Enrollee's knowledge and dietary habits pre- and post-engagement at 6-12 months
- Glucose control with target range of 80-120 before meals; compare lab data pre- and post-engagement at 12-18 months
- Moderate physical activity regimen with minimum 30 minutes on most days; compare level documented pre- and post-engagement 6-12 months

Partnerships and Collaborations

Community Farm Alliance and Mobile Market: Community farmers markets link Enrollees in Region Four to accessible health food

Phoenix Preferred Care and Phoenix Wellness: Projects that target sustainable nutrition initiatives, overall wellness, and community engagement in healthy lifestyles, such as community gardens

YMCA Kids Day: Community event in Henderson County to promote healthy eating

Strong Support from a Partnership

"I would like to extend Marshall County Health Department's support for WellCare's bid submission. Our organization has partnered with WellCare on Community Baby Showers, they have attended out health coalition meetings, and we have been fortunate to work with them on

Interventions
our after-school program Team Ultra. We have always been pleased with the partnership we hold with WellCare." ***-Jennifer Brown, MS, RD, LD, LDE, CLC,*** ***Public Health Services Manager, Marshall County Health Department***

Table C.24-10-e Population Health Condition Priority: Tobacco Use

Population Health Condition Priority: Tobacco Use	
Our ACT for Tobacco program encourages Enrollees to actively commit to healthy lifestyles and supports those who are ready to quit tobacco. We integrate anti-tobacco education into programming for adolescent Enrollees and continue to offer options for all our young people to make the ongoing decision to stay tobacco-free. Enrollees choosing to quit have access to custom quit programs and supports. Tobacco usage and its health effects disproportionately affect Medicaid recipients and diverse population groups. The program aggressively works to prevent anyone from becoming a user of tobacco products or e-cigarettes. The program makes cessation information and treatment available in clinical care settings and refers Enrollees to the WellCare Kentucky ACT for Tobacco Program and the Kentucky Quitline (1-800-QUIT-NOW). Between 2016 and 2018, WellCare of Kentucky saw positive utilization trends attributable to the ACT Program. ER visits/1000 decreased by 13% and specialist visits increased by 16%, indicating a shift from more expensive and uncoordinated care to more cost-effective coordinated specialist care Pharmacy costs increased by 8% a reflection of treatments to support tobacco cessation, such as NRT In Region Seven, specifically, where 19% of the Enrollee population uses tobacco, we have seen positive utilization trends, including a 10% decrease in ER Visits/1,000 and increases in PCP visits/1,000 (7%) and Specialist Visits/1,000 (7%)	
Interventions	
Enrollee Interventions • Value-Added Services: MyStrength self-directed online therapy to help Enrollees deal with tobacco use in relation to comorbid conditions such as anxiety, depression, or other substance use disorders; Healthy Rewards provides financial incentives for Enrollees to complete preventive screenings, attend appointments, and engage in healthy behaviors related tobacco cessation; access to NRT, non0nicotine prescription medications, and Kentucky Tobacco Quitline	• Vaping Interventions: Align with Commonwealth efforts toward prevention, recommending FDA-approved quit aids; Care Manager access; peer support services; motivational text messages; WellCare website and Enrollee portal *Provider Interventions* • Incentives driven by related EDIS measures; tobacco screenings in dental, vision and mental health settings • Engage providers to raise awareness about cessation services to Enrollees through the Provider Manual, Newsletters, and Website;

Population Health Condition Priority: Tobacco Use	
• Clinical Management: Personalized engagement and coaching • Physical Activity: Providers write Prescriptions for Activity	alert providers of Enrollee participating in tobacco cessation program • Education and training through the Provider Portal; includes access to clinical profiles, open care needs and chronic condition reports compared to state benchmarks

Program Goals

- Improved Enrollee perception of health at discharge from care management as evidenced by an increased score in on the short form health survey (SF-12/SF-10)
- Positive Enrollee Satisfaction Survey results
- HEDIS Care Gap Reduction
- Admission and Readmission Reduction
- ED Utilization Reduction
- Program completion/graduation
- 3% improvements in rate of medical assistance with smoking and tobacco cessation and behavior risk tobacco screenings
- Fewer admissions or ED visits related to cardiovascular or respiratory diagnosis; compare pre- and post-claims and service authorizations
- Increase in exercise endurance blood flow to the heart; decreased blood pressure and fewer respiratory symptoms; compare pre and post-documentation of Enrollee's vitals

Partnerships and Collaborations

Kentucky Tobacco Quitline: Offers 24/7 coaching, patches, and Text2Quit programs; Community Outreach Events: Distribute educational materials**.** To strengthen our partnership with the Kentucky Quitline, we will work to secure sharing of Enrollee information that will provide us.

Kentucky's Youth Program for Tobacco Cessation: Provide educational component; **Partner with the University of Kentucky**: Sponsor Kentucky Center for Smoke Free Policy, which provides assistance and financial support to Smoke Free Adair's efforts; **Smoke Free Coalitions in seven Kentucky counties** (Johnson, Caldwell, Henderson, Bracken, Gallatin, Carroll, and Adair); Provide funding for **Teens Against Tobacco Use** (TATU) peer mentoring program with Jessamine County Health Department and for **Freedom from Smoking** classes in numerous counties

Strong Support from a Partnership

"The insights you share at our monthly partnership meeting and at our special events are invaluable and our partnership Enrollees appreciate your dedication to the cause- especially because you are the only Medicaid provider to have attended our meetings."

-Mason County Tobacco Free Partnership

Table C.24-10-f Population Health Condition Priority: Cancer

Population Health Condition Priority: Cancer

Our Cancer Program approach includes interventions, goals, and expected outcomes that vary based on diagnosis, risk level, and various other factors. Our Cancer Programs address variations in practice around evidence-based treatments, give Enrollees and their families the knowledge to be actively engaged in their care, and aim to reduce economic waste from overtreatment spent on inappropriate care. We identify Enrollees for the program by referral or by using medical claim files populated with an ICD-10 code for cancer.

We recognize that nationally, 32% of cancer treatment plans deviate from evidence-based medicine, which increases clinical variation. There are wide variations in care along the cancer care continuum. WellCare approaches evidence-based cancer care management through a comprehensive, multi-faceted strategy to support our Enrollees in their treatment and survival. **Our approach is effective, and has positioned us first among MCOs in Kentucky in breast and cervical cancer screening.**

Interventions

Enrollee Interventions

- Work with Enrollees on the Importance of following recommended physician treatment plan, managing side effects of treatment per recommended treatment plan, taking medications as prescribed, education about mental health impact of cancer diagnosis, potential for bacterial infection while receiving chemotherapy, being aware of fevers, washing hands regularly, and education about behaviors that can increase survival rate, including not smoking
- Access to Krames education material on their specific condition and care gaps they should address

Provider Interventions

- Help Enrollees know when they are most susceptible to infection – when white blood cell counts are lowest (typically 7 to 12 days after chemotherapy is completed) to help them avoid infection
- Educate Enrollees about fevers, proper handwashing, and knowing the signs and symptoms that indicate a need to call the provider; and informing Enrollees about other important considerations during chemotherapy

Program Goals

Targeted health outcomes from successful Enrollee self-management: Enrollee experiences no symptoms requiring acute medical care and intervention, Enrollee satisfaction with cancer treatment team and plan

- *Care Goals* target specific care gaps or adherence issues, and measure the member's progress towards self-management and their adherence, which will lead to these targeted health outcomes. Examples:
- The Enrollee attends initial and follow-up appointments with cancer treatment team per treatment team recommendations over last 90 days (verified by claims or Enrollee/provider narrative)
- The Enrollee's prescription refills demonstrate at least an 80% adherence rate (verified by claims or Enrollee/provider narrative) over last 30 days
- The Enrollee is adherent to labs and diagnostics prescribed by the physician/cancer treatment team (verified by claims or Enrollee/provider narrative) over last 30 days

Population Health Condition Priority: Cancer
• Specific for Enrollees requiring hospitalization: The Enrollee participates in provider follow-up visit within 7-days of hospital discharge • Other measurable health outcomes may apply based on complications and comorbidities in the individual.
Partnerships and Collaborations
Kentucky CancerLink: Funds timely, reliable transportation assistance for Enrollees to access cancer screenings and treatment. The program provides $25 gas cards, local taxi rides, and third-party transportation services. *Community Relations Team:* Participates in community events such as Go Red for Women breast cancer awareness luncheon; and we hosted a Non-Profit Showcase where Hope Scarves spread the word about the amazing work being done locally and nationally to support those impacted by cancer.
WellCare Day of Service at Gilda's Club
Gilda Radner, of Saturday Night Live fame, passed away from cancer. In her honor, Gilda's husband formed Gilda's Club, a community clubhouse that provides opportunities to learn, share, and laugh in fellowship with others whose lives are affected by cancer. The first location opened in 1995, in New York with its signature red door to welcome families and individuals touched by cancer. In 2007, the red doors opened in Louisville. The organization provides support services such as yoga, art, mediation, support groups, and community dinner. In 2018, WellCare associates helped prepare for the Annual Thanksgiving Dinner at Gilda's Club, which 80 individuals attended.

Table C.24-10-g Population Health Condition Priority: Infant Mortality and Low Birth Weight

Population Health Condition Priority: Infant Mortality and Low Birth Weight
Our WellCare BabySteps program improves maternal health and birth outcomes through the delivery of services by multidisciplinary, integrated care coordination and care management services team. BabySteps is available to all pregnant Enrollees, regardless of risk level, from conception and up to a minimum of 60 days postpartum. The program works as a collaborative process that assesses, plans, implements, coordinates, monitors, and evaluates maternity care management services and options to meet Enrollee needs. BabySteps delivers positive birth outcomes for both the mother and the infant, including a reduction in preterm births, NICU admissions, neonatal abstinence syndrome (NAS) newborns, and Caesarian section (C-section) rates. In addition, the program provides supports to ensure a strong start for the infant, with an emphasis on connecting the mother with needed services (e.g., WIC) and promoting attendance at well-child visits, including: • Early identification of pregnant Enrollees through authorizations, claims data, lab data, and eligibility files/834s • Assessment and stratification of pregnant Enrollees, using a standardized maternity assessment tool based on national best practice care guidelines, including those from the American College of Obstetricians and Gynecologists that evaluates the pregnant Enrollee's physical health, behavioral health, and social determinants of health.

Population Health Condition Priority: Infant Mortality and Low Birth Weight	
• Care Management, including a broadened focus to include minimal, moderate, and high-risk pregnant Enrollees o Coordination with providers to ensure delivery of appropriate physical, behavioral health, and social services for the individual member (e.g., delivery of 17P for members with a history of preterm birth, care for substance use) o Consistency in Care Manager assignment, even if the Enrollee's risk level changes o Services executed by internal staff Enrollees (not vendor personnel) located within the market that best know their Enrollee population, provider network, and local practice patterns. Across markets, care management programs may include Field and telephonic care management, with the flexibility for the Care Manager to engage the Enrollee in the most appropriate setting; Peer support, including doulas; and coordination with NICU and first-year care management, including promotion of postpartum care for mothers of children enrolled in the NICU programs	
Interventions	
Enrollee Interventions • Incentive program to encourage attendance at recommended prenatal care appointments, a postpartum visit with 21 days and a second postpartum visit between 22 and 84 days after delivery • Education materials related to pregnancy, including postpartum care • Mobile solutions, including smartphone applications that provide the Enrollee an opportunity to track their appointments and set reminders, access a 24/7 nurse line, video chat with a lactation consultant, or pediatric nutritionist; and maternity home care solutions (e.g., delivery of 17P for Enrollees at risk of pre-term delivery, members experiencing hyperemesis, gestational diabetes, and gestational hypertension).	• Enrollees with a high-risk pregnancy or chronic condition receive a free cell phone to stay in touch with your WellCare case manager, providers, and family members. *Provider Interventions* • Value-based contracting: Performance incentive programs related to maternity outcomes • Communication methods: provider website and handbook; provider relations; printed and electronic notification

Program Goals
o **Reduce preterm birth rate, low birth weight, NICU admit rate and NICU average length of stay** o **Decrease C-Section Delivery Rate** o **Reduce infant mortality rate** o **Reduce Early Elective Deliveries** o **Improve related HEDIS scores and achieve rates within the 75th percentile or above:** o Prenatal Timeliness o Postpartum Visit o Well Child 15 Months (6+ Visits) o Specific for Enrollees requiring hospitalization: The Enrollee participates in provider follow-up visit within 7-days of hospital discharge o Other measurable health outcomes may apply based on complications and comorbidities in the individual
Partnerships and Collaborations
WIC and HANDS: Partner since 2014, providing donations for baby showers and summer events *Community Relations Team:* Participates in community events such as Oh Baby Expectant Parent Fair and a Parent Empowerment Workshop *The Nest:* Provides parent classes, respite child care, domestic violence counseling, and crisis care

Table C.24-10-h Population Health Condition Priority: Behavioral Health and Substance Use

Population Health Condition Priority: Behavioral Health and Substance Use	
We are aware of and support the expansion of access to treatment and recovery services for individuals with SUD through a portion of the 1115 Medicaid demonstration waiver.	
Interventions	
Enrollee Interventions • Enhanced care management training; updated identification and stratification tool *Provider Interventions* Outlier prescriber program to reach out to the top 10 outlier for peer to peer consultation Resources and tools encouraging providers to become safe, judicious	We have created a comprehensive Opioid Misuse Prevention Program for members who are over-using opioid medications or appear to be at risk of doing so. The program contains interventions that support and promote safer prescribing of opioids, management of chronic pain with opioid sparing pharmacologic and non-pharmacologic modalities, early detection of opioid misuse and intervention, Screening, Brief Intervention, and Referral to Treatment (SBIRT), and increased access to Naloxone and substance use disorder treatment, including Medication Assisted Therapy. To the extent possible, the program also engages Enrollee families and caregivers who are often impacted by behaviors of the index Enrollee. The program partners with Pharmacy Benefit relations to ensure customer communication of

Population Health Condition Priority: Behavioral Health and Substance Use	
prescribers of MAT services with support of behavioral therapeutic interventions Low back pain program involvement to explore alternative to opioid therapeutic treatment • Low back pain letters to support our care management program; outreach to outlier prescribers, information to providers on how to become MAT certified	the availability to Naloxone and MAT for our Enrollees, as well as education around the proper disposal of opioids. In 2017, we introduced an innovation to our lock in algorithm with the goal of improving identification of members at risk for opioid misuse and to decrease opioid utilization. In the first year of implementation we saw a decrease in: • Utilization of hydrocodone/acetaminophen and oxycodone/acetaminophen of 55% versus baseline • Benzodiazepine use by over 30% • Neurontin use by over 30% • Muscle relaxer use There are five components to our program: • Lock-In: outreach for above normal users of prescription pain medications to restrict them to one prescriber/pharmacy • Low Back Pain: outreach for selected members with low back pain who have been prescribed opiates and who are over-using opioid medications or appear to be at risk of doing so • Predictive Analytics: Outreach following proactive early identification of Enrollees prescribed opioids at risk of misuse • Point of Sale Pharmacy Edits: Implements prior authorization requirements, institutes quantity limits, and strengthens utilization review criteria for opioid prescriptions • Medication Assisted Treatment (MAT): Improves timely access to medications used in MAT by eliminating/modifying prior authorization requirements per state contact; encourages providers to consider being judicious MAT prescribers; ensuring customer service knows a 24-hour supply of MAT drugs can be given on an emergency basis, if needed
Program Goals	
The goals are to improve safety for Enrollees and decrease costs while cutting down on unnecessary opioid prescribing. Key success measures include: • Reduce Opioid Prescriptions/1,000 • Increase MAT Prescriptions/1,000 • Reduce Opioid Overdoses/1,000 • Reduce Opioid Related Deaths	

Population Health Condition Priority: Behavioral Health and Substance Use
Improve related HEDIS scores and achieve rates within the 75th percentile or above: • UOD (High Dosage) and UOP (Multiple Providers)
Partnerships and Collaborations
Shelter of Hope: Provides temporary, emergency shelter and food for veterans, families and individuals who are homeless or at risk of becoming homeless in Boyd and Greenup counties; **Approximately 50% of Shelter of Hope's client base is battling opioid use**; *Community Relations Team:* Participates in community events such as the Third Annual West Kentucky Wellness Summit Community Mental Health and Breaking the Stigma!; **Chrysalis House** to fill transportation gaps; **Children, Inc. Pregnancy Substance Abuse Education**: financial assistance to provide education to youth

j. Description of staffing for each risk level, including staff to Enrollee ratios, modes of interface with Enrollees, and use of Care Managers.

WellCare of Kentucky offers stratified caseloads to meet Enrollee needs in all risk levels. Staffing thresholds may need to be adjusted based on regional circumstances (such as travel distances) and the risk profile of our membership. We give our Care Managers the option to exceed these ratios (for example 1:80 for Management of Chronic Conditions) as needed to meet the unique needs of their population. Our Enrollee ratios and staff credentials for each risk level follows in **Table C.24-11**:

Table C.24-11

Enrollee Risk Level	Recommended Caseload	Staffing Credentials
Low (Health Promotion and Wellness)	1:4,800	Care Coordinators (non-licensed) Health Coaches (non-licensed or registered dieticians)
Moderate (Management of Chronic Conditions)	1:125	RNs Licensed Social Workers Licensed Clinical Social Workers Bachelor Social Workers
High Management of Chronic Conditions (Complex Care Management)	1:60	RNs Licensed Social Workers Licensed Clinical Social Workers Bachelor Social Workers

We believe in leveraging one integrated care team to cover all care needs, including physical, behavioral, pharmacy, and unmet social needs. With this in mind, we developed our WellCare at Home field-based care management program. Within this model, we have developed an innovative organizational structure in which WellCare provides and oversees local care management, which includes local, in-person, Care Manager resources from WellCare and our partners, such as designated care management entities. WellCare at Home, supported by our advanced CareCentral care management system, ensures the administration of a seamless continuum of care management from initial screening through follow-up and monitoring at a point of care closest to the Enrollee.

Interface and interventions for Enrollees at each risk level are showing in **Table C.24-12** below.

Table C.24-12 Interface and Interventions

Risk Level	Risk Level Modes of Interface and Interventions
Health Promotion and Wellness	• Care Coordinators (non-licensed) and Health Coaches (non-licensed or registered dieticians) • Administer HRA for all new Enrollees (not enrolled with WellCare of Kentucky in the prior 12 months, and annually thereafter • Reach out for care gaps related to diabetes, immunizations, women's health (e.g., breast cancer, cervical cancer, osteoporosis, chlamydia), colon screenings, and maternity care • Provide wellness and prevention support, as needed; self-managed through online education materials and videos; can trigger additional support with health coaches for smoking cessation and weight reduction; Community Connections Help Line
Management of Chronic Conditions	• Includes all Health Promotion and Wellness interface and interventions plus our Care Managers and Behavioral Health Advocates • Administer Care Needs Assessment with annual reassessment or when there is a change in an Enrollee's conditions or circumstances • Develop person-centered Care Plan and assist with integrated care needs • Telephonic care coordination • Monitor and follow-up for indications of increasing risk level • Discharge planning and transitional care management • Possible MDT engagement, as warranted • Increased interventions when ID/Strat identifies a rising risk trend toward the high-risk level
Complex Care Management	• Includes all Management of Chronic Conditions interface and interventions plus our Care Managers and Behavioral Health Advocates • In-person interactions in an Enrollee's home, supplemented by phone contact • Provide frequent and intense MDT Enrollee engagement with more disciplines involved • Increase interventions when ID/Strat or a Care Manager identifies rising risk toward higher intensity care

k. If applicable, value-based payment (VBP) or incentive models the Contractor will include in Provider agreements to support involvement in the PHM Program.

100% of Kentucky Medicaid Enrollees are assigned to PCPs participating in our P4Q program.

WellCare of Kentucky has extensive experience working with our providers to develop and implement Value-Based Payment (VBP) programs. We understand the importance of our providers' interactions with our Enrollees and know they need to be rewarded for ensuring our Enrollees receive the necessary preventive services. Our VBP programs start with **Partnership for Quality (P4Q) program that includes participation by 100% of our PCPs. Payments in this program have increased from roughly $1,400,000 in 2016 to more than $3,700,000 in 2019**.

Our VBP program rewards providers for closing care needs for our Enrollees as well as reviewing current diagnoses and medical conditions and ensuring appropriate care is being provided to address such conditions. **This program has been so successful that WellCare of Kentucky created a similar program for its behavioral health providers in 2019 (BH P4Q), which has paid more than $281,000 in incentive payments to providers and helped close 7,039 care needs.** Our BH P4Q program helped to address the integration of physical and behavioral health, which has been a cornerstone of WellCare's approach to care since its inception in Kentucky.

In addition to our P4Q program, we currently have 19 **VBP shared savings agreements** in Kentucky with practices and IPAs that focus on improving the quality of care and service provided to our Enrollees while also reducing the cost of care. Our goal is to reward our providers for improving quality by having them share in the cost savings that can be achieved by ensuring that an Enrollee's care is truly managed and is provided in the right place at the right time by the right provider. WellCare believes that by creating a focus on VBP we can also help to improve the health of the overall population by sharing evidence-based practices that support VBP.

Each of the VBPs summarized above, and detailed throughout our response, include extensive provider education not only on the tools and member specific information needed to be successful, but also on our Care Management programs. The importance of a provider being aware of our extensive Care Management programs, specifically how to access and refer their members in need, is a critically important component of their VBP.

Beyond the P4Q program, which incents providers to complete specific tasks to drive improved outcomes, we also offer **shared savings arrangements**, which reward providers for engaging in PHM programs by allowing them share in the savings generated by reducing costs for higher-level services. We can reward a physician for engaging in an MDT of a member who frequently visits the ER by supporting their care plan and ultimately reducing those unnecessary ER visits. This allows the provider to receive a share of WellCare's reduced medical expense. In addition to these programs for our PCPs, we offer other VBP programs to incent engagement in our PHM program for specialists and facilities:

- *Specialty Care VBP:* In conjunction with our PHM program for high-risk pregnant women (described above), we plan to develop a **VBP that rewards obstetricians for improving birth outcomes**. Metrics may include ongoing prenatal care, improved birth weight, postpartum care and C-Section rates. We appreciate the amount of time and effort an obstetrician needs to devote to our pregnant Enrollees to ensure a successful delivery. By focusing on successful birth outcomes, we create a better start in life for some of our most vulnerable Enrollees.
- *Hospital VBP:* We have a hospital **VBP program focused on readmission reductions** that is currently in place with two acute care hospitals for our Medicare Advantage plan. The focus is a withhold to payment that may be earned back by the hospitals by achieving readmission rates that are less than expected. We would like to develop similar programs with through our Medicaid program with acute care hospitals. We have entered into a withhold agreement with Sun Behavioral Health in which a withhold may be earned back based on success of Enrollee's follow-up visits after hospitalization HEDIS measure. In addition, we have a pilot withhold agreement with another behavioral health hospital that has a withhold that is tied to several HEDIS measures for both their SUD adolescent rehabilitation program and their adolescent sexual offender program.

l. Methods for evaluating success of services provided.

We use a combination of technology and tools along with supervision and audit oversight to provide continuous evaluation of the success of the services our Enrollees receive. Our PHM program evaluation process is data-driven and follows standard CQI methodology so we can address identified issues quickly and effectively. Our Integrated Clinical Leadership team works with our operational leaders across the organization to implement changes. The PHM program is further monitored by our national leadership through a variety of market performance analyses including reviewing trends by category of service, top trend drivers, ER utilization and others. This helps support the local teams in leveraging national best practices to drive improvements in the PHM program for our Enrollees.

Using our best-in-class software including Tableau, AccuReports, SAS Business Intelligence and P4Q Portal, our analysts developed a suite of reports, which look for improvements in measures for specific disease states or population health issues (e.g., diabetes, smoking cessation, colorectal cancer) as well as improvements in overall quality measures in order to determine how our efforts, including VBP arrangements, are improving health outcomes.

REPORTS TO TRACK IMPROVEMENTS IN HEALTH OUTCOMES

P4Q Portal Reports: Our P4Q portal reports including web portal and drill down capabilities, which QPAs and PR Reps provide to WellCare of Kentucky providers monthly, provide a snapshot of the care needs for their Enrollees collectively and individually, which are tied to performance payments, allowing them to prioritize those measures that will result in the most improved Enrollee health outcomes.

Performance Scorecards: Custom monthly scorecards monitor provider performance and calculate performance-based payments based on a specific set of quality measures tailored to the provider.

Members without PCP Visits for 16 Months: Included with the respective identifying Enrollee information, and respective PCP information, this is a detailed list of WellCare of Kentucky Enrollees who have not had a PCP visit with the last 16 months. It is the PCP who is the driver or the hub for an Enrollee's preventive and primary care initiatives. Routine PCP visits contribute to healthier Enrollees, and conversely lower cost. This report is distributed monthly via in-person PR Rep visits, email, or secure FTP.

ER High Utilizer Report for the last 12 Months: This report reflects the Enrollees who are assigned to the respective provider group or IPA who have used the ED; how many visits they have had; which hospital they used; when the last ER visit was; what their most frequent diagnosis was during all of their visits; and how much WellCare of Kentucky paid for the Enrollee's ER utilization during the respective number of ER visits. This report helps the PCP to address any non-emergent conditions the Enrollee may have, educating the Enrollee on the cost benefits of coming to the PCP office for non-emergent conditions. This helps the PCP develop a long-term care plan to help improve the Enrollee's health. This report is distributed monthly via in-person PR Rep visits, email, or secure FTP.

30-Day Readmission Report: This report reflects Enrollees who have been readmitted to the hospital as inpatient within the last 30-days. It reflects detailed information regarding both admission and re-admission including the facilities of both admissions, diagnoses, DRGs, and respective amounts paid. This report gives the PCP insight into any unresolved health issues that may contribute to poorer quality outcomes and higher costs. This report is distributed monthly via in-person PR Rep visits, email, or secure FTP.

High Cost Member Report: This report reflects Enrollees who have claims over $50,000 (catastrophic claims) for the last 12 months. It includes any claim with the amount paid over $50,000—inpatient hospital, outpatient/ER hospital, physician office, or pharmacy. This report allows the provider group/IPA to see which Enrollees are the more expensive (and, conversely have a greater impact on their Value-Base Contractual arrangement), and how better can the Enrollee's care be tailored to help improve quality outcomes while helping to mitigate cost. This report is distributed monthly via in-person PR Rep visits, email, or secure FTP.

Care Needs Reports: The Care Needs Report shows which outstanding Care Needs exists on individual Enrollees, allowing the provider to address the outstanding Care Needs to help improve quality outcomes. This report is distributed monthly via in-person QPA visits.

Pharmacy Utilization Reports: These reports reflect a provider's generic dispensing rate (which helps mitigate cost), 90-day fills (also helps mitigate cost and improves Enrollee compliance) and breaks down the provider group's/IPAs individual prescriber profiles, which helps address any therapeutic equivalent recommendations and ensure the Enrollee receives exactly the same care but at a much less cost. These reports are distributed to providers through monthly meetings with our pharmacy leadership and via secure email and FTP sites.

Enterprise Provider Dashboard (EPD): The EPD provides a single place for providers to access cost effectiveness, quality scorecards/care needs, utilization, Enrollee demographics (risk score), and other population health data for managing total cost of care and outcomes. EPD is a living dashboard that updates on a weekly basis as new information is available.

OPUS Specialty Provider Dashboard: WellCare of Kentucky leverages episodic grouper logic to assess the cost efficiency of specialists in Orthopedics, Cardiology, Neurology, Podiatry, Pulmonology, and OB/GYN using the OPUS Specialty Provider Dashboard. By comparing actual costs against expected costs for a specific episode, WellCare of Kentucky is able to identify efficient specialists and can share that insight with PCPs with the goal of reducing the overall cost of care. In addition, it allows WellCare of Kentucky to compare specialists against their peers within the same specialty by grouping treatment and services into risk-adjusted medical condition-based episodes. This level of analytics, in combination with traditional utilization metrics (ER/1,000, IP/1,000, MWOV), helps create a complete and holistic picture of health care costs for the PCP and in turn, allows us to create efficiencies that benefit our Enrollees. New claims data is provided quarterly through this system.

WellCare of Kentucky has made significant investments in strategic solutions aimed at improving health outcomes through quality management, measurement, and improvement. These investments are yielding positive improvements as evidenced by our year-over-year HEDIS performance or based on the results of individual program performance. For example, **91% of our HEDIS scores have improved year-over-year from HEDIS 2013 to 2019**, and we currently **lead the Commonwealth in 24 HEDIS measures for 2019**, including all three Well-Child Visit measures, Medical Assistance with Smoking and Tobacco Use Cessation, Breast and Cervical Exams and Annual Dental Visits (through November 30, 2019). Additionally for the last two rating years, WellCare of Kentucky is the only Kentucky Medicaid MCO that has received the highest overall Mental and Behavioral Health rating of 3.5 in both the 2018/19 and 2019/20 NCQA Health Insurance Plan Ratings.

Monitoring Key Metrics

Our Integrated Clinical Leadership team, under the direction of Dr. Shaps, Terri Flannigan, and Shannon Maggard, in collaboration with our Quality Improvement team, led by Laura Betten, continuously reviews both process and outcomes measurements to monitor the success of PHM services provided at each risk level. Some metrics reviewed include:

- Enrollee perception of health at discharge from care management as evidenced by an increased score in SF-12/SF-10
- Satisfaction Surveys
- Care Manager performance standard
- HEDIS Care Gap Reduction
- Admission Reduction
- Readmission Reduction
- ED utilization reduction
- Enrollee complaints and grievances

Some of the tools we use to monitor the efficacy of services and PHM interventions including process metrics include the following:

- *Advanced Workflow Tracking:* CareCentral uses systematic task generation based on alerts or events integrated within the platform for effective management of turnaround times for outreach and assessment completion. These tasks are generated for appropriate follow-up

for care needs, reassessment, alerts, and re-certifications. The tasks assigned are time boxed based on the due date, which alerts the Care Manager to upcoming, due or overdue tasks which are color-coded. Additionally, the system integrates census reports and ADT notifications, which alerts Care Managers to an Enrollee admission, allowing for timely reassessments, care plan modifications, and the initiation of discharge planning. All of this information is monitored by supervisors through system alerts.

- *Oversight Tracking:* Leaders use CareCentral to assess compliance with care management performance standards like completing the Enrollee Needs Assessment within 30 days of being identified for care management and keeping WellCare and MDT members informed about an Enrollee's status. WellCare PHM supervisors not only are able to run reports to audit and monitor PHM activity, but they receive alerts so they can intervene more quickly to ensure Enrollee safety and timely coordination of needed services.
- *Supervisor Auditing:* Care Manager performance and member interaction and engagement are observed by the supervisor through audits of care plans to compare to CPGs, goals, and interventions as well as riding along with them as they visit members in their homes. Telephonic Care Coordination is also observed during follow-up calls to members.
- *Quality Monitoring:* Available PHM services beyond care management intervention, such as educational materials and remote patient monitoring, for example, fall under our QI department's Continuous Quality Improvement activity. For example, when we saw a lack of compliance at the national level with EPSDT reminders, we re-evaluated our "birthday card" reminders and changed the process to send them out earlier to ensure time for parents or guardians to make the pediatrician appointment.

m. *Methods for communicating and coordinating with an Enrollee's primary care provider or other authorized providers about care plans and service needs.*

Primary Care Providers (PCPs) are our primary partners in all of our PHM programs. They are the first line of defense for Enrollees with basic prevention needs as well as complex and chronic condition care needs. By working closely with our providers, we ensure our Enrollees receive timely access to the services they need and that our providers are focused on closing Enrollee care needs. We combine the deep relationships we build in the communities we serve with the technologies we have available to communicate and coordinate with an Enrollee's PCP or other authorized providers about care plans and service needs.

Hands-on provider support: Our PR Reps review care needs in collaboration with QPAs (described below). Our PCAs are co-located in select high-volume provider offices and assist in scheduling appointments for targeted Enrollees with identified care needs.

Provider Connections: Because we are locally placed in the same communities as our providers, our Care Managers often develop close working relationships with providers and communicate through telephonic and in-person touch points. They also work closely with their co-located colleagues in provider relations as needed to communicate with providers. For particularly complex cases, we will include PCPs or other providers on case rounds with one of our medical directors to discuss.

Provider Portal: Our provider portal is connected to our integrated Care Management system, CareCentral, which allows us to share the outcomes of health screens, EPSDT information,

social determinants of health obstacles, Enrollee assessments, care plans, and multi-disciplinary team contacts with providers. Providers can also view open and pending care needs through the portal and notify us when those care needs are closed through encounters, claims, eMR interchange or submission of supplement medical record information. They can also view appointment agendas, which allow our physician partners to understand, in a single report, everything that they need to address for each Enrollee during an appointment including all known chronic diagnoses and associated care needs derived from evidence-based guidelines. We offer a wide variety of webinars through our provider portal as well as access to our provider newsletter, provider manual, claims, prior authorizations and clinical practice guidelines. As part of our collaborative effort to support providers, we held Quality-led focus groups with providers to discuss their needs for data analytics and the provider portal. As a result of these focus groups, we heard feedback on a few common themes: faster data generation, expand data capture tools, and more flexible reporting features. We incorporated this feedback to meet the needs of the provider community in our quality programs and provider portal.

Electronic Medical Records (eMR): Our eMR flat file transfer process allows physical and behavioral health providers to submit flat file information from their eMR to provide WellCare of Kentucky up to date and complete Enrollee information that is not captured on claims and encounters. Our recently updated process includes: Providing an accessible setup guide; providing a dedicated Quality and eMR team to help set up connections; leveraging consultants to help configure systems for export; providing error reports that show appropriate use and configuration of the system interchange; accepting appointment agendas in various formats for ease of transition.

Multi-disciplinary care teams (MDTs) and Data Sharing: Care Managers engage PCPs on Enrollee MDTs and we share assessments, care plans, and service needs with PCPs and other relevant providers. We use the provider portal to communicate with PCPs and other providers and give providers a detailed set of tasks to close care gaps and ensure service needs identified on the care plan are provided. Our provider portal is connected to our CareCentral clinical platform, which allows us to share the outcomes of health screens, EPSDT information, social determinants of health obstacles, Enrollee assessments, care plans, and multi-disciplinary team contacts with providers. Providers can also view open and pending care needs through the portal and notify us when those care needs are closed through encounters, claims, EMR interchange, or submission of supplement medical record information.

Kentucky QPA Teams: We have three teams of regionally located QPAs, who are responsible for assisting providers in closing care gaps. They educate providers on HEDIS and HPR measures and the importance of completing appointment agendas. Appointment agendas allow our physician partners to identify, in a single report, Enrollee chronic conditions and care needs that need to be addressed during an appointment. QPAs assist provider groups in practice transformation in order to develop coordination of care for patients. In addition, QPAs are responsible for EPSDT and AMRR audits, reviewing results directly with providers and

In 2019, our QPAs conducted more than 6,000 visits to provider offices to educate providers and advance the Commonwealth's quality

developing corrective action through identifying opportunities to increase efficient and effective use of EMR templates and care alerts, office workflows, and coding to improve capture of quality services. In addition, QPAs assist with referrals to and coordination between care management as needed. In preparation of the new contract, we are implementing specialized QPAs to provide focused support to specialty providers, including Behavioral Health and OB/GYN. The Behavioral Health QPA will focus on care coordination between medical and behavioral health needs and the OB/GYN QPA will focus on women's health needs. Both will conduct visits with their respective specialty providers to educate them on performance management and our programs.

P4Q Portal Reports: Our QPAs and PR Reps present to providers our P4Q portal reports (**Figure C.24-6**), which show a snapshot of their patients' care needs and allow providers to prioritize Enrollee outreach based on those measures that will result in the most improved Enrollee health outcomes.

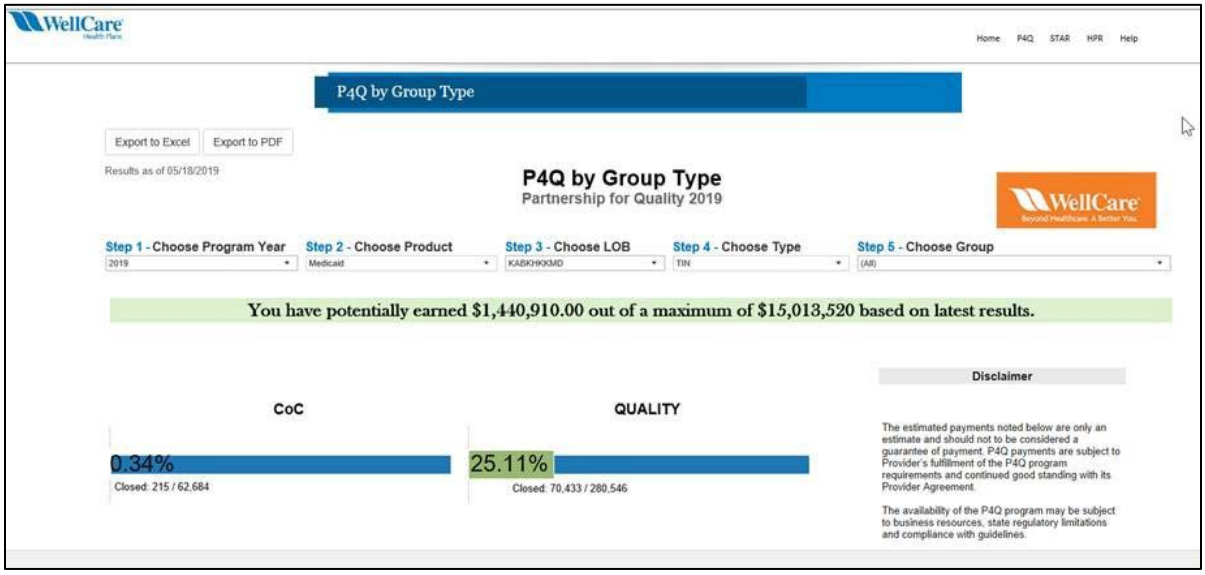

Figure C.24-6 P4Q Portal Report

n. Role, if any, the Kentucky Health Information Exchange (KHIE) will play in the Contractor's PHM Program as a resource.

Already, KHIE has become an integral part of our PHM program, as field Outreach Coordinators use information within KHIE to help locate individuals in need of care management and other PHM interventions. As KHIE expands and matures over the coming years, we are fully equipped to leverage KHIE features and capabilities within our PHM program. The first step starts with helping to make sure our providers connect to KHIE and see it is as valuable tool to share clinical data in real time. In compliance with Section 17.1 Kentucky Health Information Exchange (KHIE) of Attachment C (Draft Medicaid Managed Care Contract), all our network providers will be required to will sign a Participation Agreement with the KHIE within one month of contract signing. This required sharing of data facilitates improved PHM interventions, so a PCP can know if one of his/her patients returns to the ER or allows the specialist to better understand a patient's history even if they cannot reach the Enrollee's PCP

in real time. Our Network Management Representatives, QPAs, and PR Reps will train providers on the benefits of EHR and KHIE adoption in person and telephonically. We will also develop and publish self-service training materials on our website, along with job aides to provide detailed explanations about EHR and KHIE use. **WellCare of Kentucky proposes to provide a grant of up to $1,000 for our eligible independent providers who successfully implement EHRs for the first time**.

Additional to provider engagement in KHIE is our internal connectivity and use of the system. Since 2012, we have been engaged in implementing and using data exchanges, deriving clinically intelligent insights from Enrollees' health risk assessments and sharing this information with providers through electronic health record connections to promote early intervention. We use this expertise to forward our engagement with KHIE in a more consolidated fashion. As noted above, our outreach coordinators already use KHIE to help find Enrollees, which has resulted in a steady decline in our Unable-to-Contact rates. When the system comes back online, we are fully prepared and look forward to having access to Admit, Discharge and Transfer information on Enrollees. Care Managers will use available information in KHIE, such as lab results, medications, and diagnosis history to supplement the Enrollee Care Needs assessment and care planning process with an accurate Enrollee clinical history.

v. Provide the Contractor's proposed approach to coordination with other authorized providers such as the WIC program and others.

Our Enrollees often engage in multiple areas of the public system to get the full range of services needed. Regardless of risk level, we seek to empower Enrollees to receive services from any authorized providers and have procedures in place to ensure we can coordinate with those providers in an effective way. Just some of the authorized providers we coordinate with include the following:

- WIC
- Low Income Home Energy Assistance Program (LIHEAP)
- ARC Pregnancy Centers
- Office for Children with Special Health Care needs
- HANDS program at local health departments
- Lifeline phone assistance
- HEAR NOW
- Schools
- Head Start

OUR COORDINATION PRACTICES INCLUDE THE FOLLOWING:

- *Education and outreach:* Enrollee outreach materials include information on various resources available to them and guides them on how to access those services. We also train these providers on our programs so we can make cross-referrals and work more closely together on individual Enrollee needs.
- *Enrollee-level referrals and supports:* Care Managers and outreach coordinators are trained on various authorized providers and help Enrollees navigate those programs, identifying and coordinating those that best support their needs and goals. These services are included in the Enrollee Needs Assessment to help guide the Care Manager to finding the right services and to identify what a family is already connected with, such as SNAP benefits or

the First Steps program. Care Managers educate Enrollees and families or guardians about the availability of special program services and help them engage in those programs. In many cases, assistance is simply helping Enrollees complete the necessary applications and explaining the guidelines for assistance. Enrollees who are not enrolled in care management can also receive assistance with referrals to social services by calling Enrollee Services or the CCHL. If a program needs information on an Enrollee to help provide the right services (e.g., WIC seeking information on nutrition deficits or conditions an Enrollee faces), we share the appropriate information as allowed by law and approved by the Enrollee.

- *Community-level engagement:* Our locally based PHM and Community Connections staff regularly engage with these programs, like WIC offices to educate and support their programming. These resources are also often included in our Community Impact Councils to round out coordination with key partners in serving local communities and ensuring access to a broad base of available resources.

vi. Describe the Contractor's approach to ongoing review of its PHM Program, including potential real-time measurement, and how the Contractor will use results to address identified issues.

APPROACH TO ONGOING REVIEW OF THE PHM PROGRAM

WellCare of Kentucky has an established set of target metrics for each of our PHM programs that includes both process and outcome measures. Process measures evaluate compliance with the completion of required care management activities (e.g., member reach rates, assessment completion rates, plan of care completion rates). Outcomes measures include cost and utilization (e.g., ED visits, admissions, readmissions, pharmacy, outpatient visits); member satisfaction with care management and with their Care Manager (e.g., member surveys), and quality measures (e.g., HEDIS®).

Internally, we monitor daily Census reports, weekly and monthly utilization reports and annual quality surveys and scoring to evaluate the effectiveness of our PHM programming. Our PHM staff collaborate with our QI staff to review data by risk level and PHM intervention, watching, for example, ER utilization rates of our asthma Enrollees to identify if the asthma interventions are working. QI staff also drill down to outcomes for individuals in Complex Care Management, to monitor if the field-based interventions are successful. We even carry the review of our PHM programming into our social determinants of health, where we have conducted a number of studies including having external researchers validate our data, to demonstrate effectiveness of addressing social service needs.

We integrate feedback from our stakeholders as part of program evaluation. WellCare uses formal surveys, internal and external committees, and one-on-one interactions to obtain information and feedback from various stakeholders about the effectiveness of the service delivery system. Examples include, but are not limited to CAHPS surveys, the Enrollee, BH-CAC and more. Information and feedback obtained flows through our quality processes for opportunities for improvement. Based on the nature of the opportunities presented, actions for improvement are assigned to a department to lead those efforts. The progress of improvements are formally tracked through the Quality Department and reported back to all

applicable committees and up to Executive Leadership. **In 2018, 95% of those surveyed expressed satisfaction with their care management experience.**

Real-time Measurement: As described above, we have tools in CareCentral that provide real-time monitoring of productivity and process measures. With more advanced data available through KHIE, we can continue to advance real-time measurement evaluation by watching ER rates and care needs closures without a claims lag.

USING RESULTS TO ADDRESS IDENTIFIED ISSUES

Our PHM program evaluation process is data-driven and follows standard CQI methodology so we can address identified issues quickly and effectively. Our Integrated Clinical Leadership team works with our operational leaders across the organization to implement changes. One example is the introduction of our REACH program both locally and nationally. Evaluation of the our program showed very low rates of engagement and participation of Enrollees in the Complex Care Management risk level in Region 8, which was exacerbating poor health outcomes for those Enrollees. By hiring Enrollee Outreach Coordinators to knock on doors in those communities, we were able to increase contact rates and reduce ER utilization for those members. This program has expanded across our national footprint incorporating newer and more complex tools to mine contact information and conduct multiple modalities of outreach.

The PHM program is further monitored by our national leadership through a variety of market performance analyses including reviewing trends by category of service, top trend drivers, ER utilization and others. This helps support the local teams in leveraging national best practices to drive improvements in the PHM program for our Enrollees. As an example, recently WellCare's clinical team analyzed and noted a continual increase in Oncology related utilization and cost. After a detailed review and evaluation, we implemented a more comprehensive program to manage oncology-related costs. This program uses a holistic view of the Member's treatment plan and drug protocols. By working with the treating physicians, the program helps guide the member and physician through evidence-based medicine that has the proven best outcomes for the Member.

As requested, we will provide to DMS the results of our evaluations at a frequency and in a format defined by DMS, including monthly, quarterly, and annual reports.

25. Enrollees with Special Health Care Needs

C.25. ENROLLEES WITH SPECIAL HEALTH CARE NEEDS

a. **Describe innovative approaches and evidence-based practices the Contractor proposes to use in providing services to Enrollees defined in Section 35.0 "Enrollees with Special Health Care Needs" including. Include a summary of how the Contractor's experience in providing services to these populations has informed the approaches.**

b. **Describe the Contractor's approach to facilitate access to appropriate services for Individuals with Special Health Care Needs to include:**

   i. Approach to identifying Enrollees.

   ii. Process for screening and assessing individual Enrollee needs.

   iii. Approach to providing education to Enrollees and caregivers.

   iv. Approach to providing transition support services.

C.25. ENROLLEES WITH SPECIAL HEALTH CARE NEEDS

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 35.0 Enrollees with Special Health Care Needs of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

The Kentucky Medicaid program has an important role in the lives of our Enrollees with special health care needs--most of whom require health and related services of a type or amount beyond what is generally required by other Enrollees. Individuals with special health care needs (ISHCN) are adults and children/adolescents who face daily physical, behavioral, or environmental challenges that place their health and ability to function fully in society at risk. Factors include intellectual and developmental disabilities or related conditions; serious chronic illnesses, such as schizophrenia or degenerative neurological disorders; disabilities resulting from years of chronic illness, such as psychiatric disorders, depression, arthritis, emphysema, or diabetes; and children/adolescents and adults with specific environmental risk factors, such as homelessness or family problems that lead to placement of children in foster care.

In Kentucky, we work collaboratively with providers, ISHCN Enrollees, families, guardians, caregivers, state agencies, and others to remove barriers to good health and help coordinate timely ISHCN Enrollee access to individualized, whole-person care and services available in their local communities. This collaboration and a focused approach helps keep adults and children with intensive and chronic needs living at home with their families or in a community-based setting of their choice. For example, by covering and coordinating medically necessary home-based medical equipment, nursing services, occupational therapy, physical therapy, and more, we enable children with congenital conditions to receive medically complex care at home so that they do not spend their childhood in a hospital or nursing facility.

Our ISCHN Enrollees and their families often have social needs like transportation, which serve as barriers to accessing the care and services they need. Family and caregivers of ISCHN Enrollees report more hours taking care of ISHCN Enrollees at home than the general population. Some caregivers stop working to provide needed care and subsequently have trouble paying their utility bills and paying for over-the-counter medications. Our Kentucky Medicaid claims data and our own experience confirm that our ISHCN Enrollees have, or without intervention, they are at increased risk for chronic physical, developmental, behavioral, and/or emotional conditions. We also know that the prevalence of the ISHCN population varies by geographic region, race, and ethnicity. For example, while nearly 20 percent of all U.S. children under age 18 have a special health care need, prevalence varies between states, from a low of 14% in Hawaii, to a high of 25% in Kentucky (Data Research Center for Child & Adolescent Health National Survey of Children's Health 2016).

On our current Medicaid contract, ISHCN Enrollees are a subset of our general Medicaid population. Today, WellCare of Kentucky serves more than 430,000 Medicaid Enrollees statewide in Kentucky's urban and rural areas in all eight DMS regions. WellCare of Kentucky has diverse populations across the Commonwealth and has the largest majority of complex Enrollees, largely in eastern Kentucky in Regions 7 and 8 -- the most rural parts of Kentucky. For all EPSDT-eligible Enrollees, we cover EPSDT special program services for those who need those additional services. In addition, we offer a full range of population health management and supporting services for Enrollees when they need it. As of Q3 in 2019, our Kentucky Medicaid population included approximately:

- 229,000 individuals in the Temporary Assistance for Needy Families/Kentucky Children's Health Insurance Program (TANF/KCHIP) population
- 24,000 individuals in the Dual Eligible population
- 43,000 individuals in the Supplemental Security Income (SSI) population (adults and children)
- 8,100 individuals in the foster care/juvenile justice system/adoption assistance population
- 800 individuals in the Former Foster Care population
- 141,000 individuals in the Medicaid Expansion population

Per 42 C.F.R. 438.208, DMS defines the categories of individuals identified in the ISHCN population. Department-specified ISCHN populations include:

- Children in/or receiving foster care or adoption assistance (Kentucky SKY)
- Blind/disabled children under age 19 and related populations eligible for SSI
- Adults over age 65
- Enrollees experiencing homelessness
- Individuals with chronic physical health illnesses
- Individuals with chronic behavioral health illnesses

- Children receiving EPSDT special services
- Children receiving services in a pediatric prescribed extended care facility or unit
- Enrollees who are adult guardianship clients

We identify ISHCN Enrollees from our Kentucky Medicaid population. As described later in this section, we employ a focused, systematic, and multimodal effort to identify ISHCNs with chronic physical or behavioral health illnesses in all populations as quickly as possible so we can connect them to the care and services they need. We coordinate a broad range of primary, specialized medical, behavioral health, and or related services, including social services and non-covered services, for ISHCN Enrollees' respective conditions. This includes adults and children in the Kentucky Medicaid population with significant conditions that range from autism spectrum disorders to vision or hearing loss, diabetes, asthma, attention deficit hyperactivity disorder (ADHD), cancer, or cerebral palsy.

a. Describe innovative approaches and evidence-based practices the Contractor proposes to use in providing services to Enrollees defined in Section 35.0 "Enrollees with Special Health Care Needs" including. Include a summary of how the Contractor's experience in providing services to these populations has informed the approaches.

WellCare of Kentucky has served the Kentucky Medicaid ISHCN population for the past eight years. Nationally, WellCare Health Plans, Inc. (WellCare) has 30 years of Medicaid program has experience serving ISHCN. This includes but is not limited to experience in Florida, Hawaii, Michigan, Missouri, Nebraska, New Jersey, and South Carolina. WellCare of Kentucky collaborates with providers, state agencies like DMS, and other MCOs to improve overall health care quality and outcomes in a cost effective manner. In this section, we present a summary of our innovations and initiatives that facilitate the provision of services to Enrollees in the ISHCN population.

INNOVATIVE APPROACHES TO PROVIDING SERVICES TO ENROLLEES IN THE ISHCN POPULATION

In this section, we present innovative approaches to providing services to ISHCN Enrollees:

Integrated Care Model and Population Health Management Programs

ISHCN Enrollees and their families/guardians, and caregivers are at the center of our integrated care model, which supports their varied and often complex needs. To better serve our Medicaid Enrollees and subpopulations, we continually enhance our integrated care model and population health management programs. Our Kentucky-specific outcomes data and ISCHN Enrollee feedback tell us that they benefit from our fully integrated, person-centered, community-based approach to Care Coordination and Care Management. Our high-touch, in-home approach integrated care model has proven its value in increasing Medicaid Enrollee satisfaction and improving health outcomes. Relying on Care Managers who are nurses or social workers, field-based Care Management and Care Coordination is fully integrated and tailored to each Enrollee's needs by considering their physical health, behavioral health, pharmacy, and social resource needs. This is particularly important for the ISHCN population.

WellCare defines our population health model as: **Coordinating health care needs through a holistic, evidence-based, proactive approach centered on larger, socially grouped medical and behavioral needs and prevention efforts while reducing disparity and variation in care delivery. Analytics allow identification of opportunities to create and implement evidence-based, best practice initiatives delivering excellent and innovative care in the most cost-effective ways.**

Our Population Health Management program is an evidence-based, proactive approach centered on larger, socially grouped medical and behavioral needs and prevention efforts. Our program has seven clinical focus areas, or domains, each led by a clinical advisory board to review effectiveness, explore opportunities and innovations, and develop new programs and initiatives. Our domains include:

1. Behavioral Health and Substance Use Disorder (SUD)
2. Maternal and Child Health
3. Community and Long-Term Supports and Services (LTSS)
4. High Acuity and Transitions
5. Medical Conditions
6. Advanced Illness
7. Prevention and Wellness

Each domain improves health outcomes through prevention and promoting healthy behaviors, early identification, and preventing deterioration or complexities. Our population health domains align with DMS' population health condition priorities. All programs emphasize empowering individuals to improve their health and engage in their healthcare. We employ a person-centered approach that addresses medical and non-medical drivers of health while reducing inappropriate utilization and costs.

Care Management and Care Coordination are key components of integrated, whole-person care for ISHCN Enrollees, including our SSI population comprising 10.87% of our total Kentucky Medicaid membership, representing 7.94% SSI adults and 1.95% SSI children. The majority of our SSI-adult and SSI-child populations live in Region 8. Further, 11.8% of our SSI adult population lives in Region 8, in contrast with the statewide average of 7.9% SSI adults living in other DMS regions. Because the SSI population has multiple physical health care, behavioral health, environmental, and social service needs, they can benefit from our Care Management, Care Coordination, and population health management programs. The most prevalent chronic condition in our SSI-child population is one or more psychiatric conditions (57%) -- a higher rate than any other Kentucky Medicaid population we serve. Our SSI-adult population ISHCN Enrollees have the highest rate of hypertension (56%) and cardiovascular (61%) chronic conditions of the populations we serve. The SSI-adult population experiences a high rate of psychiatric conditions (39%). Our SSI population has the highest rate of asthma (13% of SSI adults and 12% of SSI children) than any other population we serve today. Like other ISHCN Enrollees, many ISCHN Enrollees in the SSI population face adverse social risk factors that may affect their health status, such as housing insecurity and homelessness, food insecurity,

inadequate access to transportation, poverty, and low health literacy. The combination of potentially high-risk and high-cost needs of the SSI population underscores the importance of effective Care Management and Care Coordination for SSI adults and children by assessing the full range of their individualized needs; incorporating their needs and individual preferences and goals in person-centered care plans; connecting them to population health management programs targeting chronic conditions; and coordinating and sharing information across all needed medical and non-medical providers and supports, including family, caregivers, and other stakeholders.

To enhance services for all the populations we serve, we are currently building new or next version Population Health Programs, including programs that target the chronic conditions our ISCHN Enrollees experience, including asthma, heart disease, diabetes, obesity, tobacco use, cancer, infant mortality, low birth weight, and behavioral health and substance use. We are exploring remote patient monitoring to receive biometric data and share it with our providers, deploying resources to an Enrollees' home in real time when a potential issue arises (e.g., blood sugar spike for Enrollees with diabetes, oxygen monitor alert for Enrollees with COPD, and more).

We continue to innovate in our social determinants of (SDOH) programs and will be expanding our WellCare works program, which assists with employment opportunities, to reach Enrollees in all 120 counties--this extends to ISHCN Enrollees who have shared with us their training and employment goals. We are proud that within one year we reached Enrollees in 109 Kentucky counties covering 91% of the Commonwealth with our WellCare Works platform. We fully expect by mid-year, Enrollees in all 120 counties will have accessed our innovative solution to getting Enrollees back to work.

Our latest innovation includes data-informed outcome-based contracting with community partners. These community contracts assess impact and connect to enterprise priorities, including quality outcome data, Enrollee retention, and Enrollee and provider satisfaction. Leveraging our local partnerships, Community Connections staff, community engagement partners, work with community-based organizations to assess their capacity for connecting our Enrollees, including ISHCN, to Care Management, their Primary Care Physician, Workforce Innovation Programs, and more. Based on that capacity, we provide payment to community-based organizations for the health outcomes, based in their community contract. Community-level data analysis helps drive decisions around priorities, investment, and innovation opportunities focused on systemic, industry-leading solutions to drive social determinant integration into healthcare. Innovation pilot programs generate the data to evaluate the impact in local communities by improving health outcomes and increasing access to care, reducing avoidable costs by removing social barriers, and evaluating system effectiveness leading to social innovation. This is vital to most of our ISHCN Enrollees who experience a high degree of unmet social resource needs.

COMPREHENSIVE PAYER/PROVIDER ANALYTICS

WellCare recognizes the fact that the amount and type of data available on an Enrollee or population is a very powerful tool in improving health. We have already implemented an integrated system, built specifically for Medicaid. This system, CareCentral, provides our team

and our provider community and 360-degree view of the Enrollees/patients they serve. We will continue to introduce innovations that include the integration of social determinants into our predictive analytics, earlier trend identification to support program development and individualized Enrollee intervention, and an improved risk stratification model that allows us to move even further toward prevention by including community factors in our scoring. We recognize the importance of KHIE data and will begin to integrate that information into our platforms. Our objective is to collaborate with our provider and stakeholder communities, share data transparently, and drive quality improvement, improved outcomes, and increased Enrollee and provider engagement and satisfaction.

IMPROVED ENROLLEE ENGAGEMENT

We recognize that ISHCN Enrollee engagement is critical to improving their health outcomes. We intensified our unable-to-contact program in the Eastern Region of Kentucky when we deployed local community health workers to find Enrollees, many of whom were ISHCN. **This resulted in a 19.6% reduction in Emergency Department care and a 21.4% reduction in overall medical expenses for Kentucky Enrollees engaged.** During our previous and current Kentucky Medicaid contracts, we launched written, verbal, and digital Enrollee education programs and offer incentives to Enrollees who complete preventative and follow up care. While this has made an improvement in the outcomes for engaged ISHCN Enrollees, we must continue to build on our success and broaden our reach. In addition, we will introduce improvements to our Enrollee portal and social media strategy, which will improve communication and engage Enrollees in several different ways. The portal will become more interactive and easy to use, and our multi-faceted social media approach will allow Enrollees to receive information in the way they prefer to receive and consume it. We plan to implement additional tools to measure each Enrollee experience, which will inform our engagement strategy and toolset. By expanding our Enrollee Care Center in Hazard, we can reach and empower more of our ISCHN Enrollees to help them navigate their healthcare, while connecting them to whole-person solutions that improve their overall health.

INCREASED ACCESS AND AVAILABILITY

Introducing telehealth more broadly across Kentucky is a key innovation that will improve access and availability for our ISHCN Enrollees. Based on feedback from our providers, we will look to roll this out generally, but also with an emphasis on targeted programs or conditions, such as stroke care, substance abuse treatment, diabetes care, and increased access to pediatricians, pediatric specialists, and child psychologists. Access-related provisions related to network adequacy and timely access to care apply to Enrollees in all populations. We have a strong focus on the inclusion of pediatric providers for our ISHCN-child and adolescent population. We understand the challenges of provider availability in rural Kentucky and have built a strong network of providers. However, we must begin to introduce more innovation that improves access and addresses not only the limited number of certain providers in these areas, but the social barriers, such as transportation or child care, which prevent our Enrollees from seeing their providers. We will supplement our focus on telehealth with a virtual high-touch model that allows our clinical and support teams to wrap around providers and Enrollees to make sure they receive integrated, whole-person care.

NEXT GENERATION CONTRACTING MODELS

We understand the need to align our payment structures to drive improvements in quality and outcomes for all populations. We will be expanding our value-based contracting models to a broader array of provider types, not simply focused on mainstream providers like Primary Care Providers, hospitals, and specialists. Today, every Primary Care Provider has a value-based payment (VBP) contract, considering they are all eligible for Partnership for Quality (P4Q) program dollars where providers receive bonus payments for closing care needs on key HEDIS performance measures and timely completion of appointment agendas. **Since 2014, approximately 443,000 care needs have been closed and more than $10.1 million in bonus payments have been paid to providers as a result of WellCare of Kentucky's P4Q program.** We have providers who participate in shared savings arrangements and who want to increase their participation in this type of contract. We will examine the opportunity to better align our models with Population Health quality and outcome goals by introducing VBP structures for Population Health issues, such as substance abuse treatment and diabetes--conditions we see in ISHCN Enrollees. For example, the most prevalent chronic conditions in the TANF-adult population, which includes ISHCN Enrollees, are psychiatric conditions (27%). Other chronic conditions include cardiovascular (24%); gastro, hypertension, and depression (20%); and substance use disorder (13%). For providers that achieve quality and improved outcomes, we will look to expand our Gold Card program that removes authorization requirements for those providers, easing their administrative burden and driving improvements in quality, cost, and improved health.

HOW WE USE EVIDENCE-BASED PRACTICES IN THE PROVISION OF SERVICES TO ISHCNS

Effective access to reliable and persuasive evidence in an understandable format is vital to the development of informed and shared decision-making among healthcare providers, Care Managers or Care Coordinators, ISCHN Enrollees, families and caregivers, and other stakeholders, including state agencies. Promoting practice and evidence-based healthcare practices balance scientific knowledge; clinical expertise and experience; the goals, values, beliefs, and experiences of our ISHCN Enrollees and their families and caregivers; and systematically and objectively measured person-centered outcomes to promote data-informed healthcare delivery and decision-making. We promote transparency of treatment protocols, toolkits, resource guides, clinical practice guidelines, and other science-based resources used in the provision of optimal care and services for ISCHN Enrollees. Upon request, we share medically necessary guidelines with all Enrollees and their families. Providers have access to clinical practice guidelines on the provider portal. We provide and continually enhance our decision-making aids for Enrollees and providers to help with care planning and the best options for treatment.

As shown in **Table C.25-1**, we support our staff and providers with industry-leading clinical practice guidelines and criteria for standard physical and behavioral health services to promote evidence-based decision-making. We list a summary of clinical practice guidelines and criteria.

Table C.25-1: Evidence-Based Review Guidelines

Guideline Category	Summary of Clinical Practice Guidelines and Criteria
InterQual Review Manager	A nationally recognized decision tool for level of service, length of service, discharge planning readiness, and level of care
ASAM	American Society of Addiction Medicine (ASAM)
Behavioral Health Guidelines	Level of Care Utilization System (LOCUS) & Child and Adolescent Level of Care Utilization System (CALOCUS) for adults & children, respectively. NOTE: When approved by DMS we will also use guidelines from leading organizations (e.g., the American Society of Addiction Medicine, Substance Abuse and Mental Health Services Administration) for behavioral health & substance use disorders
Children and Adolescents	Child and Adolescent Service Intensity Instrument (CASII) or the Child and Adolescent Needs and Strengths Scale (CANS); for young children; Early Childhood Service Intensity Instrument (ECSII)
Clinical Practice Guidelines	Appraisals and guidance for 200+ procedures and services. For example: • Our Heart Disease Program (coronary artery disease, congestive heart failure, and hypertension) uses evidence-based clinical practice guidelines and guidelines from the American College of Cardiology (ACC), American Heart Association (AHA), the American College of Cardiology Foundation (ACCF), and the Institute for Clinical Systems Improvement (ICSI), with additional direction from National Committee for Quality Assurance (NCQA), United States Preventive Services Task Force (USPSTF), National Quality Strategy (NQS), and Agency for Healthcare Research and Quality (AHRQ). • Our Diabetes program uses evidence-based clinical practice guidelines and guidelines from the American Diabetes Association (ADA), American Academy of Pediatrics (APA), NCQA, USPSTF, NQS, and AHRQ, and specialty association, colleges, and societies. Range of topics, including durable medical equipment (DME), disposable incontinence products, food and lodging services, oral function therapy for feeding disorders and other benefits.
Hayes, Inc. Online™ (Medical Technology)	Hayes is a subscription-based tool used by Medical Directors to solidify medical necessity and to research new procedures and technologies. This tool will be utilized in Kentucky subject to DMS review and approval.

Guideline Category	Summary of Clinical Practice Guidelines and Criteria
eviCore Guidelines	Advanced radiology (MRI, CT), cardiology (advanced imaging), radiation therapy management, pain management, sleep management, PT/OT/Speech services, and molecular and genetic lab testing
HealthHelp	Medical oncology and radiation guidelines to help providers optimize cancer treatment protocols
Avesis	Dental and vision evidence-based guidelines
CMS Guidelines	Guidelines as defined in the contract National Coverage Determinations (NCD), Local Coverage Determinations (LCD) used in DME reviews

Care Management for high-risk ISHCN Enrollees guided by evidence-based clinical practice guidelines: For ISHCN Enrollees stratified in the high-risk group, Care Managers oversee person-centered care plan development, linkage and referrals, coordination and monitoring of care, arranging transportation, and assuring that medical records and other information flows among various providers in the system of care. Care Managers build care plans in our Care Management system, CareCentral, guided by standard evidence-based guidelines. Care Managers and Care Coordinators recognize ISHCN Enrollees are at the center of care planning activities and that family members are most often the primary caregivers, e.g., for a child with special health care needs. Our staff values and honors the input of family/guardians and caregivers in shared decision-making about an ISHCN Enrollee's health services. Shared decision-making involves and solicits the input of Enrollees and families, caregivers, and others involved in an Enrollee's care when designing and incorporating evidence-based interventions and monitoring progress toward goals. Use of evidence-based clinical guidelines, including InterQual criteria, serve as a framework for clinical decisions and service provision that optimizes Enrollee care. When our Care Managers include providers on multidisciplinary teams, we improve communication among those involved in an ISHCN Enrollee's care and the ISHCN Enrollee experiences better health outcomes. ISHCN Enrollees trust their providers, so they are often the first to know our ISCHN Enrollees have social resource needs. We educate providers about our Community Connections program, how community-based social resources remove barriers to health and have a measurable positive effect on an ISCHN Enrollee's health, and how to refer them to these resources.

Motivational Interviewing: Motivational interviewing is an evidence-based counseling practice and an essential skill for all Enrollee-facing staff, including Care Managers, Care Coordinators, field outreach coordinators, Enrollee Services representatives, and our Enrollee outreach staff who help us locate and engage high-risk Enrollees across the Commonwealth, and in Region 8. We train Enrollee-facing staff on motivational interviewing, which is a collaborative process between the ISCHN Enrollee and clinician. It is evocative to activate an Enrollee's own motivation and resources for change and honors autonomy to accept that ISCHN Enrollees can and do make choices about the course of their lives. Providers often use motivational

interviewing to help their patients adhere to treatment recommendations and to promote behavioral change by helping Enrollees explore and resolve their ambivalence and barriers to achieving health care goals.

Care Management Success Story for ISHCN Enrollee

In December 2016, a Primary Care Provider referred a Kentucky Medicaid Enrollee who lives in western Kentucky to our care management team. The provider determined this ISHCN Enrollee was facing serious health issues. After neglecting to complete well checkups, her diabetes became unmanaged, and now she has diagnoses of COPD and hypertension. Our care manager quickly called the ISHCN Enrollee and set up a time to conduct an in-person Enrollee needs assessment at the ISHCN Enrollee's home. Through motivational interviewing and assessment results, the care manager found out that the Enrollee was doing without her needed diabetic supplies. The care manager called the ISHCN Enrollee's Primary Care Provider, and they agreed the care manager should order a glucometer, strips, and lancets for this ISHCN Enrollee in alignment with clinical care guidelines. The care manager educated the Enrollee and her family on keeping logs to track blood pressure and blood sugar. She also educated her about the signs her condition(s) are worsening and when to call her Primary Care Provider. During conversations, the ISCHN Enrollee did not express interest in quitting smoking; however, the care manager noticed in the ISHCN Enrollee's record that there had been a prior issue related to a prescription to Chantix. With the ISHCN Enrollee's consent, the care manager successfully resolved the pharmacy order issue.

In addition, the care manager identified socioeconomic conditions having an impact on the ISCHN Enrollee's health. The ISCHN's husband was disabled, unable to work, and their only income was his limited SSI benefit. Their SNAP benefits had been reduced, and food was scarce. The care manager used the Health Connections Referral Tracker to refer the ISCHN Enrollee to a local food bank for assistance. The care manager removed the ISHCN's transportation barrier to health by making a referral to the medical transportation provider in the area, so the ISHCN Enrollee can easily access her Primary Care Provider appointments. Because of our field-based, individualized, integrated care management intervention, the ISHCN Enrollee feels empowered after receiving education about her conditions, self-care, and the importance of self-managing her hypertension, COPD, and diabetes. She subsequently received her Chantix and says she is serious about quitting smoking. Through the connection with the local food bank, the ISHCN and her husband are eating a more balanced diet and saving money as well. Finally, the ISHCN Enrollee's goal is to make every scheduled doctor's appointment now that she does not have to worry about transportation.

Behavioral Health: A strong focus on evidence-based behavioral health care is an opportunity to improve the quality of mental health and substance use disorder care and services and to empower Enrollees in recovery and their families and caregivers to seek quality care that is person-centered and person-reported, achieving recovery-oriented outcomes. **During our tenure in Kentucky, we have consistently maintained the largest behavioral health network, which today includes more than 2,300 behavioral health specialists.** In addition to the behavioral health clinical practice guidelines listed above, evidence-based practices discussed

by SAMHSA include solutions proposed in our Kentucky SKY response for the foster care, juvenile justice-involved, and adoption assistance population. WellCare of Kentucky identifies providers who are specifically trained and certified in evidence-based practices and can immediately refer any ISHCN Enrollee to a specific provider for a specific evidence-based practice. These evidence-based practices include:

- Child Parent Psychotherapy
- Trauma-Focused Cognitive Behavioral Therapy
- Parent Child Interaction Therapy
- Dialectical Behavior Therapy
- Applied Behavioral Analysis
- Motivational Enhancement Therapy
- Multisystemic Therapy
- Multidimensional Family Therapy
- Assertive Community Treatment
- High Fidelity Wraparound

Sharing of Enrollee care needs: Ensuring ISHCN Enrollees, particularly those in the Prevention and Wellness risk level, get necessary preventive services is foundational to our population health management program. We use multiple modalities to share care needs, including our Appointment Agenda, which tells a Physician in one view, everything the ISCHN Enrollee needs during that visit to be compliant with evidence-based preventive and chronic care clinical guidelines.

Leverage new and emerge technologies for wellness and chronic condition management: As more ISHCN Enrollees, particularly among our younger populations, rely on technology, we are continuing to innovate with web-based and mobile engagement tools. For example, we implemented a mobile phone app, JOOL, for our foster care Enrollees (also ISCHNs) to help them life plan for aging out of the system. We also implemented self-help web tools for wellness and chronic condition management, such as MyStrength, which is an evidence-based digital behavioral health platform empowering Enrollees to address depression, anxiety, stress, substance use, chronic pain, and sleep challenges. It also supports the physical (e.g., smoking cessation, diabetes) and spiritual aspects of whole-person care.

Peer support offer emotional support, share knowledge, teach skills, provide practical assistance, and connect people with resources, opportunities, communities of support, and other people: Peer support is an evidence-based practice. It is generally cost-effective and cost saving. Our population health programs, such as our asthma, heart disease, tobacco use, and infant mortality and low birth weight programs, include peer support as an intervention. Peer support helps ISHCN Enrollees prevent illness, manage chronic illnesses, cope with stress or emotional and psychological challenges, and help us engage ISHCN Enrollees who are difficult to locate and engage in Care Management and Care Coordination. In behavioral health,

community-based peers offer their unique lived experience with mental health conditions to provide support focused on advocacy, education, mentoring, and motivation.

Our Trauma-Informed Approach is distinct from trauma-specific interventions or treatments that are designed specifically to address the consequences of adverse childhood events and related trauma and to facilitate healing: SAMHSA promotes linkage to recovery and resilience for those individuals and families impacted by trauma. Consistent with SAMHSA's definition of recovery, services and supports that are trauma-informed build on the best evidence available and Enrollee and family engagement, empowerment, and collaboration. We currently train our Enrollee-facing staff and providers on a trauma-informed approach and will enhance and expand this training on the new contract. We promote SAMHSA's Six Key Principles of a Trauma-Informed Approach. This trauma-informed approach reflects adherence to six key principles rather than a prescribed set of practices or procedures. These principles can be applied across multiple types of settings. Principles include:

1. Safety
2. Trustworthiness and transparency
3. Peer support
4. Collaboration and mutuality
5. Empowerment, voice, and choice
6. Cultural, historical, and gender Issues

Partnering with providers to deliver evidence-based care and services: One way we verify ISHCN Enrollees receive a high standard of care is by partnering with providers to deliver evidence-based preventive, specialty, and integrated care. We do this through telephonic, online, and in-person education at multidisciplinary team meetings to discuss care for specific ISHCN Enrollees. We deploy clinical practice guidelines on the provider portal and provide administrative support in provider practices. Our utilization management (UM) staff assures high-quality care during prior authorization and concurrent review. Our UM team confirms ISHCN Enrollees receive care consistent with clinical guidelines and do not receive unnecessary services.

We reinforce the importance of preventive care with ISCHN Enrollees and providers through reminders and incentives for closing care needs and completing screenings and activities that support EPSDT and HEDIS measures. Incentivizing providers is one way we can help transform the Kentucky health care delivery system for quality and value. Through VBP contracts, we partner with providers to drive Enrollee engagement, improve access to care, decrease non-emergent Emergency Department use, avoid inpatient stays, manage high-risk Enrollees, and improve health care quality and outcomes. We align our VBP incentive payment strategy with DMS' goal of improving health outcomes and reducing costs.

SUMMARY OF HOW WELLCARE OF KENTUCKY'S EXPERIENCE IN PROVIDING SERVICES TO ISHCN ENROLLEES INFORMS OUR APPROACHES

We have an eight year history of implementing innovative programs and fostering collaboration to ensure our ISHCN Enrollees have access to and receive the highest quality of care and services in Kentucky. In addition, we serve similar populations in other state program and we were recently awarded a contract to serve Children's Medical Services in Florida. With the support of our affiliated health plans and our national Population Health team, we focus on improved health outcomes and our approach is completely evidence-based. Our goal is to make it easier for our ISHCN Enrollees to get the high quality healthcare they need, when they need it. We provide a broad range of support for ISHCN Enrollees, ranging from life-sustaining medical care, to therapeutic care and caregiver support and respite. Through community-based partnerships and local services, we help our ISHCN Enrollees successfully navigate complex healthcare systems. This is especially important for ISHCN Enrollees who may be involved with many providers, state agencies, and community-based organizations in the system of care.

We evaluate Care Management and Care Coordination interventions to understand which interventions deliver sustainable results for improved health outcomes and which ones are cost effective for our ISHCN population. Our experience and observations show and outcomes data supports the following interventions consistently contribute to ISHCN Enrollee improved health outcomes:

- Field-based, integrated Care Management and Care Coordination in-person Care Management has a strong and positive impact on clinical outcomes. We streamline the facilitation of appropriate services under the direction of our Care Managers and Care Coordinators, which includes licensed or certified Special Health Needs Coordinators.
- Motivational interviewing helps us understand our ISHCN Enrollees' needs and goals as well as their barriers to achieving positive health outcomes.
- Outreach and education is critical to improved health outcomes. Enrollee education is vital to fostering self-management and monitoring. EPSDT stresses health education to children and their caretakers related to early intervention, health and safety risk assessments at every age, referrals for further diagnosis and treatment of problems discovered during exams and ongoing health maintenance. Provider education improves provider satisfaction and contributes to improved ISHCN health outcomes. In Kentucky, **we have been ranked #1 or #2 for both Enrollee and provider satisfaction for the last two years.** We have improved Kentucky Enrollee access to providers, resulting in an increase in Primary Care Provider visits **from 64.5% in 2013 to over 70% in 2018.** Because of our focus on closing care needs and encouraging preventive care, **91% of our HEDIS measures, including all three Well-Child Visit measures, Medical Assistance with Smoking and Tobacco Use Cessation, Breast and Cervical Exams and Annual Dental Visits, have improved year-over-year from 2013 to 2019.**
- Population health management programs target conditions prevalent in the ISCHN population, including asthma and diabetes, and demonstrate sustainable improved health outcomes and lower the cost of care.

- Linkage to social resources provided by community-based organizations through our Community Connections social determinants program fills a significant gap in the ISCHN population. **Since launching the Community Connections Program in Kentucky, we have connected 31,000 people to 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program, including a 26% reduction in Emergency Department visits and a 53% decrease in inpatient spending (Robert Wood Johnson study of our Community Connections program, 2016).**

b. Describe the Contractor's approach to facilitate access to appropriate services for Individuals with Special Health Care Needs to include:

The components of our Care Management and Care Coordination program include:

- Assignment of a Care Manager or Care Coordinator to ISHCN Enrollees who are identified as high-risk and those in the ISCHN adult guardianship population
- Completion of a health risk assessment (HRA) and a comprehensive needs assessment along with supplemental assessments, as needed, to drive development of an individualized care plan with personal, measurable goals and outcomes for qualifying ISHCN Enrollees
- Risk stratification of new Enrollees and monthly predictive modeling of all Enrollees using sophisticated, proprietary algorithms to identify care needs and Enrollees who can benefit from Care Management or Care Coordination
- Plans for diversion from or transition from institutional care, as needed
- Solution-oriented follow up and monitoring after an Emergency Department visit or institutional care to identify opportunities for care improvement to prevent re-institutionalization
- Identify care needs, including accessibility issues
- Identification of barriers that affect the ISHCN's social determinants of health and their ability to adhere to treatments or maintain their health
- Identification of service needs to support ISHCN Enrollees to remain in their homes or other community-based setting
- Symptom management, medication management, and emotional and behavioral health support
- Parent/guardian and caregiver training regarding diagnoses, medications, symptoms, and how to use and manage specialized medical equipment used by some ISHCN Enrollees, including a crisis or back-up plan for loss of power
- Arranging transportation to serve an ISHCN Enrollee and family's needs and assistance with scheduling appointments

- Communication with schools and school-based providers on the development of an individual education plan (IEP), 504 plan, or other education plan and other school-related special program services
- Coordination of EPSDT special program services
- Provider education, such as care needs, and ongoing provider training through webinars, online, and in-person contact, on topics relevant to ISHCN Enrollees, including EPSDT
- Communication and information sharing among Primary Care Providers/Pediatricians, pediatric specialists, behavioral health providers, state entity staff, and others involved in an ISHCN Enrollee's care

Our field-based, high touch Care Management and Care Coordination program supports ISHCN. Medical Director, Howard Shaps, MD, MBA, Vice President of Health Services, Terri Flanigan, and Population Health Management Director, Shannon Maggard lead our Care Management and Care Coordination team and our population health management programs. This team comprises Care Management and Care Coordination leadership and a mix of qualified, experienced, and local Care Managers and Care Coordinators with medical, social work, and behavioral health backgrounds. Our approach provides individualized care and integration between medical, behavioral, pharmacy, and social needs, led by a Care Manager or Care Coordinator and delivered through a multidisciplinary team.

i. Approach to identifying Enrollees.

Our approach to identifying begins with our intensive efforts to locate and engage ISHCN Enrollees and families/caregivers in care and services and to take action on the ISHCN Enrollee's health. WellCare of Kentucky has a team of over 300 associates located throughout the Commonwealth in our six regionally based offices, living and serving in the communities that our Enrollees and providers reside and establishing relationships throughout each DMS region. We are the only MCO with Enrollee and provider-facing staff deployed through six regional offices across the Commonwealth, including nurses, social workers, community engagement partners, quality and provider relations staff. In Region 8, we deployed Enrollee outreach coordinators to locate and engage Enrollees, including ISHCN Enrollees, identified as high-risk. This local and integrated approach to our organizational structure, gives us the knowledge and flexibility to connect ISHCN Enrollees to local programs that are effective and meaningful to them and their health outcomes. We established a Care Center located in Hazard, which focuses on helping Enrollees navigate the Medicaid program and healthcare landscape. Our vision for this center is to improve Enrollee education, satisfaction, retention, and outcomes for our ISHCN. Critical to identifying Enrollees in the ISHCN population is developing and maintaining relationships with local providers, community-based organization staff, homeless shelter staff, and state entity staff, including Department, DJJ, and the Office for Children with Special Health Care Needs (OCSHCN) staff. These relationships increase the number of ISHCN Enrollee referrals and our ability to facilitate their access to appropriate care by connecting them to a Care Manager and a multidisciplinary care team.

There is no wrong door for ISHCN populations to access our Care Management and Care Coordination program. To identify ISHCN Enrollees, WellCare of Kentucky uses various sources of information and employs all possible data and identification efforts including health risk assessment (HRA) results, ID/Strat risk score and Care Management referrals to identify ISHCN Enrollees. The following methods help us identify ISHCN Enrollees:

- *834 Eligibility files:* In the 834 files, data element fields may identify an ISHCN Enrollee. Data element fields that assist in identifying individuals include, but are not limited to date of birth (over 65 years), link to other Enrollees (family members previously identified), an indicator of Medicare part A/B, or institutional status. Further, we may be able to identify ISCHN Enrollees who are participating in multiple Commonwealth programs. We perform retrospective review of secondary claims that indicate additional coverage.
- *Self-reporting:* We contact any Enrollee or family/caregiver who self-identifies an Enrollee as having special health care needs. Our outreach includes completion of an HRA to validate their report. Once we identify the Enrollee as qualifying as ISCHN, we engage the ISHCN Enrollee in the appropriate level of Care Management or Care Coordination and assistance.
- *Manual referrals:* Care Managers, Care Coordinators, Enrollee Services representatives, Primary Care Providers, UM staff, concurrent review nurses, 24/7 nurse line and behavioral health crisis line staff, Community Connections Hotline staff, and community partners may identify ISHCN Enrollees, including those at high risk needing Care Management. Our local field-based and telephonic staff are a reliable resource to identify ISHCN Enrollees with special health care needs. For example, they may identify an additional individual in the same family, residence, shelter, or receive referral from an Enrollee or family member engaged in Care Coordination services. Our provider-facing staff, including Quality Practice Advisors, work with providers to close care gaps and improve quality measurements. They have access to medical chart information and data and to local provider office staff. Both present opportunities to identify ISHCN Enrollees and refer them for Care Management or Care Coordination, as needed. Provider Relations representatives offers training to providers to promote their awareness of the resources available to ISHCN Enrollees. We encourage providers to alert us early and quickly when they identify adult or child ISHCN Enrollees and when they refer an EPSDT-eligible Enrollee to EPSDT special services.

Our health plan in Hawaii, 'Ohana, has a collaboration and data-sharing agreement with the local Homeless Management Information System (HMIS) agencies which allows us to capture real-time data of 'Ohana Enrollees and what services they received (e.g., emergency shelter, temporary housing, etc.) through HUD-funded housing network.

- *The Office for Children with Special Health Care Needs (OCSHCN):* Formerly the Commission for Children with Special Health Care Needs, this state entity provides comprehensive care to children and youth with special health care needs who are Kentucky residents, younger than age 21, meet medical eligibility, and meet financial eligibility. We have an established and collaborative relationship with OCSHCN staff who refer ISHCN Enrollees to us for Care

Management and Care Coordination of care services. We work in collaboration with them and our 44 medically complex foster care ISHCN Enrollees, meeting no less than twice a year and communicating at least monthly on these needs of these special Enrollees.

- *Claims submissions:* System flags attach to specific ICD-10 codes and serve as a stop-gap measure in identifying individuals with chronic conditions, those receiving EPSDT services, those with a location code indicating an institutional setting or code Z59.0 indicating an ISHCN Enrollee experiencing homelessness or likelihood of homelessness.
- *Community Connection Hotline (CCHL):* Our open-access toll-free CCHL call center provides Enrollees, families, and the public connectivity to free resources to help with social determinants of care. CCHL staff occasionally identify our own Enrollees who self-identify with special health care needs when calling the CCHL.
- *Event triggers, discharge management, and transitional Care Management resources:* Individuals involved in discharge planning and the coordination of care for Enrollees who are transitioning from one care setting to another often refer to WellCare of Kentucky individuals who have special health care needs. Relevant data to facilitate ISHCN Enrollees includes inpatient authorizations, and claims data, including length of stay, admission acuity, comorbid conditions, and Emergency Department use during the last six months. Predictive modeling includes our modified readmission prediction tool improved from the nationally recognized LACE score to identify individuals at risk of inpatient readmission.
- *Authorization for services:* A request for authorization may serve as an identifier of an ISHCN Enrollees. This includes a request for inpatient behavioral health services, facility-based crisis services, non-hospital medical detoxification, medically supervised or alcohol/drug use treatment center, and NICUs.
- *Unified Family Court:* With matters involving a family being addressed by a single judge, there is an opportunity to identify and engage WellCare of Kentucky justice-involved Enrollees after domestic violence, dependency, termination of parental rights, and status offenses (runaways, truancy, and beyond control). Recognizing the impact of conflict on health outcomes, we identify Enrollees involved in the family court system as having the potential to be an ISHCN Enrollee.
- *KY-HMIS:* The system collects and reports information on homelessness, which may assist us in identifying individuals experiencing homelessness, which is a Department-specified ISHCN category. This cutting-edge research and data collection demonstrates our commitment to address the housing crisis while documenting the correlations and root causes between homelessness and health outcomes. Eventually this robust data collection could serve as a foundation for predictive modeling tools.
- *Reach program and HRA:* Our staff uses a combination of systematic telephonic outreach at different times on different days and community-based, in-person outreach to locate and engage hard-to-reach Enrollees to increase completion of the HRA and to engage Enrollees identified as having high risk through predictive modeling.

USING DATA ANALYTICS TO IDENTIFY ENROLLEES WITH HIGH NEEDS

Our effective risk scoring and stratification process, depicted in **Figure C.25-1**, ensures ISHCN Enrollees who need services and supports receive them quickly. We use a well-defined and documented process to identify high-needs Enrollees in priority populations who could benefit from Care Management. Our Identification and Stratification (ID/Strat) process is a proprietary multichannel approach that analyzes data sources from our integrated platform to identify priority populations, such as those with emerging risk factors or high-risk needs like high risk pregnancy or individuals with a substance use disorder (SUD). The model accepts varying frequency of inputs and uses a proprietary predictive algorithm that takes all variables (e.g., readmission risk, HRA results, chronic diagnosis classifications, claims and pharmacy data, pharmacy adherence, zip codes, and race and ethnicity) into consideration to identify ISHCN Enrollees at risk early and direct them, using our assignment logic to the appropriate intensity of care and the most appropriate Care Manager or other support person based on their hierarchy of condition and their specific needs. Our Care Manager performs a comprehensive assessment to confirm risk level and holistic care needs through a care plan

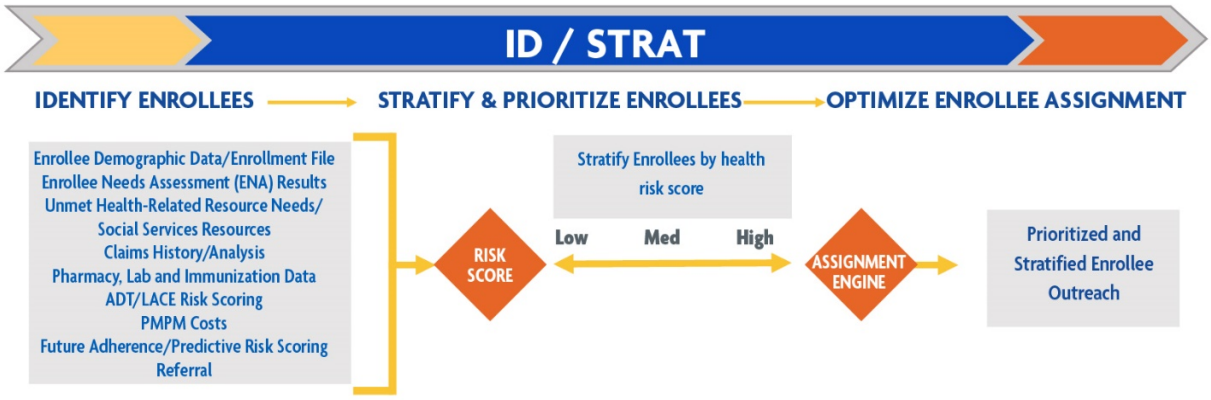

Figure C.25-1 ID/STRAT

After first launching the tool, WellCare identified 20 percent more Enrollees previously masked by claims-only based identification tools and half of those had a BH diagnosis.

Key to the success of our program is how we adapt tools to meet the specific needs of the populations we serve and how we leverage these tools in a fully integrated manner. For example, while all health plans have a risk stratification system as required, WellCare designed our stratification process with predictive analytics specific to the Medicaid population, which allows us to better identify emerging risks as well as behavioral health and substance use risks that are often masked in traditional cost-based stratification models. Our Opioid risk identification and stratification process, for example, can identify, after the first opioid prescription is written, who is at risk for misusing that drug. We assign all Enrollees that fill their first opioid prescription a Risk of Unsafe Use Score™, which identifies Enrollees at risk of unsafe use of prescription opioids and predicts the likelihood that an opioid user will be diagnosed with unsafe opioid use in the next one-year period. This allows us to intervene early with specially trained Care Managers to prevent Opioid misuse. Generally, our risk stratification methodology allows us to determine the risk of our overall population and identify Enrollee risk

levels. Our stratification methodology uses integrated data sources to identify Enrollee needs for services and is run as continuous intervals to ensure new and emerging risks are identified.

ii. Process for screening and assessing individual Enrollee needs

We begin with an assessment and discovery process to better understand the needs of an ISHCN Enrollee and their family/caregivers. Our Care Management and Care Coordination program is rooted in evidence-based strategies for successful coordination of ISHCN Enrollees with complex conditions to assure delivery of accessible, safe, well-coordinated, cost-effective, high-quality care. This includes incorporating population health management program interventions and social services into an individualized care plan. The vulnerable nature of the ISHCN population requires us to place a high priority on Care Coordination activities longitudinally and during care transitions and unplanned acute episodic care. ISHCN Enrollees can move between population health management programs and tiered Care Coordination, depending on the ISHCN's identified needs and preferences.

Our process for screening and assessing individual Enrollee needs includes:

Health Risk Assessment. The HRA is a standardized tool, as designated by DMS, is one way we identify urgent needs to assign ISHCN Enrollees to one of our population health management programs or to Care Management or Care Coordination. We include the HRA in our new Enrollee welcome packet and reach out by phone multiple times at different times to encourage Enrollees to complete the screening within the first 30 days of enrollment and annually thereafter to identify any new needs. With historically low rates of HRA completion across Medicaid populations for all MCOs, WellCare of Kentucky continues to evaluate the best approach to encourage Enrollee completion, such as incentives and different modality options (e.g., mobile). Our Kentucky unable-to-reach in-person contact strategy (REACH) boosted HRA completion rates in Kentucky in Region 8.

Enrollee Needs Assessment. We conduct a comprehensive Enrollee Needs Assessment for individuals identified as potentially needing a higher level of Care Coordination program services. This assesses their immediate, current and past healthcare, mental health, and SUD needs; psychosocial, functional, and cognitive needs; social determinants of health, including employment and housing; ongoing conditions or needs that require treatment or care monitoring; current care being received; current medications; and their support network. The goal of the Enrollee Needs Assessment is to gain a whole-person understanding of the individual's goals, strengths, needs, preferences, abilities, functional needs, and physical and behavioral health status. Within 30 days of an ISHCN Enrollee's referral to Care Management, a local WellCare of Kentucky conducts an Enrollee Needs Assessment in a location and manner that meet their needs to validate which level of Care Management is required for the individual and, if so, the individual's needs.

COMPONENTS OF THE ENROLLEE ASSESSMENT TOOL

Care Managers contact ISHCN or potentially ISHCN Enrollees and/or their families to schedule an in-person Enrollee Needs Assessment at a time and in a place convenient for the Enrollee. The contents includes at least the following elements:

- Immediate care needs
- Current services
- Care and service preferences
- Personal goals (Enrollee and family)
- Demographics
- Clinical Screenings
- Supplemental Assessments
- State or local services currently used
- Physical, intellectual, development disabilities
- Physical health Conditions
- Failure to Thrive
- Developmental Milestone Checklist
- Mental health history (current)
- Substance use history (current)
- Community supports received
- Non-covered benefits received
- Medication list (prescribed and taken)
- DME/Medical Supplies
- Natural supports available
- Functional status (ADLs/IADLs)
- Pain assessment
- Diet/weight
- Safety issues/Falls
- Unmet health-related needs
- Transportation needs
- Housing or shelter needs
- Clothing and hygiene resources
- Employment and education
- DME needs
- Food insecurities
- Domestic violence risks
- Family conflict
- Financial limitations

Our CareCentral clinical IT platform includes a dynamic, configurable comprehensive Enrollee Needs Assessment module that allows us to drill down to specific Enrollee needs. We maintain methodologies and tools for conducting comprehensive Enrollee Needs Assessments for differing demographics and needs while respecting individual choice. Care Managers also use supplemental assessments for individuals in priority populations. We share the results of the Enrollee Needs Assessment with the Enrollee and their PCP within 14 days of completion to inform care planning and treatment planning, as consented to by the Enrollee to the extent required by law.

Supplemental Assessments: Variation in the comprehensive Enrollee Needs Assessment tool relies on branching logic. This means Care Managers are prompted to ask additional questions based on trigger questions, Enrollee responses, and an individual's unique situation. Branching logic streamlines the Enrollee experience and avoids unnecessary questions, which supports completion of the assessment. Supplemental assessments target particular health conditions like diabetes, asthma, depression, or social determinants of health, as well as different priority

population needs, such as asking different questions of a woman with a high-risk pregnancy than those asked of a parent with a child under age five with complex needs.

For all Enrollees, as indicated by certain answers, Care Managers can use validated supplemental screening tools:

- CAGE (Drug and alcohol use screening tool for individuals 16+)
- CRAFFT (Screens for high-risk alcohol and other drug disorders for people ages 12 to 21)
- PHQ-9 (Depression screening tool for individuals age 13+)
- AUDIT-C (Alcohol Use Disorders Identification Test) to screen adults for alcohol use
- Edinburgh Postnatal Depression Scale, a screening tool for postpartum depression

In addition, experience in managing individuals with chronic pain has led us to include screening for opioid use disorder. Care Managers can use the Opioid Risk Tool (ORT), which is a brief, validated screening tool to use to monitor the risk for opioid addiction among adults prescribed certain medications. **Table C.25-2** shows other tools to support identifying and stratifying Enrollees to support services.

Table C.25-2 Additional Support Tools

Additional Tools to Identify and Stratify Enrollees and To Support Services	
Supplemental Tool	**Description**
Smart Care Management Assignment	We generate a daily census report of Enrollees, by risk level, who may benefit from varying levels of PHM intervention. We subsequently segment Enrollees based on risk score and population, such as ISHCN, SMI, SED, Disease Management, Behavioral Health, Transplant, Foster Care, etc. to allow for timely referral to the appropriate resource in the field or telephonically within our clinical teams.
Standard care planning tools	Our care plans are built in CareCentral and guided by standard evidence-based guidelines.
Social Service Needs Assessment, Database and Call Center	Through our database of social service resources, we can track the needs of the population and intervene at the Enrollee, organization, and systemic level to support Care Coordination services.
Holistic view of Enrollee needs	Our Member 360 view helps quickly identify ISHCN Enrollee needs and supports services provided to them by showing any Enrollee-facing staff a holistic view
Provider Portal and Data Exchange Process	Our provider portal is connected to CareCentral, which allows us to share the outcomes of health screens, EPSDT screening and special program services, social determinants of health obstacles, Enrollee assessments, care plans, and multidisciplinary team contacts with providers. Providers can view open

Additional Tools to Identify and Stratify Enrollees and To Support Services	
	and pending care needs through the portal and notify us when those care needs are closed through encounters, claims, EMR interchange, or submission of supplemental medical record information.
Mobile and web Prevention and Wellness education	Through digital platforms, which comply with Federal Section 508 standards and web content accessibility guidelines, Enrollees learn about benefits and services, how to access care, learn about preventive care, how to self-enroll in our health and wellness programs, and how to order a new ID card. Engaging ISHCN Enrollees through their mobile devices and helping them to take even small steps, such as downloading our MyWellCare mobile app, is a step toward empowering them to be active participants in their health and health care.

iii. Approach to provide education to Enrollees and caregivers

WellCare of Kentucky demonstrates ISHCN Enrollees are our priority by putting our Enrollees first so they can get the care and services they need to stay healthy. We maintain a strong focus on early prevention and treatment. We help Enrollees and their caregivers effectively use the resources available through special program services and our population health programs. We offer a wide range of educational materials and use numerous and innovative methods to inform Enrollees, caregivers, and providers about the availability of special program services and to maximize the benefit of our targeted population health programs. We consistently refer ISHCN Enrollees to and coordinate with other providers that provide special program services, such as EPSDT screening and special program services, dental services, and transportation, and to our population health programs that target chronic conditions prevalent in the ISHCN population.

EDUCATING ISHCN ENROLLEES AND CAREGIVERS

Enrollees and their families or guardians want to know what benefits and services are covered. We empower ISHCN Enrollees and their caregivers to take action on their health by providing access to education and resources chronic condition. We meet Enrollees where they are by offering a multi-modal communication and outreach approach that includes specialty-service program descriptions and condition-specific education via easily understood written and online materials; verbal explanations from WellCare of Kentucky staff, providers, and community-based organizations; digital communications; face-to-face interactions; and home visits when appropriate. In all Commonwealth regions, Enrollees and community residents who participate in community events and activities can talk to our staff face-to-face and meet with our community partners to learn about improving health and wellness and the features and benefits of our special program services like EPSDT and our population health programs.

Parents and guardians have both a responsibility and desire to ensure their children get needed health services, but many need education and support to understand and access EPSDT screening and other special program services like dental services and transportation. We coordinate access to other child-oriented special program services like pediatric sexual abuse

examinations. In this case, WellCare of Kentucky staff informs parents and caregivers that we have providers in our network who have the capacity to perform a forensic pediatric sexual abuse examination, and upon receiving a request from DCBS, we coordinate this service. We have an established relationship with DCBS and our staff works closely and collaboratively with DCBS staff to coordinate services for our Enrollees.

METHODS TO EDUCATE ISHCN ENROLLEES AND CAREGIVERS ABOUT BENEFITS AND SERVICES

Our experience tells us that Enrollees and their families/guardians have different preferences in how they learn about covered benefits and services. We meet Enrollees where they are and use a variety of methods to continually educate Enrollees and families/guardians about special program services:

- *New Enrollee Welcome Call and Welcome Packet:* We offer a combination of automated and live new Enrollee Welcome Calls, which includes calls to action like asking all Enrollees to confirm receipt of new Enrollee onboarding materials, including the Welcome Packet and ID card and reminding them to schedule primary care appointments. In addition to the Welcome letter and other informational items, our Welcome Packet includes information related to special program services and population health management programs, including but not limited to:
    - Message encouraging all ISHCN and/or their guardians to schedule well checkups
    - Information on the appropriate use of the Emergency Department
    - Healthy rewards incentive program brochure, a program that rewards Enrollees who complete specific preventive health, EPSDT, wellness, and engagement milestones
    - We include other tools in the initial welcome packet and in subsequent Enrollee communications. This includes prenatal care materials and important phone numbers, including nurse advice line and our Community Connections Help Line (CCHL) for assistance with social resource needs. We direct all Enrollees to call our Enrollee Services toll-free line to obtain written materials, receive assistance with the Enrollee portal, or to receive assistance on any other matter like help finding a doctor or dentist. All material included in the Welcome Packet is also available on the Enrollee portal.
- *Welcome Video:* Our captioned, dynamic welcome video is a recent innovation to engage our Enrollees through a multi-media version of the written Quick Start Guide, included in the Welcome Packet. Enrollees and caregivers access the video through a link on a new Enrollee welcome text (SMS) message. The four-minute video on WellCare Health Plans, Inc.’s (WellCare's) YouTube channel explains in English, with captioning in Spanish. It educates viewers about resources where an Enrollee can learn about benefits and services, including special services like EPSDT and dental services, the role of a Primary Care Provider with a prompt to schedule an appointment, the purpose of the nurse advice line, availability of population health programs, and how to reach our CCHL for live assistance with social needs.
- *Enrollee Services Call Center:* WellCare of Kentucky Enrollees can reach our Enrollee Services call center staff at 1-877-389-9457. Enrollee Services representatives are often an Enrollee’s first contact with us. When an Enrollee initiates an inbound call and it is their first contact,

the Enrollee Services representative helps the Enrollee complete the onboarding process, including completing their initial health risk assessment. They help Enrollees and caregivers understand benefits and services and answer questions about how to access services; help Enrollees find a doctor or other providers and schedule appointments; and help Enrollees connect to other health care services like dental services or voluntary family planning services. Depending on an Enrollee's needs, an Enrollee Services representative may help an Enrollee connect to the Kentucky Transportation Cabinet, Office of Transportation Delivery for nonemergency transportation services or connect them to a Care Manager for medical or behavioral health concerns.

- *Public Website:* WellCare of Kentucky has a mobile-responsive public website. In 2018, the top three most visited sections of the Kentucky Medicaid website included the Welcome page, the Healthy Rewards Program page, and the Benefits page. Our Healthy Rewards Program provides gift card rewards for Enrollees completing wellness visits and preventive care.
- *Enrollee Portal:* Enrollees can access the portal from the internet or from mobile devices. It provides Enrollees a secure, personalized health care experience and 24/7 access to self-service functions. Within the portal, Enrollees can change Primary Care Providers or check on the status of service authorizations. Enrollee portal features banners, which we can use to call attention to special program services. Our Enrollee portal offers Enrollees and families/guardians the following information:
    - Enrollee-specific care needs and how to close those gaps
    - Electronic versions of Enrollee newsletters, which include articles about the availability of special services programs
    - Find-A-Provider search tool
    - Enrollee rights and responsibilities
- *Enrollee Handbook:* Our Kentucky Enrollee Handbook contains information to help Enrollees connect to the care and services they need. Enrollees and families can access the Enrollee Handbook on our secure Enrollee portal at wellcare.com/Kentucky. Through simple navigation and two clicks, Kentucky Enrollees can download the Enrollee Handbook, learn about preventive care, and find FAQs in the New Enrollee Quick Tips section. The Find-A-Provider resource is an intuitively designed query tool recently redesigned according to health literacy principles to help Enrollees find physicians using words, such as pediatrician or obstetrician. Enrollees filter and compare search results by languages, gender, accessibility considerations, specialty, and distance from a user-chosen location, such as home, work, or current location. The Enrollee Handbook highlights special services program descriptions, including but not limited to:
    - Covered Services, immunizations, pregnancy services, and hospital services
    - WellCare of Kentucky's extra benefits like our Healthy Rewards Program Enrollee incentive program and other value-added services, such as over-the-counter items - $10/month per household and free sports physical, maternity care special program services along with our population health management WellCare Baby Steps maternal and child health program

- Emergency care, including nurse advice line and out-of-area emergency care; urgent care; and post stabilization care services
- Dental services
- Non-Emergency Medical Transportation (NEMT)
- EPSDT
- Lock-In Program

- *Digital Engagement:* An effective means of Enrollee engagement, we direct our Enrollees to our digital platforms and demonstrate how to navigate managed care as a convenient way for Enrollees to obtain information or perform self-service functions. Through digital platforms, which comply with Federal Section 508 standards and web content accessibility guidelines, Enrollees learn about benefits and services, how to access care, learn about preventive care, how to self-enroll in our health and wellness programs, and how to order a new ID card. For Medicaid Enrollees with frequent address changes, mailed materials sometimes do not reach them but digital communication are often an effective means of communication. Engaging Enrollees through their mobile devices and helping them to take even small steps, such as downloading our mobile app, is a step toward empowering them to be active participants in their health and health care.

- *MyWellCare mobile app:* Our mobile app makes getting and staying healthier easy. WellCare actively uses our mobile app to communicate important information to our Enrollees and provides easy access to services. In 2018, as a result of **our proactive approach and updated functionality, WellCare of Kentucky experienced a YoY increase of 476% in downloads of the mobile app for Kentucky Medicaid Enrollees from 2017-2018. The top app features used in 2018 were Find A Provider, Messages, and ID card.**

  The MyWellCare mobile app is free and is compatible with Apple and Android devices. This digital engagement tool enables Enrollees to assume more responsibility for their health through familiar tech capabilities and functions. Enrollees can call the Enrollee Services number on the back of their ID cards if they have questions about the mobile app or need assistance downloading it.

  Using the app, Enrollees can view open care needs displayed together with their provider's phone number, which they can tap to call and schedule appointments. They can email their Mobile ID card to providers. We continually add functionalities to our digital applications to keep pace with our Enrollees' increasing utilization and feedback regarding their online experience. **Figure C.25-2** shows the MyWellCare mobile app features.

Figure C.25-2 Using the MyWellCare mobile app, users can use a smart phone or tablet to pull up their ID card, find a provider, and more.

We align monthly health messaging with general, non-PHI messages, or push notifications that mirror the inbound IVR route messaging and the public website.

- *WellCare's mobile app promotes the health and wellness of new mothers in an interactive and modern way by providing immediate, cutting-edge support for new moms at the touch of a button.* The app is a live video chat service, available 24/7 through smartphones. It provides new mothers immediate access to certified providers including lactation consultants and nutritionists. Mothers can receive breastfeeding support as well as guidance related to any health issues their babies may be experiencing, such as colic, digestion, transitioning to solid foods and more. We are piloting this mobile app on our Arizona Medicaid program. The app features push notifications that appear regularly on the mobile devices of registered Enrollees. These helpful alerts include health and safety tips that are beneficial to mothers and their babies.
- *JOOL:* JOOL is a digital life coach mobile application customized for WellCare's foster care ISHCN Enrollees to prepare them for transitioning from the foster care program. Twelve months before aging out of the program, we provide mobile devices with the JOOL app for Enrollees to create a private account and complete an initial screening about their physical/behavioral health and transition goals. JOOL then creates a personalized, step action plan featuring daily check-ins with a chatbot for ISHCN Enrollees to report on their goals progress as well as stress levels and sleeping habits. Powered by machine learning, the chatbot responds to the Enrollee's daily check-ins with short messages, called daily JOOL, which become progressively more attuned to the ISHCN Enrollee's progress or challenges. For example, if an Enrollee reports a lack of sleep, the chatbot recalls that a previous sleep deprivation episode resulted in the Enrollee skipping meds and missing a medical appointment. The chatbot's daily JOOL would correspondingly urge the ISHCN Enrollee to go to bed earlier. Combined with WellCare of Kentucky's supportive, Care Managers who are trained in trauma-informed care, JOOL is a breakthrough app helping ISHCN Enrollees stay on track with their care plans and learn self-care.
- *MyStrength:* As an evidence-based digital behavioral health platform, MyStrength provides our ISHCN Enrollees with interactive clinical programs empowering them to address depression, anxiety, stress, substance use, chronic pain, and sleep challenges, while also supporting the physical (e.g., smoking cessation, diabetes) and spiritual aspects of whole-person care.
- *Inbound caller IVR route messaging increase health and wellness awareness:* We create IVR route messaging that inbound callers hear as their calls transfer to our staff. Route messages rotate from month to month and focus on specific health and wellness topics. For example, in 2019:
    - **March:** Dental health for you or your child is important. Ask your customer advocate about your dental benefits. He or she can help set up a visit with your dentist. WellCare of Kentucky is your partner in preventive health!
    - **April:** April 22 to April 26 is Every Kid Healthy Week. Help your kids eat healthy and stay active all year long. Do you want to learn about nutrition and healthy habits? Ask your

customer advocate to set up a visit for you and your doctor! WellCare of Kentucky is your partner in preventive health!

- *Outbound calls regarding Enrollee care needs:* WellCare of Kentucky quality staff, Field Outreach Coordinators, and Care Managers make outbound calls to Enrollees and families or guardians to close gaps in care, including overdue EPSDT screenings or immunizations. Our staff provides reinforcement and support, such as assistance with scheduling appointments for needed services like well-child visits, immunizations, or blood lead screening as well as for annual adolescent and dental screenings. As an example, our quality staff initiated an Enrollee outreach campaign from October 2017 to December 2017 to increase well-child and dental visits. *Quality staff called 10,573 Enrollees. Of those calls, we successfully reached 3,226 Enrollees and closed 681 additional care gaps.* This had an impact on the following quality measures: our Adolescent Well Care measure improved by 31.57%, our Well Child visit measure for children 3-6 years old improved by 25.96%, and the Annual Dental Visits measure improved by 11.59%. In addition, Adolescent Immunizations, Combo 2 improved by 5.67%.
- *Mailings in the form of annual/seasonal prevention written reminders and newsletters:* We send to Enrollees and caregivers an EPSDT guide and birthday cards (shown in **Figure C.25.3**) to remind EPSDT Enrollees about the screenings and preventive services they should receive during the year. Birthday cards encourage Enrollees to reach out to their Primary Care Provider to schedule a check-up and receive screenings and/or preventive services. We send targeted reminders, e.g., reminding Enrollees that February is Oral Health Month to encourage Enrollees to use dental services. Enrollee newsletters (mailed and electronic on the Enrollee portal) contain benefit updates and details, highlight new services, communicate outreach events in specific communities, and present fitness and health education.

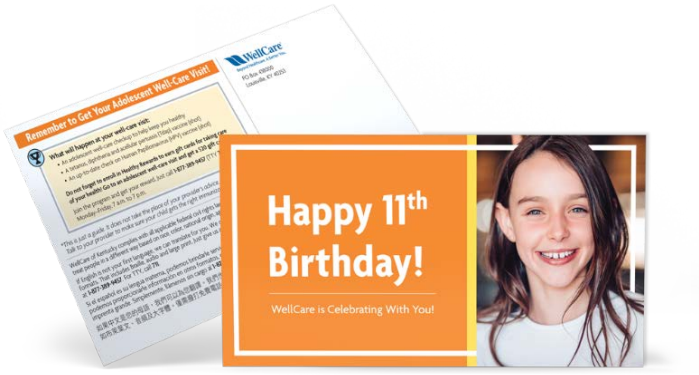

Figure C.25-3. Birthday cards remind Enrollees about screenings and preventive services.

- *Outreaching and Educating Enrollees at Community Events:* We share a common goal with our community partners to improve the lives of the people in Kentucky communities. We engage with Enrollees and caregivers in their own neighborhoods through our Community Connections Program and our comprehensive Enrollee and Community Education and Outreach Program**. In Kentucky in 2019, WellCare of Kentucky staff completed 1,409 community activities, reaching 37,509 stakeholders.** Our Community Education and Outreach Program includes creative collaborations with various entities, including schools, homeless centers, youth service centers, family resource centers, public health departments, school-based health clinics, chamber of commerce, faith-based organizations,

and more. WellCare of Kentucky staff continually seek new opportunities to partner with organizations that share our commitment to helping to build healthier communities. We leverage these partnerships to hold fun and informative health-related events; support women's health; and educate children and youth about how to develop healthy habits related to fitness and nutrition.

Community events are activities where WellCare of Kentucky staff dedicate time to connect with community agencies or sponsor/host events for the community. Activities include attending interagency council meetings, specific health and social service-focused coalitions, as well as hosting community activities targeted at specific health or social issues. We have a strong commitment to participate in or sponsor local street fairs, health fairs, county fairs, Kentucky State Fair, festivals, and other scheduled and health-related events like community baby showers, which increase Enrollee compliance with and education about the EPSDT program. When our community relations team identifies an ISHCN Enrollee, they refer them to a Care Manager for follow up. WellCare of Kentucky's community relations team participates in community events that align with special program services and our Population Health Management program focus areas, including:

- *Health Education* -- Obesity: WellCare attended the YMCA Kids Day community event in Henderson County to promote healthy eating and living with kids. Asthma: Community health fairs in numerous counties across Kentucky
- *Maternity Care* -- Low Birth Weight and Pre-term Birth: Community baby shower events; Oh Baby Expectant Parent Fair; Parent Empowerment Workshop
- *Transportation* -- Mental health and substance use/misuse: Third Annual West KY Wellness Summit Community Mental Health and Breaking the Stigma! Mental health was the theme of the 2018 summit. WellCare partnered with the Chrysalis House for the past three years, filling transportation gaps that their women in recovery encounter through taxi vouchers, bus passes, and gas for Chrysalis House's on-site van.

- *Kentucky quality staff and Care Management staff:* Care Management staff conduct educational activities that inform Enrollees about special program services and help them access those services. For high-risk ISHCN Enrollees, Care Managers conduct a comprehensive needs assessment that identifies care needs. When identified, they educate the Enrollee about availability and importance of accessing these services, list referrals to special program services in the care plan, and coordinate access to the services. The Care Manager conducts ongoing monitoring and additional education, as needed, to support appropriate access.
- *Triggering events:* Certain events trigger engagement of ISHCN Enrollees with over or under-utilization of services; Emergency Department over-utilization; discharge planning needs; behavioral health crisis intake; pregnancy; opioid or other controlled substance overdose, etc. Care Managers conduct in-person or telephonic outreach, education about appropriate utilization, assessment, and referrals to special program services, as necessary.
- *Providers and community partners assist us in educating Enrollees:* We educate providers to engage their assistance in educating Enrollees when a provider identifies a need for special program services. Our Community Connections team educates our community partners

about special program services so that they can reinforce our efforts to increase Enrollee awareness of special program services and population health program services and the benefit of using these services to improve health outcomes.

- *Creative efforts to target outreach and education efforts to Enrollees in harder-to-reach populations (e.g., Hispanic, African American, LGBT community, young adult, and veterans):* Partnering with faith-based and other community organizations, including food banks and homeless shelters, serving specific populations helps us connect with Enrollees in hard-to-reach or hard to engage populations, including the ISHCN population. Individuals in the community trust these organizations. Developing customized outreach materials and resources helps us engage targeted populations in special program services. In Kentucky, our community engagement staff participate in a number of community events that target harder-to-reach populations. This includes events sponsored by Volunteers of America for veterans who may be homeless, resource fairs for grandparents raising grandchildren, and Healthy Start 502 Fathers baby shower for Jefferson County fathers in the African American community.

  Our staff participated in the World Refugee Day Celebration in Bowling Green, celebrating diversity and cultures of newcomers who arrived through the Refugee Resettlement program. This event highlighted different cultures and provided educational opportunities for attendees to learn about helpful services and programs in the community, including healthcare services. Our staff sat on the committee for a Language Access Forum, an educational event for healthcare staff to learn how to communicate effectively with their patients who have limited English language proficiency. We attended the Americana World Festival hosted by the Americana Community Center of South Louisville and educated Enrollees about healthcare services. Our staff sat on a committee in Perry County for the LGBTQ ALLYance, founded at Hazard Community and Technical College to train organizations how to become a safe space for LGBTQ-identifying individuals, with the hope these individuals will feel safe seeking needed services

APPROACH TO PROVIDING TRANSITION SUPPORT SERVICES

Enrollee outcomes data shows us that specific, timely interventions are effective in successfully supporting individuals as they discharge from hospitals or facilities and move between settings. Care transitions are widely recognized as periods of heightened health risk, which can result in health complications and costly readmissions. Our formal discharge-planning program includes a comprehensive evaluation of an ISHCN Enrollee's physical and behavioral health and social service needs. This is in addition to the identification of services and supports needed to transition into the most clinically appropriate, least restrictive setting possible following an ISHCN Enrollee's discharge from an acute setting, institutional clinical setting or residential placement, or a transition between levels of care. WellCare of Kentucky has experience with discharge management at the Commonwealth's four hospitals, including Western State Hospital (WSH), Eastern State Hospital (ESH), Central State Hospital (CSH), and Appalachian Regional Hospital (ARH). During 2019, 271 of our Medicaid Enrollees were discharged from

these four hospitals. Approximately 40% of these Enrollees agreed to engage with our Care Coordinator in discharge planning and Care Coordination activities.

WellCare of Kentucky uses transparent UM processes and takes steps to quickly approve services needed post discharge to maintain an ISHCN Enrollee in the least restrictive setting possible. **Our Care Coordinator outreach efforts continue to have a positive impact on reducing hospital readmissions in Kentucky. In 2018, WellCare of Kentucky's readmission rate for the number of Enrollees readmitted to an acute hospital or facility within 30 days of a discharge was down 3% from 2016.**

Our current experience serving the ISHCN population in the Kentucky Medicaid program informs our approach to meeting the Commonwealth's expectations and requirements for discharge management and transitional Care Management for ISHCN Enrollees and their families. On the current contract, WellCare of Kentucky leadership staff meet with providers and with hospital and facility staff serving large groups of ISHCN Enrollees, including our foster care and adoption assistance population, e.g., Our Lady of Peace; Children's Alliance and PRTFs, to enhance discharge-planning processes, improve information sharing, and expand educational opportunities, such as pharmacy utilization of psychotropic medications and telehealth to increase access to specialists.

DISCHARGE PLANNING NEEDS OF ISHCN ENROLLEES

We collaborate with hospitals and other acute care facilities, PRTFs, residential providers, physical and behavioral health providers, the Children's Review Program, DMS, DCBS, the DJJ Placement Services Division, and others on discharge planning needs of ISHCN Enrollees across all levels of care. Today, we coordinate care for our ISHCN Enrollees across a full continuum of care. Our current Care Coordination team works hand in hand with our Utilization Management team to make sure we share and incorporate into the discharge planning process all clinical information and social determinants for health information. We encourage Care Coordination team planning with providers to assure discharge planning consistency and ensure referrals for the next level of care are in process. To plan for discharge, clinical services need to be identified and appropriate placement and levels of supervision needed must be identified. Often, a hold up to identifying an appropriate discharge plan is due to the ISHCN Enrollee's level of supervision need. Once the appropriate placement is identified, finding the correct level of clinical intervention can then be planned. Discharge planning also involves ensuring that social determinants of health and community resources are identified and planned. WellCare of Kentucky maintains written policies and procedures in place for discharge planning focused on strengths-based, culturally competent, and medically appropriate treatment designed to meet Enrollee needs, including those identified with emotional and behavioral issues.

Notification of admission or discharge facilitates timely Enrollee engagement: WellCare of Kentucky uses predictive analytic ID/Strat results, admission, discharge, and transfer (ADT) feeds, direct facility EMR access, electronic prior authorization requests in 278 format, faxes, and HIE to identify ISHCN Enrollees with an inpatient admission and who are experiencing a care transition. In addition to having hospital-based staff onsite in larger Kentucky hospitals and facilities, we require WellCare of Kentucky network hospitals to alert us when Enrollees have an inpatient stay or come to the Emergency Department with physical or behavioral health issues.

In-person staff in large hospitals and enhances our engagement with Enrollees: To engage Enrollees quickly, we embed onsite inpatient Care Managers in high-volume hospitals and facilities and telephonic concurrent review nurses at low-volume hospitals and facilities to identify ISHCN Enrollees experiencing an inpatient stay. Onsite inpatient Care Managers, concurrent review nurses, and our integrated Care Coordination system, CareCentral, enhance a Care Coordinator's ability to quickly engage ISHCN Enrollees. Our approach to Care Management ensures each ISHCN Enrollee needing discharge management and transitional Care Management has a single point of contact who follows-up with the ISHCN Enrollee, family, network providers, and state staff, if involved. Embedded onsite inpatient Care Managers and concurrent review nurses review inpatient hospital and facility stays for medical necessity. They review an ISHCN Enrollee's status to assure the severity of presenting symptoms and the intensity of services provided support the ongoing need for an inpatient level of service. A Care Coordinator completes medication reconciliation telephonically with the WellCare of Kentucky pharmacist.

Advanced analytics identify Enrollees at high risk of readmission: WellCare conducts predictive modeling and risk stratification to identify ISHCN Enrollees at moderate or high risk of readmission, including the LACE+ index, at admission when discharge planning begins. Our LACE Index Scoring Tool for Risk Assessment of Hospital Readmission system alerts our Care Coordination staff about an ISHCN Enrollee's condition. Activated at the time of ADT or other notification, this proprietary algorithm helps Care Coordinators prioritize care needs. It assigns a daily readmission risk score using length of stay, acuity, comorbidities, and ED use to predict the likelihood of readmission. **Use of the LACE tool, combined with WellCare's added analytics, increased the accuracy of the tool's predictive power by more than 60%.** The LACE+ score guides the level of transitional Care Management and the type (in-home or telephonic) and duration of support and interventions. In Kentucky, we stratify all Enrollees into risk levels.

The following information informs ID/STRAT risk stratification includes:

- A weekly assessment risk score using weighted questions to stratify Enrollees and identify those with statistically significant predictors for multiple readmissions.
- A monthly claims-based risk score using claims related to chronic conditions and enrollment data, e.g., considers aid category separately, a diagnostic classification algorithm, PMPM dollar thresholds, utilization requests, and impactable condition flags.
- A monthly pharmacy adherence score using claims, clinical, and intervention data to show Enrollee compliance with medication regimens based on claims history. It predicts an Enrollee's risk of specific medication outcomes, quantifies the financial value of better medication use, and assesses an Enrollee's receptivity to intervention.
- A monthly predictive risk score using admission, readmission, Emergency Department, and disease progression predictions to create a holistic risk profile.

DISCHARGE PLANNING FROM HOSPITALS AND OTHER ACUTE CARE FACILITIES

Effective discharge planning requires a team approach. Our discharge planning activities prioritize collaboration with hospital or facility staff, network providers, state staff, community advocates and others to create a person-centered discharge plan and facilitate an ISHCN Enrollee's proactive and successful transition to a lower level of care. Rapid responses often require same-day or next-day outreach for high-need ISHCN Enrollees who are admitted to a hospital or facility. Onsite inpatient Care Managers, concurrent review nurses, and Care Coordinators add new ISHCN information related to the hospital or facility admission in the Enrollee's record CareCentral.

Our Care Coordinator makes sure ISHCN Enrollees have voice and choice during the discharge planning process and that an ISHCN Enrollee's family has the training and support they need to keep an ISHCN Enrollee safe and well. For foster care Enrollees, an ISHCN Enrollee's discharge plan and transition care plan align with the DCBS case plan and our care plan in CareCentral. The transition care plan includes safe discharge into the most appropriate, least restrictive setting possible, access to the full range of services needed including behavioral health services.

Our Care Coordinator oversees discharge planning and care transitions, including:

- Provide timely, in-person and/or telephonic follow-up post discharge, scheduling Primary Care Provider post-discharge appointments (48 hours to 7 days), and referrals to specialists, appointment scheduling assistance, transportation, and social needs, follow up to confirm completed appointments, and referral management
- Conduct and update needed assessments
- Coordinate comprehensive medication management, medication reconciliation, and medication self-management, engaging a pharmacist
- Conduct ISHCN Enrollee and parent or caregiver condition-specific education; how to recognize the red flags the Enrollee’s condition is worsening; self-management support; use of a personal health record; alternatives to using the Emergency Department; and wellness/prevention education
- Provide specialized training and education for parents and caregivers when an ISHCN Enrollee has a medically fragile condition that requires special procedures or use of special equipment post discharge
- Create an individualized care plan with interventions, including Primary Care Provider, specialist, and behavioral health visit follow-up appointments, durable medical equipment (DME), in-home supports, and connection to peer support, as appropriate
- Connect ISHCN Enrollees to community resources for health-related social needs using the resources of our Community Connections program. We have extensive engagement and strong partnerships with community-based organizations that support the people of Kentucky with their social needs, including the Community Farm Alliance, Orphan Care Alliance, SOAR, Kentucky Home Place, Operation UNITE, and more

- Connect ISHCN Enrollees to value-added benefits. Many of our value-added services are particularly valuable for ISHCN Enrollees post hospital or facility discharge. For example, home-delivered meals for Enrollees discharged from an inpatient stay hospital, rehabilitation or skilled nursing facility; meal program for Enrollees discharged from a behavioral health facility; respite services for caregivers; and over-the-counter items - $10/month per ISHCN Enrollee or family.
- Convene multidisciplinary team meetings of clinical and non-clinical representatives and strengthen collaboration with hospital and facility discharge planning staff, providers, pharmacies, and ISCHN Enrollees, (for foster care ISHCNs, we include foster parents, adoptive parents, fictive kin, caregivers, and Department, DCBS, and DJJ staff) to coordinate a broad spectrum community-based physical, behavioral, pharmacy, and social services post discharge across all levels of care.
- Facilitate collaboration and oversees information sharing between multidisciplinary team members and state entity staff, if the ISHCN Enrollee is involved in other programs
- Coordinate linkage to community services through our Community Connections program and follow up on referrals to community-based services to see if an ISHCN Enrollee's and family's needs have been met
- Conduct timely in-home, high-touch engagement and follow-up with ISHCN Enrollees with complex care needs. A high-touch, high-intensity home visit from a Care Manager after hospital discharge substantially reduces 30-day readmission rates for individuals with multiple chronic conditions. For individuals with complex chronic conditions, home visits reduce the likelihood of a 30-day readmission by almost 50 percent compared to less intensive forms of transitional care.

Our goal for discharge planning is to provide a proactive and well-coordinated plan for transitioning an Enrollee from an acute setting or inpatient facility or PRTF to the most appropriate level of care while focusing on quality, safety, and ISHCN Enrollee and family satisfaction. Another important goal is to engage ISHCN Enrollees in person-centered services, supports, and resources that wrap around the ISHCN Enrollee to minimize his or her risk for readmission. Assuring timely post-discharge follow-up physician and behavioral health specialist appointments is a key strategy to reducing readmissions.

CARE COORDINATION FOR ISHCN ENROLLEES DISCHARGED FROM RESIDENTIAL CARE

We coordinate inpatient behavioral health discharges, e.g., from Our Lady of Peace or The Ridge, and work with the hospital clinical team to engage with PRTF staff for admission to the Care Coordination program. Our clinical leadership team meets with PRTF leaders to establish and maintain relationships, points of contact, etc. to facilitate smooth behavioral health discharges. Discharge planning is often the first step to an ISHCN Enrollee's recovery. Therefore, we begin planning as close to the point of a behavioral health admission as possible. Within the first 30 days, our Care Coordinator outreaches to the PRTF to discuss initial thoughts of discharge placement and needs. For foster care ISHCN Enrollees, the Children's Review program

or DJJ Placement Services Division must be involved in the discussion to assist with placement identification and referral.

Well-Coordinated Discharge Plan

When our Kentucky foster care Enrollee, Ethan, age 8, was hospitalized during a crisis precipitated by his medical and behavioral health needs, his care coordinator facilitated a consultation call between our Medical Director, Ethan's providers, and his adoptive mother to decide next steps to stabilize him. When psychological testing recommended Applied Behavior Analysis, a service typically only provided to Enrollees with an autism diagnosis, the care coordinator worked with our UM staff to obtain authorization. Today, Ethan is stable, out of the hospital, and living at Home of the Innocents. The family's long-term goal plan is for Ethan to return to a less restrictive setting at home with his adoptive mother.

Prior to discharge, our Care Coordinator works with the PRTF discharge planner to get copies of documents related to our ISHCN Enrollee's care in their facility so we can coordinate getting this information into the Enrollee's record and share this ISHCN Enrollee-specific information with the mental health provider who will be providing the ISHCN Enrollee's aftercare. Essential information includes:

- Medical needs including allergies
- Medication; dosage; clinical rationale; prescriber
- Discharge diagnosis
- Prevention plan to address symptoms of harm to self or others
- Any other essential recommendations
- Appointments with after discharge service providers-date, time, place
- Contact information for internal providers
- Contact information for PRTF discharge planners or liaisons

For any ISHCN Enrollee in a PRTF who is receiving or who has received psychotropic medication during their stay, we expect the clinical rational for each medication to be clearly documented on their psychiatric discharge summary or final evaluation. The reason for discharge should also appear on the PRTF's discharge summary.

Providing an appropriate continuum of behavioral health services and social supports is crucial to achieving a successful transition to home or a community setting and the best possible outcomes for children and youth discharged from residential care. Many ISHCN Enrollees are individuals who have diagnoses of co-occurring mental health and substance youth disorders. In addition, family courts or the juvenile justice system may have had a key role in the placement of the individual in residential care, mandating a residential care placement as part of the disposition process. Our experience shows this population benefits from integrated Care Coordination, family-driven care, community-based support, collaboration between residential

and community-based providers and government entities, and provider adoption of evidence-based and effective practices.

We use a high-fidelity model and strengths-based, culturally and linguistically competent approach that recognizes the importance of the family, school, and community and addresses an ISHCN Enrollee's whole person needs. ISHCN Enrollees discharged from residential care have a Care Coordinator who works collaboratively with residential and community-based providers and others involved in an ISHCN Enrollee's care. The Care Coordinator facilitates shared decision-making with physical and behavioral health providers, pharmacists, ISHCN Enrollees, families, and any involved state entity staff so they work together to make decisions and select treatments and care plans based on clinical evidence that balances risks and expected outcomes with ISHCN Enrollee and family preferences and values.

The Care Coordinator seeks active engagement of the ISHCN Enrollee and his or her family or support system to plan for and coordinate follow-up community-based care and services that become part of the ISHCN Enrollee's care plan. This plan lists traditional steps toward recovery and management of co-occurring physical health conditions as well as a crisis and safety plan. Service planning, service delivery, and post discharge Care Coordination may include but is not limited to:

- An in-home evaluation of the family or living situation
- Coordinating with state entities, as necessary
- Coordinating with educational institutions
- Connecting ISHCN Enrollees to peer support groups
- Arranging housing
- Engaging a peer support specialist to accompany an ISHCN Enrollee to outpatient or other community services
- Connecting a ISHCN Enrollee to educational or vocational opportunities

WellCare of Kentucky employs a peer support specialist who is a young adult with lived experience in the mental health system and who is a former foster care youth. The peer specialist serves as a mentor, navigator, and recovery support for our foster care youth ISHCNs in crisis. This peer support specialist can help an adolescent understand treatment options, understand what groups, social and recreational activities are available in the community, and serve as someone to talk to when the ISHCN Enrollee is confused or feeling unsure about where to go for help.

OTHER KEY COMPONENTS OF DISCHARGE MANAGEMENT AND CARE TRANSITIONS

In addition, the following discharge management and transitional Care Management includes the following key components:

Advanced technology helps us address an Enrollee's whole person needs: We maintain a single and centralized Enrollee record in CareCentral, our Care Management system. CareCentral houses all behavioral health and medical UM and authorizations into a single ISHCN Enrollee view. Fully integrated with our claims systems, CareCentral shows users an ISHCN Enrollee's integrated health record, health history, diagnosis and treatment, outreach efforts, information received from providers, assistance with scheduling appointments, assessment data, medication history, health-related social resource needs, claims history, authorizations, and care plans. Authorized WellCare of Kentucky staff and providers have access to a complete picture of an ISHCN Enrollee's needs across the entire spectrum of care when considering authorization decisions and utilization trends.

CareCentral offers automated notifications and workflows related to care transitions. It supports transitional Care Management activities by generating alerts based on ADT feeds, electronic and faxed prior authorization requests, predictive modeling, and other sources. It helps the Care Coordinator bring together an ISHCN Enrollee's entire multidisciplinary care team (e.g., providers, behavioral health specialists, pharmacists, Enrollee, family, and state staff, if involved). CareCentral's intuitive transitional Care Management workflows and alerts automate a Care Coordinator's activities like appointment scheduling, which improves Care Coordinator efficiency in directing the right transitional care to the right ISHCN Enrollees at the right time.

Integrated leadership and staff and joint rounds improve health outcomes: Local leadership represents physical, behavior health, pharmacy, and social services expertise. This is integral to implementing cohesive population health strategies and programs to improve health outcomes and enhance Care Coordination and Enrollee satisfaction. Our Kentucky physical and behavioral health Medical Directors conduct joint rounds and consult on cases with comorbidity. We conduct multidisciplinary rounds on a weekly basis to collaborate on the coordination of care for inpatient ISHCN Enrollees. This approach provides an opportunity for a team review of the clinical reasons for an ISHCN Enrollee's admission to determine the appropriate path to discharge and remove any barriers that exist to an effective care transition. Through this approach, we review outpatient service requests and consider the ISHCN Enrollee's entire history in the context of a requested service. We devote significant attention to investigating the nuances of integrated service delivery, soliciting perspectives from an array of providers and community advocates. Our staff operates under a single set of fully integrated policies aimed at whole-person care, operational integration across internal departments, and collaboration with external entities.

Compliance assessments and ongoing audits assure consistency: Throughout the year, an independent internal clinical service compliance unit performs compliance assessments and ongoing audits to ensure that application of criteria is accurate and consistent. WellCare conducts online inter-rater reliability (IRR) testing using a commercially available IRR product for all clinical review staff involved in assessments, care and service plan development, and utilization decisions. This audit process assures a consistent Enrollee outcome and experience by evaluating all important elements of the record, including the comprehensive care needs assessment, discharge planning, Enrollee and foster family engagement, biological family engagement as appropriate, Care Coordination, and monitoring and follow-up for goal

achievement. UM teams responsible for identifying opportunities for improvement and taking action receive summary reports, including staff training and coaching. Clinical leadership reviews daily management reports displaying patterns of decisions by health plan and by team to look for over and underutilization (e.g., the percentage of reviews that an RN sends to a physician).

We mirror these quality oversight practices with our pharmacy team. Our quality audit specialists conduct a daily review of prior authorizations to assure all processes, (e.g., turnaround times, process steps, and notice of decision) meet or exceed Commonwealth Contract expectations and statutory requirements. Each month, quality auditors randomly sample ten cases per UM associate, reviewing the chart for adherence to our rigorous review steps, clinical standards and program expectations, and for consistency in clinical decision-making.

Joint Operating Committee (JOC) meetings facilitate process improvement: We will continue to hold JOC meetings where we jointly meet with providers to review performance monitoring results; chart audit results (1:40 or more charts); IRR scores; health outcome and operating metrics; monthly, quarterly, and annual reporting; and agree to implement process improvements. As an example of a process improvement in Kentucky, one of our network providers, The Ridge, said they wanted access to concurrent reviews beyond normal business hours. Our staff brought his issue to the JOC meeting for discussion. The JOC-recommended solution was to extend the concurrent review process to 24 hours a day, 7 days a week for The Ridge. After implementing this solution, we expanded it to include Baptist Hospital.

26. Program Integrity

C.26. PROGRAM INTEGRITY

a. Provide a detailed summary of Contractor's proposed Program Integrity plan, including a discussion of the following:

i. The Contractor's fraud and abuse detection/prevention program activities for employees, caregivers and providers, including reporting and follow-up, continuous monitoring of compliance, identification and reporting of issues to all required parties, and ongoing training.

ii. An overview of the Regulatory Compliance Committee.

iii. The proposed appeals process.

iv. Proposed innovations for reporting data in the Program Integrity area. Provide examples of successful innovations implemented in Kentucky or other states.

b. Describe the Contractor's proposed approach to prepayment reviews.

C.26. PROGRAM INTEGRITY

a. Provide a Detailed Summary of Contractor's Proposed Program Integrity Plan:

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 36, Program Integrity and Appendix M, Program Integrity Requirements of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Our Program Integrity Plan addresses WellCare's efforts to detect, deter and prevent overpayments, abuse, and fraud regarding the provision of and payment for Medicaid services. For additional detail, we are providing **Attachment C.26.a.i WHICKY Anti-Fraud Plan** electronically which will be submitted to the Kentucky Department of Insurance (DOI) as required by KRS 304.47-080 and 806 KAR 47:030. Our approach to meeting the Commonwealth's expectations and requirements is rooted in confidence gained across more than 30 years of experience monitoring Program Integrity in Medicaid healthcare delivery across the nation, safeguarding public funds and overall financial stability to protect every dollar spent on Enrollees' services. With eight years of direct experience as the largest managed care partner in Kentucky, we take our role as responsible stewards of Kentucky Medicaid dollars seriously.

OVERVIEW OF INVESTIGATIVE FUNCTIONS

WellCare's Chief Compliance Officer (CCO), oversees and directs the Corporate Compliance Program throughout the WellCare organization and is responsible for ensuring that the Program's goals are achieved. The CCO reports to the Company's Chief Executive Officer (CEO), and to the Board of Directors (BOD). The CCO has unrestricted access to the BOD. The CCO also chairs the Corporate Compliance Committee, which serves as a resource to the CCO, and to the Regulatory Compliance Committee of the BOD. Finally, the CCO also serves as a point of contact for Company associates regarding compliance concerns. Our Program Integrity Plan is overseen ultimately by the CCO and in the Kentucky market by the Compliance Director, Aubrey Harmon.

WellCare has established a special investigations unit (SIU) as part of a comprehensive anti-fraud program designed to prevent, detect, investigate, resolve, correct and report incidents of suspected fraud, waste and abuse (FWA). WellCare utilizes a multi-faceted collaborative approach to detect, deter, prevent and remedy FWA. The WellCare business units that collaborate in this process include, but are not limited to:

- Claims Department
- Legal Department
- Pharmacy Department
- Quality Department
- Recovery Department
- Enrollment Department
- Grievance Department
- Regulatory Affairs Department

However, the SIU is the business unit primarily responsible for identifying, investigating and reporting possible FWA. To preserve total independence and objectivity, our SIU is part of our compliance department reporting directly to the compliance leadership structure of WellCare Health Plans. The SIU is a component of the Compliance Department, headed by our Senior Director, Lori Peters, who reports to the Vice President, Corporate Compliance Investigations, who in turn reports to the CCO.

Our SIU team is a company-wide interdisciplinary team of 50 knowledgeable professionals. The investigators, including dedicated behavioral health clinicians, work closely with certified professional medical coders, coding auditors, nurses, and various analysts who are also a part of our SIU team.

Specifically for WellCare of Kentucky, our SIU employs two investigators located within the Louisville office, Sr. Investigator David Blackford and Investigator Carlye Philbin. These locally based investigators meet the requirements set forth in Section 36, Part H of the Draft Contract. David and Carlye have a combined 13 years of SIU experience in Kentucky and 35 years combined Healthcare experience.

This team, along with Kentucky Behavioral Health Investigator Blanton Halliday, and Manager Jennifer Jarke, participates in monthly meetings with all other Kentucky MCOs as well as representatives from DMS' Program Integrity team to discuss current schemes and providers of interest. Our Kentucky-based investigators are also active participants in these discussions as we realize the importance of collaboration to combat FWA. This team also participates in quarterly meetings attended by the Medicaid Fraud Control Unit (MFCU) and collaborates with various FWA entities within the state to develop strategies and providing updates on active investigation to further combat FWA. In the process of attending these regular meetings, we share our findings with other parties and receive information regarding trends and potential FWA schemes that are occurring in the Commonwealth. We take this shared information and

use it to data mine for potential cases for providers that are in our network. On occasion, we have opened cases on some, especially when the providers have multiple locations.

In addition to the Kentucky-dedicated SIU staff, medical directors and other subject matter experts throughout the WellCare organization are available for consultation on investigations. Moreover, WellCare's Regulatory Affairs team, led locally by Rebecca Randall, works collaboratively with the SIU to fulfill anti-fraud regulatory and contractual requirements, including reporting referrals to the Commonwealth.

PROCEDURES FOR DETECTING AND INVESTIGATING POSSIBLE ACTS OF FWA

The SIU's mission is to identify, investigate and correct FWA committed by *anyone*, against the Plan and its stakeholders, including, providers, facilities, employees, and Enrollees. Our internally managed and operated SIU leads our Program Integrity activities. WellCare's SIU employs a multi-faceted approach to combat suspected or potential FWA. This includes a combination of mining data to spot inconsistencies, application of various levels of pre- and post-pay edits, leveraging of clinical expertise to identify and confirm unusual trends, follow-up on internal and external referrals, use of a broad set of investigative tools and skills, and the deployment of education and awareness training programs to maximize referrals. Our SIU prioritizes work so that those cases that have multi-state impact, potential high dollar overpayment, patient harm, or potential for an increase in fraud or abuse are given the highest priority.

As described in more detail below, among other things, the SIU:

- Identifies, and remedies fraudulent claims;
- Identifies and remedies provider overutilization;
- Collaborates with Provider Relations and Legal to terminate providers who have defrauded or abused the system;
- Refers for regulatory inquiry and criminal prosecution those who defraud the system;
- Works with our pharmacy benefits manager to identify and remedy pharmacy fraud; and
- Supports efforts to provide fraud awareness training to WellCare employees, vendors and providers.

This list is expanded and updated as new fraud schemes and trends are identified.

Our SIU has increased efforts to conduct additional provider onsite visits. **Our local investigators, David and Carlye conducted 12 provider onsite visits in 2018 and 13 provider onsites in 2019.** This frequency is in compliance with the requirements in Section 36, Part B of the Draft Contract to conduct at least three onsite visits per quarter. In accordance with DMS guidelines, our SIU seeks permission to perform provider onsite visits from the Kentucky Department for Medicaid Services. The majority of our provider onsite visits are unannounced unless otherwise required by the provider's contract. Onsite visits allow a unique perspective and insight into provider's practices and behaviors and how our providers are interacting with our Enrollees allowing us to gain further insight to their experiences in the provider's office. Our

SIU team also has three behavioral health (BH) investigators who are licensed clinicians that perform targeted reviews of FWA activities for BH providers. One of these investigators is dedicated, but not solely, to Kentucky; however, 62% of her cases are in Kentucky. **In 2018, these specialized investigators accounted for $1,137,781.43 in recoveries and $144,711.64 in cost avoidance. In 2019, this team has accounted for $826,636.16 in recoveries and $108,993.40 in cost avoidance dollars related to BH providers.** Following are some specific examples of these provider onsite visits.

Louisville Psychotherapy Services

An internal referral was received in the SIU concerning billing for psychotherapy services. Our SIU conducted on onsite audit of this provider and reviewed claims for 59 unique Enrollees. A review of the records submitted by the provider revealed numerous instances of improper billing and all claims were denied. The result of the investigation was an identified overpayment in the amount of $255,035.02. This case has been referred to Kentucky DMS DPI to request permission to pursue the identified overpayment. Currently we are awaiting Kentucky DMS approval to issue the initial overpayment notice to the provider.

Jeffersonville, IN Border State Provider

Our SIU received a tip from a Kentucky Medical Director who noted a series of daily progress notes appeared to have been cloned. Our SIU conducted on onsite audit of this provider and reviewed claims for 46 Enrollees. A review of the records submitted by the provider revealed the record documentation was insufficient and did not meet documentation guidelines due to missing time, date, and late or missing authenticating signature of the provider of service. The result of the medical record audit was an identified overpayment of over $80,000. The Kentucky DMS referral is in process to request permission to pursue the overpayment.

In 2018, our SIU opened 4,096 cases for review. 20% of these cases were driven from proactive data analysis, which yielded $4.3 million in recovered dollars and a cost avoidance of $32.2 million. In 2019, our SIU opened 5,433 cases for review of which 26% of cases were driven from proactive data analysis, recovered $7.4 million and are responsible for a cost avoidance of $38,053,788.29. **In 2018, of the $4.3 million recovered, $56,462 was attributed to Kentucky Medicaid claims and of the $32.2 million in cost avoidance, $2.8 million was attributed to Kentucky Medicaid claims. From January to May of 2019, for the $2.5 million recovered, $305,205 is attributed to Kentucky Medicaid claims and are responsible for a cost avoidance of $502,542 in Kentucky.**

COLLABORATION WITH DMS

WellCare is committed to partnering and exchanging information and ideas with DMS in a shared effort to fight FWA. As such, we have a physical presence at all quarterly meetings with several members of our local and national SIU, compliance and regulatory affairs teams in

attendance to discuss areas of interest regarding investigations of FWA and overpayment in the Medicaid Program.

WellCare recently partnered with Jennifer Mayes-Laracuente from DMS to schedule WellCare of Kentucky hosting the December 2019 Program Integrity Quarterly Meeting. We routinely communicate with David McAnally and Jade Bullen, both with the Kentucky Audit and Compliance Branch, Division of Program Integrity, Department of Medicaid Services, regarding referrals and other FWA related matters.

Additionally, WellCare attended the HFPP meeting held in Louisville during April 2019 and attends the United States Attorneys' Statewide Health Care Fraud Task Force meeting which is held quarterly in Frankfort. At the HFPP meeting, WellCare of Kentucky was recognized as being well prepared to share providers of interest in the breakout sessions.

Our Program Integrity Plan is further defined specifically by our FWA Program, described below.

i. The Contractor's fraud and abuse detection/prevention program activities for employees, caregivers and providers, including reporting and follow-up, continuous monitoring of compliance, identification and reporting of issues to all required parties, and ongoing training.

FWA PROGRAM

Our extensive experience identifying, preventing, and remediating FWA has and will continue to serve DMS well. The graphic below summarizes our sophisticated three-step process to **Prevent, Detect, and Rectify (Report, Follow-up, Monitor),** in **Figure C.26-1**, FWA and further describes the key elements of our FWA program in Kentucky.

Figure C.26-1 Prevent, Detect, and Rectify

Prevent and Detect

Providers/Caregivers Prevention

WellCare of Kentucky uses a combination of tools to spot inconsistencies including: mining data, application of various levels of pre-and post-claim edits. We also use these tools to leverage clinical expertise to identify and confirm unusual trends, follow-up on internal and external referrals, and use of a broad set of investigative tools and skills. As part of our efforts to root out FWA, WellCare has developed a broad range of technology and predictive analysis tools to validate that services billed and paid for were actually provided. Provider credentialing is a significant aspect of our approach to prevent contracting with providers or entities previously found guilty of FWA. We validate the credentials of network providers as part of

initial contacting and we re-credential in accordance with NCQA criteria, and Commonwealth and federal regulations. A thorough analysis is done based on the information collected about the providers from a variety of sources (e.g. National Practitioners Data Bank, OIG list of excluded individuals or entities, and applicable state professional licensure boards). Some of the reports used for screening include OIG LEIE (screened monthly), State Medicaid Exclusion Reports (screened monthly), State Medical/Professional Boards screened monthly, and Medicare Opt Out (screened quarterly). Within WellCare, when FWA is suspected, we generate detailed reports allowing investigators to view the entire billing and claims history for the provider.

In addition, WellCare conducts pharmacy related FWA inquiries focused on identifying, preventing and remedying FWA related to pharmacy services. We derive investigative leads from multiple internal and external sources. For example, our SIU and pharmacy department have monthly workgroup meetings to coordinate appropriate FWA referrals, exchange information, and discuss systemic FWA related issues. Pharmacy claims are administered primarily through our Pharmacy Benefits Manager (PBM). Our PBM's administration of the program includes conducting audits and utilizing data analytics, and EOBs to detect billing issues. WellCare's other subcontractors, such as dental, vision, hearing, and transportation, also identify FWA and make referrals to our SIU for investigation or for reporting to DMS.

Fraud, Waste, and Abuse Prevention and Detection
Proactive Home Health Investigation in Owensboro

WellCare's data mining tool (STARS) identified that a provider may be misrepresenting home health care services/billing. The provider was paid a significant amount higher than other home health care facilities in Kentucky providing similar services. WellCare SIU reviewed a twelve month sample of the provider's claims from 2016-2017. A review of the Enrollees medical records, submitted by the provider, revealed missing and insufficient documentation, improper therapeutic goal plans and all claims were denied. The result of the investigation was an identified overpayment in the amount of $361,329.47. The case has been referred to the Commonwealth and WellCare has been asked to stand down as this has been referred to law enforcement.

Enrollee Prevention

Verification of services

As part of our efforts to detect and eliminate FWA, WellCare has developed a broad range of tools including a Verification of Services (VOS) process to validate that services billed and paid for were actually provided. This process includes partnering with Enrollees or their Caregivers to determine if specific services were received.

Our VOS program consist of sending a letter resembling a REOMB notice containing billed claim information specific to the recipient Enrollee. The letters are sent to a random sample of Enrollees on a quarterly basis. Once comprehensive Enrollee data to generate REOMB is complete, WellCare processes delivery. To initiate Enrollee delivery by mail, a PDF is sent to the WellCare print vendor for creation of a monthly paper copy. Specifically, generation of WellCare's Medicaid REOMB process starts with our Electronic Information Management team,

and is based on monthly claims activity from which an REOMB data extract is created; WellCare sends the extract to our Variable Data Printing system, a data rendering solution that produces PDFs of each Enrollee REOMB.

WellCare uses a sampling methodology based on claims per month to determine the letter recipients. We stratify the sample group to ensure that all Provider types (or specialties), and all claim types are proportionally represented in the sample pool and that the sample group includes the entire range of services available under the contract.

The letter explains that we are asking Enrollees or their designated Caregiver to tell us whether they received all the services for which the plan has been billed for the dates of service included in the letter. It also informs them that they should contact our 24-hour anonymous Fraud Hotline (1-866-678-8355) with questions or in the event the services identified were not actually received. Should an Enrollee or Caregiver indicate that services were not received, a member of our SIU will conduct a review to determine if the allegation of potential fraud or abuse is credible.

WellCare's internet site contains detailed information to inform members and anyone who visits the site how to report potential FWA. FWA can be reported anonymously and confidentially by anyone through multiple channels, including:

- Referral mailbox: SIU@wellcare.com
- SIU Fraud Hotline: 866-678-8355 (Hotline staffed 24 hours per day/7 days per week.)
- iCare Hotline: 866-364-1350 (Hotline staffed 24 hours per day/7 days per week.)
- Direct contact to Chief Compliance Officer

We include examples and Kentucky specific FWA reporting guidelines for our Enrollees within our WellCare of Kentucky Enrollee Handbook. Each Enrollee receives a copy of their handbook at least once a year (more often if requested) and we also post it to our WellCare of Kentucky website: https://www.wellcare.com/en/Kentucky/Members/Medicaid-Plans/WellCare-of-Kentucky. We also provide a Kentucky specific form (also referenced in the Enrollee Handbook, in which Enrollees or their Caregiver can report FWA via our website at https://www.wellcare.com/Kentucky/Report-Fraud-and-Abuse.

Leitchfield Behavioral Health Provider - Stand Down

One recent investigation originating from WellCare's SIU Hotline from a WellCare of Kentucky Enrollee who indicated her child's card information may have been compromised as she did not receive targeted case management services. A claim review was conducted during affected timeframe. After receiving denial letters from several different Enrollees the case was expanded and a medical records request was sent. WellCare's SIU conducted a line by line review of claims for 58 unique Enrollees. After review of the records submitted by the provider, it was determined that the claims were neither billed nor documented correctly which resulted in the denial of all claims. Further, our SIU identified an overpayment of $85,170.00. The provider appealed with additional documentation and the appeal review resulted in a slight reduction of the overpayment with a final determination amount of $84,502.00. At the request of Kentucky DMS, our SIU was asked to stand down as the case was being turned over to law enforcement.

WellCare Associate Prevention

By establishing clear lines of communication with employees, business associates and downstream entities, the Compliance Department promotes the immediate reporting of compliance concerns and suspected incidents of FWA. WellCare's Code of Conduct and Business Ethics (Code of Conduct) requires employees to immediately report any potential FWA concerns to the Compliance Department.

All associates receive mandatory initial and periodic training for detecting and reporting any suspected FWA. WellCare promotes a corporate culture of ethical conduct which seeks to deter FWA. This effort begins with hiring persons committed to ethical business conduct, and ensuring that new associates have successfully passed a background check, which verifies that an associate does not have a criminal history related to healthcare. This culture is reinforced by, among other things, training, and periodic communications informing staff regarding their FWA detection, prevention and reporting responsibilities.

WellCare provides mandatory compliance training, including FWA training, to all associates, Officers and Directors. This training must be completed within 30 days of hire, and annually thereafter. Associates in reimbursement-related functions also receive supplemental FWA specific training, which must be completed within 30 days of hire and annually. The SIU helps develop and maintain the Company's FWA training materials. The Company's FWA training is designed to create awareness of FWA, and to convey a full understanding of associates' rights and responsibilities when encountering or identifying potential FWA. Among other things, the training identifies red flags which may be indicative of FWA, including the following examples excerpted from the training:

Training excerpt: provider related abuse red flags

- Does the provider write for diverse drugs or primarily only for controlled substances?
- Are the provider's treatment appropriate for the Enrollee's health condition (medically necessary)?

- Is the provider writing for a higher quantity than medically necessary for the condition?
- Is the provider performing unnecessary services for the Enrollee?
- Does the provider bill the sponsor for services not provided?

Our SIU oversees the development and ongoing maintenance of WellCare's FWA training materials – and our CCO ultimately approves the content of the training. The curriculum of compliance training programs are also periodically reviewed and revised as needed to ensure continued compliance with federal and state laws, regulations and guidance. Our associate training program is discussed in greater detail in Section B.03 Staffing.

DETECTION AND PREVENTION OF FWA FOR ASSOCIATES THROUGH OUR COMPLIANCE PROGRAM

WellCare's corporate compliance program is intended to promote ethical conduct in all aspects of our operations and to ensure compliance with applicable federal and state laws and regulatory requirements and standards by Directors, Associates and business partners through:

- A Chief Compliance Officer who reports directly to WellCare's Chief Executive Officer (CEO) and to the Finance and Audit Regulatory Compliance Committee of the Board of Directors.
- A comprehensive system of internal policies and procedures that address day-to-day legal risks and help reduce the prospect of fraudulent, wasteful and abusive activity by identifying and responding to specific risk areas.
- Compliance training programs, conducted to ensure that policies, procedures and related compliance concerns are clearly understood and followed by all WellCare Officers, Associates and Directors;
- Open lines of communication for WellCare Associates, Enrollees, Caregivers and others to easily and confidentially ask questions or report suspected violations of company policies or of legal and regulatory requirements without fear of retaliation;
- Prompt investigation of reported concerns and the implementation of effective corrective action when required;
- Periodic audits and routine monitoring of business operations to measure and assess WellCare's compliance with its internal controls and with applicable federal and state laws, regulations and guidance; and
- Clear and specific disciplinary policies that address violations and promote accountability.

WellCare's compliance team is made up of approximately 180 experienced associates responsible for the oversight and monitoring of compliance with government programs, including Medicaid program requirements, compliance training and education, privacy and data security compliance, and the detection and prevention of FWA by Enrollees, Caregivers, Providers and other business partners. WellCare also has a Market Compliance Director, Aubrey Harmon, who is physically located in Kentucky and reports up to WellCare's CCO. Aubrey is responsible for all compliance and detection activities related to FWA in Kentucky and tailors WellCare's compliance plan to meet the unique needs of the Kentucky market.

In addition to our Kentucky-based associates, all WellCare associates, subcontractors, vendors, and providers are held to WellCare's Code of Conduct which outlines ethical principles to ensure that all business is conducted with an unwavering allegiance to ethics and compliance. Our compliance program requires that all associates know and understand their individual responsibility to report all suspected incidences of inappropriate conduct. Associates have easy access to numerous corporate compliance resources, including trainings, policies and procedures, our anti-fraud plan, our compliance plan and our Code of Conduct.

To further engage associates in WellCare's culture of compliance, there are communications and activities throughout the year that provide associates with reminders and additional information on how they can continue to combat FWA. Our monthly associate newsletter, the Bluegrass Bulletin, is distributed electronically to associates, and includes a "Compliance Corner" section that highlights various compliance topics including FWA. The Kentucky Market Compliance Officer also hosts quarterly educational workshops that provide targeted training on compliance topics such as FWA. Compliance also posts information throughout our offices with reminders of how to report concerns and how to secure protected information.

Annually, WellCare's Compliance team hosts "Compliance Week" to further promote compliance throughout our organization. Throughout the week there are a series of informative emails sent out to associates with quizzes and drawings for prizes for those who participate in the quizzes. It also includes office events that provide opportunities for our associates to interact in-person with members of our compliance organization beyond our Market Compliance Officer, including compliance team members in areas such as SIU, Compliance Investigations, Policy and Compliance Analytics. Office events include interactive games and quizzes and distribution of key compliance materials such as our Code of Conduct.

Additionally, to increase transparency and collaboration, the SIU coordinates quarterly discussions focused on our investigations (including findings, outcomes, dollars recovered and costs avoided), key initiatives, and industry trends. WellCare of Kentucky's CEO and executive leadership team, as well as members of our compliance, regulatory affairs, pharmacy, provider relations, network management, and health services (medical and behavioral) teams are included in these discussions. On an ongoing basis, our SIU receives input from the network and provider relations teams regarding providers currently under investigation or identified through proactive data analysis.

Technological Investigative Strategies

In addition to our proactive training program and investigating referrals, the SIU uses a variety of proactive investigative measures to identify and pursue potential FWA. **Table C.26-1** below lists our technologies and strategies for FWA prevention and detection.

Table C.26-1 WellCare's Technologies and Strategies for FWA Prevention and Detection

Strategy	Description
Fraud and Abuse Hotline	Our compliance department actively promotes timely reporting of suspected incidents of FWA by maintaining lines of communication to enable employees, providers, Enrollees, Caregivers, business associates and downstream entities to report FWA anonymously and confidentially to the compliance department via the referral mailbox or by calling the SIU anti-fraud hotline at 1-866-678-8355. Our website and manuals also contain information for Enrollees, Caregivers, providers, and the general public on how to report suspected or known FWA.
Data Mining	The SIU uses data mining technologies to proactively identify potential FWA: • The SIU employs a team of data analysts, coding auditors and nurses to conduct targeted claims queries, leveraging the Statistical Analysis System® data network to identify Enrollees and providers with suspicious activity or unusual patterns of behavior that might indicate FWA. Our SIU also uses COGNOS reporting to detect FWA. An example of our COGNOS reporting is our Physician Trend Report by specialty, which enables us to identify spikes or other aberrant trends. Results of such queries include the identification of up-coding, unbundling, misuse of modifiers, unusual CPT codes, double billing, and unreasonable service time billed in a day based on excessive service counts. If this analysis identifies a provider with suspicious activity, a more detailed set of reports is generated, allowing investigators to view the entire billing and claims history for that provider. These efforts allow our SIU to identify suspicious activity, which may lead to an expanded investigation with multiple lines of inquiry. • The SIU employs a statistician to generate Statistically Valid Random Samples (SVRS) and Audits on a routine basis. These audits identify and detect inappropriate claims and potential FWA billing. • We use a FWA analytics library to produce ad hoc reports for the identification and investigation of FWA. These reports include but are not limited to visit trend analysis, provider up-code checker, and hospital stay with no professional services, bell curve analysis and abnormal provider utilization. • The SIU uses the Cotiviti STARSSolutions as a FWA Analytical Tool that provides predictive models and algorithms that identify aberrant patterns and outliers. The Cotiviti STARSSolutions FWA tool provides robust capabilities to identify outlier providers, Enrollees and pharmacies. It provides predictive analytics algorithms applied to pharmacy and medical claims data each month. The scoring, which prioritizes providers and Enrollees for investigation, is based on the most current six months of paid claims, with up to three years of

Strategy	Description
	claims data being available for reference. The results of the scoring once prioritized, are forwarded to a workgroup of investigators, coding auditors and nurse reviewers with the outcome of increased identification of FWA and recoveries for our SIU. To illustrate the importance of STARSSolutions and other FWA analytics techniques, over 20% of all our cases of suspected FWA are identified via STARSSolutions or other data mining tools.
Provider Services and Quality Improvement Personnel	Provider services and quality improvement personnel are trained to be aware of possible and questionable indicators of FWA so that issues can be identified during routine office visits or medical record reviews. These employees report suspected FWA activities to our SIU for review and further action.
Provider Credentialing	Provider credentialing prevents contracting with providers previously found guilty of FWA. We validate the credentials of network providers as part of initial contacting and we re-credential in accordance with NCQA criteria, and state and federal regulations. As part of this process, we collect and evaluate information about providers on a monthly basis from a variety of sources (e.g., OIG list of Excluded Individuals or Entities, state Medicaid exclusion Lists and applicable state professional licensure boards). Providers found to have Medicare or Medicaid Exclusions are terminated immediately WellCare will not engage the services of an entity that is in nonpayment status or is excluded from participation in federal health care programs under ss. 1128 and 1128A of the Social Security Act.
Medical Management Activities	Medical Management activities (e.g., prior authorization, concurrent review, discharge planning, retrospective review and provider profiling) include: 1) verifying Enrollee eligibility; 2) reviewing the medical necessity of the service; 3) determining the appropriateness of the service being authorized; 4) verifying that the service is covered; and 5) referring Enrollees to appropriate providers. When the prior authorization process identifies FWA, the prior authorization will be denied, a notice of action will be sent to the Enrollee or designated Caregiver and provider, and a report will be sent to the SIU. Our SIU reviews, trends, and reports findings to regulators as necessary. In addition, medical management reports allow the SIU department to have multiple points of data to review and verify unusual patterns that may indicate potential fraud and abuse. Any unusual incident is documented and reported as outlined by WellCare policies and procedures.
Statistically Valid Random Samples (SVRS) and Audits	WellCare's SIU conducts SVRS and Audits on a routine basis. These audits identify and detect inappropriate claims and potential FWA billing.

Strategy	Description
SIRIS	As a member of the National Health Care Anti-Fraud Association® (NHCAA), WellCare has access to SIRIS, the NHCAA information-sharing website that includes regular postings of information about potential provider FWA activities by more than 100 insurance companies nationwide. SIU investigators use SIRIS as part of the due diligence they perform in their investigations.
Thomson Reuters CLEAR	Thomson Reuters CLEAR is a powerful online investigation software SIU investigators can use throughout the different phases of an investigation. CLEAR has a vast collection of public and proprietary records that enable SIU investigators to uncover hard-to-find data. CLEAR can be used to analyze billions of records from all different sources that are constantly being updated with current information.

Rectify

Once we detect a potential case of FWA, either through a referral or through the various array of analytical tools deployed, WellCare's SIU pursues investigative actions. The SIU pursues reactive and proactive investigations to either corroborate the allegations or determine them unfounded. The investigator develops an action plan to investigate the allegations applying the steps outlined in **Table C.26-2**:

Table C.26.-2 WellCare's FWA Investigative Action Plan Steps

Strategy	Description
Intake	When we receive a referral, staff enter the referral record into our secure Compliance 360© enterprise compliance management system. The intake team completes a preliminarily assessment to confirm that the matter concerns potential FWA.
Request for Approval to Proceed	If that assessment confirms possible FWA, we request permission to proceed with an investigation from the DMS Program Integrity Division. When permission is granted, a manager assigns the case to an investigator for further inquiry.
Investigation	The investigator may pull and review any of the following records: Provider top CPT/ICD-9 codes; Payment records; NHCAA SIRIS search and reporting; Provider/Vendor/Enrollee IDs, contact information, eligibility; copy of provider's Commonwealth license and disciplinary actions; provider and vendor contracts. The investigator may also conduct any of the following actions to either corroborate the allegations or determine them unfounded: Data analysis; clinical record reviews; interviews; provider on-site audits; public record reviews

Strategy	Description
Case Prioritization	Our SIU prioritizes work so that those cases that have multi-state impact, potential high dollar overpayment, patient harm, or potential for an increase in Fraud or Abuse are given the highest priority.
Determination	Based on the findings of the review, the investigator makes a determination of whether or not the target party engaged in FWA.
Remedial Action	When an investigator determines that the target party engaged in FWA, the SIU pursues remedial action. The type of remedial action depends on the misconduct identified by the investigation. For example, if the FWA concerns an Enrollee's drug abuse or doctor shopping/pharmacy shopping, the Enrollee may be placed in our Pharmacy Lock-In Program, and the Enrollee's access to narcotics will be closely regulated. For a provider who engages in FWA, remedial actions may include recovery of an overpayment, termination of the provider, and/or referral to law enforcement for prosecution.

As previously described, our SIU's comprehensive approach to combatting FWA includes a combination of analytic tools, clinical expertise, investigative knowledge, and internal and external referrals, as well as an education, training and awareness program.

Reporting, Follow-up, and Continuous Monitoring of Compliance

WellCare maintains its SIU internally including all facets of regulatory reporting and does not subcontract these requirements. Our internal process and policies ensure compliance to all Kentucky contractual requirements. WellCare partners closely with our specialty vendors to assist with the more granular aspects of FWA prevention, detection and rectification.

Our SIU submits ongoing referrals to Kentucky Division of Medicaid Services (DMS) Department of Program Integrity (DPI) and law enforcement for further investigation and prosecution. WellCare of Kentucky submits a standardized Provider or Enrollee Investigative Report directly to David McAnally within the DMS DPI for review. The following process is utilized to make an initial disclosure to regarding a new allegation of FWA. The requisite steps include:

- The MCO Provider or Enrollee Investigative Report is completed by our SIU investigator and submitted to their manager for review.
- Once all pertinent information is confirmed, our manager or senior investigator submits the investigative report referral via the MOVEit Transfer Plus portal. Should our SIU wish to also report the matter to the Office of Attorney General (OAG), our investigator will transfer the required case files to Direct Drop.
- Our manager or senior investigator then logs the approval and submission information into the comments section of the C360 case tracking system and notifies the investigator the information has been "submitted, referred and approved."

- Updated investigative report referrals are sent as need to Kentucky DMS Program Integrity Division via the same process with additional case findings and information when applicable to include requesting approval prior to pursuing overpayments over $500 and approval to close the case.

From 2017 to 2018, our referrals to Kentucky DMS increased from 77 to 152 and in 2019, we sent 199 referrals..

WellCare also reports on a monthly basis all provider internal referrals (tips) and the disposition of the prior months' internal referrals, SIU investigator staffing specific to WellCare of Kentucky, and provider on-site visits via the Kentucky Current Tips and Reconciliation Report which is submitted on the last business day of the reporting month. This report is prepared and reviewed for quality by our SIU and submitted via the MOVEit Transfer Plus Portal to Jade Bullen, Kimberly Shannon, and David McAnally within the DMS Program Integrity Division.

Also on a monthly basis, WellCare submits three reports: #72 – Medicaid Program Violation Letters and Collections, Kentucky Report #73 - Explanation of Enrollee Benefits (EOMB), and Kentucky Report #75 – SUR Algorithms, Kentucky Report. These reports are prepared and validated by our SIU and submitted to our WellCare of Kentucky Regulatory Affairs team who submits the reports to DMS by the 15th day of the month following the reporting period.

Quarterly, WellCare submits three reports: Kentucky Overpayment and Prepayment Report, Kentucky Report #76 - Provider Fraud, Waste, and Abuse, and the Kentucky Report #77 - Enrollee Fraud, Waste and Abuse. These reports are prepared and quality checked by our SIU department. The Kentucky Overpayment and Prepayment Report is submitted via the MOVEit Transfer Plus Portal directly to Jade Bullen, Kimberly Shannon and David McAnally at the Kentucky Department for Medicaid Services. Reports 76 and 77 are prepared and quality checked by our SIU and submitted to our WellCare of Kentucky Regulatory Affairs team who submits to the Kentucky Department for Medicaid Services by the 30th day of the month following the reporting period.

Our Payment Integrity Team focuses on identifying cost savings opportunities though cost avoidance, correct coding requirements, medical payment policy, claims payment quality, and overpayment recovery. This team reviews claims to identify potential outliers for closer review. High dollar claim areas such as NICU, implants, pediatric, surgical, transplants, or other identified outliers are examples of scenarios where additional review could be warranted to identify potential unbundled services or overpayments. These reviews are applicable to how the individual claim is billed, not to a particular provider. The intent is strictly to ensure that we are paying the claims correctly and to educate providers when there are billing errors. If our payment integrity team identifies any questionable billing patterns and/or trends, they promptly refer them to our SIU for investigation.

SIU personnel engage in continuing professional education and training throughout the year, including attendance at formal training and bi-monthly webinar programs sponsored by the National Health Care Anti-Fraud Association (NHCAA), of which WellCare is a corporate member, and the American Association of Professional Coders. As a member of the NHCAA, WellCare has access to the Special Investigation Resource and Intelligence System (SIRIS), the

NHCAA information-sharing website that includes regular postings of information about potential provider FWA activities by more than 100 insurance companies nationwide. SIU investigators use SIRIS as part of the due diligence they perform in their investigations.

These numbers are reported externally to DMS and distributed internally as part of our commitment to promote and maintain a culture of compliance and to provide awareness of the impact of FWA. While the SIU is primarily responsible for anti-fraud activities, all associates, officers and directors are trained to look for unusual or suspicious activity and to report such activity through our compliance program.

Partnerships to Enhance FWA Prevention and Detection

WellCare's many partnerships with both state and federal agencies enhance our FWA prevention and detection capability. In **Table C.26-3** below we highlight some of our key state and Federal partnerships.

Table C.26-3 WellCare's State and Federal Partnerships for FWA Prevention and Detection

Partnership	Description
National Health Care Anti-Fraud Association (NHCAA)	As a member of the National Health Care Anti-Fraud Association (NHCAA), the SIU has access to their information sharing website, SIRIS, which includes input from over 100 insurance companies, and the regular posting of current activities nationwide, ranging from indictments to Provider convictions. The SIU also participates in other NHCAA information-sharing activities. These activities enable the SIU to proactively target and remedy FWA.
Healthcare Fraud Prevention Partnership (HFPP)	As a member of the Healthcare Fraud Prevention Partnership (HFPP), WellCare joins a Partnership of private and government payers and anti-fraud
National Association of Medicaid Program Integrity	WellCare's Vice President of Compliance Investigations, Chris Horan, is an active member of the National Association of Medicaid Program Integrity and attends meetings regularly.
SIU/WellCare of Kentucky Collaboration Meetings	Collaboration meetings between SIU and key Kentucky market stakeholders to encompass FWA prevention through the full spectrum of WellCare's operations.

DME Provider in Ashland

WellCare received a referral from the Kentucky OIG that a provider was possibly engaging in fraudulent activities, including but not limited to forging patient and physician signatures, falsifying documents, and fraud involving power wheelchairs. WellCare SIU reviewed a 10 month sample of the provider's claims. The purpose of the audit was to determine if the services billed were supported by the documentation. The medical records provided for the selected claims were reviewed and the review revealed improper documentation for DME services. An overpayment of $31,847.29 was identified and upheld after the provider appealed the audit findings. The provider did not send in the overpayment and WellCare SIU is currently in the process of offsetting. To date, the SIU has recovered $19,907.34. We are continually updating the Department with our findings.

TRAINING AND EDUCATION OF ENROLLEES, PROVIDERS/CAREGIVERS, ASSOCIATES, AND SUBCONTRACTORS

Training and education is another important way of preventing FWA. WellCare maintains comprehensive training programs to ensure our WellCare associates, Enrollees and/or Caregivers, providers and subcontractors understand the policies, procedures and related compliance concerns of the company and conduct special trainings on FWA identified billing and overpayment concerns.

Associate Training: WellCare's corporate culture of ethical conduct which seeks to deter FWA begins with hiring persons committed to ethical business conduct, and ensuring that new associates have successfully passed a background check, which verifies that an associate does not have a criminal history related to healthcare. This culture is reinforced by, among other things, training, and periodic communications informing staff regarding their FWA detection, prevention and reporting responsibilities. WellCare provides mandatory compliance training, including FWA training, to all associates, officers and directors. This training must be completed within 30 days of hire, and annually thereafter. New associates receive a minimum of five hours of compliance training and, depending on the nature of their roles, may receive up to an additional three hours of compliance training within the first 30 days of hire and on an annual basis. Associates who fail to timely complete such mandatory training are subject to disciplinary action. Our FWA training is designed to create awareness of FWA, and to convey a full understanding of associates' rights and responsibilities when encountering or identifying potential FWA. The training identifies red flags which may be indicative of FWA. The SIU helps develop and maintain the Company's FWA training materials. The CCO ultimately approves the content of the Company's FWA training.

Subcontractor: As part of our onboarding process for new Subcontractors, we provide compliance and FWA training. WellCare's Delegation Oversight department conducts a pre-delegation assessment of all potential Subcontractors before the Subcontractor is formally engaged. This assessment includes an assessment regarding the entities FWA compliance protocols. Delegation Oversight requests all pertinent FWA related policies and procedures and training documents. Where a Subcontractor's FWA training does not adequately match

WellCare's FWA training, first tier, downstream and related Subcontractors must complete WellCare's FWA training module. First tier, downstream, and related Subcontractors who satisfy FWA certification requirements through Medicare Program enrollment, or accreditation as a Durable Medical Equipment, Prosthetics, Orthotics, and supplies (DMEPOS), are deemed by federal regulation to satisfy the training and educational requirements for FWA compliance. The assessment process is repeated during an annual review.

Enrollee Awareness of FWA: To ensure Enrollee awareness of FWA, we provide ongoing education through our Enrollee handbook, community outreach, quarterly newsletters and online Enrollee portal. Our handbook defines FWA and provides examples that our Enrollees or their designated Caregiver can more closely relate to, identify, and understand. Enrollees can call our toll-free 24-hour fraud hotline or report through our website as previously discussed in section titled Enrollee Prevention.

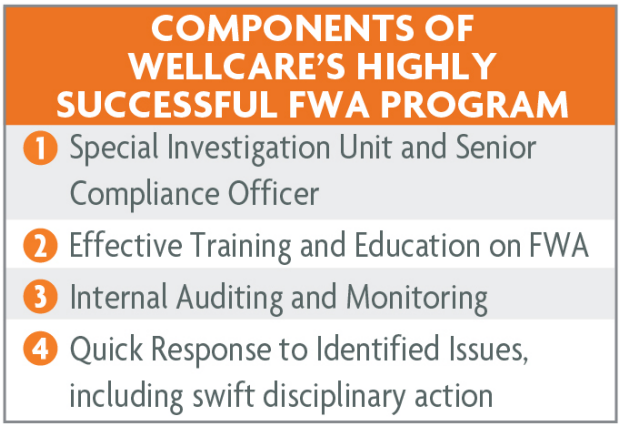

Figure C.26-2 FWA Program

Provider and Caregiver Training: WellCare's compliance and FWA program is communicated to providers through several avenues including provider orientation visits, which take place within 30 days of the provider's contract effective date, the Provider Handbook, the provider's contract, and online through our provider portal. The provider can elect to complete the training module at the time of the initial onboarding visit with their local provider relation's representative or they can complete it online through our provider portal. However, regardless of the option selected, the provider must attest to the completion of the training. **In 2018, WellCare's provider relations representatives completed approximately 357 new provider orientation visits. In 2019, WellCare's provider relations representatives completed approximately 586 orientations visits including new provider orientations, provider manual orientations, and company overview presentations..**

Training is only one of the components of our FWA program, see **Figure C.26-2**, above.

ii. An overview of the Regulatory Compliance Committee

The Audit, Finance, and Regulatory Compliance Committee (AFRCC) of the Board of Directors assists the Board in the oversight of WellCare's compliance with legal, financial and regulatory requirements, and compliance with WellCare's code of conduct and business ethics and related policies by employees, officers, directors and other agents of, and those providing services for, WellCare and its affiliates. The AFRCC provides oversight of the structure, operation and efficacy of the compliance program, including, but not limited to (i) establishing and periodically reviewing procedures for the receipt, retention, and treatment of complaints received by WellCare regarding accounting, internal accounting controls, or auditing matters, and the confidential, anonymous submission by employees providing services for WellCare or its affiliates of concerns regarding questionable accounting or auditing matters; (ii) compliance

efforts with respect to its code of conduct and business ethics and relevant federal and state laws, regulations or other legal standards; (iii) the adequacy, efficacy and implementation of WellCare's annual compliance audit plan developed by the Chief Compliance Officer; (iv) the adequacy of the organization, responsibilities, plans, results, budget, membership, staffing and operations of the corporate compliance committee and compliance department; (v) the adequacy and efficacy of WellCare's compliance policies and procedures; (vi) regularly review compliance audits, or summaries of such audits, corrective action plans and the results of such plans; (vii) review WellCare's code of conduct and business ethics not less than annually and make recommendations to the Board regarding proposed revisions to the code of conduct and business ethics; (ix) receive and review periodic reports from the CCO; not less than annually, such reports include a compliance program report incorporating each of the elements of an effective compliance program identified by CMS.

WellCare also maintains a Market Compliance Oversight Committee (MCOC) that meets quarterly and advises, reports to, and supports the CCO and the corporate compliance committee to assist the compliance department in identifying risks and issues to be reported to the AFRCC. The MCOC supports and facilitates the identification, evaluation and assessment, oversight, and communication of market compliance matters including risks, issues, and mitigation and oversight activities. MCOC responsibilities include (i) identifying key compliance risks, issues, or concerns related to market-based legislative, regulatory, or contractual requirements; (ii) evaluating and assessing known or potential noncompliance and assuring business owner assignment and accountability of remediation and oversight activities; (iii) providing guidance and support to business owners regarding market compliance risks to ensure appropriate oversight activities and the prevention or detection and, if applicable, remediation of compliance issues.

iii. The proposed appeals process.

When an investigator determines that the target party has engaged in FWA, the SIU pursues remedial actions. The type of remedial action depends on the misconduct identified by the investigation. For a provider who engages in FWA, remedial actions may include recovery of an overpayment, termination of the provider, and/or referral to law enforcement for prosecution. The SIU, as part of remedial actions, may choose to educate the provider should the findings not rise to the level of FWA and place that provider on a monitoring list for re-review to ensure the provider has corrected their billing practices.

Should our SIU receive permission from DMS to pursue the recovery of the identified initial overpayment, the provider, in accordance with their contract language, is offered the opportunity to request an appeal and submit additional documentation, such as medical records, for review. The request for an appeal may be mailed, faxed, or submitted through a secure portal to the SIU for review - see **Attachment C.26.a.iii Initial Overpayment Letter Example** for a sample of our Initial Overpayment Letter.

The provider will have 60 calendar days from the original notice of adverse action to file an appeal. Appeals submitted after that time may not be considered for review. Should the

provider feel they submitted an appeal timely, they may submit documentation showing proof of timely filing.

Upon receipt of all required documentation, WellCare has 30 calendar days to review the appeal and to render a decision to reverse or uphold the original findings. Our SIU reviews all additional documentation provided and if necessary, will engage clinical staff should the appeal involve clinical issues including whether a particular treatment, drug, or other item is experimental, investigational or not medically necessary or appropriate.

Our SIU notifies the provider of WellCare's final decision in writing. Should the provider still have concerns, our SIU collaborates with the provider to discuss the findings, determine any necessary repayment plan, and/or negotiate a settlement agreement. If we are unable to come to an agreement, depending on the terms of the provider's contract, arbitration would be an option. If the provider doesn't pursue arbitration, the SIU may pursue claims offset. **Figure C.26-3** below provides the specific steps in our SIU overpayment appeals process.

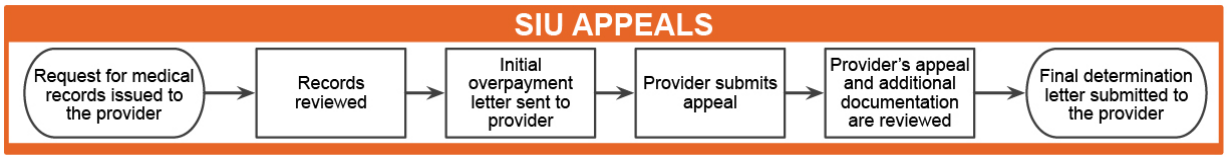

Figure C.26-3 SIU Appeals

iv. Proposed innovations for reporting data in the Program Integrity area. Provide examples of successful innovations implemented in Kentucky or other states.

WellCare strives to be the industry leader in government healthcare programs and has an established history of innovation and collaboration within the Commonewealth. To continue this precedent, WellCare's SIU team has chosen the following proposed innovations to move our Kentucky FWA program forward as a national best in class program:

PROACTIVE DATA MINING - 2019 DATA PLAN

To ensure WellCare of Kentucky's SIU is investigating the current industry fraud and abuse trends, our SIU team utilizes the US DHHS OIG Annual Work Plan to drive data analytics within multiple Medicaid markets that we serve. Our annual data plan is created by our SIU Data Analytics team which is overseen by a Senior Data Analytics Manager. This team monitors our claims data closely to identify the current trends and aberrancies. Through the use of our FWA Tool they can identify the top scheme and/or rule violations. They conduct additional analysis of that data such as identifying the top violating providers in a particular state. This information is used regularly for proactive case generation. With our unit goal of having a minimum of 25% of our cases being proactively generated, this process and tool is instrumental in assuring we are identifying and pursuing quality cases instead of just working reactive cases. Our proactive case initiatives can also result in more global approaches where the FWA issue is addressed as an SIU Project. Through the use of an Annual Data Plan we remain vigilant in our pursuit of potential FWA and take a collaborative approach with participation and input from multiple levels. If new schemes and trends are identified throughout the year, the data plan can easily be adjusted to incorporate "hot topics."

SIU 2019 Kentucky Strategic Plan

Specifically for Kentucky, we have taken the global 2019 Data Plan and combined it with our proven experience, trends, and themes to drive our KY Strategic Plan. Using our SIU annual data plan, we asked the KY Investigators to conduct a deep dive on the SIU activities in Kentucky, compile the data and success, then develop a Strategic Plan consisting of areas of focus. The Strategic Plan was presented to the Kentucky Market Management Team to collaborate and solicit the market's assistance in identifying ideas/concerns they recommended be included. The 2019 Strategic Plan listed specific provider specialties/schemes to initiate proactive cases, the plan to increase on-site audits, collaboration efforts, etc. The plan also listed the 2018 accomplishments and best practices. The successes shown in the Kentucky plan demonstrated a year over year dashboard of cases opened and closed, recoveries, cost avoidance, onsite visits, RFIs, etc. Additionally, process improvements implemented in Kentucky were listed which included a Recovery Process enhancement, established timeframes to offset overpayments, and specific timeframes for medical record requests to keep investigations moving forward.

This innovative approach to monitoring potential fraud, waste and abuse activities in the Kentucky Medicaid market allows us to be nimble and flexible. When collaborating and sharing case reviews with other plans and DMS, OIG, OAG, and MFCU at monthly and quarterly meetings and we become aware of new schemes or trends, both the data and strategic plans can be modified to ensure we are current with what is affecting Kentucky Medicaid.

SIU Proactive Project Strategy

Our experience when speaking with other health plans has yielded that other SIU departments do not place as much emphasis on collaboration as our Kentucky staff. Our SIU in Kentucky is considered innovative because our proactive project strategy consists of data mining to initiate multiple proactive investigations based on global FWA trends. The cases that result from these investigations are initiated simultaneously for the same/similar allegation but tailored in accordance with Kentucky specific guidelines and regulations. These cases are worked as a group instead of individual investigators working solo on smaller cases, and they progress together.

As these cases are developed based on global FWA trends, they are given the highest priority so we can provide the Commonwealth with investigative reports on current trends affecting Kentucky Medicaid. Multiple cases are opened, based on highest priority, and assigned to different investigators so cases are researched and investigated. All letters and documents are tailored to the specific FWA trend/and scheme for the investigator to use as templates. Newer investigators learn how to build better cases and they develop case management skills. Any case issues or concerns are discussed and addressed as a team. The proactive project cases enhance teamwork within the unit and across the enterprise.

Proactive projects previously completed for Kentucky include emergency department up coding and advanced life support ambulance. Kentucky provider project investigations currently in progress include genetic testing and allergy testing.

Kentucky Opioid Concerns

Utilizing our approach to data mining, several cases identifying outlier laboratories were opened to review their billings for urine drug screening. A recent example of a successful innovation based on this data mining is in regards to urine drug screening. Given the scope of the opioid epidemic in Kentucky, WellCare undertook a significant effort to control wasteful spending related to inappropriate use of these drugs. WellCare noticed a dramatic increase in the use of urine drug screening (UDS) by some of our providers, especially our laboratory providers. Our clinical policy team worked collaboratively with our payment integrity team to identify key laboratory codes that showed a significant trend of abuse and waste. As a result of this internal collaboration, we created a drug testing clinical edit guideline that our providers can reference. This edit explains in detail the evidence-based guideline related to this claims edit. Secondary to this effort, we have seen more appropriate utilization of these services and ensured compliance with medical necessity standards. We know from collaborating with other MCOs, controlling wasteful spending of UDS is a best practice and the savings benefits both the Commonwealth and tax payers.

WellCare understands DMS' recent instructions to incumbent MCO's to remove all UDS edits and guidelines for UDS effective July 1, 2019, in anticipation of a universal policy that DMS announced in October 2019. WellCare successfully implemented the DMS UDT policy effective January 1, 2020.

SIU Investigators with Behavioral Health Credentials

Over the last several years, due to DMS' expansion of behavioral health services available to Enrollees, there has been a substantial increase in the number of behavioral health claim submissions and subsequent opportunities for increased FWA. To address this, the SIU expanded its investigative expertise by hiring three BH clinical investigators and a BH coding auditor. The BH SIU team is tasked with investigating BH services including psychosocial services and targeted case management. One of these specialized investigators currently devotes over 60% of her time solely to Kentucky. **In 2019, specific to KY Medicaid, this team has identified over $1,773,966 in overpayments and recovered over $387,360.**

Low Priority SIU Case Process

WellCare of Kentucky's SIU developed an innovate process to be used as a best practice for KY Medicaid cases as well as our other lines of business to screen and identify low priority SIU cases. This low priority methodology was implemented to ensure that cases which could have an adverse effect on our members are moved to a higher priority, while at the same time identifying the truly low priority cases. Our goal is to utilize our investigative resources in the most practical and productive manner for the Commonwealth.

Cases are prioritized as defined below. A case can start high, move to medium, then back to high or move to a low priority. In addition, cases may start out as a low priority and not move up to another priority level.

- *High* – Cases/allegations having the greatest program impact which would include: patient abuse or harm, multi-state fraud, high dollar impact of potential overpayment, likelihood

for an increase in the amount of fraud or enlargement of a pattern, cases with an active payment suspension, etc.

- *Medium* – Cases/allegations not at the level of a high priority, may be a case in Coder review, overpayment letter sent, multiple complaints against subject, etc.
- *Low* – Cases/allegations not at the level of a high or medium priority, may be a case active with law enforcement or regulatory agency and SIU told to stand down, cases in recovery status, etc. All cases being prepared for closure should be a low priority

The SIU screening process to identify and close the low priority cases ensures the Investigators are working cases with the highest impact. Cases are screened and prioritized as follows:

- Determine how many prior complaints/matters/cases have been received involving the subject
- Identify the dollar amount in controversy/potential loss based on allegation
- Determine if any adverse effect would come to our member if the matter was not pursued.
- No findings identified from the due diligence research
- If no harm will come to the patient, three or fewer complaints have been received in the past 6 months, the potential loss is low dollars (i.e., less than $500.00), and no aberrancies identified from the due diligence, the provider will be placed on a monitoring list to be evaluated in six months and the case closed

Notice of Adverse Provider Actions (NAPA)

The WellCare of Kentucky SIU, in collaboration with our compliance and regulatory teams, recently developed a process to track adverse provider actions. This process is known as our Notice of Adverse Provider Actions (NAPA) process and is used to track adverse provider actions received from the Kentucky Division of Program Integrity. Trackable actions include:

- Payment suspensions
- Involuntary termination
- Denied provider applications
- Release of payment suspension
- Recession of provider termination
- Settlement agreements

The process utilizes a workflow within Compliance 360 to track communications with DMS as well as various internal teams to ensure appropriate actions are taken. The workflow depicted in **Figure C.26-4** below details this process:

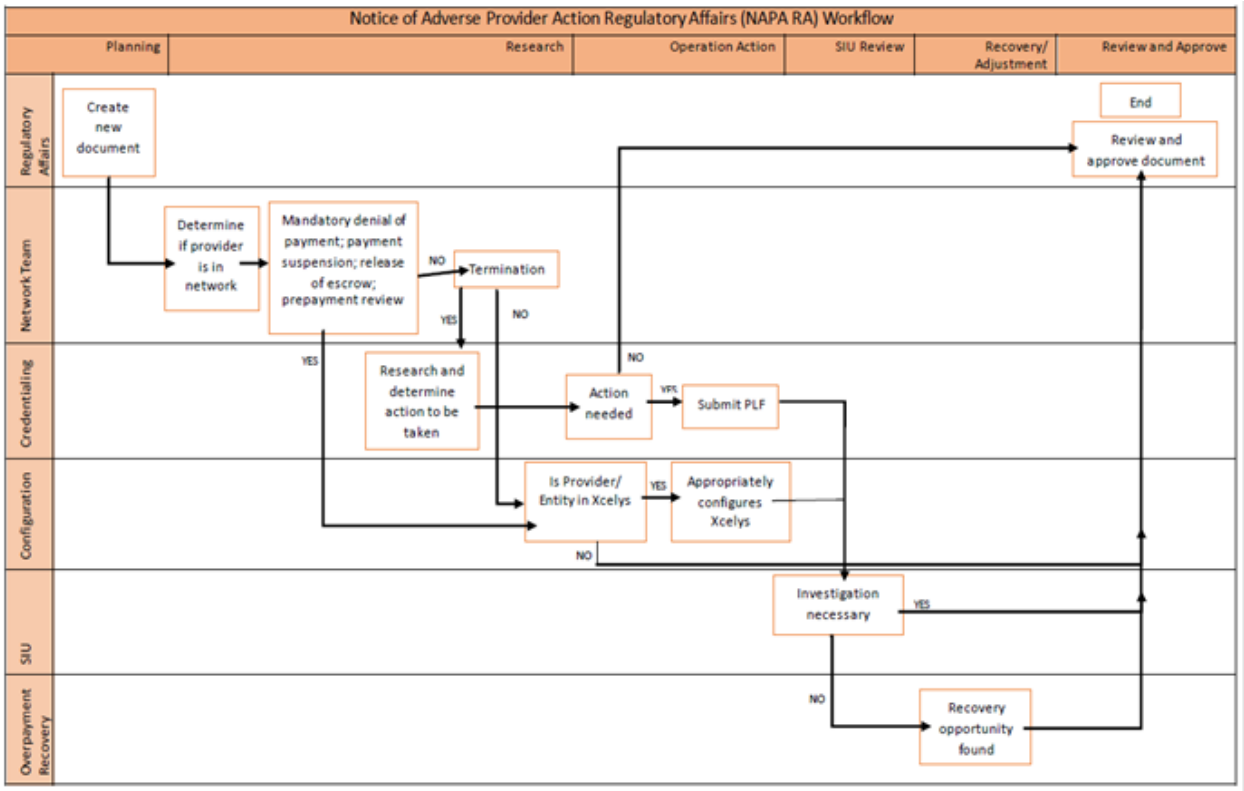

Figure C.26-4 NAPA Process Workflow

The NAPA workflow is initiated when DMS submits notification of an adverse action to our local Kentucky Regulatory Affairs (RA) Team. The RA team "announces" the action within C360 and it then flows through our local Network, Credentialing, Configuration, SIU and the Overpayment Recovery Teams. The Network and Credentialing Teams determine if the provider is an active provider within our network. If the provider is active in our network, they will "announce" to our configuration team who will initiate action based on the request, i.e., place future claims billed in an escrow status. Once the Configuration Team has completed their step, the SIU Team will review the circumstances of the announcement to determine if an investigation should be initiated. SIU and the Overpayment Recovery Team both ensure that any identified overpayments resulting from the adverse action are pursued for recovery. Reports can also be pulled from C360 to show the status of actions requested by DMS and when the actions were implemented by WellCare.

Recommended Reporting Innovation for Kentucky's Program Integrity Division

WellCare's SIU can provide meaningful dashboards to the Kentucky Division of Program Integrity which is used in other markets. For example, the screenshot shown below in **Figure C.26-5** shows a sample dashboard developed for use in other WellCare Medicaid markets and includes activities regarding recoveries, cost avoidance, workload, referrals, etc. by quarter. WellCare's SIU team led the charge to develop a universal reporting and would like to propose that we work collaboratively with the Kentucky Division of Program Integrity to do the same. This dashboard can be customized so that MCOs can share the results of their investigations and other FWA activities at the monthly and quarterly collaborative meetings. This universal

platform will assist in furthering the plans' ability collaborate and share information regarding Kentucky Medicaid providers and current and potential FWA trends and allow DMS greater transparency into plans' FWA activities.

WellCare has implemented similar initiatives in South Carolina, Florida, and Nebraska and has been received well by the respective Medicaid agencies.

b. Describe the Contractor's proposed approach to prepayment reviews.

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 36.2, Prepayment Review of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix.**

WellCare of Kentucky contracts with established pre-payment medical code editing vendors to improve claims payment accuracy and reduce costs through prospective claim editing. In claim editing, we perform automatic claims reviews to catch errors, omissions and questionable coding by comparing data against expansive databases containing millions of government and industry rules, regulations and policies governing health care claims. **In 2018, these activities resulted in $40.7 million in avoided overpayments across our Kentucky Medicaid Plan.**

In conjunction with our business associate, Equian LLC (Equian), WellCare has been performing reviews of high dollar inpatient hospital claims submitted for adjudication since November 19, 2013. This process has reviewed over 1,300 claims, or less than 1% of our more than 150,000 inpatient claims adjudicated during that same period. Despite the very low volume of targeted claims, nearly $81M in billed charges have been called into question on those claims. WellCare's review demonstrates a fiscally responsible, provider friendly approach by targeting fewer than 24 claims per month on average while addressing highest cost claims which are most likely to have challenges with accuracy and compliance given the high volume of billing entries and coding complexities.

Prepayment Process Overview

The adjudication process, procedures involved in accurately, and timely compensating providers for their services have evolved as reimbursement methodologies and complexities have increased. Historically, claim adjudication has only focused on ensuring eligibility and conducting basic administrative and code editing on the information provided in the claim submission data. In order to proactively identify potentially abusive billing practices, WellCare has enhanced its adjudication process and extends claim adjudication to also include an analysis of the claim as a whole and/or individual detail for the specific charges in comparison with the medical records. Through this process, WellCare has identified numerous provider billing errors and billing methodologies that, on their face, are inconsistent with sound fiscal, business, or medical practices, and that would have otherwise resulted in unnecessary cost to the Kentucky Medical Program.

Resolution and Appeal Process

WellCare's review begins when a claim is identified as a contradictory to industry standard billing practices and peer comparison. When a review identifies questionable billing, a claim or specified line item is denied, and the additional documentation and/or information necessary to clarify/support the charges at issue is requested. Providers are afforded a minimum of 45 days to submit the medical documentation requested. Clarifying information may include but is not limited to provider billing policies, explanations and/or medical record excerpts pertaining to the issue(s) affecting the claim in question. If a provider does not respond to the request for information within the specified timeframe, the claim remains denied. If a provider complies with the request and submits the medical documentation within the specified timeframe, WellCare performs a detailed review for compliance with applicable billing guidelines and issues a report with our findings within 30 days. Both the CMS and DMS guidance is clear regarding our fiduciary responsibilities with claims accuracy by defining fraud, waste and abuse to include everything from mistakes (i.e. unbundling), inefficiencies, bending the rules (upcoding), and intentional deception.

Should the provider not agree with the findings of our review, the notice also advises the provider of their formal appeal rights and procedures for filing. Consistent with the MCO contract, WellCare will review and issue a written response to any formal provider appeal within 30 days of receipt. If the appeal decision is upheld by WellCare, the provider may pursue Independent External Review in accordance with DMS guidelines.

WellCare believes that prepayment review is an important component of our overall payment integrity program and a critical element of our overall fiscal duty to identify potential fraud, waste and abuse. Under the new contract, we propose to expand our pre-pay review process by partnering with our vendor, Optum, to introduce a robust program that uses predictive analytics and provider scoring to target additional potential FWA claims for medical record comparison. Partnering with Optum will provide us with medical payment policy advisory services based on, but not limited to, generally accepted principles and practices of CMS, American Medical Association (AMA) coding Kentucky guidelines, specialty academy organizations, applicable guidelines, and other processes and rules approved by WellCare and DMS to achieve prospective payment accuracy across all claim types.

This process was launched in both our Georgia and Florida Medicaid markets and has yielded a combined savings of approximately $3.9 million since July 2018. Using the same concepts in Kentucky for the same time period, WellCare is able to project that this initiative would have yielded approximately $1.7M in cost avoidance.

Through this implementation, WellCare will continue to comply with Section 36.2 of the Draft Contract including, but not limited to, the following provisions:

- We do not use Prepayment Review to hold claims for an indefinite period of time
- Providers are given 45 days to submit documents in support of claims under prepayment review
- Documentation is reviewed in a reasonable time not to exceed 30 days
- Claims under Prepayment Review are not subject to prompt payment or timely filing requirements

Edit effectiveness is not based exclusively on claim approvals, but we evaluate effectiveness based on denial rate and dollar return, as well as risk to our members. We revise and replace ineffective edits. Any provider that has undergone additional education on prepayment medical review for six months or longer that has not corrected their billing patterns is escalated for further actions. For providers who demonstrate sustained a 90% error free claims submission rate for 45 days, we will request express permission to continue Prepayment Review from DMS' Director of Program Integrity (or designee) and the Director of Program Quality and Outcomes (or designee).

City, State Zip

RE: Proposed Action – Findings for Medicaid Case #12345

Thank you for your patience and cooperation while WellCare's Special Investigations Unit (SIU) completed its medical records review. Based on this review, the SIU has determined that a $X,XXX.XX overpayment was made to Provider Name. Please refer to the analysis below for additional information regarding how the overpayment amount was calculated.

Reason for the Review

WellCare's SIU attempted to conduct an audit to validate the services being provided to WellCare members. The audit was to ensure Provider Name is complying with the rules and regulations listed in the Kentucky Medicaid Provider General Handbook.

Summary of Findings

WellCare's Special Investigation Unit (SIU) Coding Auditor reviewed ## claim lines representing ## unique members. ## CPT/HCPCS codes were reviewed. The dates of service for the claims were between insert date range.

Primary Denial Reason(s):

- 12 claim lines were disallowed because the documentation does not meet Local Coverage Article requirements for Therapeutic Shoes for Persons with Diabetes.
- 5 claim lines were disallowed because the documentation does not meet Local Coverage Article requirements for Ankle-Foot/Knee-Ankle-Foot Orthoses.
- 4 claim lines were disallowed because the signature on the records does not meet CMS criteria.
- 2 claim lines were disallowed because the documentation does not meet Local Coverage Article criteria for surgical dressings.
- 1 claim line was disallowed because no records were submitted to support the billed services.

Additional Denial Reason(s):

- 4 claim lines were also disallowed because the documentation does not meet Local Coverage Article requirements for Therapeutic Shoes for Persons with Diabetes.
- 1 claim line was also disallowed because there was conflicting/inconsistent documentation in the medical records.

Resolution

REMIT OVERPAYMENT
If you agree with the determination, please submit a draft in the amount of $X,XXX.XX within sixty (60) days from the date of this letter to:

WellCare Health Plans, Inc.
Attention: SIU-Director Lori Peters
PO Box 31407
Tampa, FL 33631-3407

Please ensure to place the case number (#12345) in the memo section.

You may contact Investigator Name, at (502) 555-1212 to discuss repayment options.

ADMINISTRATIVE REVIEW
If you do not agree with this proposed determination, you may request an Administrative Review by submitting your request in writing within sixty (60) days of the date of this letter. Your request should detail why you disagree with these findings and must include any supporting evidence/documentation you believe is pertinent to your position. In the event of an appeal, any additional and previously submitted documentation will be included in a more comprehensive review to include (but not limited to) medical necessity, all applicable local, state, and federal rules, as well as any applicable regulatory policies and guidelines.

WellCare
Beyond Healthcare. A Better You.

Special Investigations Unit

Additional documentation should be sent to:

WellCare Health Plans, Inc.
Attn: SIU Records Custodian
8735 Henderson Road
Building 2, Floor 2
Tampa, FL 33634

A Final Determination will be rendered within thirty (30) days of the date of receipt of the additional information submitted with your administrative review request.

CLAIM OFFSET

If no refund is received within sixty (60) days from the date of this letter, the TOTAL REFUND AMOUNT will be reduced from future claim payments, per *WELLCARE 2019 KENTUCKY MEDICAID PROVIDER HANDBOOK; SECTION 5: CLAIMS; PAGES 81-82 OVERPAYMENT RECOVERY*: "WellCare will proactively identify and attempt to correct inappropriate payments. In situations when the inappropriate payment caused an overpayment, WellCare will adhere to Kentucky Regulatory Statute KRS 304.17A-708 and limit its notice of retroactive denial to twenty-four (24) months from the payment receipt date. However, no such time limit shall apply to overpayment recovery efforts which are based on a reasonable belief of fraud or other intentional misconduct, or abusive billing, required by,or initiated at the request of, a self-insured plan, or required by a state or federal government program or coverage that is provided by this state or a municipality thereof to its respective employees, retirees or Members In all cases, WellCare or its designee will provide a written notice to the Provider identifying the specific claims, overpayment reason and amount, contact information and instructions on how to send the refund. If the retroactive denial of reimbursement results from coordination of benefits, the written notice will specify the name of the carrier and coverage period for the Member. The notice will also provide the carrier address WellCare has on file but recognizes that the Provider may use the carrier address it has on file. The standard request notification provides sixty (60) days for the Provider to send in the refund, request further information or dispute the retroactive denial. Failure of the Provider to respond within the above time frame will constitute acceptance of the terms in the letter and will result in offsets to future payments. The Provider will receive an EOP indicating if the balance has been satisfied. In situations where the overpaid balance has aged more than three months and no refund has been received, the Provider may be contacted by WellCare, or its designee, to arrange payment."

Any final resolution in this matter between the provider and WellCare Health Plans, Inc. in no way binds nor precludes the State or any other regulatory agency from taking further action for the circumstances that were addressed in this letter.

Thank you in advance for your prompt attention to this matter.

Regards,

27. Contractor Reporting Requirements

C.27. CONTRACTOR REPORTING REQUIREMENTS

a. As indicated in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," the Department would like to leverage the contracted MCOs existing technologies and reporting capabilities to develop a comprehensive reporting package through a collaborative process. Understanding that ultimately the Department will define the reporting package, describe the Contractor's willingness to participate in such a collaboration, including a discussion of the following:

i. Proposed reports and report templates that will result in a comprehensive, Department-accepted reporting package.

ii. Proposed ideas for collaborating across MCOs to ensure consistent and comparable reporting using the same data definitions and specification can be achieved.

iii. Requirement of Subcontractors to participate and or comply with this process.

b. Provide a detailed description of the Contractor's capability to produce reports required under this Contract, including an overview of the Contractor's reporting systems and capability to configure such systems to capture data according to reporting definitions and specifications as required by the Department.

c. Describe the Contractor's processes to review report accuracy and completeness prior to submission to the Department.

d. Provide examples of the Contractor's proposed:

i. Processes for conducting comparative data analyses, interpreting trends, and summarizing findings in a manner that is easily interpreted by the Department.

ii. Use of dashboard reporting to monitor, track, and evaluate performance metrics, including dashboard level data the Contractor proposes to submit to the Department. Provide a sample dashboard report.

iii. Use of findings from reports to make program improvements and to identify corrective action.

e. Describe the Contractor's processes for monitoring, tracking, and validating data from Subcontractors.

f. Describe the Contractor's proposed process for the receipt, generation, interpretation, and provision of ad hoc reports requested by the Department.

C.27. CONTRACTOR REPORTING REQUIREMENTS

OUR EXPERIENCE IN REPORT SUBMISSION

WellCare of Kentucky will comply with the Department of Medicaid Services' expectations and requirements as specified in Section 37 Contractor Reporting Requirements and Appendix D Reporting Requirements and Reporting Deliverables and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

WellCare of Kentucky has a long history of ensuring timely submission, accuracy and completeness of all regulatory reports and compliance requests with our government partners. Our compliance and regulatory oversight teams, tools and processes are specifically designed to meet the unique needs of government constituencies. Our highly responsive well recognized local Regulatory Affairs and Compliance team is led by Chief Compliance Officer Rebecca Randall. Working together, alongside a dedicated IT Regulatory Reporting team, with an average of over 7.5 years of dedicated regulatory reporting experience meeting the needs of the Department, WellCare of Kentucky has historically demonstrated strong capabilities in fulfilling the Department's reporting requirements. For example, **all 2019 report submissions were delivered timely and in accordance with the Department's required specifications.** This dedicated team will continue to use their well-established processes to provide the Department with timely and accurate reports, for both standard regulatory report submissions and ad-hoc report requests, including the reporting package outlined in Appendix D "Reporting Requirements and Reporting Deliverables" and the additional reports as mentioned in section 37.3 Reporting Requirements for Specific Operational Areas. These processes include cataloguing the request, working with appropriate department owners and subject matter experts to ensure understanding of the request, validating accuracy, tracking completion, analyzing for trends, archiving the report and any supporting documentation, and final submission to the Department.

a. As indicated in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," the Department would like to leverage the contracted MCOs existing technologies and reporting capabilities to develop a comprehensive reporting package through a collaborative process. Understanding that ultimately the Department will define the reporting package, describe the Contractor's willingness to participate in such a collaboration, including a discussion of the following:

COLLABORATIVE APPROACH

WellCare has extensive experience within the Kentucky market as well as, recently in both Georgia and Nebraska, participating in working groups, facilitated or led by the Department, to define common formats for regulatory reporting requirements. We welcome this opportunity to once again collaborate with the Department and our MCO partners to develop a robust and meaningful reporting package for the Department.

In the past WellCare of Kentucky has worked directly with the Department in reviewing, developing and analyzing regulatory reports. **Through this collaboration we were successful in enhancing several reporting packages, specifically related to behavioral health that would have otherwise been very difficult to obtain.**

Our Collaborative Approach with the Department

One example of our collaboration involved the inclusion of Severe Mental Illness (SMI) and Severe Emotional Disorder (SED) enrollee data within our reports. The core of the issue was the Department wanted the MCO's to report on specific outcomes related to SMI and SED enrollees, but the Department did not capture all SMI and SED enrollee indicators and provide to the MCOs via the 834 file process.

WellCare of Kentucky collaborated with the Department to resolve this issue as generating a report without appropriate enrollee indicators was an impossible task. We proactively reached out to the Department for Behavioral Health and Intellectual Disabilities (DBHDID) to determine a solution.

Through the process we learned that as our enrollees were being treated for mental health disorders through the Community Mental Health Centers (CMHCs), the CMHC's provided a monthly enrollee listing to DBHDID with both SMI and SED indicators. We were able to develop a file transfer process with DBHDID to receive a monthly enrollee SMI/SED indicator file from the CMHCs to flag enrollees as SMI or SED in our eligibility system.

Through this collaboration, we are now able to enhance our reporting capability to DMS and ensure that we are providing the most current data available regarding this specific population.

Our past experience has demonstrated that the Department's proactive approach to solicit MCO participation, feedback and suggestions, while ultimately defining the reporting package requirements will allow for streamlined processes and defined outcomes for the Department as well as the MCOs. We have found that this face to face collaboration is most effective in determining Department needs as well as MCO capabilities. WellCare of Kentucky commits to identifying and making resources available immediately upon Contract Execution to participate in the collaborative meetings with the Department and other MCOs to establish a reporting package that provides:

- Detailed specifications and consistent data definitions for all required reports
- Statistical information in a format for which trends can be identified
- Detailed analysis with a summary of identified trends and patterns of change, outliers, successes, risks, and mitigation strategies

Additionally, WellCare of Kentucky, as we have done in the past will draw upon our experience and reporting best practices utilized in our other Medicaid markets that could potentially also be useful for the Department to review.

i. Proposed reports and report templates that will result in a comprehensive, Department-accepted reporting package.

As a willing participant in the collaborative process of developing a comprehensive reporting package, WellCare of Kentucky will leverage ideas and suggestions from our vast experience within the Kentucky market, as well as from other Medicaid markets we currently serve to suggest templates and reporting specifications for the Department to consider. Our locally centered regulatory reporting team has reviewed the proposed reporting requirements within Appendix D and 37.5 of the Contract and worked collaboratively with counterparts in other

WellCare markets to gather sample reports and templates that closely resemble both the new as well as existing reporting requirements and descriptions laid out by the Department.

NEW REPORTS

We have included two sample templates (listed below), as examples of standard reporting templates that are already available, with defined specifications, that WellCare of Kentucky, the Department and other MCOs could collaboratively agree to implement. WellCare already generates these reports for our Florida Medicaid program and they are generally well-received.

- **Attachment C.27.a.i-1 Administrative Subcontractors and Affiliates Report Template**
- **Attachment C.27.a.i-2 Appointment Wait Times Report**

Modified Reports

After further review of the modified reporting descriptions to the existing reports within Appendix D, we have identified the following reports (listed below) that could potentially be modified or combined with another report to increase efficiency and reduce the overall volume of reports. As with the new reporting templates referenced above, WellCare already generates these reports for our Florida Medicaid program.

- **Attachment C.27.a.i-3 Claims Aging Report**
- **Attachment C.27.a.i-4 Denied Suspended Terminated Provider Report,** and
- **Attachment C.27.a.i-5 Enrollee Compliance Grievance Appeal Report** (provided electronically)

Additional Reporting Suggestions

In addition to the review and presentation of specifications and templates for new and modified reports, we would also propose the following:

- Identification of additional subject areas of potential interest that are not currently being reported on, such as the use of Social Services by enrollees
- Identification of reports that could potentially be removed from the existing regulatory reporting package that are redundant or could be combined with another report
- Recommendations to consider establishing the practice of defining all report templates and standards within a Kentucky Medicaid Reporting Guide, that would include a defined Data Dictionary (further outlined in below), and making that information publicly available via the Department's website.
- Internal Operational Dashboards and Reports that are in use in our organization that the Department may wish to access (through our Government Partner Portal, refer to **Figure C.27-1**) or another Department-defined platform.

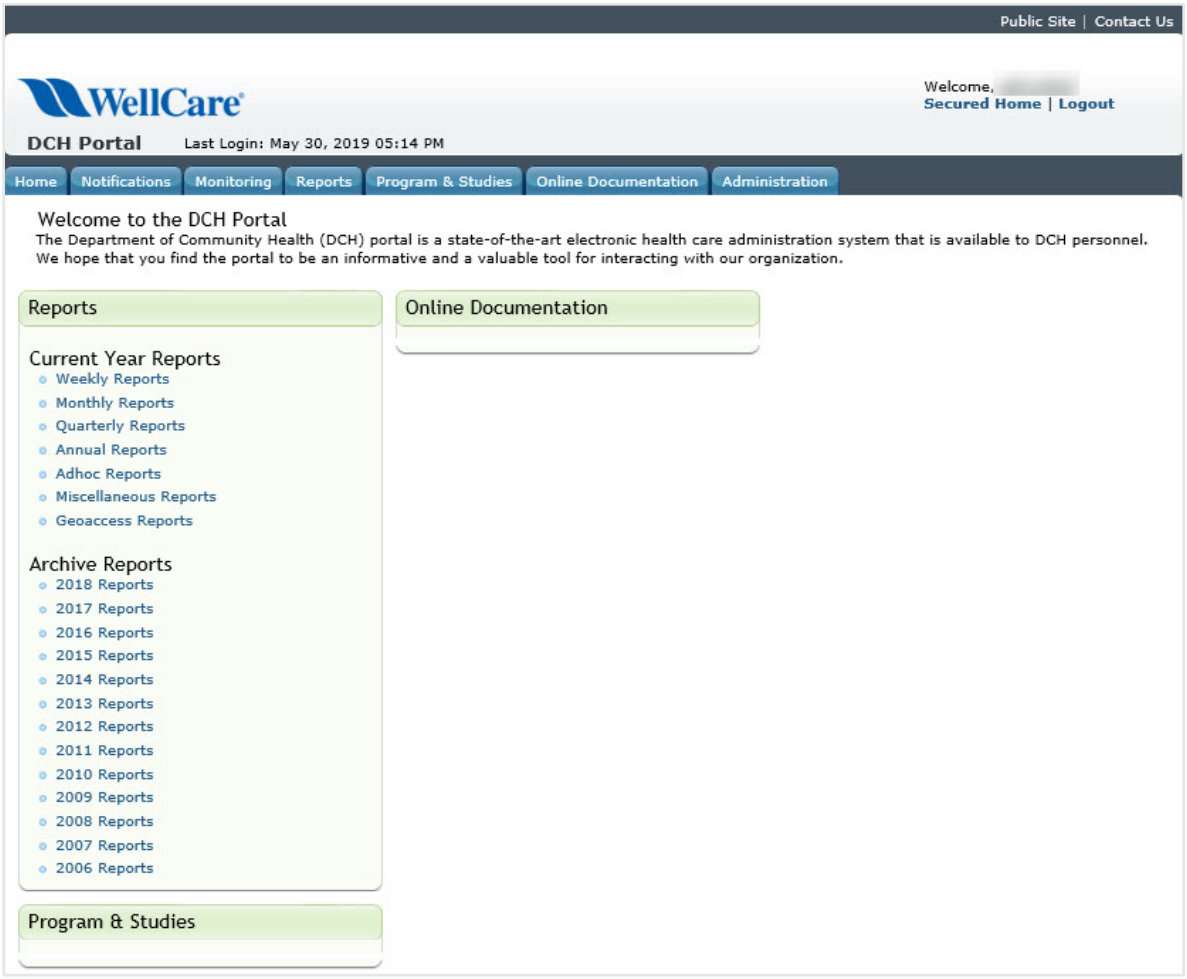

Figure C.27-1: Sample screenshot of Government Partner Portal

We also believe that reporting transparency is an important component of the Department's regulatory reporting package. Once all the MCOs and the Department have agreed upon all templates and specifications of the reporting package, WellCare of Kentucky would recommend that the "Kentucky Medicaid Reporting Guide" be published on the Department's website. This guide would provide the details of all the managed health plans reporting requirements including instructions, specifications and templates. This guide is further discussed in (ii).

We would also propose to the Department that MCOs work collaboratively to implement Quality and Outcome Driven Reports through a dedicated webpage (ideally placed on the Department's website) that would include all of the performance measure indicator descriptions defined in Section 19.4 Kentucky Healthcare Outcomes of the Contract, for e.g., HEDIS. This information would be available to the public and would allow further visibility into the Department's monitoring of the Medicaid health plans' performance. The Medicaid Beneficiaries can also access and use this information to compare health plans and determine the relative value of care offered by managed care health plans. The measures allow the users to understand how well health plans achieve results that matter, such as how effective and accessible is the care being delivered, network adequacy, prevention and treatment quality scores, customer service satisfaction, and % of board certified providers, just to name a few.

WellCare has direct experience working collaboratively with State Medicaid Agency to design a comprehensive reporting package and greatly welcomes the opportunity to partner with Kentucky to do the same.

ii. Proposed ideas for collaborating across MCOs to ensure consistent and comparable reporting using the same data definitions and specification can be achieved.

As a willing participant in the collaborative process of developing a comprehensive reporting package, WellCare of Kentucky will share insights and experiences gained from the development of our own robust reporting solutions. As the Department suggests, the establishment of a common Kentucky Medicaid Reporting Guide is a key step in achieving the desired results. **We have direct experience with this type of collaboration in Kentucky and other Medicaid markets we serve.** In Kentucky, we presented a standard approach for using provider type and specialty fields to distinguish and identify behavioral health services and substance abuse services from non-behavioral health services. This proposal was submitted to both DMS and DBHDID reporting and operational teams in 2018. A sample of the BH logic document report is attached in **Attachment C.27.a.ii Sample BH Logic Report**, provided electronically.

We also have extensive experience in our other Medicaid markets working with our governmental and managed care plan partners to develop a robust, consistent and transparent reporting package. Our experience integrating acquired entities into our operating environment has demonstrated that once the Reporting Guide is established, and independent systems (such as those used by the multiple MCOs) map elements to within the Reporting Guide, data quality, accuracy, and consistency will automatically increase. Further, as we suggested earlier, placing this information on the Department's website, where it can reviewed by Enrollees and other interested parties, increases transparency and allows the people of the Commonwealth the opportunity to see the true value that managed health care brings.

Other key considerations WellCare of Kentucky would recommend to discuss include:

- Reporting Guide definitions of "Reference Data" and values. This can include agreement to utilize specified Code Sets but can also extend to values for common fields such as gender, reason codes (such as disenrollment reason), and other frequently utilized fields
- As Reporting Guide will be the precursor to successful implementation and achievement of the Department's reporting goals, our recommendation would be to establish various sub groups, based on subject matter (e.g. claims, behavioral health, and utilization management). Bi-weekly sessions would be an appropriate frequency.
- WellCare's past experience has shown that both business and technical resources are key to defining a successful Reporting Guide and would include a variety of participants from the Department and WellCare of Kentucky staff in areas such as IT, Regulatory, Claims, Customer Service and other operational areas (depending on the Department's areas of focus) in this process.
- WellCare of Kentucky also recommends collaboratively exploring the opportunity to leverage existing, published Data Dictionaries for the health care industry (e.g. Medicare standards). This approach would reduce the time and effort required to complete the

Reporting Guide yet allow the end product be tailored to the unique needs of the Department.

iii. Requirement of Subcontractors to participate and or comply with this process.

As a contracted MCO, we believe it is our obligation to know, understand, and represent all services and capabilities offered to DMS, whether they are subcontracted or not. If nuances within a specific service type provided by a subcontractor required the need for additional guidance, it would be incumbent upon the MCO to work directly with their vendor to gather that information and bring it back to the work group Further, our experience has demonstrated that competitive, market and other relationship scenarios of subcontractors can create challenges when a single vendor represents multiple MCOs. . However WellCare of Kentucky would recommend that participation by subcontractors in the process not be required, and in most cases limited or not included.

WellCare of Kentucky includes in our contracts with subcontractors, language that requires them to comply with all requirements in our contracts with government partners. We fully expect subcontractors to comply with the final requirements published by DMS. Our Kentucky Subcontractor Oversight Team, led by Ben Orris, is supported by multiple subject matter experts across our company. As part of their negotiating and contracting processes, our National Network Performance Team ensures all required Kentucky-specific contract standards are included in our Kentucky subcontracts, and also aligns these standards with monetary performance incentives and penalties. In addition, our Network Performance Team and our Delegation Oversight team works to ensure our subcontractors are in compliance with the processes and expectations. They also periodically re-procure our subcontracts to ensure we are partnering with the strongest organizations and obtaining the best value for the subcontracted services. Reporting deliverables, complaints and inquiries are tracked within LIONS and C360. In the instance of reports, each month, the Oversight Team generates a report of all deliverables due. If a Subcontractor is responsible for a regulatory report, the Regulatory Affairs team sends a reminder to the Subcontractor contact stating the due date. The report is to be delivered to the plan, with the appropriate attestation to accuracy. The Regulatory Affairs team reviews the data in collaboration with the Subcontractor management team, and submits the report to the Commonwealth. We do not allow our subcontractors to submit reports directly to DMS without appropriate internal review and approval.

If a Subcontractor fails to deliver the report in a timely manner, they are subject to reimburse the plan for any penalties assessed by the Department. The issue is escalated internally to the Subcontractor management team who will determine if further corrective action is warranted. Repeated violations of contractual obligations could be justification of contract termination. In addition to a formal annual audit, WellCare regularly monitors all delegated subcontractors through monthly scorecards. The results of these monitoring and oversight activities are discussed directly with the delegated subcontractors and the Kentucky Regulatory Affairs Team through Joint Operating Committee (JOC) meetings.

Please see **Attachment C. 27.a.iii-1 2019 Delegation Oversight Audit Schedule** and **Attachment C. 27.a.iii-2 Sample Avesis Scorecard**, provided electronically, for examples of some of our monitoring tools.

One suggested participant to include beyond the MCOs would be the KHIE. As an active participant with many common goals and objectives, WellCare of Kentucky believes that KHIE may have an existing Data Dictionary and other assets that would also assist the Department and the MCOs in developing a uniform reporting package.

b. Provide a detailed description of the Contractor's capability to produce reports required under this Contract, including an overview of the Contractor's reporting systems and capability to configure such systems to capture data according to reporting definitions and specifications as required by the Department.

WELLCARE'S REPORTING CAPABILITIES

WellCare of Kentucky has developed the systems and processes necessary to ensure the ability to produce the reports required under this contract. We have historically demonstrated a strong commitment to meeting the reporting expectations of our government partners and have invested heavily in developing systems and processes that support our commitments.

We have a long history of submitting high quality data files and reports in accordance with state standards for accuracy, timeliness, and completeness.

This success is the result of the combination of our proprietary Legal Integrated Online Network Solution (LIONS) submission tracking tool, our Enterprise Information Management (EIM) solution, a formal report development lifecycle, and a formal certification process to produce the reports previously outlined within Appendix K of the MCO Contract. These processes will carry forward to ensure the reporting package in Appendix D "Reporting Requirements and the additional reports outlined in Section 37.3 Reporting Requirements for Specific Operational Areas:

- *LIONS:* formalizes the certification tracking and submission process to ensure individuals validate and complete the review and attestation activities
- *EIM:* provides access to data that is already quality-reviewed, both reducing development time and improving data quality
- *Lifecycle:* our report development lifecycle ensures an accurate understanding of the request (and data elements) is established up front and serves as the basis for independent QA validation prior to production deployment
- *Certification process:* ensures that all participants in the report development process have an understanding of the critical nature of the submission and the appropriate appreciation for the required data quality compliance.

An experienced team of staff currently uses these established tools, processes, and systems to provide the state with timely and accurate data files and reports. These processes include cataloguing the request, distributing the requests to appropriate owners, validating accuracy, tracking completion, analyzing for trends, storage of the completed report, and final submission to the Department.

Our ability to meet the Department's reporting requirements extends not only to the pre-defined contractual reports identified in Appendix D "Reporting Requirements and the

additional reports outlined in Section 37.3, but also to the reporting package that will be developed during the collaborative work team process. It also extends to the ability to support ad hoc reporting requests on short notice, consistent with the Departments expectation that we respond timely to ad hoc requests. We are able to make the commitment to meet these expectations of turnaround times, which can be as short as three days, not only because of our systems and processes, but because we anticipate the need as an expectation of the Department. Consistent with that expectation, WellCare has an assigned, directly allocated Regulatory Reporting team with an average of over 7.5 years developing regulatory reports, to ensure we have staff with the necessary expertise to meet these obligations.

OVERVIEW OF THE REPORTING SYSTEM

WellCare's reporting capabilities, including regulatory and ad hoc report submissions, are based on our Enterprise Information Management (EIM) solution. This is the central repository of all our data, which facilitates data integrity and self-service analytics. The EIM catalogues and collects all available data in a scalable and high performing repository which is built using industry leading technologies. We support development of enhanced data integration and analytics capabilities, and the EIM can provide the Department with the data requested in a timely manner and in accordance with technical requirements. The EIM solution facilitates data integrity and self-service analytics. It leverages innovative solutions and technologies for storage and processing, high performing data exchange and integration tools, data visualization tools for reporting and analytics in conjunction with predictive modeling capabilities to process, analyze and report on very large amounts of data rapidly. In addition, the EIM is also directly integrated into our quality management activities, risk adjustment processes, and fraud waste and abuse functions. The EIM also provides service coordinators with member 360º views and serves as the source for the risk stratification and provider profiling functions. The EIM backs the ongoing initiatives detection to onboard clinical data in industry format from providers for effective population health management initiatives and to reduce gaps in care.

Key functional attributes of this enterprise technical component include:

- *Data Ingestion* which captures and catalogs the raw data from incoming files, internal applications, and outgoing files regardless of the source data structures leveraging Hadoop.
- *Data Refinement* employs a set of validation, cleansing, and aggregation activities to assemble the raw data into standard subject areas in Hadoop.
- *Data Publishing* makes pre-assembled information available for reporting, analytics, and applications, including support for regulatory reports and ad hoc requests using the formats and best-suited database (Oracle, Greenplum and XML).
- *Data Access* tools are supplied to match user needs and experience, including traditional reporting tools (such as Cognos), analytics tools (such as SAS), and visualization tools (such as Tableau®).

All of the data that is pooled into the EIM is available for use in generating regulatory reports, fulfilling ad hoc requests, and meeting operational and analytics needs. Data is collected and incorporated into the Data Marts on a continuous basis. We employ a set of validation,

cleansing, and aggregation activities to make sure all Data Marts are populated with clean, accurate, and useful information. Data Marts include all data types and combine similar data sets from multiple source systems in order to meet the specific needs of the organization as efficiently as possible. The data marts are constructed based on the intended use and can generally be classified as an Application Support, Reporting, or Analytic Data Mart. While WellCare has existing Data Marts and the associated information available to meet our existing reporting obligations in Kentucky, as needed, new Data Marts will be constructed to specifically support the requirements.

Application Data Marts are a key method of integrating data from all sources into our applications. Just as the application data stores (such as claims, enrollment, and provider transactions themselves), these Data Marts are accessed by applications through the data services layers. Reporting and Analysis Data Marts often come from the same sources of data but are structured to be used by our reporting tools (such as Cognos), analytics tools (such as SAS), and visualization tools (such as Tableau®). In turn, these tools make data readily available to our users.

The following **Figure C.27-2** depicts our reporting and analytics sources and integration:

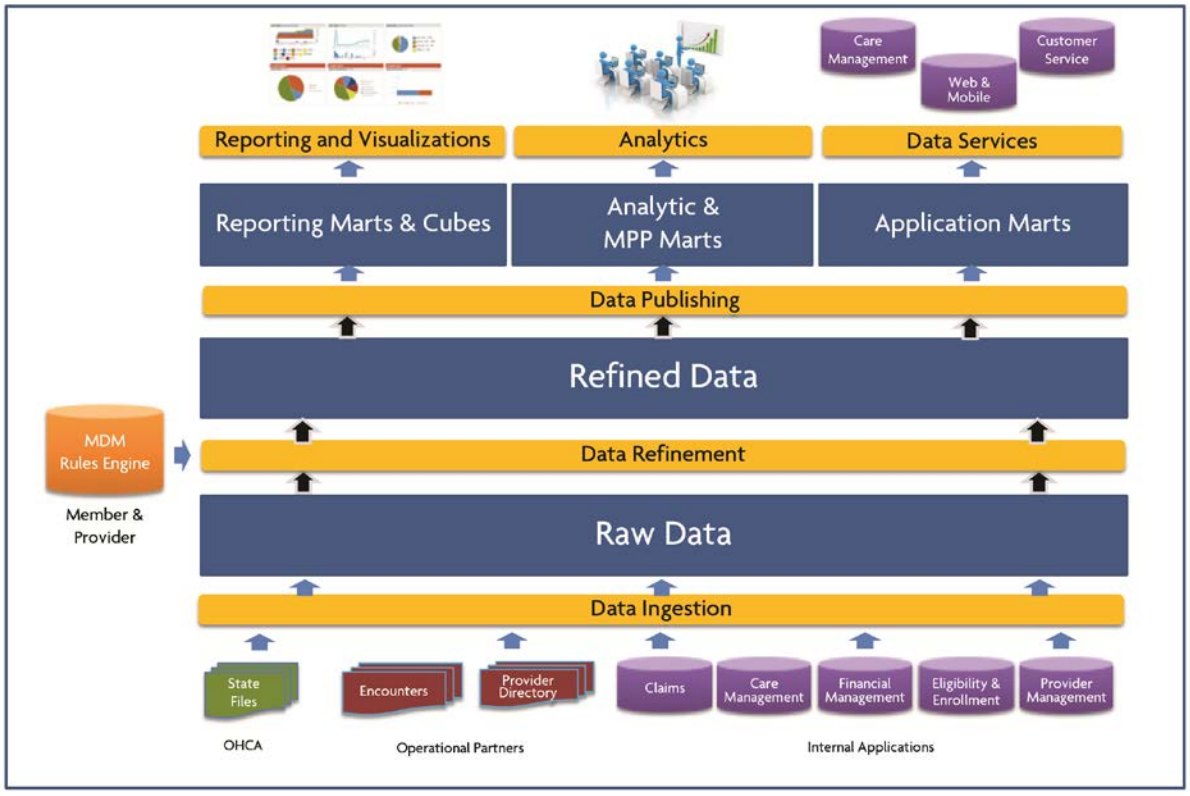

Figure C.27-2: Our reporting and analytics sources and integration

A key distinguishing outcome of our EIM strategy is the ability to ensure the appropriate, validated source of information is available to the appropriate user of the information and delivered according to the appropriate methodology.

ABILITY TO CONFIGURE SYSTEMS TO CAPTURE DATA

WellCare's operational systems are designed to support the data and operational characteristics associated with our contract with the Department. As a result, we have built into our processes the capture of the data elements needed to support our obligations.

Where necessary, WellCare of Kentucky is able to rapidly update and expand these systems and the associated data repositories to support regulatory reporting needs. This includes, in particular, the ability to utilize our Roles and Relationship Data Structure (RRDS) to add new attributes (demographic in nature) and conditions (which are time sensitive) to both the enrollee and provider databases. As an example, WellCare of Kentucky will be able to configure the capture of the provider's participation in KHIE using the RRDS structures, as committed in our response to support participation in KHIE. The reliable capture of this information results in WellCare's ability to identify provider partners that are not actively integrated with KHIE and assemble smart reporting to be shared with our Network and Provider Relations teams. The translation of that data to actionable information can then be used to pursue corrective action or incentivize participation in the KHIE.

A significant advantage of our EIM solution is the flexibility that results from having all of the data received from external sources or generated by internal systems available for reporting and inclusion in the Data Marts available for use in generating regulatory reports, fulfilling ad hoc requests, and meeting operational and analytics needs. This data is collected and incorporated into the Data Marts on a continuous basis. The result is WellCare of Kentucky's ability to rapidly adjust our report content to include new data elements without large scale projects.

Additionally, a built in feature of our dashboard solutions is the opportunity to change filters and drill down into more detail without the development of new reports. WellCare of Kentucky has identified examples of dashboards that may be of interest to the Department but would openly welcome the opportunity to discuss dashboards of interest to the Department.

c. Describe the Contractor's processes to review report accuracy and completeness prior to submission to the Department.

We view accurate and complete data, analytics and reporting as a foundational element of a top-performing health plan. To that end, WellCare of Kentucky has established a compliance process for "Subject Matter Expert" review and Business Owner review of, and attestation to, the accuracy of each report, prior to each submission to the Department. This is referred to as the Internal Certification Process. Attached are the policies and procedures of our certification process **Attachment C.27.c Attestation Policy and Procedure**. The purpose of the Internal Certification Process is to establish procedures for the review and certification of all reports, records, data, and other information that are contractually required to be filed with, or submitted to, state and federal agencies ("Submissions" or "Reports"). Specifically, the Internal Certification Process helps to ensure that:

- Appropriate reviews, validations, certifications, and approvals occur prior to submission to any federal or state agency

- All submissions are accurate, complete, submitted in a timely manner, compliant, and in accordance with all governing contractual provisions and the underlying state and federal laws, requirements and guidelines.
- All retention protocols are satisfied
- Associates receive regular training on their duties and responsibilities under this policy and its associated procedures, and that any questions or issues regarding such duties or the appropriate use of the attestation forms are promptly resolved.

WellCare's Regulatory Reporting department is a team of over 30 resources who are focused and accountable to develop reports for submission to the Department based on contractual requirements. Data-driven reports (e.g. excluding financial statements, corporate filings, and narrative summaries) are developed by this dedicated team. This team is composed of the following positions:

- Software Engineers: skilled in WellCare application development tools and processes and accountable for developing code and extracts to support reporting requirements
- Business System Analysts: familiar with business terminology and processes who are accountable for documenting the business requirements of any individual report or extract request and facilitating data mapping exercises
- Data Engineers: responsible for the analyzing, designing, developing, testing, and documenting information management systems with specific knowledge or data sources
- Data Analysts: primary points of contact for interface between data users and information system teams. They conduct analysis of business and user data needs, documenting requirements, create source-to-target mappings, and revise existing logic, as necessary. They also analyze data needs for users and cross reference to data sources in information technology (IT) systems.

Additionally, for each regulatory report submission, there are the following roles:

- Market Project Manager: dedicated Kentucky Market resource who tracks receipt of each monthly and quarterly report for timely submission, report template completion and assures the sub-certification for each report has been finalized
- Data Source Provider: this individual has direct knowledge of the data used in the data request, and is responsible for specific data and data sources supplied to the request preparer
- IT Preparer: an IT associate who works with the data request preparer, data source provider, and business owner; establishes data request control and requirements documents
- Business Owner: Responsible for collaborating with the State data requestor (e.g., auditor, contractor) to fully understand and document data request specifications and requirements; monitors timeliness of data request delivery

- Data Request Preparer: compiles final data set and certifies it before submission or required sign-off

WellCare of Kentucky maintains a Kentucky-specific reporting policy to submit required reports and submissions timely and in the appropriate format, frequency as prescribed by the Department. This report submission process is overseen and validated by our Regulatory team, led by Rebecca Randall. The sources, processes, and systems above are used to meet the requirements of our other state partners. A significant advantage of our sole focus on government sponsored initiatives is that ability to leverage prior works. We are able to update and modify the format and content of any new or existing report to meet the requirements of the Department.

d. Provide examples of the Contractor's proposed:

i. Processes for conducting comparative data analyses, interpreting trends, and summarizing findings in a manner that is easily interpreted by the Department.

WellCare of Kentucky understands that their responsibility to not only complete that statutory regulatory reporting package, but, more importantly, to demonstrate a commitment to providing the Department with reports, trends, and analyses that are easily interpreted and can be utilized by the Department to drive organizational change. Part of that mission is designed to be fulfilled by our dashboard containing key performance indicators, visualizations, and trends. That dashboard is configurable to meet the Departments needs and can be adapted to new configurations.

It is our intention to take our internal resources and processes for detailed comparative analysis and put them at the disposal of the Department. Specifically, we are proposing that on a quarterly basis WellCare of Kentucky will propose a range of topics that have been identified for analysis through our internal processes. From this list the Department will select a topic for detailed comparative analysis and by quarter end produce a detailed whitepaper on that topic detailing all geographic and demographic trends, outliers, as well as a proposed strategy for addressing the topic at hand, complete with descriptive interpretations. Depending on the breadth and complexity of the topic, these papers could range from 5 - 10 pages on average and provide all of the insights available to WellCare's leadership through internal channels.

The foundation of this reporting will be Kentucky-specific data that addresses the topic, but where appropriate the whitepapers will also include recommendations from our subject matter experts, industry best practices, and comparative analysis between WellCare of Kentucky and other WellCare Medicaid markets.

This process is intended to, first and foremost, meet the Department's needs for actionable information. In the event that the Department identifies areas of concern which were not recommended by WellCare of Kentucky, possibly through CMS initiatives or legislative inquiries, we will be able to provide the same level of quality research into the department preferred topic rather than the proposed set. The attached whitepaper (**Attachment C.27.d-i Sample Dashboard Report,** provided electronically) is a very short demonstration of the types of analysis available through this process. It is only intended to serve as an example.

In addition to the generation of our standard Regulatory Reporting WellCare would welcome opportunities to collaborate with the Department to leverage our AI and Machine learning team to jointly develop and execute advanced analytic exercises. WellCare's dedicated team of experts in this discipline, in collaboration with the appropriate business partners, have been able to leverage these statistical techniques to approach analytics from new and productive perspectives. A key example of the application of the tools, knowledge, and skill sets has been our set of Population Segmentation activities.

Population segmentation and modeling are have proven useful for a variety of applications. Some of these include, but are not limited to: identifying populations for specialized/tailored health interventions, selecting different care and utilization management strategies, factors leading to disenrollment, and the effectiveness of member retention practices.

Prior works on population segmentation at WellCare were primarily based on the use of multiple 'traditional' methods that are usually centered on the identification of naturally occurring clusters (sub-populations) on the basis of observable and directly measurable attributes of a particular population.

ii. Use of dashboard reporting to monitor, track, and evaluate performance metrics, including dashboard level data the Contractor proposes to submit to the Department. Provide a sample dashboard report.

WellCare's dashboards help us monitor, track, and evaluate performance metrics. We routinely begin with a high level analysis and proceed to break that data out:

- By Region
- By Hospital / Provider
- By Diagnosis
- By Age / Gender Cohort
- By Race / Ethnicity / Language
- By Time Period
- By enrollment type
- By urban/rural designation

This more detailed analysis allows us to pinpoint the root cause of positive or negative data observations and create a mitigation or promotion strategy as appropriate.

WellCare of Kentucky is also proposing an additional process to provide comparative analysis, trend analysis, and actionable intelligence for the Department. As a process, our key leaders routinely review dashboards and trend reports to confirm that processes are working as intended, spot outliers, or uncover emerging trends. However, our analysis does not end with these reports. Business leaders throughout the organization, upon viewing such summary reports, have teams of analysts and economists that are able to proceed from general trends and examine the phenomena at a much more granular level.

To ensure our findings are easily interpreted by the Department we adopt a "pyramid" approach that starts with an "Executive Summary" dashboard containing a high-level view of the most important metrics (enabling efficient review) – but also allows the user to easily "drill down" and slice the data into key sub-segments that can reveal meaningful insights. The dashboard allows WellCare users to utilize standard data element definitions and mapping for commonly utilized data elements to ensure consistency in reporting and the use of data across our organization. This tool allows uses to drill-down and "slice" the data into relevant sub-components and make the data available in a digestible format. Dashboard examples are provided in the following section, ii.

Below are screenshots (**Figure C.27-3, Figure C.27-4, and Figure C.27-5**) of our sample dashboard which can be easily interpreted by the Department. *The dashboards (below) and the report attached under ii) is based on mock up data which would give the Department an easily interpreted picture of the report yet maintaining our confidentiality of data.*

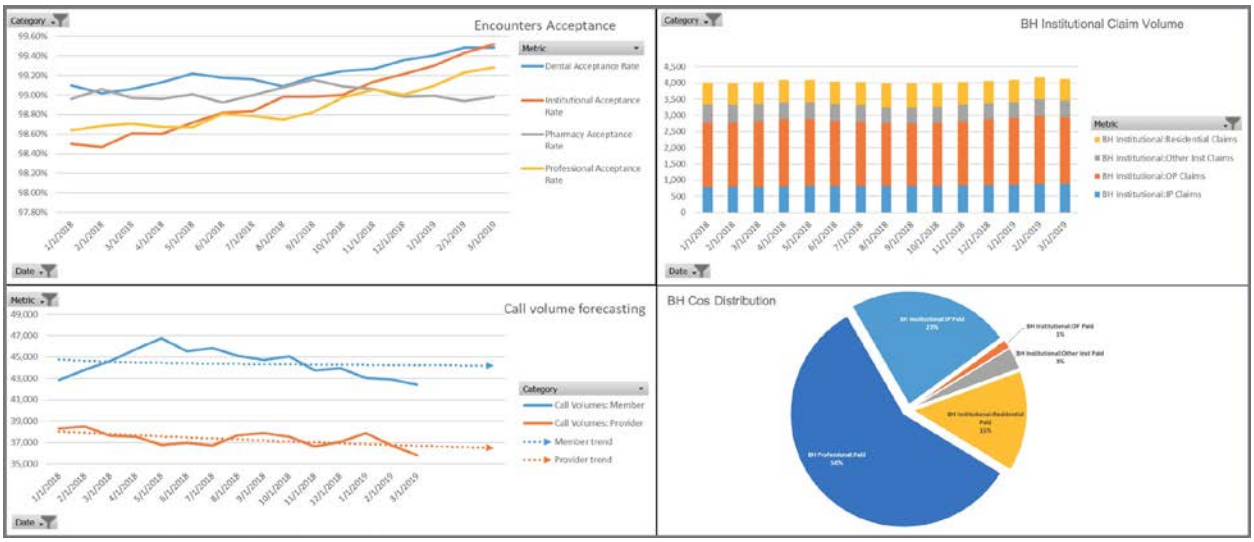

Figure C.27-3: Sample dashboard screenshot

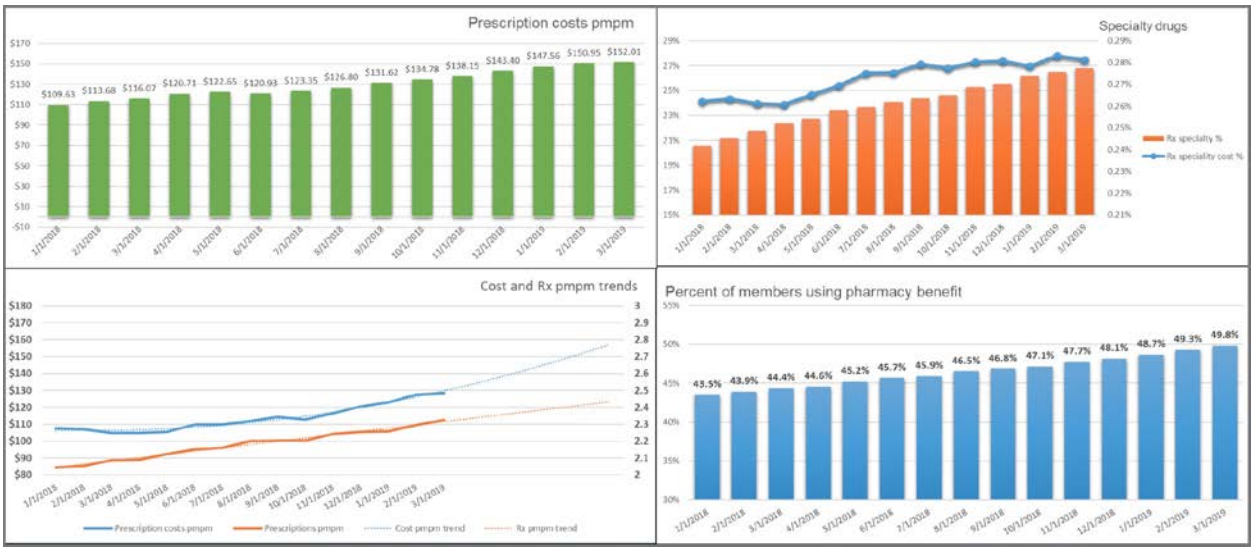

Figure C.27-4: Sample dashboard screenshot (continued)

Figure C.27-5: Sample dashboard screenshot (continued)

iii. Use of findings from reports to make program improvements and to identify corrective action.

EXAMPLE 1: Improving Generic Dispensing Rate

Identifying the trend: In March, 2018, Park DuValle's, a FQHC provider group that is a member of the Kentucky Primary Care Association, had a Generic Dispensing Rate (GDR) of 87.6% and their Per Utilizer Per Month (PUPM) was $87.

Implementing the Solution: Our local pharmacy team under the leadership of Director of Pharmacy Thea Rogers, and Ayonna Tolbert, Pharmacy Manager, worked with the provider to

assist them in increasing their generic dispensing rate. As a corrective action, our pharmacy team organized meetings and went over the reports with them. The provider was provided specialized reports regarding their top prescribed drugs by costs, formulary adherence, and key performance indicators such as ingredient cost per utilizing member per month (PMPM), average cost/Rx, generic dispensing rate, and percentage of controlled substances prescribed. Within these reports, we also provided them with actionable recommendations that include the formulary and/or lower costing alternatives. We also provided the FQHC with an enrollee list that identified which enrollees would be impacted by the recommended change. Our specialized reporting allowed them to observe their performance over time and compare them to other peer (other FQHCs) prescribers in plan. Through our collaborative efforts, we were able to assist the provider with achieving improved cost savings to the program which also resulted in improved quality of care for our enrollees, and concurrently reducing the administrative burden of completing authorization requests by switching to a generic drug that does not require authorization.

Results: In March, 2019, Park DuValle's GDR had improved to 90.4%, while their PPM had significantly declined for the first quarter of 2019 to $71. We have included an example of this report in **Attachment C.27.d.iii Sample Report**.

EXAMPLE #2: Preventing Inpatient Hospital Readmissions

Identifying the trend: It is not unusual for Medicaid utilization trends to be hidden when reviewing information at a high level. WellCare regularly examines information beneath the surface to determine if there are unfavorable trends emerging by line of business, region, facility or age cohort to name a few. In 2018 we experienced a 3.3% year over year increase in our Aged, Blind and Disabled (ABD) inpatient readmission rate which went from 18.0% in 2017 to 18.6% in 2018. Identifying drivers of the adverse trend, we saw a need for ABD Enrollees to be more engaged in their discharge planning and after-care and a greater need for collaboration for discharge services.

Implementing Solutions: In addition to the Enrollee, provider and system level strategies to reduce inappropriate utilization, we implemented targeted initiatives to address this adverse readmission trend, including the following efforts:

- Enhanced Discharge Planning Collaboration: Our care management, UM and provider relations team began collaborating on clinical rounds for Enrollees identified through our predictive discharge algorithm, known as LACE+, as being at the most risk for a readmission. We run the predictive scoring algorithm at the time of admission and throughout the stay to identify risk. Our collaborative team works to identify discharge needs (including behavioral, physical, pharmacy and social needs). We worked closely with the hospitals, including placing care coordinators in certain high-volume hospitals, to collaborate on discharge plans ensuring that needed services such as DME or home health were in place when the Enrollee goes home.
- Care Management Integration: When it becomes clear through our discharge efforts that an Enrollee will need more intensive follow-up, our PHM staff is engaged for follow-up and referral to Chronic Condition Management or Complex Care Management.

- Medical Leadership Engagement: A key strategy for addressing inpatient readmissions includes intense local engagement with individual hospitals. Dr. Shaps worked extensively with hospitals systems throughout the state as we saw the spike and trend (and ongoing) to provide education and discuss methods to prevent avoidable inpatient hospital readmissions. Hospital systems across the state included, but were not limited to, the University of Kentucky, St. Elizabeth Healthcare, Norton Healthcare, KentuckyOne and Baptist Health. Meetings and collaboration with key stakeholders which included hospital or health system leadership, consisted of reviewing historic readmissions data, profiling high-risk patients, providing WellCare resources upon hospital discharge such as connecting discharging members with social gaps in care, and assisting with arranging post-acute care.
- Enhanced Data Exchange: We have used admission, discharge, and transfer data to stay better informed on Enrollee discharge status and to inform our providers when an Enrollee has a change in status so they can be empowered to help prevent an unnecessary readmission.

Results: With the greater awareness and focus on our ABD enrollees through the first 6 months of 2019, our ABD readmission rate has improved by 7% and currently running at 17.3%; the lowest readmission rate we have achieved for the ABD population since inception.

e. *Describe the Contractor's processes for monitoring, tracking, and validating data from Subcontractors.*

WellCare of Kentucky's approach to ensuring the timeliness and validity of data from providers and subcontractors, WellCare's Data Governance and Data Quality programs including external data sources in their scope, and are based on our assumption of responsibility for all data associated with our contract with the Department, whether that data is internally generated or provided by providers or subcontractors. During our regulatory report submission attestation process, if data from subcontractors is included in the report, this fact is recorded and the appropriate internal subcontractor representative is attesting to the accuracy of the data.

WellCare's Data Governance processes identify and define an enterprise Data Dictionary. This process includes business owners as Data Stewards to ensure both technical (data type, data ranges, referential integrity) and business (definition, reasonableness, expected values and uses) are incorporated into the results. This Data Dictionary is used as the basis of our Data Quality edits and validations.

WellCare of Kentucky also ensures that all data from subcontractors is submitted to the appropriate Data Quality validation edits based on the Department's guidelines. As an example, for claims and encounters WellCare of Kentucky applies the Department's encounter SNIP edits and will reject submissions back to the subcontractor for resolution if the edits are not met. Our encounters team actively tracks the quality, timeliness, and volumes of subcontractor's submissions to ensure we are receiving timely, accurate encounter data for inclusion in our submission process.

WellCare implements completeness checks against data received from subcontractors in addition to standard edits, as part of every process. As an example, WellCare requires the submission of a Cash Disbursements journal in addition to Encounters from delegated

adjudication entities. This allows us to ensure the subcontractor has provided all required encounter information.

In similar fashion, WellCare executes Data Quality edits against clinical data submissions and cross reference the closure of care needs data with the clinical and administrative data to ensure data quality and accuracy.

In addition, all data received from subcontractors is included in our Enterprise Information Management (EIM) solution that supports all of our data needs, including application processing, regulatory reporting, and ad hoc reporting. This comprehensive EIM solution ensures that all data sources, including data from subcontractors, are captured and catalogued, fully integrated into and accessible by transactional processing systems, and enables robust reporting capabilities in support of regulatory, operational, and analytic capabilities.

WellCare of Kentucky employs a Data Quality set of validation, cleansing and aggregation activities to make sure all Data Marts are populated with clean, accurate, and useful information, which include not only data type and format, but also data integrity constraints. In cases where data is submitted to us by a subcontractor and it fails to meet the data quality and accuracy requirements or our EIM, the submission is rejected to the subcontractor for remediation and resubmission.

f. Describe the Contractor's proposed process for the receipt, generation, interpretation, and provision of ad hoc reports requested by the Department.

WellCare of Kentucky's Regulatory Affairs (RA) team, led by Rebecca Randall, will serve as the single point of contact for DMS to request all ad hoc reporting requests, simplifying the process of managing these requests for DMS. We currently have a well-structured process of report generation from receipt to delivery, which takes into consideration the unique and urgent nature of the request:

Receipt: The Regulatory Affairs team utilizes a shared email box to receive all requests from DMS and the same holds true for ad hoc reporting. Once a request is received, the request is triaged by RA staff and is assigned to a Regulatory Manager and project analyst. *Adhoc reporting requests are assigned high priority status as we understand that many request are generally time sensitive and needed by DMS to respond to an external inquiry.* The Regulatory manager and project analyst is accountable for ensuring the ad hoc request is treated as high priority and fulfilled in the timeline requested by DMS. All requests will be immediately logged in our tracking application and forwarded to our IT Regulatory Reporting team for discussion and review, and will be fulfilled using our report development lifecycle and artifacts.

Generation: The first step in this review process is for an assigned Business System Analyst and the assigned Data Analyst to review the request, document the requirements in our Data Requirements Document (DRD) (**Attachment C.27.f-1 DRD Template Sample**) and the Source to Target mapping document (**Attachment C.27.f-2 Source to Template Sample,** provided electronically), using our enterprise Data Dictionary as a reference, to ensure that correct data sources, formats, and validations are included in the report. Any questions or requests for clarifications flow through the Regulatory Manager from DMS to ensure streamlined communications. Once the business and data requirements are documented and completed,

the report request is fulfilled by the Engineering team, using a Technical Design Document (TDD) (**Attachment C.27.f-3 TDD Template Sample,** provided electronically) to ensure all details of the report generation process meet the business requirements. Our independent Quality Assurance (QA) process will validate the final report against the lifecycle artifacts to ensure the accuracy of the report before it is sent to the Regulatory Manager for final review and submission.

For each regulatory report submission, including ad hoc requests, WellCare of Kentucky identifies the following roles:

- *Data Source Provider:* this individual has direct knowledge of the data used in the data request, and is responsible for specific data and data sources supplied to the request preparer
- *IT Preparer:* an IT associate who works with the data request preparer, data source provider, and business owner; establishes data request control and requirements documents
- *Business Owner:* Serves as the subject matter expert for the Data Source Provider, the IT Preparer and Data Request Preparer to fully understand and document data request specifications and requirements; monitors timeliness of data request delivery
- *Data Request Preparer:* compiles final data set and certifies it before submission or required sign-off

Interpretation: Once the report is delivered from our Regulatory Reporting team to the Regulatory Manager, a meeting is convened with the Regulatory Affairs and Compliance Director, Rebecca Randall and our COO, Ben Orris, to review the report and ensure that 1) the data accurately meets DMS's request, 2) the report is in the format requested and 3) any trends, issues, caveats, etc. are identified and disclosed. Once the report is vetted and final approval is granted, our COO completes the executive attestation and the report is submitted to DMS.

APPOINTMENT WAIT TIMES

Managed Care Plan Name:	

Reported Quarter:		January - March		April - June		July - September		October - December

- Pursuant to Attachment B, Exhibit B-1, Section VIII.A.8 (a-b), The Managed Care Plan shall:
  - Ensure that appointments for medical services and behavioral health services are available on a timely basis:
    - ♦ Urgent Appointments
      - Within forty-eight (48) hours of a request for medical or behavioral health care services that do not require prior authorization
      - Within ninety-six (96) hours of a request for medical or behavioral health care services that do require prior authorization
    - ♦ Non-Urgent Appointments
      - Within seven (7) days post discharge from an inpatient behavioral health admission for follow-up behavioral health treatment
      - Within fourteen (14) days for initial outpatient behavioral health treatment
      - Within fourteen (14) days of a request for ancillary services for the diagnosis or treatment of injury, illness, or other health condition
      - Within thirty (30) days of a request for a primary care appointment
      - Within sixty (60) days of a request for a specialist appointment after the appropriate referral is received by the specialist
  - Quarterly, review a statistically valid sample of PCP, specialist, and behavioral health offices' average appointment wait times to ensure services are in compliance
- The Managed Care Plan must file the Agency supplied template (and attestation) to the SMMC SFTP Site
- The Managed Care Plan must use the naming convention as described in Chapter 2 of the Report Guide
- The template contains the following spreadsheets: MMA Cover Sheet, MMA Urgent Template and MMA Non-UrgentTemplate

Describe below the Managed Care Plan's methodology used to obtain the statistically valid sample:

Attachment C.27.a.i-2 Appointment Wait Times Report

MMA Urgent Appointment Wait Times

- Must provide methodology on "Cover Sheet" of this report template
- Data entered below must reflect in # of HOURS
- Simply inputting Contract standard wait times is not acceptable

			Actual Wait Time in Number of Hours			
			Do **NOT** Require Prior Authorization		**DO** Require Prior Authorization	
NPI #	NAME (Last Name, First Name)	LOCATION ADDRESS	Medical	Behavioral	Medical	Behavioral

Created by PNOU

DENTAL APPOINTMENT WAIT TIMES

Dental Health Plan Name:	

Reported Quarter:	☐	January - March	☐	April - June	☐	July - September	☐	October - December

Pursuant to Attachment B, Section VIII.A.7 (a-d), the Dental Health Plan shall:

- Contract with and maintain a provider network sufficient to comply with timely access standards as specified in the Contract
- Establish mechanisms to ensure network providers comply with timely access requirements, monitor regularly to determine compliance, and take corrective action if there is a failure to comply (42 CFR 438.206(c)(1)
- Ensure that PDP services and referrals to participating specialists are available on a timely basis:
  - **Urgent Care Services** - within twenty-four (24) hours for services that do not require prior authorization and within forty-eight (48) hours for a request for services that do require prior authorization
  - **Routine Sick Patient Care** - within seven (7) days
  - **Primary Dental Care** - within thirty (30) days
  - **Follow-up Dental Services** - within thirty (30) days after assessment
- Quarterly, review a statistically valid sample of average appointment wait times to ensure services are in compliance

The Dental Health Plan must file the Agency supplied template (and attestation) to the DENTAL CY18-23 SFTP site.
The Dental Health Plan must use the naming conventions as described in Chapter 2 the Report Guide.
The template contains the following spreadsheets: Dental Cover Sheet, Dental Report Template

Describe below the Dental Health Plan's methodology used to obtain the statistically valid sample:

Attachment C.27.a.i-2 Appointment Wait Times Report

DENTAL APPOINTMENT WAIT TIMES

- Must provide methodology on "Cover Sheet" of this report template
- Data entered must reflect the ACTUAL value (number) for each PDP
- Simply inputting Contract standard wait times is not accceptable

Procedures:

WellCare Health Plans, Inc. and its subsidiaries ("WellCare" or the "Company"), and their business activities, are subject to a broad array of state and federal statutes and regulations. WellCare's Code of Conduct and Business Ethics reflects the Company's commitment to the accuracy and completeness of all reports and submissions to state and federal agencies.

The procedures within this document have been developed and adopted pursuant to policy C13LG-022. These procedures are designed to meet the requirements of that policy relating to the review and certification of all contractually required reports, records, data and other information that are filed with, or submitted to, state and federal agencies ("**Submissions**" or "**Reports**").

Procedures used to prepare the report data are documented and retained as part of the report file and related report preparation procedures align with specific reporting instructions provided by the regulator.

Transaction details must be retained for cost related regulatory reports that support monies due to or from regulators.

Definitions

A. The **Business Requirements Document ("BRD")** or **Process Control Document ("PCD")** is a document developed through the collaborative efforts of the BRD/PCD Owner and Data Source Provider that identifies which data must be compiled to satisfy the requirements of a particular Report. The BRD/PCD protects the IT system from changes that would adversely affect the format and accuracy of Report data.

B. The "**BRD/PCD Owner"** is the WellCare associate responsible for the IT system(s) that hosts and provides content data for use in a Report.

C. The "**Certification Forms**" are those forms attached to this procedure as Attachments A, B, C, D and E. Specifically, they are the Report Preparer Certification Form (Attachment A), Data Sub-Certifications Form (Attachment B), Executive Internal Certification of Regulatory Report Form (Attachment C), Data and Records Qualification Disclosure Statement (Attachment D) and Report Attachment Proxy (Attachment E). The Certification Forms document the Company's effort to assure the accuracy of data submitted to its regulators, as well as any issue, concern, qualification or exception the certification process reveals.

D. The "**Data Source Provider**" is an associate, with direct knowledge of the data utilized in a Report and who is responsible for specific data sources and data supplied to the Report Preparer for inclusion in a Report. The Data Source Provider may be a Company associate or the representative of a Delegated Entity.

E. A "**Delegated Entity**" is an external third party that is contracted to provide specific services to WellCare members, and that is responsible for providing accurate and complete data to satisfy particular regulatory requirements.

F. The "**Executive Approver**" is the profit center owner, area leader or business executive who signs the Executive Internal Certification of Regulatory Report Form (Attachment C), if necessary.

G. **"IT"** means information technology,

H. The "**IT Preparer**" is the WellCare associate within the IT Department who works with the BRD/PCD Owner to ensure the IT systems are configured correctly according to the documented processes. The IT Preparer can also serve as the Report Preparer.

I. The "**Regulatory Owner**" is the WellCare associate primarily responsible for defining the specifications for a particular Report and measuring WellCare's compliance based on the applicable regulatory and contractual requirements. The Regulatory Owner is the associate responsible for communicating with the applicable state or federal regulator if clarification of such reporting requirements is necessary. In the case of a Reports required by a Medicaid contract, the Regulatory Owner is the designated Regulatory Affairs contact for that contract's Reports and related issues. In the case of Medicare contracts, the Regulatory Owner is a designated individual from the Medicare Regulatory Compliance group.

J. The **"Report Preparer"** is the WellCare associate who:

1. Is responsible for ensuring the accuracy, completeness, timely submission, and retention of a particular Report to be submitted to a regulatory agency;
2. Compiles the final Report, which may include multiple data sources and inputs;
3. Certifies the final Report prior its submission to the Company's Chief Executive Officer (CEO), Chief Financial Officer (CFO) or other executive for such executive' signature.

In some cases, the Report Preparer may also serve as the IT Preparer and/or the Data Source Provider.

Attestation and Disclosure Process

The Report Preparer shall comply with all reporting and submission requirements established by the regulatory agency to which a Report is to be submitted pursuant to law, regulation or contract. As discussed below, the Report Preparer shall certify all Submissions prepared by him or her. The Report Preparer may require Data Source Provider(s) to sub-certify Report content when appropriate, such as in instances where the Report Preparer does not have personal/direct knowledge of the underlying data. In the event a current BRD/PCD has not been established, the BRD/PCD Owner is responsible for working with the IT and market Regulatory Affairs departments to develop and implement such BRD/PCD. Market review, conducted by either the market Regulatory Affairs department, the market President, or his/her designee, must be documented for all reports for which the Report Preparer is a Shared Services business owner and the report is submitted to a State regulator.

In instances where the data submitted for Reports are provided by a Delegated Entity, the Delegated Entity works with the Report Preparer in attesting to the accuracy and completeness of the data submitted. The Report Preparer must sub-certify the data reflecting the review and approval of the Delegated Entity submission.

The Regulatory owner is responsible for notifying Corporate Compliance of Reports that are no longer required, and for providing supporting documentation from the applicable regulatory agency.

Use of Forms to Certify Reports

Certification Form(s) (see Attachments A, B, C, D and E) shall be used to document the internal review process and include the signature of the Report Preparer and, if necessary, the signatures of any other providers of data or other information contained in the Report, confirming the Report Preparer's reliance on the accuracy and completeness of such data or other information. The Certification Form(s) shall also set forth any issues, concerns, qualifications or exceptions identified by the Report Preparer or other certifiers. The Certification Form(s) attest that, to the best knowledge of the Report Preparer and Data Source Provider(s), all data contained in the Report or underlying the Report and all documents requested by the government regulator have been reviewed to ensure accuracy and adherence to the specific reporting requirements and that no such data or information have been falsified or altered.

WellCare policy requires that any Report provided to a regulatory agency receive executive certification regardless of whether executive certification is required by the receiving agency. Where the recipient agency requires such executive certification, that certification is provided in the format required by the agency. Where it is not required by the recipient agency, the executive certification is documented using the Executive Internal Certification of Regulatory Report Form (Attachment C).

These Certification Forms (which may be completed either in electronic or paper format) are standardized to address the majority of business owners' needs, systems, or processes. Any changes to the forms must be approved by Corporate Compliance in advance of being presented for certification or attestation.

Subject to any issue, concern, qualification or exception regarding the Report that has been reviewed and approved by the Compliance and Regulatory Affairs Departments (see paragraph 2 below), the person(s) signing on behalf of the Company shall attest, based on his/her best knowledge, that all data submitted in conjunction with the Reports and all documents requested by the government regulator are accurate, truthful and complete.

A. **Report Preparer Certification Form (Attachment A)** – Internal form completed by the Report Preparer and/or IT Preparer, used to document completeness and accuracy of information provided.

B. **Data Sub-Certifications Form (Attachment B)** – Internal form completed by the Data Source Provider to certify the source data used to generate the Report.

C. **Executive Internal Certification of Regulatory Report Form (Attachment C)** – Internal form completed by the Vice President or Area Leader of the department submitting the data to report. This form is completed only when executive attestation is NOT required by the regulatory agency receiving the Report. When executive attestation is required by the regulatory agency, it is provided in the format requested by the agency.

D. **Data and Records Qualification Disclosure Statement (Attachment D)** – Internal form completed by the Data Source Provider and/or the Report Preparer to document known issues, concerns, qualifications or exceptions affecting the quality of the data. Compliance and Regulatory Affairs and, in some instances, Legal Services, review and signoff is required for the submission of a Report for which this form has been submitted.

E. **Report Attachment Proxy (Attachment E)** – Internal form completed by the Report Preparer in instances when the actual Report is not being presented for executive attestation due to a large file size or possible confidential data content.

Procedures When There is a Known Issue, Concern , Qualification or Exception with the Accuracy of Data or Reports

All business requirement documents are prepared to support how unresolved warning edits and/or non-reconciling items are deemed not to be errors.

If known issues, concerns, qualifications or exceptions exist regarding the accuracy or completeness of a Report, the Report Preparer and/or Data Source Provider will:

A. Complete a Data and Records Qualification Disclosure Statement ("**Disclosure Statement**") (see Attachment D) documenting the nature of the issue, concern, qualification or exception.

B. Check the appropriate box on the Report Preparer Certification Form (Attachment A) indicating that he or she is aware of an issue, concern, qualification or exception.

C. Submit the Disclosure Statement for review and approval by the appropriate Regulatory Affairs and Compliance leaders and, if directed by the Chief Compliance Officer in his or her discretion, to the Legal Department.

The designated Corporate Compliance and Regulatory Affairs personnel shall jointly:

A. Determine whether the issues, concerns, qualifications or exceptions addressed in the Disclosure Statement require disclosure to the agency that will receive the Report; and

B. Determine the manner in which such issues, concerns, qualifications or exceptions should be disclosed (i.e., as part of the Report, or in correspondence accompanying the Report submission to the government agency).

The Compliance Department shall also ensure that an appropriate corrective action plan has been established to ensure that the issue, concern, qualification or exception is being addressed and, if appropriate, remediated. This procedure should occur prior to the submission of the Report to the regulatory agency.

Report Preparer Certification Form

Report Name: **Contract Name:**

Preparer Certification:

All Report Preparers must complete this section:

This report is created in compliance with the policy on Certification of Reports and Submissions to Federal and State Agencies. I have reviewed the documentation and procedures used to compile the enclosed report and signed to certify the following:

Please check one:

☐ To the best of my knowledge, the information contained in this report and the attached supporting documentation is complete and accurate.

☐ The information contained in this report includes issues, concerns, qualifications and exceptions as described in the attached data disclosure form.

Please check one:

☐ There are Business Requirements Documents (BRDs) on file for automated reports, or the equivalent documentation on file for manual reports.

Executive Internal Certification of Regulatory Report Form*

Report Name: **Contract Name:**

Executive Certification

I have reviewed the Report Preparer and Data Sub-Certifications Form, along with the attached supporting documentation, and have signed to certify the following:

Please check one of the following:

☐ To the best of my knowledge, the information contained in this report and the attached supporting documentation is complete and accurate. Data provided for the report was prepared in accordance with the report instructions and guidance provided by the Report Preparer. Procedures used to prepare the report data have been documented and retained as part of the report file and align with specific reporting instructions provided by the regulator.

☐ The information contained in this report includes issues, concerns, qualifications and/or exceptions as described in the attached Data and Records Qualification Disclosure Statement ("Disclosure Statement"). Accordingly, I will not release the report to our regulators until the Disclosure Statement has been reviewed by the Regulatory Affairs and Compliance departments and, as applicable, the Legal department, and they have determined what kind of disclosure, if any, will be made when the report is submitted to the relevant regulatory agency.

If you checked the second box, there is a completed Disclosure Statement attached to this submission

Please check one of the following:

☐ Market review conducted and documented (required for all reports for which the Report Preparer is a Shared Services business owner and the report is submitted to a State regulator).

☐ Market Review not required

28. Records Maintenance and Audit Rights

C.28. RECORDS MAINTENANCE AND AUDIT RIGHTS

a. **Describe the Contractor's methods to assess performance and compliance to medical record standards of PCPs/PCP sites, high risk/high volume specialist, dental providers and providers of ancillary services to meet the standards identified in Section 38.1 "Records Maintenance and Audit Requirements" of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."**

b. **Describe the Contractor's approach to prevent and identify data breaches.**

c. **Describe the Contractor's approach to conducting Application Vulnerability Assessments as defined in Section 38.6 of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."**

C.28. RECORDS MAINTENANCE AND AUDIT RIGHTS

a. ***Describe the Contractor's methods to assess performance and compliance to medical record standards of PCPs/PCP sites, high risk/high volume specialist, dental providers and providers of ancillary services to meet the standards identified in Section 38.1 "Records Maintenance and Audit Requirements" of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."***

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 38.1 Records Maintenance and Audit Requirements of the Draft Medicaid Managed Care Contract and Appendix Q Cabinet for Health and Family Services Contractor Security Requirements of the Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

We maintain medical records for Enrollees and require both our network Providers and Subcontractors to maintain clinical and medical records in a manner that is current, detailed and organized, and which permits effective and confidential patient care and quality review, administrative, civil, and/or criminal investigations and/or prosecutions. Our Chief Compliance Officer, Rebecca Randall, oversees this process locally in Kentucky.

PROVIDERS

We incorporate all contractual requirements for maintenance of clinical and medical record policies and practices into all our Provider agreements and Provider Manuals (including those of our delegated subcontractor Avesis for dental and vision services), which is distributed to Providers during contracting and orientation to our plan and/or via our Provider website. The standard language in our provider contract templates contain this language and doesn't vary based on specialty including, but not limited to, PCPs/PCP sites, high risk/high volume specialists, dental providers and providers of ancillary services.

Our contracts require Enrollees' medical records to be maintained timely, legible, current, detailed and organized to permit effective and confidential patient care and quality review. Complete medical records include, but are not limited to: medical charts, prescription files,

hospital records, Provider specialist reports, consultant and other health care professionals' findings, appointment records (including appointment date and duration), and other documentation sufficient to disclose the quantity, quality, appropriateness, and timeliness of services Provider under the Contract. The medical record is signed by the Provider of service.

We will also ensure, through our provider agreement, any Kentucky-specific provisions including the requirement that PCPs forward copies of Enrollees' medical records to new PCPs or Partnerships within 10 days from the receipt of request in accordance with Section 38.1 of the draft managed care contract.

The Enrollee's medical record is the property of the Provider who generates the record. However, each Enrollee or their representative is entitled to one free copy of his/her medical record. Additional copies are made available to Enrollees at a cost. Medical records are preserved and maintained for a minimum of ten years unless Federal or Commonwealth requirements mandate a longer retention period (i.e., immunization and tuberculosis records are required to be kept for a person's lifetime).

Each Provider is required to maintain a primary medical record for each Enrollee, which contains sufficient medical information from all Providers involved in the Enrollee's care, to ensure continuity of care. The medical chart organization and documentation, a minimum, requires the following:

- Enrollee/patient identification information, on each page
- Personal/biographical data, including date of birth, age, gender, marital status, race or ethnicity, mailing address, home and work addresses and telephone numbers, employer, school, name and telephone numbers (if no phone contact name and number) of emergency contacts, consent forms, identify language(s) spoken, and guardianship information
- Date of entry and date of encounter
- Late entries should include date and time of occurrence and date and time of documentation
- Provider identification by name and profession of the rendering Provider (e.g., MD, DO, OD)
- Allergies or adverse reactions to drugs noted in a prominent location
- Past medical history, including serious accidents, operations and illnesses. For children, past medical history includes prenatal care and birth information, operations and childhood illnesses (e.g., documentation of chickenpox)
- Identification of current problems:
- Consultation, laboratory and radiology reports filed in the medical record contain the ordering Provider's initials or other documentation indicating review
- Current list of immunizations
- Identification and history of nicotine, alcohol use or substance abuse

- Documentation of reportable diseases and conditions to the local health department serving the jurisdiction in which the patient reside or Department for Public Health
- Follow-up visits provided secondary to reports of emergency room care
- Hospital discharge summaries
- Advance medical directives, for adults
- Documentation that Enrollee has received the Provider's office policy regarding office practices compliant to HIPAA
- Documentation regarding permission to share protected health information with specific individuals has been obtained
- Record is legible to at least a peer of the writer and written in standard English. (Any record judged illegible by one reviewer will be evaluated by another reviewer.)

An Enrollee's medical record will include the following minimal detail for individual clinical encounters:

- History and physical examination for presenting complaints containing relevant psychological and social conditions affecting the patient's medical/behavioral health, including mental health, and substance abuse status
- Unresolved problems, referrals and results from diagnostic tests including results and/or status of preventive screening services (e.g., EPSDT) are addressed from previous visits
- Plan of treatment including medication history (current medications prescribed, including the strength, amount, directions for use and refills) and therapies for other prescribe regimen
- Follow-up plans including consultation and referrals and directions, including time to return
- Education and instructions whether verbal, written or via telephone

SUBCONTRACTORS

For our Subcontractors, we incorporate the same contractual requirements as part of our delegated contracting arrangements. WellCare will ensure that for any subcontracts delegated for network management, utilization management or claims processing that medical records are maintained as well as provided to Enrollees as set forth in Section 38 of the draft managed care contract.

WellCare selects highly-qualified Subcontractors to complement and enhance the services we provide to our Enrollees and Providers. Our approach to Subcontractor oversight and to establishing and maintaining compliance with regulations is based on our thorough contracting process, rigorous upfront screening process and comprehensive ongoing review process. Prior to delegating any functions to a third party, we perform due diligence including a comprehensive assessment to prospectively evaluate the Subcontractor's ability to perform the activities to be delegated. The comprehensive vetting and due diligence process is a requirement in our delegated subcontracts, and compliance must be demonstrated prior to a

delegated Subcontractor becoming active with WellCare of Kentucky. We perform oversight and monitoring of the delegation activities through scorecards, data analysis, focused reviews, and annual audits. We develop and maintain a system for regular and periodic monitoring of each Subcontractor's compliance with the terms of its agreement and the Contract. All pre-delegation audits for new Subcontractors are based on the National Committee for Quality Assurance (NCQA), and Commonwealth and federal requirements.

We will not delegate to an entity unless it achieves a successful passing score on its pre-delegation audit. Our pre-delegation audit process confirms the Subcontractor has the structural elements, i.e. policies, procedures, staff, licensure, etc., in place to comply with all of the contractual requirements for the functions assigned to them. Additionally Subcontractors have to comply with the expectations of the company on an ongoing basis. After delegation, the team continues to monitor performance. In addition to the confirmation, we require the submission of supporting documentation to demonstrate compliance. Examples of documentation may include codes of conduct, compliance policies, copies of training materials, training rosters, etc. WellCare's extensive oversight of Subcontractor performance reflects our commitment to deliver high quality services and our understanding that Subcontractors' performance is a reflection of WellCare's focus on quality. Weekly operations oversight consists of meetings with our vendors to review key performance indicators, perform joint root cause analysis, and discuss opportunities to improve processes. The Quarterly Joint Operating Committee (JOC) meetings are used as a higher level status check and to set strategy for subsequent efforts.

REVIEWING COMPLIANCE

WellCare conducts Medical Record Audits to review network Provider office medical records. We utilize criteria based upon government sponsored contractual requirements and Federal and Commonwealth regulations. The medical record review is conducted to assess the quality of care delivered and documented. The process includes, but may not be limited to, evaluation of adherence to Early Periodic Screening, Diagnostic and Treatment (EPSDT) requirements, provisions for continuity of care, adult preventive care rendered, identification of quality of care events, treatment for Enrollees with special health care needs, compliance with regulatory reporting requirements, compliance with coding practices, and appropriate follow up (i.e. notification to patients of adverse lab results).

We regularly evaluate utilization of recommended preventive services, chronic disease management services, and acute care. We systematically mine membership data to identify trends in adherence to recommendations. Our Quality Improvement department conducts medical record audits on a random sample of charts from Primary Care Providers (PCPs) annually in accordance with our medical record review policy. Our medical record audit assesses physician compliance with recommended preventive health and clinical practice guidelines. We also assess and trend Provider compliance with guidelines through annual administrative data and medical record reviews for HEDIS®.

Annual medical and behavioral health record audits are conducted to measure compliance with general medical record keeping practices, confidentiality of Enrollee data, adherence to certain preventive care guidelines and coordination and continuity of care.

Providers that fail to meet established standards, have instances of poor quality, or are non-compliant with contractual, Commonwealth, or federal regulations will be reviewed by our Credentialing and Peer Review Committee, with avenues of recourse including corrective actions, sanctions or Provider termination. **Since 2014, WellCare's external quality review audit, conducted by the Commonwealth's EQRO auditor, IPRO, has found WellCare to be fully compliant with all contractual requirements surrounding our medical review audit process.**

COMPLIANCE WITH CONFIDENTIALITY

WellCare of Kentucky understands and will comply with the standards set forth in Section 38.1 of the Draft Contract. WellCare maintains the confidentiality of all medical records in accordance with 42 CFR 431, Subpart F. WellCare is compliant with the Privacy and Security provisions of HIPAA as set forth in our policies and procedures. WellCare continues to enhance security of WellCare systems based upon a continuous risk assessment and remediation process by internal and external auditors and assessors.

We have clinical and medical record keeping policies and practices in place which are consistent with 42 CFR § 456 and current NCQA standards, as well as all other related Commonwealth and Federal laws for medical record documentation. Furthermore, our policies and procedures address who has access to an Enrollee's clinical and medical records, the extent of information that may be released, and protocols for obtaining consent to disclose from Enrollees and former Enrollees. This information is reinforced through initial and ongoing training and shared with our Kentucky network Providers and Subcontractors.

Written Consent

Through mandatory HIPAA training, WellCare associates are required and trained to maintain the confidentiality of all confidential information and the duty not to disclose confidential information related to proprietary information, protected health information (PHI) and personally identifiable information (PII), in accordance with applicable laws and WellCare policies, procedures and standards. We are required to disclose an Enrollee's PHI to that Enrollee, with the exception of psychotherapy notes. We are required to disclose PHI to the U.S. Department of Health and Human Services when they are performing a review, enforcement action or compliance investigation.

WellCare is permitted, but not required, to use or disclose PHI in the following situations without Enrollee authorization:

- Routine disclosures such as communications of PHI within treatment, payment, and health care operations
- Treatment activities by Providers
- Payments to other covered entities

- Health care operations including quality or competency assurance activities or fraud and abuse detection to another covered entity or WellCare associate
- PHI may be disclosed without authorization for the national priority purposes listed below:
- Required by law
- Public health activities
- Victims of abuse, neglect or domestic violence
- Health oversight activities
- Judicial and administrative proceedings
- Law enforcement purposes
- Decedents
- Donations/transplants
- Research
- Serious threat to health/safety
- Essential government functions
- Worker's compensation

We recognize the sensitive nature of certain conditions due to the unfortunate stigma that is often attached to certain diagnoses, such as mental health, drug and substance use disorder (SUD), abortion, HIV/AIDS, minors/incapacitated individuals and psychotherapy notes. We take our commitment to privacy very seriously for all of our Enrollees and have established protocols to protect all health information. We have protections in place to ensure compliance with all privacy and disclosure Federal and Commonwealth laws, including adequate policies and procedures to assure the confidentiality of services for minors who consent to diagnosis and treatment for sexually transmitted disease, alcohol and other drug abuse or addiction, contraception, or pregnancy or childbirth without parental notification or consent as specified in KRS 214.185. Our policies and procedures also address such issues as how to contact the minor Enrollee for any needed follow-up and limitations on telephone or mail contact to the home WellCare has also developed a HIPAA Handbook to educate associates on the proper handling of protected health information, and we frequently remind all associates to contact WellCare's Privacy Office if a request is made to disclose protected health information for these sensitive conditions.

Pursuant to the HIPAA Privacy Rule, WellCare must obtain an individual's authorization prior to a non-routine disclosure of these sensitive conditions, even for disclosure to a health care Provider other than the originator of the notes for treatment purposes. An exception under HIPAA exists that would permit the disclosure of these sensitive conditions if WellCare has a good faith belief that the disclosure is:

- Necessary to prevent or lessen a serious and imminent threat to the health or safety of the patient or others.

- To a person(s) reasonably able to prevent or lessen the threat. WellCare's Privacy Office and Legal Department would assess whether the request for psychotherapy notes meet this exception.

Need to Know Basis

Data and information is not disclosed to any person or entity that does not have a legitimate and demonstrable business need to receive the information. The extent of clinical or medical record information to be released is based on medical necessity and a "need to know" basis on the part of the Provider or facility requesting the information. In compliance with the Draft Contract, it is our policy to limit access to information, except as otherwise required by law, regulations, or this Contract, to persons who or agencies which require the information in order to perform their duties related to the administration of the Department, including but not limited to the U.S. Department of Health and Human Services, U.S. Attorney's Office, the Office of the Inspector General, the Office of Attorney General, and such others as may be required by the Department.

We have security measures that protect and control access to Enrollees' clinical and medical records. WellCare focuses on verifying the identity of the person/entity making the request, controlling the information being requested, and using measures to protect data during transmission.

Substance Use Disorder

We have policies and procedures in place to ensure that all releases of information for SUD specific clinical or medical records meet Federal guidelines at 42 §CFR Part 2. WellCare has developed a HIPAA Handbook to educate associates on the proper handling of protected health information, and we frequently remind all associates to contact WellCare's Privacy Office if a request is made to disclose protected health information for any sensitive conditions, which include SUD. To reinforce these resources, associates are required to attend annual training and are tested on their knowledge.

Access to Medical Records

WellCare will provide access to the clinical and medical records and related record-keeping systems that include a complete record for each enrolled Enrollee in accordance with Section 38.1 of the draft Managed Care Contract. Our records will include sufficient information to comply with the provisions of 42 CFR §§ 456.111 and 456.211 regarding Utilization Review. WellCare will adhere to all inspection and audit requests as required in Section 5.6 of the draft contract. WellCare will also provide assurance through language within our provider agreements that authorized representatives of DMS, or other Commonwealth and federal agencies will have reasonable access to premises, physical facilities, equipment, and records for financial and medical audit purposes both during and after the term of the Provider contract.

Records Retention

WellCare of Kentucky understands and will comply with the standards set forth in Section 38.1 of the Draft Contract. We will maintain Enrollee records for a minimum of ten years from the

date of termination of this Contract. In addition, records involving matters which are the subject of litigation will be retained for a period of not less than ten years following the termination of such litigation, if the litigation is not terminated within the normal retention period. WellCare uses information security vendor Iron Mountain to maintain offsite storage needs of physical records along with encrypted tape backups. Iron Mountain is also leveraged for certified tape and physical records destruction, in addition to being the primary shredding vendor across all WellCare offices.

Records remaining under the care, custody and control of the Provider are maintained for a minimum of ten years from the date of when the last professional service was provided.

b. Describe the Contractor's approach to prevent and identify data breaches.

APPROACH TO MANAGING SENSITIVE AND CONFIDENTIAL DATA

WellCare's Security and Privacy team recognizes the impact of identity theft and medical fraud on Enrollees and works to protect them in practical and effective ways. These include mandatory training for associates, clear and descriptive policies, modern technical security solutions, and incorporating security and privacy into our daily operations (versus adding it after the fact). Our approach to meeting DMS' expectations and requirements is centered in our core design objective for our systems architecture which is grounded in Security and Privacy services. This high-level depiction of our enterprise architecture, in **Figure C.28-1**, provides an overview of our MIS and specifically depicts how our Security and Privacy services encapsulates and protects our systems and builds these concepts into our solution at the foundational level. We employ multiple physical and electronic security technologies as part of our privacy and security services and infrastructure services into every layer of our operational environment. Our principle of maintaining and enforcing a set of information security policies and standards is reflected throughout the enterprise via adoption of the HITRUST Common Security Framework. These standards are overseen by our Information Security Group and implemented by our Infrastructure Security Group, with clear segregation of duties throughout the process. Our servers, workstations, and network are continuously monitored using industry-standard intrusion protection technologies, advanced persistent threat monitoring, and data loss protection.

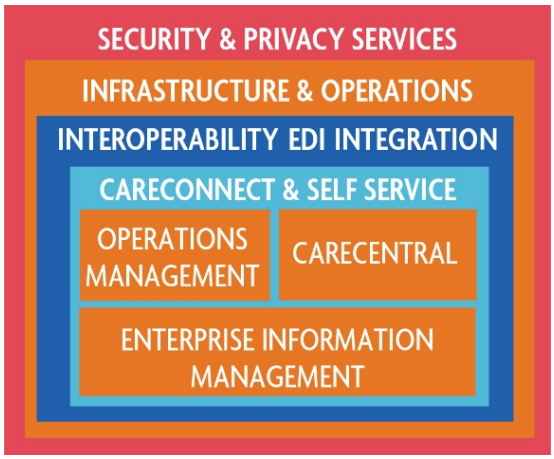

Figure C.28-1 Security and Privacy Services

The HITRUST Common Security Framework allows us to demonstrate compliance with DMS' requirements via a set of security and privacy controls in direct support of HIPAA, NIST 800-53, NIST Common Security Framework, PCI-DSS, and other industry frameworks. Our Chief Security and Privacy Officer is responsible for monitoring and auditing ongoing compliance including risk assessments based upon NIST 800-30, HITRUST compliance, application security testing,

wireless testing, and penetration testing. WellCare leverages a 3rd party firm that specializes in information security to conduct a comprehensive penetration test once a year. The results of all these tests are reviewed by our IT infrastructure management and by the Information Security team, and enhancements are made accordingly. The test results and progress tracking on enhancements and resolution are also presented to WellCare's senior leadership and the Board of Directors' audit, finance, and regulatory compliance committee.

EMPLOYEE TRAINING FOCUSED TO MINIMIZE DATA EXPOSURE

Associates' vigilance and awareness play critical roles in protecting sensitive and confidential data requiring the entire organization's awareness of the role they play, ensuring the safety and privacy of our network and our Enrollees' PHI and medical record information. Continuous and current training is used to reinforce our corporate philosophy and our Employee Code of Ethics. Within 30 days of employment and annually thereafter, all our associates are required to satisfactorily complete 16 or more hours of mandatory training on subjects including Information Security, Information Governance, HIPAA Privacy and Security, Acceptable Use, Compliance Training, and Certification of Reports and Submissions to Commonwealth and Federal agencies. We also provide our associates trainings on social engineering, PCI compliance, and phishing.

Phishing continues to be the method of choice for attackers to gain access to corporate environments. In order to prevent these breaches. WellCare performs live phishing exercises quarterly where all associates received one of ten crafted phishing emails. These phishing emails are based upon real examples received from attackers, however instead of a malicious site, these have links to an education page. The goal is for the associate to report the email for which they received a congratulatory note. If they click on the links in the email instead, they are directed to the education page. This page demonstrates how they should have identified the email as phishing and reported it. This safely raises awareness of phishing within the environment. To make reporting easier, we added a Phishing button to our email system to report suspicious email. As a result, we continue to see improvements with the reduction of back clicks and increase in reporting.

OVERALL APPROACH TO CUSTOMER AND ENROLLEE BREACH PREVENTION

WellCare of Kentucky invests heavily in the Information Security and Privacy programs in order to reduce risk of a data loss event. The HITRUST program and the implementation of the HITRUST Common Security Framework focuses on minimizing the risk of a breach while efficiently providing services to Enrollees. We employ multiple physical and electronic security controls as part of our privacy and security services and infrastructure services into every layer of our operational environment. Our environment is continuously monitored by our 24/7 Enterprise Service Operations Center (ESOC). Examples of our existing comprehensive security features include:

- Encryption of hard drives, including all desktops and laptops.
- Multifactor authentication for all remote access.

- Monitoring of laptops, desktops, and the network through automated virus scanning solutions, data loss prevention, and advanced persistent threat technologies.
- Blocking of ability to save data to portable (thumb drive), disc media (CDs), webmail, and cloud file sharing.
- Built in "Automated Wiping" for desktops and laptops in the event of loss or theft
- Encrypted storage solutions (including medical records).
- Secure decommissioning including full magnetic erasure of disc drives.
- Email controls (e.g., scans for spam, malware, and viruses; user-elected and automated email encryption; Transport Layer Security (TLS) email exchanges).
- Role-based security features based on least-privilege (e.g., two-factor authentication, automated provisioning) with annual certification.
- Implementation of a diverse set of Firewalls, Intrusion Detection Systems, virus scanning, data loss prevention, and advanced persistent threat prevention, monitoring and detection technologies.
- Recurring vulnerability testing, web application testing, and penetration test and with remediation of any identified vulnerabilities and enhancement opportunities.
- The use of encrypted file transfers with government partners and subcontractors primarily through the use of Secure File Transfer Protocol (SFTP) (which will include Department provided FTP site).
- Application designs and controls (e.g., detailed audit logs; access to display last change date, time, and user; inability to alter finalized transactions).
- Physical controls (e.g., restricted access building requiring appropriate credentials to enter; separate, highly restricted areas, like Data Center facilities).

WELLCARE'S SECURITY STRATEGIES FOR DATA PROTECTION AND ACCESS

Access to any WellCare system requires a valid user ID and password, the sharing of which is strictly prohibited. The User ID process begins at the time of hire through our user provisioning process. Provisioning occurs via role based access associated with role and job title. The user access request includes a complete description of the access needed including network drives, applications, and templates. Requests for access to in-scope applications are approved based on the individual's need to view, add, change, or delete data. "Least Privilege" access is driven by the use of templates specific to the system functions and information that the unique user requires. Once a user receives his or her ID, access attempts are monitored. WellCare's Active Directory domain policy restricts unsuccessful login attempts and can be programmed to fit DMS-specific requirements.

WellCare desktops and laptops are protected at the host level by an Enterprise Anti-Virus and End-Point Firewall solution. Password complexity is established and enforced at the domain level and administrator user privileges are limited to support staff exclusively. A mature patch

management process ensures that these devices receive scheduled vendor updates, and compliance is tracked via an enterprise distribution package. Laptops are further protected by the use of a full-disk encryption solution with full DOD level remote wipe capability.

WellCare's Chief Compliance Officer oversees implementation and compliance with all current and future HIPAA standards. He also manages the Corporate Compliance Department, which is responsible for WellCare's privacy, information security, records management, and information management programs. The COO reports to our CEO and independently reports to the Board of Directors' audit, finance, and regulatory compliance committee. The COO and his team provide support to Rebecca Randall in Kentucky.

WellCare actively promotes compliance with the requirements of this section through multiple ongoing activities, which include:

- Maintaining policies and procedures describing the types of information to be safeguarded and the proper release of protected health information (PHI). These policies, including HIPAA Privacy, HIPAA Transactions, and Information Security Policies defined and document our commitment to understanding and enforcing these standards.
- All new hires are also required to complete this training within their first 30 days of hire. Our corporate training Department independently executes the administration and completion compliance of this training.
- Requiring the completion of annual training on security, privacy, fraud waste and abuse, and HIPAA compliance by all associates as a condition of continued employment.
- Associates also attend general compliance (iCare) training designed to instill our core values and ethics. We maintain corporate policies that address system access management and information accessibility at the corporate level. In addition to the aforementioned programs, our information security council meets regularly with key leaders to communicate and govern the information security risks throughout the organization.

BREACH RESPONSE PLANNING AND EXERCISES

WellCare of Kentucky acknowledges that protecting data is critical, but also having and testing an Incident Response Plan on how to quickly react and respond in the event of a breach is important in mitigating harm to the Enrollee. WellCare has developed an extensive set of playbooks that model responses to the top anticipated events, which may impact Enrollees. These include events such as malware, ransomware, hacking events, data loss, etc. These playbooks enhance the Incident Response Plan Standard which is based upon SANS WellCare performs tabletop exercises with the incident response teams on a quarterly basis to ensure clear decision making authority, open communication channels, backup communication plans, and process improvement opportunities. Lessons learned are incorporated back into the playbooks after conclusion of the exercises. Participants in the exercises include a core team involving Legal, Privacy and Security, IT, and Communications along with a varying set of business representatives or senior leadership representatives.

Each session includes review of impacted stakeholders and communications protocols internal and external to WellCare. These stakeholders include DMS, vendors, law enforcement, incident

response specialists, etc. These exercises include development of standard communications tools, briefings, and most importantly experience for those filling the roles essential in quickly analyzing, stopping, and mitigating the harm associated with a breach.

BREACH MONITORING AND RESPONSE

Vulnerability and breach monitoring begins with system level monitoring, active event logging, frequent vulnerability scanning, and threat intelligence data from multiple sources including US CERT and H-ISAC.

WellCare leverages a centralized security event and incident management tool to collect and analyze events from systems, applications, and security tools. Security tools feeding this system include Intrusion Detection and Prevention Systems, Firewalls, VPN Concentrators, Domain Controllers, advanced threat detection tools, anti-virus, among others. This data is correlated with information provided from both public and private threat intelligence resources in addition to vulnerability scan and system information. Vulnerability scan information is updated weekly internally and multiple times per day for internet facing systems. Changes detected by vulnerability scanning on internet facing systems trigger an automated alert workflow for Information Security. Security data is augmented using threat intelligence resources to proactively block bad actors as they identified in the larger community.

Our Infrastructure and Operations ensures that all components of our systems are continuously monitored by our 24/7 ESOC. The ESOC monitors systems continuously for any and all issues, outages, or indication of potential threats to operations. We supplement the ESOC with security monitoring by interfacing with a Managed Security Services Provider (MSSP) to perform 24/7 monitoring and alerting. The MSSP performs ongoing analysis of the enriched log data from the SEIM and follows a playbook for handling events discovered within the WellCare environment. If an event is discovered, the MSSP will triage the event and, based upon the severity of the event, the Incident Response Plan is triggered.

c. Describe the Contractor's approach to conducting Application Vulnerability Assessments as defined in Section 38.6 of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

WellCare of Kentucky (WellCare) confirms adherence to DMS' expectations and requirements outlined in Section 38.6 of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices." and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Application Vulnerability Assessments occur leveraging multiple teams and toolsets. The OWASP Top Ten and the SANS Top 25 are identified as key test criteria and baked into the process from beginning to end. The application vulnerability assessment addresses, at a minimum:

- Injection
- Broken Authentication and Session Management
- Cross-Site Scripting (XSS)

- Insecure Direct Object References
- Security Misconfiguration
- Sensitive Data Exposure
- Missing Function Level Access
- Cross-Site Request Forgery (CSRF)
- Using Known Vulnerable Components
- Invalidated Redirects and Forwards

Preventing vulnerabilities from getting into code is the first step. WellCare leverages static application scanning tools to analyze code as it is developed and checked into the code repository. Any vulnerabilities are categorized as defects and addressed accordingly. Once code is produced, it is introduced to the QA environment where pre-production application scans are performed using dynamic scanning tools leveraging both authenticated and un-authenticated scans. Defects are created for any items discovered prior to go-live. Once in production, authenticated and unauthenticated scans are performed to verify no changes in the code from QA.

Quarterly web scans are performed against different sections of the Internet facing properties by Internal WellCare personnel using authenticated and unauthenticated scans. Scanning is performed using a combination of automated and manual tools. Once issues are identified, the Information Security Analyst provides the report back to the development teams and works with them on remediation planning. These items are tracked within the Information Security risk management platform with issues identified, remediation steps identified, ownership, and timelines for completion. Once the remediation is complete and introduced to production, then the item is retested and verified as closed. We will provide DMS a copy of the application vulnerability assessment within 14 Business Days of its execution.

29. Use Cases

C.29. USE CASE 1 - RHONDA

Rhonda is a 30-year-old Enrollee who recently learned that she was pregnant after visiting the Emergency Room, by ambulance, with severe nausea and dehydration. She has a history of high- risk pregnancies. Of 5 pregnancies she has experienced one (1) live birth, three (3) miscarriages occurring early in the second trimester, and one (1) abortion in her teens. In addition to her history of complicated pregnancies she smokes a half pack of cigarettes per day and drinks approximately 2 -3 beers /week. During her pregnancies, Rhonda sporadically kept prenatal visits and had a history of noncompliance with routine care instructions.

Rhonda was shocked to learn that she was pregnant since she delivered a baby girl ten (10) months earlier. Her daughter, Amanda, was born at 32 weeks and was in the NICU for three (3) weeks. Amanda is feeding well and is steadily gaining weight. With that pregnancy, Rhonda experienced post-partum depression and was concerned whether she could care for Amanda. Rhonda's closet family is in Texas but visits are infrequent. She recently separated from an abusive partner who provides minimal financial and emotional support. Rhonda and Amanda sought safety in a family shelter on three (3) different occasions after her partner threatened to harm Amanda.

Rhonda became upset upon learning she was pregnant again and kept telling the ER nurse that it could not be true. She explained that she just moved out her apartment after splitting with her partner and was staying temporarily with friends. Rhonda does not have reliable transportation and often relies on friends to provide rides to the pediatrician and grocery shopping.

The ER nurse recommended that Rhonda talk with her OB/GYN and her MCO about her options. Rhonda's electronic medical record was updated and a referral was made to her OB/GYN.

Describe how the Vendor would address Rhonda's situation including a detailed description of prenatal programs and Quality Improvement Initiatives. At a minimum, address the following programs and services:

a. Applicable evidence-based Care Management practices;
b. High risk pregnancy initiatives;
c. Health Risk Assessment and Care Planning;
d. Environmental assessment;
e. Behavioral Health Services;
f. Family planning;
g. Enrollee and family engagement;
h. Linkage to community resources and support;
i. Social Determinants of Health;
j. Provider engagement; and
k. Transportation.

C.29. USE CASE 1 - RHONDA

WellCare's discussion of this Use Case includes additional information about Rhonda and her family for the purpose of better demonstrating how we support our members. ***WellCare does not foresee any limitations or exceptions to providing the programs and services listed****.*

Overall Approach and Assumptions: WellCare's approach to helping Rhonda achieve optimal outcomes for herself, her baby and her 10-month old daughter involves a full integrated maternity care management program, BabySteps, to address her physical and behavioral health, pharmaceutical and social service needs. BabySteps will address Rhonda needs for interpersonal safety plan, prenatal care, housing, and support Amanda's infant health needs. Closed-loop referrals through our long-standing community partners ensure Rhonda has safe housing, transportation, food, and support to recover from interpersonal violence and improve her ability to care for her children.

Innovations for Rhonda

- Trauma-informed and evidence-based maternity care
- Technology enabled maternity support
- Comprehensive Community Supports
- "Families First" approach to care planning

a. Evidence Based Practices for Care Management and Quality Initiatives

Our care management practices for Rhonda, as illustrated below, are built on nationally recognized evidence-based guidelines that are fully integrated and embedded into all aspects of our operations, including our care management information system CareCentral. Our Clinical Practice Guidelines are informed by the Agency for Healthcare Research (ARQH) and the American College of Obstetricians and Gynecologists (ACOG) other national standards. Rhonda's care includes in-person and telephonic care management, education for self-management, provider education, profiling and feedback. We pay close attention to the social determinants of health that can influence whether Rhonda engages in good prenatal care.

Enrollment and Health Risk Assessment: Rhonda calls the toll-free number on the back of her WellCare ID card and speaks to Emily, a WellCare Enrollee Call Center Representative. Rhonda explains that she recently went to ED by ambulance and discovered she is 10 weeks pregnant. Rhonda is new to the plan and does not know who she needs to call to help her understand her pregnancy benefits. Emily understands the importance of early access to prenatal care and transfers Rhonda to our Kentucky Maternity Care Coordinator who completes a maternity assessment to identify Rhonda's risks and needs. Rhonda is anxious and unclear about her next steps, she indicates she has had difficulties with past pregnancies and is not sure where she will be living full-time. Because Rhonda is high risk, she is assigned to Joan is a dedicated OB Case Manager who offers **intensive support to Rhonda throughout her pregnancy** and postpartum.

Enrollee Needs Assessment: Joan reviews the results of Rhonda's risk screening and asks Rhonda about her current living situation, whether she feels safe with friends and if she has contacted the Lexington Police Department for an Emergency Restraining Order. Rhonda indicates that while her friends are very supportive, she is anxious and fearful that ex-partner will easily find her there. Joan is trained in working with enrollees, like Rhonda who have trauma histories and calmly walks her through options for a safety plan. With Rhonda's agreement, Joan initiates a closed-loop referral for Rhonda to GreenHouse17, an emergency shelter and advocacy program for victims of domestic violence. GreenHouse17 is a WellCare community partner works with Joan to help Rhonda; Joan secures transportation for Rhonda and Amanda to get to GreenHouse17.

Joan reviews Rhonda's her claims information in CareCentral, our comprehensive care management information system, to determine if Rhonda has gaps in her health and prenatal care such as an annual physical, pap smear, dental visit; as well as Amanda's infant health and well-child visits. Joan sees that Amanda, 10-months old is listed in CareCentral, as a related member. Joan learns that Amanda was born at 32 weeks, spent time in the NICU and that Rhonda was sporadic in her prenatal care during Amanda's pregnancy. Joan prepares a "New Mom" packet, including a "Preparing for a Healthy Baby" book, a list of educational links on our website, and the toll-free number for our BabySteps program for Rhonda.

Joan's goal is to complete a comprehensive assessment to gain a holistic understanding of Rhonda's needs and personal strengths, parenting strengths, preferences, abilities, social service barriers, physical and behavioral health (BH) status, and goals, including the identifying: urgent and short-term needs; supportive friends and family; engagement with providers; parenting needs such as back-up caregiver plans; emergency response plans; and vocational needs. Joan will also evaluate Rhonda's knowledge of pregnancy, nutrition and healthy routines, and her current pregnancy. Joan's comprehensive assessment reveals a variety of factors influencing Rhonda's health:

Medical/Pharmacological	Behavioral	Social/Cultural
• Pregnancy discovered during ER visit 2 weeks ago • History of sporadic prenatal care with prior pregnancies • 10-month old daughter born at 32 weeks, spent 3-weeks in NICU, steadily gaining weight • 3 previous miscarriages in early second trimester • No current engagement with PCP or OBGYN • No current medications incl. prenatal vitamins or OTC • Able to perform all ADLs and IADLs	• Domestic violence trauma • Anxious and overwhelmed by current pregnancy • Drinks several beers a week to "relax" • Smokes cigarettes to "calm down" and "focus" • History of postpartum depression • History of not adhering to routine care guidelines	• Has 10-month old daughter; no childcare or back-up caregiver for daughter • No transportation; no income • Closest family is in Texas • English is primary language • Currently homeless, staying with friends in Lexington • Baby's father has history of violence • Currently connected with GreenHouse17 for support with safety concerns • Has High School diploma

Rhonda reports that she has not followed-up on her ER referral to the OBGYN because the provider is too far from her friend's house, where she is staying. Joan offers to schedule an appointment for her with the UK Women's Health Clinic and to arrange transportation. Joan discusses the importance of engaging with her OBGYN given her history of miscarriages. They also discuss the importance of follow-up for Rhonda's current level of anxiety and her history of postpartum depression following Amanda's birth. Rhonda's agrees to see a provider with the UK Psychiatry Clinic, if both UK appointments can be scheduled on the same day. Joan confirms the appointments and, with Rhonda's permission, sends the results of her needs assessment.

Integrated Interdisciplinary Team: Joan explains to Rhonda the interdisciplinary team available through the BabySteps team including RN's, social workers, pharmacy, medical and behavioral

health staff. Joan also explains how she assist with housing, food, transportation and other social services. Joan also asks Rhonda about the important people in her life, her family and friends who may be important support for her as she reestablishes a home and who she may want on her care team or who may play an informal role in supporting her. Rhonda's wants Bella, her sister in Texas, to part of her team and the counselor from GreenHouse17. Joan ensures releases are complete and entered into CareCentral; she documents contact information in the care plan and makes sure team members have her contact information.

Care Planning: Joan asks Rhonda about her goals and priorities. She will then work with Rhonda to turn her priorities in specific, measurable, achievable, relevant and timely (i.e., S.M.A.R.T.) care plan goals. Rhonda reports being extremely anxious about her current pregnancy and while overwhelmed, her priorities are to have a healthy baby and to keep Amanda healthy. Rhonda talks about her fear that her ex-partner will harm her, however she takes comfort in getting help from GreenHouse17. Joan gets Rhonda's permission to add a Care Manager from our specialty BH team to care team to assist with planning. Using a person-centered planning process and motivational interviewing techniques, Joan asks Rhonda about her goals for the week, month and year. Rhonda's goals in her own words, programs and services include:

Rhonda's Goal	Programs and Services	Focus Area
I want to be healthy for me, my baby and Amanda	• UK Women's Health and UK Psychiatry Clinic, including Federated Transportation services to/from clinic • Global authorization in CareCentral for all prenatal care • Well Care smartphone to access Pacify (prenatal advice), appointment reminders and educational materials • Kentucky Quit Line for smoking cessation • Healthy Rewards for incentives to complete prenatal and postpartum visits and smoking cessation • BabySteps care management, written and verbal education on nutrition, hydration, growth states, risks and red flags throughout pregnancy • WIC nutrition services and HANDS support • 24/7 Nurse Advice Line	Prenatal Care
	• Introduce MyStrength's self-guided online modules to learn positive coping strategies and self-management tools	Behavioral Health
	• BabySteps care management, written and verbal education on signs and symptoms of depression, when to reach out for help and building positive supports throughout pregnancy	
	• Education on the risks of street drugs and over-the-counter medications during pregnancy	
	• Education on the risks of drinking beer during pregnancy and alternative strategies for relaxation, including peer supported telehealth services through Kentucky Maternal Assistance Toward Recovery	
	• Education on the importance of birth spacing through LARC and other family planning options	Family Planning

Rhonda's Goal	Programs and Services	Focus Area
I want to deliver a full-term baby	• Universal Pregnancy Screening (Genetic testing), as recommended by OBGYN • OBGYN evaluation of the need for 17P/Makena between 16-20 weeks gestation	Prenatal Care
I want Amanda to stay healthy	• Collaboration with Amanda's Pediatric Case Manager to ensure Amanda's needs are met and she is achieving developmental milestones	Infant Health
	• Nutritional support to continue Amanda's weight gain	Infant Health
I want my family to be safe	• WellCare Community Connections assistance in expediting an application with the Lexington Housing Authority	Housing
	• Engage The Nest to provide childcare for Amanda while Rhonda attends medical appointments and looks for housing	Childcare
	• Engage the Purple Purse fund for assistance with housing cost and food	Housing and Economic Support
	• Domestic Violence Counseling and Advocacy through GreenHouse17	Interpersonal Safety
I want to be able to provide for my children	• Engage Rhonda with WellCare Works, after her pregnancy has stabilized to explore her vocational strengths and skills	Vocational
	• Educate Rhonda on how to use Federated Transportation services for medical appointments and community partners for non-medical transportation	Transportation
	• Work with HANDS, The Nest and GreenHouse17 on parenting, child development, and creating a healthy home environment	Parenting Skills
I want my sister Bella to help me make decisions	• Regular over the phone check-ins with her sister using Rhonda's WellCare enabled smartphone • Care team meetings with Bella on conference line	Social Support

Monitoring and Follow-up: Joan schedules regular monitoring calls and visits with Rhonda. Rhonda feels comfortable using GreenHouse17 as her "home-base" for visits and, if needed, her 17P/Makena injections, until she secures long-term housing. During each visit, Joan monitors Rhonda's health status, verifies that notifications for upcoming appointments are set-up on Rhonda's smart phone and confirms she can access numerous education videos and engage in video chats with experts through the BabySteps app. Joan provides on-going education to Rhonda on what to expect with her pregnancy and the importance of healthy eating and hydration and makes sure she knows the signs and symptoms of preterm labor. Joan asks Rhonda about her progress with the BabySteps Healthy Rewards Program and explains qualifying activities. Rhonda has already earned her Prenatal reward of a $25 gift card for completing her first prenatal care visit and is eligible for a Bonus Reward prior to delivery (car seat, pack n play or a stroller); as well as a reward of a $25 gift card for completing a timely postpartum visit. Joan lets Rhonda know she has access to home-delivered meals after her baby's delivery. Joan discusses Rhonda's preference for breast feeding vs formula and provides information so Rhonda can make an informed decision. If Rhonda chooses breast feeding, Joan

will arrange for a free breast pump and support from lactation consultant. Joan assist Rhonda with WIC enrollment and monitors Amanda's EPSDT milestones and care gaps. Joan enrolls Rhonda with the Lexington Health Departments HANDS program for ongoing support throughout her pregnancy and for the baby's first 2 years of life.

Quality Initiatives: To ensure high quality care for all our members, BabySteps engages in a variety of Quality Initiatives focusing on improving birth outcomes such as the reduction of pre-term and NICU birth rates; improving the timeliness of prenatal care, use of post-partum care, and birth spacing and the reduction of C-section delivery rates.

b. High Risk Pregnancy Initiatives

WellCare's BabySteps Maternity Care Management program is based on ACOG evidence-based guidelines and other nationally recognized guidelines. Key elements of BabySteps include: motivational interviewing and person-centered planning; assignment to a RN maternity care manager; an integrated care team; intensive follow-up with Rhonda, her PCP and OBGYN; a Home Care Program for high-risk women with previous preterm births for administration of 17P injections and in person nursing assessments and monitoring; identifying and addressing social barriers to health; substance use and smoking cessation; smart phone apps with education on pregnancy, appointment reminders, and a 24/7 nurse line.

c. Health Risk Assessment and Care Planning

Rhonda's initial HRA was completed within 30-days of her enrollment with WellCare and before she knew of her pregnancy. As described above, once alerted to Rhonda's pregnancy our BabySteps team completes a pregnancy assessment, within 10-days of contact, to identify risks and needs. Our assessment tool is based on ACOG and other national best practice clinical guidelines. We screen for risk factors such as: *age* (i.e., teens and women over age 35); *history of pregnancy related conditions* such as recurrent miscarriage, preterm or low birth weight births, gestational diabetes, postpartum depression; *co-morbid medical conditions* such as blood clotting, cardiac or renal conditions, diabetes; *current pregnancy conditions* such as cervical change, gestational diabetes or hypertension, HIV/AIDS, hyperemesis gravidarum, multiple gestation, vaginal bleeding; *co-occurring behavioral health conditions* such as serious mental illness, history of or current anxiety, depression, substance abuse, including alcohol, smoking, domestic abuse; and *social barrier*s such as homelessness, lack of a support system or transportation.

d. Environmental Assessment

Embedded in WellCare's HRA and all needs assessments are questions to assess the Rhonda's living situation, safety, risk of harm from domestic violence, homelessness or other unsafe or unsanitary living conditions. Safety issues are immediately addressed through our community partnerships and all environmental discussed and issues are addressed in the care plan as appropriate.

e. Behavioral Health Services

As a fully integrated health plan, Joan has access to integrated case conferences with our medical, behavioral health and maternal child health leaders for problem solving around

Rhonda's physical health care, her history of postpartum depression, alcohol use and current levels of anxiety. Joan introduces Rhonda to MyStrength, our online app that helps her understand issues such as anxiety and depression and learn new coping strategies. If Rhonda's substance use escalates, the team considers treatment and peer support through Chrysalis House. WellCare's partnerships with Chrysalis House, the Nile, and Women of the Well, provide residential treatment that allows Amanda to stay with Rhonda. Joan works with Rhonda and her providers to find the program that best fits her needs.

f. Family Planning

WellCare BabySteps provides education on family planning and the importance of birth spacing for maternal and child health, during Joan's 3rd trimester and during postpartum calls. Our evidence-based guidelines include a pre-delivery discussion of Long Acting Reversible Contraception (LARC) options and birth spacing, giving pregnant women the knowledge and power to include such options in her plan of care. Joan helps Rhonda write down questions she has for her OBGYN and explains that services are covered by Medicaid and also offered through the Lexington-Fayette County Health Department. During follow-up calls Joan will document Rhonda's decision and ensure her questions have been addressed.

g. Enrollee and Family Engagement

Joan keeps Rhonda engaged by "meeting her where she is" emotionally and physically. Joan is trained in Motivational Interviewing and uses these techniques to identify Rhonda's goals and priorities. Joan makes sure that Rhonda feels supported in addressing basic safety and housing needs first, with GreenHouse17 and meets Rhonda in-person at locations and times convenient for Rhonda and where she feels safe. Establishing a circle of support is vital for Rhonda's engagement. Joan identifies people who Rhonda trusts, including reconnecting with her sister in Texas, Bella, via a WellCare smartphone. With Rhonda's permission, Bella joins the care team to support Joan by phone during the pregnancy and schedules time off work to be with her when the baby is born.

h. Linkage to community resources and support

Joan identifies community services for Rhonda and assists her with access. Joan engages Rhonda in the WIC program and arranges transportation. She reminds Rhonda about the Kentucky Quit Line for smoking cessation assistance. Rhonda enrolls in The Nest 12-session parenting class, which uses an evidence-based nurturing parenting curriculum and provides childcare for Amanda. Joan advises Rhonda about HANDS, and the benefits of having a mentor who can visit with her as she establishes a new home and who can offer her support in building a healthy, safe environment for her family.

i. Social Determinants of Health

As part of her assessment, Joan evaluates social barriers to health. Rhonda's need for safety, housing, and transportation are include in her care plan. Joan will collaborate with Rhonda and GreenHouse17 to address needs. For example, Joan uses a closed loop referral to engage Rhonda with the Community Action Council (CAC) in the Winburn neighborhood. Joan knows CAC operates the Continuum of Care homelessness prevention program for Central Kentucky. Joan works with Rhonda to have her Lexington Housing Authority application elevated due to

her pregnancy and history of domestic violence. Joan introduces Rhonda to the God's Pantry Food Bank where she can receive emergency food assistance and can sign up to regularly receive food from the pantry. Rhonda also discusses her future plans and her goal for getting a job. Joan engages Rhonda with Opportunity for Work and Learning (OWL), an organization engaged with WellCare Works, designed to assist Rhonda with identifying skills and interests to help her find a job.

j. Provider Engagement

Joan is part of the locally based WellCare team that lives and work in the communities they serve. Part of that team includes Provider Relations Representatives (PR) who work with Joan to engage providers in understanding our integrated care model. Joan speaks directly with providers and office staff to answer questions about managed care and to talk about Rhonda's health care gaps and adherence to the care plan. The team makes sure that providers have access to Rhonda's assessments, care plans, progress notes and care plan updates via fax, hard copy and electronically through the online WellCare provider portal. Providers have real-time access all Rhonda's records.

k. Transportation

Joan arranges for transportation through Federated Transportation service for medical appointments and helps Rhonda set the appointment reminders in her smartphone. Joan calls the day of each appointment to make sure Rhonda is ready. Joan works with partners such as the Maxwell Street Presbyterian Church, Lexington Paramedical Program, Community Action and Chrysalis House to ensure that Rhonda and Amanda have a Bus Pass for Lextran Transportation Service for rides to parent support meetings, WIC and other non-medical needs. Joan will work with Rhonda and her providers to determine if telehealth appointments can help to reduce Rhonda's transportation needs.

Conclusion: Joan and her locally based colleagues provide comprehensive support to Rhonda as she obtains safe housing, delivers an infant with a minimal hospital stay, and reconnects with her family in Texas. Joan reassess Rhonda's needs and those of her growing family, she assists Rhonda to ensure that the children receive the necessary EPSDT follow-ups. Rhonda receives continuing support through HANDS, Healthy Start and other community based programs to help her create a nurturing and safe environment for her family.

C.29. USE CASE 2 - KATY

Katy is a 20 year old female who is taking classes at a local community college while living at home with her mother to help take care of her younger brother. Katy's mother works two (2) jobs and has difficulty finding time to shop for and prepare healthy meals. Katy does not assist with grocery shopping or meal preparation. Katy is significantly overweight and rarely exercises. Most of her meals are from fast food restaurants and she only occasionally eats vegetables or fruit.

Recently, Katy became light headed after eating lunch and was taken to an urgent care center by a friend. The provider asked Katy about her symptoms and whether this has happened before. Katy stated that the dizziness happens frequently after meals and she is always thirsty. The provider asked Katy if she has diabetes and Katy stated she did not think so. She told the provider that she has not seen a doctor since she was in middle school. The nurse took Katy's vital signs and a blood glucose reading. Katy's blood glucose reading was elevated and her blood pressure was 162/90. Her BMI was computed to be 32.6. The provider recommended that Katy contact her MCO to find a PCP as soon as possible before her condition worsened and she ended up in the Emergency Room.

Katy contacted her MCO's Enrollee Call Center and explained her situation.

Describe the Vendor's Enrollee engagement process and Care Management. At a minimum, address the following:

a. Evidenced based practices for Care Management;
b. Health Risk Assessment and Care Planning and monitoring;
c. Provider engagement;
d. Cultural competency;
e. Patient engagement and education;
f. Community resources; and
g. Social determinants of health

C.29. USE CASE 2 - KATY

WellCare's discussion of this Use Case includes additional information about Katy and her family for the purpose of better demonstrating how we support our members. ***WellCare does not foresee any limitations or exceptions to providing the programs and services listed.***

Overall Approach and Assumptions: WellCare's care management and planning process are grounded in nationally recognized evidenced based practices. Using a fully integrated model we address Katy's physical and behavioral health, pharmacological and social service needs. Our condition specific education tools address diabetes prevention, hypertension and lifestyle routines. As a young person aging out of the EPSDT periodicity schedule, we take special care to empower her to understand and manage her health. Through education, problem solving, group support, and a mobile app to track lifestyle changes, Katy will learn self-management skills and healthy routines.

Innovations for Katy

- Technology enabled health education
- Family-based approach to care planning

a. Evidenced based Practices for Care Management

The foundation of WellCare's Care Management program is built on nationally recognized evidence-based guidelines that are fully integrated and embedded into all aspects of our operations, including our care management information system CareCentral. Our Clinical Practice Guidelines are informed by the Agency for Healthcare Research (ARQH) and other national standards and include in-person and telephonic care management, education for enrollee self-management, provider education, profiling and feedback. Every aspect of our care management is integrated and proactive to optimize enrollee health and access to care (identification and stratification of enrollees for care management, assessments, care planning, follow-up and monitoring). We pay close attention to the social determinants of health that can influence whether Katy can follow through on her treatment. As illustrated in the following sections for Katy, Dana, her Care Manager provides targeted interventions, educational materials and in-person and telephonic interaction and health coaching. Dana's work is guided by clinical best practices and programs that support Katy's health literacy, self-management of her health conditions and strategies for making lifestyle choices that lead to optimal health. Dana is supported by an interdisciplinary team trained to help members solve for social barriers that prevent them from reaching their health and wellness goals, such as gaining access to nutritious food or finding resources to help pay their water bill or secure a job.

b. Health Risk Assessment and Care Planning and Monitoring

Engagement: Katy calls the toll-free number on the back of her WellCare ID card and is connected to Rebecca, a WellCare Enrollee Call Center Representative. Katy explains that she recently went to urgent care due to dizziness, and reports that she knows nothing about health insurance or what that means for seeing a doctor. Rebecca is able to see a single integrated view of Katy's claims, providers and benefits information, including her EPSDT coverage as a young person under the age of 21. Rebecca realizes that Katy has not completed a Health Risk Assessment (HRA) and was also auto-assigned a PCP due to lack of action on her part. Katy asks about the PCP to see if he/she is close. Rebecca asks Katy where she lives and works and whether she uses public transportation or has her own car. Together they find a PCP whose location aligns better with Katy's weekly routine in Ashland. Rebecca explains the HRA and Katy agrees to complete it.

Health Risk Assessment: Rebecca completes the HRA screening tool to collect information on Katy's health status, including mental health and substance use disorders(s). Rebecca collects demographic information, Katy's personal and family medical history, and lifestyle habits. Katy begins asking questions about what to do next. Hearing about Katy's Urgent Care visit, lack of engagement with a PCP since middle school and limited knowledge about health benefits, Rebecca explains the importance of seeing her PCP and helps Katy schedule an appointment within 7-days and confirms she has transportation to Lewis County Primary Care, a full service FQHC.

Care Management Enrollment: Following her first appointment, Katy's PCP makes a referral to the Care Management program. Dana, a Care Manager who is an RN with training as a heath coach reaches out to Katy by phone to explain the Chronic Condition Management program and talk about her PCP's recommendations. Because WellCare uses a real time integrated platform, Dana is able to see notes from Katy's discussion with Rebecca and notes from her PCP

visit, including her blood pressure, BMI, and blood glucose results. Dana also understands that Katy's health literacy is low. Dana asks Katy about her PCP visit. Katy admits that she did not fully understand what pre-diabetic and diabetic meant, other than they were bad. Katy indicated that she had to pick up a medicine for the high blood pressure and learn more about cooking. Her next check-in with the PCP is in two months. Katy reported being confused because that is the same thing the Urgent Care said, she was not sure how the PCP was helpful. Dana explained to Katy the types of testing that the PCP does that are different from Urgent Care. Katy explains that her PCP's office is considered her medical home. The new PCP can help manage her medical needs, can arrange consultations with other providers and is typically available by phone or walk-in appointment, even during weekends and holidays. Dana helps her understand the adverse and long-term, or chronic, impact that high blood pressure and diabetes can have on her life. Dana confirms that Katy can get to the Pharmacy to pick up and start her prescription that same day.

Enrollee Needs Assessment: Dana asks Katy a series of questions to better understand Katy's daily routine, her lifestyle habits such as eating, exercise and what she does to relax. As Katy responds to each question, the assessment tool intelligently branches to the next relevant set of questions. This allows for a customized comprehensive assessment for behavioral health, substance use and social barriers to health. Dana's goal is to gain a holistic understanding of Katy's needs and personal strengths, caregiver responsibilities for her younger brother, abilities preferences, physical and behavioral health status, and goals, including the identification of: guardians/surrogate decision makers; urgent and short-term needs to accelerate access to needed services; social service needs and barriers; her support system and engagement with providers; emergency response plans; school, post-secondary education; and vocational needs. Dana recognizes that although she is over age 18, Katy's health is influenced by her household routines and environment. Given that Katy has reported a supportive relationship with her mother, Dana asks Katy if she would like to invite her mother to join them on the call. Dana also explains to Katy that sometimes health conditions are common amongst family members and it would be good to talk about family history. Katy agrees it is a good idea.

When Katy's mother comes on the line, Dana asks about family routines, health history and Katy's younger brother. Dana's assessment reveals a variety of factors influencing Katy's health:

Medical/Pharmacological	Behavioral	Social/Family/Cultural
• BMI 32.6 • Pre-diabetic • Hypertension 162/90 • New medication for HTN, has not started • No reproductive health care or knowledge of family planning • EPSDT care gaps • Able to perform all ADLs and IADLs	• Father died when Katy was 10, saw grief counselor with Mom at that time; reports feeling resolved with grief • No substance use • No risk for depression or suicide • No wellness tools or exercise, eats fast foods with friends to 'relax' and 'have fun'	• Health literacy is low • Does not pay attention to food, groceries or know how to cook • Lives at home • Supportive mother • Has caregiving responsibilities for younger brother (age 10), while Mom works 2 jobs • Taking community college class • Uses public transportation and mother's car • English is primary language

Interdisciplinary Care Team: Dana explains to Katy and her mother the interdisciplinary team available through WellCare, including the Community Connections Advocate, who can assist with healthy food, transportation and other social services; and the WellCare clinical team of nurses, pharmacy, medical and behavioral health staff. She also asks Katy about the important people in her life, her family and friends who may be extra support for her as she learns about her health condition and works to create new lifestyle routines. Katy talks about her friends, but does not want anyone other than her PCP, mother and Dana on her care team. With Katy's consent, Dana shares the results of Katy's Enrollee Needs Assessment with her PCP within 14 days to inform care and treatment planning.

Care Planning: Dana explains that Katy's care plan is driven by both her PCP recommendations and by Katy's goals and preferences. Dana talks to Katy about her immediate health issues (e.g., hypertension and pre-diabetes) and her overall health care including filling in her gaps in immunizations, annual physicals, preventive screenings, and family planning options. Dana employs Motivational Interviewing and a person-centered planning processes to ask Katy's about what she wants to be doing in a few months and in a year. She also asks Katy about her long term goals, what she sees herself doing and where she might be living in five years. Dana's goal is to elicit priorities in Katy's own words. She will then work with Katy to turn her priorities in specific, measureable, achievable, relevant and timely (i.e., S.M.A.R.T.) care plan goals. Katy indicates she would like to know how to cook. She talks about enjoying walking and wanted to join the high school track and field team, but did not have time. Now the thought of exercise is intimidating. Currently Katy volunteers at the community college's helpline and has an interest in becoming an advocate for disability rights. Katy's immediate goal is to understand how to keep herself from "becoming sick with diabetes".

Dana provides Katy with verbal and written education on diabetes prevention and health lifestyles and including coaching on nutrition, physical activity, stress management, sleep, and weight loss. Dana helps Katy learn how to self-monitor, problem solve, and sustain positive change. Throughout the care planning process Dana with work Katy and her PCP tailored her care plan to meet Katy's needs including the use of digital technology, group support, and personalized goal setting. Dana also connects Katy with the Ashland Area YMCA for exercise classes.

To support Katy's long-term goals, Dana introduces Katy to the WellCare Works set of online tools that can help her explore her work interests and map out her education needs. She also has access to our partner CareerArc to explore career goals, build a resume and find jobs. While her focus is on Katy, Dana talks to Katy's mother about her son's health care needs and his risk for also developing hypertension and diabetes. Dana introduces Katy and her mother to the "Clean Out Your Pantry Program", an innovative program to improve healthy eating for the whole family. This program includes a Health Coach who works with Katy and her mother on changing their eating habits for the family. The Health Coach provides education about healthy eating, shopping, and active lifestyles to Katy and her mom over multiple sessions. The Health Coach visits the house to review the current inventory of food and dispose of unhealthy items (with their permission). The Health Coach then accompanies Katy and her mom on a grocery-shopping trip, trips to the Farmer's market and to the Food Bank, to identify cost-effective alternatives for healthy food; provides Katy and her mom healthy cooking guides; and assists in preparing meals. The family learns about the Double Dollars program for using the Farmer's Market. WellCare has relationship with farmers market to double the amount spent for

Medicaid members, thus Katy's voucher for $5 is worth $10 in fresh foods. Katy's goals, in her own words and the programs and services to support her include:

Katy's Goal	Person-Centered Plan	Focus Area
I don't want to get sick with diabetes	• Katy will schedule regular PCP follow-ups for hypertension and pre-diabetes monitoring	Physical Health
	• Katy and her mom will enroll in the 'Clean Out Your Pantry" program	Physical Health
I want to be healthier	• Enroll in Healthy Rewards for incentives to support Katy's follow through w/preventive visits and screens	Physical Health
	• Introduce MyStrength's self-guided online modules to learn positive coping strategies and self-management tools for relaxation and exercise	Behavioral Health
	• Improve Katy's understanding of her health services and insurance benefits	Physical and Behavioral Health
	• Establish a dental home and regular visits	Oral Health
	• Reestablish Katy's EPSDT and immunization schedule with her PCP to fill in health care gaps	Physical and Behavioral Health
	• Assist Katy in getting family planning education	Family Planning
I want to have a good job when I finish college	• Engage with WellCare Works to explore vocational strengths and skills and interests, including with work CareerArc	Vocational

Monitoring and Follow-up: Dana talks to Katy about the date and time of her next doctor appointment and shows her how to use the MyWellCare app on Katy's smartphone to set date and time reminders. Dana will also document the appointment in CareCentral, our integrated care management information system so she can outreach to Katy beforehand to remind her about the appointment and make sure she has transportation. Dana reviews with Katy all of her covered services and the recommended schedule based on the EPSDT periodicity schedule for young people under the age of 21. She also talks to Katy about her care needs as she gets older and introduces Katy to CareCentral's member portal. The Member Portal providers Katy with information on diabetes, her PCP, all scheduled visits, preventive screenings and care gaps, included needed dental care. Katy also has access to our 24/7 Nurse Advice Line, for health questions, and our Community Connections Help Line, for information on social services, transportation, employment and other community services.

Dana follows up with Katy monthly to check on her progress in managing her diabetes and discusses tips and strategies she is learning with her health coach and Clean Out the Pantry service. As Katy's health stabilizes and her care gaps are filled, Dana will adjust the frequency of check-ins and care plan meetings in collaboration with Katy and her PCP. Katy is aware that Dana is available as needed and she does not need to wait for a formal meeting to occur.

EPSDT Considerations: Katy is transitioning to adulthood and Dana will work with her on how to take control of her health care. However, she also recognizes that Katy's mother may not have received information and education on the importance of EPSDT periodicity schedule from her previous health plan. To address care gaps for Katy's younger brother, Dana talks with Katy's mother separately and sends education materials designed for parents. Dana also offers to

show her how to set up the MyWellCare app for herself and her son, so that she can get text messages and reminders of the need to schedule appointments and get immunizations. Dana offers to assist with any appointment scheduling and transportation that she may need to support the family.

c. Provider Engagement

Dana works as part of locally based team with WellCare's Provider Relations Representatives (PR) who live and work in the communities they serve. Dana and the PR team work to engage providers in understanding our integrated and comprehensive care model, EPSDT standards and integrated clinical guidelines for diabetes and hypertension management. Dana will speak directly with the PCP and other providers, and office staff to answer questions about managed care and Katy's health care gaps. Dana keeps the doctor's office informed about Katy's progress in changing her eating and lifestyle habits. Dana provides the PCP information with any signs and symptoms that Katy's condition is worsening including a pre-visit report with actionable information that details specific data points such as her cardiac risk score, cholesterol and blood pressure trending, medication adherence findings, care gaps (e.g., eye exams, lab work). Care plans are shared through paper, fax and through our secure provider portal. Dana and the PR team makes sure that providers understand how to use the online WellCare provider portal to access Katy's records, including recent assessments and her care plan. Dana additionally providers her contact information to the PCP office should she be needed to help manage Katy's care outside of the office.

d. Cultural Competency

Dana will assess Katy's cultural preferences for all aspects of health care such as: care delivery, treatment setting, care planning, coping styles, and social supports. She documents Katy's preferences to ensure they are factored into her care planning and that materials are accessible cognitively, linguistically and culturally. Katy and her family are part of the Appalachian community and culture. Dana is a part of the same community and understands Katy's cultural differences and needs. Dana recognizes that trust is important, and that Katy is very connected to her family and community. Dana knows supporting Katy to make lifestyle changes will also involve her family and friends. Katy's goals for good health may look different from the norm, for example, improved blood pressure may need to start with a goal of reaching 150/90 and build incrementally in addition to gradual weight loss to help prevent type II Diabetes. Dana includes Katy's mother on the team, with Katy's permission and works to connect them both to community resources for services and supports that benefit the whole family, including education on shopping, cooking classes, and exercise.

e. Patient Engagement and Education

All WellCare member facing staff are trained in addressing immediate needs and engaging members to understand gaps in their health care. From Katy's first call our staff work together as a team to offer personalized assistance, based on their location, daily schedules and contact preferences. Rebecca helped Katy find a PCP closer to her work and home and made a warm transfer to Dana who immediately helped her understand her health care needs and answered key questions for her. Dana helps to keep Katy engaged by "meeting her where she is" emotionally and physically. Dana is trained in Motivational Interviewing and uses these techniques to identify Katy's goals, assess her health literacy and establish her priorities. Dana

makes sure that Katy feels supported in addressing her immediate needs for hypertension, exercise and pre-diabetes prevention care. Dana is available to meet Katy in-person at locations and times that are convenient for Katy and where she feels safe. Dana makes sure Katy has information and education to understand her health conditions and understand lifestyle changes she can make to take control of her health. Dana teaches Katy how to use simple tools, calendars and mobile apps, along with how to set appointment reminders that help Katy stay on track.

f. Community Resources

Dana uses WellCare Community Connections data base of over 330,000 state and national resources to support social service needs of our members. Dana helps Katy find the CAReS, Community Assistance and Referral Services in Boyd County to assist Katy and her family with utility assistance, food, prescriptions, transportation, and housing. They act as an informational clearinghouse to prevent duplication of social services. Katy and her family receive a "Neighborhood Card" which they can use at organizations working with CAReS free of charge. The Dressing Room provides clothing, Clean Start provides hygiene items and cleaning supplies, and the Community Kitchen provides breakfast, lunch, and dinner. Dana talks Katy and her mom about The Drop Youth Center as a safe, drug free environment for young people to gain skills and support as they enter adulthood. When not in classes, Katy could access the center from 1:00 – 3:00 pm, Monday – Friday, the designated time slot for young adults ages 19-25; her younger brother could access the center Monday – Friday, 3:30 – 6:30pm when they serve youth ages 14-18. The center provides opportunities for supportive employment and education services as well as youth peer support services and case management services. There is a computer lab, pool table, and free snacks. The Drop offers free transportation to and from the location. Dana suggest to Katy's mom that Katy's brother could also consider going to the Westwood Boys and Girls Club for activities and opportunities to interact with other youth. He can also work out at Planet Fitness for free from May 15 – Sept 1 or take free tennis lessons at the Ashland Tennis Center.

g. Social Determinants of Health

Dana talks with Katy and her mom about Hope Central, a WellCare partner trained on navigating WellCare Work's suite of online tools to job skills, education, and assistance in locating employment and volunteer opportunities. Hope Central can assist Katy in honing her career path and Community College classes. Katy's mother may benefit in finding one job that will pay as much or more as her two part-time jobs. Dana refers Katy and her mom to the Hillcrest-Bruce Mission, a local food pantry and makes sure Katy takes advantage of the Ashland Bus System's half-price bus tickets for students.

In summary, WellCare is committed to whole-person care. Enrollees like Katy who are aging out require additional support through increasing awareness of our staff and providers and through our Community Connections resources to connect her with community resources.

C.29. USE CASE 3 - THE VENDOR

The Vendor is implementing a two-year initiative to improve outcomes by addressing a variety of health behaviors (e.g., tobacco use and diet) and social determinants of health in the southeast region of Kentucky. The Vendor has enrolled several primary care and multi-specialty provider groups in the area to participate in the initiative and has developed relationships with various community agencies to support the effort. The Vendor has identified five (five) quality measures for which providers will receive incentives for meeting targeted improvements. The quality measures emphasize physical and behavioral health integration, social determinants of health, and critical community resources. The Vendor intends to make initial incentive payments 14 months after the start of the initiative. Six (6) months into the project, a multi-specialty provider group's Administrator met with the Vendor to discuss challenges the group is encountering with the initiative and to raise concerns about reporting. This provider group has 50 participating practitioners, including Advanced Practice Nurses, in four different locations. Specifically, challenges are as follows:

- Some practitioners in the group are very engaged while others are not interested in supporting the effort, indicating it is too complicated and administratively burdensome as the group is also participating with similar initiatives being implemented by the other contracted Medicaid MCOs, but that have different required measures.
- The provider group has a new electronic health record (EHR) system and experienced numerous onboarding issues that haven't yet been resolved. In addition, the provider group does not plan to contribute or retrieve information from KHIE until the EHR issues are resolved. The provider group does receive ADT data from Southeastern Kentucky Medical Center and the Baptist Health hospitals.
- The Administrator has made multiple attempts to outreach to a community housing agency that the MCO indicated is supporting the effort to discuss opportunities to collaborate; however, the agency has not returned calls.
- Enrollee compliance is lower than anticipated. Follow up and other outreach has been difficult due to Enrollees not returning calls and also incorrect Enrollee contact information.
- The Administrator is frustrated that the MCO had not provided feedback on the first set of required reports that were submitted three months after project initiation. Communication has been minimal and the Administrator is concerned about lack of support.

The Administrator and practice leadership are concerned with the extended timeframe for incentive payments and the ability to impact providers' behaviors.

Describe the Vendor's approach in addressing the Provider's concerns. At a minimum, address the following:

a. Provider engagement at local, regional, and statewide levels;

b. Provider education, communications, and support;

c. Simplification of provider administrative burden;

d. Enrollee engagement; and

e. Vendor assessment of internal operation challenges and mitigation strategies.

C.29. USE CASE 3 - THE VENDOR

WellCare of Kentucky is well-positioned to focus on and improve health outcomes in southeastern Kentucky. We have been serving the needs of Enrollees in Region 8 continuously since 2011 and have strong, trusting relationships with providers and community service organizations. We understand the health issues in the population and know how to work with our providers, Enrollees and the community to address them and implement successful interventions. We also have extensive experience implementing incentive-based initiatives to improve health outcomes such as our Partnership-for-Quality (P4Q) program that rewards providers for improving key quality measures.

In 2018, WellCare of Kentucky implemented a two-year initiative to improve health outcomes in Region 8. We approached a number of large provider groups to participate in the initiative including a provider group with 50 practitioners across four locations in Bell and Knox Counties. The residents of Bell and Knox Counties face a range of health challenges including high rates of obesity, diabetes and tobacco use. The provider group was therefore a good fit for the initiative, which ties five quality measures to financial incentives:

- BMI and nutritional intervention and reassessment: The number of Enrollees categorized by age and BMI category--obese (>30) or morbidly obese (>40) who completed nutritional counseling and received a follow-up visit within three or six months.
- Pre-diabetes intervention and reassessment: The number of Enrollees categorized by age and HbA1c level of 5.7-6.4 who completed nutritional counseling and received a follow-up visit within three or six months.
- Tobacco assessment and intervention: The number of Enrollees categorized by age who screened positive for tobacco use and/or vaping and (1)received a tobacco cessation intervention; (2) received a tobacco cessation intervention and a follow-up visit within three months; and (3) received a tobacco cessation intervention and a follow-up visit within three months with a negative tobacco screening.
- BH Diagnosis and PH Visit**:** The number of Enrollees with a Behavioral Health diagnosis who had an annual preventive health visit.
- BH Diagnosis with Medical Record of BH Consult**:** The number of Enrollees with Behavioral Health diagnosis whose medical record reflected a note/consult from the Behavioral Health provider.

The measures were specifically designed to capture a rate, an intervention and an outcome. A rate alone does not improve population health. A rate combined with an intervention allows insight into the effectiveness of the intervention.

The provider community is key to any successful intervention. Their interactions with our Enrollees determine the success or failure of any intervention. With this in mind, WellCare of Kentucky Quality Manager Sharon Hall, RN and Provider Relations Manager Brandon Cornett, who both live in Region 8, presented the initiative to the provider group's Administrator at their monthly Joint Operating Committee (JOC) meeting, describing the benefits of the initiative for

the group's Medicaid Enrollees, the financial incentives it could receive for closing care needs, and the support WellCare of Kentucky would provide to help them succeed.

a. Provider engagement at local, regional, and statewide levels

Supporting the initiative at the local level are WellCare's Provider Relations (PR) Representative Scott Smith and Quality Practice Adviser (QPA) Johnnie Keaton, RN. PR Representatives serve as the primary point of contact for network providers. QPAs help educate providers to improve quality measures and data capture, share best practices, and provide cost-efficient care. Working out of our Hazard, Kentucky office, Scott and Johnnie meet with practitioners at each of the provider group's four locations on a monthly basis.

Our local teams have a regular reporting and communication structure that moves from local to regional to statewide visibility. Scott reports Brandon Cornett, one of the three regional PR Managers working under Provider Services Manager Anthony Piagentini, who leads the statewide Provider Relations team. Johnnie reports to Quality Manager Sharon Hall, one of the three regional Quality Managers who work under statewide Quality Improvement Director Laura Betten. This structure maximizes local decision making, reveals trends at a regional or state level and allows for the deployment of resources to happen at the appropriate level when problems occur. It empowers local or regional staff to make decisions and solve problems but if issues are beyond their control, leadership are quickly engaged to deploy resources to create solutions.

Mr. Piagentini and Ms. Betten meet on a bi-weekly basis to discuss ongoing provider quality initiatives. On a monthly basis, the PR and Quality leadership collaborate on our P360 providers. P360 providers have large memberships or have ongoing initiatives like this that we are monitoring closely. These P360 meetings start with regional meetings with our PR and Quality Managers on a more local level and then roll up to a statewide conversation with Quality and PR leadership to ensure there is oversight from each level of the organization.

b. Provider education, communications, and support

The success of the initiative is critically dependent on active communication with providers, including sharing data with providers and educating providers on operational best practices. As the QPA for the program group's practitioners, Johnnie regularly communicates with providers at their offices to review quality measures and clinical practice guidelines, provide toolkits that support ongoing quality improvement activities, and share reports that track progress toward the initiative goals at the location and individual provider level, allowing each location to understand their performance and identify where improvement opportunities exist. Some of the customized reports developed for this initiative include a Behavioral Health Gaps in Care report, Social Determinants report, BMI report, Pre-Diabetes report, and Tobacco Cessation report. These reports, which are also available on the provider portal, offer the providers actionable information as they track progress toward program goals.

Regular communication and support for the initiative also occurs at the provider group level. WellCare holds a monthly JOC meeting with the provider group's leadership including the Program Administrator to review comprehensive performance metrics and mutually identify opportunities to improve the overall success of the partnership. WellCare representatives at

the JOC meeting include Provider Relations manager Brandon Cornett, Quality Manager Sharon Hall, Senior Project Manager Johnnie Akers, Pharmacy Manager Ayonna Talbert, Scott Smith and Johnnie Keaton. During the JOC meeting, summary reports that identify patterns by provider, by locations and by a provider at a specific location track progress toward the goals of the initiative. In addition, participants can ask questions and describe challenges involved in implementing the initiative; WellCare can incorporate feedback and improve support to the provider group in meeting incentive targets.

Addressing the Administrator's Concerns. It is at the monthly JOC meeting where the Program Administrator alerts Brandon and Sharon about some concerns the provider group is having. These include lack of provider engagement due to administrative burden; lower than anticipated Enrollee engagement; difficulties with EHR implementation and information exchange with KHIE; difficulty reaching out to a community housing agency that WellCare had indicated was interested supporting the initiative; concerns about the timeliness of feedback on reports submitted to WellCare; and concerns about the timeframe for incentive payments. Upon hearing these concerns, WellCare of Kentucky representatives at the local, regional and statewide levels take action to address these concerns and support the provider group in achieving success in the initiative.

c. Simplification of provider administrative burden

EHR Implementation and data exchange. Although the provider group does receive Admit Discharge Transfer (ADT) messages from its two area hospitals, Southeastern Kentucky Medical Center and Baptist Health, they are experiencing issues with their new electronic health record (EHR) system and they do not plan to contribute or retrieve information from KHIE until the EHR issues are resolved. To address the issue, Brandon and Sharon engage WellCare's Practice Transformation Specialist, whose role at WellCare is to assist practices in overcoming obstacles like EHR adoption that may prevent them from participating successfully in incentive-based quality initiatives. After an initial introduction to discuss the problem, Johnnie and the Provider Transformation Specialist work with the provider group to set up a process which would facilitate automated submission of EHR data between the group's provider locations and WellCare using a WellCare-formatted eMR “flat file”, enabling WellCare to gather quality measure data with no additional administrative burden on the part of the providers once the connection was set up. WellCare of Kentucky has also committed $2,000 to any practice to assist in EHR implementation. We offer to use this and explore other grants to bring needed financial resources to the practice resulting in proper EHR deployment so they can fully connect with KHIE.

As an additional interim workaround for exchanging data with WellCare, we offer the practices our Electronic Data Submission program, in which data is not required to be submitted in WellCare’s structured flat file format but in the file format of the practice’s choosing, including a file layout that is sent to other payers. We then work to ensure that the data exchange is established and that the administrative burden on the provider to report quality measures is minimized.

Varying Levels of Practitioner Engagement. Another concern the Program Administrator has brought up at the JOC is that some its practitioners are less engaged with the initiative, finding

it administratively burdensome as they are also participating in similar quality initiatives with other MCOs but with different required quality measures. Brandon and Sharon offer to set up a meeting with Provider Services Manager Anthony Piagentini and Quality Improvement Director Laura Betten to discuss with them how WellCare can modify the initiative to make it less burdensome for the provider group. At the meeting, Mr. Piagentini and Ms. Betten ask about what measures are being tracked in the provider group's similar quality initiatives with other MCOs and discuss if there are opportunities for alignment. They explain that while substantive changes would impact the desired outcomes, WellCare can be flexible on the implementation if that would increase compliance and the chances for successful outcomes. They offer to make some operational adjustments to the program to better align with their market experience if that would ease the burden of participation without sacrificing the overall goals of the initiative.

At the state level, Mr. Piagentini has the ability to work through the Managed Care Trade Association or through the practice executive leadership to recommend more substantive changes such as a re-examination of the data gathering process to better align with other MCOs so the practitioners have an easier time complying with the requirements. This commitment to industry collaboration extends through our leadership team and into the Department.

d. Enrollee engagement

Lower than Anticipated Enrollee Engagement. During the JOC meeting, the provider group's Program Administrator alerts the WellCare team that Enrollee compliance has been lower than anticipated, and that follow up and other outreach had been difficult due to Enrollees not returning calls and also incorrect Enrollee contact information. To address his concerns, Sharon offers the assistance of our Field-based Outreach Coordinators (FOCs) who begin reaching out to these Enrollees. The FOCs attempt to contact Enrollees by calling each of the phone numbers in the Enrollee's files. They also call home health agencies, pharmacies, discharge stations in hospitals, billing departments and any provider associated with the Enrollee to locate a viable phone number. In addition, we have a contract with the Commonwealth to use the KHIE tool through the state files without having to wait for it to be uploaded in our system.

Enrollees we are still unable to engage through the FOCs are reported to Brittany Triest, one of our non-clinical Enrollee Outreach Coordinators (EOCs) who works in the area. Our EOCs are frontline community health workers who live in the community and serve as liaison between the Enrollee, WellCare and the social and medical entities. As an EOC, Brittany leverages her relationships with local pharmacies, durable medical equipment (DME) suppliers and other community resources to obtain correct contact information for these hard-to-reach Enrollees and then establish a trusting relationship with them. From there she engages the Enrollees and facilitates a visit for them with their PCP and ensure they make it the provider's office.

Once at the office, providers participating in the initiative can connect Enrollees to programs and services that support the health behaviors they are seeking to change. Scott and Johnnie have facilitated this effort to engage Enrollees by educating providers about these programs through our **Community Connections** model, which was developed specifically for the WellCare of Kentucky in 2011 to effectively and systematically address unmet social needs that impact the health of our Enrollees. It features our **Community Connections Help Line (CCHL)**, a social

service referral telephone line that connects Enrollees and the community-at-large to community resources to address unmet social needs. We have four call centers nationally, with one located in Hazard. The model also features Community Engagement Partners who work with social resource organizations to address social barriers and support safety net infrastructure.

Scott and Johnnie also connect the providers with WellCare's Community Connections local Community Engagement Partner, Cortney Caudill, who assists them in making connections with community agencies who can support their efforts to meet targeted improvements of the incentive program. To support quality measures associated with BMI, nutritional intervention and reassessment, they refer Enrollees to the **University of Kentucky Cooperative Extension's Family & Consumer Sciences** Agents Rebecca Miller and Danielle Barret in Bell and Knox Counties, respectively. Enrollees can be placed in their monthly Lunch & Learn programs where families cook together and get tips that make cooking fast, healthy, and affordable. There they receive recipes, share shopping trips, and if in Knox County can shop at the **Knox County Farmer's Market**. Families qualifying for the **Kentucky Double Dollars Program** can double their SNAP benefits when buying produce, reducing the barrier of cost associated with fresh fruits and vegetables. In Bell County, Enrollees can utilize **Lighthouse Mission Center** for access to a monthly food box from their pantry.

To support **pre-diabetes intervention and reassessment**, Enrollees are referred to **Kentucky Homeplace (KHP)**, which provides no-cost Chronic Disease Self-Management (CDSMP) and Diabetes Self-Management (DSMP) health coaching to their clients in 30 counties in Eastern Kentucky. WellCare entered into a data-sharing agreement with KHP to identify WellCare clients who participated in their health coaching and classes and has provided $28,150 in funding for operational costs and so program participants could receive gift cards to help offset the cost of transportation across the 30 participating counties in Eastern Kentucky. Through this collaboration, WellCare and KHP removed social barriers and increased participation in the Stanford Model of CDSMP and DSMP health education for Enrollees and the broader community through a network of CHWs. Between 2016 and 2018, 1,903 WellCare Enrollees received 9,066 total services. There was a 16.4% reduction in ER visits, a 28.9% reduction in inpatient admissions, and a 31.5% reduction in inpatient days for Enrollees with diabetes.

To support **tobacco assessment and intervention**, Enrollees are referred to our **Tobacco cessation program.** In this program, Optum health coaches telephonically manage Enrollees by coaching and educating them to make lifestyle behavior modifications. During coaching sessions, Enrollees receive encouragement, problem-solving techniques, relapse prevention strategies, and a smoking cessation toolkit to reinforce training sessions and coaching calls. All enrollees can receive tobacco cessation counseling and pharmacotherapy.

In order to support Enrollees who may need assistance with doctors' appointments or accessing any of these community services, WellCare has funded a **"Healthy Stops Program"** in Knox County that allows any Knox County resident free transportation that is non-billable which includes, but is not limited to, doctor appointments, mental health assessments, dentist, food pantry, employment, and child care.

Housing Agency Unresponsive. Housing is another key concern in Knox and Bell counties and one of the social supports that affects health behaviors. Having heard that the provider group's Program Administrator was having difficulty contacting a community housing agency in the area, Cortney calls and then personally visits the agency's office to see why they haven't responded. When they are unable to assist, Courtney, who is familiar with all of the housing support agencies in the Knox and Bell County areas, will work with the others in the area who are ready to assist. Cortney will also connect with the Housing Authority in both Bell and Knox Counties so Community Connections has the most updated information about their services and their correct contact. Cortney can then ensure the provider has this information and make an introduction. Cortney will also connect the provider group with Jerry Lambdin, Director of Mission Outreach, at **Henderson Settlement** in Bell County who offers housing repair.

e. Vendor assessment of internal operation challenges and mitigation strategies

Concerns over Communication and Responsiveness. As soon as Brandon is made aware of the delay in receiving feedback on the provider group's initial submitted reports, he escalates the issue to Mr. Piagentini. Brandon also ensures that the Administrator is aware that he always has the ability to contact any level of WellCare leadership including the Chief Executive Officer William Jones at any time. WellCare leadership regularly give out their contact information including at Provider Summits because it is our philosophy that it is everyone's role to help support providers in the field.

With the understanding that the provider's concern is about reporting, Mr. Piagentini escalates the issue to Ms. Betten, who involves Shannon Johnston, Business Technical Analyst, to troubleshoot the issue. If Shannon is able to address the issue, he is empowered to solve the problem with the provider as soon as possible. If he requires support from the WellCare of Kentucky or the WellCare corporate team, he is empowered to coordinate additional support or solicit help from his leadership until the proper people are involved who can solve the problem. Leadership is structured to break down barriers for associates to help them solve problems more independently. They are not designed as an impediment to rapid problem resolution. After the solution is reached, James Smith from Provider Relations coordinates a meeting with the provider group to include the appropriate WellCare Subject Matter Experts. The purpose of the call is to resolve the problem with the provider and explain the changes we have implemented to fix this permanently.

Our Provider Relations team uses a variety of formal and informal methods to assess internal operations and improve when there are identified problems. The formal assessments are done via bi-weekly staff meetings and bi-weekly one-on-one meetings between the Provider Relations management staff and Mr. Piagentini. Both formal venues include a standing agenda item to review existing and escalating issues. As they are brought up, the management team collaborates to define the next steps and solution to the problem. If additional resources are required, Mr. Piagentini and his management team then set follow-up discussions with WellCare of Kentucky or corporate leadership such as our Quality, Operations or Claims teams to help solve the problem.

In the WellCare of Kentucky operations team, tracking reports capture these escalated issues which are reported out to leadership at least monthly. This provides a defined method from

issue to resolution where all operational challenges can find the right team to resolve while leadership is tracking and reporting on the progress of the problem. This monthly reporting is distributed to the Provider Relations team so they are aware of the current status of all operating problems.

Timeframe for Incentivizing Providers. In response to concerns over the extended timeframe for receiving the first incentive payments and the ability to impact providers' behaviors, Mr. Piagentini and Ms. Betten meet personally with the provider group's executive leadership to discuss the initiative. At the meeting, they offer to extend the timeframe by six months so that the providers have adequate time with the appropriate reports to achieve the goals and incentive payments. Additionally, they offer to move the first payment up by six months to encourage the group's practitioners to stay engaged.

D.

Implementation Plan

WellCare®
Beyond Healthcare. A Better You.

D. IMPLEMENTATION PLAN

1. Describe the Vendor's proposed approach to support the readiness review process, and include the following information:
    a. **A proposed Program Implementation Plan beginning from Contract Execution through ninety (90) days post go live, including elements set forth in the Contract, such as:**
        i. Establishing an office location and call centers.
        ii. Provider recruitment activities.
        iii. Staff hiring and a training plan.
        iv. Developing all required materials.
        v. Establishing interfaces to other Information Systems operated by Subcontractors, the Department, or others as required.
    b. **Proposed staffing to support implementation activities and readiness reviews.**
    c. **An overview of system operational implementation requirements and related milestones.**
    d. **Required MCO, Department, and other resources to ensure readiness.**
2. Describe potential limitations or risks that the Vendor has identified that may impact planning and readiness, and indicate the Vendor's proposed strategies to address those limitations and risks. Include examples of similar situations the Vendor has encountered with prior readiness planning and resulting solutions.

D. IMPLEMENTATION PLAN

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Since 2011, WellCare of Kentucky has collaborated with the Kentucky Department for Medicaid Services (the Department) as a managed care partner to strengthen and enhance achievement its goals for the Medicaid managed care system. Together, we have focused on and implemented initiatives and programs to better coordinate and integrate quality care for Enrollees in Contract-specified populations throughout the Commonwealth. The driving force behind these innovative initiatives and programs has been our willingness to partner with Commonwealth staff, our providers, and community-based organizations to empower and encourage Kentucky Enrollees to take an active role in their own health, make informed decisions about their health care, and close their care needs, ultimately leading to improved health outcomes.

Over the past eight years, our leadership staff and subject matter experts have worked with the Department to continually enhance its Medicaid managed care system to improve care for populations with chronic and complex conditions, align payment incentives with quality goals,

and drive quality care to improve health outcomes. We have successfully completed and passed all required readiness reviews for the Kentucky Medicaid Managed Care Contract. Our Kentucky Medicaid leadership team comprises thought leaders with significant managed care and Kentucky Medicaid expertise, including several who have played pivotal roles in prior readiness review activities. We plan to continue to build upon our existing expertise to support the readiness review process for the new Contract rebid. Examples of our prior successful implementations in Kentucky include:

2011 Kentucky Medicaid Managed Care Contract: Managed care was launched in Kentucky in 2011. The original Contract for the managed care program was awarded July 2011 for all regions within the state except Region 3. The project go-live date was November 1, 2011. Despite an aggressive four-month implementation period (and the first time the Commonwealth had implemented statewide managed care program), WellCare of Kentucky successfully passed all readiness requirements, with no corrective actions, prior to beginning operations.

WellCare of Kentucky received from the Department of Medicaid Services on December 21, 2012 the following note of appreciation for a successful readiness review:

> "I wanted to take this opportunity to congratulate and thank all of the WellCare staff that worked so hard to make the readiness review process successful. All of the documentation has been received and sent to CMS for their approval. I look forward to the year ahead and hope that we can work together to make managed care and WellCare a success story in Kentucky. Thanks for your continued support."
>
> – CINDY ARFLACK, DEPARTMENT OF MEDICAID SERVICES, MANAGED CARE OVERSIGHT BRANCH

2013 Kentucky Medicaid Managed Care Statewide Contract and Medicaid Expansion: In 2013, the Commonwealth moved to a statewide Contract that included Region 3 and added a new eligibility category, Medicaid Expansion Enrollees. This Contract was awarded October 2013, bringing both the Region 3 membership as well as the Medicaid Expansion Enrollees onboard for a January 1, 2014 go-live. WellCare of Kentucky successfully passed the readiness review, also with no corrective actions, prior to the launch of these programs. This Contract more than doubled our expansion enrollment, from approximately 45,000 to 100,000 Medicaid Expansion Enrollees, within six months of the program's launch. This successful transition to the new Contract provides evidence of our adaptability to a new regulatory environment and our ability to make quick business rule changes to accommodate new regulatory guidance and new programs. Today we serve 143,500 Medicaid Expansion Enrollees.

2015 Kentucky Medicaid Managed Care Contract Rebid: In 2015, the Commonwealth issued a renewal Contract, which was awarded in July 2015 with a go-live of November 2015. We addressed operational changes disclosed within the renewal contract. This necessitated swift operational changes, including the implementation of new privacy and security provisions, a new policy that prohibited offshoring of subcontracted functions, and new behavioral health medical necessity criteria. Despite the three-month implementation timeframe, WellCare of Kentucky implemented all changes timely and seamlessly, continuing to serve our Enrollees. Operations continued without disruption.

2020 Kentucky Medicaid Managed Care Rebid: Based upon the current solicitation documents, the Commonwealth expects to award the Managed Care Contracts Spring 2020 with a go-live date of January 1, 2021. As with our prior launches, we will conduct the 2020 Kentucky Medicaid Managed Care Contract Rebid Implementation in the same professional and thorough manner as our previous Kentucky implementations, applying all of our experiences, lessons learned, and best practices, which we have acquired and adopted.

WellCare of Kentucky has successfully completed four separate Medicaid program implementations in Kentucky since 2011. Each of these implementations was achieved as a joint effort between our accountable Kentucky leadership team working collaboratively with our enterprise Shared Services team.

WELLCARE IMPLEMENTATION EXPERIENCE

WellCare Health Plans, Inc. (WellCare) nationally has successfully completed and passed every Managed Care Contract readiness review since 2009. On a national level, WellCare transitioned more than 1,880,000 Enrollees on managed care contracts over the last eight years, as illustrated in **Figure D-1**, which presents the timeline, program and size of our most recent implementations.

WELLCARE IMPLEMENTATION EXPERIENCE

The total is more than **1,880,000** members over 10 years.

Implementation Description	2019	2018	2017	2016	2015	2014	2013	2012	Pre 2012	Number of members Transitioned
WellCare Transition of Florida children with special healthcare needs, including foster care, to our statewide Children's Medical Services (CMS) Health Plan	✓									68,000 members
Staywell Transition of Florida Medicaid members, including the SMI and LTSS populations	✓									78,000 members
Harmony Health Plan Statewide Medicaid expansion into all Illinois counties		✓								190,000 members
Care 1st Health Plan Arizona Transition of Arizona members		✓								100,000 members
Missouri Care Statewide expansion of Medicaid managed care into all 115 counties			✓							179,000 members
WellCare of Nebraska Statewide implementation of Medicaid managed care for Heritage Health			✓							70,000 members
WellCare of South Carolina Transition of Medicaid members from Advicare Corp.				✓						30,000 members
WellCare of New York Statewide carve-in of behavioral health services for adult Medicaid members				✓	✓					71,000 members
WellCare of New Jersey Transition of 46k Healthfirst members & implementation of LTSS program						✓				46,000 members
Staywell Transition of Florida Medicaid members from FFS due to mandated managed care						✓				394,000 members
WellCare of Kentucky Transition of 43k members due to realignment of MCOs (open enrollment): enrollment of 28k members (Reg 3 expansion)							✓	✓		71,000 members
WellCare of Kentucky Transition of members due to realignment of MCOs							✓			63,000 members
`Ohana Health Plan Statewide implementation of the Hawaii QExA, QUEST and CCS programs								✓	✓	30,000 members
WellCare of Georgia Transition of Medicaid members									✓	490,000 members

Figure D-1. WellCare implementation experience

WELLCARE OF KENTUCKY ORGANIZATIONAL STRUCTURE

WellCare of Kentucky's locally based transition team, led by Chief Executive Officer William (Bill) Jones and Chief Operating Officer Benjamin (Ben) Orris, assumes overall responsibility for the Kentucky Implementation Plan activities and readiness review requirements. They lead the WellCare of Kentucky Program Steering Committee, Program Leadership, Program Management, along with other dedicated resources across the organization and assigned to the Kentucky Implementation.

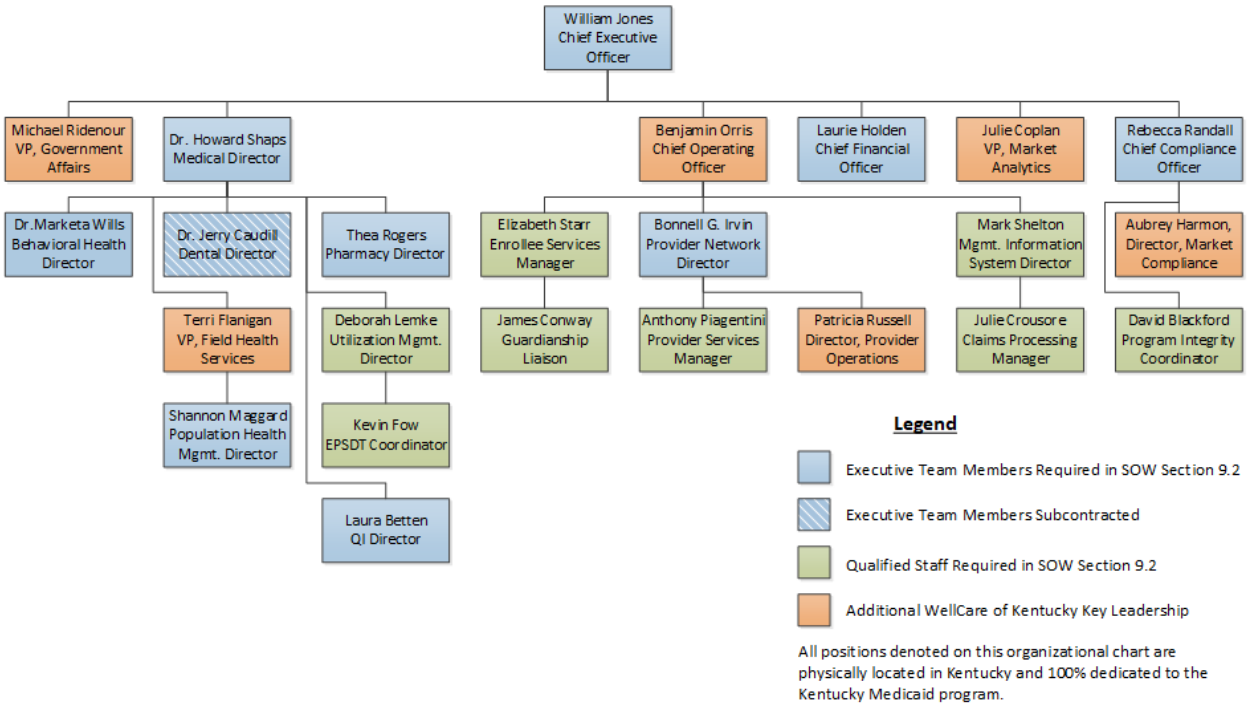

Figure D-2. WellCare of Kentucky Organizational Structure

1. Describe the Vendor's proposed approach to support the readiness review process, and include the following information:

Our approach to implementation and readiness review calls for an alignment of dedicated resources across the WellCare organization and includes the existing WellCare of Kentucky leadership team, our Project Management Office (PMO), and Business Area Teams. The existing WellCare of Kentucky Team, staffed as part of current operations, will continue to conduct normal business operations for the existing Kentucky Medicaid Managed Care Contract. In addition, they serve as the subject matter experts and stewards for the new Medicaid Managed Care Contract implementation and requirements.

Upon Contract award, our primary focus to align expectations around project meetings, 30, 60, 90, and 120-day deliverables, key milestone dates, and requirements. As documented in the Project Initiation section of the Implementation Plan, we assign a dedicated Project Management Team, including a dedicated Readiness Manager responsible for all readiness review activities. The Readiness Manager works hand-in-hand with the Kentucky PMO, in close

collaboration with the Department's Readiness Team, and in unison with our Compliance and Regulatory Affairs Team to usher policies and procedures and other deliverables through the Department's review and approval process. Our Readiness Manager provides oversight for the overall readiness review process and is in direct contact with our Business Owners and Business Leads for required updates and revisions to policies and procedures and other deliverables, as well as requirements and evidence for Desk Readiness and the Onsite Readiness Review.

Other Project Initiation activities include engaging with business leads and subject matter experts from each of our business areas to conduct a GAP requirements assessment of the overall Medicaid Managed Care Contract and Appendices, and document any important information about each of the requirements and assign business owners for accountability. All GAP Assessment findings serve as input to the final and baselined Implementation Plan.

Our draft Implementation Plan is based on the Procurement Milestone dates in **Table D-1**.

Table D-1 Implementation Plan Procurement Milestones

Procurement Milestones	Start Date	Finish Date
Kentucky Request for Proposal Posted	1/10/2020	1/10/2020
Kentucky Proposal Response Submission	2/7/2020	2/7/2020
Kentucky Contract Award Date	Spring 2020	Spring 2020
Kentucky Readiness Review - Anticipated	7/1/2020	10/1/2020
Kentucky Project Go-Live Date	1/1/2021	1/1/2021
Kentucky Post Go-Live + 90-Days	1/1/2021	4/1/2021

Our PMO meets at least weekly with our business area teams to collaborate on project activities, risks, issues, action items, and updates to the Implementation Plan. This information is provided to our Kentucky Program Leadership Team, which meets weekly to review the overarching project status, review weekly synopsis for project status updates, and serve as the key liaison(s) with the Department. Our Program Steering Committee meet weekly to provide executive program oversight, make needed decisions, remove roadblocks, and resolve escalations.

a. A proposed Program Implementation Plan beginning from Contract Execution through ninety (90) days post go live, including elements set forth in the Contract, such as:

i. Establishing an office location and call centers.
ii. Provider recruitment activities.
iii. Staff hiring and a training plan.
iv. Developing all required materials.
v. Establishing interfaces to other Information Systems operated by Subcontractors, the Department, or others as required.

WellCare of Kentucky's Implementation Plan supports the successful implementation of all the requirements outlined in the Request for Proposal (RFP) and the Medicaid Managed Care Contract. This draft Implementation Plan was developed by WellCare's Business Owners and Business Leads, also referred to as the Implementation Plan Oversight Team, as described later in this section.

The implementation plan is included as **Attachment D WellCare of Kentucky's Implementation Plan.**

We organized the Kentucky Implementation Plan by business areas. For each of these functional areas, we have detailed project plans, which roll-up into one cohesive master Implementation Plan. WellCare of Kentucky's Implementation Plan business areas are:

- Project Initiation
- Readiness Review
- Facilities
  - Evaluate existing office locations and call center/customer service facility
- Human Resources
  - Staff recruiting, hiring, and onboarding
  - Training plan development and delivery for external partners and key stakeholders
- Finance
- Information Technology and Reporting (included establishing interfaces to other Information Systems operated by Subcontractors, the Department, or others as required)
- Product
- Provider Operations
- Channel Communications, including development of all required materials
- Eligibility & Enrollment
- Stakeholder Engagement
- Population Health
- Network, includes provider recruitment activities
- Pharmacy
- Compliance and Regulatory
- Quality and Analytics
- Legal

- Project Go-Live

Our Implementation Plan is validated by readiness review, where all the activities and teams come together to demonstrate our services and solutions to the Commonwealth of Kentucky. We will submit the final Implementation Plan at Contract award or as otherwise specified by the Department.

b. Proposed staffing to support implementation activities and readiness reviews.

As stated above, we align staffing and assign a dedicated PMO Project Team, which includes a dedicated PMO readiness manager who oversees all readiness review activities. Our existing WellCare of Kentucky team, staffed as part of our current operations, will continue to conduct normal business operations for the existing Kentucky Medicaid Managed Care Contract. In addition they serve as the subject matter experts and stewards for the new Medicaid Managed Care Contract implementation and requirements.

Project Initiation activities include identifying the appropriate staff from each of our business areas to support the overall implementation. We refer to these staff as our Implementation Plan Oversight Team. This team is accountable for day-to-day implementation and readiness review activities and for providing weekly status reports to the Kentucky Program Leadership Team and Program Steering Committee. The Kentucky PMO PM coordinates all the activities of the Implementation Plan working closely with our Implementation Plan Oversight Team. Refer to **Table D-2** for the WellCare of Kentucky Implementation Plan Oversight Team.

Table D-2 WellCare of Kentucky Implementation Plan Oversight Team

Business Area	Business Owner	Business Lead
Overall Implementation plan	Ben Orris/Angela Flynn	PMO PM
Project Initiation	Paulo Vieira	PMO PM
Readiness Review	Paulo Vieira	PMO PM
Human Resources	Ray McComb	Allison Porter
Facilities	Alex Valdes	Shane Mihok
Finance	Jeff Skobel	Laura Holden
Information Technology & Regulatory Reports	Bob Klopotek	Rhonda Mitchell
Product	Felicia Thomas	Deanna Creamer
Provider Operations	Jessica White	Talena Jones
Channel Communications	Terrence Southward	David Dawkins
Marketing	Cindy Hatcher	Brandon Lau

Business Area	Business Owner	Business Lead
Community Engagement & Unmet Social Needs	Emmalee Ericksen	Elizabeth Starr
Quality & Analytics	Laura Betten	Rebecca Carpenter
Population Health Services	Terri Flanigan	Shannon Maggard
Network	Bonnell Irvin	Candice Bowen
Pharmacy	Bill Davies	Thea Rogers
Compliance and Regulatory	Rebecca Randall	Aubrey Harmon
Legal	Greg Stiefvater	Nina Ruparel

c. An overview of system operational implementation requirements and related milestones.

We include system operational implementation requirements in the overall implementation plan managed and maintained by the PMO to ensure independent oversight and alignment with the large scope of the enterprise activities and DMS's objectives and timelines. We will also dedicate a Project Manager located in Kentucky to liaison with DMS and other stakeholders (e.g., other MCOs, Department of Juvenile Justice, Department of Community Based Services, etc.) to ensure coordination activities are monitored closely by someone intimately familiar with the Commonwealth's needs.

As part of the process of submitting our RFP response, WellCare of Kentucky has identified the draft list of system operational implementation requirements and expectations, including the identification of any system modifications and interface development anticipated to be necessary to support the Contract requirements and effectively meet the needs of our Enrollee and provider community. The proper planning for any necessary funding and resource commitments, occurs prior to Contract award to ensure WellCare of Kentucky's ability to begin execution of these activities immediately upon award.

We will also maintain the Business Owners and Business Leads in **Table D-2** above during all stages of the implementation to service as our operational subject matter experts and stewards for the new Medicaid Managed Care Contract implementation and requirements.

High-level system operational requirements and the currently projected milestones are outlined in **Table D-3**. This list of requirements and associated milestones is further reviewed, refined, and incorporated into the PMO implementation plan upon Contract reward.

Table D-3 High Level System Operational Requirements and Milestones

System Operational Implementation Milestones	Number of Days
Initial identification of new interfaces and system requirements	28

System Operational Implementation Milestones	Number of Days
Internal review, communication and validation of requirements, funding and commitment	60
Development, testing, and validation of any new interface and system requirements	180
Review of production system capacity requirements and implementation of any required enhancements and upgrades	90
Establishment of System Readiness Review environment	60
Deployment of changes and validation of Readiness Review environment	14
System Readiness Review activities	60

d. Required MCO, Department, and other resources to ensure readiness.

Our implementation and readiness review activities do not happen in a silo and affect every aspect of the project, including processes, procedures, technology, and resources collaborating together. Successful implementations require coordination with other MCOs, the Department, and other State agencies, such as the Department for Behavioral Health, Developmental and Intellectual Disabilities, the Department for Community Based Services, and the Cabinet for Health and Family Services' independent ombudsman program.

For example, when we prepared for the anticipated July 1, 2018 Kentucky HEALTH Implementation, we actively engaged in Kentucky HEALTH implementation meetings with the Department and other MCOs. Director of Market Analysis Robin Rhea was an active participant and leader in those implementation meetings.

Similarly, we engage with the Department and with other MCOs to ensure a smooth transition and continuity of care for Enrollees newly assigned to WellCare of Kentucky from other MCOs. This includes outreach to a relinquishing MCO's care coordinator for our transitioning Enrollee to secure copies of the Enrollee's care plan and to arrange the Enrollee's transition of care.

2. Describe potential limitations or risks that the Vendor has identified that may impact planning and readiness, and indicate the Vendor's proposed strategies to address those limitations and risks. Include examples of similar situations the Vendor has encountered with prior readiness planning and resulting solutions.

The PMO identifies and discusses risks, issues and action items as part of all of our weekly meetings, and documents these items into the project RAID log. Risk items are shown on all of our project dashboards and status reports.

We follow a standard five-step approach to risk management, as shown in **Figure D-3**.

Figure D-3: Risk Management Steps

Risk Identification: When risks are identified they are documented in our Kentucky Project RAID log

Risk Evaluation: We analyze each risk for probability and potential impact to the implementation and add a priority ranking

Risk Mitigation: Our project team works together to determine the mitigation strategy

Risk Contingency: The project team determines contingencies where needed

Risk Communication: Risks are an integral part of our weekly Executive Leadership Team meeting and status report, our Steering Committee Meeting and status report, and our work stream team meetings and status reporting to ensure effective communication, timely project delivery, issue resolution, scope control, and escalation to appropriate parties when necessary.

POTENTIAL LIMITATIONS OR RISKS

As a long-term incumbent plan within Kentucky since 2011, we have fully implemented the Kentucky Medicaid Managed Care Contract and already have in place the vast majority of the requirements in the Medicaid Managed Care Contract and Appendices. We have thoroughly reviewed the new Contract and are confident of our ability to implement the new requirements and meet readiness review standards. **Table D-4** contains key new requirements in the new Contract that will impact planning and readiness and our strategy to address them.

Table D-4 Potential Limitations or Risks and Strategy to Address

Potential Limitations or Risks	Strategy to Address
All authorizations or pre-authorizations for treatment of an Enrollee with substance use disorder are now treated as expedited reviews.	We staff to accommodate the new requirement and configure our system to treat these authorizations as an expedited review with a 24-hour response with real-time monitoring reports.
Increased transparency in Utilization Management requirements	All of our Clinical Coverage Guidelines, Claims Policy Guidelines, and Claim Edit Guidelines are available through our website. Currently, our prior authorization requirements are available through our on-line authorization look up tool on our Provider Website. We are currently engaged in a project to enhance our provider web portal to expand the capabilities of our look-up tool. Once completed, we educate providers on this tool through all avenues of provider communication, including in-person

Potential Limitations or Risks	Strategy to Address
	meetings, summits, newsletters, and our Provider Manual.
Provider inquiries responded to within two business days	We assure appropriate staffing to meet these requirements and establish real-time reports to monitor turnaround times.
New Population Health Management program requirements	We build on our local expertise as well as WellCare's national experience with Population Health Management as we implement this new program. Our Population Health programs are in line with NCQA guidelines and will be NCQA Population Health Management certified.

EXAMPLES OF SIMILAR SITUATIONS WE HAVE ENCOUNTERED

WellCare of Kentucky is an experienced managed care partner, as demonstrated by our ability to take on and implement program changes, including new populations, quickly and efficiently with minimal Enrollee and provider abrasion. Examples of our ability to implement new programs or changes quickly and successfully include:

2014 Medicaid Expansion: The Contract was awarded November 1, 2013 and went live January 1, 2014. WellCare of Kentucky accepted 45,000 Medicaid Expansion Enrollees at go live. This number quickly grew to 100,000 within six months and 136,000 by the middle of 2015.

Kentucky HEALTH Readiness: WellCare of Kentucky fully operationalized the Kentucky HEALTH program for an anticipated implementation date of July 1, 2018 when it was delayed by a federal judge on June 30th, the day before go-live. WellCare of Kentucky employees spent the weekend reverting the system to the pre-waiver implementation status with minimal disruption to our Enrollees.

Emergency Response and Disaster Recovery Plan

WellCare®
Beyond Healthcare. A Better You.

E. EMERGENCY RESPONSE AND DISASTER RECOVERY PLAN

Describe the Vendor's proposed emergency response and disaster recovery plan, including a summary of how the plan addresses the following areas:

1. **Essential operational functions and responsible staff members;**
2. **Plans to ensure critical functions and continuity of services to Providers and Enrollees will be met;**
3. **Staff training;**
4. **Contingency plans for covering essential operational functions in the event key staff are incapacitated or the primary workplace is unavailable;**
5. **Approach to maintaining data security during an event;**
6. **Communication methods with staff, Subcontractors, other key suppliers, and the Department when normal systems are unavailable; and**
7. **Testing plan.**

E. EMERGENCY RESPONSE AND DISASTER RECOVERY PLAN

Describe the Vendor's proposed emergency response and disaster recovery plan, including a summary of how the plan addresses the following areas:

WellCare of Kentucky will comply with the Department for Medicaid Services' (DMS) expectations and requirements as specified in in Appendix Q Cabinet for Health and Family Services Contractor Security Requirements, Disaster Recovery (DR) Drill Suggestions and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

We have reviewed Appendix Q and confirm our Business Continuity Plan (BCP) and a Disaster Recovery (DR) plan are tested and updated on an annual basis. We understand that the Cabinet for Health and Family Services (CHFS) will be invited to all meetings related to Disaster recovery Drills and that the Commonwealth and CHFS maintains the right to audit at any time without notice. In accordance with requirements, we will submit a customized comprehensive Business Continuity Plan (BCP), Business Impact Analysis (BIA), and DR plan to DMS annually. Our current BIA,BCP, DR plans are included (electronically) as **Attachment E-1 BIA, Attachment E-2 BCP, Attachment E-3 Emergency Preparedness Plan,** and **Attachment E-4 IT Disaster Recovery Plan.** Our comprehensive Business Continuity and Disaster Recovery Plan have ensured service continuity for our enrollees, providers, and state partners for 30 years in 12 states. Hardened data centers in multiple locations (including Florida, Georgia and Michigan), our recovery site in Carlstadt, NJ, and operations across the United States(including Hawaii) give us geographic diversity that we leverage to ensure no single local, statewide, or regional event in Kentucky prevents us from delivering services. Experienced Business Continuity (BC), Disaster Recovery (DR), and Emergency Response teams prepare for threats and disasters, ensuring system availability and minimal disruption of services, regardless of extraordinary events. When requirements, information systems or policies and procedures change we use an integrated

update process. We test our plans at least annually at the corporate and local levels, and collaborate with DMS to make updates to ensure constant emergency readiness. As required in Appendix Q, we will schedule a review of the test of our plans with DMS' team, including security staff.

A key component of our Emergency Preparedness and Disaster Recovery operations is the ongoing monitoring of weather and other potential risks to operations and continuity. Based on the potential scope, timing, and severity of the risk event WellCare is able to take preparatory actions to increase our ability to complete recovery capabilities. As just one example, 3 days prior to the arrival of Irma in Florida, WellCare had already deployed away teams at our Carlstadt, NJ recovery site and staged the recovery failover should it have been required.

Historically we have maintained stable operations in such situations, evidenced by continual, uninterrupted operations through storms over the last two years: Harvey (Texas), Irma (Florida), Lane (Hawaii), and Florence (North Carolina). We are prepared to enact our IT Disaster Recovery plan if necessary, however, we have not had to failover, as our hardened facilities have remained operational.

The viability of our contingency planning and our ability to execute on those plans was demonstrated through real world situations. WellCare of Kentucky works with the Commonwealth to ensure its members receive disaster assistance as well as uninterrupted access to health care services and supplies during natural disasters, as well as other tragic events. Recent examples include:

- In August 2018 WellCare's local Community Engagement Partner met with Jeff Tackett, Community Outreach Coordinator with Water into Wine Food Pantry, a non-profit organization created to help families impacted by tornadoes in Eastern Kentucky. We provided a $5,000.00 grant to Water into Wine to purchase commercial refrigeration to store milk and dairy products. This has also assisted in the storage of fresh fruit and vegetables that are susceptible to a short shelf life.
- In February 2018, WellCare donated $10,000 to Marshall County for long-term counseling and support in the wake of the school shooting that happened at Marshall County High School counseling support where two students were killed and 16 suffered gunshot wounds.

We also leverage the experience of our affiliates in other states. For example, during Hurricane Irma, our Florida affiliate had a dedicated team committed to ensuring Enrollees continuity of care. The transportation team prioritized transportation to critical care appointments including dialysis, chemotherapy, and behavioral health services (i.e., methadone treatment). They met daily during the span of the storm to identify any barriers to securing transportation such as fuel shortages, power outages, and road hazards preventing access, and remediated these barriers and ensured transportation to these critical care appointments were completed, so Enrollees did not have any gaps with their care. During this time, WellCare maintained constant communication with all stakeholders both internal and external. Technology such as the IVR messages and web portal were used to inform stakeholders on the expected delay of services due to emergency. Our Florida affiliate achieved this without any disruption in service and

balanced the work across all locations to ensure that impacted and non-impacted states received the same level of service.

Information System Stability During and After a Disaster Event: Our operational, infrastructure, security and communications environments contain preventive measures to ensure system availability, data integrity and business continuity. The key components of our plan to recover from disaster scenarios include the following:

- WellCare employs a Tier III certified data center that is highly secured utilizing key systems and personnel. The data center includes exterior and floor level biometric security systems and has built in redundancies for power, HVAC (heating, ventilation, and air conditioning), and fire detection and suppression. Additionally, the data center has redundant data connections and a robust switched network to support continuous connectivity.
- WellCare has contracted with Sungard Availability Services to provide recovery services, co-location of key WellCare systems and managed IT Services in the event of a disaster. WellCare has deployed redundant systems at Sungard's state of the art Carlstadt, New Jersey data center and has access to key systems, technology and personnel in the event of an emergency at WellCare's primary location. The data center includes exterior and floor level biometric security systems and has built in redundancies for power, HVAC (heating, ventilation, and air conditioning), and fire detection and suppression. Additionally, the data center has redundant data connections and a robust switched network to support continuous connectivity.
- Leveraging multiple load-balanced servers for our applications, including redundant hardware configurations for network and storage, which prevents individual failures from impacting operations.
- Leveraging virtual servers to enable the staging and rapid deployment of new application instances and fail-over of applications across multiple servers and geographies without production disruption.
- Supporting access to applications through multiple methods, including onsite through user network connectivity, remotely through direct connectivity and remotely through secure Internet access to the central data center to enable ongoing access to production systems.
- Maintaining – and requiring subcontractors to maintain – fail-over connectivity to our primary and recovery data centers to ensure access to production systems whether in primary or recovery locations.
- Actively monitoring weather and news media for natural and man-made events that would threaten the security of our Corporate Data Center or local business operations and responding pre-emptively.
- Cross-training staff and leveraging multiple locations to allow workloads to migrate to trained staff when needed.

1. Essential operational functions and responsible staff members

Every Enrollee and provider-facing department at WellCare has a detailed business impact analysis (BIA) and business continuity plan (BCP) to ensure continuity of services to our Enrollees and providers. In the event of an emergency, our business continuity plan members employ a work from home and work load shifting strategy, engaging our corporate office to ensure continuity of communications and all critical business functions.

- The BIA is an essential component of any business continuity program. The BIA identifies, quantifies and qualifies the business impacts of a loss, disruption or interruption of critical business processes in an organization. In addition, the BIA provides pertinent data from which appropriate continuity and recovery strategies can be determined. Each BIA describes the critical business functions performed within that Business Unit and the resources required to support these processes. Resources include people, systems and applications, vendors, among others. The content of the BIA provides the organization with a tool to fully characterize and correlate these resources.
- Each BCP describes the critical business functions performed within that Business Unit as indicated in their BIA, resources required to support these processes and how to maintain these processes during an emergency event. The content of the BCP provides the organization with a tool to maintain business continuity during an outage.
- WellCare's emergency plans ensure continuity of services to our Enrollees and providers. If there is an impact to our Corporate office:
    - All enrollee service operations can be shifted to other market offices and vendors, and our associates will be working remotely to continue operations.
    - Claims processing can be shifted across multiple on-shore vendors, and associates will be working remotely
    - Appeals and Grievances can be shifted to the California, Florida and Missouri offices, and the vendor, Results.

CALL CENTERS

- The call center volume for Kentucky Enrollees is handled by our back up centers in Columbia, SC, work from home agents in Kentucky, Results in Winter Haven, FL; which provide back up for each other. We also have trained back-up capacity centers in 26 locations across United States to provide temporary support while we investigate the issue and make adjustments to restore the call center to full strength
- Kentucky provider is handled by TelePerformance, Results and C3 at the following sites which provide back up for each other:
    - TelePerformance in Columbia, SC
    - TelePerformance in Augusta, GA
    - TelePerformance in Fort Lauderdale, FL
    - Results in Paris, TX
    - C3 in Tucson, AZ

- WellCare utilizes real time replication along with NetBackup from our Data Domain, employs constant monitoring with various software on all systems and applications, and have appropriate firewalls and security in place.
- Plans are tested at least once a year, via a mock disaster exercise

RESPONSIBLE STAFF MEMBERS

WellCare of Kentucky has identified critical business processes and key personnel, depicted in **Table E-1**, who would be instrumental in ensuring business continuity and a quick recovery of the Business Unit. These associates would be the first responders and responsible for the execution of the recovery activities.

Table E-1: Critical Operational Functions

Critical Operational Functions	Staff Member	Responsibilities
Field Case Management	Terry Flanigan, VP, Field Health Services	Performs outbound Enrollee phone calls to coordinate care and meet their special needs, as well as inpatient hospital discharge planning
Reporting & Analytics	Rebecca Randall, Chief Compliance Officer	Responsible for the completion and submission of all state Regulatory reporting
Network Development	Bonnie Irvin, Provider Network Director	Responsible for providing a network of physicians, pharmacies, hospitals, and other health care providers through whom it provides the items and services included as “Covered Services”
Provider Relations	Tony Piagentini, Provider Services Manager	Responsible for all provider specific and widespread education.
Field Operations	Patricia Russell, Director Provider Operations	Intakes all new/revised provider contracts, load contracts into OmniFlow and store the hardcopy original contracts
Field Health Analytics	Kim Fighter, Director, Strategic Initiatives	Performs state specific functions, such as, create HS&R reports for each hospital in the state, create regulatory reports using SAS and Toad, analyze vendor data, analyze cost trends, pull quarterly

The critical operational functions are backed up by our key personnel who are instrumental in maintaining communication with DMS, associates, Enrollees and providers in the advent of any disaster.

The list below, in **Table E-2**, is in a descending order starting with the Business Unit leader, who would be the person in charge of the Business Unit during an emergency.

Table E-2: Communication Responsibility Table

Key Members	Title	Responsibilities
Bill Jones	Chief Executive Officer	Communicates with all business unit leaders and DMS and CHFS
Benjamin Orris	Chief Operations Officer	Responsible for Business Unit during emergency event. Ensures associates are working from home effectively, works with IT to ensure system access, and facility recovery and readiness point person
Allison Porter	Human Resources Business Partner	Communication to all associates
Bonnie Irvin	Provider Network Director	Manages communications to Department and providers
Aubrey Harmon	Director, Market Compliance Officer	Mitigates compliance risks
Rebecca Randall	Chief Compliance Officer	Manages communications with State Partners

2. Plans to ensure critical functions and continuity of services to Providers and Enrollees will be met

Ensuring minimal disruption to providers and enrollees should a disaster impact our operations is the core tenet of WellCare's extensive emergency preparedness planning. On the business side, functions that would impact services to Providers and Enrollees are accounted for, and alternative approaches are outlined in the Business Impact Analysis (see Attachment E-1 BIA, provided electronically). WellCare's Business Continuity Plan (see Attachment E-2 BCP, provided electronically), details how services will continue during a disaster event, including, but not limited to, the rerouting of calls, implementing remote work options, leveraging corporate resources and manual work-around so that enrollees and providers will always have a way to reach WellCare, and continuity of services is assured. For instance, the plan includes a section on business continuity and work-around solutions for Provider Relations, Case Management and Claims.

All of the business functions are supported by a fully networked Information System that has multiple failovers and back-up systems to ensure system functionality regardless of the situation. Continuity and recovery plans for WellCare's information systems are detailed in our Corporate Emergency Preparedness Plan (See Attachment E-3 Emergency Preparedness Plan, provided electronically), and the IT Disaster Recovery Plan (See Attachment E-4 IT Disaster Recovery Plan, provided electronically).

The Information Technology Disaster Recovery Plan (IT DRP) establishes the WellCare IT data center remote recovery procedure. The plan outlines the procedures to be executed in the event the Corporate Data Center is impaired and information or telecommunications processing capabilities are not available.

WellCare has contracted with Sungard Availability Services to provide recovery services, colocation of key WellCare systems, and managed IT Services in the event of a disaster. WellCare has deployed redundant systems at Sungard's state of the art Carlstadt, New Jersey data center and has access to key systems, technology, and personnel in the event of an emergency at WellCare's primary location. The data center includes exterior and floor level biometric security systems and has built in redundancies for power, HVAC (heating, ventilation and air conditioning), and fire detection and suppression. Additionally, the data center has redundant data connections and a robust switched network to support continuous connectivity. The plan includes procedures to restore IT managed services and information processing infrastructure. Additionally, this document contains procedures to manage activities in preparation of a pre-announced event that will have significant impact to the Corporate Data Center and affecting information or telecommunications processing. The plan addresses events including, but not limited to the following: extended power outage, extended network outage (LAN/WAN), severe data corruption, security threats, environmental disruptions and localized disasters.

The IT DRP is activated per the direction and authority of the WellCare Corporate Emergency Preparedness Committee (EPC) in cooperation with WellCare Information Technology (IT) leadership. The disaster preparation procedures are executed in its entirety or in part depending on the available amount of time leading up to the event. A preparation timeline is provided to show the various steps to be taken prior to the event.

The disaster recovery procedures are executed after the event to restore IT services and information processing infrastructure at a remote data center if the Corporate Data Center is not available. The same steps and procedures are followed regardless of the type of event or if preparation procedures were executed. The recovery procedures identify restoration decision points, criteria, actions, contacts and responsible individuals. These procedures are to be executed by qualified personnel with experience in the respective technology. The scope of this plan includes restoration of information processing capabilities and addresses events that include, but are not limited to:

- Extended Power Outage
- Extended Network Outage (LAN/WAN)
- Catastrophic Data Corruption
- Security Threat
- Localized Disaster

Event Watch procedures are activated approximately 72 hours prior to the anticipated event impact. The following procedures are initiated at the discretion of the IT DR Incident Management Team based on event information from a recognized, official source; i.e., FEMA, National Weather Center and local stations.

- Issue Event Alert: The IT DR Incident Management Team will deem when it is necessary and will Issue an Event Alert to all IT managers and above by any and all means of communications to include Emails, Outlook Calendar, SMS and Voice.

- Alert DR Vendor (SunGard): The IT Infrastructure Management will notify SunGard of an Alert Status.
- Based on the scope, scale and anticipated timing of the event, WellCare will take proactive steps to increase our recovery capability. These steps can include actions such as sending an away team to the recovery site to proactively prepare for the potential need to switch operations to the recovery site, as would be the case of a Hurricane threatening a data center.

REMOTE DATA CENTER RECOVERY PROCEDURES

In the event of a data center interruption, all detailed recovery procedures are stored electronically on the SunGard Recovery portal. The following will be recovered in the following order:

- Validate Network
- Configure DR Host Servers
- Configure/Allocate DR Storage (SAN/NAS)
- Establish Remote DR Citrix Farm
- Build DR Exchange Server
- Verify DR Backup Domain
- Restore Critical System Back-up Images
- Recover and Verify Critical Applications

APPLICATIONS RECOVERY SEQUENCE

WellCare systems are recovered in the following order by the Recovery Time Objective (RTO) and the Maximum Tolerable Period of Disruption (MTPD) as mandated by the Business in the annual update to the Business Impact Assessment (BIA). Refer to the Attachment E-1 BIA for the Tier 1 Mission Critical Applications and the 2015 BIA.

- Timeframe (D= Declaration Point + RTO to MTPD)
- Tier 1 – Timeframe (D+24 to 72hrs) 5.1
  - Customer facing applications
  - Critical ERP systems
  - Vendor facing applications
  - Channel Communications
- Tier 2 – Timeframe (D+ 24 to 96hrs)
  - Surround Applications and Tools;
- Tier 3 – Timeframe (D+ 24 to 120hrs)
  - BI / Reporting
- Tier 4 - Timeframe (D+ 24 to 144hrs)

- Ancillary

3. Staff training

All WellCare associates are provided Emergency Preparedness Training upon hire and at least annually thereafter. The training has a consistent focus on ensuring employees' safety, the continued safeguarding of Protected Health Information (PHI), and the protection of and continuity of care for our enrollees during a disaster. Our Emergency Preparedness Committee (EPC), which is responsible for facilitating an inter-departmental focus on our emergency preparedness, business continuity and disaster recovery planning initiatives and execution, created and maintains our corporate level employee training. Our Emergency Preparedness Training educates all associates on the various methods of protecting WellCare plan and enrollee information during an emergency. The module is designed to provide employees information to facilitate a rapid, coordinated and effective response during any emergency. WellCare supplements these efforts through additional training and information sharing with local employees related to specific local business continuity plans (BCPs) such as alternate sites.

Our employee training emphasizes the protection of **"three Ps"** when responding to any emergency: People, PHI (Protected Health Information) and Production.

PROTECTING PEOPLE: OUR ASSOCIATES ARE TRAINED ON THE FOLLOWING KEY AREAS:

- Associates' responsibilities during an emergency
- Steps to take during a safety incident
- How associates will be notified in the event of an emergency situation, including safety incidents and natural disasters

PROTECTING PHI: THIS MODULE FOCUSES ON METHODS TO SECURE DOCUMENTS CONTAINING PHI DURING AN EMERGENCY. THIS INCLUDES, BUT IS NOT LIMITED TO, THE FOLLOWING:

- Locking computers before leaving the work area
- Securing PHI materials in a locked drawer or having managers assigned to collect PHI/Confidential materials
- Security protocols to handle company laptops while working from a location offsite during an emergency
- Guidelines to protect paper PHI if it needs to be taken offsite during an emergency

PRODUCTION: OUR ASSOCIATES RECEIVE GUIDANCE ON ENSURING ENROLLEES AND PROVIDERS HAVE ACCESS TO CARE AND SERVICES BEFORE, DURING AND AFTER AN EMERGENCY. EVERY BUSINESS UNIT THROUGHOUT WELLCARE PROVIDES BUSINESS CONTINUITY TRAINING TO THEIR STAFF ANNUALLY. AT A MINIMUM TRAINING INCLUDES:

- How to obtain update their emergency contact information via Human Resources
- How to obtain a copy of the associate emergency contact information

- How to execute the Call Tree
- Roles and responsibilities for all associates and specifically the Recovery Team during an emergency
- Typical preparation activities (specific to their business unit)
- Typical actions if there is a loss of facilities (specific to their business unit)
- Typical actions if there is a loss of the data center (specific to their business unit)

4. Contingency plans for covering essential operational functions in the event key staff are incapacitated or the primary workplace is unavailable;

In the event of an emergency where the primary workspace is unavailable, WellCare has a provision that allows associates to work from home or from an alternative/remote location. Many associates are on laptops which provide for secured VPN access to network. Additionally, we have multiple offices around Kentucky that our associates can relocate to, including Owensboro, Louisville, Bowling Green, Lexington, Ashland, and Hazard. If the key employees in Kentucky are incapacitated, the workload will shift to the Tampa (corporate) office or a vendor's site in order to ensure no disruption of services for enrollees, particularly at a time when they may need us most.

As detailed in the attached WellCare Business Continuity Plan (See Attachment E-2 BCP, provided electronically), each business function and designated member of the Business Unit Recovery team are identified. This is critical to ensure all contingencies are in place and can be executed in the event key employees are incapacitated or the primary workplace is unavailable. Very specific steps to be followed for each function at each stage of an emergency are laid out in the plan. For instance, one day prior to an anticipated event such as a hurricane, the plan outlines communication procedures, mobilization and evacuation protocols and reporting responsibilities to business partners, which is then carried out through the event cycle into recovery and resumption of normal business operations.

Additionally, WellCare benefits from the broad reach of WellCare's corporate offices and other local business units, all of which are connected electronically and can step in to assure all essential business functions are operating in the event of an emergency.

WellCare has successfully tested our work from home strategies and the utilization of alternative/remote locations. Our local BCP and BIA are updated annually before the start of each Atlantic hurricane season.

5. Approach to maintaining data security during an event;

WellCare maintains the security and privacy of all sensitive data entrusted to us during and emergency event as all operational, access, and system controls in place for normal operations remain in effect throughout emergency plan execution, beginning at the declaration of an event, through recovery, and including the resumption of standard operations. This includes ensuring the recovery of our security and system monitoring solutions, the ongoing requirement for two-factor authentication, and the use of encryption for data at rest and in

motion (file transmissions and connections). In addition, as part of our all-employee disaster recovery training, we educate our staff on additional security and privacy steps to be taken to ensure with respect to the safe and proper management of PHI.

WellCare has policies and procedures for data replication, data center recovery, business continuity, and records retention to prevent data loss. We backup systems and applications nightly, and store encrypted copies of the data at a secure, remote site vendor location external to any WellCare data center or office location. Operationally, we use data replication capabilities to stream databases in real-time to cold site locations. This minimizes data exposure and accelerates the pace at which our recovery efforts can be initiated. WellCare contracts with Sungard Availability Services to provide recovery services, co-location of key WellCare systems, and to manage IT services when disasters occur. We have deployed redundant systems at Sungard's innovative Carlstadt, New Jersey data center and have access to key systems, technology, and personnel in the event of an emergency at WellCare's primary location. The data center includes exterior and floor level biometric security systems and built-in redundancies for power, HVAC (heating, ventilation, and air conditioning), and fire detection and suppression. It also has redundant data connections and a robust switched network to support continuous connectivity. All detailed recovery procedures are stored electronically on the SunGard Recovery portal at https://www.mysungard.com. The recovery process for those procedures is: 1) validate network, 2) configure DR host servers, 3) configure/allocate DR storage (SAN/NAS), 4) establish remote DR Citrix farm, 5) build DR exchange server, 6) verify DR backup domain, 7) restore critical system back-up images, and 8) recover and verify critical applications and monitoring of production environment.

Each year, as part of ongoing efforts to ensure privacy and security of sensitive information, an independent organization performs HIPAA Risk Assessments, following the National Institute of Standards and Technology (NIST) Risk Assessment guidance in NIST SP 800. We also have been audited for and achieved HITRUST certification. Our approach to privacy and security remains the same when we must invoke our Business Continuity or Data Center Recovery plans.

6. Communication methods with staff, Subcontractors, other key suppliers, and the Department when normal systems are unavailable; and

In case of any safety incidents within our offices or work sites, our associates are notified by a safety coordinator or by alarms within the building. When a safety incident becomes an emergency, or a natural disaster occurs, there are several different ways that associates can gather information on the situation:

ASSOCIATES

- The Emergency Hotline: 1-866-473-9135
- WellCare Link myHR Portal/HR Service Center: available at https://portal.adp.com
- Associate Connect Online
- Workplace/Facebook

- Emails
- Voicemails
- WellCare's Emergency Notification System

DMS, SUBCONTRACTORS, OTHER KEY SUPPLIERS

In the event of an emergency, WellCare of Kentucky will communicate with subcontractors, other suppliers and DMS on a regular basis to keep them informed and updated of the situation via:

- Email
- Phone call
- Posts to our external websites

7. Testing plan.

We employ two strategies to test ours Corporate Emergency Preparedness Plan (EPP):

- Annual table-top exercises are used to evaluate plans and identify possible gaps for remediation
- Annual systems recovery testing before the start of the Atlantic hurricane season

Testing results are documented and presented to the EPC and the EP Steering Committee. In addition, our Internal Audit Department audits the annual testing process and has not noted any significant issues.

On February 16, 2015 WellCare completed a system recovery test, which validated our ability to fully recover a data center loss. This test validated improvements in recovery approaches and solutions that were based on all prior tests, which were also successful. The improved techniques reduced the recovery time significantly (50%) hours from initiation to full validation of all systems. During the 2016 DR test, all 15 core systems tested were recovered successfully and approximately 50% faster than the required recovery time objectives. In 2017, despite increasing the scope, the Recovery Time Objective (maximum acceptable downtime) was reduced from 25 hours to 24 hours and Recovery Point Objective (maximum acceptable data loss) was 30 minutes due to new automation technology and increased planning. In our 2018 test, all systems were successfully recovered and verified well under 24 hours. The improved techniques reduced the recovery time 60% from initiation to full validation of all systems and our recovery point to less than 30 minutes. In 2019 we increased the scope significantly. Despite this increase, the Recovery Time Objective was less than 22 hours and Recovery Point Objective stayed below 30 minutes with all systems successfully recovered and verified. Our IT and EPP teams use these test results to further refine and improve data center recovery capabilities leading to the demonstrated year-over-year improvements.

Our DR Results

2017: Despite increasing the scope, the Recovery Time Objective (maximum acceptable downtown) was reduced from 25 hours (in 2016) to 24 hours and Recovery Point Objective (maximum acceptable data loss) was 30 minutes due to new automation technology and increased planning

2018: All systems were successfully recovered and verified well under 24 hours. The improved techniques reduced the recovery time significantly (60%) from initiation to full validation of all systems and our recovery point to less than 30 minutes.

2019: The scope of the 2019 test was greatly increased from the 2018 Test. Despite the increase, the Recovery Time Objective was less than 22 hours and Recovery Point Objective was less than 30 minutes, and all systems were successfully recovered and verified.

The annual Disaster Recovery Test is based on the known impact of a Category 4 or greater hurricane. The Plan has been designed to handle a worst-case data center interruption, i.e. total destruction of facilities or data center site. In reality, however, data center disruptions occur in varying degrees. Each situation requires careful consideration before a decision can be made regarding disaster qualification. The IT Disaster Recovery Organization is structured so that competent and knowledgeable personnel are placed in the evaluation role. The scope of this plan includes restoration of information processing capabilities, which is validated by independently by the execution of actual test transactions by the appropriate business users from remote locations, just as would be the case in an actual event. To help ensure independent validation of the appropriateness and test activities and results, WellCare's internal audit team observes the annual Data Center Recovery test exercise.

F.

Turnover Plan

WellCare®
Beyond Healthcare. A Better You.

F. TURNOVER PLAN

Submit a detailed description of the Vendor's proposed approach to providing turnover planning, as it relates to the Contract resulting from this RFP, in the event of Contract expiration or termination for any reason, including the following:

1. **A summary of the support the Vendor will provide for turnover activities, and required coordination with the Department and/or another Vendor assuming responsibilities.**
2. **Approach to identifying and submitting all documentation, records, files, methodologies, and data necessary for the Department to continue the program.**
3. **Resources and training that the Department or another contractor will need to take over required operations.**
4. **Methods for tracking and reporting turnover results, including documentation of completion of tasks at each step of the turnover.**
5. **Document and verify how all data is securely transferred during a turnover ensuring integrity of same. Maintain the CIA concept in turnover, Confidentiality, Integrity, and Availability.**

F. TURNOVER PLAN

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

To minimize the disruption of services to enrollees and providers, WellCare of Kentucky is committed to partnering with DMS and associated vendors during all stages of the contract, including our obligation to fully support turnover planning in the event of a contract termination. Our primary aims in turnover planning are to minimize any disruption in the delivery of healthcare services to enrollees, minimize any disruption in authorization and payment to our providers contracted during transition to a subsequent contractor, cooperate with DMS and the subsequent vendor in notifying enrollees and providers of the transition, and cooperate with DMS and the subsequent contractor in securely transferring information to the subsequent contractor in the form required by DMS.

Our approach to turnover planning is detailed in the attached sample Turnover Plan, **Attachment F. Sample Turnover Plan**, which outlines all turnover activities, as well as coordination with DMS and the Vendor assuming responsibilities upon contract termination. In compliance with the Commonwealth's requirements and as described below, our Turnover Plan:

- Provides a summary of the support the WellCare will provide for turnover activities, including required coordination with DMS or another Vendor assuming responsibilities
- Describes the activities associated with identifying and submitting all documentation, records, files, methodologies, and data necessary for DMS to continue the program,

including pre-transition data (such as PCP assignments), operational transition data (such as open authorizations, care plans, and benefit accumulators) and historical data (such as encounter history)

- Identifies the Resources and training that DMS or another contractor will need to take over required operations
- Describes the methods for tracking and reporting turnover results, including documentation of completion of tasks at each step of the turnover
- Describes how WellCare will document and verify all data will be securely transferred during a turnover ensuring integrity of same, and acknowledgement that WellCare must maintain the CIA concept in turnover, Confidentiality, Integrity, and Availability.

Our business turnover methodology ensures continuity of operations throughout the duration of runout obligations (as much as 18 months after termination) using the same infrastructure, security, and application solutions in place under the contract to ensure seamless, uninterrupted transition of service to enrollees and our provider network.

1. A summary of the support the Vendor will provide for turnover activities, and required coordination with the Department and/or another Vendor assuming responsibilities.

The scope of our Turnover Plan includes contractual obligations that extend beyond the contract termination date, such as network relations, claim processing, service management, enrollee services, issue management (appeals, grievances, and disputes) and regulatory reporting functions during the runout period. Our ability to leverage resources from across the local market and corporate resources ensures our ongoing ability to fulfill these obligations.

As the accountable owner, WellCare of Kentucky Chief Executive Officer William Jones will work hand-in-hand with DMS, successor Vendor and sub-contractors throughout all phases of the transition. Bill Jones' involvement will ensure agreement on scope, planning and roles and responsibilities throughout the turnover effort. WellCare of Kentucky will provide the necessary resources to ensure a smooth turnover while continuing to meet contractual obligations through contract close-out. We will maintain adequate staffing levels to serve enrollees and providers through contract termination and the run out period. Above all, we will work with all participants to ensure enrollees continue to receive the care and services needed.

During the planning phase, WellCare of Kentucky will designate a WellCare Regulatory Affairs Officer (RAO) as the SPOC (Single Point of Contact) who will report directly to Bill Jones. The RAO will have accountability for all turnover project matters. We will designate a Turnover Manager to facilitate day-to-day turnover activities who will report to the RAO and will identify turnover leads for Enrollee Services, Provider Services, transition of care, claims, and financial accounting. While we are fortunate to have limited opportunities to execute on Turnover plans, our experience shows that outcomes are greatly improved when the successor MCO also appoints a designee to service as the Turnover Manager.

WellCare employs a dedicated team representing key organizational areas for implementing and carrying out the turnover plan. The team works together to make team assignments both

at corporate and market levels, establishing milestones and identifying critical dependencies. The key areas and staff involved in carrying out turnover activities includes the following:

- Bill Jones will provide leadership, guidance, and knowledge of current practices, tasks to be completed and, along with the SPOC, will perform close-down activities for all areas of the project and remain the key contact with DMS.
- Regulatory Affairs Officer (RAO) SPOC will report directly to Bill Jones and lead the Turnover Management Team. We will designate a Turnover Manager to facilitate day-to-day turnover activities who will report to the RAO and will identify turnover leads for Enrollee Services, Provider Services, transition of care, claims, and financial accounting.
- Key Subject Matter Experts provide guidance and knowledge and perform particular close down functions for their areas of responsibility throughout the transition period including functions such as Enrollee transition of care to identified agencies.
- IT Staff ensure data will be extracted, formatted, and transferred securely and timely. They assist in report development, generation, and submission.
- Project Management Office (PMO) provides the project management of the entire process to ensure tasks and timelines are being met.

WellCare plans for both pre-transition and post-transition data extracts and operational requirements. Examples of such data extracts include Enrollee PCP assignments, risk stratification and health condition scores, and active care plans. Our transition planning approaches account for the early identification, testing, and execution of these types of extracts. Where possible, WellCare will utilize existing DMS and industry standard formats for these extracts to reduce the development and testing impacts to DMS or a successor MCO.

WellCare also realizes and acknowledges that our existing contractual obligations remain in effect for a run out period, which is typically 18 months, to accommodate timely filing and appeals-rights timelines.

Subject Matter Experts at our corporate offices provide guidance and knowledge and perform particular close down functions for their areas of responsibility throughout the runout period of obligations. Examples include functions, such as Enrollee services, Provider services, appeals and dispute processing, claims runout processing, encounter submission, financial reporting and supporting any ongoing reporting requirements for DMS. The same operational practices, policies, and monitoring will continue to apply to runout transactions as were in effect during the contract term.

An advantage of WellCare's single integrated platform is the leverage provided in runout situations. This strategic approach ensures the staff knowledge and technical agreements needed to maintain operations and compliance with regulatory commitments (including new but applicable changes) will be able to be supported.

2. Approach to identifying and submitting all documentation, records, files, methodologies, and data necessary for the Department to continue the program.

Turnover planning includes the HIPAA-compliant collection and transfer of records, files, methodologies, data and any supplemental documentation, which DMS would require to continue the program. We would first work with DMS to determine what type of records, files, methodologies, data, and documentation would be needed and requested to seamlessly transition the Enrollee to the new program.

Then, using our internal systems documentation, we would identify the source systems and locations of the appropriate records to ensure a complete accounting of all record sources. Using existing processes where possible, we would extract Kentucky's specific information, create data extracts in a format defined and acceptable to DMS, encrypt them, and deliver them through existing secure FTP arrangements we currently have with DMS or establish similar arrangements to exchange the information with another Vendor.

WellCare also suggests that often, as an alternative to the creation of separate processes for transition, the ability to leverage the KHIE be considered. The KHIE will be in possession of large amounts of data about Medicaid membership in Kentucky. The use of the KHIE as a central, MCO-neutral data source would allow new Vendors to establish interfaces to support transition services and subsequently leverage those same capabilities to implement effective and efficient ongoing operations. Note that these same methods and solutions can serve as the standard MCO-to-MCO transition support mechanism during the normal course of the contract as well.

If DMS requires Enrollee-specific claims, correspondence, or medical records, we would image the collateral, create zip files, and deliver the images to DMS using the same delivery method described above. We could also provide examples of our health risk assessment survey questions and acceptable responses.

WellCare recognizes that the successful transfer of these data, records, and methodologies is necessary to allow for seamless transition of care from WellCare to DMS or a successor Vendor should that be necessary and would comply with all requests to provide such information in a timely, comprehensive and efficient manner.

3. Resources and training that the Department or another contractor will need to take over required operations.

Once the state approves the scope and approach of our Turnover Plan, WellCare's transition team will begin executing the plan, including the transfer of relevant assets and knowledge necessary to smoothly transition. The actual execution of the turnover plan would begin 100 days prior to the end of the contract, including the transfer of relevant assets and knowledge necessary to smoothly transition Enrollees and Providers to the successor MCO(s) or DMS (e.g., data, files, records, methodologies and other supporting documentation). . At this point, the successor Vendor should appoint a designee who will serve as the Single Point of Contact for our RAO and Turnover Manager and work with WellCare of Kentucky to develop an organizational chart defining their functional area work stream leads and training audience. Once the successor identifies their respective transition team, all stakeholders, including WellCare of Kentucky, DMS, the successor MCO(s) and subcontractors would agree upon a

regularly scheduled day and time for a weekly cross-functional task coordination meeting. During this transition phase, WellCare of Kentucky will provide a team of training resources who will:

- Flesh out the details of the training plan
- Develop a training curriculum and materials necessary for the successor staff to fully and seamlessly service our Enrollees and providers.
- Assemble a training schedule with the assistance of the successor Vendor work stream leads
- Deliver the training to the State and successors where appropriate.

The scheduled end date for knowledge transfer would be no later than 15 days before the contract end date. However we will process claims beyond the contract dates, through the claims run-out period. It is our expectation that DMS would perform a readiness review of a successor Vendor. We would acknowledge the successful conclusion of the execution and knowledge transfer phase upon their sign-off of the Turnover Results Report that WellCare of Kentucky would use to document the completion of all tasks in the turnover plan. Upon sign-off, we would hand over the turnover plan management to the successor MCO.

4. Methods for tracking and reporting turnover results, including documentation of completion of tasks at each step of the turnover.

Once the successor identifies their Transition Team, all stakeholders, including WellCare of Kentucky, DMS, the successor vendor, and subcontractors will agree upon a regularly scheduled day and time for a weekly cross-functional meeting where progress toward completion of each turnover task is monitored and identified issues resolved. We will work closely with DMS to develop a Turnover Plan, determine turnover stakeholder roles, responsibilities, and construct an organization chart. DMS will acknowledge the successful conclusion of the execution and knowledge transfer phase of the turnover upon their sign-off of a Turnover Results Report that WellCare of Kentucky would use to document the completion of all tasks in the Turnover Plan. Upon sign-off, we would hand-off Turnover Plan management to the successor Vendor.

A routine aspect of our project management process is to maintain a detailed Microsoft Project plan to manage and track the overall progress and completion project tasks, such as:

- Tracking progress on a task-by-task level
- Providing DMS weekly status reports, or another frequency preferred by DMS.
- Developing and executing an external stakeholder communication strategy no later than 60 days before the contract expires. Upon DMS' approval, WellCare of Kentucky would:
    - Notify our Enrollees about the contract termination via both mailed letters and the Member portal aimed at assuring them that there would be no disruption to their current service levels

- Notify network Providers about our contract termination via both mailed letters and the Provider portal, and provide them regular updates on the status of the transition on the Provider portal

- Updating our call center representative and case manager scripts so both teams can accurately and appropriately respond to Member and Provider inquiries about the transition

During the final phase of the transition, WellCare of Kentucky staff would be available to Enrollees, Providers, DMS, the successor MCO(s) and subcontractors for at least 30 days to answer questions and troubleshoot "people, process, or technology" issues associated with the turnover. We would continue to meet with DMS, the successor MCO(s) and subcontractors every week to review status and operational metrics. For a minimum of 90 days following the termination of the contract, we would be available on an as needed basis to address any outstanding issues until they are fully resolved.

5. Document and verify how all data is securely transferred during a turnover ensuring integrity of same. Maintain the CIA concept in turnover, Confidentiality, Integrity, and Availability.

WellCare understands the vital importance of ensuring that all data is completely and properly transmitted in a secure manner during a turnover. We collaborate to ensure a secure connection for exchanging files with DMS, existing vendors and subcontractors, and any successor MCO.

Secure Transfer of Data. Our experience is that through the course of normal operations, WellCare will already have deployed the delivery methods (such as secure FTP or other data media) that are preferred by Department (and is consistent with their security and privacy guidelines). Our intent would be to continue leveraging those exact same capabilities to complete the transition and transfer of any necessary data. For instance, WellCare will continue to use secure FTP sites for data transfers between WellCare and DMS, WellCare and KHIE, and if appropriate create secure FTP transfer sites with the new Vendor. Additional methods can be considered and implemented as needed, including the use of encrypted mass storage for data transfer, with only WellCare and DMS (or its subcontractors) being aware of the encryption key.

Ensuring Data Integrity. All data extracts and exchanges created and executed as part of our obligations under the Turnover plan will be created and validated using our standard Software Development LifeCycle (SDLC). Specifically relevant to ensuring the integrity of any data provided are the SDLC steps to formally document the requirements, functional design, and technical design to eliminate any ambiguity. Test plans and test cases are independently developed and executed by WellCare's Quality Assurance department to ensure that all requirements (including data integrity requirements) are met as part of the extract process.

Maintaining the CIA Concept. Specifically with respect to our runout processing and execution commitments, all of our existing Security and Privacy policies would remain in effect, and continue to be enhanced, throughout the transition. These practices, including least-privileged access, the use of encryption both in transit and at rest, and 24/7 security monitoring meet current Confidentiality, Integrity, and Availability (CIA) requirements and, through their

continued use, would meet CIA requirements throughout the transition. Further, when WellCare subcontractors are involved, WellCare's contracts will continue to require them to maintain the same level of standards.

An advantage of WellCare's single integrated platform is the leverage provided in runout situations. This strategic approach ensures the staff knowledge and technical agreements needed to maintain operations and compliance with regulatory commitments (including new but applicable changes) will be able to be supported. As a result, in addition to existing confidentiality and integrity practices, the data integrity, and system availability requirements of the CIA philosophy will also continue to be met.

F. Turnover Plan

- Attachment F. Sample Turnover Plan

ID	Task Name	Duration	Start	Finish
1	**Kentucky Medicaid Turnover Plan**	**379 days**	**6/1/20 8:00 AM**	**11/11/21 5:00 PM**
2	**Phase 1: TURNOVER PLANNING**	**30 days**	**6/1/20 8:00 AM**	**7/10/20 5:00 PM**
3	Receive " Intent to Terminate " notice from State	1 day	6/1/20 8:00 AM	6/1/20 5:00 PM
4	Establish SPOC with State for Turnover activities	1 day	6/2/20 8:00 AM	6/2/20 5:00 PM
5	Send communication to functional area VPs informing them of Contract termination and effective date	1 day	6/3/20 8:00 AM	6/3/20 5:00 PM
6	**Initiate Turnover Project**	**27 days**	**6/4/20 8:00 AM**	**7/10/20 5:00 PM**
7	**Wellcare of Kentucky Turnover Team and Responsibilities**	**4 days**	**6/4/20 8:00 AM**	**6/9/20 5:00 PM**
8	Assign RA Turnover Officer	1 day	6/4/20 8:00 AM	6/4/20 5:00 PM
9	Assign Turnover PM	1 day	6/4/20 8:00 AM	6/4/20 5:00 PM
10	Assign Wellcare of Kentucky functional work stream leads	1 day	6/4/20 8:00 AM	6/4/20 5:00 PM
11	Create Turnover Scope document	2 days	6/4/20 8:00 AM	6/5/20 5:00 PM
12	Create Turnover Team Organizational Chart	1 day	6/4/20 8:00 AM	6/4/20 5:00 PM
13	Create Turnover Team Contact List	1 day	6/4/20 8:00 AM	6/4/20 5:00 PM
14	Create RACI chart	3 days	6/5/20 8:00 AM	6/9/20 5:00 PM

G.

Kentucky SKY

WellCare®
Beyond Healthcare. A Better You.

1. Executive Summary

G.1. EXECUTIVE SUMMARY

a. Provide an Executive Summary that summarizes the Contractor's proposed technical approach, staffing and organizational structure, and implementation plan for the Kentucky SKY program. The Executive Summary must include a statement of understanding and fully document the Contractor's ability, understanding and capability to provide the full scope of work.

b. The Contractor's statement of understanding of the unique needs of Medicaid Enrollees in the Commonwealth enrolled in the Kentucky SKY program;

c. An overview of the Contractor's proposed organization to provide coordinated services for the Kentucky SKY program;

d. A summary of the Contractor's strategy and approach for administering services for Kentucky SKY Enrollees;

e. A summary of the Contractor's strategy and approach for establishing a comprehensive Provider network able to meet the unique physical and Behavioral Health needs of Kentucky SKY Enrollees; and

f. A summary of innovations and Trauma-informed initiatives the Contractor proposes to implement to achieve improved health outcomes for Kentucky SKY Enrollees in a cost effective manner. Include a discussion of challenges the Contractor anticipates, how the Contractor will address such challenges, and a description of the Contractor's experience with addressing these challenges for similar contracts and populations.

G.1. EXECUTIVE SUMMARY

WellCare of Kentucky, Inc. ("WellCare of Kentucky") is a wholly owned subsidiary of WellCare Health Plans, Inc. On January 23, 2020 WellCare Health Plans, Inc. was acquired by Centene Corporation (Centene). WellCare is now a wholly owned subsidiary of Centene. **WellCare of Kentucky's leadership, staff, branding, and model for delivering services to the Commonwealth are not changing and we remain committed to partnering with the Department of Medicaid Services (DMS) to ensure Kentucky's Enrollees, communities, providers and other stakeholders receive the integrated, whole-person care and services necessary to address all of their physical, behavioral, and social needs.** With the acquisition, WellCare of Kentucky is now also able to leverage the combined experience and best practices of our Centene affiliate health plans, which is now managing the care of more than 12.9 million Medicaid Enrollees across 30 states.

WellCare of Kentucky currently serves more than 430,000 Medicaid Enrollees across the Commonwealth. We have served SKY-eligible Medicaid Enrollees in the Commonwealth for eight years, currently managing the care of approximately 8,100 Foster Care Enrollees, Former Foster Care Youth Enrollees, Adoption Assistance Enrollees, and Juvenile Justice (JJ) Enrollees (hereafter referred to collectively as Foster Care Enrollees), across the Commonwealth, which constitutes the single largest concentration of these Enrollees served by any Medicaid managed care organization (MCO) in Kentucky.

WellCare of Kentucky also leverages the experience and expertise of our affiliate health plans in other states. Nationally, as of yearend 2019, WellCare managed the care of more than 20,000 Foster Care Enrollees across seven other states. Additionally, we are now able to leverage the experience and best practices of our Centene affiliate health plans, which manage the care of

more than 150,000 children in Foster Care across 17 states. This experience includes statewide, sole sourced, Foster Care contracts in Florida, Illinois, Texas, and Washington.

WellCare of Kentucky has been privileged to serve the Kentucky Medicaid program and our foster care, adopted and DJJ members over the last eight years. We have embraced our role as a supporter to the Department and as an advocate for these vulnerable members. Children in foster care have unique needs. Not only are they suffering with trauma, but they are living in a substitute home that does not belong to them. They are in a hospital with no idea of where they will go next. They have medical and behavioral health issues that are complex and overwhelming. Because of their complex trauma, caring, housing and treatment needs, the system of care must be purposeful and strategic and collaborative. From the beginning of managed care in Kentucky, WellCare has been the one MCO that recognized the complex and challenging needs of our members in foster care. We have understood the important responsibility on our shoulders and have developed comprehensive, Kentucky specific, innovative programs that are improving not only the health of members in foster care, but improving their quality of life in Kentucky. Since 2011 we have grown to the largest health plan in the commonwealth, bringing the largest network, the highest NCQA quality rating, and the highest provider and member satisfaction scores among all MCOs. Our foster care, adopted and DJJ membership continues to grow monthly, demonstrating that DCBS, DJJ, and adopted parents view WellCare as THE MCO to take care of their children. For our foster care members, we have created innovative programs, piloted services, trained foster parents, and engaged DCBS, DJJ, the Department and private child care providers in out of the box thinking to serve these members. We are deeply committed to our 8,100 Foster Children that we serve today and are passionate about providing a single MCO solution for the entire Foster Care population. Through collaboration with DMS, DCBS and DJJ, we know we can contribute to improved health care and improved futures for these vulnerable children.

a. ***Provide an Executive Summary that summarizes the Contractor's proposed technical approach, staffing and organizational structure, and implementation plan for the Kentucky SKY program. The Executive Summary must include a statement of understanding and fully document the Contractor's ability, understanding and capability to provide the full scope of work.***

TECHNICAL APPROACH

As described below and throughout this proposal, WellCare of Kentucky offers an approach for the Kentucky SKY program that builds on our unmatched experience serving foster care, former foster care, juvenile justice, and adoption assistance Enrollees here in Kentucky. We leverage the strengths and capabilities of our existing systems and infrastructure which include:

- An experienced leadership team, including Lori Gordon, SKY Executive Director, and LeAnn Magre, SKY Provider Relations Liaison, that has supported DMS over the past eight years through numerous program changes and brings unparalleled expertise with the Kentucky SKY population and established relationships with DCBS and DJJ.
- Field-based staff located throughout the Commonwealth to support providers and Enrollees, including dedicated Care Coordination staff who have been providing high-touch services working in the field with DCBS, DJJ, Enrollees, and caregivers for 8 years.

- The largest Medicaid provider networks in Kentucky, which is #1 in provider satisfaction and already includes many providers that are unique to and critical for this population as well as telehealth capabilities that align with new Kentucky rules.
- Our industry-leading CareCentral system which integrates internal and external data to ensure staff, providers, and Enrollees/caregivers have a 360 degree view of each Enrollee.
- A fully integrated model for physical, behavioral health and social determinants of health that extends all the way from our executive leadership and quality structure through our network and oversight functions to our integrated Care Coordination teams.
- Community Connections, our nationally-recognized social determinants of health platform and program for meeting individual Enrollee needs and supporting community-level resource development and deployment.

We will tailor this strong foundation to the unique needs of SKY Enrollees, understanding that our task is to pull together the disparate pieces of multi-system involvement and create a unified system of care around each child and youth. Key to this endeavor will be our trauma-informed model of care that we will extend throughout the systems and stakeholders involved in the care of this population. Other important elements of our approach include:

- A detailed plan for collaborating with DMS, DCBS, and DJJ to ensure a smooth implementation, based on our experience implementing new programs in Kentucky and other states as well as work we have already done with our Kentucky partners to coordinate care for foster care, former foster care, juvenile justice, and adoption assistance Enrollees.
- Locating Field Outreach Coordinators and Care Coordination staff at DCBS regional offices and DJJ Community Districts to facilitate close communication and bring together all system of care partners to ensure integration across the Commonwealth service continuum.
- Our secure, HIPAA-compliant Clear SKY solution to ensure all providers and authorized DCBS, DJJ, foster and adoptive parent users and former foster care youth have 24/7 access to up-to-date, comprehensive information on Enrollee services and needs. Because of the frequent moves and transitions that often occur, ensuring access to information so to assure appropriate care is critical.
- Expanding availability of trauma-informed and other relevant expertise, including promotion of additional evidence-based practices specific to this population and bringing new providers of scarce but critical services into Kentucky, which we have already begun.
- A robust plan for training all system stakeholders, including Enrollee-facing staff, providers, caregivers, the courts and law enforcement in trauma-informed care and the unique needs of this population. We will also provide Mental Health First Aid training for all stakeholders.
- Targeted programs that address unique needs such as transition to adulthood, challenges finding appropriate post-discharge placements, increased risks for suicide and human trafficking, preventing further abuse and neglect, and supporting successful adoption.
- Existing relationships with community organizations that support this population such as Kentucky Partnership for Children and Families and local groups across the Commonwealth.

STAFFING AND ORGANIZATIONAL STRUCTURE

Local staffing and leadership have been foundational to our successful implementation and ongoing operations in Kentucky, and our structure for Kentucky SKY will follow this model. Our SKY Executive Team lives and work in Kentucky today, and we are the only MCO with Enrollee- and Provider-facing staff located throughout the Commonwealth. We will implement a regionally-based organizational model that includes embedding staff in DCBS regional offices and DJJ community districts. This model will facilitate high-touch, intensive support to DCBS, DJJ, other cabinet agencies, providers, Enrollees, caregivers and other stakeholders through highly qualified and trained provider engagement and Care Coordination staff.

IMPLEMENTATION PLAN

WellCare of Kentucky will use the foundation of our comprehensive Medicaid program and established relationships with DCBS and DJJ regional staff as a springboard for our implementation plan, which is based on industry best practices and our experience implementing new programs in Kentucky and other states. We successfully completed all required readiness reviews for the Kentucky Medicaid Managed Care contract and implemented new populations and program changes quickly and efficiently with minimal Enrollee and provider issues and impacts. On a corporate level, WellCare has transitioned more than 1,880,000 Enrollees over the last eight years.
Our implementation strategy is comprised of three key elements:

1. A command center approach that begins with Readiness Reviews and continues through at least 90 days after go-live
2. Clear accountability for each requirement
3. A comprehensive training plan that ensures that our staff are prepared to address 100% of new contract requirements prior to go-live.

Bob Diver, Project Manager, and Chief Operating Officer, Ben Orris, in collaboration with Lori Gordon, our SKY Executive Director, and LeAnn Magre, our SKY Provider Relations Liaison, will lead our locally-based Kentucky SKY Governance team and have overall responsibility for Implementation Plan and readiness review activities. A central focus of implementation will be collaborating with DMS, DCBS, and DJJ to put processes in place that will ensure continuity of care for Enrollees and enable continuation or rapid initiation of services for those with immediate and high needs.

STATEMENT OF UNDERSTANDING

WellCare of Kentucky acknowledges and understands that DMS seeks to improve health outcomes and strengthen support to families in crisis through contracting with a single statewide MCO to oversee and coordinate physical health, behavioral health, dental, and social services for children in foster care, dually committed youth in both the foster care and juvenile justice systems, former foster youth under age 26, and post-adoptive children with subsidized care. We further understand that the selected MCO must collaborate closely with DMS, DCBS, DJJ, and other stakeholders to implement the program and provide enhanced care coordination and service integration to meet the unique needs of this population.

ABILITY, UNDERSTANDING, AND CAPABILITY TO PROVIDE FULL SCOPE OF WORK

WellCare of Kentucky is strongly positioned to improve quality, health outcomes, and stability and permanency for SKY Enrollees. The experience and relationships our staff already have with our current foster care, juvenile justice, and adoption assistance Enrollees as well as with DMS, DCBS, DJJ, providers serving the population, and key stakeholders mean we are not starting from scratch and can hit the ground running on Day 1. We are deeply familiar with and have experience navigating the regional and community contexts that impact children and families and what it takes to promote resiliency, stability, and permanency among this population. Our ability, understanding, and capability to provide the full scope of work is reflected in the outcomes we have achieved for these Enrollees:

- From 2017 to 2019 HEDIS scores for well-child visits in the third, fourth, fifth and sixth years of life **increased 10%.** Adolescent well-care visits increased 28%.
- Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents had a significant increase for all ages and is in the top 75 percentile and had a 68% increase.
- The use of first-line psychosocial care for children and adolescents (12-17 years) on **antipsychotics increased 9%.**
- HEDIS scores increased for all five Immunizations for Children and Adolescents measures as well as for Adolescent Well Care, Timeliness of Prenatal Care, and Chlamydia Screening from 2017 to 2019.
- Among those with co-morbid physical and behavioral health (BH) issues, inpatient admissions/1000 decreased by 11%, ER visits/1000 decreased by 13%, and specialist visits/1000 increased by 29% from 2016 to 2019.
- Among those with co-occurring mental health and substance use issues, ER visits/1000 decreased by 14%, inpatient mental health admits/1000 **increased by 3%,** PCP visits/1000 increased by over 7%, and specialist visits/1000 increased by 84% from 2016 to 2019.

Perhaps the best evidence of WellCare's ability, understanding, and capability is the fact that our foster care enrollment continues to increase***. In 2018, our foster care enrollment grew by 30%. This is strong evidence that WellCare is highly trusted and is the preferred MCO for DCBS caseworkers.***

As DMS places its trust in a single point of accountability for these children and youth, WellCare is uniquely positioned as a leader to bring the vision of the Families First Prevention Services Act to life and support our Commonwealth partners in moving the program forward.

WellCare of Kentucky implemented services required under the Families First Prevention Services Act, well ahead of the required 2021 implementation.

b. The Contractor's statement of understanding of the unique needs of Medicaid Enrollees in the Commonwealth enrolled in the Kentucky SKY program;

WellCare understands the unique needs of children and youth and their families here in Kentucky and the local issues and barriers they face. In 2016, children in Kentucky experienced abuse and neglect at a rate more than twice the national average, and parental substance

abuse is a major factor driving foster care entry. While the children and youth in this population share many needs and characteristics, each one has their own individual needs influenced by their experiences; race/ethnicity; family and community background; sexual orientation, gender identity and expression (SOGIE); personal strengths and resiliencies; and goals and dreams for their future. We recognize that Enrollees need an advocate to promote their voice and choice and ensure services are Enrollee/family-driven and support permanency and stability.

NEEDS FOR TRAUMA TREATMENT AND TRAUMA INFORMED APPROACHES

Every Kentucky SKY Enrollee has experienced Adverse Childhood Experiences (ACEs) and trauma. By the time removal occurs, many children have trauma from abuse, neglect, and witnessing violence, and they experience further trauma from being removed from their homes and separated from parents and siblings. Trauma-informed assessment and treatment approaches are critical and all stakeholders in the child's care must understand the impacts of trauma and how it manifests. Often, trauma must be addressed before treatment for medical or BH conditions will be effective. Everything we do across the entire organization must be trauma-informed in order to effectively and appropriately address SKY Enrollee needs.

INTENSIVE AND UNMET HEALTH CARE NEEDS

Preventive, Primary, and Chronic Care. Children often receive limited health care prior to entering foster care, presenting with significant gaps in recommended services. Few have had a medical home and many have undiagnosed or under-treated conditions. The American Academy of Pediatrics and Child Welfare League of America (AAP/CWLA) recommend a higher frequency and intensity of medical home services for these children.

Services to Address Disabilities. Abuse and neglect during infancy and early childhood can impair physical, cognitive, and emotional development. Many Enrollees need services for vision and/or hearing loss. Others need treatment for neurological disorders and lasting health and developmental effects of in utero substance exposure or premature birth.

Oral Health Care. Nearly 40% of those entering foster care have significant dental and oral health problems. In 2017 in most Kentucky counties, fewer than half of the children covered by Medicaid or CHIP used dental services. While the impact of trauma makes many children reluctant to receive dental care, other barriers in Kentucky include limited access to dental providers and lack of family and caregiver understanding of the importance of dental care.

Behavioral Health Care. BH crises are more common in this population. These enrollees need crisis planning, mobile crisis services, and step-down levels of care.

Medication Management. Enrollees in foster care have three times the rate of psychotropic medication prescribed, higher polypharmacy, and longer treatment regimens than other children in Medicaid.

Providers with Specific Expertise. This population requires specialized, evidence-based treatment such as Trauma Focused Cognitive Behavioral Therapy or Parent Child Interaction Therapy. They may need specialized services to address sexual acting out, behavior dysregulation, and developmental disabilities including autism spectrum disorder.

CARE COORDINATION NEEDS

Immediate Evaluation Upon Entry. Children and youth in foster care need immediate, comprehensive evaluation when they enter the system due to urgent and unmet needs and a history of lack of care.

Central Repository of Medical Records. Many children come into foster care with few or no medical records to inform assessment and treatment. Providers and those making care decisions need a single, easily accessible record of assessment results, claims and utilization data, care plans, and other information to ensure continuity and accurately assess needs.

Integration of Health Care and Other Needed Services. These children and youth often are served by multiple providers and receive services through community agencies. A designated point of coordination is needed to facilitate information sharing; identify and alert stakeholders to duplication, gaps, or contraindications; and integrate social determinant of health needs.

Navigation Support. Newer foster parents, those who have never parented a child with complex needs, kinship caregivers, and former foster youth generally need significant support navigating the health care system. Adoptive parents new to the Medicaid system also need support, such as locating network providers and understanding EPSDT requirements.

STABILITY AND PERMANENCY SUPPORTS

Support for Community Placement Success. Out of home placements should be used only when clinically necessary and should focus on preparing the Enrollee to return to a community placement. The foster care system and the health care system must work in tandem to secure appropriate post-discharge placements, such as training a potential foster family so that an inpatient medically complex child can discharge to an appropriate community placement.

Family Support. Kinship caregivers may experience emotional distress due to family dysfunction. Existing children in an adoptive family may experience distress at family change. Families need connection to support groups, therapy, peer supports, and respite.

Caregiver Education and Training. Caregivers need to understand the child's conditions, needs, and care, and how to manage behaviors, oversee medications, engage with school staff, and maintain health appointments. For instance, caregivers of children with intellectual and developmental disabilities (IDD) often need assistance understanding behaviors, such as difficulty toileting and sexual acting out, against normative standards.

Coordination With Schools. Nearly half of school-age children in foster care are involved in special education, and of those, half have severe behavior problems that can lead to suspension and missed educational opportunities. Due to the impact of trauma, even children who are not in special education may require support, such as ensuring their teacher can accurately identify emotional dysregulation that presents as behavioral acting out. Educating the Individualized Education Plan team, school nurses, and teachers about the child's needs and effectively addressing behaviors can mitigate suspensions and missed class.

SAFETY NEEDS

Abuse and Neglect Prevention and Detection. Children with disabilities and those with behaviors due to trauma, IDD, or a mental health condition are at higher risk for experiencing abuse. To prevent further abuse or neglect, families and caregivers need education and support to understand the child's needs and how to manage them, and support for their own needs.

Human Trafficking Prevention and Treatment. The National Foster Youth Institute estimates that 60% of child sex trafficking victims in the US have a history of child welfare system involvement. Caregivers, providers, and communities must be well informed about risks and detecting potential danger. Enrollees need age-appropriate education about risks, including the use of peers to lure children and youth into situations in which they can be exploited. Those who have been victimized need treatment for this extra layer of trauma and often sexual abuse.
Consent and Confidentiality Issues. When a child is removed from the home, their safety is paramount. A DCBS-approved 'source of truth' ensures Care Coordinators, Community Connections Help Line staff, providers, and others are clear about who is authorized to have and discuss information about the child. Additionally, timely access to needed care requires real-time information about who may consent to treatment.

NEEDS SPECIFIC TO SUBGROUPS OF THE KENTUCKY SKY POPULATION

Within the overall Kentucky SKY population, subgroups of Enrollees have their own specific needs. We describe a sampling of these below.
Medically Complex Children. These children require intensive management to ensure timely care and continuity. They are at risk of hospitalization and long lengths of inpatient stay and need a strong medical home to prevent underutilization of preventive and primary care due to heavy use of specialty services. These children need comprehensive evaluation by a team of appropriate experts to identify all needs. For example, we have found that many of our medically complex Enrollees have undiagnosed and untreated autism spectrum disorder. They are also more likely to be technology dependent (e.g., on a ventilator), increasing the challenge of finding an appropriate placement. Their care requires close partnership with DCBS to find and support willing foster families who will accept the placement and provide adequate care.
Youth in the Juvenile Justice System. Some studies indicate that abuse and neglect increase a youth's likelihood of being arrested by 55%. In 2017, nearly 400 Kentucky youth were placed in a DJJ detention center due to status offenses such as running away, skipping school, and underage drinking. Most DJJ-involved Enrollees require the same intensive mental health and behavioral supports as other SKY Enrollees. Many will have exhibited trauma-impacted behaviors, especially in their teen aged years, and these behaviors contribute to their juvenile-justice involvement. Juvenile justice and school staff often serve as parental substitutes and need education and training to ensure long-term Enrollee success. Since the court system, instead of clinical assessment, often drives treatment, judges and court personnel need education to identify appropriate services. In addition, girls in the 'crossover' population, or move back and forth from foster to juvenile justice care, disproportionately lack appropriate care compared to male counterparts.
Transition Age Youth. This population requires support on a wide range of issues to prepare them for transition, including education and support for their health care needs and for social determinants needs such housing, education and employment. Youth also need education and support to exercise their 'voice and choice' during planning. Many desire to 'leave the system', which puts their continued Medicaid coverage at risk. They distrust adults, requiring a strong peer support resource to ensure engagement. They are at high risk for issues such as truancy, early sexual activity and pregnancy/repeat pregnancy, sexually assault, human trafficking,

homelessness, substance abuse, self-harm, and suicide. They need education on healthy relationships and families need support to manage the transition to teen years.

Former Foster Youth. These Enrollees have many of the same needs and issues as Transition Age youth. In addition, many have poor support systems as reunification with the family of origin may be challenging or not in their best interests. They need assistance to connect with peer and other supports and create a 'village' that provides a sense of mutual care and belonging. While this age group becomes more likely to start families, they need education and services to support healthy relationships and develop parenting skills. They remain at risk for poor health outcomes and should be encouraged to maintain Medicaid coverage.

Adoption Assistance. Support for a successful adoption requires educating the adoptive parents about the child's needs and care as well as issues that may arise well after the adoption is final. For example, the transition to the teen years may bring up past trauma or emotions and grief over loss of the family of origin may last indefinitely. Adoptive parents also need assistance with their own support needs.

c. An overview of the Contractor's proposed organization to provide coordinated services for the Kentucky SKY program;

WellCare of Kentucky's organizational infrastructure provides integrated accountability with behavioral, social, pharmacy and physical health staff aligned through our clinical, administrative and operational structure. This supports integrated delivery of services across our staff, contractors, systems, call centers, and all available resources to provide a unified, streamlined managed care experience for our Enrollees, caregivers/families, and providers.

Our organization is built around WellCare's 'One Team' philosophy of a fully integrated, holistic approach to Enrollee care. One Team means that our philosophy applies to every aspect of our organization, from executive leadership staff to the fully integrated Care Coordination Team, across all entities that support our Enrollees, including our Enrollee Call Center, Nurse Advice Line, and BH Crisis Line and local subcontractors. For those services that we subcontract, we provide close oversight to ensure subcontractor adherence to guidelines and standards. WellCare does not subcontract BH services.

Kentucky-Based Leadership. Our Kentucky SKY organization will be led by our SKY Executive Team. These Kentucky-based individuals have significant experience serving the SKY-eligible population and established relationships with our DMS, DCBS, and DJJ partners. Our Kentucky leadership Lori Gordon, LeAnn Magre and BH Medical Director Tim Houchin in particular have worked closely with DMS, DCBS, and DJJ to integrate our services with the foster care and juvenile justice systems. Beyond their experience with managed care for these Enrollees, our Executive Team offers deep, Kentucky-based experience providing direct services to SKY and other Medicaid Enrollees in settings such as institutions, out of home placements, BH treatment facilities, and acute care facilities. This direct care experience informs our approach with clinical insight into effectively serving these children and youth.

Dedicated Regionally-Based Teams. To provide a streamlined managed care experience for our Enrollees, foster and adoptive parents, fictive kin, caregivers, and providers and ensure close collaboration with DMS, DCBS, and DJJ, we have developed an organizational structure that includes regional teams of operational and clinical staff in each of our six regional offices throughout the Commonwealth. Through our proposed structure, we will embed staff in DCBS

regional offices and DJJ community districts to ensure quick engagement and collaboration. Our regional team leaders will support their teams to ensure adherence to escalation protocols and timely, accurate, and proactive services.

Dedicated, Field-Based Care Coordination Staff. A key WellCare differentiator is our field-based Care Coordination staff, which already work face-to-face with Enrollees, DCBS, DJJ, and other stakeholders to ensure timely access to appropriate services. While initially we provided Care Coordination services through a telephonic model, which remains the predominant model among other current Medicaid MCOs, we moved to a field-based model in 2011 with an expanded team in 2013. We specifically dedicated trained and experienced Care Coordination staff to this population based on lessons learned about effectively meeting their needs. We are expanding our Care Coordination staff to deliver face-to-face services to every DCBS regional office and in each DJJ Community District.

Integrated Care Coordination Teams. Our Care Coordination Teams incorporate medical, BH, pharmacy, and social work expertise based on each Enrollee's needs. The team coordinates across the health and social services continuum and bridges Medicaid and the foster care and juvenile justice systems to create a seamless experience of care.

Dedicated Liaison and Training Staff. To ensure we provide targeted communications and training to providers, law enforcement, the judicial system, advocates, and other stakeholders, we are adding several positions to our organizational structure. These positions include:

- Our **Training Specialist** will provide education and training to DMS, DCBS, DJJ, DBHDID, and Cabinet Sister Agency Personnel. This role is also responsible for providing quarterly training for law enforcement officials, judges, district and county attorneys, including the Kentucky Administrative Office of the Courts (AOC), the Kentucky County Attorneys Association, and the Kentucky Department of Public Advocacy.
- **Field Outreach Coordinators** will serve as our liaisons to DCBS. We plan to locate them at DCBS regional offices to promote timely identification of, and provision of services to, children who have been taken into state custody or have changed placements.
- Our **DJJ Specialist** will serve as our liaison with DJJ, DCBS, Kentucky Department of Corrections (KDOC), and AOC, coordinating training and serving as the point of cross-system contact for evaluations, treatment, and transfers for juvenile justice-involved Enrollees.

Dedicated Provider Engagement Teams. Building on our local provider engagement model that places representatives within the communities they support to provide face-to-face service, we are establishing a separate SKY Provider Engagement Team to provide a high level of service to SKY providers. For example, the team will provide support to private child care providers who are new to a managed care system and may need extra assistance enrolling in Medicaid, learning new systems, and resolving any issues that arise at implementation.

Enhanced Quality Structure. To support effective collaboration with our cabinet partners and ensure specialized focus on SKY operational and quality processes, we will add two new committees to our existing QMC structure: a Collaboration Optimization Committee and a SKY Enrollee Outcomes Committee. The Collaboration Optimization Committee will monitor the effectiveness of collaboration and coordination among WellCare of Kentucky, DMS, DCBS, and DJJ across all operational areas and issues. The committee, which will include DMS, DCBS, and DJJ representation, will recommend policy and process changes to facilitate our joint

cooperative performance to improve quality and outcomes. The SKY Enrollee Outcomes Committee will monitor the quality of care and service for all Kentucky SKY Enrollees receiving Medicaid services and the network of providers who deliver services. Each committee will include provider, caregiver, and former foster care Enrollee representation and report into the QMC oversight committee.

d. A summary of the Contractor's strategy and approach for administering services for Kentucky SKY Enrollees;

COMPREHENSIVE TRAUMA TRAINING ACROSS THE SYSTEM OF CARE

To ground our model of care and stakeholders in trauma-informed approaches, we will provide our evidence-based Healing Futures training to all SKY dedicated and shared staff and providers and make the training available to our DMS, DCBS, and DJJ partners and other stakeholders such as foster and adoptive parents, law enforcement, and judges. Healing Futures specifically addresses trauma informed care, ACEs and service interventions needed to support this population. We will supplement this with trauma and SKY-specific training through our partnership with the University of Louisville School of Social Work. We are also working with the Orphan Care Alliance and Kentucky Partnerships for Families and Children to develop foster parent education.

HIGH-TOUCH, TIMELY ENROLLEE SERVICES

Our strategy and approach to administering services to SKY Enrollees includes a high touch Enrollee Services model that bridges the Medicaid and foster care systems to ensure timely notification of new Enrollees and rapid identification of needs and access to services.

Expediting Immediate Services. WellCare will assign a Field Outreach Coordinator (FOC) to each DCBS regional office and DJJ community districts to quickly screen and initiate services for immediate needs. We will work with DCBS, DJJ and DMS to develop a mechanism to receive notification within 24 hours of a court order. The FOC will serve as the "One Call" coordinator for all stakeholders, removing barriers and improving communication and can issue a temporary ID number if necessary. The Care Coordinator will conduct a Health Risk Assessment, if not completed during the Welcome Call, and a Comprehensive Needs Assessment and schedule an Assessment Team meeting to begin care planning.

Providing Timely Access to Comprehensive Enrollee Data. We will give authorized DCBS and DJJ staff, caregivers, and former foster care Enrollees access to the Medical Passport and other critical information (e.g., current providers, medications) to support decision-making. Foster and adoptive parents and former foster care Enrollees will be able to access WellCare's ClearSKY mobile application via their mobile device or, if they do not own a device, through a tablet issued by their Care Coordinator. Through the ClearSKY app, they also can print an ID card or forward it to their provider.

Facilitating Timely Medical and Dental Home Access. Our FOC will identify existing PCP relationships, determine if they are within access standards, and as needed assist with new PCP selection. Once assigned, an email to the PCP will alert them to the new Enrollee and encourage them to access the Provider portal to quickly address any care gaps. We will also assign each Enrollee to a primary care dentist and, if necessary, an orthodontic dental home.

POPULATION HEALTH MANAGEMENT ALIGNED WITH UNIQUE POPULATION NEEDS

We have refined our PHM model and care coordination approach to align with the goals, needs, and processes of DCBS, the Children's Review Program (CRP), and DJJ. Our strategy and approach for Kentucky SKY builds on this experience to address unique factors that make PHM and care coordination for this population different than for other Medicaid populations. Our tailored PHM model incorporates features such as the following.

Population Trauma Management. Every SKY Enrollee has a history of trauma, which influences health, behavior, participation in care, and other factors that impact outcomes, stability, and permanency. Our entire population health program model, including our care management model, will be trauma-informed.

Expanded Approach to Preventive Care. We will use American Academy of Pediatrics and Child Welfare League of America (AAP/CWLA) standards for higher frequency and intensity of well-child services. Our approach also incorporates prevention of placement disruption, as well as abuse, neglect, and maltreatment.

Population-Specific Approach to Utilization Management. We will support providers in the use of evidence-based guidelines specific to this population. Our UM approach will go beyond strict adherence to medical necessity, accounting for factors like post-discharge placement availability and appropriateness, supports needed for placement stability, and the impact of trauma. Understanding the role of the courts for this population, we will offer grand rounds with judges to promote evidence-based, appropriate services.

Customized Care Coordination Model. Our field-based, fully integrated model will ensure continuity of and access to care upon entry into foster care and through placement changes and transitions across care settings, to adulthood, or out of WellCare. Our Care Coordination Services are person-centered, culturally competent, using a strengths-based approach with a focus on resiliency and intensive support for shared decision-making. Our Care Coordinators have a primary mission to promote Enrollee and family voice and choice throughout the planning process and advocate for what the Enrollee and family say are important to them.

Intensive Support for Enrollees with High Needs. Through our more than eight years of experience managing the care of Kentucky Foster Care Enrollees we know that a large percentage of Foster Care Enrollees have medically complex needs. WellCare will assume all new Enrollees are high needs to ensure no child falls through the cracks. Upon notification, Enrollees with high BH needs will be assigned a BH clinician as the Care Coordinator who will immediately begin the High Fidelity Wraparound process. For those with complex physical health needs, including those with a Medically Complex designation, we will assign a nurse Care Manager as the Care Coordinator to ensure continuity and quickly arrange needed services, coordinating Individual Health Plan (IHP) meetings and working with the Children's Review Program and the Children's Commission to ensure appropriate treatment and placement.

BH Crisis Prevention and Management. Care Coordinators will collaborate with the Enrollee and circle of support to develop a crisis plan as part of the care plan that identifies triggers and specific de-escalation actions for the Enrollee and others to take. Care plans will address non-medical factors that can contribute to crises and to inappropriate hospitalizations, including effects of Adverse Childhood Events (ACEs), SDOH needs, caregiver/family respite needs, and supports within the school environment. We provide 24/7 availability of face-to-face

Emergency Services including in-community mobile crisis intervention services and in-home services; 24/7 availability of telephonic licensed clinical support from our Nurse Line and BH Crisis Line for routine, urgent, and emergent issues; provider education on acceptable after-hours telephonic support for Enrollees so that an incident does not become a crisis; training for all WellCare Enrollee-facing staff on recognizing and managing a crisis call; and ongoing collaboration with DCS and DBHDID on improving BH crisis services.

Programs to Support Enrollee Health, Stability, and Permanency. All Enrollees have access to a full range of wellness, clinical, and condition management programs as needed. We have also developed evidence-based programs to address population-specific needs, including psychotropic drug utilization, frequent BH readmissions, challenges appropriate post-discharge placements, sexual orientation and gender-related issues, suicide and adoption success.

Enhanced Focus on SDOH Resources to Promote Protective Factors. Through our Community Connections program we are seeking new SDOH resources to reduce the risk of delinquent behavior and future adult offending due to exposure to ACES. We will use SDOH data collected through assessments and Z-codes to identify and address Enrollee SDOH needs to support health and permanency outcomes and pinpoint 'hotspots' where community resources must be developed to meet population needs.

Integrating Data to Support a Holistic Enrollee View. We will leverage our CareCentral health management system to integrate claims and utilization data, care plans, and other information to provide a Medical Passport supporting informed treatment and a holistic view of Enrollee needs. The Medical Passport will be available to providers via our Provider Portal and to other authorized users via our Clear SKY solution.

TAILORED QUALITY MANAGEMENT

WellCare of Kentucky's Quality Management program leads the Commonwealth in 24 HEDIS® measures for 2019 and has maintained a two-year NCQA commendable accreditation status in Medicaid. For the past three years, our HEDIS scores for foster care Enrollees have been higher on many measures for our overall Child HEDIS results and the majority if the well-child scores have exceeded the national Medicaid mean. Enhancements to tailor our strong quality management approach to the SKY program include:

Promoting Evidence-Based Practices. We will adopt additional, SKY-specific evidence-based guidelines and approaches such as the higher-intensity AAP/CWLA well-child standards and approaches grounded in SAMHSA's six key trauma-informed principles. We will also adopt and support guidelines on topics like health care for juvenile justice-involved youth; appropriate utilization of psycho-tropics; BH interventions; developmental disabilities including autism; and suicide prevention. We will offer provider incentives, such as value based reimbursement models, to encourage participation and compliance. We will also empower providers to use the holistic High Fidelity Wraparound approach and apply the Annie E. Casey Foundation framework for promoting resiliency.

SKY-Specific Quality Committees. We are enhancing our quality structure by establishing a Collaboration Optimization Committee (focused on the effectiveness of our collaboration with DMS, DCBS, and DJJ to implement the program) and a SKY Enrollee Outcomes Committee to ensure a specialized focus on Enrollee health and other outcomes.

Tailored Metrics and Performance Improvement Topics. In addition to traditional HEDIS measures, we will track and analyze a wide variety of metrics to evaluate our impact on Enrollee outcomes. These metrics will align with measures and reports required by the contract, incorporate key aspects of care for this population, and reflect stability and permanency. We may also use these measures to identify providers with specialized expertise and outstanding performance to recommend to DCBS, Enrollees, and caregivers as preferred providers for SKY Enrollees. We plan to develop a comprehensive reporting dashboard, inclusive of mutually agreed upon metrics, that will be easily interpreted and demonstrate how our services affect Enrollee outcomes. We will also conduct performance improvement projects tailored to population needs such as reduction of seclusion and restraints within residential settings.

WellCare of Kentucky has been National Committee for Quality Assurance (NCQA) accredited since 2014. Since that time, **we have improved our accreditation scores from 79.0 in 2015 to 85.73 in 2018**, have maintained a two-year Commendable NCQA accreditation status, and have the highest NCQA quality ranking in the State Medicaid program at 3.5. In addition to having the highest quality rating, we also have the highest percentage of ratings of a 4 or higher in the 2019 – 2020 report.

e. A summary of the Contractor's strategy and approach for establishing a comprehensive Provider network able to meet the unique physical and Behavioral Health needs of Kentucky SKY Enrollees;

WellCare of Kentucky offers the **largest and most comprehensive network of all Kentucky MCOs**, based on our review of online provider directories**.** Our existing provider network includes 100% of all hospitals, 99% of all eligible PCPs, and 100% of all FQHCs as well as more than 34,500 network providers and 2,300 behavioral health professionals. In addition, all Private Child Care providers with Medicaid numbers are currently in our network.

STRATEGY AND APPROACH

Our strategy for establishing a comprehensive network to meet the unique physical and BH needs of Kentucky SKY Enrollees includes three components.

1. Identify and Contract With Non-Participating Providers Serving enrollees

Gap Analysis to Identify Non-Participating Providers Contracted with Other MCOs. To ensure continuity of care for new Enrollees transitioning from other MCOs, we will use the claim history provided by DMS to conduct a gap analysis, identifying non-participating PCPs who serve SKY Enrollees through other MCOs. We will include those providers in our Network Development work plan with personal outreach to discuss contracting.

Stakeholder Outreach to Identify Additional Non-Participating Providers for Recruitment. We will outreach to stakeholders, including community organizations and key providers, for assistance in identifying providers for contracting.

Recruitment of Specialists Unique to the SKY Population. We are recruiting specialists unique to the Kentucky SKY population such as Level 2 Psychiatric Residential Treatment Facilities (PRTFs) and therapeutic foster care providers. We have already begun the personal outreach to these providers to invite them to upcoming Provider Summits, help them secure a Medicaid number and explain the contracting and credentialing process to them.

2. Expand Access to Key Services That Are Critical But Not Widely Available

BH Crisis Services. WellCare has collaborated with Lifecare Solutions in Louisville to develop a true crisis response team network, which will be expanding into additional Kentucky counties. We are in discussions with providers in bordering states, such as Saint Francis Ministries in Tennessee, to expand services into Kentucky. We are also working with Community Mental Health Centers and Behavioral Health Service Organizations to offer these services.
BH Specialists. Many of the specialties necessary to provide appropriate treatment for this population are in short supply in Kentucky, such as psychiatry, child psychiatry, child psychology, pediatric neurology, neuropsychology, and applied behavioral analysis. To address this, we will build on our current telehealth capabilities to expand access. We will provide telehealth equipment and support to connect foster youth to BH specialists. Through our Virtual Integration Program, we will provide PCPs with a tablet that includes a screening tool and ability to connect to a virtual BH specialist. Virtual visits and follow-up can occur from the youth's home via a device provided to the foster or adoptive parent by WellCare of Kentucky.
Dentists. In addition to integrating our dental vendor into all network development activities to ensure adequate access to a network of dentists and pediatric dentists, we will also use tele-dentistry technology to ensure continuity of care even if the Enrollee needs to move to a foster home outside of the access standards. Using synchronous modalities, we will connect Enrollees with their dental provider by deploying Big Smiles mobile dental providers (able to cover the entire Commonwealth with dental services) to the Enrollee's home, school or other community-based location to ensure continuity of care. We are expanding the network to include mobile sedation dentistry. This will allow Enrollees with special health care needs who require anesthetic to receive care in a dental sedation center or in their dentist's office, rather than in a costlier hospital setting, improving access.

3. Expand Access to Trauma-Informed Care and Other Evidence-Based Practices

Identify Expertise Already Available In Network. Many of our current providers have expertise in trauma-informed care and other relevant evidence-based practices (EBPs), such as trauma-focused cognitive behavioral therapy (TF-CBT). We will use this information to help DCBS, DJJ, and caregivers select providers who can effectively meet Enrollee needs. We will also identify providers with a subspecialty focus such as sexual abuse, physical abuse, domestic violence or human trafficking. When contracting with residential providers we will require evidence they meet the requirements of a Qualified Residential Treatment Provider (QRTP), as required under the Family First Preservation Services Act. We will also ensure that providers follow Building Bridges Initiative (BBI) principles through work plans based on the BBI self-assessment.
Establish A Baseline for Trauma-Informed Care Expertise. Using the National Child Traumatic Stress Network framework for trauma informed care, we will work with DCBS, DJJ Kentucky Partnership for Children and Families, University of Louisville Kent School of Social Work, and our providers and community stakeholders to develop a checklist for trauma-responsive care. We will use results to establish individual provider baselines as well as a network baseline against which we can evaluate improvements in availability of Trauma Informed Care (TIC).
Expand Expertise With Additional Training and Support. We will supplement existing provider expertise with network-wide training and support for an expanded list of EBPs relevant to this population. We are adding training on EBPs such as the American Academy of Pediatrics and

Child Welfare League of America well-care standards for children and youth in foster care, and on appropriate use of psychotropics, treatment for autism spectrum disorder, and health care for youth with juvenile justice involvement. We are partnering with the University of Louisville's Kent School of Social Work to offer TIC training program across the Commonwealth and with our dental benefits administrator to provide TIC training to network dental providers through P.A.N.D.A (Prevent Abuse and Neglect through Dental Awareness). We will offer incentives for providers to deepen their TIC expertise by reimbursing for specified training and certifications and offering preferred provider status to those completing extra trainings. Quality Practice Advisors will provide technical support to providers on TIC and other EBPs including gap analysis, re-training, training for practice staff, and recommendations on external resources.

f. A summary of innovations and Trauma-informed initiatives the Contractor proposes to implement to achieve improved health outcomes for Kentucky SKY Enrollees in a cost effective manner. Include a discussion of challenges the Contractor anticipates, how the Contractor will address such challenges, and a description of the Contractor's experience with addressing these challenges for similar contracts and populations.

INNOVATIONS AND TRAUMA-INFORMED INITIATIVES

WellCare of Kentucky offers a wide range of innovations and trauma-informed initiatives to achieve improved outcomes in a cost effective manner. **Table G.1-1** summarizes some of our most important innovations and trauma-informed initiatives

Table G.1-1 innovations and Trauma-Informed Initiatives

EXPANDING ACCESS AND AVAILABILITY OF SERVICES	
Bring New Providers to Kentucky	To expand access to scarce but critical services such as mobile BH crisis, WellCare of Kentucky will collaborate with providers in border states to expand into the Commonwealth. We have done this with Lifecare Solutions (Tennessee) for mobile crisis and are working with additional providers such as St Francis Ministries.
Telehealth Virtual Integration Pilot	We will provide telehealth equipment and support to PCPs and foster parents to connect youth to BH clinicians through virtual visits and follow up via a tablet-enabled screening tool and telehealth link.
Expand Access to Evidence-Based Practices and Treatment	We will identify, and link Enrollees, to providers who have been formally trained in the use of evidence-based BH assessment and practices like trauma-focused cognitive behavioral therapy (TF-CBT), dialectical behavioral therapy (DBT), parent-child interactional therapy (PCIT), rapid eye movement desensitization and reprocessing (rEMDR), and others.
IMPROVING QUALITY	
Foster Care Medical Home	We will link Enrollees to, and provide additional reimbursement for, PCPs offering enhanced BH coordination practices that conform to the American Academy of Pediatrics/Child Welfare League of America standards for health care for children in foster care.
Evidence-Based Standards for Well-Child Care	We will require PCPs to follow the increased frequency and intensity of well-child services recommended by the American Academy of Pediatrics and Child Welfare League of America.
QTRP Standards	When contracting with residential providers, as part of a BHSO, we will require evidence they meet the requirements of a Qualified Residential

	Treatment Provider (QRTP), as required under the Family First Preservation Services Act.
Building Bridges Initiative	We will ask providers to complete the Building Bridges Initiative (BBI) self-assessment and develop a work plan to move toward BBI improvement. During care coordination, we will promote BBI's youth-guided, family-driven principles.
Members Empowered to Succeed (METS) Program	The METS Program supports provider use of evidence-based approaches and assists Enrollees in stepping down from intensive services or obtaining more specialized or extended services
Preferred Providers	We will identify high-quality providers, including providers who have obtained advanced training in trauma-informed care, for a SKY Preferred Provider designation.
Pilot Program for Transition to Least Restrictive Placement	We are working with Home of the Innocents to provide mental and medical health interventions and intensive assessments to prepare children to transition to the appropriate placement in the least restrictive setting.
Reducing Seclusion and Restraints	We plan to implement a Performance Improvement Project with identified PRTFs and BH hospitals to reduce use of seclusion and restraints and increase alternative methods of addressing behaviors for Enrollees in residential settings.
Grand Rounds with Judges	Judges often order treatment without a full grounding in evidence-based approaches and recommendations. We will offer grand rounds with our clinical experts to inform judicial decision making in the Enrollee's best interests.
Value-Based Purchasing	We are developing value-based purchasing initiatives with PCPs, dentists, key specialists, and foster care residential services to link payment to value and quality.
Case Management Fee and Pay for Quality	We will pay a case management fee to compensate PCPs for the additional responsibilities they are assuming. Our Partnership for Quality (P4Q) incentive program will reward reduction in ER usage, timeliness of initial PCP outreach, and timely assessment completion.
INTENSIVE COORDINATION APPROACH AND SUPPORT	
Co-location of WellCare Staff in DCBS Offices	To expedite access to services as Enrollees enter foster care, we will co-locate staff in regional DCBS offices and DJJ Community Districts. We will also work with DCBS/DJJ to develop a file to alert us within 24 hours of a court order for a child to enter foster care.
Face-to-Face, High Touch Service for All New Enrollees	Under our WellCare At Home field-based fully integrated Care Coordination program, we will conduct a face-to-face assessment of all new Enrollees and presume that all new Enrollees are complex
Enhanced Data for Stratification	Our risk stratification model incorporates SDOH and information from KHIE and we will collaborate with DCBS and DJJ to incorporate data from their systems.
Intensive Placement Support Program	This program will provide intensive clinical and coordination support for children and youth with high and specialized needs preventing DCBS from securing a permanent foster placement.
Clear SKY Solution for Data Sharing	Our ClearSKY solution will provide secure, HIPAA-compliant access to the Medical Passport and other key Enrollee information for authorized DCBS, DJJ, foster and adoptive parent users and former foster care Enrollees.

ENHANCING PROVIDER SUPPORT	
Coding Educator	Beginning four months in advance of program go-live, we will offer support to providers through a coding educator on our Provider Relations staff.
Gold Card Program	Behavioral health and other specialty providers with a demonstrated record of cost efficiency and quality will not be subject to prior authorization requirements.
Regionally-Located Quality Practice Advisors	Regional QPAs will provide a range of technical supports to assist providers in complying with evidence-based practices.
ENROLLEE AND FAMILY SUPPORT	
Transition Age Youth and Young Adults Program	This program uses a youth-led planning model and designated transition staff and peer support resources to encourage youth voice and choice.
Maintain My Medicaid Initiative	This initiative leverages peer support and intensive outreach and education to encourage youth to remain enrolled/re-enroll in Medicaid for their health care.
Kentucky Partnership for Children and Families leadership training	Our partnership with KPCF will expand their leadership training to Enrollees by offering scholarships and developing unique training methods to encourage participation.
Kumanu (JOOL)	This one of a kind smartphone-based application promotes health engagement and personal well-being. The application captures Enrollee-entered data for factors (such as health and life engagement, willpower/self-control, and resilience) that are impacted by ACEs and protective factors, providing insight into SDOH needs.
Youth Peer Support Specialist	We will co-locate Youth Peer Support Specialist on college campuses to provide outreach and support to engage former foster care youth in care and assist with connection to community resources.
Lifetime Access to Community Connections	Former foster care youth will have lifetime access to resources and support through our Community Connections program.
SOGIE program	This program provides evidence-based intervention to address the increased risks among Enrollees of different sexual orientations, gender identities, and gender expressions (SOGIE).
Ensuring Adoption Success for Enrollees (EASE) Program	This program provides intensive education and support to adoptive families to ease the adoption process and promote a successful adoption and family transition.
Human Trafficking Prevention and Healing Program	This program provides education to protect Enrollees from victimization and provide specialized treatment and support resources to those who have been victimized.
MEETING SOCIAL DETERMINANTS OF HEALTH NEEDS	
SDOH Hotspotting	We will analyze z-codes to help us pinpoint and track SDOH needs among our membership and identify 'hotspots' across the Commonwealth where specific resources need to be developed.
Evidence-based SDOH Screening Tool	We use the CMS Center for Innovation's Health-Related Social Needs (HRSN) Screening Tool which asks 10 questions about living situation, food,

	transportation, utilities, and safety. For foster and adoptive parents and for Enrollees age 17 and older, we use additional supplemental questions about financial strain, employment, family and community support, education, physical activity, substance use, and mental health.
Community Connections	We proactively identify Enrollees with unmet social service needs, remove barriers to appropriate access and healthy lifestyles, and build strong community partnerships we can leverage to benefit Enrollees and families.
WellCare Works	This program provides tools, support, and a robust network of more than 190,000 resources (virtual, national, and local community based) to help Enrollees and families take charge of their personal health including social connectivity and employment.
Welcome Home Kits	We will provide kits, including bedding and towels, to help transition age youth and young adults to settle into dorm rooms and apartments.
TRAUMA INFORMED INITIATIVES	
Staff, Provider, and Stakeholder Training and Education	We will provide our Healing Futures comprehensive trauma-informed care training to all WellCare SKY dedicated and shared employees and well as providers and stakeholders. We will supplement this training through a partnership with the University of Louisville Kent School of Social Work to offer additional trauma-informed care training to Enrollee-facing staff, providers, law enforcement, and the courts. We will also provide Mental Health First Aid training for all WellCare Kentucky SKY staff and make it available to providers and community partners including foster and adoptive parents.
Specialized Trauma-Informed Care Training for Dental Providers	We will work with our dental benefits administrator to provide training for dental providers through P.A.N.D.A (Prevent Abuse and Neglect through Dental Awareness). The training includes information about identifying child abuse and neglect, elder abuse, domestic violence and human trafficking.
Trauma-Informed Care Checklist	We will develop a checklist for components of provision trauma responsive care that aligns with the National Child Traumatic Stress Network framework, in collaboration with DCBS, Kentucky Partnership for Children and Families, University of Louisville Kent School of Social Work, providers and community stakeholders.
ACEs Screening	We will incorporate screening for Adverse Childhood Experiences into our comprehensive assessment process and require PCPs to conduct ACEs screening.

CHALLENGES

In implementing the Kentucky SKY program to achieve improved health outcomes for Enrollees, we anticipate the following challenges.

Learning Curve for Providers New to Medicaid. Some of the providers who currently provide vital services for children and youth in foster care, such as therapeutic foster care providers, are new to Medicaid managed care. We will address this by deploying our high-touch Provider Relations team to provide assistance enrolling in Medicaid and with service authorization and billing, and by adding a full-time Coding Educator.

Stakeholder Learning Curve on Kentucky SKY Requirements. It is one thing to receive training and education on ACEs and trauma-informed care, a High Fidelity Wraparound approach, or a framework for strengthening resiliency among children and youth in foster care. It is another to incorporate those guidelines and frameworks into everyday practice. We will address this through education and training opportunities, our high-touch approach to Provider Relations, and structured collaboration with stakeholders, including DCBS and DJJ.

Building a Bridge Between Medicaid and DCBS/DJJ. Our goal is to become a resource for DCBS and DJJ regional staff, aligning our work flows with theirs and identifying ways in which we can assist with information flow and coordination. We will connect with the DCBS and DJJ staff in each region and county office and developing good working relationships with the goal of demonstrating our value to them.

On-boarding 24,000 New Enrollees. At go-live, we will need to quickly complete comprehensive assessments and initiate care planning so that Enrollees quickly get or resume needed services and supports. WellCare already serves many of these Enrollees but we will leverage our successful Kentucky experience with new program implementation as well as our Florida affiliate's recent experience successfully transitioning a large population of children with special needs.

Expanding Access to Critical Services. We will improve access to key but scarce services including mobile crisis, psychiatry, psychology, ABA and trauma therapy. We will do this by expanding our network to include providers in Border States and by leveraging telehealth.

2. Company Background

WellCare
Beyond Healthcare. A Better You.

Best Places to Work IN KENTUCKY • 2019

G.2. COMPANY BACKGROUND

a. Corporate Experience

i. Describe the Contractor's experience in the provision of managed care services similar to those specified in the Contract for the Kentucky SKY populations specified in this Contract. In addition, include the following information in the response:

a. Experience in coordinating and providing Trauma-informed services, and educating Providers on Trauma-informed Care, ACEs, and evidenced based practices applicable to individuals in the Foster Care and juvenile justice systems or receiving Adoption Assistance;

b. Three (3) examples of initiatives the Contractor has implemented for Medicaid managed care programs for individuals in the Foster Care and juvenile justice systems or receiving Adoption Assistance that have supported improved outcomes (e.g., greater awareness of Trauma-Informed Care, clinical outcomes, Discharge Planning between levels of care, etc.). Describe whether such initiatives were cost effective and resulted in sustained change;

c. A summary of lessons learned from the Contractor's experience providing similar services to the populations enrolled in Kentucky SKY; and

d. How the Contractor will apply such lessons learned to the Kentucky SKY program

ii. Provide a listing of the Contractor's prior and existing full risk Medicaid managed care contracts serving individuals in the Foster Care and juvenile justice systems or receiving Adoption Assistance the previous five (5) years. Include the following information:

a. State name

b. Contract start and end dates

c. Number of covered lives

d. Whether the Contractor provides services regionally or statewide

b. Office in the Commonwealth - For programs similar to Kentucky SKY, has the Contractor co-located staff in an agency regional office? If yes, describe the factors that influenced that decision and summarized the outcome of the co-location in coordinating of services for program participants.

c. Staffing

i. Describe the Contractor's proposed approach to staffing for the Kentucky SKY program under this Contract, including the following information at a minimum:

a. Description of how the organizational structure provides innovative solutions for meeting programmatic goals specific to the Kentucky SKY program and Kentucky SKY Enrollees and supports stakeholder groups (e.g., Kentucky SKY Enrollees, providers, partners, among others).

b. Description of how the organizational structure will support whole-person integrated care, population health, and overall improvement in health outcomes in a cost-effective manner for the Kentucky SKY program.

ii. What prior experience will the Contractor require staff to have had in serving populations similar to Kentucky SKY Enrollees?

iii. Provide a narrative description of the Contractor's approaches to recruiting staff for the Kentucky SKY program, including:

   a. Recruitment sources;

   b. Contingency plans if the Contractor is unable to recruit sufficient numbers of adequately trained staff in a timely basis or if the Contractor's original staffing estimates are too low and for avoiding and minimizing the impact of personnel changes;

   c. How the Contractor will assure the Department that sufficiently experienced, licensed and trained personnel are available to support implementation and ongoing administration of the Kentucky SKY program; and

   d. How the Contractor will seamlessly transition staff, if necessary, from implementation to ongoing operations.

iv. A listing of Full-Time Kentucky SKY Key Personnel identified in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," and as otherwise defined by the Contractor, including:

   a. Individual names, titles, job descriptions, qualifications and full-time equivalents (FTEs) who are dedicated one hundred percent (100%) to the Kentucky SKY program under this Contract with no other responsibilities outside of the Kentucky SKY program, as well as their office locations for this Contract. An FTE is defined as the ratio of the total number of paid hours divided by the total number of working hours in the period. Annually, an FTE is considered to be 2,080 hours.

   b. Whether each Full-time Kentucky SKY Key Personnel position will be filled by a Contractor's employee or a Subcontractor. Identify the number of FTE Subcontractor staff who will be one hundred percent (100%) dedicated to the Kentucky SKY program.

   c. Resumes, including information such as degrees, credentials, clinical licensure as applicable, years and type of experience. Include as an Appendix or Attachment to the Proposal.

v. Overview of the Contractor's proposed training of staff to fulfill all requirements and responsibilities of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," for all operational areas. Provide the Contractor's proposed training program and curriculum for all staff specific to areas of responsibility. Include information about the topics for which staff will receive training, how trainings will differ for new staff members versus ongoing trainings and related training schedules.

vi. Overview of Contractor's approach to monitoring Subcontractors' progress in recruiting and training of staff to meet all requirements of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

vii. Retention approach for Full-time Kentucky SKY Key Personnel.

viii. Provide a detailed description of the Contractor's organizational structure for the Kentucky SKY program under this Contract, including an organizational chart that displays the following:

a. Management structure, lines of responsibility, and authority for all operational areas of this Contract.

b. How the Kentucky SKY fits into the overall organizational structure of the Parent Company.

c. Where Subcontractors will be incorporated.

ix. A summary of how each Subcontractor will be integrated into the Contractor's proposal performance of their obligations under the Contract to ensure a streamlined experience for the Kentucky SKY Enrollees, Providers and the Department.

x. Identification of staff positions that will be based (1) in the Contractor's Kentucky office(s), (2) in the field, and (3) at a corporate office of the Contractor or Subcontractors. Information should include physical locations for all Contractor operational areas to support this Contract.

xi. Number of proposed FTEs dedicated to the Kentucky SKY program, by position type and operational area and how the Contractor determined the appropriateness of these ratios.

xii. Describe the roles and responsibilities of Care Coordinators and Care Coordination Team. How will the Contractor maintain adequate Kentucky SKY to Kentucky SKY Enrollee ratios and number of Care Coordination personnel and management staff having expertise in Physical Health, Behavioral Health, and the Kentucky SKY Enrollee to build Care Coordination Teams? Provide the Contractor's approach to locating the Care Coordinators areas in which they serve.

G.2. COMPANY BACKGROUND

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 41.1 Scope of Services of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix,** provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

WellCare of Kentucky, Inc. ("WellCare of Kentucky") is a wholly owned subsidiary of WellCare Health Plans, Inc. (WellCare). On January 23, 2020 WellCare was acquired by Centene Corporation (Centene). WellCare is now a wholly owned subsidiary of Centene. **WellCare of Kentucky's leadership, staff, branding, and model for delivering services to the Commonwealth are not changing and we remain committed to partnering with DMS to ensure Kentucky's Enrollees, communities, providers and other stakeholders receive the integrated, whole-person care and services necessary to address all of their physical, behavioral, and social needs.** With the acquisition, WellCare of Kentucky is now also able to leverage the combined experience and best practices of our Centene affiliate health plans, which is now managing the care of more than 12.9 million Medicaid Enrollees across 30 states.

a. Corporate Experience

i. Describe the Contractor's experience in the provision of managed care services similar to those specified in the Contract for the Kentucky SKY populations specified in this Contract. In addition, include the following information in the response:

OUR EXPERIENCE PROVIDING MANAGED CARE SERVICES FOR THE POPULATION SIMILAR TO KENTUCKY SKY

It has been WellCare of Kentucky's privilege to serve the Kentucky Medicaid program and our Enrollees over the last eight years. Currently, **WellCare of Kentucky is managing the care of approximately 8,100 Foster Care Enrollees, Former Foster Care Youth Enrollees, Adoption Assistance Enrollees, and Juvenile Justice (JJ) Enrollees (hereafter referred to collectively as Foster Care Enrollees), across the Commonwealth**. We also leverage our affiliate WellCare Medicaid health plan's experience and best practices from managing Foster Care Enrollees, which as of year end 2019 include approximately 20,000 enrollees in seven other states. With the acquisition, we are now also able to leverage the experience and best practices of our Centene affiliate health plans, which manage the care of more than 150,000 children in Foster Care across 17 states. This experience includes sole source Foster Care contracts in Florida, Illinois, Texas, and Washington.

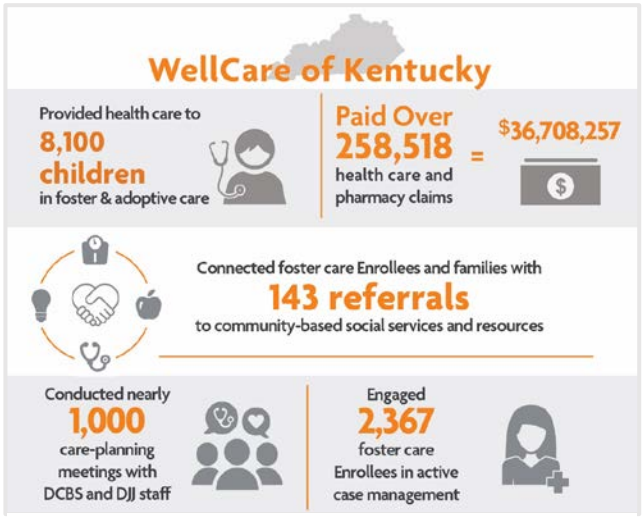

Figure G.2-1 Data for our Foster Care Enrollees

We have embraced our role as a supporter to the Kentucky Cabinet for Health and Family Services, DMS as an agent of change to transform the Medicaid program and to achieve the goal of better health outcomes for Enrollees in the populations we serve. Through the years, we have developed comprehensive, Kentucky-specific, innovative programs that are improving Enrollee health in Kentucky. As an incumbent managed care organization (MCO) with six Regional offices, we currently serve the single largest concentration of children and youth in foster care, receiving adoption assistance and/or involved with the juvenile justice system across the Commonwealth with approximately 8,100 children, relying on our passion for individualized and holistic care to empower them to achieve their unique short-term and long-term goals. Our local Kentucky and national knowledge and experience of this population informs our approach to care coordination of their medical, behavioral, pharmacy, and dental health benefits and their use of social resources. Providing health care for children in the foster care population requires those involved in a child's care to have an in-depth understanding of childhood trauma and its potential negative impact on a child's brain development. It also requires an understanding of their unique physical health, mental health, pharmacy, and social needs as well as the developmental and educational problems children and adolescents in foster care experience. It

is also important to know what it takes to navigate effectively the structure, goals, and mandates of Kentucky's foster care system of care. This knowledge and experience facilitates the provision of appropriate comprehensive care to children and youth in this population. Children in foster care are a uniquely vulnerable population.

The American Academy of Pediatrics (AAP) classifies this population as children with special health care needs because of the high prevalence of chronic medical, developmental, and mental health problems, most of which predate their placement in foster care. In Kentucky, this population has received comprehensive and coordinated services through our existing Kentucky network of more than 34,500 providers since 2011. **On Day 1 of the Kentucky SKY contract, we have the expertise, experience, capability, and proven commitment to providing services to the Kentucky SKY population.**

Children and youth placed in foster care because of abuse or neglect often enter our care with significant behavioral health challenges. Their health issues are often related to poverty or to other at-risk conditions, such as parental substance abuse or mental illness. The actual abuse or neglect (including medical, behavioral, and dental care neglect) is often a contributing factor to their poor health, as noted when they become our Enrollees. The disruption caused by removal from the home and placement in foster care can exacerbate their health issues, if not quickly and appropriately addressed by qualified individuals who understand their needs and know how to navigate and collaborate with those engaged in Kentucky's system of care. Our direct experience with our Kentucky Medicaid children in the foster care population shows these children and youth have high levels of trauma, transiency, psychotropic medication use, and higher rates of hospitalization and readmissions. In April 2019 based on claims data, the most prevalent chronic condition for our Medicaid Enrollees in the foster care population is one or more psychiatric conditions, including depression and substance use disorder (SUD). Our data shows that almost half of our current Enrollees in the foster care population have behavioral health needs, as seen in **Figure G.2-2**, a much higher rate of behavioral health needs than most of the other adult and child Kentucky Medicaid populations we serve today. In fact, their rate of behavioral health issues is more than double the rate for the children and youth we serve in our Kentucky Children's Health Insurance Program (KCHIP) and Temporary Assistance for Needy Families (TANF) child populations. **In 2018, 3,657 foster care children received behavioral health services, with 53,710 unique behavioral health claims for a total $14,149,603.** Many of our foster care children and youth have complex care needs with co-occurring and comorbid conditions, such as gastrointestinal disorders, metabolic disorders, diabetes, asthma, and developmental disabilities. On average, they use twice as many chronic care drugs compared to our KCHIP and TANF child populations. **Our utilization data from 2016 – 2018 for the foster care population shows a positive trend of a 9.54% decrease in Emergency Department visits/1,000 and a 9.51% increase in PCP visits per 1,000 and a 22.22% increase in specialist visits, demonstrating a migration from expensive non-**

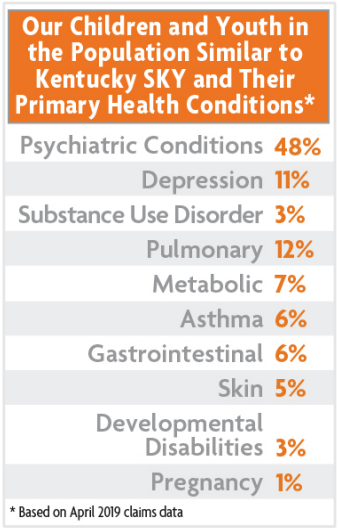

Figure G.2-2 Primary Health Conditions

coordinated Emergency Department visits to a less expensive, highly coordinated place of service.

Children and youth in foster care have more touch points than other Medicaid populations, interacting with foster families, biological and fictive kin relations, medical consenters, child protective services, judges, medical and behavioral healthcare providers, pharmacists, child-placing agencies, advocacy groups, community-based services, and sometimes juvenile justice. This makes care coordination and integration of health care services particularly vital to improving health outcomes for the Kentucky SKY population. Our current population similar to Kentucky SKY is disproportionately clustered in DMS Region 5. For all Enrollee population types, only 17.5% of our total Medicaid population is in Region 5, however in Region 5 the foster care and juvenile justice systems and adoption assistance population is 26% of our total Medicaid population.

Nationwide, as of year end 2019, WellCare managed approximately 28,000 children and youth in the foster care and receiving adoption assistance population in Florida, Hawaii, Michigan, Missouri, Nebraska, New Jersey, and South Carolina. With the acquisition by Centene, WellCare of Kentucky now has access to Centene's industry leading Foster Care experience including 150,000 children in 17 states including Texas and Florida. In Kentucky, we are a market leader and innovator for the foster care and receiving adoption assistance population, collaborating with Department, DCBS, and DJJ staff and other stakeholders, conducting shared decision-making activities that consider an Enrollee's whole person needs and offering initiatives and innovations, like the JOOL health coach program for youth in foster care who are transitioning to adulthood, which we describe later in this response. Transition-age youth and former foster care Enrollees require significant support for self-advocacy, maintain Medicaid, and accessing social determinant resources as they age out. We also recognize the importance and impact of caregiver needs and capabilities on utilization of and lengths of stay in higher levels of care. Our prevention-focused approach includes abuse, neglect, and maltreatment prevention efforts, such as education, training, peer support, and connection to respite for family caregivers. Recognizing children in foster care are at greater risk than the overall population for being victims of human trafficking and sexual exploitation, we offer a population health program to protect Enrollees from victimization through education about risks and how to identify and report potentially dangerous situations and help Enrollees who have been victimized to heal through specialized treatment and support resources.

WellCare of Kentucky demonstrates to the Commonwealth the value of managed care for individuals in the foster care and juvenile justice systems and those receiving adoption assistance. We have a strong commitment to collaboration, transparency, flexibility, and innovation in care delivery for all populations, including the population similar to Kentucky SKY. **In 2018, we conducted nearly 1,000 care-planning meetings with DCBS and DJJ staff.** Today, we offer the following key components required to manage this population, including:

- Complex case management and care coordination
- Psychotropic medication review
- Transition-aged programming focus

- Provider, Enrollee, Department, DCBS, DJJ, and other stakeholder engagement and foster-care related training with an increasing focus on trauma-informed care and services
- Consideration and insight into the geographical and cultural differences throughout all nine DCBS regions and DJJ Community Districts
- Performance-based payment for providers and an Enrollee incentive program

WellCare of Kentucky is currently the largest managed care provider in Kentucky. We have Kentucky Medicaid experience providing covered services, value-added services as well as high-quality population health management program services and care coordination services, including care coordination and specialty case management services for complex and medically fragile populations. On our current Kentucky Medicaid contract, in 2018, we engaged 2,367 foster care Enrollees in active case management.

We use an analytics-driven and locally integrated approach to delivering care and services statewide. In Kentucky, our membership has the highest number of medically fragile Enrollees. Our population health management programs serve all our Enrollees regardless of their diagnosis or where they are on the continuum of health and wellness. We integrate medical and behavioral health, pharmacy, dental, and social services to improve and maintain Enrollee health and wellness through coordinated, interdisciplinary care teams supported by local staff, targeted initiatives, and advanced technology and tools.

NATIONAL EXPERIENCE

As a company responsive to the needs of our Enrollees, providers, state agency staff, and others involved with the care and services for foster care Enrollees, we exclusively serve Enrollees enrolled in government-sponsored health care programs. We react quickly to feedback from Enrollees, providers, state agency staff, and other stakeholders and use our deep knowledge of Medicaid and Medicare to inform problem-solving, shared decision-making, and finding a better way to serve our Enrollees. Between 2014 and 2019, WellCare was the only national Medicaid managed care plan to be re-awarded 100% of rebid contracts and, in multiple states, has been awarded contracts to serve additional populations and regions—many new to managed care. In 2018, WellCare won procurements for new Medicaid business in North Carolina for the Medicaid program statewide and in Florida for Children's Medical Services (CMS) Health Plan, a program offering high-touch services for 68,000 children with special healthcare needs, including 250 foster medically fragile children.

WellCare is a leader in helping Enrollees transition from other MCOs and fee-for-service (FFS) Medicaid programs to our health plans. WellCare's national experience managing transitions of care encompasses Arizona, Florida, Georgia, Hawaii, Illinois, Kentucky, Michigan, Missouri, Nebraska, New Jersey, New York, and South Carolina and the successful transition of 1,880,000 Enrollees to WellCare, as illustrated in **Figure G.2-3**. Our Kentucky, Florida, Hawaii, Michigan, Nebraska, New Jersey, and South Carolina program implementations included the foster care and adoption assistance populations.

Additionally, with the acquisition we are now able to leverage our affiliate Centene health plans past experience of successful implementations of more than 9.25 million Medicaid Enrollees across 23 states.

WellCare has an extensive array of resources and full scalability to accept large or small groups of transitioning Enrollees, including the Kentucky foster care population, and provide covered services. We designed our standardized processes and advanced platforms to support growth.

WELLCARE IMPLEMENTATION EXPERIENCE

The total is more than **1,880,000** members over 10 years.

Implementation Description	2019	2018	2017	2016	2015	2014	2013	2012	Pre 2012	Number of members Transitioned
WellCare Transition of Florida children with special healthcare needs, including foster care, to our statewide Children's Medical Services (CMS) Health Plan	✓									68,000 members
Staywell Transition of Florida Medicaid members, including the SMI and LTSS populations	✓									78,000 members
Harmony Health Plan Statewide Medicaid expansion into all Illinois counties		✓								190,000 members
Care 1st Health Plan Arizona Transition of Arizona members		✓								100,000 members
Missouri Care Statewide expansion of Medicaid managed care into all 115 counties			✓							179,000 members
WellCare of Nebraska Statewide implementation of Medicaid managed care for Heritage Health			✓							70,000 members
WellCare of South Carolina Transition of Medicaid members from Advicare Corp.				✓						30,000 members
WellCare of New York Statewide carve-in of behavioral health services for adult Medicaid members				✓	✓					71,000 members
WellCare of New Jersey Transition of 46k Healthfirst members & implementation of LTSS program						✓				46,000 members
Staywell Transition of Florida Medicaid members from FFS due to mandated managed care						✓				394,000 members
WellCare of Kentucky Transition of 43k members due to realignment of MCOs (open enrollment): enrollment of 28k members (Reg 3 expansion)							✓	✓		71,000 members
WellCare of Kentucky Transition of members due to realignment of MCOs							✓			63,000 members
`Ohana Health Plan Statewide implementation of the Hawaii QExA, QUEST and CCS programs								✓	✓	30,000 members
WellCare of Georgia Transition of Medicaid members									✓	490,000 members

Figure G.2-3 WellCare Implementation Experience (prior to 2020)

This ability to scale is a key aspect of our operational practices. Our expert national transition team supports local transition activity for large groups. Earlier this year, we completed the implementation of our CMS Health Plan program and transitioned these children to our high-touch program. Like our Kentucky foster care population, our CMS Health Plan Enrollees have special health care needs, many have complex care needs, and some have experienced high levels of trauma, transiency, psychotropic medication use, and higher rates of hospitalization and readmissions. Over the last 20 years in Florida, we have expanded care to more than one million Enrollees across our Medicaid, CMS Health Plan, Healthy Kids, and Medicare plans. This growth is a testament to our proven record of accomplishment providing Enrollees with consistently high quality, comprehensive healthcare solutions. Kentucky SKY Program Key Scope of Work Components WellCare of Kentucky has been fortunate in establishing long-term relationships with its clients, which are indicative of our commitment to our customers and our

ability to provide improve health outcomes and provide quality, cost effective services. In Kentucky, Florida, Hawaii, Michigan, Missouri, Nebraska, New Jersey, South Carolina, we have experience capability to provide the full range of the Kentucky SKY program required scope of services in the Draft Contract, including:

Readiness Review: WellCare of Kentucky is an experienced managed care partner that has successfully completed all required readiness reviews for the Kentucky Medicaid Managed Care Contract as well the successful implementation of new populations and program changes, quickly and efficiently with minimal Enrollee and provider issues and impacts. **Nationally, WellCare has successfully completed and passed every managed care contract readiness review between 2009 and 2019.**

Management Information System: On all of our Medicaid programs, we maintain a single and centralized Enrollee record in CareCentral, our care coordination system. CareCentral houses all behavioral health and medical UM and authorizations into a single Kentucky SKY Enrollee view. Fully integrated with our claims systems, CareCentral shows users a Kentucky SKY Enrollee's integrated health record, health history, diagnosis and treatment, outreach efforts, information received from providers, assistance with scheduling appointments, assessment data, medication history, health-related social resource needs, claims history, authorizations, and care plans. CareCentral has the capability to store and forward information. Authorized WellCare staff and providers have access to a complete picture of a Kentucky SKY Enrollee's needs across the entire spectrum of care when considering authorization decisions and utilization trends. CareCentral offers automated notifications and workflows related to care transitions. It supports transitional care management activities by generating alerts based on ADT feeds, electronic and faxed prior authorization requests, predictive modeling, and other sources. It helps the care coordinator bring together a Kentucky SKY's Enrollee's entire interdisciplinary care coordination team (e.g., providers, behavioral health specialists, pharmacists, Enrollee, family, and Department, DCBS, and DJJ staff). CareCentral's intuitive transitional care management workflows and alerts automate a care coordinator's activities like appointment scheduling, which improves care coordinator efficiency in directing the right transitional care to the right Kentucky SKY Enrollees at the right time. We are updating our system to interface with Subcontractors and other relevant Kentucky systems, including DCBS' TWIST system, DJJ's JORI system and reported data in a format specified by DMS, DCBS, and DJJ.

We recognize the value that our single integrated management information system brings to ensuring visibility into an Enrollee's whole health needs. Through our experience, we have gained a strong understanding of state partner's needs and recognize that if our systems do not function properly we risk our Enrollees not receiving needed care and our providers not getting paid timely and accurately. **Evidence of our commitment to system availability is our recent increase in systems availability metrics from 99.98% in 2017 to 99.99% in 2018.**

Quality Management: Quality is foundational to everything WellCare of Kentucky does for our Medicaid Enrollees. WellCare of Kentucky uses an integrated, collaborative effort on our Medicaid contract to improve Enrollee health outcomes through Enrollee empowerment and provider support and education, we have improved performance in CAHPS scores, provider satisfaction, PCP visits, HEDIS scores, and NCQA accreditation status over the past eight years. WellCare of Kentucky earned high ratings according to the National Committee for Quality Assurance (NCQA) Medicaid Health Insurance Plan Ratings 2018-2019. NCQA evaluated WellCare's clinical performance based on three areas: consumer satisfaction, prevention, and treatment. Because of targeted and tailored hands-on approach to empowering Enrollees and their families, **we have improved our CAHPS scores from 86.51% in 2014 to 88.3% in 2018** while experiencing significant growth, and have the **highest Enrollee satisfaction in the Commonwealth as measured by the CAHPS survey**. Due to our responsiveness and quick action to provider concerns, our **overall provider satisfaction rate increased significantly (47%) from 2013 to 2018**, and we have ranked **#1 for provider satisfaction in the Commonwealth for 2017 and 2018**. Our programs have increased Enrollee access to providers, resulting in an **increase in PCP visits from 64.5% in 2013 to 70.1% in 2018**. We maintain a focus on closing care needs and encouraging preventive care, **consequently 91% of our HEDIS measures including Well-Child Visit measures and Annual Dental Visits have improved year-over-year from 2013 to 2019**. We currently lead the Commonwealth in 24 out of 70 HEDIS measures for 2019. **Since we became National Committee for Quality Assurance (NCQA) accredited in 2014, we have improved our accreditation scores from 79.0 in 2015 to a projected 85.73 in 2019, have maintained a two-year Commendable NCQA accreditation, and have the highest NCQA quality ranking in the State Medicaid program at 3.5.** In addition to having the highest quality rating, we also have the highest percentage of ratings of a 4 or higher in the 2019 – 2020 report, see **Figure G.2-4**. High NCQA high ratings demonstrate our commitment to our Enrollees, providers, as well as DMS, DCBS, and DJJ and to building on our accomplishments to provide a better healthcare experience for all Kentucky Sky Enrollees. Our investments in quality are helping our Kentucky Enrollees access needed care and services, making sure individuals are receiving the right care at the right time. This reinforces our continued commitment to helping our Kentucky SKY Enrollees live better, healthier lives.

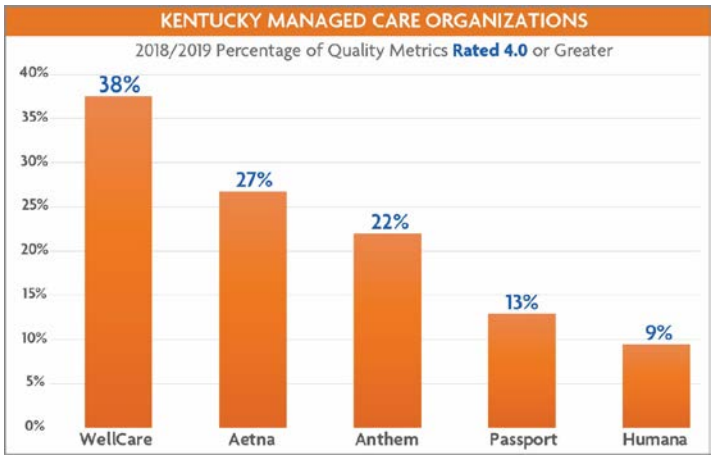

Figure *G.2-4* WellCare of Kentucky Percentage of Quality Metrics

Utilization Management: Because the majority of families involved with child protective services struggle with poverty, they may rely on Emergency Departments for care. Emergency Departments do not provide optimal pediatric preventive care, nor the continuity that is critical

for children in foster care. Fragmented medical care can delay prompt identification of health problems. However, when WellCare of Kentucky, DCBS and DJJ, and medical and behavioral health work together, we can avoid high-cost Emergency Department services by coordinating effective and timely comprehensive health care services for children in foster care.

Today, our Kentucky UM program ensures our Enrollees receive the most appropriate, integrated, and effective treatment to achieve the best clinical outcomes. We accomplish this through the prospective, retrospective, and concurrent assessment of medical necessity and appropriateness of the allocation of medical and behavioral healthcare resources and services given, or proposed services (e.g., discharge planning and care transitions), to meet a SKY Enrollee's needs. **Our focus on shared decision-making means physical and behavioral health providers, pharmacists, Kentucky SKY Enrollees, foster parents, adoptive parents, fictive kin, caregivers, and Department, DCBS, and DJJ staff work together to make decisions and select treatments and care plan interventions based on clinical evidence that balances risks and expected outcomes with Enrollee and family preferences and values.**

Our physical health, behavioral health, and pharmacy guidelines reflect evidence-based recommendations from leading specialty associations, colleges and societies (e.g., American Psychiatric Association, American Academy of Child and Adolescent Psychiatry, American Diabetes Association), as well as peer-reviewed literature and studies. WellCare's extensive evidence-based practice resources strongly align with the top diagnoses among our foster care and juvenile justice Enrollees. We already use a wide range of evidence-based guidelines relevant to the population, such as for ADHD, antipsychotic drug use, asthma, autism spectrum disorder, depression, epilepsy, lead exposure, and obesity.

Enrollee Services and Support: Through our high-capacity, multimodal Enrollee communication channels and customer service team of dedicated Enrollee Service Representatives (ESRs), we listen to our Enrollees to provide first-call resolutions to their questions and concerns. **Compared to other Kentucky Medicaid MCOs, we have the highest Enrollee satisfaction as measured by the CAHPS survey.** Enrollee outreach includes a suite of digital smartphone applications connecting Enrollees to easily digestible information, access to our online wellness programs that empower self-sufficiency and healthy behaviors, and access to personalized information to help close care needs. We a comprehensive program to provide ongoing education and outreach to Kentucky Medicaid Enrollees and on all of our Medicaid programs. Our training approach includes program descriptions and other relevant information via written and online materials, 1:1 verbal training, mobile education and outreach, digital communications, face-to-face counseling, and home visits when appropriate. We also have an in-state Care Center located in Hazard, Kentucky, and staffed with 40 employees who talk to fellow Kentuckians to ensure Kentucky SKY Enrollees have access to needed resources as they navigate the Medicaid program. We have extensive experience disseminating Enrollee Handbooks (online and written) and ID cards (hardcopy and electronic via MyWellCare mobile app) on the Kentucky Medicaid program. **In 2018, WellCare of Kentucky sent 1,023,416 ID cards to our Enrollees. In 2020, ID cards will be available from the Enrollee portal.**

Grievance and Appeals: Our Enrollee-friendly process leverages more than 30 years of experience resolving grievances, appeals, and state fair hearings in compliance with NCQA,

state, and federal Medicaid requirements using a process designed for rapid and thorough resolution. The program protects Enrollees' rights and employs industry-leading technology to capture, log, document, track, resolve, report, and trend every grievance and appeal from beginning to end. **From 2017 to 2018, WellCare of Kentucky experienced a 3% improvement in first call resolutions.**

Provider Network: Our current Kentucky Medicaid network is fully compliant with RFP-defined Network Access and Adequacy standards and is the largest and most comprehensive network of all Kentucky MCOs, based on our review of online provider directories. **We currently have over 99.9% of all Kentucky Medicaid providers under contract, including 100% of all hospitals, 99% of all eligible PCPs, 100% of all FQHCs, and approximately 2,300 behavioral health professionals.** In Kentucky and on other Medicaid programs, we have experience assigning PCPs as a medical home that serve as a single point of accountability and coordination for primary care, which includes EPSDT screenings and special services. We believe children placed in foster care should have a consistent primary healthcare provider for primary care. Consistency supports the child or youth in developing a relationship with his/her healthcare provider, which is critical for developing their trust. Familiarity with a healthcare practice, its staff, and a team of trusted healthcare providers can help decrease an Enrollee's anxiety regarding health care. These factors are fundamental for children who have experienced trauma. Whenever possible, efforts should be made to maintain children in the same healthcare practice even after changes in placement. We are the only MCO to contract continuously with Appalachian Regional Hospital since inception of our Kentucky Medicaid program, which has been very important for our Enrollees in DMS Region 8.

Provider Services and Support: In Kentucky and on all of our other Medicaid programs, we have a fully functioning provider services function, which serves as the single point of contact for our provider network. **In an independent, external provider satisfaction survey in 2019, we had the highest provider satisfaction—with providers rating WellCare of Kentucky highly on the degree to which we cover and encourage preventive care and wellness.** Provider services produces written and online program-specific educational materials, conducts 1:1 training, and other educational opportunities, **such as our monthly provider training meetings via webinar for CMHCs and DCBS who choose to attend. Our Kentucky leadership team creates an agenda and leads the call to discuss specific topics, such as technical assistance, appeals, and authorizations. Attendance varies from five to 75 attendees.** We have a proven, field-based, provider-facing outreach and education program with 18 Provider Relations representatives (PR reps) and managers established regionally across the Commonwealth. WellCare's PR reps live in the region where they support providers, giving them both proximity to the providers they support and familiarity with their communities. We will build on this foundation to serve the Kentucky SKY program, including hiring a Kentucky SKY dedicated PR Manager and two dedicated PR reps, ensuring we can meet the specific outreach and education needs of its providers. **In 2019, WellCare of Kentucky PR reps made over 6,600 personal visits to provider offices to educate providers and their staff.**

We provide 24/7 provider support through multiple channels. Our provider call center has customer service representatives who are cross-trained on the Kentucky Medicaid program.

Kentucky providers can call Provider Services at (877) 389-9457 with issues related to eligibility verification, claims, UM, Language Line, and provider complaints. In addition, our quality practice advisors (QPAs) support providers in transforming and improving their practices with dashboards and tools. They remind providers about the availability of special program services and value-added services. They work with providers to identify and close care needs related to preventive care visits, provide care gap reports, assist with EMR information through the pseudo-claims process, and provide educational material to remind office staff of the standards of care as outlined in HEDIS specifications (HEDIS Toolkits). **In 2019, WellCare of Kentucky QPAs conducted more than 6,000 visits to provider offices to educate providers and advance the Commonwealth's quality measures.**

Covered Services: By educating and outreaching to Enrollees and families or guardians about the availability of special program services like EPSDT and helping them to effectively use special program services, covered benefits, and other resources available through the Kentucky Medicaid program, WellCare of Kentucky supports DMS' focus on quality goals, closing care needs, and improving health outcomes. We have an established and sophisticated process for closing care needs and increasing EPSDT screening standards and a time-tested process for education and outreach to Enrollees, parents, and providers. We ensure timely completion of required assessments and screenings for our Enrollees within required timeframes. In Kentucky, we collaborate with Kentucky SKY Enrollees, DMS, DCBS, DJJ, other sister state agencies, and families on Enrollee needs.

Pharmacy Benefits: We offer pharmacy benefits and services for foster care, adoption services, and juvenile justice-involved Enrollees as part of whole-person care. We incorporate pharmacy interventions, including medication review and medication reconciliation. We use data to review of the appropriateness of psychotropic medications at the Enrollee and population levels, advocating for our Enrollees and intervening as necessary with providers for instances of suspected overprescribing of psychotropic medications.

Behavioral Health: We know the best path to recovery for children and youth with mental health needs and substance use disorders is a holistic approach that helps Enrollees and their families navigate the broad range of services available to them across the continuum of care. We recognize that Enrollees struggling with chronic health conditions may also experience depression, anxiety, and other disorders secondary to their health diagnoses. We integrate behavioral health into every part of our approach to care, including Enrollee engagement, broad access to care, clinical programs, social programs, and value-added benefits. WellCare of Kentucky aligns with DMS' efforts to significantly improve outcomes for a variety of healthcare chronic conditions and to empower individuals to improve their health and engage in their own healthcare. Nationally, we have developed comprehensive programs to address Opioid Misuse Prevention and Opioid Use Disorder Treatment, Adverse Childhood Experiences (ACEs), and Severe Mental Illness (SMI). Each of these programs includes person-centered supports that focus on addressing whole person needs. As noted above, approximately half of our foster care Enrollees have behavioral health conditions.

Eligibility and Enrollment: DMS has the exclusive and final right to determine an individual's eligibility for the Kentucky Medicaid program and eligibility to become a WellCare of Kentucky

Enrollee not subject to DMS' review nor our appeal. We accept all Enrollees whether they selected us or they were assigned to us through DMS' auto-assignment logic.

Population Health Management and Care Coordination: Our model for Kentucky SKY builds on our Kentucky and national experience working in the field with our current Enrollees similar to Kentucky SKY, their caregivers, state staff (DCBS, DJJ), and other stakeholders to address the unique factors that make population health management and care coordination for this population different than it is for other Medicaid populations. Our population health management programs support the foster care population and include wellness, high-risk OB, chronic disease management, comprehensive psychotropic drug oversight, Pharmacy Toolbox, substance use diversion, dental program, discharge planning, program to address frequent behavioral health-related readmissions, intensive placement support, transition-age youth and young adults, ensuring adoption success for Enrollees, and programs on specialized topics, including sexual orientation, gender identity, gender expression, suicide prevention, abuse and neglect prevention, and human trafficking.

Dental services: We subcontract with Avesis Third Party Administrators, Inc. to provide dental services for eligible Kentucky Enrollees. WellCare of Kentucky is ultimately responsible for the provision of dental services. We educate Enrollees and providers about dental benefits. We facilitate Enrollee use of these services by helping them select a dentist and coordinating their preventive and primary care dental services for oral health conditions or illness. We also encourage providers to refer our Enrollees to dental care. Many of our Kentucky foster care and juvenile justice systems and adoption assistance Enrollees use these services today.

Care Coordination: We have experience improving the health outcomes of our Enrollees through prevention, resiliency, and recovery and preventing further decline in a condition or functioning. Care coordination leadership team focuses on accountability, collaboration, excellence, and innovation and makes a long-term commitment to delivering on the goals of the communities we serve. We will assign all Kentucky SKY Enrollees to a care coordination team of staff who are dedicated to the Kentucky SKY program. Care coordinators and their supervisors are an integral part of the Kentucky SKY Program, a local and high-touch program. Care coordinators comprehensively address the needs of our complex, high-risk Enrollees and provide the personal 1:1 interaction and engagement to improve outcomes, resiliency and recovery, self-management skills, and decision-making capability desired for this population. **Nationally, we recently added 200 additional local care coordinators to our programs and as a result experienced a 20% decrease in inpatient admissions per 1,000 Enrollees, a 13% decrease in readmission per 1,000 Enrollees, and a 13% decrease in Emergency Department utilization.** We have significant experience assigning care coordination staff to an Enrollee, making assignments based on an Enrollee's primary needs and the skills and experience of our care coordination staff. They coordinate the Enrollee's end-to-end medical, behavioral, pharmacy, and social needs across the system of care. In Kentucky, our care coordinators assist our foster care and juvenile justice systems and adoption assistance population with navigating the healthcare system, coordinating health assessments within RFP-defined timeframes, and help coordinate provider appointments along with NEMT or community-based transportation to meet timeliness requirements.

For the last two years, WellCare of Kentucky made the list of Best Places to Work in Kentucky. We placed 10th in the Large Company category in 2018 and 8th in the Large Company category in 2019. Our designation as one of the Best Places to Work in Kentucky will be important as we attract, recruit, and hire a significant number of dedicated care coordinators for the Kentucky SKY Program. In Florida for the CMS Health Plan program, we recently undertook a significant statewide recruiting effort to hire 300+ care coordinators with experience serving children with special health care needs. As the Kentucky SKY contractor, we will leverage our CMS Health Plan's best practices for the recruiting effort in Kentucky.

Program Integrity: WellCare has more than 30 years of experience monitoring Program Integrity in Medicaid healthcare delivery across the nation, safeguarding public funds and overall financial stability to protect every dollar spent on Enrollees' services. **In 2018, of the $4.3 million our Special Investigative Unit recovered, $56,462 was attributed to Kentucky Medicaid claims and of the $32.2 million in cost avoidance, $2.8 million was attributed to Kentucky Medicaid claims. From January to May of 2019, for the $2.5 million recovered, $305,205 is attributed to Kentucky Medicaid claims and are responsible for a cost avoidance of $502,542 in Kentucky.**

Reporting: WellCare of Kentucky has a long history of ensuring timely submission, accuracy, and completeness of all regulatory reports and compliance requests with our government partners. **All of our 2018 and 2019 report submissions were delivered timely and in accordance with DMS' required specifications.**

Social determinants of health: Our Community Connections program considers the social and economic factors of all Enrollees and their families or guardians. **Since launching the Community Connections Program in Kentucky, we have connected 31,000 people to 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program including a 26% reduction in Emergency Department visits, a 53% decrease in inpatient spending (Robert Wood Johnson study of our Community Connections Program, 2016).**

The Community Connections program integrates social resource needs into every element of care coordination and management through the following features:

- An up-to-date registry of community resources available across more than 70 domains used by WellCare staff and providers to link Enrollees directly to needed services. This database encompasses more than 335,000 resources, including community-based public assistance organizations, services, and health-related activities and events. We recently redesigned our Community Connections platform to enhance community data sharing.
- Community Connections Help Line that provides telephonic episodic social service coordination support through peer coaches and liaisons with lived experience to help screen for eligibility for service, identify additional needs, connect callers to appropriate services, and follow up.
- WellCare of Kentucky places our community engagement partner staff in every region of the Commonwealth to identify emerging needs of the communities in which they live to solve for social service gaps and support care management activities.

- Use of closed-loop referrals to social services, whereby our staff tracks the outcomes of referrals that are made through the Community Connections program and provides Enrollees with additional help, as needed.
- To advance community health outcomes through our Community Connections program, WellCare's strategic plan includes investing in existing community resources and implementing new Community Health Investment Programs. This proprietary contracting and investment model supports social service resource organizations by sharing data and targeting investments that have proven efficacy for the Medicaid populations we serve.

Since launching our Community Connections social resource program, **we have assisted 117 foster care Enrollees and their families with 475 referrals to community-based social services and resources, with their greatest needs being school-based supports, food pantry and similar nutrition programs, and financial assistance with utilities.** Through our Community Connections program, if a care coordinator identifies an Enrollee with an urgent need for a social resource need like food or shelter, a care coordinator may make a referral to a community-based organization prior to engaging that Enrollee in care management activities. The Robert Wood Johnson Foundation and the University of South Florida have evaluated our Community Connections model. It has demonstrated quality improvements in the overall health of individuals. **Enrollees receiving referred services are 4.8 times more likely to complete their annual PCP visit, while also reducing the total cost of care. Enrollees who have had their social resource needs met show an annual $2,400 savings in health care expenditures.**

a. Experience in coordinating and providing Trauma-informed services, and educating Providers on Trauma-informed Care, ACEs, and evidenced based practices applicable to individuals in the Foster Care and juvenile justice systems or receiving Adoption Assistance;

EXPERIENCE COORDINATING AND PROVIDING TRAUMA-INFORMED SERVICES

WellCare of Kentucky recognizes the prevalence and impact of ACEs and trauma experienced by children/youth in the foster care, juvenile justice, and adoption assistance populations. We understand the importance of trauma-informed principles in all aspects of care for Enrollees who experience ACEs and trauma. Our approach to trauma-informed care incorporates knowledge of the impact of early trauma into our policies and programs. Trauma-informed approaches require a culture shift. We have extended the principles of a trauma-informed approach into other areas of our operations, including population health management, care coordination, utilization management, prior authorization, and pre-certification, discharge planning, care coordination and management, and crisis intervention services.

Trauma is not easily observable; therefore, we recently updated our Comprehensive Needs Assessment tool to include questions related to Adverse Childhood Events (ACEs) and trauma. We have experience identifying and addressing childhood ACEs and trauma in individuals who experienced one or more of the following: recurrent and severe physical abuse and/or severe emotional abuse; neglect (physical and/or emotional); alcoholic or SUD in family; imprisoned family member; unstable behavioral health, depressed, or institutionalized family member; parent treated violently; parental separation or divorce; and sexual abuse. Screening individuals

for ACEs and trauma has implications for holistic care and services, including social supports and SUD and/or mental health services. In North Carolina, we collaborate with Community Care of North Carolina's, our partner in delivery of healthcare services to North Carolina Medicaid Enrollees, national subject matter experts whose experience indicates the number of ACEs an individual experiences is key, not which ACEs. Further, data shows individuals who have experienced four or more ACEs results in:

- Seven times the rate of alcoholism
- Two times the rate of cancer
- Four times the rate of emphysema
- Adults with six or more ACEs results in a 30 times increase in suicide rate

Our care coordination staff use pediatric behavioral health and trauma screening and assessment tools to identify possible trauma and the need for a referral for trauma-focused services. Our care coordination staff share with DCBS, DJJ, or the adopted parent a list of providers who have indicated specialization in trauma, working to refer Enrollees to the guardian or parent's provider of choice. WellCare has identified over 350 behavioral health clinicians who indicate specialization in post trauma therapy.

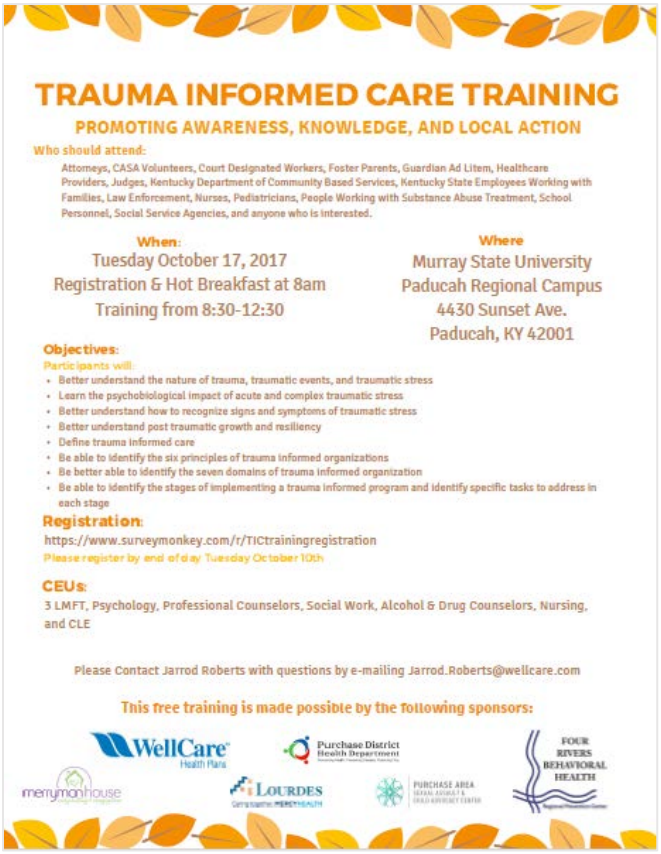
We know that every individual, regardless of age, reacts to and presents the effects of their traumatic experiences in diverse and unique ways and these experiences frequently influence their health in a negative way. We have network providers, including PCPs, behavioral health specialists, and child psychologists, who provide trauma-informed care services. Our care coordinators have experience coordinating care for children and youth in the foster care and juvenile justice systems or receiving adoption assistance and connecting children and youth to providers who provide trauma-informed care.

EXPERIENCE EDUCATING PROVIDERS ON TRAUMA-INFORMED CARE, ACES, AND EVIDENCE-BASED PRACTICES APPLICABLE TO ENROLLEES IN THE FOSTER CARE AND JUVENILE JUSTICE SYSTEMS OR RECEIVING ADOPTION ASSISTANCE

Today we offer online training via the provider web portal to support Enrollees and families. We offer providers interactive face-to-face training and educational opportunities, our popular and well-attended bi-weekly Webinar targeted training sessions for providers on specific topics, including evidence-based practices, screening for behavioral health issues like ACEs and trauma, and providing trauma-informed care or providing referrals to providers or specialists who do. We sponsored or offered the following trauma-informed care educational opportunities:

- In October 2017, WellCare sponsored an in-person provider educational summit at Murray State University in McCracken County to train more than 200 providers about providing trauma-informed care, see **Figure G.2-5**.
- In September 2018, WellCare sponsored a Protective Factors Approach conference focused on ACEs and trauma-informed care and the Strengthening Families initiative to help caregivers build protective factors.

Community Impact Councils proactively identify the need to address the effect of ACEs and trauma. WellCare of Kentucky's Community Connections team leads multiple Community Impact Councils around Kentucky each year. These councils are a creative and innovative vehicle to breakdown silos and work together as a community to strengthen the social safety net. In 2016, our Daviess County Community Impact Council focused on foster care service gaps. **Through a facilitation process, the group agreed that the most urgent need was to address foster children who transfer from one foster care home to another in rapid succession based on behavioral issues, often resulting from ACEs and trauma. This meeting led to the creation of a foster parent support group supported by a $5,000 sponsorship from WellCare.** The funds provided food, childcare, and incentives to grow the group for twelve months. This support group provided an organic way to create a mentorship model where seasoned foster parents could guide newer foster parents. If there were normal behavioral issues occurring, the foster parents could reach out to their developed support network for assistance, giving the opportunity for more stable foster care placements.



TRAUMA INFORMED CARE TRAINING

PROMOTING AWARENESS, KNOWLEDGE, AND LOCAL ACTION

Who should attend:

Attorneys, CASA Volunteers, Court Designated Workers, Foster Parents, Guardian Ad Litem, Healthcare Providers, Judges, Kentucky Department of Community Based Services, Kentucky State Employees Working with Families, Law Enforcement, Nurses, Pediatricians, People Working with Substance Abuse Treatment, School Personnel, Social Service Agencies, and anyone who is interested.

When:
Tuesday October 17, 2017
Registration & Hot Breakfast at 8am
Training from 8:30-12:30

Where
Murray State University
Paducah Regional Campus
4430 Sunset Ave.
Paducah, KY 42001

Objectives:
Participants will:
- Better understand the nature of trauma, traumatic events, and traumatic stress
- Learn the psychobiological impact of acute and complex traumatic stress
- Better understand how to recognize signs and symptoms of traumatic stress
- Better understand post traumatic growth and resiliency
- Define trauma informed care
- Be able to identify the six principles of trauma informed organizations
- Be better able to identify the seven domains of trauma informed organization
- Be able to identify the stages of implementing a trauma informed program and identify specific tasks to address in each stage

Registration:
https://www.surveymonkey.com/r/TICtrainingregistration
Please register by end of day Tuesday October 10th

CEUs:
3 LMFT, Psychology, Professional Counselors, Social Work, Alcohol & Drug Counselors, Nursing, and CLE

Please Contact Jarrod Roberts with questions by e-mailing Jarrod.Roberts@wellcare.com

This free training is made possible by the following sponsors:

WellCare Health Plans, Purchase District Health Department, merrymanhouse, Lourdes, Purchase Area Drug Advocacy Council, Four Rivers Behavioral Health

Figure G.2-5 Trauma Informed Training

Telehealth/Telemental Health increases access to behavioral health services: We will educate providers on the new telehealth regulations and provide versions of our in-person educational presentations in a variety of forums, including breakout sessions at our annual Provider Summits, on both our public website and provider web portals, and through bi-weekly Webinar series. We will encourage provider-to-provider consultations to expand trauma-informed care.

Today, our providers, local Community Mental Health Centers (CMHC), and Federally Qualified Health Centers (FQHC) already use telemedicine/telehealth to connect their Enrollees to specialists and behavioral health providers, such as psychiatrists and mental health counselors, to help address their patients' whole-person needs. **In 2018, we paid claims to providers for over 6,800 telemedicine/telehealth services for over 20 different types of services.**

Partnership

Telehealth/telemental services have great potential to improve access to care for Kentucky SKY Enrollees in rural areas without a pediatric psychiatrist, those who have behavioral health conditions requiring specialty services, or those who have challenges with transportation, or who simply prefer the convenience or privacy afforded by telehealth access. Today WellCare has an established telehealth

presence in the Commonwealth. We are identifying, partnering, and contracting with specialty providers to expand access to specialty services (e.g., applied behavioral health analysis, neuropsychology, trauma therapies, and mobile crisis). By using telehealth to meet with a certified juvenile sex offender treatment provider, an Enrollee receives a full risk assessment that identifies the potential for future acting out and determines the appropriate level of care—taking into consideration the safety of the individual, those around them, and the community. This specialized training is a critical need for a child or youth dealing with the emotional difficulties of trauma and requires learning correct behaviors from a trusted professional.

Expanding Trauma-Informed Education – University of Louisville/Kent School of Social Work Partnership: We are partnering with the University of Louisville/Kent School of Social Work to implement a statewide trauma-informed care training program across the Commonwealth, targeting providers, community-based organizations, and first responders. The University of Louisville has a well-regarded trauma-informed training program through the Kent School of Social Work. This partnership includes curriculum development, building capacity, launch, and evaluation. Training sessions will be available via Webinar or in person. University of Louisville has experience providing trauma-informed training for state agencies like DCBS, Kentucky Cabinet for Health and Human Services, and Volunteers of America. The outline for trauma-informed training includes:

- Welcome and goal of training
- Self-assessment
- Trauma-informed care (System)
- What is trauma
- What is traumatic stress
- Types of trauma (incidence, prevalence)
- What does trauma look like, feel like, sound like to a person victimized by trauma
- Factors that determine the impact of trauma
- Effects of trauma exposure (short term; long term)
- Trauma and PTSD
- Trauma and brain development
- Trauma and social, behavioral, emotional development
- Trauma and culture
- Responding to trauma
- Screening, assessing, and treating trauma
- Impact of trauma on the service provider
- Types of trauma impact on service provider-vicarious trauma, burnout, secondary trauma stress, compassion fatigue, compassion satisfaction

- Resilience and post-traumatic growth
- Self-care (physical, social, emotional, psychological, spiritual)

"It is my pleasure to write this letter of support and partnership with WellCare of KY to address the needs Kentucky's SKY population. We applaud your efforts to deliver holistic, comprehensive, and integrative services to the most vulnerable in our society. We look forward to partnering with you to accomplish this critical need in Kentucky."
– Quote from Bibhuti K. Sar, MSW, PhD, Professor Director of Doctoral Program, June 18, 2019.

Care Coordination Training: In addition to training providers, we educate care coordinators on the principles of trauma-informed care. Core elements of our training for care coordination staff include:

- How to identify trauma and ACEs
- How it impacts care delivery and the way our Enrollees engage in their own health care
- Providing guidance on preventing re-traumatization
- Empowering Enrollees to realize their individuality that extends beyond their trauma experiences

b. Three (3) examples of initiatives the Contractor has implemented for Medicaid managed care programs for individuals in the Foster Care and juvenile justice systems or receiving Adoption Assistance that have supported improved outcomes (e.g., greater awareness of Trauma-Informed Care, clinical outcomes, Discharge Planning between levels of care, etc.). Describe whether such initiatives were cost effective and resulted in sustained change;

WellCare of Kentucky implements creative initiatives that result in sustained positive change, improved outcomes, and promote cost effectiveness. The following are three initiatives we have implemented that benefit our Enrollees, including individuals in the Foster Care and juvenile justice systems or receiving Adoption Assistance

INITIATIVE #1: WELLCARE AT HOME FIELD-BASED CARE COORDINATION PROGRAM

WellCare of Kentucky has implemented and successfully operates our WellCare at Home field-based care coordination model for all of the populations we serve in Kentucky. The WellCare at Home field-based care coordination is a critical component of our fully integrated, person-centered, community-based care coordination model. This program originated in Kentucky, and our initial efforts proved the value in a high-touch approach brings to increasing Medicaid Enrollee satisfaction and improving health outcomes. Our care coordination program is fully integrated and tailored to each Enrollee's needs by considering their whole-person needs. In 2015, we expanded our WellCare at Home field-based care coordination program nationwide to all of our other WellCare Medicaid affiliates. Today, all of our Medicaid programs serving foster care and juvenile justice systems or receiving adoption assistance use field-based, integrated care coordination.

As we continue to enhance our care coordination capabilities, we expanded our high-touch approach in Kentucky to include an innovative Field Outreach Coordinator (FOC) program with

non-clinical FOCs who reach out telephonically to Enrollees with high utilization based on claims data, diagnosis, and Emergency Department use. Prior to calling an Enrollee, FOCs review an Enrollee's centralized record in CareCentral, our care management program. Their mission is to use evidence-based motivational interviewing skills to understand and help remove an Enrollee's barriers to accessing care and services. Our FOCs demonstrate empathy and support for the Enrollee's situation and connect the Enrollee to care coordination staff who can remove identified barriers and assist with newly identified needs.

Our Kentucky care coordination team comprises a fully integrated team of local and national staff, including registered nurses, licensed clinical social workers, social workers, care coordinators, and FOCs. Our care coordinators work in all nine DCBS regions and the four DJJ Community Districts. They frequently work in DCBS and DJJ offices to support a collaborative approach with state staff. An advantage of co-locating in DCBS and DJJ is that we can hear about new Enrollees prior to receiving the 834 file. This early notification of new Enrollees facilitates early, shared decision making about an Enrollee's total care needs.

WellCare's fully integrated data platforms, CareCentral and the Provider Portal, upload data in real-time from internal and external systems, including claims (pharmacy, medical, and behavioral health), encounters, eligibility, health information exchange (HIE) and admission, discharge, and transfer (ADT) feeds, encounters. Care coordinators use CareCentral to view a holistic view of each Enrollee and to document all interactions with Enrollees. Providers have access to our comprehensive Member Care Compass, including all Enrollee data, such as personal goals, care plans, assessments, and medical history. With Enrollee or parent/guardian consent, care coordination staff and providers have access to this complete picture of individual Enrollee needs across the entire spectrum of care when considering authorization decisions and utilization trends. CareCentral includes advanced reporting tools that share meaningful and actionable Enrollee data to support physical and behavioral providers as they facilitate integrated services. , and our Community Connections social resource database

CareCentral supports effective care coordination: CareCentral pushes system alerts to care coordinators in real-time, allowing them to take action regarding Emergency Department visits, hospitalizations, provider messages, and Enrollee communications and make necessary updates to an Enrollee's care plan. CareCentral's comprehensive Enrollee 360 view includes the Enrollee's care plan, care needs (gaps in care), interventions, medication utilization, and utilization history. Network providers can review Enrollee-specific data and update care plans using the provider portal. The Enrollee's centralized record includes Health Risk Assessment (HRA) and Comprehensive Needs Assessment results. CareCentral offers automated workflows and triggers for care coordinators to perform specific tasks for specific Enrollees. For example, CareCentral supports HRA and comprehensive needs assessment and reassessment completion through sophisticated workflows and system-generated notifications. CareCentral functionality automatically generates care authorizations upon care plan completion and any updates thereto. We fully integrate and embed into all aspects of our operations, including CareCentral, our evidence-based disease-specific medical and behavioral health clinical practice guidelines. Further, we align our metrics and reporting capabilities to track and analyze integrated, whole-person services and metrics for utilization, HEDIS measures, claims data (e.g., medical,

behavioral, pharmacy), readmissions, Emergency Department use for all diagnoses, cost of care, and shared savings metrics.

Foster Care Opioid Use Disorder (OUD) Pilot: WellCare of Kentucky leadership team conducted focus groups to design an innovative a pilot program for coordination of care for foster youth with OUD. We met with a foster care youth who went into residential care because of her OUD and other substance use issues. This individual shared her experience and suggested we work with Court Appointed Special Advocate (CASA) volunteers. We conducted three focus groups that included CASA volunteers in Louisville and Lexington to understand issues. CASA volunteers shared their observations related to youth and family issues with OUD. We plan to expand focus groups to include providers and DCBS staff. WellCare of Kentucky and the Kentucky CASA Network are teaming up to help children in foster care who have felt the impact of opioid addiction. WellCare of Kentucky will sponsor and present at the CASA conference in November 2019. This effort demonstrates our focus on innovation and collaboration, which extends beyond engaging DCBS and providers to involving courts and other stakeholders involved with the foster care system of care.

Outcomes: After moving to the WellCare at Home high-touch, in-person model, **our Enrollees experienced a 26% reduction in inpatient admission and an 8% reduction in preventable Emergency Department visits.** In Kentucky, we continue to sustain improvements in the reduction in inpatient readmissions. In 2018, WellCare's Kentucky plan readmission rate for the number of Enrollees readmitted to the hospital within 30 days of a discharge was just under 3% from 2016.

WellCare at Home CC/CM for high-risk Enrollees has resulted in an average savings of $500 pm compared to historic controls, mostly due to reductions in hospital admisstions and readmissions.

INITIATIVE #2: KEY ASSETS – HELPING YOUTH WITH AUTISM

In 2012, WellCare of Kentucky identified Enrollees with a diagnosis for autism and who were housed in facility levels of care, both inside and outside of Kentucky. These Enrollees, through conversations with DCBS, did not have options for community-based placement. One of our Enrollees had been in a facility in Texas for three years. Through a unique collaboration, we worked with DCBS and a provider to outline a potential program to meet these Enrollees' needs. Not only did we need to develop the place where the Enrollees were to live, but also the system of care and services needed for these individuals had to be developed. We collaborated with DCBS, DMS, and Key Assets, along with the current facility providers, care providers, behavioral health providers, and medical providers to develop a home for these individuals.

Service Development and Planning: WellCare of Kentucky worked with the current providers and Key Assets to identify the Enrollees' current treatment needs and identify the types of services that would need to be available in the home and in the community for the Enrollees to be successful. WellCare identified CPT codes for services that were not currently available on the Medicaid fee schedule in Kentucky and engaged Key Assets in planning the process to develop the identified CPT codes into services. We developed service definition and service parameters along with frequency, intensity, and duration based on current Enrollee need. While the current fee schedule did not support these CPT codes, WellCare of Kentucky

committed to Key Assets, DCBS, and DMS that we would cover these services for these specific Enrollees under a single case agreement.

Service Transition Planning: To prepare for transition from a facility level of care into a community level of care, careful planning, and development of a transition place was required. This took a creative approach on to how to cover and pay for services from multiple providers. We were dedicated to developing single case agreements that allowed for multiple service billing from multiple providers in one day. This allowed Key Assets to go into these facilities and work side-by-side with the current provider to learn about the Enrollee's current treatment and intervention plan. This allowed the Enrollee to get to know the Key Assets staff and the foster parent caregiver. Key Assets even traveled to Texas and met with the treatment team there for a week in preparation for transition. To ensure continuity of care was consistent with all care providers, the ABA provider in the facilities worked directly with the ABA provider through Key Assets. The ABA providers worked together to develop the behavior plans needed to assist the Enrollee and the staff through transition. WellCare covered the majority of these services through transition, offering the continuity of care services needed for this to be successful.

Service authorization and concurrent review: Because the services and program for Key Assets were different than the existing Medicaid approved services and fee schedule, we had to develop a specialized medical necessity review and authorization process for this program. Our UM team identified the needed components of medical necessity criteria to use for authorization and concurrent review. We educated Key Assets staff on the criteria needed and held special concurrent live reviews to ensure all information needed for continued approval of services was available. Because this was a step in service provision that Key Assets had never done as a private childcare provider, we paid special attention to documentation, treatment planning, and service review, with WellCare of Kentucky hand holding the process. Despite the uniqueness of this program, the requirement to meet medical necessity under the mandates of our contract had to be met.

Outcomes: In January 2014, James, our first Key Assets Enrollee, transitioned from Our Lady of Peace to Key Assets. The first week in his home, James experienced being outside and swinging. Key Assets staff stated they could not get him out of the swing easily. They also discovered how much he enjoyed running through the frozen food section of the grocery store and rearranging food in refrigerators. Within a couple of months, our second Enrollee transitioned from Texas and into his home. The Key Assets program is continuing today. Overall, 11 of our Enrollees have been in the Key Assets program. The primary outcome is that these individuals have been able to live in the community and have not required a higher level of care. James would have lived in facilities all of his life, based on conversations with state-level medical directors. However, James has remained at Key Assets since 2014 in a home in the community, graduated the 8th grade, learned how to swim, attends public school, and is preparing to transition into adulthood today. Out of the 11 Enrollees in the program, only two required a higher level of care and left Key Assets as a result.

INITIATIVE #3: JOOL (REBRANDED AS KUMANU) LIFE COACH FOR TRANSITION AGE YOUTH

Transition age youth in foster care are young people who are at high risk of unsuccessful transitions into independent adulthood due to the complexity of their needs, the many challenges they face, and the lack of a support system to assist them. We initiated JOOL in October 2018 as a pilot program ending in September 30, 2019.

In 2018, WellCare of Kentucky held a focus group with young adults who recently aged out of the Kentucky Foster Care program. These adults shared their experiences and made recommendations for a tool that included incentives for reaching certain milestones during the aging out process.

The JOOL Life Coach engages and improves purpose in life of young adults (transition-aged youth) that are aging out of the Kentucky State Medicaid Foster Care program. WellCare is collaborating with JOOL Health to offer a one of a kind smartphone-based application that promotes health engagement and personal well-being. Think of a personal, digital life coach based on one's defined life purpose. The anticipated outcomes are health and life engagement, energy (vitality), willpower (self-control), resilience, lifestyle change, as well as potential impact to health care costs.

The program targets WellCare Medicaid Enrollees who are 17 years old and are part of the Kentucky Foster Care program. For Enrollees engaged with the JOOL Life Coach program, a care coordinator, the Enrollee's state-appointed caseworker and their foster parent or private childcare representative jointly provide an overview of the JOOL Life Coach program. If an Enrollee has a personal smartphone, we encourage them to use it, if possible. If the Enrollee does not have access to a smartphone, we issue the Enrollee a smartphone with limited capabilities. The care coordinator works with the Enrollee to download and set up the JOOL application on the smartphone. The Enrollee interacts with the JOOL application in the multiple ways.

The JOOL application introduces the Enrollee to the program with several onboarding steps. Onboarding walks the Enrollee through the following:

- *Core Values –* The user chooses their top core values. Examples include tradition, responsibility, expertise, kindness, independence, etc.
- *Purpose Composer –* This step asks the Enrollee to identify four purposes, a personal purpose, a family purpose, a work/school purpose, and a community purpose. An example of a school purpose could be "I want to be on time to school every day and exceed the expectations of my teachers."
- *Health Risk Assessment (HRA) –* The Enrollee then participates in a very basic HRA. For instance, the app asks the Enrollee to provide information about his/her age, gender, height, weight, stress level, and questions about diabetes and feeling depressed.

Once the onboarding is complete, the Enrollee begins charting on a daily basis in three areas:

- *Alignment with their purposes for that day –* For example, an Enrollee may be less aligned with the work/school purpose if he or she was late to school or reprimanded by a teacher.

- *S.P.A.C.E. –* Sleep, presence, activity, creativity, and eating.
- *Personal outcomes –* Changes to the Enrollee's personal outcomes.

The JOOL application "learns" about the Enrollee through charting. After five days of charting, the application establishes a baseline so that it can track how often the individual meets targets. After 10 days of charting, the application begins to give interactive visuals of what factors impact S.P.A.C.E., willpower, and the Enrollee's outcomes the most. After 15 days of charting, the application begins to forecast S.P.A.C.E, willpower, and personal outcomes and then provides tips to improve the outcome.

The JOOL Life coach program includes some small incentives that make sure as many Enrollees as possible reach the important milestones of the application. We use the following incentives:

- Age appropriate, no cost, mobile phone games. Popular games, such as Candy Crush, Sims, Farmville, Angry Birds, or many other family friendly titles.
- Gift card incentives for individuals who reach certain milestones in the program. The following incentives will be available:
    - $25 gift card for program Enrollees who use their own phone.
    - $25 gift card for finishing the program (12 months).
    - $10 gift card each at three months, six months, and nine months

We do not require the Enrollee to return a smartphone to WellCare at the end of the 12-month program. However, we discontinue the cellular service for the phone at the end of the program. The care coordinator provide the Enrollee with contact information on the Lifeline cell phone program.

Lastly, the application provides "Daily JOOLS" to the Enrollee. Daily JOOLs are machine learning intelligent tips that get smarter over time. The tips are targeted messages that address executive functioning, S.P.A.C.E., outcomes, and other factors that may help drive Foster Care kids towards a healthier lifestyle. For example, Foster Care young adults, many times, inadvertently allow their Medicaid health coverage to lapse. The JOOL application, through the Daily JOOL functionality, educates individuals on the importance of the need to re-certify their Medicaid status.

Outcomes: We ask all participating Enrollees to take a pre-test at enrollment and a post-test at 30 days and 90 days. Because the program is still open and occurring, the outcomes from the pre and post-tests are not available. The following preliminary outcomes, in **Figure G.2-6** and **Figure G.2-7** are available for our Enrollees using JOOL:

Figure G.2-6. This JOOL dashboard show the areas our uses have improved since starting to use the tool. The results in blue highlight shows a statistically significant improvement for Work Alignment.

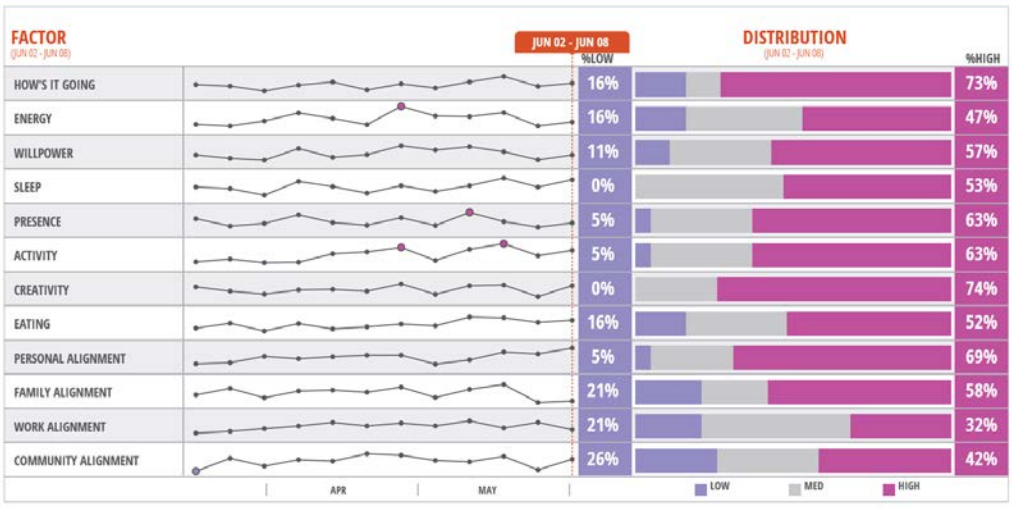


Figure G.2-7. This graph shows us the distribution related to Enrollee use of JOOL factors for a specified timeframe.

c. A summary of lessons learned from the Contractor's experience providing similar services to the populations enrolled in Kentucky SKY; and

WellCare has a proven record of successful operations for the foster care and juvenile justice and adoption assistance population, both in Kentucky and nationally. And while every state is unique, we have learned through experience that some lessons learned can be applied universally as part of developing an effective strategy for managing the foster care population. We tailor our operations and programs to fit the priorities and delivery systems within each state and effectively address specific challenges. The continued application of lessons learned reinforces our commitment to help our Kentucky SKY Enrollees live better, healthier lives.

Table G.2-1 presents lessons learned from our experience providing similar services to the populations enrolled in the Kentucky SKY program.

Table G.2-1 Lessons Learned

Lesson Learned	Description
The Kentucky system of care is too focused on facility-based care for high-risk foster care Enrollees and a fully integrated, field-based care model works best	Our foster care youth do not want to be housed in residential treatment facilities, especially for long periods of time. We have a strong focus on community-based care. Utilization data from 2016 – 2018 for the foster care population shows a positive trend of a 9.51% increase in PCP visits per 1,000 and a 22.22% increase in specialist visits, demonstrating a migration from expensive non-coordinated Emergency Department visits to a less expensive, highly coordinated place of service. Our experience is grounded on putting our Kentucky Enrollees first; providing whole-person, fully integrated care using a collaborative shared decision-making approach; delivering services locally and statewide; connecting Enrollees and their families to community-based social resources; comprehensive education for Enrollees, families, network providers, and Department, DCBS, and DJJ staff, and ensuring Enrollee access to collaborating with network providers and Department, DCBS, and DJJ staff. We establish and maintain collaborative relationships with network providers and with DMS, DCBS, and DJJ. WellCare of Kentucky has made significant investments in quality and process improvements to help our more than 8,000 Kentucky Enrollees in the foster care and juvenile justice and adoption assistance population better access needed care and services. This model increases permanency; increases access to community-based care; reduces spending on inappropriate utilization; uses data-driven and informed shared decision making;
Training is not a once and done process	During the preparation for the anticipated Waiver transition we learned we needed to strengthen provider training to include longer-term refresher training via webinar in addition to short-term, focused training sessions.
Collaboration is more than just bringing stakeholders together	Communication and collaboration is key. We learned the value and benefits of shared decision-making, giving all stakeholders, including the Enrollee and foster parents/guardians, a strong voice and a real opportunity to contribute during care and service planning. Our staff goes to Building Bridges. Our leadership staff goes to numerous meetings, state interagency councils, and conferences related to foster care to develop relationships and help address gaps in the system of care. We meet with faith-based organization leadership.
The importance of assigning a PCP to children in foster care	We learned a “gatekeeper” model does not work for the foster care population. We applaud the Commonwealth’s decision to assign PCPs on the new contract.

Lesson Learned	Description
Need to increase partnerships with stakeholder regarding psychotropic medications	Due to the increasing trend of psychotropic usage among youth in foster care, we have increased and will continue to increase our outreach and engagement of PCPs, pharmacists, Enrollees and their foster parents and guardians, and DMS, DCBS, and DJJ staff regarding appropriate utilization of psychotropic medications by the foster care population. We anticipate a positive outcome in curbing increased use of psychotropic medications.
Need specialized staff expertise	WellCare of Kentucky hired staff, including a Pharm.D., with pharmacy expertise and engages this staff on interdisciplinary care team meetings, as needed. We need to hire a child psychiatrist to assist with the Kentucky SKY population. Today in Kentucky, we can engage a corporate child psychiatrist, as needed, to consult with interdisciplinary care team members. We anticipate the expansion of telehealth and telemental health will increase access to individuals with needed specialty expertise, particularly in rural areas.
Need to gain greater insight into appropriate prior authorization and ongoing concurrent review for residential treatment	We learned the value of conducting weekly meetings for Enrollees in residential treatment or at risk of inpatient facility-based care. During these meetings, our UM staff walks through the needs of every youth in residential treatment. Our staff discusses each Enrollee's whole person needs and the care and services the Enrollee needs to be able to transition to a community-based lower level of care. These collaborative joint staff meetings have identified provider-training needs. We are strong advocates for our foster care Enrollees experiencing an in-state or out-of-state residential treatment. Increased collaboration reduces reliance on high-cost residential treatment facilities and promotes Enrollee satisfaction and less expensive, yet highly coordinated community-based care and services.
Need to educate providers on our new discharge planning form for Enrollees with complex care needs post hospital discharge	We learned that providers did not use our new discharge planning form until we educated them about how to complete the form. Today, after our training sessions, our providers, including Our Lady of Peace and The Ridge, tell us they like the newly developed discharge planning form. It collects more in-depth information about Enrollees so UM staff can make better-informed decisions about medical necessity, and care coordinators can coordinate more appropriate clinical interventions based on current and future needs. Details about the totality of an Enrollee's situation need to be included on the form, which requires collaborative input from DCBS, hospital discharge planning staff, and the Enrollee and foster parent. A result of this collaboration was the need for criteria around sexual abuse. We escalated this issue to DCBS and national experts and helped the Commonwealth develop sexual abuse-related criteria. We implemented best practices for improved provider training and making better care decisions around whole-person needs based on a combination of collaborative shared decision-making and InterQual criteria.
Need to engage CASAs in improving	We learned that CASAs provide valuable insight into our Enrollees involved with the juvenile justice system. CASAs can serve as a single point of contact and provide valuable information and insight that helps us provide more timely

Lesson Learned	Description
outcomes for juvenile justice-involved foster care youth	interventions.
Need to engage DCBS staff to increase Enrollee access to the new JOOL educational tool	Having the right skills to transition from adolescence to adulthood and not having these skills is a barrier to success for our transition-age foster care Enrollees. We rolled out our new JOOL tool in 2018. During the last six months, we have only filled 40% of the slots available in this program. We learned that we need to work with DCBS caseworkers to help engage our Enrollees in this new educational and skill-building tool. We anticipate filling additional slots by being purposeful on how we collaborate with DCBS caseworkers who work with many youth and connecting Enrollees to this tool.

d. How the Contractor will apply such lessons learned to the Kentucky SKY program

We apply our lessons learned to inform our actions to improve or enhance Enrollee-level and system-level processes, quality initiatives, and the system of care, with a focus on improving Enrollee health outcomes and Enrollee, foster parent/caretaker, and provider as well as Department, DCBS, and DJJ satisfaction. We have learned that creating new service access, enhancing current service access, and collaborating with quality providers is key.

We have applied our lessons learned to:

- *Improve collaboration and shared decision-making* across the continuum of care, involving biological and fictive kin relations, medical consenters, child protective services, judges, medical and behavioral healthcare providers, child-placing agencies, advocacy groups, CASAs, and community-based services as well as DMS, DCBS, and DJJ staff.
- *Increase and enhance multi-modal opportunities for education and training* for Enrollees, providers, and Department, DCBS, and DJJ staff.
- *Fully integrate our care teams and promote increased collaboration between UM and care management staff* improves Enrollee access to care and services as well as improves Enrollee and foster parent and caregiver satisfaction.
- *Improvements in discharge planning processes* led to system-level processes that resulting in enhanced opportunities to address an Enrollee's whole-person needs.
- *Find creative solutions and use our thought leadership* to address gaps in access and barriers to success to care and services in the system of care.

LESSON LEARNED – THE SYSTEM OF CARE NEEDS THOUGHT LEADERSHIP AND CREATIVITY

WellCare of Kentucky learned that **approaching the care and service needs for foster children, adopted children, and children under the DJJ umbrella must be done purposefully, carefully, and thoughtfully**—with a focus on enhancing a child's quality of life.

In 2011, after contract go-live, DCBS assigned James to WellCare of Kentucky as a foster child. James was inpatient in Our Lady of Peace, a behavioral health hospital. James had an autism diagnosis and was mostly non-verbal and very active. We immediately began working on discharge planning for James and quickly discovered that James did not have options for a place to live outside of the hospital. All the foster care providers in Kentucky had refused to take James into their care and our staff worked on finding options for James.

James was 11 years old and very interested in running and getting into refrigerators. He was on high AWOL precautions because he had a knack of getting out of the locked unit. Our Lady of Peace staff loved him because he had lived there so long. He was on a lot of medication and had a behavior plan. During his long-term placement at Our Lady of Peace, he did not receive consistent dental services, as such his assigned WellCare of Kentucky Care Coordinator coordinated dental services. James was very small for his age—some guessed due to medication, others guessed due to the continual facility living. DCBS tried to place James in a foster home, but placements never worked out due to his high energy and need for a high level of supervision.

His Care Coordinator realized immediately that the placement services that James needed did not exist. He needed a home with highly trained foster parents and options for supervision, even in the middle of the night. Additionally, he needed experts in behavior planning, speech, occupational therapy, and psychotropic medication. He needed a place that would not give up on him just because James was being James. Through multiple meetings with state officials, they gave us permission to look for a placement and develop a program to meet his needs. After outreaching to several providers to discuss James' needs, Key Assets emerged as the right provider and the right setting at the right time for James. (Refer to Initiative #2 in G.02.a.i.b.)

James entered into the Key Assets community-based residential group home program in January 2014. It was a cold, snowy day and school was out. Quickly, Key Assets staff learned that the cancellation of school led to staffing and supervision issues for James. Our UM staff immediately approved increased the service hours to make up for the increased need. Even though it was cold, James felt he must go outside and swing; Key Assets staff took him swinging every day, and he loved it. Key Assets staff soon learned that James was not trying to run away when he would run—he just liked to run and loved being outdoors. He also loved running through the frozen section of the grocery store, opening all the doors to the frozen food. He went to school and began showing great improvement with interacting with others. He began to grow and eventually began to look his age instead of five years younger. By the end of his first year with Key Assets and his foster mom, he was communicating with words and began saying "I love you," to his Key Assets foster mom. Many never expected James to live outside of an institution, to talk, or to go to public school. Others thought he would never smile, laugh, and have fun. Yet, he proved all of the experts to be wrong.

James is just one example of WellCare of Kentucky's compassion for our Enrollees and how our Enrollees needs always come first, above all else. WellCare of Kentucky associates have permission to be creative and think beyond what is typical. Through James, we learned the importance of collaboration with everyone involved in his care, and how just talking about it does not get the work done. We know we need help from all stakeholders in all areas to change how the current system of care works, and that often medical necessity reviews for treatment have to go beyond the medical necessity review criteria and look at the Enrollee as a whole person.

Other lessons learned include the need to engage the foster care, adoption, and DJJ system of care into system transformation. To continue to do business as usual is not going solve the problem for children similar to James. We know that children do better and are happier in homes. We had to overcome a reliance on residential treatment and find a home for every child, and support existing all stakeholders involved in caring for foster children in addition to working to prevent a child from leaving their family because of safety issues.

ii. Provide a listing of the Contractor's prior and existing full risk Medicaid managed care contracts serving individuals in the Foster Care and juvenile justice systems or receiving Adoption Assistance the previous five (5) years. Include the following information:

a. State name

b. Contract start and end dates

c. Number of covered lives

d. Whether the Contractor provides services regionally or statewide

We have current experience providing full Risk Medicaid Managed Care Medicaid contracts that include serving Enrollees in the foster care and juvenile justice systems and those receiving adoption assistance populations. As of December 31, 2019, WellCare of Kentucky and our affiliate WellCare Medicaid health plans managed approximately 28,000 Foster Care Enrollees i across the continuum of care as part of our contracts in the following states:

- Kentucky
- Florida
- Hawaii
- Michigan
- Missouri
- New Jersey
- Nebraska
- South Carolina

Table G.2-2 through **Table G.2-9** provides the requested information on WellCare's full risk Medicaid managed care contracts that include Foster Care Enrollees.

Table G.2-2 Kentucky

Kentucky Medicaid	
Contract Start and End Dates	Cabinet for Health and Family Services **Initial Contract Start Date:** July 6, 2011 **Current Contract End Date:** June 30, 2020
Number of Covered Lives	430,874 Total Covered Lives includes **8,152 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	Statewide

Table G.2-3 Florida

Florida Medicaid	
Contract Start and End Dates	Agency for Health Care Administration (AHCA) Department of Health **Medicaid:** **Initial Contract Start Date:** July 1 2002 **Current Contract End Date:** December 31, 2024 **Florida CMS Health Plan:** **Initial Contract Start Date:** February 1, 2019 **Current Contract End Date:** December 31, 2024
Number of Covered Lives	1,027,370 Medicaid Total Covered Lives includes **10,285 Foster Care** Enrollees 68,000 CMS Health Plan Total Covered Lives includes **250 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	**Florida Medicaid Contract**: Regional **CMS Health Plan Contract**: Statewide

Table G.2-4 Hawaii

Hawaii Medicaid	
Contract Start and End Dates	State of Hawaii Med-QUEST Division (MQD) Quest Integrated Program: **Initial Contract Start Date:** March 8, 2012

Hawaii Medicaid	
	Current Contract End Date: December 2020 with two option years
Number of Covered Lives	40,837 Total Covered Lives includes **190 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	Statewide

Table G.2-5 Michigan

Michigan Medicaid	
Contract Start and End Dates	Department of Health and Human Services (DHHS) **Initial Contract Start Date:** April 1, 1999 **Current Contract End Date:** December 31, 2020
Number of Covered Lives	494,682 Total Covered Lives includes **1,881 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	Regional

Table G.2-6 Missouri

Missouri Medicaid	
Contract Start and End Dates	Missouri HealthNet Division, Managed Care **Initial Contract Start Date:** March 1, 1998 (since 2013 as a WellCare company) **Current Contract End Date:** June 30, 2020 – contract was divested on January 23, 2020 as part of the acquisition
Number of Covered Lives	218,488 Total Membership includes **2,663 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	Statewide

Table G.2-7 Nebraska

Nebraska Medicaid	
Contract Start and End Dates	Nebraska Department of Health and Human Services **Initial Contract Start Date:** April 14, 2016 **Current Contract End Date:** December 13, 2021 – contract was divested on January 23, 2020 as part of the acquisition
Number of Covered Lives	79,185 Total Covered Lives includes **2,773 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	Statewide

Table G.2-8 New Jersey

New Jersey Medicaid	
Contract Start and End Dates	Division of Medical Assistance & Health Services (DMAHS) **Initial Contract Start Date:** November 13, 2013 **Current Contract End Date:** June 30, 2020 with automatic annual renewal options
Number of Covered Lives	74,265 Total Covered Lives includes **4,351 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	Statewide

Table G.2-9 South Carolina

South Carolina Medicaid	
Contract Start and End Dates	South Carolina Department of Health and Human Services **Initial Contract Start Date:** January 2013 **Current Contract End Date:** June 30, 2021 with optional annual renewal
Number of Covered Lives	81,146 Total Membership includes **65 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	Regional

With the acquisition, we are now also able to leverage the experience and best practices of our Centene affiliate health plans, which manage the care of more than 150,000 children in Foster Care across 17 states. **Table G.2-10** through **Table G.2-26** provides the requested information on our Centene affiliate full risk Medicaid managed care contracts that include Foster Care Enrollees.

Table G.2-10 Arizona

Arizona Medicaid	
Contract Start and End Dates	Arizona Health Care Cost Containment System **Initial Contract Start Date:** Oct 1, 2015 **Current Contract End Date:** Sept 30, 2021
Number of Covered Lives	224,065 total covered lives, includes **4,100 Foster Care** Enrollees
Whether the Contractor provides services regionally or statewide	South Region

Table G.2-11 California

California Medicaid	
Contract Start and End Dates	Department of Health Care Services - Medi-Cal **Initial Contract Start Date:** Jan 1, 2013 **Current Contract End Date:** Jun 30, 2020

b. Office in the Commonwealth - For programs similar to Kentucky SKY, has the Contractor co-located staff in an agency regional office? If yes, describe the factors that influenced that decision and summarized the outcome of the co-location in coordinating of services for program participants.

WELLCARE OF KENTUCKY WILL CO-LOCATE KENTUCKY SKY FIELD OUTREACH COORDINATORS IN AGENCY REGIONAL OFFICES.

Collaboration and partnerships between WellCare of Kentucky staff and DMS, DCBS, and DJJ staff are essential. Today, our Kentucky field-based care coordinators serving the foster care and adoption services population are local and work physically in DCBS and DJJ offices statewide. On the Kentucky SKY program, we will build upon existing relationships with DMS, DCBS, and DJJ staff and continue in-person outreach in local DCBS and DJJ offices.

Co-location enhances collaboration and coordination, problem solving, and information sharing with DCBS and DJJ staff. Today our regional teams of associates live and work in the regions and districts where DCBS and DJJ offices are located. We assign a local WellCare of Kentucky care coordinator to each DCBS Service Region. This care coordinator meets with his or her assigned Service Region and county level offices to establish and maintain internal relationships with DCBS and DJJ staff.

On our current Kentucky Medicaid contract, we conducted monthly meetings in each DCBS Service Region at contract go-live, with meetings occurring quarterly today. Care coordination staff conducts similar meetings with DJJ East and West Service Districts. Care coordinators conduct frequent Enrollee-specific treatment planning meetings with Service Region, county level, and Community District staff, collaborating to ensure each Enrollee in the foster care and adoption services population can access physical, behavioral health, pharmacy, and social services and is receiving the care he or she needs across the care continuum. We leverage established relationships during these meetings as we gain insight into Enrollees with existing care coordination and access needs. We collaborate with DCBS and DJJ staff to connect the Enrollee with needed services without duplicating them. We seek recommendations from DCBS and DJJ staff regarding provider and state agency educational needs. Often our collaboration consists of specific Enrollee issues, addressing access to care, referrals to providers, discharge planning from one level of care to another, or just sharing ideas that can help Enrollees. Our current collaboration has allowed training sessions to occur within multiple regions across the Commonwealth and opportunities to provide training to DCBS foster parents.

As part of the Kentucky SKY program implementation and ongoing, we will expand upon existing relationships with regional staff in the Service Regions and Community Districts to address concerns, problem resolution, provider and state agency educational needs, and risk management for the Kentucky SKY program. As an example, WellCare of Kentucky developed a tip sheet with helpful hints and information for DCBS/DJJ staff and foster parents. This tip sheet outlined information around how to request services, what information WellCare of Kentucky could help track down on an Enrollee's medical/behavioral health history, and who to call with specific questions. Because of this tip sheet, state staff could resolve questions and concerns quickly. Recently, a DCBS worker outreached the contact name on the tip sheet because the pharmacy could not fill an Enrollee's medication. The DCBS worker stated the pharmacy was

showing the Enrollee having inactive status with WellCare of Kentucky. That direct contact from DCBS allowed WellCare of Kentucky staff to outreach to the pharmacy--with the DCBS worker on the phone--and confirm the Enrollee's active status. As a result, the pharmacy filled the Enrollee's medication immediately.

c. Staffing

i. Describe the Contractor's proposed approach to staffing for the Kentucky SKY program under this Contract, including the following information at a minimum:

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 9.2 Administration/Staffing of the Draft Medicaid Managed Care Contract and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

PROPOSED APPROACH TO STAFFING THIS CONTRACT

WellCare of Kentu cky understands that building and deploying the correct staffing model is critical to our ability to meet the operational requirements of the Kentucky SKY program and deliver on its mission to improve health outcomes and strengthen the support to families in crisis. As noted in our response to a.i, WellCare of Kentucky is now subsidiary of Centene. **WellCare of Kentucky's leadership and staff is not changing and remains committed to partnering with DMS to ensure Kentucky's Enrollees, communities, providers and other stakeholders receive the integrated, whole-person care and services necessary to address all of their physical, behavioral, and social needs.** WellCare of Kentucky manages the care of approximately 8,100 Foster Care Enrollees, across the Commonwealth. We also leverage the experience and best practices of our affiliate WellCare Medicaid health plans' experience managing the care of approximately 20,000 Foster Care Enrollees across seven other states(as of year end 2019). With the acquisition, we are now able to leverage the experience and best practices of our Centene affiliate health plans, which manage the care of more than 150,000 children in Foster Care across 17 states. This experience includes sole source Foster Care contracts in Florida, Illinois, Texas, and Washington.

We understand that Children/youth in foster care typically have more intensive health care needs than other children and may lack access to regular primary care, dental care, or behavioral health care. We know these children/youth may have been exposed to Adverse Childhood Experiences (ACEs) because of trauma, significant stress, abuse, and neglect and may require care for chronic physical problems. Further, we know these children/youth tend to have more behavioral health problems and require more psychosocial services than other children/youth receiving Medicaid services.

With this in mind, and building on our eight years of experience in providing Medicaid services in Kentucky, we have built a staffing model that is focused on improving the quality of life and health outcomes for Kentucky SKY Program Enrollees by meeting their complex physical, social, pharmacy, and behavioral health needs. We will expand our team of highly qualified and trained associates and maintain a level of staffing necessary to perform and carry out all of the functions, requirements, roles, and duties as identified in RFP Attachment C Draft Medicaid

Managed Care Contract and Appendices. We will continue to develop and maintain our WellCare of Kentucky SKY team by utilizing the following best practices:

- Leveraging our extensive experience of operating a locally driven health plan within the Commonwealth to create a staffing plan that addresses the complex challenges specific to the Commonwealth's health care landscape as well as the diverse cultural needs of the Kentucky SKY population.
- Identifying, recruiting, and retaining experienced executives and associates who understand the distinct needs and cultural nuances of our SKY Enrollees, who live in our operating communities, and are familiar with our collaborative programs and community partners.
- Giving our local leaders and associates closest to our Enrollees, providers and stakeholders the autonomy to make decisions regarding the Kentucky SKY program with support and feedback from our Commonwealth leadership team.
- Providing our associates with the training, tools, and resources needed to provide the highest level of service to our Enrollees and providers.
- Continue to grow our relationship with the Commonwealth, DMS for Community Based Services (DCBS), and the Department of Juvenile Justice (DJJ) through frequent, effective, and transparent communication.

WellCare of Kentucky's SKY program is led by a skilled group of health plan executives that serve as our SKY Executive Team and are responsible for oversight of all WellCare of Kentucky SKY operations. WellCare of Kentucky today serves the single largest concentration of Foster Care, Adoption and Adult Guardianship children across the Commonwealth with approximately 8,100 children relying on our passion for individualized and holistic care to empower them to reach their unique goals. Led by our Kentucky SKY Executive Director, Lori Gordon, who personally champions on behalf of our foster care children and their caregivers, our dedicated teams of professionals have worked closely for nearly a decade with our agency partners to ensure the highest quality of service to our most vulnerable Kentuckians and assure all children have nurturing communities of care. As DMS places its trust in a single point of accountability for its Foster Care youth, WellCare is uniquely positioned as a leader among provider partners and families to bring the vision of Families First Prevention Act to life.

Every associate serving on WellCare of Kentucky's SKY Executive Team will live in Kentucky. WellCare of Kentucky's SKY executives are experienced in implementing innovative care delivery systems for individuals similar to those enrolled in Kentucky's SKY Program and they bring diverse sets of clinical and operational expertise. Each has a deep understanding of the challenges specific to the Commonwealth's healthcare landscape as well as institutional knowledge of our collaborative programs, network providers, and community partners in all nine DCBS regions across the Commonwealth. All full-time Kentucky Sky key personnel are dedicated full-time to the Kentucky SKY population and shall be available to meet at the location requested by DMS, DCBS, and DJJ within 24 hours' notice from DMS.

WellCare of Kentucky employs more than 300 associates, all of which are dedicated to serving people in Kentucky and will be crucial to the success of the Kentucky SKY program. We plan on

deploying an additional 220 associates located within the Commonwealth that will be solely dedicated to serving the SKY program. This approach to staffing this Contract is critical to our success as these locally-based employees perform a variety of key functions including, but not limited to care coordination, population health, utilization management, grievances and appeals, quality improvement, provider service (including provider relations, network development, and enrollment), pharmacy enrollee services, compliance, finance, and enrollee and provider complaints. We shall provide DMS, DCBS, and DJJ with a staff roster every 90 days during the Term of the Contract unless otherwise specified by DMS. This roster shall set forth the names, titles, and physical location of our Kentucky SKY staff (including Subcontractors), their areas of responsibility and the number of hours they are required to dedicate to the Kentucky SKY program.

a. *Description of how the organizational structure provides innovative solutions for meeting programmatic goals specific to the Kentucky SKY program and Kentucky SKY Enrollees and supports stakeholder groups (e.g., Kentucky SKY Enrollees, providers, partners, among others).*

WellCare of Kentucky is a thought leader within the Commonwealth and our drive for developing and providing innovative solutions permeates all aspects of our organization from executive leadership to every WellCare associate. WellCare of Kentucky is the only Managed Care Organization in the state with a completely integrated team and service capabilities. Under the umbrella of our health plan leadership, and leveraging the support and resources of WellCare Health Plans, Inc., our operational structure and processes fully support the integrated delivery of services, including WellCare staff, contractors, systems, and call centers. Building on WellCare of Kentucky's achievements and experience operating within the Commonwealth, we support DMS' goal of enhancing its current Medicaid managed care system with a focus on quality goals and improving health outcomes.

'ONE TEAM' APPROACH

WellCare of Kentucky's innovative organizational structure and practices support integrated delivery of services across our staff, contractors, systems, call centers, and all available resources to provide a unified, streamlined managed care experience for our Enrollees, physicians, the DCBS, the DJJ and DMS. Our operations structure and processes were developed and continue to evolve based on industry needs with integration in mind—ensuring that our support teams, contractors, and call centers leverage standardized WellCare of Kentucky procedures for open communication, Enrollee support, and continuous improvement.

Our approach to integrated service delivery begins with our 'One Team' philosophy—which has been the cornerstone of our organizational culture and the culmination of WellCare's 30 years' experience building toward a fully integrated, holistic approach to Enrollee care. One Team means that our philosophy applies to every aspect of our organization, from the executive leadership staff led by our Executive Administrator, Lori Gordon, to the fully integrated care management team, and across all entities that support our Enrollees, including our local subcontractors and the Enrollee call center staff trained to support the Commonwealth through the Enrollee Call Center, Nurse Advice Line (NAL), and our Behavioral Health Crisis Line.

Because of our streamlined operational structure, processes, and staff, our health plan can focus on providing comprehensive, holistic care management that focuses on proactively leveraging services that treat the whole-person. As a fully integrated health plan, we implement person-centered goal setting and care planning, address social determinants of health (SDOH), and ensure that Enrollees have reliable access to services that treat more than a specific diagnosis or condition, such as physical health, behavioral health, and pharmacy. Our whole-person care approach includes guidance assisting Enrollees with access to carved-out services when necessary, or to our suite of valued-added services that address non-medical needs and serve to improve health outcomes.

DEDICATED CARE COORDINATION TEAMS IN EACH OF THE NINE DCBS REGIONS AND FOUR COMMUNITY DISTRICTS

WellCare of Kentucky today serves the single largest concentration of Foster Care, Adoption and Adult Guardianship children across the Commonwealth with approximately 8,100 children relying on our passion for individualized and holistic care to empower them to reach their unique goals. WellCare already locates Care Coordinators and Care Coordination Teams in the areas they serve and because our Care Coordination staff is field based, it offers increased flexibility to work in any environment; DCBS/DJJ offices, PCP offices, provider offices, foster homes, and family homes. Currently, our Care Coordination staff are assigned to one of our six offices across the Commonwealth, but they work from the field. Building on our successful field-based Care Coordination approach, we have developed a regionally based care coordination model that places Care Coordinators and Care Coordination Team staff in each of the nine DCBS regions. The following staff will be deployed regionally throughout the Commonwealth:

- Masters level licensed Behavioral Health Clinicians
- Care Coordinators
- Behavioral Health Specialists
- Nurse Care Managers: Medically Complex Children
- Nurse Case Managers
- Care Management Supervisors
- Coordinator Supervisors
- Case Management Managers

These associates will serve all Service Regions and Community Districts throughout the Commonwealth. Placing our Care Coordination Teams in each of the nine DCBS regions allows for better coordination of care and services for each Kentucky SKY Enrollee in collaboration with DMS, DCBS, and DJJ. A WellCare of Kentucky local Care Coordinator is assigned to each DCBS Service Region/DJJ Community District and responsible for meeting with his or her assigned Service Region and county level offices to establish internal relationships. These regional staff meetings occurred monthly at program go-live and are now held quarterly.

Similar meetings have occurred with DJJ East and West Service Districts since the beginning of the program.

Our Care Coordination staffing model aims to meet the unique needs of Kentucky SKY Enrollees in support of DMS' objectives to:

- Enhance the coordination of care and access to Trauma-informed services, including physical health, mental and behavioral health, dental care, social services, and wraparound services
- Improve coordination of care and continuity of care between CHFS agencies, health care providers, and community resources, as needed
- Ensure required assessments and health services within the mandated timeframes
- Foster collaboration and coordination with CHFS agencies and health care providers to share key health records in a timely manner and reduce duplication of services
- Foster collaboration and coordination with hospitals, treatment facilities, residential providers, physical and behavioral health providers, and others on the discharge planning needs of the Enrollee for all levels of care
- Safely reduce the number of children entering OOHC
- Improve timeliness to appropriate permanency
- Reduce Caseloads

Additional information regarding our innovative care coordination model can be found in our response to section G.2.c.xii.

DEDICATED REGIONALLY BASED TEAMS

In order to provide a streamlined managed care experience for our Enrollees, Adoptive Parent(s), Foster Care Parent(s), Caregivers, Fictive Kin, providers, the DCBS, the DJJ and DMS, we have developed an organizational structure that includes separate and distinct regional teams of operational and clinical staff in each of our six regional offices throughout the Commonwealth. WellCare of Kentucky's Foster Care and Adoption Program has met both regionally and locally with DCBS staff and DJJ staff since the award of the Kentucky Managed Care Organization contract in 2011. Placing regional teams and associates throughout the Commonwealth, including within regions and districts where DCBS and DJJ offices are located, will allow us to continue building these relationships through constant communication. We have a state-level executive leadership team to anchor each regional staff team, and a local regional leader to manage the team's day-to-day activities. This innovative staffing model ensures our regional team leaders engage in daily, weekly, and monthly interactions with their teams to ensure adherence to escalation protocols and to ensure associates are making timely, accurate, and proactive decisions.

DEDICATED ENGAGEMENT TEAM - PROVIDING TRAINING FOR SKY STAKEHOLDERS

In order to ensure we provide targeted communications and training to providers, law enforcement, the judicial system, advocates, and other stakeholders on the managed care

program, we are proposing adding several positions to our organizational structure. These positions include a Training Specialist that is responsible for providing education and training of DMS, DCBS, DJJ, DBHDID, and Cabinet Sister Agency Personnel and a Department of Juvenile Justice Liaison that serves as the interagency liaison with the Kentucky DJJ, KY DCBS, Kentucky Department of Corrections (KDOC), and Administrative Office of Courts (AOC).

Training Specialist

WellCare of Kentucky's training specialist is responsible for providing education and training of DMS, DCBS, DJJ, DBHDID, and Cabinet Sister Agency Personnel. This role is also responsible for providing quarterly training for law enforcement officials, judges, district, and county attorneys, including the Kentucky Administrative Office of the Courts and the Kentucky County Attorneys Association, and the Kentucky Department of Public Advocacy.

The associate fulfilling this role is required to have a Bachelor's Degree in a related field or equivalent work experience. It is preferred that this associate has one of the following licenses/certifications: Licensed Bachelor Social Worker (LBSW), Licensed Master Social Work (CSW), or Licensed Professional Counselor (LPC). The associate within this role must possess thorough knowledge of Kentucky SKY contract requirements, SKY business processes and workflows and specific tools/assessments required by contract. This associate must also possess comprehensive understanding of the roles and responsibilities of DMS, DCBS, and DJJ. This associate is required to have 4 plus years of experience in design and delivery of training programs using strong facilitation and communication skills, evaluation of learner needs, assessment of training programs and implementation of learning solutions for performance enhancement or 3+ years of experience in clinical practice in a hospital, clinic or other provider setting specific to foster care and/or juvenile justice.

Department of Juvenile Justice Liaison

WellCare of Kentucky's DJJ Liaison coordinates with the Department of Juvenile Justice for evaluations and treatment specific to the disposition for eligible Enrollees. This associate collaborates with the interdisciplinary team to achieve optimal resource outcomes. The DJJ Liaison serves as the interagency liaison with the Kentucky DJJ, KY DCBS, KDOC, and AOC. This role serves as the single point of contact for information specific to the DJJ disposition for eligible Enrollees. This role communicates DJJ related follow-up/requirements to the interdisciplinary team and collaborates with the interdisciplinary team to achieve optimal resource outcomes. This role is responsible for ensuring required DJJ paperwork is complete and submitted in a timely manner. This role provides support to care and case managers regarding the coordination of care plans for members by utilizing social service expertise to evaluate the members need for alternative services and third party intervention. This role also assists in coordinating transfers for Enrollees under DJJ treatment. Provides and/or coordinates trainings, as needed or requested (i.e., substance abuse treatment).

The associate fulfilling this role is required to have a Social Work (BSW), Psychology, Counseling, Rehabilitation, or other relevant field or equivalent work experience in managed care directly related to assisting Enrollees to change behaviors and to locate and access interpersonal, family and community resources that will make it easier to manage their health. It is preferred that

this associate has one of the following licenses/certifications: LBSW, Licensed Master Social Work CSW, or LPC. This associate must also have six months of experience in a health care environment with client care coordination responsibilities via assisting clients to change behaviors and to locate and access interpersonal, family and community resources that will make it easier to manage their health.

Dedicated Provider Network Team – Supporting Our Network of Providers

As an incumbent managed care organization within the Commonwealth, we currently serve the single largest concentration of Foster Care, Adoption and Adult Guardianship children across the Commonwealth with approximately 8,100 children relying on our passion for individualized and holistic care to empower them to reach their unique goals with services delivered through an existing network of more than 34,500 providers. As we expand our network to support Kentucky SKY, we will build on this expertise to ensure a comprehensive network that meets the unique needs of Kentucky SKY Enrollees in support of DMS' objectives to:

- Enhance the coordination of care and access to Trauma-informed services
- Provide appropriate statewide provide network with 24 hour emergency access and crisis services
- Ensure required assessments and health services are delivered within the mandated timeframes
- Promote the sharing of key health records in a timely manner to reduce duplication of services

Executive Director, Lori Gordon, Bonnell Irvin, Provider Network Director, Tim Houchin, Behavioral Health Director with board certifications in Psychiatry, Child and Adolescent Psychiatry and Forensic Psychiatry, and Candice Bowen, Senior Director, Network Management lead our Kentucky SKY network development activities.

To support the unique needs of Kentucky SKY Enrollees and this contract we will utilize our dedicated provider network teams to perform outreach to each stakeholder, including DMS, DCBS, DJJ, and foster parents, to identify specific providers who are not already in our network that we need to recruit. We will also expand the network by adding new services around mobile crisis, in home services, telehealth, child-psychologists, child-psychiatrists, and other key specialty providers. Specifics of our approach include

Dedicated Provider Engagement Teams – Supporting Our Providers

WellCare of Kentucky is focused on creating the highest level of provider satisfaction with our health plan and eliminating problems for providers who serve our Enrollees. As such, in 2016, we evolved our innovative provider engagement organizational structure to include a dedicated Commonwealth-based provider engagement team, employing local representatives who live and work in the communities they support and are better equipped assist our providers in moving along the value-based continuum.

WellCare Kentucky will build on the foundation of its extensive MMC Provider Relations functions, establishing a separate Provider Engagement Team to serve the Kentucky SKY

program, creating a provider services function that will act as the point of contract specifically for providers serving SKY Enrollees. WellCare will establish this separate Provider Engagement Team to best serve the new providers, including 30+ private childcare providers who will be new to a managed care system and may need extra assistance learning new systems and resolving any issues that arise at intervention.

We will support our SKY network of providers with a regional team of experts in the Kentucky SKY program who live in the communities they serve. Our provider engagement team will wrap supports around Kentucky SKY providers and assist them in all aspects of contracting and delivering services to Kentucky SKY Enrollees. Anthony Piagentini, WellCare of Kentucky's Provider Services Manager, leads our provider engagement team. Anthony is responsible for managing our provider relations team for WellCare of Kentucky including all institutional, professional, and behavioral health providers. Our SKY provider engagement team includes our SKY Provider Relations Liaison, LeAnn Magre, who is responsible for supporting the resolution of Provider access and availability issues and Patricia Russell, our Director, Provider Operations, who has been with WellCare of Kentucky since 2011 and provides additional stability to the team. Our Provider Services Manager, Provider Relations Liaison, Director of Provider Operations, and regional SKY Provider Relations representatives will have detailed knowledge of Kentucky providers, including behavioral health providers, patterns of care/referral in Kentucky, the Kentucky SKY program, provider contracting, billing, authorizations, and claims submission. In support of the Kentucky SKY program, our SKY Provider Engagement Team also includes a coding educator will also work directly with SKY providers on coding practices beginning four months in advance of program go-live.

Currently, WellCare of Kentucky has the largest and most active field-based provider relations team amongst our competitors, comprised of over 26 associates to conduct provider relations and engagement in full support of DMS' goals. With this dedicated provider engagement team, WellCare of Kentucky is able to provide the highest frequency of face-to-face and overall interactions from provider support staff among our competitors. **WellCare of Kentucky averages 736 contacts with providers each month from the Provider Relations Team. Of these interactions, on average that includes 476 face-to-face meetings in provider's offices per month.** This is supported by four Hospital Specialists calling on institutions, and 15 Provider Relations Representatives who call on primary care and behavioral health providers across the state. These interactions focus on multiple objectives including resolving existing issues, educating providers on current programs like pay-for-quality, and executing Joint Operating Committee meetings with a variety of participants including quality and pharmacy as an example.

b. Description of how the organizational structure will support whole-person integrated care, population health and overall improvement in health outcomes in a cost-effective manner for the Kentucky SKY program.

AN ORGANIZATIONAL STRUCTURE THAT SUPPORTS WHOLE PERSON INTEGRATED CARE, POPULATION HEALTH, AND IMPROVING HEALTH OUTCOMES

WellCare of Kentucky's infrastructure provides integrated accountability with behavioral, social, pharmacy and physical health staff aligned through our clinical, administrative, and operational

structure. This ensures that integration of services begins at the top of WellCare of Kentucky's management structure and flows down into our regional and local service delivery at the Enrollee level. Our governance and decision making model ensures that these local leaders engage in daily, weekly, and monthly interactions with our local staff to address Kentucky specific issues, to ensure challenges are being addressed, to ensure adherence to escalation protocols, and to guarantee our associates are making timely, accurate, and proactive decisions. Examples of these interactions include weekly meetings with leadership, weekly interdepartmental meetings, weekly and monthly report reviews, and monthly town halls.

Figure G.2-8 Integrated Care Team

WellCare of Kentucky's organizational structure and practices support integrated delivery of services across our staff, systems, call centers, and all available resources to provide a unified, streamlined managed care experience for our Enrollees, physicians, and DMS. WellCare does not subcontract Behavioral Health and our integrated clinical, behavioral, pharmacy and social work teams are co-located to optimize team work and collaboration to the benefit of the Enrollee. We believe in leveraging one integrated care team covering all care needs including physical, behavioral, pharmacy and unmet social needs.

Our Enrollees benefit from one point of contact in their integrated care team, see **Figure G.2-8**, one card to carry, and one phone number to call, which simplifies the understanding, access, and coordination for the majority of their services. For those services that we provide oversight for, we work closely with and trust our local partners, such as Avesis, who follow WellCare of Kentucky guidelines and standards to provide support for our Enrollees based on our One Team philosophy. For DMS, this provides a clear and transparent view into the operational and clinical approach that WellCare of Kentucky delivers and for which we remain singularly accountable.

In addition, for our physician and care management partners, it serves to deliver a comprehensive set of Enrollee data through CareCentral, our web-based care management platform that pushes Enrollee information to the provider portal. And perhaps most importantly, our people and our systems integrate with WellCare's Community Connections database, which connects Enrollees to tens of thousands of local services with the help and guidance of our care coordinators to address social barriers and improve their quality of life.

A TEAM WITH EXPERIENCE PROVIDING WHOLE-PERSON INTEGRATED CARE

Our eight years of experience in providing Medicaid services in Kentucky has taught us that the best way to ensure whole-person integrated care is to employ culturally diverse individuals who live in our operating communities, have a deep understanding of challenges specific to the Kentucky healthcare landscape, and who have lived experience that reflects the experience of the Enrollees we serve. We are proud to have several Executive Team leaders in place with expertise in the serving approximately 8,100 Foster Care, Adoption, and Adult Guardianship

children across the Commonwealth and experience providing whole-person integrated care. WellCare of Kentucky's Executive Administrator, Lori Gordon, has full accountability for overseeing all operations, strategic direction and administration of our Kentucky SKY Program plan.

Working closely with our Executive Director is our Commonwealth-based leadership team, comprised of key leaders, each of whom are responsible for overseeing specific functional areas within WellCare of Kentucky's organization. Together, our Commonwealth-level leadership team and support staff will anchor each regional staff team. Our dynamic team of local leaders is responsible for making decisions for WellCare of Kentucky. This decision-making responsibility extends downward to the teams deployed throughout the Commonwealth to ensure that associates closest to our Enrollees, providers, and stakeholders are empowered to make decisions with support and feedback from our Commonwealth leadership team. For example, the scope of decision-making authority of our local team in Kentucky includes, but is not limited to, how staff and resources are deployed throughout the local market to support our Enrollees and providers, the authority to administer the execution and management of our provider network, the ability to make decisions about Value-Based Purchasing with our providers, and the capability to make local decisions regarding claims adjudication and prior authorization issues.

A TEAM WITH EXPERIENCE ADDRESSING POPULATION HEALTH AND IMPROVING HEALTH OUTCOMES FOR ENROLLEES

WellCare of Kentucky today serves the single largest concentration of Foster Care, Adoption and Adult Guardianship children across the Commonwealth relying on our passion for individualized and holistic care to empower them to reach their unique goals. Our dedicated team of field-based Care Coordination professionals have a true passion for helping these Enrollees improve health outcomes, build resiliency, maintain stability, and achieve their permanency goals. WellCare is the only Kentucky Medicaid MCO that has already implemented a field-based model for these Enrollees, having recognized several years ago that effectively managing this population requires a high touch approach and strong relationships and processes with DCBS, DJJ, and other stakeholders. As a result, we have improved outcomes such as the following for our foster care, juvenile justice, and adoption assistance Enrollees.

- From 2017 to 2019 HEDIS scores for well-child visits in the third, fourth, fifth and sixth years of live increased 10%. Adolescent well-care visits increased 28%. Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents had a significant increase for all ages and is in the top 75 percentile and had a 68% increase. The use of first-line psychosocial care for children and adolescents on antipsychotics increase (12-17 years) 9%. HEDIS scores for all five Immunizations for Adolescents measures, Adolescent Well Care, Timeliness of Prenatal Care, and Chlamydia Screening increased from 2017 to 2019.
- Among those with co-morbid physical and behavioral health (BH) issues, inpatient admissions/1000 decreased by 11%, ER visits/1000 decreased by 13%, and specialist visits/1000 increased by 29% from 2016 to 2019.

- Among those with co-occurring mental health and substance use issues, ER visits/1000 decreased by 14%, inpatient mental health admits/1000 increased by 3%, PCP visits/1000 increased by over 3%, and specialist visits/1000 increased by 7% from 2016 to 2019.

As DMS places its trust in a single point of accountability for its Foster Care youth, WellCare is uniquely positioned as a leader among provider partners and families to bring the vision of Families First Prevention Act to life.

ii. What prior experience will the Contractor require staff to have had in serving populations similar to Kentucky SKY Enrollees?

ENSURING PROSPECTIVE ASSOCIATES HAVE NECESSARY EXPERIENCE

As mentioned throughout this response, we have an established recruiting and hiring process in place to ensure all current and potential WellCare of Kentucky associates have sufficient experience with populations similar to Kentucky SKY Enrollees. When it comes to recruiting, we ensure applicants have a clear understanding of their responsibilities and what requirements the position for which their applying entails. Our internal and external job descriptions provide a thorough list of key duties and responsibilities as well as minimum requirements in the areas of education, work experience, skills, licenses, and certifications. The minimum requirements vary from position to position. **At a minimum, all SKY staff positions require two years of child welfare experience.** For example, our Care Coordinators are required to have five plus years of experience in a health care environment with client care coordination responsibilities and four plus years of experience working with children and families involved with foster care, adoption or juvenile justice while our Peer Support Specialists must be a certified Kentucky Peer Support Specialist with experience as a foster and/or adopted parent in the Kentucky Child Welfare system or a former foster youth with lived experience. In addition to the mandatory SKY staff position requirements, WellCare of Kentucky looks for the following skills when identifying prospective candidates for our SKY positions:

- Empathy and self-awareness
- Ability to effectively present information and respond to questions from foster families, biological and fictive kin relations, medical consenters, child protective services, Enrollees, and providers
- Ability to work independently
- Ability to multi-task
- Demonstrated time management and priority setting skills
- Demonstrated interpersonal/verbal communication skills
- Knowledge of healthcare delivery, specifically the Kentucky child welfare system, agencies, providers, and resources
- Knowledge of community, state and federal laws and resources
- Demonstrated written communication skills

- Demonstrated customer service skills
- Ability to effectively present information and respond to questions from peers and management
- Demonstrated problem solving skills
- Ability to work in a team environment

Prospective candidates are carefully selected through written application, personal interview, reference checks, and skills testing. Both the recruiting team and the hiring manager utilize behavioral based interview guides that assess candidates in a fair and unbiased manner. Recruiters have access to HI revue video interviewing technology for live, recorded, or panel interviews. Applicants complete a predictive index survey upon applying to WellCare that identifies a candidate's behaviors and personality traits relative to their desired role. Prior to award, we will screen all potential candidates to ensure they have the required licensure and experience to fulfill the role for which they are applying. Criminal and general employment background checks and drug screens are required following a conditional offer of employment. Our screening protocol also ensures these have not been excluded from participation in Federal health care programs. This thorough vetting process ensures that all prospective applicants have the necessary prior experience in serving populations similar to Kentucky SKY Enrollees.

iii. Provide a narrative description of the Contractor's approaches to recruiting staff for the Kentucky SKY program, including:

RECRUITING STAFF FOR THE KENTUCKY SKY PROGRAM

As shown in the **Figure G.2-9** below, **we have identified candidates for 16 of 19 key leadership positions leveraging individuals who live and work in the Commonwealth**; we are ready to work with DMS, DCBS, DJJ and other stakeholders to implement this exciting enhanced program.

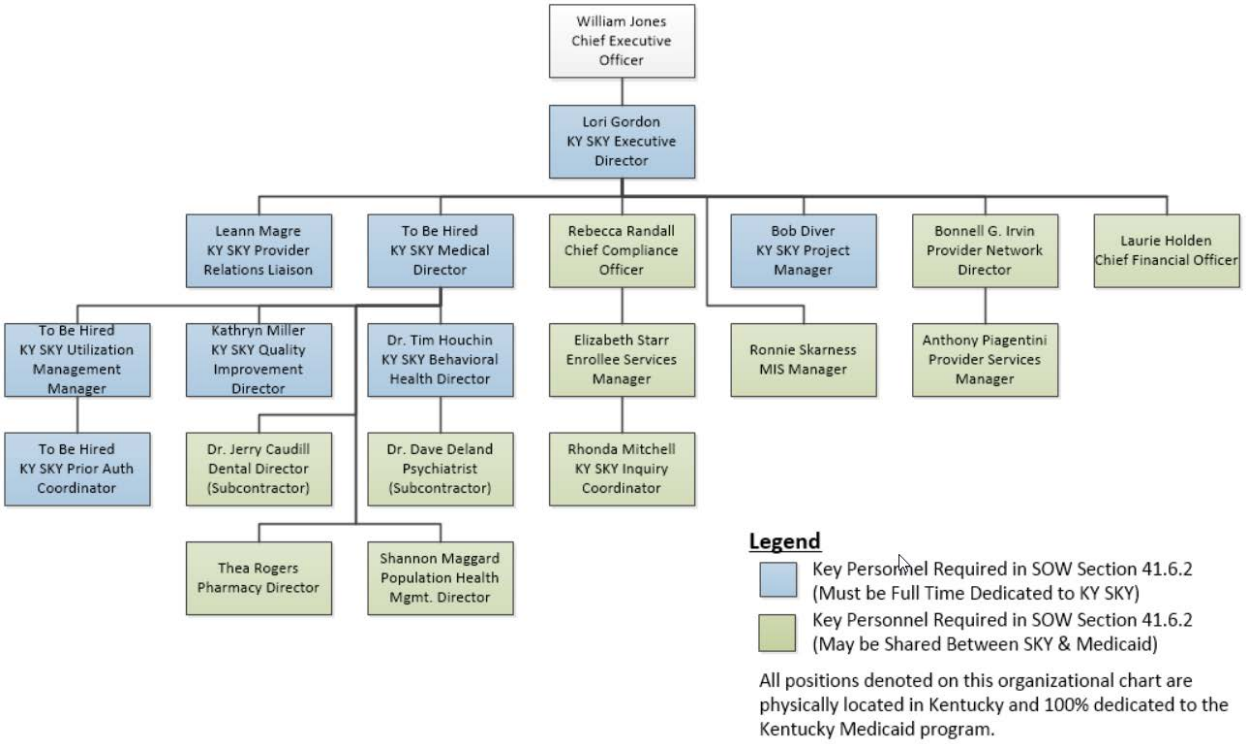

Figure G.2-9 WellCare of Kentucky SKY Organizational Structure

We have consistently demonstrated a strong commitment to offering a locally staffed plan with the Commonwealth and during our time serving people in Kentucky, we have shown a unique ability to recruit local, high-performing executive leaders and associates who understand the diverse needs and cultural nuances of our Enrollees. We are confident our proven internal and external recruiting methodologies will allow WellCare of Kentucky to add the necessary key personnel to complement our existing team to serve Enrollees covered under the new Kentucky SKY program.

In order to develop a staffing plan to fulfill the requirements of the Kentucky Sky Program, WellCare conducts a detailed and thorough information gathering process to ensure that the necessitated staffing levels for the Kentucky SKY program are accurately captured and planned for over time. We achieve this through a series of structured review sessions with functional area leaders that span all functions of the organization to ensure a clear understanding of the contract requirements, deliverables, and the strategy in place to effectively achieve and execute those deliverables. Following these review sessions, each functional area is responsible for providing a detailed staffing plan that includes the number and type of FTEs as well as the anticipated dates of hire, over time, including the time leading up to contract implementation. Senior level leadership reviews, revises (if needed), and approves the plan to ensure strategic direction is achieved and the inputs are appropriate to meet the established requirements.

Within 30 calendar days, WellCare of Kentucky will submit a detailed staffing plan that includes activities WellCare of Kentucky will conduct to fill any staffing needs to have sufficient support for Contract implementation and ongoing operations. The staffing plan will provide timelines for conduct of activities and for filling all staff positions.

a. Recruitment sources;

RECRUITMENT SOURCES

Our Talent Acquisition Team, comprised of specialized recruiters well positioned to leverage our ongoing pipelines, innovative sourcing tools and technologies, is responsible for executing our staffing plan. **Our Talent Acquisition Team includes 11 Talent Acquisition leaders at varying levels, one College Recruiting Program Manager, 56 recruiters (five specialized executive recruiters, 26 FTEs, 25 temporary positions), six Sourcing Specialists, and 12 Staffing Assistants.** We also have the ability to hire temporary/FTE recruiters in order to support influx of new Kentucky positions. Our Talent Acquisition Team has already begun developing and executing targeted recruiting strategies in each region of the Commonwealth. WellCare's Talent Acquisition Team has a variety of innovative and interactive recruitment tools to enhance candidate quality and experience. To ensure we are identifying a diverse pool of applicants for leadership and associate positions that reflect the diverse population of Kentucky and the specific staffing needs of the Contract, we are leveraging several different recruiting solutions that directly outreach to members of the disabled and aging community, members with lived experience similar to our Enrollees, and individuals of varying ethnic and cultural backgrounds. Our outreach efforts target a network comprised of major job board aggregators national outreach career sites, diversity sites, veteran's sites, LGBT sites, disabled sites, and local community-based organizations.

Our Talent Acquisition Team is currently involved in the following recruitment strategies to ensure we have the adequate staff in place to carry out the requirements of the Kentucky SKY program.

Advertising and Marketing

Associate Referral Program

WellCare of Kentucky leverages our Associate Referral Program as a key to recruiting talented associates who are highly motivated and committed to excellence. Through this program, we encourage our associates to refer qualified candidates to apply for open positions. Should that referred individual become hired and complete 90 days of continuous employment, the associate will receive a monetary bonus. We offer highly competitive referral bonuses including $500 for Non-Exempt associates, $1,500 for Exempt associates and $2,500 for Director-level and above associates. For positions that need to be filled quickly due to growth or unexpected attrition, we enhance the associate referral bonus to offer a stronger incentive to our associates to refer qualified candidates to open positions. Since January of 2018, WellCare of Kentucky has identified, hired, and on boarded 29 associates through our Associate Referral Program.

Job Boards

Our Talent Acquisition Team ensures that the available positions are posted on free online job boards and that they review the postings weekly to ensure accuracy. We post our positions on traditional online job boards including eQuest Advantage, Glassdoor, Google PPC, HealtheCareers, Indeed, LinkedIn, Professional Diversity Network, Programmatic, and Monster.

Targeting the Competition and Existing Healthcare Companies

WellCare is the employer of choice within the health care industry and we have built an organization that has become an attractive place to work for experienced health care executives, people leaders, and individual contributors. We provide a comprehensive benefits package, promote work life balance with flexible schedules, opportunities to work remotely (15% of our workforce work from home full time and a large percentage telecommute anywhere between one to four days per week), and tuition reimbursement. Additionally, we are committed to diversity and inclusion, and create an environment in which associates bring their authentic selves to the work place. **This has resulted in WellCare of Kentucky receiving recognition as one of Best Places to Work in Kentucky for the last two years. In 2019, we placed 10th in the Large Company category in 2018 and 8th in the Large Company category. The Best Places to Work in Kentucky survey and awards program, sponsored by the Society of Human Resource Management and the Kentucky Chamber of Commerce, is dedicated to identifying and recognizing the Commonwealth's best employers.** We will leverage our status as one of the Best Places to Work in Kentucky to attract top-level talent from our competitors and existing healthcare companies throughout the Commonwealth.

Community Engagement

Partnering with local Universities

As a part of our recruitment process, our University team researches universities to collaborate with in Kentucky, specifically universities that provide nurse accreditations, and below is what they found.

- University of Kentucky
- University of Louisville
- Murray State
- Morehead State
- University of Cumberlands
- Western Kentucky University
- Northern Kentucky University
- Easter Kentucky University
- Kentucky State University

When our University Team looks to establish a partnership with a university, they utilize a 3x3 method (career services, student groups, and faculty). They begin with reaching out to career services, who will put them in touch with student groups (nurse's student organization, analytics student organization, IT Student organizations, and business fraternities/sororities) to build relationships. Then, they work with the faculty on becoming guest presenters within their classes to discuss WellCare's culture, job opportunities, our involvement in the community, and mission of the organization.

Career Fairs / Interview Blitz Events: Establishing interview blitz calendar for Tampa and Kentucky based positions

Our Talent Acquisition Team conducts open houses and job fairs throughout the Commonwealth to expedite recruitment in particular geographic and functional areas of need.

We also collaborate with colleges and universities within the Commonwealth who hold career fairs in the state. We attend these fairs to publicize our available positions in conjunction with our recruiting timeframes and geographic areas of needs. Our interview blitzes typically run from 10:00 am – 7:00 pm EST, and the Talent Acquisition team will invite in a list of qualified individuals to meet with the hiring managers for face-to-face interviews for open roles. These events allow us to interview multiple candidates in one day, and execute offers quickly.

Partnering with Organizations throughout the Commonwealth

WellCare of Kentucky has an established track record of collaborating with organizations throughout the Commonwealth in order to recruit and train talent individuals to support our Enrollees. We will build on these established partnerships to recruit and train a talented team to support the Kentucky SKY program. One such example of this collaboration involved partnering with the Kentucky Community & Technical College System (KCTCS) and the Eastern Kentucky Concentrated Employment Program (EKCEP) to establish a call center within the Commonwealth.

In order to support the Kentucky 1115 waiver which was slated to go live on 7/1/18, WellCare of Kentucky decided to stand up a care center (call center) in Hazard, Kentucky (an area with high unemployment and in need of additional industry.) Originally, 40 positions were to be hired which included a Supervisor, Community Programs, Operations Supervisor, Enrollee Engagement Representatives, and Community Liaisons. We partnered with the Hazard Community & Technical College Workforce Development team to evaluate the ability to find qualified candidates to fill the roles in order to be able to locate the center in Hazard, Kentucky. These individuals would be responsible for fielding both incoming and outgoing calls from Enrollees who have questions about their benefits under the waiver, are having difficulty paying their monthly premiums and meeting work requirements. When Enrollees within the Commonwealth are calling about these issues, it was important to us that they speak with someone from their own communities that can relate to their issues and geographic challenges.

WellCare of Kentucky, in partnership with the KCTCS and the EKCEP hosted a job fair on 6/26/18 at the Kentucky Career Center in Hazard. The Eastern Kentucky Concentrated Employment Program assisted us with advertising the event as well as helped us man the event. Leaders from WellCare's Operations and Community Advocacy departments participated in on-site interviews along with HR and Talent Acquisition. 293 people attended and interviewed for 40 spots. The partnership with the KCTCS and EKCEP was key in getting this message out. Although the waiver did not end up going live, WellCare of Kentucky still hired a contingency of associates since we had already made that commitment to bring jobs to this community. These associates worked on other projects such as contacting Enrollees to close care gaps and make sure Enrollees completed their attestations.

Scholarship Programs

Recognizing the need for quality primary care in rural areas of the Commonwealth, WellCare of Kentucky funded two new scholarship programs aimed at increasing the number of doctors and nurses working in primary medicine and psychiatry in Eastern Kentucky. Access to doctors, nurses, and other health care providers directly affects health outcomes. When health care is in

short supply or located far away, people are less likely to get routine screenings, tests, and vaccinations – the type of care that can catch problems early or even prevent illness all together. Anything WellCare of Kentucky can do to encourage more providers to locate in underserved areas will be a direct benefit to health of the Commonwealth.

Despite the importance of rural primary and psychiatric care, communities in rural Kentucky, particularly in the eastern part of the state, have struggled to attract and retain an adequate number of primary care providers – both doctors and advanced practice nurses. In order to address these shortages, WellCare of Kentucky funded scholarship programs in conjunction with the University of Kentucky Medical School and College of Nursing. WellCare's support funded up to 16 scholarships for medical and nursing students at various stages of their studies. We are considering providing additional scholarship programs to increase access to doctors, nurses, and other health care providers within in rural areas of the Commonwealth.

"Physicians for the Commonwealth" Scholarship

"The WellCare Physicians for the Commonwealth Program" awarded ten $10,000 one-year scholarships to incoming medical students in 2017 who have a strong interest in the UK Rural Physician Leadership program and are interested in serving an underserved population within Kentucky. The Rural Physician Leadership program offers students opportunities to gain two years of clinical experience with a rural, underserved Eastern Kentucky population. Data show that physicians who train in more rural areas are more likely to stay in those areas to practice.

College Of Nursing Scholarships

In 2017, WellCare of Kentucky partnered with the University of Kentucky College of Nursing to provide $8,000 per semester scholarships, as well as over the next two years to nurses who are in their final year of study and plan on practicing in primary medicine or behavioral health in rural Kentucky. The nurses receiving the scholarships were in their final year of the school's Doctorate in Nursing Practice Program, which focuses on preparing graduates to lead the at the highest clinical and executive ranks.

b. Contingency plans if the Contractor is unable to recruit sufficient numbers of adequately trained staff in a timely basis or if the Contractor's original staffing estimates are too low and for avoiding and minimizing the impact of personnel changes;

CONTINGENCY PLAN

In the event WellCare of Kentucky is unable to recruit sufficient numbers of adequately trained staff in a timely basis or if our original staffing estimates are too low we are prepared to implement a rapidly deployable contingency plan in order to minimize abrasion to our Enrollees and providers. WellCare of Kentucky's methodology to internal succession planning as well as our corporate supplied resources, leadership and associates at the national, state and market level, allows us the confidence and capabilities to serve our Enrollees and be responsive to Department regardless of the circumstances. We are always prepared for the unexpected, and we will have associates in place to fulfill our responsibilities as identified in RFP Attachment Draft Medicaid Managed Care Contract and Appendices.

Internal Succession Planning

To ensure we continue to provide an optimized level of care to our Enrollees, we have a pipeline of internal candidates who have expertise serving populations similar to those included within the Kentucky SKY program. Our organizational and talent development team will continuously work with our Commonwealth leaders to craft thorough and actionable succession plans for positions with WellCare of Kentucky to ensure we have a "bench" of leaders and associates that we can deploy at any time. These succession plans include a proactive internal 'candidate search' for positions instrumental to the successful operation of WellCare of Kentucky's SKY program. WellCare's Executive Leadership Team, including Ken Burdick, WellCare's CEO, the Board of Directors, and WellCare of Kentucky leaders regularly reviews our succession plans.

By aligning identified key and developing leaders and associates with a suite of carefully developed curricula targeted at closing development gaps, we are able to efficiently groom a team of 'ready now' key leaders and associates. We have a series of learning roadmaps tailored for each level of management ensuring we continuously develop a body of outstanding leaders. Using these learning roadmaps, we provide necessary training and professional development aimed at increasing potential successor competencies and skills. WellCare of Kentucky has an internal training organization that continually and proactively provides best-in-class learning and development to existing staff in core areas. Our philosophy around continuous learning fosters an environment where all associates are provided with the training they need to effectively perform not only their current roles, but also growth roles. We are committed to providing all associates with effective learning in the necessary business and development skills to expand the skills and knowledge essential to their roles and ensure we have a stable of associates that are prepared to assume vacated roles should the need arise.

Leveraging Associates from Corporate and Other Markets

WellCare of Kentucky can easily leverage and mobilize associates in our shared services (corporate) functions as well as locally in our markets in the event of inability to meet a performance standard or an expected/unexpected staffing gap. WellCare has successfully launched and currently runs Medicaid programs in multiple states across the country, including proximate regional states of Missouri and Illinois. As such, WellCare has teams of incumbent associates who deliver best in class performance in their areas of focus including clinical, network development, community advocacy, provider relations, etc. As needs arise, our organization is prepared to re-allocate targeted individuals and functional groups from other state offices or from our corporate office to support critical functions. WellCare draws on a workforce of over 13,000 associates that serve WellCare's Medicaid and Medicare markets, which we can readily leverage in the event of an unexpected staffing gap (vacancy), minimizing abrasion to Enrollees, government partners, and providers. We are prepared to leverage the skills and abilities of our teams to support the evolving needs of our Enrollees.

Avoiding and Minimizing the Impact of Personnel Changes

WellCare of Kentucky understands that associate turnover is unavoidable but we utilize proven practices to avoid and minimize the impact of personnel changes through rapid identification

and replacement of associate as well as onboarding staff and bringing personnel replacements up to speed.

Avoiding and Minimizing Impact of Personnel Changes through Rapid identification of Key Personnel Replacements

In the event of an expected or unexpected vacancy of a key position, our Executive Administrator will work with state leadership to appoint a qualified interim leader within 30 calendar days of departure to minimize disruption to our Enrollees and provides. Drawing from our leadership at the national, state and market level we will quickly identify the necessary key leader and transition them into the role as expeditiously as possible. This key individual will remain in this position until we find a permanent replacement. This individual immediately begins shadowing the departing key leader to get a better understanding of their day-to-day responsibilities and to ensure a seamless transition. Simultaneously, the departing associate, with assistance of other leaders in their specific functional area, will develop a transition plan document that outlines the necessary processes, responsibilities, current projects, key meetings, etc. for that key position. The interim associate is responsible for familiarizing himself or herself with this document to understand what they are accountable for within this role. Once we identify a long-term associate, it is the responsibility of the interim associate to bring them up to speed.

WellCare of Kentucky's Chief Compliance Officer in the Commonwealth, Rebecca Randall, will notify DMS and FAC in writing of any change in our Executive Management key personnel, department managers, and point of contact for this Contract within three Business Days of WellCare of Kentucky learning of a change, including a change in duties or time commitments, resignation, or of WellCare of Kentucky notifying an individual of planned changes for the key position (e.g., promotion, termination). Simultaneously, our Executive Administrator will engage with our Talent Acquisitions team to identify both external and internal candidates for the vacated position using a combination of internal and external sourcing strategies. Our Talent Acquisition Team will prioritize the recruiting of the vacated position in order to fill the role within (30) calendar days of departure, unless the Commonwealth approves a different timeframe.

Avoiding and Minimizing Impact of Personnel Changes through our Efficient and Effective Training Program

It is imperative that we bring all replacement associates and new associates up-to-date regarding the Kentucky SKY contract efficiently and effectively in order to minimize the impact of personnel changes on our Enrollees and providers. Upon contract award, staff training will focus on two primary tasks.

Our associates must have the requisite knowledge and skills to understand and navigate our managed care operations, information systems, and tools in order to provide a high level of consistent service. We have a well-positioned training program in place to meet established and evolving learning needs. Our corporate training program establishes training parameters including: methodology for training delivery, required attendees, tracking of course completion, evaluation of content, and knowledge assessments. We have developed and refined our

training program utilizing our Subject Matter Experts and the **ADDIE** Model (Analyze, Develop, Design, Implement, and Evaluate) to ensure our training program prepares our newly hired staff to understand the unique nuances of the Kentucky SKY program. We have dedicated clinical trainers and curriculum developers in place and our targeted curricula ensures associates have the requisite knowledge and skills to understand and navigate our managed care operations, information systems and tools. Our comprehensive Training Program ensures that new associates receive training on content specific to their individual roles as well as material necessary to understand requirements as identified in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices.

WellCare University (WCU), our learning management system, stores, deploys, assesses, and reports all training requirements by role and function across the enterprise. Within WCU, we will have all training material stored in this system and defined by role and function so any new associate or transitioning associate will have immediate access to the appropriate training and assessments to begin their job. This ensures that training and program specific knowledge is stored within our plan is not at risk when an associate leaves or transitions to another role.

We evaluate all associates, whether new hire or currently employed with WellCare, for their understanding of Kentucky SKY contract and program requirements. WellCare does not take mandatory training lightly. Any associates who fail to complete mandatory training in a timely fashion are subject to disciplinary action. We ensure all WellCare of Kentucky associates complete all mandatory Kentucky SKY contract-related training no later than the required timeframes established by DMS.

Additional information regarding our proposed training program, frequency and curriculum is located in our response to section G.2.c.v.

c. How the Contractor will assure the Department that sufficiently experienced, licensed and trained personnel are available to support implementation and ongoing administration of the Kentucky SKY program; and

EXPERIENCE AND LICENSED STAFF TO SUPPORT IMPLEMENTATION OF THE KENTUCKY SKY PROGRAM

Our Implementation Plan supports the successful implementation of all the requirements outlined in the Kentucky MMC RFP and Contract requirements for Medicaid and SKY including ensuring sufficiently experienced, licensed, and trained personnel are available to support implementation and ongoing administration of the Kentucky SKY program.

We understand that one of the most important first steps in our implementation process is identification and establishment of our Kentucky SKY Governance Team. The Kentucky SKY Governance Team has overall accountability for the Implementation Plan and reports weekly on the progress and status of all activities, risk, and issues. Bob Diver, Project Manager, and Chief Operating Officer, Ben Orris, lead WellCare of Kentucky's locally-based Kentucky SKY Governance team and they assume overall responsibility for the Kentucky SKY Implementation Plan activities and readiness review requirements. They will lead our Kentucky Executive Leadership Team along with other dedicated leaders across the organization assigned to the Kentucky SKY Implementation.

The Kentucky SKY Governance Team, in **Table G.2-10**, has overall accountability for the Implementation Plan for the SKY program and meets at least weekly to discuss the status of all activities, due-dates, action-items, risk, and issues. The Kentucky SKY Governance Team includes the following participants, forums, responsibilities & purpose, and meeting frequency:

Table G.2-10 WellCare of Kentucky SKY Governance Team

Participants	Forum	Responsibility and Purpose	Meeting Frequency
SKY Executive Leadership in Collaboration with our Core Medicaid Team	Program Steering Committee	• Final point of escalation • Organizational level contract resolution • Senior Executive Program Oversight	Weekly
SKY Team Program Leaders in Collaboration with our Core Medicaid Team	Program Leadership	• Key Executives liaison with KY • Executive program oversight • Accountable for overarching process / project success • Review Weekly Synopsis for project status updates	Weekly
Dedicated SKY Project Manager in Collaboration with our Core Medicaid Project Manager and Readiness Review Manager	Program Management	• Project oversight, leadership, and strategy • Strategic/Tactical direction • Point of escalation / conflict resolution • Cross-pillar coordination and project reporting	Weekly
SKY Project Leads and Business Leads/SMEs	SKY Program Ownership, Management, and Project Execution	• Hands on project management organized by Business Area • Maintenance of project schedules and work plans • State project status reporting	Weekly as Needed

Additional information regarding our implementation support staff can be found in our response to Section G.03. Kentucky SKY Implementation.

EXPERIENCE AND LICENSED STAFF TO SUPPORT ONGOING ADMINISTRATION OF THE KENTUCKY SKY PROGRAM

Because WellCare of Kentucky has over 300 current employees and has served the Kentucky MMC program for over eight years, we have the confidence to assure DMS that sufficiently

experienced, licensed, and trained personnel will be available to support implementation and ongoing administration of the Kentucky SKY program.

Increases in staffing necessary to manage to SKY Enrollees are already anticipated in our implementation plan. Staffing analysis was performed using a base market staffing model employed by all WellCare markets. This model is based on potential membership and set staffing ratios for all geographic and functional areas. Adjustments are then made based on an assessment of new contract requirements and Kentucky SKY goals and priorities. The Kentucky SKY leadership team will review and finalize estimated staffing. Our goal is to have all necessary associates hired in the second quarter of 2020. Associates will have all necessary training completed and will be ready for go live by January 1, 2021.

Our implementation plan features the addition of 220 staff located throughout the Commonwealth to support the Kentucky SKY program. Our proven experience in implementing and staffing new Medicaid programs across the country will allow us to quickly identify, hire, onboard, and train the necessary associates to support the Kentucky SKY program. As mentioned throughout this proposal, we will utilize a variety of local recruiting strategies to ensure we have proper staff in place. Direct recruiting will focus locally on positions crucial to the success of the SKY program and interviews will be done locally within those areas. Offers will be extended based on business need and timing required.

d. How the Contractor will seamlessly transition staff, if necessary, from implementation to ongoing operations.

TRANSITIONING STAFF FROM IMPLEMENTATION TO ONGOING OPERATIONS

Throughout the implementation process, our implementation team provides guidance, decision-making, authority and accountability, which provides a streamlined process to address any concerns as they arise. As the plan is launched, these local leaders are empowered to assume day-to-day operations and strategic direction with support as needed. This includes continue engagement with the DCBS and DJJ to ensure the needs of each SKY Enrollee are being met.

Prior to go live all associates tasked with performing functions within the Kentucky SKY program will have the requisite training, knowledge and skills to understand and navigate our managed care operations, information systems and tools to ensure a smooth transition from implementation to ongoing operations

Upon contract award, staff training will focus on two primary tasks. The first task is training current staff on the benefits under the contract to ensure all associates have intimate knowledge of Kentucky SKY program requirements. We will review and revise current training content and curricula to reflect the benefits and other requirements of the Kentucky SKY contract. We will provide total comprehensive training and education to all of our staff members to ensure current associates are fully equipped to provide unparalleled service. It is critical that all employees understand the Kentucky SKY contractual details as well as WellCare's vision and goals, our Enrollee-centered approach and the criticality of the Enrollee experience.

The second task is training new staff hires. New staff training will focus on requirements of the contract along with additional training for external facing associates. All of WellCare of

Kentucky associates begin with a foundation of training at onboarding that includes specific market training, corporate training, and detailed compliance courses. Further, all associates are engaged in on-going annual training on a variety of topics including program changes compliance, and professional development. Much of that training is mandatory, regardless of how long an employee has been with WellCare of Kentucky. This ongoing training reinforces critical information and such training helps improve performance, compliance, and morale.

Our rigorous training regimen for both current and new associates will ensure a seamless transition from implementation to ongoing operations.

iv. A listing of Full-Time Kentucky SKY Key Personnel identified in RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," and as otherwise defined by the Contractor, including:

a. Individual names, titles, job descriptions, qualifications and full-time equivalents (FTEs) who are dedicated one hundred percent (100%) to the Kentucky SKY program under this Contract with no other responsibilities outside of the Kentucky SKY program, as well as their office locations for this Contract. An FTE is defined as the ratio of the total number of paid hours divided by the total number of working hours in the period. Annually, an FTE is considered to be 2,080 hours.

FULL-TIME KENTUCKY SKY KEY PERSONNEL

WellCare of Kentucky's SKY program is led by a skilled group of health plan executives that will serve as our SKY Executive Team and will be responsible for oversight of all WellCare of Kentucky SKY operations. Our leaders have a depth of experience providing services and supports in a variety of settings including institutional clinical settings, Out of Home Placement settings, behavioral health treatment facilities, and acute care settings. This experience has informed our evidence-based, innovative care delivery models to positively impact Kentucky's SKY Program. **Table G.2-11** below includes the names, titles, and fulltime equivalents (FTEs) 100% dedicated to this Contract, as well as their office locations for this Contract.

Table G.2-11 Full Time Kentucky Sky Key Personnel

Title	Name	Office Location	Employee or Subcontractor	FTEs
Project Manager	Bob Diver	Louisville	Employee	1.0
Executive Administrator	Lori Gordon, LCSW, MBA	Bowling Green	Employee	1.0
Medical Director	To be hired upon contract award	TBD	Employee	1.0
Quality Improvement (QI) Director	Kathryn Miller, LCSW, CCM	Louisville	Employee	1.0

Title	Name	Office Location	Employee or Subcontractor	FTEs
Behavioral Health Director	Timothy Houchin, MD, MHCDS	Louisville	Employee	1.0
Utilization Management Manager	To be hired upon contract award	TBD	Employee	1.0
Prior Authorization/Pre-Certification Coordinator	To be hired upon contract award	TBD	Employee	1.0
Provider Relations Liaison	Leann Magre, MSSW, MBA, LCSW, CCM	Louisville	Employee	1.0
Nurse Case Managers	To be hired upon contract award	TBD	Employee	14.0

In addition to the required Full-Time Kentucky SKY Key Personnel listed above, WellCare of Kentucky will employ experienced professional staff to participate in Care Coordination Teams serving all Service Regions and Community Districts throughout the Commonwealth. We will build individual Care Coordination Teams for Kentucky SKY Enrollees based on their specific needs and will assign the Care Coordination Team within one (1) Business Day of Enrollment in Kentucky SKY. The Care Coordination Team will involve and include the preferences of the Kentucky SKY Enrollee, Adoptive Parent(s), Foster Care Parent(s), Caregivers, and Fictive Kin in Care Coordination processes, care planning, and Care Plan implementation. We will update our Care Coordination Teams as necessary as determined by the Kentucky SKY Enrollee's Service Plan. These teams will include at a minimum:

- Masters level licensed Behavioral Health clinician;
- Nurse Care Manager to assist Kentucky SKY Enrollees designated as Medically Complex Children;
- Behavioral Health Specialist with at least five years of Behavioral Health experience;
- Family Peer Support Specialist and/or Youth Peer Support Specialist; and
- Care Coordinators

Table G.2-12 below includes the titles and fulltime equivalents (FTEs) dedicated to this Contract, as well as office locations for these Care Coordination Team members. Additional information regarding the roles and responsibilities of Care Coordinators and Care Coordination Team is located in our response to Section G.02.c.xii.

Table G.2-12 Full-Time SKY Key Personnel Care Coordination Teams

Title	Name	Office Location	Employee or Subcontractor	FTEs
Masters level licensed Behavioral Health clinician	To be hired upon contract award	Field-Based	Employee	20.0
Nurse Care Manager to assist Kentucky SKY Enrollees designated as Medically Complex Children	To be hired upon contract award	Field-Based	Employee	8.0

ADDITIONAL LEADERSHIP - THOMAS JAMES III, M.D.

WellCare of Kentucky recently hired Thomas James III, M.D. Dr. James has extensive leadership experience with government programs, population health, health policy and quality measurement. Dr. James also has over 25 years of experience in Kentucky within the managed care industry as well as extensive direct patient care specifically in the areas of internal medicine and pediatrics. Prior to joining WellCare of Kentucky, Dr. James held the position of Senior Medical Director, Medical Management and Quality with Highmark, Inc. Within this role, Dr. James was responsible for clinical oversight of quality, clinical quality in care transition of Highmark members from UPMC, and provided support for wellness and preventive services initiatives. Dr. James has also served as Chief Medical Officer with Baptist Health. Within this role, Dr. James was responsible for Population Health for Baptist Health, an integrated delivery network (IDN) in Kentucky. He coordinated the analytics units of Baptist Health, Evolent Health,

and other partners while achieving NCQA interim accreditation for the first time for this health plan. In addition to his time spent with Highmark and Baptist Health, Dr. James has held Medical Director positions with other various managed care organizations including, AmeriHealth Caritas, Humana, and Anthem Health Plans of Kentucky. Dr. James has an active medical license in the state of Kentucky as well as certifications from the American Board of Internal Medicine, the American Board of Pediatrics, and the American Board of Medical Management.

WellCare of Kentucky will submit job descriptions and required qualifications, and a description of the qualifications of each individual with key management responsibility for any mandatory function to DMS for approval within 30 days of signing the Contract, annually, prior to material revisions and upon request by DMS.

Job descriptions and qualifications for the key personnel identified in **Table G.02-11 and Table G.02-12** begin on the following page.

b. Whether each Full-time Kentucky SKY Key Personnel position will be filled by a Contractor's employee or a Subcontractor. Identify the number of FTE Subcontractor staff who will be one hundred percent (100%) dedicated to the Kentucky SKY program.

As denoted **in Table G.2-11 and Table G.2-12**, all WellCare of Kentucky Full-Time Kentucky SKY Key Personnel positions will be filled by a WellCare of Kentucky employee.

c. Resumes, including information such as degrees, credentials, clinical licensure as applicable, years and type of experience. Include as an Appendix or Attachment to the Proposal.

Please refer to **Attachment G.02. Company Background – Key Personnel Resumes** for resumes including information such as degrees, credentials, clinical licensure as applicable, years and type of experience for the key personnel listed in **Table G.2-11 and Table G.2-12.** We have provided job descriptions in lieu of resumes for those Full Time Kentucky SKY Key Personnel positions for which we are currently recruiting and will be hired post-award.

PROJECT MANAGER

WellCare of Kentucky's SKY Project Manager leads the Kentucky SKY program planning and implementation, and facilitates ongoing operations until such time DMS and Kentucky SKY Contractor mutually agree to discontinue the project management services. The project manager shall be located at the Kentucky SKY MCO's Kentucky office and be onsite at DMS and DCBS offices in Frankfort, Kentucky at times specified by DMS and DCBS during the planning, implementation and deployment phases of the Contract.

PRIMARY RESPONSIBILITIES:

- Provides leadership to the management team to ensure the organization's strategic plan is translated into tactical goals and objectives that guarantee performance objectives are met or exceeded
- Directs and manages the organization's financial performance. Takes appropriate actions to increase revenue, leverage resources, manages and/or minimizes expenses and ensure compliance with all business and administrative regulations.
- Assist and leads where appropriate, with aspects of state and federal government relationships, including dealing with regulators, as necessary, to establish and continue effective working relationships. Ensures that all state and federal regulations are met
- Ensures WellCare of Kentucky compliance with the terms of the Contract, including securing and coordinating resources necessary for such compliance
- Receiving and responding to all inquiries and requests made by Department related to the Agreement, in the time frames and formats specified by Department
- Attending and participating in regular meetings or conference calls with Department
- Making best efforts to promptly resolve any issues identified either by the WellCare of New Kentucky or DMS that may arise and are related to the Agreement
- Meeting with Department at the time and place requested by Department, if Department determines that WellCare of New Kentucky is not in compliance with the requirements of the Contract

EDUCATION:

v. Overview of the Contractor's proposed training of staff to fulfill all requirements and responsibilities of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," for all operational areas. Provide the Contractor's proposed training program and curriculum for all staff specific to areas of responsibility. Include information about the topics for which staff will receive training, how trainings will differ for new staff members versus ongoing trainings and related training schedules.

PROPOSED TRAINING OF STAFF

WellCare of Kentucky confirms adherence to DMS' expectations and requirements outlined in Section 9.2 Administration/Staffing of the Model Contract. Our approach to meeting DMS' expectations begins with designing training programs aligned with the needs of Kentucky's SKY Enrollees and providers and integrating our resources with DMS' SKY partners. WellCare of Kentucky ensures that all staff, providers, and Subcontractors have appropriate training, education, credentials, experience, liability coverage, and orientation to fulfill the requirements of their positions. All persons assigned to perform work under this Contract shall have the necessary credentials to perform the work herein. We ensure that all personnel involved in activities that involve clinical or medical decision making have a valid, active, and unrestricted license to practice in the Commonwealth of Kentucky. On at least an annual basis, WellCare of Kentucky and our Subcontractors will verify that applicable staff have all necessary current licenses that are in good standing and will provide a list to DMS of licensed staff and current licensure status. Additionally, WellCare of Kentucky will submit to DMS an educational and training plan within one hundred twenty (120) Calendar Days of the Contract Execution Date. We shall update training materials annually, at a minimum, and more often if a change in law or policy alters the content of the training materials.

COMMONWEALTH SPECIFIC TRAINING FOR STAFF WITH VARYING BACKGROUNDS AND EDUCATIONAL LEVELS

WellCare's Learning and Development department, made up of more than 40 full-time training professionals, develops, facilitates, and evaluates our training curriculum. Led by Anne Read, M.A., Senior Director of Enterprise Learning and Development, we have provided more than 900 hours of market-specific training year-to-date to our associates within the Commonwealth. Since WellCare of Kentucky's focus is to develop a workforce reflective of our diverse Membership, our staff represent different backgrounds and educational levels. Accordingly, we have a depth of experience in designing market-specific training for our diverse staff to successfully acquire the knowledge and skills to be successful in our markets and further their professional careers.

Our training development methodology follows the time-tested **ADDIE** principles, an instructional design development program developed in the 1970s for the U.S. Army. These principles are the gold standard for training course development and have five components:

Analysis – We conduct a thorough market analysis to align training with market needs.

- *Contract Review:* Our learning and development team and regulatory affairs leaders conduct a line-by-line analysis of the SKY Contract identifying training needs based on requirements, policies, and procedures. Content development is parsed out by functional

areas such as Enrollee services, provider relations, care management, and claims/encounters to subject matter experts. For changes to the SKY program, we follow the same process ensuring ongoing compliance with the Contract.

- *Enrollees:* Our analysis identifies the eligibility categories and populations included in Kentucky's SKY Program, demographic attributes, geographic distribution within the Commonwealth, health morbidities, health disparities, as well as any circumstances affecting Enrollees
- *Providers:* We generate training content for our provider-facing staff by assessing the provider environment in terms of the number of SKY providers who are independent practices, large groups, FQHC penetration, health systems, payment models, and familiarity with managed care. Given the wide range of managed care knowledge and experience among the Kentucky SKY providers, our Commonwealth-specific training would prepare our provider-facing staff to assist providers regardless of their size or sophistication whether that means an in-service on the provider portal or a strategic meeting to discuss payment models.

Design and delivery of the curriculum for staff of all educational levels – Our training methodology consists of a blend of instructor-led and web-based learning through WellCare University, which meets the diverse learning styles of our staff. We tailor training to include operational scenarios for roles requiring less formal education yet more operational experience and supplement further with additional modules, reading, practice guidelines, and critical thinking scenarios for roles requiring more formal education. Regardless of our staff's educational levels or role, our market-specific training program design helps them complete the training and be successful in their roles.

Development of training materials for staff of varying backgrounds – Just as we practice cultural competency when interacting with our Enrollees, we abide by the same principles with the staff we train. We honor their individualities, we seek to understand their perspective, respect their religious and cultural beliefs, sexual orientation, and other means of self-identification. We accommodate our staff's language needs and provide American Sign Language (ASL) interpreters if requested, provide materials in large print, include captioning on training videos, and ensure adequate space in our training rooms for wheelchair users to maneuver. Depictions of people in our videos and written materials reflect diversity in race, ethnicity, gender, and disability. Our training model leverages the diversity of our staff to contribute their lived experiences to the success of the market-specific training. We engage our associates to draw from their own culture and heritage and contribute to group discussions about cultural beliefs and healthcare. Some of our staff were former Medicaid beneficiaries who are now transforming their lives through a career. We tap into their experience and have them provide a first-hand perspective to better understand, engage, and serve our Enrollees.

Implementation of the training – Includes tracking associate enrollment through WellCare University, periodic knowledge assessments, completion of the training curriculum, and any additional end-of-training knowledge assessments. The system documents all scored assessments, tabulates, and generates a training report. For required training, our system tracks status and completion sending reminder notices to the associate and successive

escalation notices to their managers if the training is coming due. Through online training, our field employees can access remotely at a time amenable to their work demands allowing them to continue learning while they integrate into communities in Kentucky.

Evaluation of the training in meeting its objectives. Staff are provided with course evaluations to rate the content, the delivery, materials, assessments, and other components of the training program. Our Learning and Development team reviews the results and recommend changes to the training program as needed. For example, as part of that review, we have begun to add additional formats and features to our training with positive feedback such as video, avatars, animation, and gamification. The end result of this evaluation loop is that market specific training tailored to Kentucky evolves based on feedback from local associates who best know the Commonwealth, Enrollees, and providers.

PROVIDING KENTUCKY SKY TRAINING TO OUR STAFF FOR ALL OPERATIONAL AREAS

WellCare's Enterprise Learning and Development department offers a comprehensive onboarding and ongoing training program for Commonwealth associates and contractors. Tonya Farris, our Commonwealth-based Learning and Development Specialist, is responsible for executing our Commonwealth training program. Initial training is delivered in a three phase approach including:

- WellCare New Hire
- Market Specific Training
- Role Specific Training

Our WellCare new hire curriculum orients associates to the company and programs; the market-specific curriculum enables staff and contractors to become subject matter experts regarding Kentucky's SKY program; and the role-specific training focuses on the job-specific skillsets needed to be successful. Following the **ADDIE** process described above, we develop the curriculum to the market's specifications. Training delivery is a combination of instructor-led training, both in the classroom and by WebEx, and computer-based training through WellCare University. WellCare of Kentucky's local Training Specialist is responsible for providing education and training of DMS, DCBS, DJJ, DBHDID, and Cabinet Sister Agency Personnel. Our Training Specialist is also responsible for providing quarterly training for law enforcement officials, judges, district, and county attorneys, including the Kentucky Administrative Office of the Courts and the Kentucky County Attorneys Association, and the Kentucky Department of Public Advocacy. Training materials consists of written materials, such as PowerPoint slides, multi-media, such as videos, and written or online assessments. Associates enroll in WellCare University which tracks completion of the training and successful performance on the assessments. We will submit to DMS the training program and evaluation within 15 days of Contract award and begin training within five days of approval. We will train our staff within seven days of their start date and can provide completion reports for DMS if requested.

The training outlined in **Table G.2-14** below provides a breakdown of the training phases, course topics, and training frequency. The top sections list the New Hire and Market-Specific courses required for all staff followed by the role-specific courses for each individual training

group. Our role-specific training takes four to eight weeks to complete. Instructor-led training is made available through location of training staff within the Commonwealth as needed.

Table G.2-14 Training Phases, Learning Topics, and Frequency

Training Phase	Learning Topics	Frequency
New Hire All Associates	• Overview of WellCare Health Plans • WellCare's purpose, vision, mission and core values; • WellCare Policies/Procedures • WellCare systems • Mandatory Compliance Training • Sexual Harassment Awareness Training • Emergency Preparedness • Code of Conduct and Business Ethics • Cultural Competency and Cultural Sensitivity • Economic Disadvantage • HIPAA Privacy and Information Security Awareness • Insider Trading • Fraud, Waste, and Abuse • First Aid (all non-clinical Enrollee-facing associates)	Within seven days of hire Annual mandatory compliance training Updated policies and procedures as needed
Kentucky Specific-Contract Requirements All WellCare of Kentucky Associates	• Overview of Kentucky SKY Program (partial list) • Contract requirements • Program eligibility, benefits, covered services, utilization management, cost sharing, transitioning Enrollees, EPSDT • Commonwealth partners including DMS • Unique populations served under Kentucky SKY • LTSS program, policies, and procedures • Fee for Service programs • Provider Networks • Welcome Rooms • Sensitivity training on age, low income, disability, language, culture, reading comprehension and literacy • Understanding unmet health-related resource needs	Within seven days of hire Updated policies and procedures as needed

Training Phase	Learning Topics	Frequency
	• First Aid (all non-clinical Enrollee-facing associates) • Detailed understanding of the Kentucky SKY Program and the roles and responsibilities of DMS, DCBS, and DJJ • The contractual requirements of the Kentucky SKY program • The organization, staffing, infrastructure the Kentucky SKY Contractor must provide to support the Kentucky SKY program • The Kentucky SKY business processes and workflows. • The unique physical health and behavioral needs of the Kentucky SKY populations • The Family First Prevention Services Act and any other federally mandated services or programs impacting Kentucky SKY Enrollees • Trauma-informed Care, ACEs, NAS, SEI, Crisis Intervention Services, and evidence based practices applicable to the Kentucky SKY populations • The aging out process and support from the Kentucky SKY Contractor	
Role Specific Care Coordination Team and Care Management Associates	• Role of the CM and designee CMs (ADH, LHD, CCNC) • Cultural Competency for the general population • HIPAA Privacy and Security and Information Governance Training • Disease Management • Execution of Comprehensive Assessments of Members • Motivational interviewing, including understanding literacy, and cultural awareness. • Self-management to evidenced based care; medication adherence strategies • Person-centered screening, needs assessments, and all elements of care planning • Understanding and addressing unmet health-related resource needs; using available social supports • Transitional care management including medication reconciliation	Four to eight week curriculum depending on role Updated policies and procedures as needed Upskill training annually

Training Phase	Learning Topics	Frequency
	• Behavioral health crisis response (for CMs with assigned Members with behavioral health needs) • How to identify trauma and ACEs • How it impacts care delivery and the way our Enrollees engage in their own health care • Providing guidance on preventing re-traumatization • Empowering Enrollees to realize their individuality that extends beyond their trauma experiences • Establishing and maintaining relationships with DCBS and DJJ personnel	
Role Specific Pharmacy and Clinical Services Staff Responsible for UM	• Pharmacy protocols • Training on application of varying clinical guidelines, • Benefit coverage • Modules on care management resources and processes, • Grievance and administrative review training • HEDIS care gap education • Management information systems • Authorization process - both expedited and standard. • InterQual Training Modules • Preceptor training for up to 80 days depending on previous work experience, performance in training, and demonstrated proficiency.	Four to eight week curriculum depending on role Updated policies and procedures as needed Upskill training annually
Role Specific Enrollee Services Representatives	• Customer Service principles and Quality Governance • Communication Skills and Call Listening • Enrollee self-service • Overview of WellCare Systems and how to navigate WellCare's public website and intranet for information; • Trauma-informed Care, ACEs, and evidenced based practices applicable to individuals in the Foster Care and juvenile justice systems or receiving Adoption Assistance • WellCare SKY program operations • Engaging with DCBS and DJJ staff/guardians • Engaging with adopted parents and foster parents	Four to eight week curriculum depending on role Updated policies and procedures as needed Upskill training annually

Training Phase	Learning Topics	Frequency
	• Enrollee Experience • Enrollee rights and responsibilities • Enrollee Advanced Directives • Overcoming barriers to accessing care • Healthy Rewards program • Appeals and Grievances • Enrollee grievance and appeals process • Documenting grievances and grievance quality • Appeals and Commonwealth fair hearing process • Top call drivers • Provider directory and changing PCPs • Pharmacy basics, PDL, and internal systems • Activating language line and ASL calls, engaging nurse line and behavioral health crisis lines • De-escalation Skills; Safety and Violence Protection for Field Associates • Behavioral Health Overview • Claims Essentials • Eligibility Requirements • Step Actions • covered and carved-out services • VABs • Kentucky place names and surnames (cultural competency)	
Role Specific Provider Relations Representatives	• Overview of WellCare Systems and how to navigate WellCare's public website and intranet for information • WellCare SKY program operations • High Performance Network Strategy • Value-Based Care • Educating providers on WellCare Policies and Procedures including Plan Benefits and Services, Claims, Authorizations, Reporting and on Balance Billing	Four to eight week curriculum depending on role Updated policies and procedures as needed Upskill training annually

Training Phase	Learning Topics	Frequency
	• Quality/HEDIS Overview • Activating language line and ASL calls • AMH Tiering • provider groups - including private child care and DJJ providers • provider Experience • provider rights and responsibilities • Quality and efficiency drivers	
Role Specific Quality Improvement Associates	• Health Literacy • HEDIS Boot Camp • External Quality Review (EQR) Protocol • Medical Record Review • NCQA Accreditation and Guidelines Summit • Cultural Competency and Awareness • PIP Validation • Ongoing Quality Status Updates to Kentucky Associates • Quality Line • Behavioral Health • Medically Frail • Health Literacy • WellCare SKY health outcomes	Four to eight week curriculum depending on role Updated policies and procedures as needed Upskill training annually
Role Specific Associates working with DMS	• Overview of WellCare Systems and how to navigate WellCare's public website and intranet for information • Eligibility process including rules and regulations; • Eligibility categories • WellCare of Kentucky Enrollee journey • 834 files and enrollment flags • Community Connections, (SDOH program), the Community Connections Help Line	Four to eight curriculum depending on role Updated policies and procedures as needed Upskill training annually
Role Specific	• Initial and ongoing education of Commonwealth personnel.	Timeframes and Location to be

Training Phase	Learning Topics	Frequency
DMS, DCBS, DJJ, DBHDID, and Cabinet Sister Agency Personnel	• An understanding of the Kentucky SKY program and the roles and responsibilities of DMS, DCBS, and DJJ. • The contractual requirements of the Kentucky SKY program. • The organization, staffing, infrastructure the MCO must provide to support the Kentucky SKY program. • The Kentucky SKY business processes and workflows. • The aging out process and support from the Kentucky SKY Contractor.	Designated by DMS Updated policies and procedures as needed
Role Specific Law Enforcement Officials and Judges (Enforcement officials, judges, district and county attorneys, including the Kentucky Administrative Office of the Courts and the Kentucky County Attorneys Association, and the Kentucky Department of Public Advocacy)	• An understanding of the Kentucky SKY Program and the roles and responsibilities of DMS, DCBS, DJJ, and DBHDID, and how these agencies will coordinate and collaborate with the Kentucky SKY Contractor; • Role and responsibilities of the Kentucky SKY Contractor; • Needs of the Kentucky SKY populations; • High Fidelity Wraparound approach; • Family First Prevention Services Act; • Trauma-informed Care; • Impact of ACEs; and • Aging out process and support from the Kentucky SKY Contractor.	Quarterly Updated policies and procedures as needed

vi. Overview of Contractor's approach to monitoring Subcontractors' progress in recruiting and training of staff to meet all requirements of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

SUBCONTRACTOR STAFF RECRUITING

Prior to delegating any functions to a third party, we perform due diligence including a comprehensive assessment to prospectively evaluate the Subcontractor's ability to perform the activities to be delegated. The comprehensive vetting and due diligence process is a requirement in our delegated subcontracts, and compliance must be demonstrated prior to a delegated Subcontractor becoming active with WellCare of Kentucky. We perform oversight and monitoring of the delegation activities through scorecards, data analysis, focused reviews, and annual audits. We develop and maintain a system for regular and periodic monitoring of each Subcontractor's compliance with the terms of its agreement and the Contract. All pre-

delegation audits for new Subcontractors are based on the National Committee for Quality Assurance (NCQA), and state and federal requirements.

We will not delegate to an entity unless it achieves a successful passing score on its pre-delegation audit. Our pre-delegation audit process confirms the Subcontractor has the structural elements, i.e. policies, procedures, staff, licensure, etc., in place to comply with all of the contractual requirements for the functions assigned to them. The pre-delegation audit includes a review of the Subcontractor's recruitment policies so that standard adherence to WellCare policies and procedures are applied during the recruitment of staff. Additionally, for all new requests for delegation, one of the first steps we take is to screen them against the state and federal exclusion lists. On a monthly basis, Delegation Oversight confirms the screening of our subcontractors against the Department of Health and Human Services Office of Inspector General's List of Excluded Individuals/Entities and the General Service Administration's System for Award Management exclusion lists and similar state exclusion lists. WellCare will not knowingly hire, retain, or otherwise conduct business with subcontractors that:

- Have been excluded, debarred or suspended from participating in state and federal programs; or
- Have been convicted of a criminal offense within the scope of exclusion laws, but has not yet been excluded, debarred, suspended, or otherwise declared ineligible by a governmental authority.

Subcontractors have to comply with the expectations of the company on an ongoing basis. After delegation, the team continues to monitor performance. In addition to the confirmation, we require the submission of supporting documentation to demonstrate compliance. Examples of documentation may include codes of conduct, compliance policies, copies of training materials, training rosters, etc. WellCare's extensive oversight of Subcontractor performance reflects our commitment to deliver high quality services and our understanding that Subcontractors' performance is a reflection of WellCare's focus on quality.

SUBCONTRACTOR STAFF TRAINING

WellCare places the highest value on the importance of effective associate and Subcontractor onboarding and training. While associate and subcontractor satisfaction and retention are important byproducts, the most important results of our training investment are reflected in the service received by our Members and Providers.

All WellCare associates and Subcontractors who will bear responsibility in the execution of commitments made in this Contract will be required to complete a detailed training program specific to Kentucky Medicaid and WellCare SKY. Content for the training modules will be developed in accordance with the regulations, eligible populations, and characteristics of Kentucky Medicaid and WellCare SKY. All training content is stored, deployed, assessed, and tracked through our Learning Management Platform. This includes aligning all market specific training to the appropriate associate by role or function. WellCare expects delegate entities to provide training reports that demonstrate their staff have been trained to meet the standards of WellCare and our state partners.

WellCare's corporate training team is skilled at building and delivering specialized training content. For Kentucky, WellCare will develop training modules, which provide staff an in-depth understanding of the populations, service coordination needs, and regulatory requirements specific to our membership in Kentucky.

vii. Retention approach for Full-time Kentucky SKY Key Personnel.

WellCare is the employer of choice within the health care industry and we spend considerable effort recruiting and retaining best-in-class employees. With our extensive experience, we have built an organization that has become an attractive place to work for experienced health care executives, people leaders, and individual contributors. Since our inception in 2011, WellCare of Kentucky has established the most experienced and stable leadership team out of any MCO operating Kentucky's Medicaid program. **For the last two years, WellCare of Kentucky has made the list of Best Places to Work in Kentucky. We placed 10th in the Large Company category in 2018 and 8th in the Large Company category in 2019.** The Society of Human Resource Management and the Kentucky Chamber of Commerce sponsor best Places to Work in Kentucky and the rankings are based on an Employer Benefits and Policies Questionnaire (25% weighting) and an Employee Engagement and Satisfaction Survey (75% weighting).

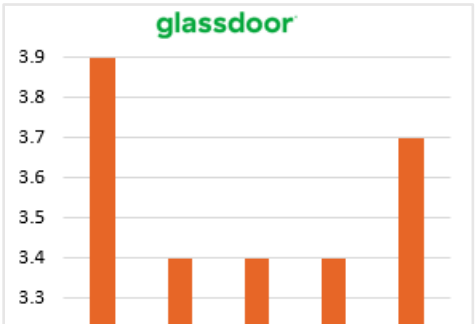

Figure G.2-10 2019 Glassdoor Rating

In 2019, WellCare had a significantly better reviews than our competitors do (see **Figure G.2-10**) as an employer of choice within the managed care industry based on reviews from Glassdoor, which is one of the fastest growing jobs and recruiting sites, and holds a growing database of millions of company reviews. We attract and retain top level talent through our comprehensive benefits package, promoting work life balance with flexible schedules, opportunities for working remotely (15% of our workforce work from home full time and a large percentage telecommute anywhere between one to four days per week), and tuition reimbursement. Additional benefits include:

- Competitive compensation
- Paid time off
- Health/dental/vision insurance
- Telemedicine
- Employee assistance plans
- 401(k) retirement plan
- Company-paid life and disability insurance
- Flexible spending accounts
- Casual Dress Code
- Tuition Reimbursement
- Volunteer Time Off Program

In addition, we are committed to diversity and inclusion, and create an environment in which associates bring their authentic selves to the work place. In addition to the benefits listed above, we use a variety of strategies for retaining key personnel and associates to ensure we always have talented team Enrollees in place to perform the functions of the Contract.

Strategies include leadership goals and training, measures and action plans, career development to engage and empower associates, and targeted retention programs. **In 2018, WellCare of Kentucky's overall undesirable turnover was 10%, well below the healthcare industry average.**

ENSURING RETENTION THROUGH MEASURES AND ACTION PLANS

The WellCare of Kentucky leadership team is committed to ensuring that we have a highly motivated and engaged team of associates in our regional offices, on-site at hospitals, and remotely to provide exceptional support to our Enrollees and providers. We measure the satisfaction and engagement of our associates by soliciting feedback from all employees through a confidential annual Associate Opinion Survey (AOS) and a New Hire Experience Survey (NHES). **In 2018, WellCare of Kentucky's average score for 14 of the 15 AOS categories in the survey was 11% to 31% higher than the U.S. high performing norm comparator, which includes Fortune 100 companies.** WellCare of Kentucky has led the organization in AOS engagement scores for the last two years. In addition, Kentucky had a 100% employee participation rate on the 2018 survey. WellCare's NHES goes out 90 days after a new associate starts. In 2018, WellCare surveyed 2,160 associates with an 87% favorable result. WellCare of Kentucky surveyed 31 associates in 2018 with a 93% favorable result. We review AOS and NHES results with each functional area and partner, creating action plans to address areas of opportunity identified by the surveys and capitalize on successes, leveraging best practices and ensuring strong future results. We hold executives accountable for achieving successful outcomes and addressing opportunities these surveys identify.

ENGAGING AND EMPOWERING OUR ASSOCIATES THROUGH CAREER DEVELOPMENT

One of our most important strategies for enhancing retention and minimizing staff turnover is to create an environment that supports professional achievement by providing associates with the tools and resources they need to succeed. WellCare of Kentucky is committed to providing all associates with effective learning in the necessary business and professional development skills to ensure their success. **In 2016, 82% of WellCare of Kentucky's associates said that they receive the training they need to perform their current job effectively and that they are given a real opportunity to improve their skills (based on WellCare of Kentucky's 2018 AOS Survey Results).** We support all of our employees in their development and individual growth at the company and are proud of our ability to recruit and promote employees from within the organization. In 2018, 15 of WellCare of Kentucky's associates received promotions and WellCare filled more than 33% of open positions with internal associates.

LinkedIn Learning

As our industry and our business grow more complex, our associates must adapt and innovate, faster and better than ever before. WellCare is excited to provide all associates with access to LinkedIn Learning – an award-winning, industry leader in online training – with a digital library of over 11,000+ micro-learning courses covering a wide range of technical, business, software and creative topics. Launching LinkedIn Learning is a strong commitment to providing professional development opportunities for our associates, allowing them to take charge of their learning and planning for their career growth.

TARGETED RETENTION PROGRAMS

Each functional area leader partners with their respective human resources business partner to create retention programs that address retention risks. This ensures we retain our top talent and that our associates are engaged and developed to serve our Enrollees and providers. For example, if we identify an attrition opportunity among a particular functional role, we implement a series of proactive measures to address it. Examples of retention plan action items include 'stay' and 'skip' level interviews with high performing associates, stretch assignments, mentoring, and engagement programs and activities. **These targeted retention programs have proved to be very successful. In 2018, WellCare of Kentucky's overall undesirable turnover was 10%, well below the healthcare industry average.**

viii. Provide a detailed description of the Contractor's organizational structure for the Kentucky SKY program under this Contract, including an organizational chart that displays the following:

WellCare of Kentucky will submit a current organizational chart depicting all functions including mandatory functions, number of employees in each functional department and key managers responsible for the functions to DMS for approval within 30 days of signing the Contract, annually, prior to material revisions and upon request by DMS.

a. Management structure, lines of responsibility, and authority for all operational areas of this Contract.

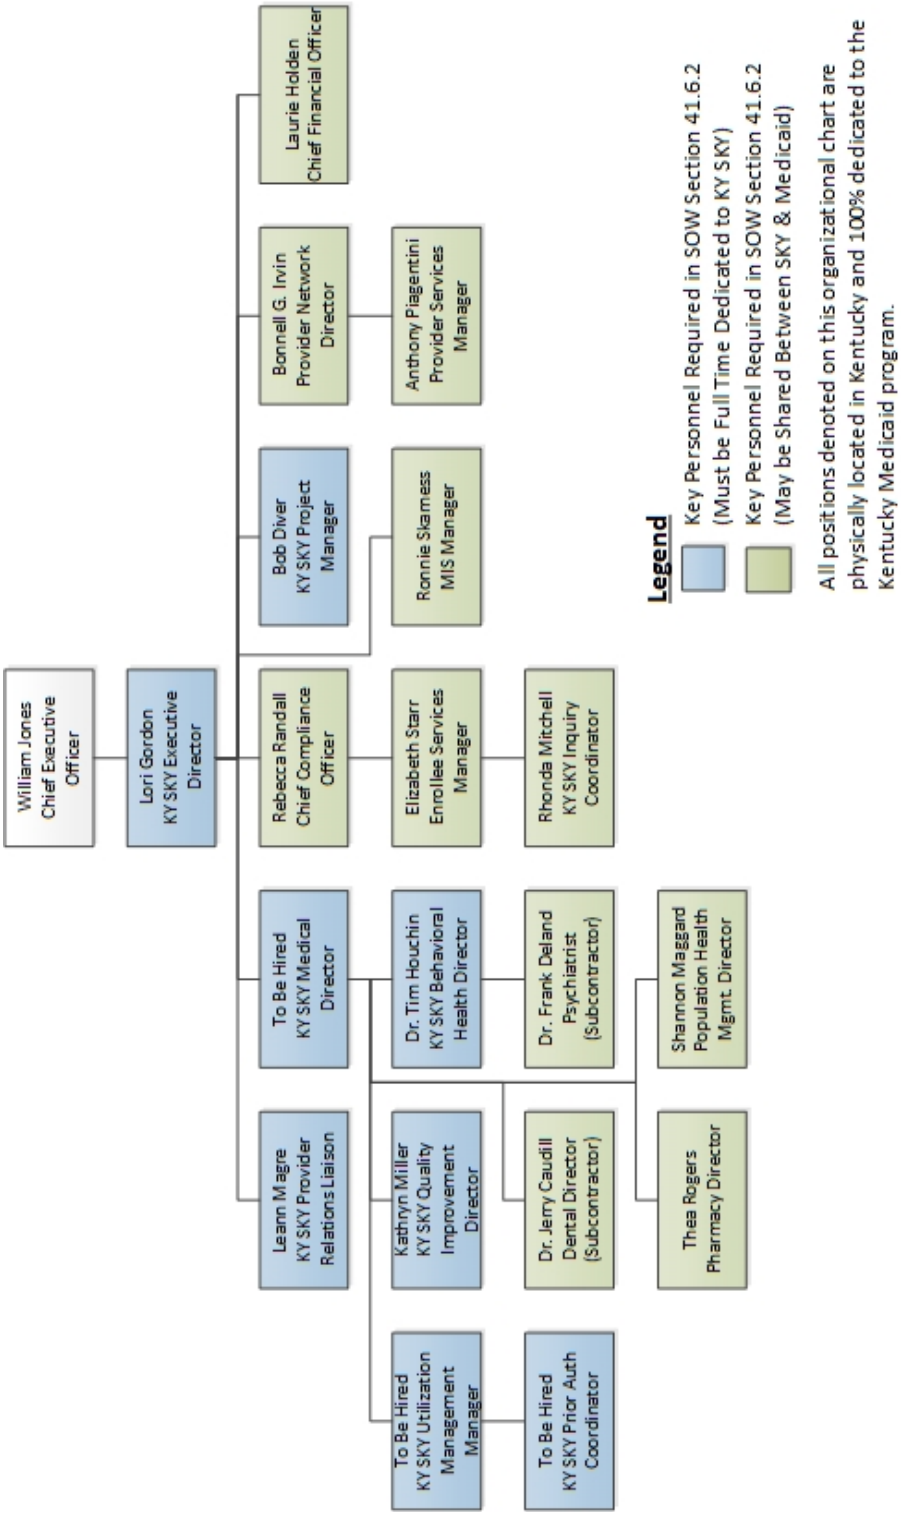
WellCare of Kentucky's Executive Administrator, Lori Gordon, has full accountability for overseeing all operations, strategic direction and administration of our Kentucky SKY Program plan. Working closely with our Executive Administrator is our Kentucky-based leadership team, comprised of key leaders, each of whom are responsible for overseeing specific functional areas within WellCare of Kentucky's organization. Together, our Commonwealth-level leadership team and support staff will anchor each regional staff team. Our dynamic team of local leaders have are responsible for making decisions for WellCare of Kentucky. This decision-making responsibility extends downward to the teams deployed throughout the Commonwealth to ensure that associates closest to our Enrollees, providers, and stakeholders are empowered to make decisions with support and feedback from our Commonwealth leadership team. For example, the scope of decision-making authority of our local team in Kentucky includes, but is not limited to, how staff and resources are deployed throughout the local market to support our Enrollees and providers, the authority to administer the execution and management of our provider network, the ability to make decisions about Value-Based Purchasing with our providers, and the capability to make local decisions regarding claims adjudication and prior authorization issues.

WellCare of Kentucky's infrastructure provides integrated accountability with behavioral, social, pharmacy and physical health staff aligned through our clinical, administrative, and operational structure. This ensures that integration of services begins at the top of our management structure and flows down into our regional and local service delivery at the Enrollee level. Our governance and decision making model ensures that these local leaders engage in daily, weekly, and monthly interactions with our local staff to address Kentucky specific issues, to

ensure challenges are being addressed, to ensure adherence to escalation protocols, and to guarantee our associates are making timely, accurate, and proactive decisions.

The organizational chart below, **Chart G.2-1**, shows the management structure, lines of responsibility, and authority for all operational areas of WellCare of Kentucky for this Contract.

CHART G.2-1: WELLCARE OF KENTUCKY ORGANIZATIONAL STRUCTURE



b. How the Kentucky SKY fits into the overall organizational structure of the Parent Company.

WellCare of Kentucky is an indirect wholly owned subsidiary of Centene Corporation, Inc. (Centene). The ownership path is as follows:

CENTENE

Centene Corporation (Centene), which includes WellCare Health Plan, provides managed care services to more than 12.9 million Medicaid Enrollees across 30 states. Centene's focus and expertise is in serving beneficiaries through government-subsidized programs, including Temporary Assistance for Needy Families (TANF), Modified Adjusted Gross Income (MAGI), the Children's Health Insurance Program (CHIP), Supplemental Security Income (SSI)/Aged, Blind and Disabled (collectively ABD), Foster Care, Medicaid Expansion Populations, LTSS, and Medicare-Medicaid Plans (MMPs). Centene serves 1 million Medicare members across 28 states.

WELLCARE HEALTH PLANS

WellCare Health Plans, Inc. ("WellCare") provides managed care to over 4.1 million Medicaid Enrollees in 12 states including serving Aged, Blind and Disabled (ABD), Children's Health Insurance Plan (CHIP), Dual-Eligible Populations (Medicare & Medicaid), Intellectual Developmental Disabilities (IDD), Managed Long-Term Services and Supports (MLTSS), Supplemental Security Income (SSI), and Temporary Assistance for Needy Families (TANF) populations. WellCare also offers Medicare Advantage plans in 21 states serving 506,000 Enrollees including approximately 125,000 dual-eligibles. WellCare also offers Medicare Part D prescription drug plans in all 50 states with approximately 1.05 million Enrollees. WellCare does not split time or our infrastructure in commercial insurance or other types of health coverage, which allows us to ensure that we tailor everything we do for Medicaid and Medicare Enrollees.

WELLCARE OF KENTUCKY, INC.

WellCare of Kentucky, Inc. ("WellCare of Kentucky") is a wholly owned subsidiary of WellCare Health Plans, Inc. WellCare of Kentucky currently serves more than 430,000 Medicaid Enrollees across the Commonwealth, which includes approximately 215,000 Temporary Assistance for Needy Families (TANF)/Kentucky Children's Health Insurance Program (KCHIP), 137,000 Medicaid Expansion, 43,000 Supplemental Security Income (SSI), 24,000 Dual Eligible, and 9,000 foster care, juvenile justice system, adoption assistance, and former foster care Enrollees. Additionally, WellCare of Kentucky services approximately 47,000 Medicare Enrollees across Kentucky, including 14,000 Medicare Advantage Enrollees and 33,000 Medicare PDP Enrollees. We currently employ over 300 people throughout the Commonwealth serving our Medicaid and Medicare Enrollees. Our experience teaches us that a local presence is the key to both successful implementation and ongoing operations. More importantly, local service to our Enrollees and providers has a positive impact on quality and availability of Enrollee care.

The organizational charts that follow (**Chart G.2-2)**, shows greater detail on how Kentucky SKY fits into the overall organizational structure of the WellCare of Kentucky's Parent Company and ultimate parent company (Centene). Parts 12 through 17 provide the specific details of WellCare of Kentucky and our affiliates and direct parent (WellCare).

c. Where Subcontractors will be incorporated.

INCORPORATION OF SUBCONTRACTORS

We choose highly-qualified subcontractors to complement and enhance the services we provide to our Enrollees and providers. We thoughtfully integrated these subcontractors into WellCare of Kentucky's SKY organizational structure to ensure a streamlined experience for our Enrollees, providers and DMS. Reporting to our Executive Administrator, our Chief Operating Officer, Ben Orris, will be responsible for overseeing the day-to-day functions and services supplied by operational subcontractors. The Kentucky SKY Medical Director, once hired, along with Dr. Howard Shaps, Medical Director, will have direct oversight to all clinical subcontractors. Several additional key personnel are responsible for overseeing services performed by our subcontractors.

- Ben Orris, Chief Operating Officer – Responsible for overseeing subcontractors providing Operations Support services
- Dr. Howard Shaps, Medical Director – Responsible for overseeing subcontractors providing Clinical services
- Utilization Management Director (TBD) – Responsible for overseeing subcontractors providing Utilization Management services
- Thea Rogers, Pharm.D., Pharmacy Director – Responsible for overseeing subcontractors providing Pharmacy Benefits Management services
- Bonnell Irvin, MPA, Provider Network Director – Responsible for overseeing subcontractors providing Provider Network services
- Julie Crousore, Claims Processing Manager – Responsible for overseeing subcontractors providing Claims Processing services
- Elizabeth Starr, Enrollee Services Manager – Responsible for overseeing subcontractors providing Enrollee services

Table G.2-15 below shows the Subcontractors WellCare of Kentucky utilizes to support our Kentucky SKY Program plan.

Table G.2-15 Subcontractors, Functions, and Reporting Structure

Subcontractor	Role
Enrollee Services – Elizabeth Starr	
All Asian Group	Translation services
C3/CustomercontactChannels Inc.	Call Center
CareerArc	Career service & employment and training support for our members

Subcontractor	Role
Cobalt Therapeutics, LLC	Behavioral health website training for members
Concentrix Corp. (f/k/a IBM Daksh Business Process Services PVT Ltd)	Enrollment services
CSI Southeast, Inc., d/b/a Interpretek	Sign language interpretation
Eliza Corporation	Interactive voice recognition – member risk assessments
Elahi Enterprises dba Akorbi	Visually and hearing impaired translation services
Healthy Profits, LLC dba HealPros, LLC	Diabetic retinopathy examination screenings
Human Arc Corporation	Outreach enrollment services
Multilingual Group	Written translation services
Novu, LLC	Member wellness reward program
Revel Health, LLC fka Healthtel	Member communications
RJ Health International Systems, LLC	Web based portal for RX claims
SPH Analytics (f/k/a Patient Satisfaction Plus, LLC, d/b/a The Myers Group)	Consumer Assessment of Healthcare Providers and Systems (CAHPS) surveys
The Results Companies, LLC	Customer service
TPUSA, Inc. d/b/a Teleperformance	Customer service
Translation Station	Interpreter services – physicians' offices
Voiance Language Services	Grievance letter translation services
WellSource, Inc.	Web access program for telephonic access to health appraisal questions.
Network and Provider Contracting – Bonnell Irvin	
Aarete, LLC	Assist markets with DME provider contracting efforts
Common Health Corporation, Inc. dba Center Care Health Benefit Programs	Credentialing

Subcontractor	Role
Council for Affordable Quality Healthcare, Inc.	Source for Provider self-reported data
Claims Processing and Reconciliation – Julie Crousore	
AdminisTEP, LLC	Clearinghouse services for claims and real-time transactions
Conduent Credit Balance Solutions, LLC (Formerly CDR Associates, LLC)	Claims overpayment recovery
Transaction Applications Group	Claims processing and adjudication
Devlin Consulting, Inc.	Overpayment recovery of claims through data mining
Equian (fka First Recovery Group)	Third party liability - subrogation
Health Management Systems, Inc.	Third party liability – coordination of benefits, credit balance and data mining
OptumInsight fka Ingenix	Payment Integrity, Claims editing, Credit Balance Audit
Syrtis Solutions Ltd.	Third party liability – verification of benefit eligibility
Transunion Corp.	Third party liability – claims
Advanced Medical Reviews, LLC.	Physician level independent peer review
CareCentrix, Inc.	Post-acute care services/ Readmissions Management Services

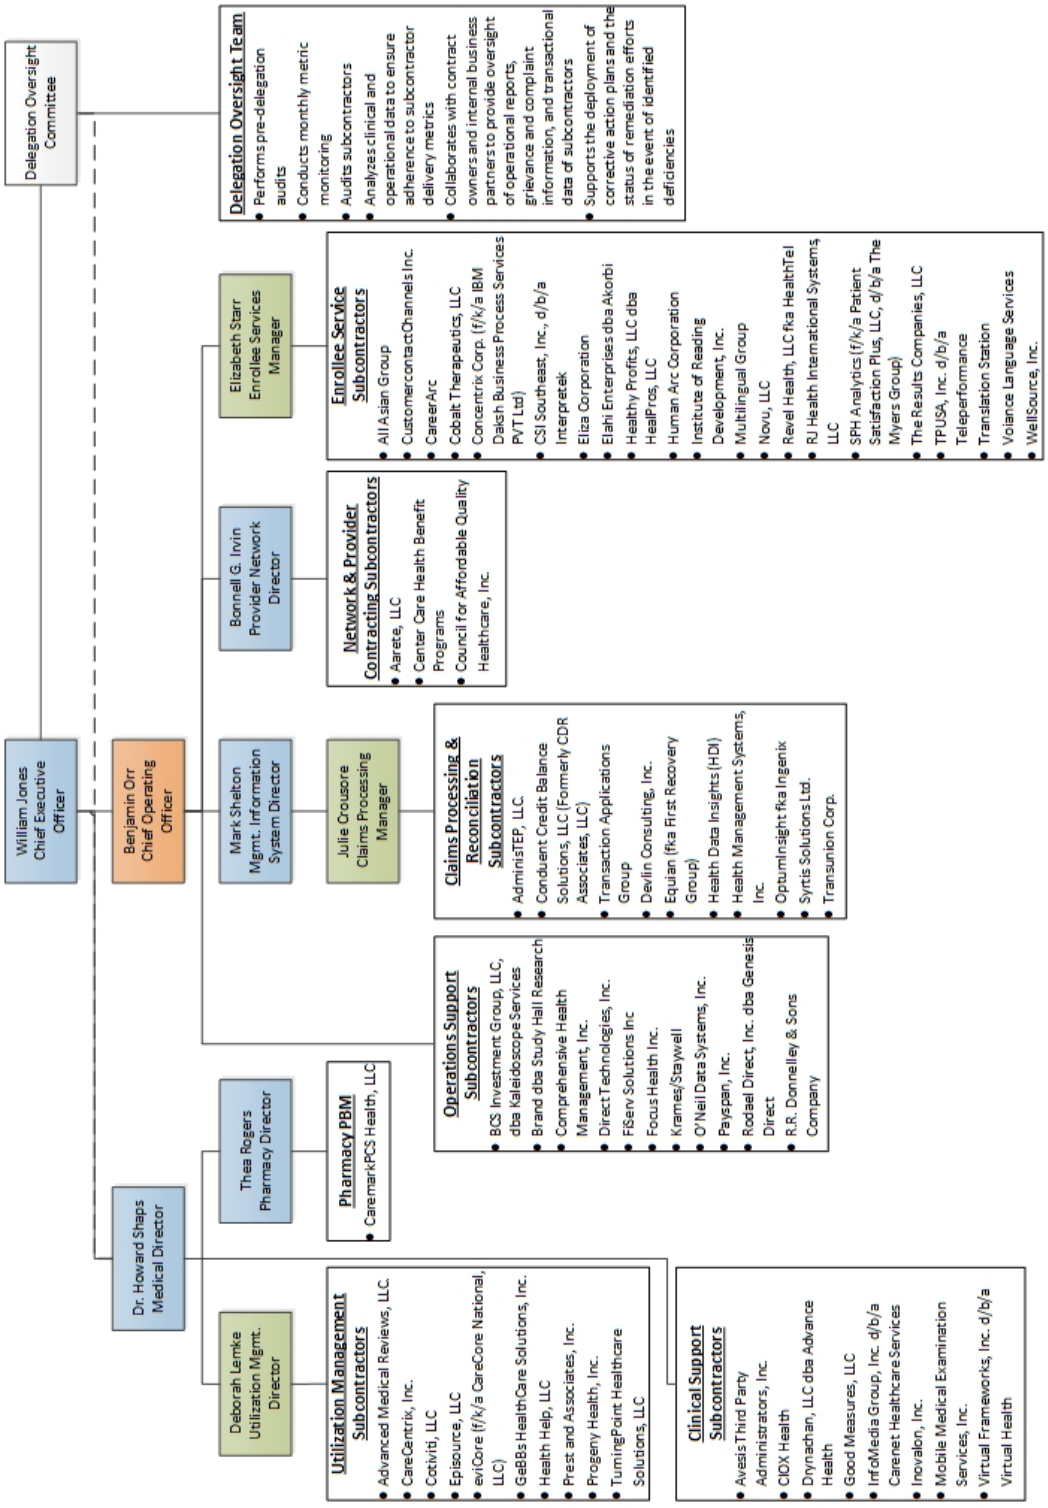
The organizational chart below, **Chart G.2-3**, shows where subcontractors will be incorporated into WellCare of Kentucky's organizational structure.

CHART G.2-3: SUBCONTRACTOR MANAGEMENT STRUCTURE



ix. A summary of how each Subcontractor will be integrated into the Contractor's proposal performance of their obligations under the Contract to ensure a streamlined experience for the Kentucky SKY Enrollees, Providers and the Department.

INTEGRATING SUBCONTRACTORS AT THE LOCAL LEVEL

All of WellCare of Kentucky's subcontractors are expected to meet the specific obligations and performance standards under RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices in order to ensure a streamlined experience for Enrollees, providers, and DMS. Chief Operating Officer, Ben Orris, is responsible for overseeing the day-to-day functions and services supplied by operational subcontractors. Supporting Ben in these efforts is our Commonwealth-based Regulatory Affairs and Compliance teams, which includes our Chief Compliance Officer, Rebecca Randall. In conjunction with our local Regulatory Affairs and Compliance teams, our team of local leaders responsible for quickly and directly addressing any issues that arise with our Enrollee and provider facing subcontractors. These local leaders include Dr. Howard Shaps, Medical Director, Thea Rogers, Pharmacy Director, Bonnell Irvin, Provider Network Director, Anthony Piagentini, Provider Services Manager, Julie Crousore, Claims Processing Manager, and Elizabeth Starr, Enrollee Services Manager. Along with Dr. Howard Shaps, Medical Director, the Kentucky SKY Medical Director has clinical oversight for all clinical subcontractors.

WellCare of Kentucky has multiple mechanisms for becoming aware of emerging subcontractor performance issues, including metric / scorecard monitoring, complaints and grievances (including those from DMS), regularly scheduled subcontractor audits, Enrollee feedback from our Consumer Advisory Boards, Joint Operating Committee (JOC) meetings with our subcontractors, and our WellCare of Kentucky Quality and Compliance governance meetings. To ensure we are constantly engaging with our subcontractors, our Regulatory Affairs and Compliance Teams, including the Kentucky SKY Medical Director, hold regular JOC meetings with our subcontractors to monitor performance level reports and scorecards, identify and address service and quality issues, and design and execute quality improvement initiatives. These meetings include discussions of any performance issues, including outstanding corrective action plans and the status of remediation efforts. We typically hold these meetings monthly, but for subcontractors with broader member impact, such as Dental and Transportation, we hold them bi-weekly (and even more frequently if needed, such as during Contract implementation).

Delegation Oversight Team

Supporting WellCare of Kentucky in our monitoring and oversight efforts is our Delegation Oversight Team, led by WellCare's Chief Compliance Officer, Lori-Don Gregory, Deputy Compliance Officer, and Chris Price, Vice President Compliance Oversight, our Delegation Oversight Team. This team oversees compliance of services provided by subcontractors to ensure they comply with federal and state regulations, contractual obligations, accreditation standards and company policies and procedures. This team is comprised of subject matter experts for each of the delegated functions and leverages audit tools and expertise, our C360 compliance management system, and national best practices to execute a comprehensive subcontractor oversight process. To further illustrate the breadth of experience of our

Delegation Oversight Team, it includes clinical and non-clinical auditors with industry expertise spanning utilization review, complex case management, claims, customer service, and pharmacy, as well as an in-depth understanding of the requirements for a WellCare of Kentucky subcontractor.

Our Delegation Oversight Team works in conjunction with the governance framework of our Delegation Oversight Committee (DOC). Our DOC provides oversight for all delegated subcontractors and continuous guidance and advisory services to our Delegation Oversight program. The Kentucky SKY Medical Director will work directly with the Delegation Oversight Committee to review all clinical subcontractor reports and will meet with clinical subcontractor directors no less than monthly through the Utilization Management Quality Improvement Subcommittee. Our DOC is governed by our Compliance Program and reports to our Corporate Compliance Committee (CCC), and ultimately to the Audit, Finance, and Regulatory Compliance Committee of WellCare's Board of Directors.

MONITORING SERVICE LEVEL AGREEMENTS

We ensure subcontractor compliance through the rigorous monitoring of service level agreements to ensure a streamlined experience for Enrollees, providers, and DMS. Our approach to establishing and monitoring service level agreements is based on our thorough contracting process, rigorous upfront screening process, and comprehensive ongoing review process. Service level agreements are established to ensure compliance with DMS' contractual requirements for covered services, as well as alignment with DMS key goals for the Kentucky SKY Program.

Monitoring Kentucky SKY service level agreements begins with ensuring they are clearly documented in our contract with our subcontractor. As part of their negotiating and contracting processes, our National Network Performance Team ensures all required state contract standards are included in our subcontracts, and also align these standards with monetary performance incentives and penalties. Our Senior Manager of Vendor Management and Senior Manager of Regulatory Affairs, who are subject matter experts on the SKY Contract and who provide guidance on any interpretation questions, support them in this effort.

Our pre-delegation audit process validates that the subcontractor has the required elements in place to comply with all of the contractual requirements for the functions delegated to them. Items evaluated as part of the pre-delegation audit include eligibility for government healthcare programs, policies, procedures, licensures, and staffing levels. The results of the pre-delegation audit are summarized and presented to our Delegation Oversight Committee. If during the initial delegation audit, an item or process is deficient or not compliant with WellCare of Kentucky's expectations, the subcontractor is placed on a corrective action plan (CAP) which must be remediated. Any exceptions must be presented to and approved by our Delegation Oversight Committee.

Once delegated services have commenced, WellCare of Kentucky continues to monitor service level agreements. The primary forum to discuss these metrics is our reoccurring Joint Operating Committee (JOC) meetings with our subcontractors. Key areas of focus for our JOCs are monitoring performance level reports and Delegation Oversight scorecards, identifying and

addressing service and quality issues, complaints, and grievances, and designing and executing quality improvement initiatives. All subcontractors delegated for network management have service level agreements to meet or exceed DMS' network adequacy requirements.

Our ongoing service level monitoring through our JOC structure is supplemented by the compliance monitoring of our Delegation Oversight Team. As part of our governance process, our Delegation Oversight Team reports directly through our Compliance Organization and Chief Compliance Officer, making their review and assessment independent from WellCare of Kentucky's day-to-day operational team. Delegation Oversight uses a risk-based approach to determine the level and frequency of review, and every subcontractor has an annual review. Our reviews include metric-based scorecards (of service levels that are aligned with Kentucky SKY standards), targeted / focused audits, and annual functional audits. Delegation Oversight imposes corrective action plans for subcontractor service level misses as necessary and monitors their completion. In the case of an explicit failure to meet Department standards, the "Improvement Plan" due to WellCare of Kentucky and DMS will mirror the corrective action plan. If a subcontractor fails to remediate the deficiency underlying the corrective action plan, WellCare of Kentucky imposes disciplinary action and fines up to and including de-delegation. Delegation Oversight's activities are managed through our compliance management system, Compliance 360 (C360), which enables accurate tracking and reporting.

A summary of how each Subcontractor will be integrated into the WellCare of Kentucky's proposal performance of their obligations under RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices is shown above in **Chart G.02.c-3**.

x. Identification of staff positions that will be based (1) in the Contractor's Kentucky office(s), (2) in the field, and (3) at a corporate office of the Contractor or Subcontractors. Information should include physical locations for all Contractor operational areas to support this Contract.

LOCATION OF WELLCARE OF KENTUCKY STAFF

Local staffing and leadership have been foundational to our successful implementation and ongoing operations in Kentucky, and our structure for Kentucky SKY will follow this model. Our SKY Executive Team lives and work in Kentucky today, and we are the only MCO with Enrollee- and Provider-facing staff located throughout the Commonwealth.

Staff Positions Based in WellCare of Kentucky's Offices

139 staff positions are located in one of our six offices within the Commonwealth of Kentucky. These individuals are fully dedicated to serving the people of Kentucky and are comprised of leadership staff, operational staff, non-field based provider, and non-field based clinical staff.

Staff Positions Based in the Field

WellCare of Kentucky has 81 field-based staff positions located throughout the Commonwealth to support our Enrollees and Providers, including dedicated Care Coordination staff who have been providing high-touch services working in the field with DCBS, DJJ, Enrollees, and caregivers for eight years. An example of our proposed regional staffing structure is outlined below:

- Region 1: Care Manager (BH), Health Coach, Care Coordinator, CM Supervisor, Case Management Manager
- Region 2: Care Manager (BH), Care Manager (RN), Care Coordinator, Case Management Manager
- Region 3: Care Manager (BH), Care Manager (RN), Health Coach, Care Coordinator, CM Supervisor, Case Management Manager
- Region 4: Care Manager (BH), Care Manager (RN), Health Coach, Care Coordinator, CM Supervisor, Case Management Manager
- Region 5: Care Manager (BH), Care Manager (RN), Health Coach, Care Coordinator, CM Supervisor, Case Management Manager, Coordinator Supervisor
- Region 6: Care Manager (BH), Care Manager (RN), Health Coach, Care Coordinator, CM Supervisor, Case Management Manager, Coordinator Supervisor
- Region 7: Care Manager (BH), Care Manager (RN), Health Coach, Care Coordinator, CM Supervisor, Case Management Manager, Coordinator Supervisor, Transition Coordinator
- Region 8: Care Manager (BH), Care Manager (RN), Health Coach, Care Coordinator, CM Supervisor, Case Management Manager
- Region 9: Care Manager (BH), Care Manager (RN), Health Coach, Care Coordinator, CM Supervisor, Case Management Manager, Coordinator Supervisor

In addition to the staff positions listed above, WellCare of Kentucky a proven, field-based, provider-facing outreach and education program with Provider Relations representatives and managers established regionally across the state. WellCare's Provider Relations (PR) representatives live in the region where they support providers, giving them both proximity to the providers they support and familiarity with their communities. Additionally, we will have Enrollee Services call center includes our Work-At-Home- Agent (WAHA) service model staffed by associates who are located in Kentucky.

Staff Based in WellCare's Corporate Offices

All staff that is dedicated to the meeting the Kentucky SKY program requirements will be located within the Commonwealth of Kentucky.

xi. Number of proposed FTEs dedicated to the Kentucky SKY program, by position type and operational area and how the Contractor determined the appropriateness of these ratios.

DETERMINING THE APPROPRIATENESS OF FTE RATIOS

Over the years, WellCare has had significant experience launching new programs, integrating acquired programs and expanding with new populations, geographies, and services with positive results, allowing us to become one of the largest Medicaid managed care providers in the country. As a company with over 30 years of experience developing staffing plans for our Medicaid programs and over eight years of experience providing Medicaid services within the

Commonwealth, we have a tested process in place for developing the appropriate level of FTEs to ensure successful operations of the SKY program. In order to develop a staffing plan to fulfill the requirements of the Kentucky SKY program, WellCare conducts a detailed and thorough information gathering process to ensure that the necessitated staffing levels for the Kentucky SKY program are accurately captured and planned for over time. We achieve this through a series of structured review sessions with functional area leaders that span all functions of the organization to ensure a clear understanding of the contract requirements, deliverables, and the strategy in place to effectively achieve and execute those deliverables. Following these review sessions, each functional area is responsible for providing a detailed staffing plan that includes the number and type of FTEs as well as the anticipated dates of hire, over time, including the time leading up to contract implementation. Senior level leadership reviews, revises (if needed), and approves the plan to ensure strategic direction is achieved and the inputs are appropriate to meet the established requirements.

Number of Proposed FTEs Dedicated to the Kentucky SKY Program by Position, Type, and Operational Area

Table G.2-16 below describes the projected WellCare of Kentucky staff dedicated to the Kentucky SKY program broken down by functional area, position, and FTE count. This table does not include WellCare of Kentucky shared staff.

Table G.2-16 Proposed Full-Time Equivalent Positions

Functional Area and Position	# of FTEs
Key Leadership	
Executive Director	1.0
Project Manager	1.0
Provider Relations Liaison	1.0
Medical Director	1.0
Utilization Management Manager	1.0
Quality Improvement Director	1.0
Behavioral Health Director	1.0
Prior Authorization Coordinator	1.0

Business Technical Analyst	1.0
Information Technology Support Specialist	1.0
Grievance Coordinator	1.0
Member Resolution Specialist	1.0
Customer Service Representative	1.0
Escalation Coordinator	1.0
Correspondence Analyst	1.0

xii. Describe the roles and responsibilities of Care Coordinators and Care Coordination Team. How will the Contractor maintain adequate Kentucky SKY to Kentucky SKY Enrollee ratios and number of Care Coordination personnel and management staff having expertise in Physical Health, Behavioral Health, and the Kentucky SKY Enrollee to build Care Coordination Teams? Provide the Contractor's approach to locating the Care Coordinators areas in which they serve.

ROLES AND RESPONSIBILITIES

WellCare will assign each Enrollee a Care Coordinator and interdisciplinary Care Coordination Team (CCT) based on their specific needs within one business day of enrollment in Kentucky SKY. To meet individual Enrollee needs, we will assign Care Coordinators as follows:

- An RN Care Manager will be assigned as the Care Coordinator for Enrollees with complex medical needs, including but not limited to those with a Medically Complex designation from the Office of the Commission on Children with Special Health Care Needs.
- A Behavioral Health Care Manager will be assigned as the Care Coordinator for Enrollees with complex behavioral health needs.
- A Health Coach will be assigned as the Care Coordinator for Enrollees with low and moderate needs.

The CCT will include clinical and non-clinical representatives to meet the individual needs of Enrollees. For example, the CCT for a moderate risk Enrollee with well-controlled depression will include a Behavioral Health Care Manager or Behavioral Health Specialist who can provide appropriate support to the assigned Care Coordinator in assessing and monitoring the depression and integrating any treatment within the Enrollee's overall care plan. Other CCT support will include our Field Outreach Coordinators working onsite at DCBS regional offices (and at DJJ facilities when needed) to conduct initial outreach and engagement with new Enrollees, and Transition Coordinators and Youth Peer Support Specialists to assist with transition age youth and former foster care Enrollees. Additionally, our Family Peer Support Specialists will assist the CCT to provide support for foster and adoptive families.

The roles and responsibilities of WellCare's Care Coordinators and CCTs for Kentucky SKY align with the standards of health case management for children and adolescents in foster care outlined in the American Academy of Pediatrics' Healthy Foster Care America. Established by a multidisciplinary task force of experts, these guidelines are intended to result in the integration of the health care plan with the foster care permanency plan and ensure delivery of "high-quality, comprehensive, and coordinated health care". We have built our Kentucky SKY Care Coordination Program to incorporate these guidelines, which mirror and complement Department requirements for the Care Coordination function.

The most important role of our Kentucky SKY Care Coordinators and CCTs is serving as the advocate for the Enrollee and family. As such, our Care Coordination staff are responsible to encourage and support Enrollee and family voice and choice throughout the Care Coordination process and across the system of care. They are also responsible for ensuring all needs are identified and met through timely access to an integrated continuum of services and supports

to improve health outcomes and achieve stability and permanency. Advocacy also includes promoting trauma-informed care and approaches among all Department, DCBS, and DJJ staff, providers and stakeholders involved with the Enrollee's care and services.

Below we summarize roles and responsibilities, which are described in detail in our responses throughout this proposal.

Care Coordinators

Care Coordinators serve as the lead member of the CCT and the key point of contact with DMS, DCBS, and DJJ, the Kentucky SKY Enrollees, Adoptive Parent(s), Caregivers, Fictive Kin, and providers. The Care Coordinator is responsible for:

- Initial outreach to new Enrollees and their caregivers, in coordination with DCBS/DJJ, to screen for immediate and urgent needs.
- Convening Assessment Team meetings, as needed, to support Enrollee needs and facilitating completion of comprehensive needs assessments, to include all required assessments and screenings and mandated timeframes (including EPDST periodicity) as specified in the Contract and in the SOP Manual.
- Leading development of a care plan which identifies the Enrollee's Care Coordination needs within 30 calendar days of enrollment (or sooner as needed). This includes involving, educating, and coordinating with the multidisciplinary team (MDT) which includes Enrollees, caregivers, PCP, dental provider, behavioral health (BH) provider, other specialist, and ancillary providers, other stakeholders as approved by DCBS, and DCBS/DJJ.
- Ensure the Care Coordination Team has the information it needs to make timely and appropriate authorizations and referrals to meet Enrollee needs. This includes, but is not limited to, contacting prior MCOs and providers for information the Care Coordination Team may need to work with current providers to develop treatment plans.
- Ensure that approved Care Plans and authorizations are communicated timely to providers, DMS, DCBS, and DJJ as required.
- Ensure that Enrollees, providers, Foster Parents, Adoptive Parents, Fictive Kin, Caregivers, DCBS and DJJ have the most current information regarding community resources available to assist Enrollees with meeting their needs and assist Enrollees with connecting with these resources.
- Conduct ongoing monitoring and follow-up to evaluate Enrollee progress and identify new or changed needs.
- Oversee regular review of the care plan with updates as needed, in conjunction with the MDT.

Care Coordination Team

The CCT is comprised of a group of professional WellCare staff with targeted qualifications and backgrounds that align with the individual Enrollee's needs, including:

- Master's level Behavioral Health Clinician

- RN Case Manager
- Behavioral Health Specialist
- Family Peer Support
- Youth Peer Support
- Health Coach

CCTs are supported by additional clinical and non-clinical WellCare resources such as our Medical and Behavioral Health Medical Directors, Pharmacy director and staff, Utilization Management nurses, and administrative support staff.

The CCT will coordinate care and services for the Enrollee in collaboration with DMS, DCBS, and DJJ. This will include meeting quarterly with DCBS to identify, discuss and resolve any health care issues and needs of our Kentucky SKY membership, and consulting with DCBS before the development of a new case management plan (on a newly identified health care issue) or modification of an existing case management plan. The CCT will also assist our leadership team in development of business processes and workflows in collaboration with DMS, DCBS, and DJJ, including those related to the transmission of Kentucky SKY Enrollee information. The CCT works under the direction of the Care Coordinator to:

- Assist Enrollees and families to navigate the health care system, coordinating all necessary health assessments within specified timeframes and ensuring required access to provider appointments.
- Involve and include the preferences of the Enrollee, Adoptive Parent(s), Foster Care Parent(s), Caregivers, and Fictive Kin in Care Coordination processes, care planning, and Care Plan implementation.
- Provide information to and assist providers, Enrollees, Foster Parents, Adoptive Parents, Fictive Kin, Caregivers, and DCBS and DJJ staff with Care Coordination services.
- Ensure access to primary, dental and specialty care and support services, including assisting Enrollees, Foster Parents, Adoptive Parents, Fictive Kin, Caregivers, and DFCS and DJJ staff with locating providers, and scheduling and obtaining appointments as necessary.
- Expedite scheduling of appointments for assessments and facilitating providers' timely submittal of assessment results used to determine Residential Placements as requested by DCBS and DJJ.
- Compile assessment results used to determine Residential Placements as requested by DCBS and DJJ and submitting those results to the appropriate DCBS or DJJ staff within the timeframes identified by DCBS or DJJ or otherwise specified in the Contract.
- Assist with coordinating NEMT services for Enrollees as needed for provider appointments and other services.
- Arrange community supports for Enrollees and arrange for referrals to community based resources as necessary.

- Document efforts and barriers to obtain provider appointments, arrange transportation, establish meaningful contact with the PCP, Dental provider, specialists and other providers, and arrange for referrals to community based resources.
- Collaborate with PCPs and specialists of prior MCOs to ensure continuity of care for Enrollees with Special Health Care Needs receiving services authorized in a treatment plan by their prior MCO.
- Provide Care Coordination services at a level of intensity to meet Enrollee needs as indicated by stratification and according to the requirements for each case management tier.
- Proactively provide discharge planning, including a comprehensive evaluation of the Kentucky SKY Enrollee's health needs and identification of the services and supplies required to facilitate appropriate care following Discharge from an institutional clinical setting or when transitioning between levels of care.

Maintaining Adequate Ratios, Number of Staff, and Expertise

WellCare has extensive experience maintaining ratios and number of Care Coordination personnel and management staff with the expertise necessary to provide effective services and support to Enrollees that are similar to the KY SKY population in the intensity of their needs and level of multi-system involvement. This includes but is not limited to medically complex children and youth in child welfare systems in seven other states in addition to Kentucky.

Based on this experience, we have developed a staffing plan with ratios and number of staff based on factors such as:

- The need to initiate Care Coordination as soon as possible and ideally within 24 hours of the court order.
- Our plan to conduct a face-to-face visit with all children and youth coming into the foster care system within five to seven days for those with immediate needs and within 30 days for all others, based on the need to assume that all new Enrollees are high risk and have complex needs
- The need for a higher intensity of Care Coordination services than for other populations, such as more face-to-face interaction with Enrollees, DCBS, and DJJ; more frequent monitoring than traditional child population; and more frequent participation in rounds and staffing to develop discharge plans and support placement stability and permanency.
- More and changing stakeholders with whom to coordinate to ensure Enrollee needs are identified and met.

Our staffing plan establishes an overall Enrollee to Care Coordinator ratio based on stratification of the enrolled population. We will use ratios of 12:1 for our Complex and Medically Complex care coordination tiers; 35:1 for our Intensive tier; 200:1 for our Standard tier; and 500:1 for Health Coaching.

Our Human Resources team will be responsible for implementation of our recruitment and hiring plan. In addition to education, experience, licensure, and qualifications for Care

Coordination and Case Manager positions to ensure applicable physical health, behavioral health, and other necessary expertise, we will seek to hire individuals who demonstrate a true personal commitment to serving these children/youth and their families. We will require experience or detailed knowledge of the Foster Care and juvenile justice systems, Adoption Assistance, the delivery of Behavior Health Services, Trauma-informed Care, ACEs, Crisis Intervention Services, and evidence-based practices applicable to the Kentucky SKY populations. Our intensive Kentucky SKY staff training program, with initial and ongoing components as described in detail in our response to Question 4, will enhance and supplement the knowledge of our Care Coordination management and staff.

To ensure we have adequate ratios and number of staff with necessary expertise, we will use ongoing audits to evaluate staff performance against contract requirements. Monthly, our Audit staff will review records for three Enrollees (selected randomly) to assess staff ability to complete Care Coordination functions in a timely manner and in compliance with all requirements. The audit also will look for evidence of integration across the CCT as well as Field Outreach Coordinator coordination with the DCBS/DJJ caseworker as documented in the Enrollee record. If the audit finds the Care Coordinator or member of the CCT has not met requirements and expectations, the Auditor reviews three additional Enrollee records for that staff member and uses the combined score to determine compliance. Results are reviewed by the Care Coordination Manager to identify staff that need improvement and implementation of corrective action. For staff that need improvement, a Care Coordination Supervisor provides coaching and retraining and as needed review of and mentoring for daily work. That staff member is audited monthly until performance meets requirements. If the staff fails subsequent audits, corrective action is escalated up to and including termination. Additionally, audit results are part of individual staff goals that are taken into account for Mid-year Review and Annual Review and can play a role in merit increases.

The Care Coordination Manager also reviews combined audit results to identify departmental trends that indicate the need for retraining or changes to ratio/numbers of staff. Trends are discussed on our monthly Care Coordination department call, with retraining provided when indicated. If trends indicate the need to consider changes to staffing ratio or numbers, the Care Coordination Director develops a plan to make the change including any immediate hiring needs. In 2018, our monthly Care Coordination audits averaged over 98% compliance.

In addition to staff oversight, we will regularly evaluate overall performance of our Care Coordination Program based on operational, quality, and Enrollee outcome metrics to identify additional hiring needs. This will occur through our Quality Assurance and Performance Improvement program ongoing monitoring and Annual Evaluation.

Our Care Coordinators and CCTs will receive support from other clinical and non-clinical staff. For example, we will assign administrative support staff to CCTs to allow Team clinicians to operate at the top of their license rather than spend time on tasks that can appropriately be performed by unlicensed individuals. In addition, we will provide support through WellCare Kentucky SKY personnel including the SKY Medical and Behavioral Health Medical Directors, our Pharmacy Director, and utilization management staff. These individuals will provide additional

support to enhance the clinical expertise and coordination assistance available to DCBS, DJJ, Enrollees, caregivers, families, and providers.

Workforce Development to Maintain Staffing Adequacy

WellCare is heavily involved in workforce development in Kentucky, partnering with the Kentucky Community Technical College (CTC) system, University of Louisville, and others to develop and invest in programs that benefit the Commonwealth while also supporting our own staffing needs. We will enhance our current efforts to ensure a strong pipeline of qualified candidates for our Kentucky SKY Care Coordination positions. Examples include the following.

- WellCare partners with the University of Louisville's Kent School of Social Work to fund scholarships for ten students each year. We work with the Kent School to offer training to their students on trauma informed care, and routinely post open positions to their graduates. We are expanding this partnership to further support development of a future Care Coordination workforce, such as creating certificate programs in relevant topics such as trauma-informed care and recover and resiliency support.
- WellCare has collaborated with DCBS and DJJ to develop and implement an education-to-work program focused on educating the WellCare workforce on the state system of care, collaboration, and required operating procedures for DCBS and DJJ staff.
- WellCare currently provide scholarships to students at Hazard CTC and Kentucky 1 East working toward relevant degrees or certifications in areas such as nursing.
- We will work with the CTC system and other post-secondary programs to host job fairs and information sessions throughout the Commonwealth to support our hiring of staff with appropriate expertise who live in the regions we serve.

Ongoing Criminal Background Checks

Our Human Resources Department will complete criminal background checks for all required and shared Well-Care Kentucky SKY personnel. This will occur upon hire and every two years thereafter and include verification with sexual offender registries. WellCare also requires drug testing for all staff with any Enrollee contact. This occurs upon hire, annually, and as needed when there are indications of drug use.

WellCare will not place any staff in contact with Kentucky SKY Enrollees, permit staff to access Kentucky SKY Enrollee information, or co-locate staff in DCBS Service Region offices until Human Resources verifies with the appropriate Department Directors that the initial background check and drug test are complete and the staff has passed both. Additionally, no staff will be permitted contact with a Kentucky SKY Enrollee or have access to their information if they have not passed a background check or are alleged to have committed a criminal offense that would prohibit him or her from having contact with Kentucky SKY Enrollees or accessing their information.

Approach to Locating CC Teams in Areas They Serve

WellCare already locates Care Coordinators and CCT in the areas they serve. Because our CC staff for this population is field based, it offers the increased flexibility to work in any environment including DCBS offices, PCP offices, provider offices, foster homes, and family homes. Our staff are assigned to one of our six offices across the Commonwealth, but work from the field. We will expand on our successful field-based approach to locate Field Outreach Coordinators, Care Coordinators, and CCT staff statewide in the Service Regions and Community Districts in which they serve.

We will collaborate with DCBS and DJJ to develop a plan for our staff to locate in their regional offices, including scheduling times staff will be onsite. We propose to have a Field Outreach Coordinator and Care Coordination staff onsite at all nine DCBS regional offices and availability to be onsite at all DJJ Community District offices. See our responses to Questions 3 and 10 for additional detail.

G.2 Company Background

- Attachment G.2.c.iv Key Personnel Resumes

WELLCARE OF KENTUCKY SKY KEY PERSONNEL RESUMES

Below, we provide resumes for our SKY key personnel including information such as degrees, credentials, clinical licensure as applicable, years and type of experience. Per the Addendum, we have provided job descriptions (in Section G.02.C.iv.a) in lieu of resumes for those Full Time Kentucky SKY Key Personnel positions for which we are currently recruiting and will be hired post-award.

Title	Name	Office Location	Employee or Subcontractor
Project Manager	Bob Diver	Louisville	Employee

BOB DIVER – PROJECT MANAGER

Bob Diver is an experienced Senior Leader with over 17 years' experience working in strategic planning, IT infrastructure, program management, cyber security, staff leadership and financial management in both private and public sector. Within his current role, Mr. Diver drives both strategic and tactical initiatives through pre-close due diligence, assessment and execution of business integrations and new market programs across the enterprise to opportunize on synergies across the business, increasing revenue to meet company objectives. Provides leadership and direction to matrixed teams to ensure the successful completion of strategy, work streams and execution of integrations.

RELEVANT EXPERIENCE AND QUALIFICATIONS

WELLCARE HEALTH PLANS, INC. – TAMPA, FL

Senior Director of Integrations (2016 – Present)

- Directing multiple large integrations and successful execution of identified strategies through close collaboration with all impacted internal departments and external companies to ensure all supporting processes, programs, and structures are optimized and implemented in accordance with agreed upon commitments across multiple locations
  - Serves as a trusted resource in business planning, organizational planning, financial performance and initiatives related to integration activities. Provides interim leadership for acquired businesses or new growth until permanent leadership is established and serves as a trusted adviser with business leaders and IT.
  - Responsible for actively planning, overseeing and delivering the strategic integrations of acquisitions and new market start-up programs across the enterprise from due diligence or RFP through the final stage of the integration or launch of the new market.
  - Drives both strategic and tactical initiatives through advanced skills in strategic planning, change management, issue resolution, and program management.

OPTUM TECHNOLOGY, INC. – PLYMOUTH, MN

Director of Mergers & Acquisitions, Mergers & Acquisitions Division (2015 – 2016)

- Led integrations of eight separate Acquisitions to Optum's managed technology network, systems, applications and processes cultivating collaboration and partnerships across multiple business units, business partners, clients and vendors.
  - Successfully re-aligned a 12-month behind and over-budget large scale acquisition with $305 million in revenue and 11,000 users.
  - Regained confidence with business stakeholders, with business partners to identify business processes, re-energized the scope across 9 workstreams, identified show-stopper dependencies, provided solutions, and developed deployment plans to meet business roadmap
  - Created a transformative organization with a focus on quality delivery, developing people and processes to deliver results, drive growth and reduce expenses.

OPTUM TECHNOLOGY, INC. – PLYMOUTH, MN

Director of IT Infrastructure Project Management, Project Management Office (2011 – Jan. 2015)

- Brought in to drive all efforts to migrate disparate legacy systems and environments into a shared managed services business model and enhance the delivery of information systems

services to all divisions. Based upon success, recruited by leadership to turnaround the Advanced Persistent Threats (APT) Program for the Information Risk Management Division. Hold direct management responsibility for 6 senior project / program managers and up to 100+ resources through 15 dotted line reports.

- Successfully turned around 6-month behind and over-budget Advanced Persistent Threats (APT) Program. Led the deployment of new secure workstation endpoints for engineering team accountable for rewriting the Healthcare.gov federal health insurance marketplace site.
  - Within a week, conducted a complete assessment of issues and capabilities, redefined the business goals, established new project plan, and restructured and led team in achieving aggressive deadlines.
  - Regained confidence with business stakeholders, led joint-workshops with business partners to identify business processes, re-energized the scope across 30 workstreams, identified show-stopper dependencies and provided solutions, and developed deployment plans to meet business roadmap.
  - Managed efforts of over 50 subject matter experts, a program budget of $5M, and technology implementation through the design, build, test, deployment, and compliance phases.
  - Conducted program reviews with impacted business and senior leadership. Developed executive scorecards
- Recipient of the United Health Care Shadow Caster Award (2013 & 2014)based upon annual feedback from direct employees on management effectiveness and employee engagement for achieving a leadership rating of 100%, exceeding the company average by 17%. Earned personal recognition by the CEO.
  - Built a high-performance team of 15 project and program managers recognized for guiding the achievement of availability, integrity, security, performance, and recoverability goals.
  - Improved portfolio planning by implementing capacity / capital estimating strategies and creating business partnerships.
  - Established an effective framework for capturing business requirements and service level requirements for the procurement and deployment of infrastructure to global Data Centers and business partners.

STATE OF MINNESOTA, OFFICE OF ENTERPRISE TECHNOLOGIES – ST. PAUL, MN
IT Product Manager (2009 – 2011)

- Core member of leadership team that established the IT infrastructure / business information capability strategies and new scalable shared services model that greatly reduced costs and improved revenue generation.
  - Defined new portfolio of IT services leveraging centralized, shared, and decentralized operations that encompassed co-location, Mainframe / Distributed / Virtual platforms rationalization and centralization, storage, and databases.
  - Led the creation of new action / orderable service catalog for all platforms, storage, and data centers co-provisioned within the organization.
  - Drove the negotiation of favorable contracts with hardware and software vendors that resulted in $20M in savings within 2 years. Deployed the on-demand provisioning framework and transformed the finance structure from a capital expenditure model to an operational expenditure model.

- Provided the leadership to identify and resolve strategic, technology, and finance issues that had prohibited the Data Center consolidation efforts.
  - Defined the strategy and execution roadmap to replace 38 Tier 1 through Tier 4 Data Centers with 2 Data Centers.
  - Established the strategic direction to reduce server footprint from 5,000 physical servers to 400 virtual servers.

THOMAS REUTERS, INC. – EAGAN, MN

Manager of Technology, IT Portfolio and Inventory Management – Professional Division (2006 – 2009)

- Defined, deployed, and aligned IT Portfolio and Inventory Management framework with complex business needs.
  - Spearheaded the development of new IT Portfolio Management group to manage the provisioning, configuration, delivery and tracking of more than 3,000 yearly assets across 3 Data Centers.
  - Built IT Portfolio Management reporting framework to provide scorecards to business, increasing overall customer satisfaction from 10% to 93.8% within 6 months.
  - Established an Inventory Management Model to forecast future technology needs and enhance the on-time acquisition of assets for business.
  - Facilitated the capture of funding, and establishment of dedicated staff providing optimal support to new organization.
  - Led the creation of new demand management tool to automatically track all server, storage and networking assets provisioned within the organization, and developed a forecasting delivery data model based on current available resources and technical complexity, increasing on-time delivery from 10% to 94%.
  - Negotiated contracts with Sun, HP, IBM< and Insight partners that reduced costs and increased on-time delivery.
  - Developed and deployed a decision-support framework, providing executive leadership with an 18-month high-level integrated view of all programs and project across 3 PMO organizations.
- Defined strategy, assembled team of 35, and led the configuration and deployment of 1,200 servers within 5 weeks.
  - Developed lessons learned and implemented new processes to maximize the on-time delivery of servers for new projects.
  - Standardized server build provisioning processes, reducing build times from 90 days to 5-10 days.
  - Established standard base configurations based on key systems and standardized new hardware selection with existing divisional standards,.

THOMAS REUTERS, INC. – EAGAN, MN

Thomson Reuters, Inc.: Manager of Project Management Office – Professional Division (2005 – 2006)

- Built a formalized Project Management Office (PMO) structure. Defined the mission, developed the strategy, and built the framework to ensure the delivery of value-driven solutions.

- Restructured and expanded project management team to effectively support business needs. Spearheaded comprehensive training and mentoring programs for project managers based on Project Management Institute's principles and best practices. Directed team in achieving PMP credentials.
- Developed, implemented and facilitated the adoption of an internal Project Management Life Cycle (PMLC) methodology within Data Center operations, providing an effective means to define, track and rollout key initiatives.
- Aligned PMLC methodology with ITIL and CMMI processes to enhance integration across business development life cycle. Instituted a project dashboard for the individual business units that enhanced visibility and decision-making.
- Developed and managed Service Level Agreements (SLAs) within the Data Center, enabling business to monitor and control capacity of applications and hardware availability.

DONALDSON COMPANY – BLOOMINGTON, MN

Thomson Reuters, Inc.: Manager of Project Management Office – Professional Division (1995 - 2005)

- Brought on to oversee the design, deployment and management of emerging technologies into engineering organization to centralize key processes and reduce costs. Collaborated with business leaders and technical teams to develop, test and implement CAD/CAM/CAE systems and interfaces to enhance collaboration between engineering, manufacturing and customers throughout China, India, Japan, Mexico, and North America. Managed team of 8.
- Built the team, defined the standards, and drove the evaluation, selection, implementation, customization, integration, and management of software applications and associated infrastructure that enhanced collaboration and innovation.
  - Directed the rollout of software to engineering organizations globally that improved teams' agility to quickly respond to customers' needs, increasing overall productivity while reducing cycle time to completion.
  - Built the Services and Support Organization and established and managed Global Service Level Agreements (SLA), increasing on-time delivery of IT services from 65% to 99%.
  - Implemented a centralized license management framework and tool supporting 4 sites to track and trend usage, resulting in the reduction of license purchases and $60-75K in yearly savings.
  - Owner of one US and one global patent, "Restriction Indicator for an Air Cleaner of an Internal Combustion Engine", a new product for the organization.

PRATT & WHITNEY GOVERNMENT ENGINE AND SPACE PROPULSION – WEST PALM BEACH, FL

Human Factor Simulation Engineer / Design Systems Support Specialist / Design Systems Integrator / Designer (1988 – 1999)

- Designed and implemented systems, environments, and solutions to strengthen data exchange with customers and enable the delivery of critical solutions to clients.
  - Built the virtual lab for the Virtual Reality F22 Program to design of electronic tools for virtual human simulation.
  - Spearheaded the design of a data communication process improvement strategy for the Joint Strike Fighter Program, reducing notification timeframe from 28 days to 30 minutes that was adopted as the standard.

3. Kentucky SKY Implementation

WellCare®
Beyond Healthcare. A Better You.

G.3. KENTUCKY SKY IMPLEMENTATION

a. Describe the Contractor's approach to project management, including a summary of responsibilities for project governance and how the Contractor will track action items, risks and issues, as well as contingency and mitigation plans. At a minimum, the implementation plan must include elements outlined in the RFP, for example:

i. Establishing an office location and call centers;

ii. Provider recruitment activities;

iii. Staff hiring and a training plan;

iv. Establishing interfaces to information systems operated by the Department and DCBS; and

v. Communicating with and educating Network Providers and Kentucky SKY Enrollees through a web site and required materials, and how that interaction will support program participation and program goals.

b. Describe the Contractor's approach for building relationships with DCBS staff at the Service Region and county level, and with Department for Juvenile Justice (DJJ) staff at the Community District level to support enhanced coordination of care, reduced duplication of services, and improved access to the most appropriate services to meet the needs of Kentucky SKY Enrollees. Please address education, training, communications, and process development.

G.3. KENTUCKY SKY IMPLEMENTATION

WellCare of Kentucky will comply with the Department of Medicaid Services' expectations and requirements as specified in Section 41.6.4 Kentucky SKY Implementation Plan in Draft Medicaid Managed Care Contract in and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**.

WellCare of Kentucky is an experienced managed care partner that has successfully completed all required readiness reviews for the Kentucky Medicaid Managed Care Contract as well the successful implementation of new populations and program changes, quickly and efficiently with minimal Enrollee and provider issues and impacts. On a corporate level, WellCare Health Plans, Inc. (WellCare) implementations encompassed more than 1,880,000 Enrollees over the last eight years, as illustrated in **Figure G.3-1.**

WELLCARE IMPLEMENTATION EXPERIENCE

The total is more than **1,880,000** members over 10 years.

Implementation Description	2019	2018	2017	2016	2015	2014	2013	2012	Pre 2012	Number of members Transitioned

WellCare of South Carolina Transition of Medicaid members from Advicare Corp.				✓						30,000 members
WellCare of New York Statewide carve-in of behavioral health services for adult Medicaid members				✓	✓					71,000 members
WellCare of New Jersey Transition of 46k Healthfirst members & implementation of LTSS program						✓				46,000 members
Staywell Transition of Florida Medicaid members from FFS due to mandated managed care						✓				394,000 members
WellCare of Kentucky Transition of 43k members due to realignment of MCOs (open enrollment): enrollment of 28k members (Reg 3 expansion)							✓	✓		71,000 members
WellCare of Kentucky Transition of members due to realignment of MCOs							✓			63,000 members
`Ohana Health Plan Statewide implementation of the Hawaii QExA, QUEST and CCS programs								✓	✓	30,000 members
WellCare of Georgia Transition of Medicaid members									✓	490,000 members

Figure G.3-1 WellCare Implementation Experience (prior to 2020)

Our accomplishments serving the Commonwealth of Kentucky during other Contract implementations include:

2011 Kentucky Medicaid Managed Care Contract: This new Contract was awarded July 2011 for the entire state except Region 3. Project go-live was November 1, 2011 with all requirements being met to pass readiness review and begin operations. This was a four-month implementation for WellCare of Kentucky, a full market standup, and the first time there was a statewide Managed Care Program in the Commonwealth.

2013 Kentucky Medicaid Managed Statewide Contract and Medicaid Expansion: In 2013, we moved to a statewide Contract that included Region 3 and added Medicaid Expansion Enrollees. The Commonwealth awarded the Contract in October 2013, bringing Region 3 and Medicaid Expansion Enrollees onboard for a January 1, 2014 go-live. A separate readiness review occurred for the Medicaid Expansion population. WellCare of Kentucky accepted 45,000 Medicaid Expansion Enrollees at go live. In addition, we transitioned 71,000 Enrollees to WellCare of Kentucky from another managed care organization (MCO) in an expedited timeframe, along with all required transition of care elements.

2015 Kentucky Medicaid Managed Care Contract Rebid: A renewal Contract was awarded July 2015 with a go-live of November 2015. WellCare of Kentucky continued serving Medicaid

Enrollees and our on-going operations continued seamlessly with uninterrupted care for our Enrollees

2018 Kentucky HEALTH Readiness: WellCare of Kentucky was fully prepared for the Kentucky HEALTH implementation July 1, 2018 when a federal judge delayed program implementation on June 30--the day before go-live. Consequently, WellCare of Kentucky staff spent the weekend reverting the system to the pre-waiver implementation state with minimal disruption to Enrollees. As part of this anticipated implementation, we conducted prospective education in communities throughout the Commonwealth, including four provider forums and nine stakeholder engagement meetings. We also conducted weekly webinars during the monthly of June. These webinars covered all Kentucky HEALTH topics and had an average weekly attendance of 325. We received feedback that providers and the stakeholder community received these educational efforts favorably around this major program change.

2019 Kentucky SKY Bid: We anticipate a go-live of January 1, 2021. We will conduct the Kentucky SKY Implementation in the same professional and thorough manner as our previous Kentucky implementations, applying all of our experiences, lessons learned, and best practices, which we have acquired and adopted. WellCare of Kentucky plans to use the same implementation approach we took in the past under the Kentucky Medicaid Managed Care contracts, which we completed on time.

a. Describe the Contractor's approach to project management, including a summary of responsibilities for project governance and how the Contractor will track action items, risks and issues, as well as contingency and mitigation plans. At a minimum, the implementation plan must include elements outlined in the RFP, for example:

i. Establishing an office location and call centers;
ii. Provider recruitment activities;
iii. Staff hiring and a training plan;
iv. Establishing interfaces to information systems operated by the Department and DCBS; and
v. Communicating with and educating Network Providers and Kentucky SKY Enrollees through a web site and required materials, and how that interaction will support program participation and program goals.

WELLCARE OF KENTUCKY'S APPROACH TO PROJECT MANAGEMENT

Our Kentucky SKY Implementation Plan supports the successful implementation of all the requirements outlined in the Kentucky Medicaid Managed Care Request for Proposal (RFP) and Medicaid Managed Care Draft Contract requirements for Section 41, "Kentucky SKY Program."

Our approach to project management calls for an alignment of dedicated resources across the WellCare organization and our WellCare of Kentucky SKY leadership team, our Project Management Office (PMO), and Business Area Teams. They serve as the subject matter experts and stewards for the new Medicaid Managed Care Kentucky SKY Contract implementation and requirements.

Upon Contract award, our primary focus to align expectations around project meetings, 30, 60, 90, and 120-day deliverables, key milestone dates, and requirements. As documented in the Project Initiation section of the Implementation Plan, we assign a dedicated Project Management Team, including a dedicated Readiness Manager responsible for all readiness review activities. The Readiness Manager works hand-in-hand with the Kentucky PMO, in close collaboration with the Department's Readiness Team, and in unison with our Compliance and Regulatory Affairs Team to usher policies and procedures and other deliverables through the Department's review and approval process. Our Readiness Manager provides oversight for the overall readiness review process and is in direct contact with our Business Owners and Business Leads for required updates and revisions to policies and procedures and other deliverables, as well as requirements and evidence for Desk Readiness and the Onsite Readiness Review.

Other Project Initiation activities include engaging with business leads and subject matter experts from each of our business areas to conduct a GAP requirements assessment of the Medicaid Managed Care Kentucky SKY Contract and Appendices, and document any important information about each of the requirements and assign business owners for accountability. All GAP Assessment findings serve as input to the final and baselined Implementation Plan.

Our draft Implementation Plan is based on the Procurement Milestone dates in **Table G.3-1.**

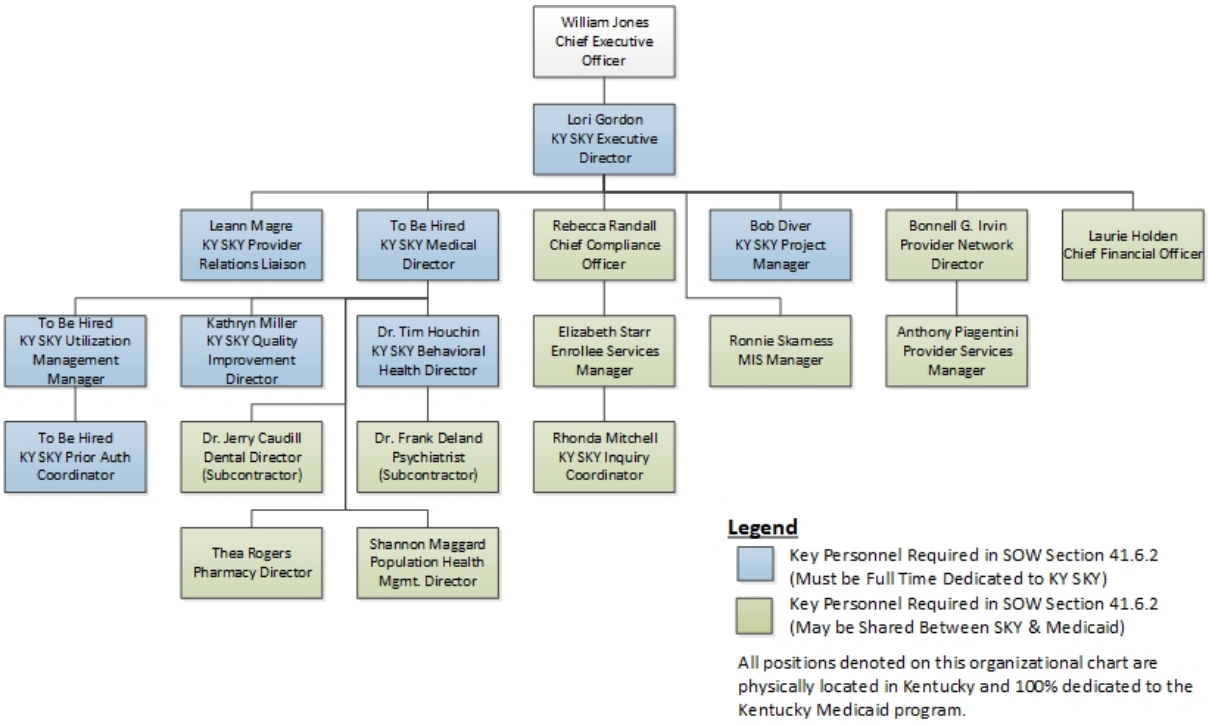
Table G.3-1 Implementation Plan Procurement Milestones

Procurement Milestones	Start Date	Finish Date
Kentucky Request for Proposal Posted	1/10/2020	1/10/2020
Kentucky Proposal Response Submission	2/7/2020	2/7/2020
Kentucky Contract Award Date	Spring 2020	Spring 2020
Kentucky Readiness Review - Anticipated	Summer 2020	Spring 2020
Kentucky Project Go-Live Date	1/1/2021	1/1/2021
Kentucky Post Go-Live + 90-Days	1/1/2021	3/31/2021

Our PMO meets at least weekly with our business area teams to collaborate on project activities, risks, issues, action items, and updates to the Implementation Plan. The PMO provides this information to our Kentucky SKY Program Leadership Team, which meets weekly to review the overarching project status, review weekly synopsis for project status updates, and serve as the key liaison(s) with the Department. Our Program Steering Committee meet weekly to provide executive program oversight, make needed decisions, remove roadblocks, and resolve escalations.

Project Governance

As illustrated below, WellCare of Kentucky's locally based leadership team, led by Chief Executive Officer William (Bill) Jones and Lori Gordon, our Kentucky SKY's Executive Director, take ownership of our governance framework and implementation responsibilities:



The Kentucky leadership team institutes our governance framework, including the Kentucky Program Steering Committee, Program Leadership, Program Management, along with other dedicated resources across the organization and assigned to the Kentucky Implementation.

The Kentucky governance framework includes the following forums, responsibilities and purpose, meeting frequency, and participants:

Forum	Responsibilities	Meeting Frequency	Kentucky SKY Participants
Program Steering Committee	Final point of escalation Organization level conflict resolution Senior Executive program oversight	Weekly	SKY Executive Leadership in Collaboration with our Core Medicaid Team
Program Leadership	Key Executive liaison with Commonwealth Executive program oversight Accountable for overarching process/project success	Weekly	SKY Team Program Leaders in Collaboration with our Core Medicaid Team

Forum	Responsibilities	Meeting Frequency	Kentucky SKY Participants
	Review Weekly Synopsis for project status updates		
Program Management	Project oversight, leadership and strategy Strategic/Tactical direction Point of escalation/conflict resolution Cross-pillar coordination and project reporting	Weekly	Dedicated SKY Project Manager in Collaboration with our Medicaid Project Manager and Readiness Review Manager
SKY Project Ownership, Management, & Project Execution	Hands on project management organized by Business Area Maintenance of project schedule and work plans Commonwealth Project status reporting	Weekly, as needed	SKY Project Leads and Business Leads/SMEs

WellCare of Kentucky SKY Implementation Plan

We organized the Kentucky SKY Implementation Plan by business area, as shown in the bulleted list below. For each of these functional areas, we create and maintain detailed project plans, which roll-up into one cohesive master Kentucky SKY Implementation Plan.

- Project Initiation
- Readiness Review
- Office Locations and Call Centers
  - Evaluate existing office locations and call centers, space needed, location, training, and oversight
  - Evaluate Enrollee call center/customer service facilities
  - Evaluate provider call center/customer Service facilities
- Human Resources
  - Staff recruiting, hiring, onboarding, and training
  - Training development plan and delivery for external partners and key stakeholders
- Finance & Actuary
- Information Technology and Reporting
  - Establish interfaces to Department, DCBS, and DJJ information systems
- Product
- Provider Operations
- Channel Communications
  - Communication and education of Enrollees and providers through web, digital, and other channels
- Quality and Analytics
- Population Health

- Community Engagement and Unmet Social Needs
- Provider Network
    - Engage in provider recruitment activities and contracting activities
- Pharmacy
- Compliance and Regulatory
- Legal
- Project Go-Live

The Kentucky SKY Implementation Plan is validated by readiness review, where all the activities and teams come together to demonstrate our services and solutions to the Commonwealth. We will submit the final Kentucky SKY Implementation Plan at Contract award or as otherwise specified by the Commonwealth.

Track Action Items, Risks and Issues, and Contingency and Mitigation Plans

In collaboration with our Kentucky SKY leadership team, our WellCare Project Management Office continually works to identify and discuss risks, issues, and action items. We hold weekly meetings to discuss risks and document any identified risks into our Kentucky Project Risk, Action, Issue, and Dependencies (RAID) log. We keep the RAID log up-to-date during weekly meetings and produce standard weekly project dashboards and status reports.

We follow a standard five-step approach to risk management, shown in **Figure G.3-2** below.

Figure G.3-2 Risk Management Steps

Risk Identification: Risks are identified and documented in our Kentucky Project RAID log.

Risk Evaluation: The project team works together to evaluate risks for probability and potential impact to the overall implementation.

Risk Mitigation: The project team works together to determine the mitigation strategy.

Risk Contingency: The project team determines contingency plans where needed.

Risk Communication: Risks are an integral part of our weekly Executive Leadership Team meeting and status report, our Steering Committee Meeting and status report, and our Work Stream Team meetings and status reporting to ensure effective communication, timely project delivery, issue resolution, scope control, and escalation to appropriate parties when necessary.

b. Describe the Contractor's approach for building relationships with DCBS staff at the Service Region and county level, and with Department for Juvenile Justice (DJJ) staff at the Community District level to support enhanced coordination of care, reduced duplication of services, and improved access to the most appropriate services to meet the needs of Kentucky SKY Enrollees. Please address education, training, communications, and process development.

OUR APPROACH FOR BUILDING RELATIONSHIPS WITH DCBS AND DEPARTMENT OF JUVENILE JUSTICE STAFF AT THE LOCAL LEVEL FOSTERS COLLABORATION

WellCare of Kentucky's Foster Care and Adoption Program has met both regionally and locally with DCBS staff and Department of Juvenile Justice (DJJ) staff since the award of the Kentucky Managed Care Contract in 2011. During the initial 2011 implementation, WellCare of Kentucky established regional teams of associates who live and work in the regions and districts where DCBS and DJJ offices are located. We assign a WellCare of Kentucky local care coordinator to each DCBS Service Region. This care coordinator meets with his or her assigned Service Region and county level offices to establish internal relationships. These regional staff meetings occurred monthly at program go-live and now are held quarterly. Similar meetings have occurred with DJJ East and West Service Districts since the beginning of the program.

Engaging with our Partners to Enhance Coordination
In 2018, our care coordinators held almost 1,000 care planning meetings with DCBS and DJJ staff for our Enrollees in foster care.

In addition to regional staff meetings, we maintain consistent contact with DCBS leadership both monthly and quarterly to share information, ensure we are operating the Kentucky SKY program in accordance with DCBS needs and identify any emerging issues. Today, Provider Relations Liaison Leann Magre attends meetings with DJJ leadership on a quarterly basis. As we implement Kentucky SKY, we will expand on our current DJJ engagement process to include each of the Community Districts.

Beyond program level meetings, our local care coordinators have frequent Enrollee-level treatment planning meetings with Service Region, county level, and Community District staff to ensure each Enrollee is receiving the care and services he or she needs. We leverage established relationships during these meetings as we gain an understanding of our new Kentucky SKY Enrollees' existing care coordination and access needs and work together to connect the Kentucky SKY Enrollee with services without duplicating them.

Expanding These Existing Relationships As We Implement Kentucky SKY

As part of the Kentucky SKY program implementation, we will expand these existing relationships with regional staff in the Service Regions and Community Districts to address concerns, problem resolution, educational needs, and risk management for the Kentucky SKY program. Our objectives in this regional staff engagement are to:

Working Together to Solve Kentucky SKY Enrollee Needs
Our aim is to build processes so Kentucky SKY Enrollees have access to what they need in the shortest amount of time.

- Establish a collaborative partnership so that when a Kentucky SKY Enrollee is newly committed, we have the relationships and procedures established for the Kentucky SKY Enrollee/foster family/guardian to access services as quickly as possible
- Expand existing processes to further enhance communication, coordination of care and problem resolution so that Kentucky SKY Enrollees have access to the most appropriate services while minimizing duplication
- Improve access to the most appropriate services to meet the needs of Kentucky SKY Enrollees
- Identify educational needs and coordinate training with DCBS and DJJ regional leaders to enhance regional staff knowledge of the Kentucky SKY program without duplicating existing training
- Build communication and process streams between WellCare of Kentucky and local DCBS and DJJ staff as we work together to secure the best care for WellCare of Kentucky Enrollees while mitigating risks to Kentucky SKY Enrollees
- Communicate jointly established processes and workflows to regional DCBS and DJJ staff

First Step: Meeting, Educating and Building a Plan

As a first step in our DCBS and DJJ engagement plan, we will meet with DCBS Service Region and DJJ Community District leadership to educate them on what the new SKY Program means to them and the collaborative requirements that affect each individual DCBS and DJJ worker. During these meetings, we will identify the processes and procedures DCBS and DJJ regional leadership need to engage with their staff on, down to the individual worker, so there is an understanding of the Kentucky SKY MCO services that WellCare of Kentucky will offer. At this time, we confirm our understanding and then identify and address the unique and specific needs for each office. Discussion topics include:

- How we can best coordinate care under Kentucky SKY
- Where we are currently duplicating services
- Current access to care issues and methods to improve access
- Education, training, and communication between WellCare of Kentucky and the local offices
- How to leverage technology to facilitate information sharing
- Joint processes between WellCare of Kentucky and regional DCBS or DJJ staff
- Joint implementation planning
- Program risks and methods to mitigate those risks

Our Kentucky SKY project manager coordinates initial meetings, which the WellCare of Kentucky SKY Executive Director, Medical Director, Behavioral Health Director, Regulatory Affairs Manager, Provider Relations Liaison, Peer Support Youth, Peer Support Parent, DCBS Liaison, and DJJ Liaison attend.

Acting On What We Have Learned

From these meetings we develop tailored and region-specific Kentucky SKY Implementation Plans based on the needs and unique qualities of each region, with DCBS and DJJ providing direction as to how we interface with them to as we administer the MCO services required by the Contract. These region-specific implementation plans will include timelines and responsibilities to build out the necessary education, training, communications, and processes so we successfully support DCBS and DJJ regional staff, the Kentucky SKY Enrollee and foster family.

Critical components of implementation plans include**:**

Education and Training: Our aim is to supplement, not duplicate, the ongoing DCBS and DJJ training that already occur. Our primary focus here is to educate regional staff on the components of the Kentucky SKY program and how it affects their day-to-day activities. We will ask for DCBS and DJJ input and expertise as we create our Kentucky SKY training program for associates and providers.

Communication: Our DCBS/DJJ Communication Plan includes regular meeting schedules and methods of ongoing communication so it best meets the needs of regional and local staff.

Process Development: We establish and document processes that define the interactions between WellCare of Kentucky and DCBS/DJJ regional and local staff. These processes include the complete flow of information from the caseworker connected to the SKY Enrollee to DCBS and DJJ leadership.

Specific tasks we have already identified as part of our implementation planning include:

- Processes to engage with local DCBS and DJJ staff on PCP assignment so the SKY Enrollee is assigned to the PCP currently managing his or her care
- Processes for DCBS and DJJ to participate in ongoing care planning activities and interdisciplinary care coordination team meetings
- Processes to allow DCBS and DJJ regional and local staff to access SKY Enrollee records
- Requests for records, forms, and processes
- Communication plan for when an individual is committed but has not yet been enrolled in the Kentucky SKY Program, including bi-directional recommended data exchanges
- Completion of specific training with Service Region and Community District staff as required under Section 41.6.3 of the Draft Contract

Regional Meetings to Implement the Plan

Once we build a Kentucky SKY Implementation Plan (in conjunction with the regional leads), we will engage in the plans and timelines we co-developed. This will include monthly meetings with regional leaders to adjust the work plan, add to it, and be flexible as to the agency's every

changing needs. We hold meetings locally, which our regional team attends, with dial in and WebEx capabilities, adjusting meeting timeframes as needed.

These region specific implementation meetings with DCBS and DJJ staff will help us identify how we can best support enhanced coordination of care, reduced duplication of services and improved access to the most appropriate services so the needs of each Kentucky SKY Enrollee, in the shortest amount of time.

Post Implementation

Our engagement with DCBS and DJJ regional staff continues post implementation in the form of monthly meetings regarding the overall program. Enrollee-specific meetings assure services are meeting each SKY Enrollee's needs or modified to meet current needs.

Program Specific Meetings: Monthly Service Region and Community District meetings focus on concerns, problem resolution, educational needs, and risk management. These meetings occur in the regions at convenient locations for DCBS and DJJ. They are attended in-person by our regionally based teams, with WebEx and dial in capabilities offered for those who cannot attend in person. Our Kentucky SKY Implementation Plan includes discussions with DCBS and DJJ as to how we can join already scheduled meetings and training to facilitate productive engagement without adding to the already heavy workload of regional staff.

Enrollee Specific Meetings: Quarterly, or more frequently as needed, we hold meetings with DCBS staff to identify, discuss, and resolve any health care issues and needs of our Kentucky SKY Enrollees. This might include specialized Medicaid Covered Services, community services, and whether the child's current primary and specialty care providers are part of our Network. These meetings focus on identifying barriers to accessing care, specific treatment needs, or specific Kentucky SKY Enrollee populations that need stronger service options.

In accordance with Section 41.6.6, our Kentucky SKY Implementation Plan includes separate or joint monthly meetings with the Department, DCBS, and DJJ to collaborate on issues, ideas, and innovations for the efficient and economical delivery of quality services to the Kentucky SKY Enrollees. Our collaboration with DCBS and DJJ is not just around the Enrollees, it includes their families and current caregivers. Our objective is to identify systemic needs and issues, region by region, for targeted community interventions and leverage our Community Connection program for assistance with social resources.

Our collaboration efforts will assist in building out prevention services for non-committed children and their families, in conjunction with the Family First Preservation Services Act. While Kentucky SKY is not the primary care coordination entity for non-committed children, the collaborative efforts can inform the systemic needs. Kentucky SKY personnel engage key WellCare of Kentucky partners to assist with meeting the needs we identify.

4. Kentucky SKY Contractor Educational and Training Requirements

WellCare®
Beyond Healthcare. A Better You.

G. 4. KENTUCKY SKY CONTRACTOR EDUCATIONAL AND TRAINING REQUIREMENTS

a. **Describe the Contractor's proposed approach for collaborating with experts including the Department, DCBS, and DJJ) to identify Provider training needs. Please include examples from other Contractor programs exhibiting collaboration with state agencies to identify training needs.**

b. **How will the Contractor ensure that the Contractor's staff and Network Providers (including but not limited to hospitals, pharmacies, and specialty Providers) receive in depth training on the Kentucky SKY program, including what is and is not allowable exchange of information in a HIPAA compliant organization, to preserve and support continuity of care. Describe how the Contractor will ensure Network Providers are aware of the requirements of the Kentucky SKY program, and how the needs of this population may differ from those of the Medicaid managed care population?**

c. **Describe how the Contractor will educate Law Enforcement Officials, the courts, judges, attorneys, and judges about the Kentucky SKY program.**

G. 4. KENTUCKY SKY CONTRACTOR EDUCATIONAL AND TRAINING REQUIREMENTS

WellCare of Kentucky will comply with the Department for Medicaid Services' (DMS) expectations and requirements as specified in Section 41.1. Scope of Services, Section 41.6.2.B.3 Kentucky SKY Contractor Staff Training, Section 41.6.3 Kentucky SKY Contractor Educational and Training Requirements and Section 41.14 Provider Services of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

WellCare of Kentucky will ensure that our staff and providers (including but not limited to hospitals, pharmacies and specialty providers) receive in-depth training on the Kentucky SKY program, its requirements and the ways in which the needs of the population served by the SKY program may differ from those of the Medicaid managed care (MMC) population. Led by our Provider Relations Liaison LeAnn Magre, who has worked with Kentucky's child welfare systems for 30 years, we will work with Kentucky and national experts to build on our current training program for staff and providers, including current foster-care specific training, to develop and deliver customized training modules. These new modules will ensure that WellCare of Kentucky staff and providers are fully prepared to work in partnership with youth and their families to transform the current system of care.

Our first step in implementing training efforts will be to develop a join plan with DMS, DCBS and DJJ to identify opportunities for content sharing, cross training, co-presenting and creating a unified approach so that the SKY stakeholders will appreciate that there are changes and new opportunities for improved health care for Enrollee in foster care or adoption assistance.

WellCare will work with the University of Louisville Kent School of Social Work to develop and implement a statewide Trauma Informed Care (TIC) training, including identifying secondary trauma, targeted to providers, community-based organizations, and law enforcement. The TIC training will be provided in communities across the commonwealth. WellCare will work with Kentucky Partnership for Families and Children to develop and implement training focused on

the youth guided, family driven engagement model, as well as the Youth and Family Leadership Academy. In addition, as the only managed care organization to meet with the National Wraparound Implementation Center through the University of Maryland, we are collaborating with them to develop a training plan for implementing the high fidelity wraparound model for care management. This process includes training for DCBS, DJJ, caregivers, providers, AA parents, judges, law enforcement, and DMS sister agencies on the implementation of this model.

a. Describe the Contractor's proposed approach for collaborating with experts including the Department, DCBS, and DJJ) to identify Provider training needs. Please include examples from other Contractor programs exhibiting collaboration with state agencies to identify training needs.

COLLABORATING WITH EXPERTS TO IDENTIFY PROVIDER TRAINING NEEDS

WellCare has a long history of collaborating with the local state agencies to identify training needs and will leverage those relationships with DMS, DCBS, and the DJJ, as well as other stakeholders, to identify provider training needs specific to the Kentucky SKY program. We will begin this process with a series of regional forums attended by local providers and stakeholders from across the state prior to implementation. This will enable us to receive provider input, questions, and feedback on how we can best assist them with training. We will take this information and work closely with our counterparts at DMS, DCBS, and DJJ to identify topics where providers require more information and training opportunities.

The following examples highlight our past collaborations with the local state agencies on identifying provider training needs:

- *Kentucky Health Summits:* Prior to implementation of the Kentucky HEALTH waiver, DMS requested that WellCare conduct provider education on aspects of the waiver implementation, including the community engagement requirements. WellCare conducted four provider summits and nine community summits throughout the state which included a detailed presentation on the Kentucky HEALTH waiver and extensive question and answer sessions. In addition to these summits, we conducted multiple webinars leading to the scheduled launch data which averaged over 400 attendees per webinar.
- *Copay Education:* Prior to implementation of copays for certain Enrollees and certain services in early 2019, DMS requested that WellCare conduct provider education on provider responsibilities around the collection of copays. WellCare conducted about 2 months of targeted provider outreach related to the copay implementation, including written material and dedicated Webinars, prior to implementation. As a result, implementation of the new process went far more smoothly than anticipated.
- *IMPACT Education:* At DMS' request, during implementation of the IMPACT and IMPACT+

We have worked with Kentucky providers and state agencies to identify and conduct impactful professional coursework for implementation of the Kentucky HEALTH waiver, IMPACT+, care coordination criteria and the concurrent review process.

programs in 2013, WellCare conducted provider education for providers new to Medicaid managed care on how to work with WellCare, including claims payment and other business processes.

- *Managed Care Launch:* In 2011, at the launch of the Medicaid Managed Care program, WellCare conducted 16 provider summits including some which were in coordination with DMS. Today, our Provider Relations team continues to host a weekly webinar focusing on new programs, relevant issues, provider concerns, changes, and new regulations or rules pertaining to provider groups. We will continue this weekly webinar for our SKY providers.
- *Medically Complex Foster Care:* Over the past three years, we have participated in a specialized training curriculum that assists medically complex foster care parent providers with better understanding and navigating the services offered for our most vulnerable Enrollees. Training topics include accessing durable medical equipment, accessing specialized services through EPSDT, requesting medical records, and connecting with specialized support from a WellCare care coordinator/care manager assigned specifically to assist Enrollees with highly specialized needs and their care providers. To date, we have participated in five different foster care parent training events focused on providing direct support.

b. How will the Contractor ensure that the Contractor's staff and Network Providers (including but not limited to hospitals, pharmacies, and specialty Providers) receive in depth training on the Kentucky SKY program, including what is and is not allowable exchange of information in a HIPAA compliant organization, to preserve and support continuity of care. Describe how the Contractor will ensure Network Providers are aware of the requirements of the Kentucky SKY program, and how the needs of this population may differ from those of the Medicaid managed care population?

WellCare of Kentucky's staff training program is designed to ensure our staff provide unparalleled support and service to Enrollees, caregivers, and providers. Our training program includes mandatory training on topics such as HIPAA, cultural competency, and fraud, waste and abuse. In addition, WellCare's care coordination team currently is trained in motivational interviewing, suicide prevention, mental health first aid and trauma-informed care.

IN-DEPTH TRAINING OF STAFF - INITIAL CARE COORDINATION STAFF TRAINING

Care Coordination personnel responsible for children involved in Kentucky's SKY program will complete an intensive new hire training program that complements various adult learning styles: instructor-led in-person training, instructor-led, web-based training, and self-paced training. Using the curriculum provided to every WellCare Care Coordinator as the foundation, we will design Kentucky SKY-specific modules to address the special behavioral and physical needs of children and youth in foster care. Because of our substantial investment in training programs, our Care Coordinators have access to more than 1,000 self-paced courses through CE Direct.

Through our continuous training program, we ensure that Care Coordinators have the requisite knowledge, competencies and skills to understand and navigate our operations, information systems and tools, and engagement programs and services, and clinical standards, all with the purpose of better serving our Enrollees. Within 120 calendar days of the contract

execution date, WellCare of Kentucky will submit our educational and training plan demonstrating orientation and ongoing training on subjects relevant to children and youth in foster care to the DCBS for review and approval. Included in the plan will be formal training classes as well as practicum observation and instruction for newly hired staff and ongoing in-service training on topics relevant to Kentucky SKY Enrollees and their families/guardians. We welcome the participation of DMS, DCBS and DJJ in our training plan. All training dates and staff attendance are documented and maintained along with copies of training materials.

Initial Kentucky SKY Training

Following completion of core training, SKY care coordinators and other SKY Enrollee-facing staff will complete focused training, explained in **Table G.4-1** designed to ensure our staff is universally equipped to manage care for children who are child welfare-involved. Staff of the Kentucky SKY Call Center, administrative staff and leadership, Enrollee Services and Enrollment staff, Provider Relations and Network staff all are Enrollee-facing positions who will receive training on the Kentucky SKY program.

Table G.4-1: Kentucky SKY Staff Training Topics

Topic	Learning Objectives	Staff	Frequency
Kentucky SKY Overview	• Program overview: • Purpose • Roles and responsibilities of DMS/ DCBS/ DJJ • Contractual requirements of the program • WellCare's organization, staffing and infrastructure to support Kentucky SKY • Kentucky SKY business processes and workflows • Providers: Types and Roles	All SKY staff	New Hire and Annually
Enrollee Needs	• System of Care Approach • Unique physical health and behavioral health needs of Kentucky SKY populations • Comparison to general MMC population	SKY Enrollee-facing staff	New hire and Annually
Coordinating Services	• Overview of Wraparound Process and Care Planning • Assessment/Identification of needs • Youth-guided, family-led care planning • Care coordination teams	SKY Enrollee-facing staff	New hire
Covered Services	• Appropriate use of psychotropic drugs	SKY Leadership	New hire
Family First Prevention Act	• Impact on Kentucky SKY Enrollees • Other federally mandated services or programs impacting Enrollees	SKY Enrollee-facing staff	New hire
Trauma-Informed Care	• Trauma-informed care training provided with University of Louisville Kent School of Social Work	SKY Enrollee-	New hire and annually

Topic	Learning Objectives	Staff	Frequency
	• WellCare policies and procedures for referral and escalation • Community referrals	facing staff	
ACES	• ACES and their impact on Enrollees • Defining ACES • What is the ACE Study? • Prevalence; Effects	CC, FOC staff and leadership	New hire
Neonatal Abstinence Syndrome (NAS)	• Evidence-based practices to prevent, identify and treat neonatal abstinence syndrome	CC Staff	New hire
Six-Seconds Emotional Intelligence (SEI)	• Unlocking EQ • Developing a clear case for emotional intelligence • Exploring the Six Seconds Model for making emotional intelligence practical • Reviewing the latest research on the brain, emotions and performance • Clarifying your vision and defining key goals for EQ development • Learning to use the TFA (Think, Feel, Act) cards to introduce EQ	CC Staff	New hire
Crisis Intervention Services	• Outline of crisis services covered and overview of providers	Enrollee-facing staff	New hire
Evidence-Based Practices Applicable to the Kentucky SKY Enrollees	• High Fidelity Wraparound Services (provided through National Wraparound Implementation Center) • AAP Bright Futures periodicity	CC staff and SKY leadership	New hire and annually
CANS	• Transformational Collaborative Outcomes Management (TCOM) • CANS: What is it, why are we using it? • Six Key Characteristics • CANS Assessment report • KIDnet Outcome Monitoring System Overview	CC staff	New hire and annually
Aging Out Process	• Support from WellCare • Youth-Led Transition Planning Model • Role of Independent Living Specialist	CC staff and FOC	New hire
HIPAA	• Defining Protected Health Information (PHI) • Your role in protecting PHI and procedures for reporting compliance or privacy concerns • Allowable vs. non-allowable exchange of information • Your role in preserving and supporting continuity of care	Enrollee-facing staff	New hire and annually

Upon successful completion of care coordination new hire training, our learning and development and clinical leadership staff use role playing, case presentations, and final course assessments to gauge learner comprehensive and aptitude. In addition, all new hires must complete one to two weeks of preceptor shadowing, depending on their previous work history

and performance throughout new hire training. During preceptor shadowing, care coordinators are assigned a task log for shadow experience, complete one-on-one coaching and ride-alongs, if applicable, and complete hands-on application of care management process and documentation, all while under the supervision of their manager or preceptor.

Understanding the Needs of Kentucky Sky Enrollees

Led by LeAnn Magre, who has a deep understanding of how the needs of this population differ from those of the general Medicaid managed care population, WellCare of Kentucky will ensure that Enrollee-facing staff training addresses those different needs. It will include an overview of the System of Care approach, trauma-informed care, and the high-fidelity wrap-around approach to care management. Specifically, we acknowledge the critical importance of implementing the high-fidelity approach as an intervention that can truly transform the way we support SKY Enrollees. Through this nationally recognized model, our Enrollee-facing staff will work with families and children to meet their needs by identifying and focusing on their strengths to help develop family-driven care plans.

HIPAA and Continuity of Care

WellCare currently provides training to staff on what is and is not an allowable exchange of information in a HIPAA compliant organization, to preserve and support continuity of care. Initial and annual ongoing training on HIPAA compliance is provided to all WellCare staff, including defining Protected Health Information (PHI), their role in protecting PHI and procedures for reporting compliance or privacy concerns at WellCare. WellCare recognizes that the protections for children and, particularly, DJJ Enrollees have more stringent requirements and our training programs will be modified to address these elements.

ONGOING CARE COORDINATION STAFF TRAINING

Staff learning and development is a dynamic process so we make training available to our staff year-round. Using a variety of innovative learning modalities, including instructor-led classroom and virtual, self-paced, eLearning, web updates, staff town halls and in-services, and information dissemination (i.e., meetings), we keep our staff up-to-date on program changes, support clinical and professional growth, provide refresher and “skills boost” training, and more. Staff meetings and announcements are used to communicate critical program updates. In-services with our clinical leaders or contracted providers allow staff to better understand clinical conditions, benefits and services while our online courses allow staff to stay abreast of current clinical trends and practices at their own pace.

We will continue to develop and provide staff training on key topics as they arise. For example, our affiliate in Florida addressed the rising topic of human trafficking by completing nearly 40 hours of human trafficking awareness training provided by the National Human Trafficking Resource Center (NHTRC). All staff continues to receive education and training on an annual basis. Through ongoing supervision, case reviews, identifying potential secondary trauma, and professional development opportunities, we help our staff members achieve their goals, stay healthy, and remain passionate about helping those most in need.

In-depth Education for Providers

WellCare of Kentucky's provider education program uses a combination of in-person provider meetings, town halls, webinars, web-based materials and traditional printed collateral to provide training and education opportunities. In addition, through CE Direct, providers in our network including PCPs, hospitals, pharmacies and specialty providers have access to thousands of on-line courses. Our provider relations staff conducts in-person provider visits, covering topics such as new provider orientations, quality performance, new program education, and any other topic that is relevant to the provider. Each visit's agenda is collaboratively developed by WellCare and our providers to include topics relevant to both parties. We use each encounter as an opportunity to educate contracted providers and their office staff about the program and the benefits of managed care and promote available education including that offered through our annual Provider Summits and biweekly webinars. In addition to our entire Provider Relations team which will be available to educate and support these providers, we will add a dedicated Manager and provider relations representatives wholly focused on the Kentucky SKY program and provider support. We will build on this core program as well as the expertise of LeAnn Magre and others who have been working with other experts in Kentucky's foster care system to develop a robust education program for providers to address the specific requirements of the Kentucky SKY program, depicted in **Table G.4-2**.

Table G.4-2: Kentucky SKY Provider Education Topics

Topic	Learning Objectives	Provider Audience	Initial/Ongoing
Kentucky SKY Overview	• Program overview: • Purpose • Requirements of the program • Roles/responsibilities of DCBS, DJJ and DBHDID • Working with WellCare	All	Initial and ongoing
Enrollee Needs	• System of Care Approach • Unique physical health and behavioral health needs of Kentucky SKY populations • Comparison to general MMC population	All	Initial
Care Coordination for SKY Enrollees	• Overview of Wraparound Process and Care Planning • Assessment/Identification of needs • Youth-guided, family-led care planning • Accessing the care coordinator	All	Initial
Covered Services	• Provider's responsibility for providing and/or coordinating such services • Differences from Medicaid coverage and processes • Coordination with foster parents/caregivers/fictive kin/adoptive parents, DCBS/DJJ/other Cabinet professionals, CASAs, Judges, law enforcement officials	All	Initial

Topic	Learning Objectives	Provider Audience	Initial/Ongoing
Other requirements	• Medical consent requirements • Required timelines for services and assessments • Specific medical information required for court request and judicial review of medical care • Appropriate utilization of psychotropic medications	All	Initial
Trauma-Informed Care	• About Trauma-Informed Care: • Overview: Trauma-informed care • WellCare policies and procedures for referral and escalation • Community referrals • Trauma Informed Care training (University of Louisville Kent School of Social Work) Please see Question G.7 for curricula	All	Initial and ongoing
ACES	• ACES and their impact on Enrollees • Defining ACES • What is the ACE Study? • Prevalence; Effects • Performing ACES screening Please see Question G.7 for curricula	All PCPs	Initial and ongoing
CANS	• Transformational Collaborative Outcomes Management (TCOM) • CANS: What is it, why are we using it? • Six Key Characteristics • CANS Assessment report • KIDnet Outcome Monitoring System Overview Please see Question G.7 for curricula	All	Initial and ongoing
Crisis Intervention Services	• Outline of crisis services covered and overview of providers Please see Question G.7 for curricula	All	Initial
Evidence-Based Practices Applicable to the Kentucky SKY Enrollee	• High Fidelity Wraparound Services • What is Wraparound? • Why Wraparound? • Wraparound Outcomes • What takes place during the Wraparound process? (engagement and team preparation; initial plan development; implementation; transition) • Implementation requirements for Wraparound • AAP Bright Futures Periodicity Please see 60.7 G.7 for curricula	All	Initial
Neonatal Abstinence Syndrome	• Evidence-based practices to prevent, identify and treat neonatal abstinence syndrome Please see Question G.7 for curricula	All	Initial

Topic	Learning Objectives	Provider Audience	Initial/Ongoing
Substance Exposed Infants	• Create familiarity with the DCBS Substance-Exposed Infants In-Depth Technical Assistance site: • Hospital assessments and discharge planning for infants with NAS • Incorporating assessment finding into DCBS prevention plans, case plans and aftercare plans	All	Initial
Behavioral Health	• Screening for BH disorders • Identification and referrals for BH disorders • Toolkit for Improving BH Quality Performance in Children Please see Question G.7 for curricula	All	Initial
Six Seconds Emotional Intelligence	• Unlocking EQ • Developing a clear case for emotional intelligence • Exploring the Six Seconds Model for making emotional intelligence practical • Reviewing the latest research on the brain, emotions and performance • Clarifying your vision and defining key goals for EQ development • Learning to use the TFA (Think, Feel, Act) cards to introduce EQ Please see Question G.7 for curricula	All	Initial
Performance measures and health outcomes	• Performance measures including: • HEDIS measures • Operational measures • Utilization measures • Evidence-based practices • Placement and permanency measures • WellCare Performance Improvement Project	All	Initial and ongoing
Family First Prevention Services Act	• Impact on Kentucky SKY Enrollees • Other federally mandated services or programs impacting Enrollees	Private Child Care Agencies	Initial
HIPAA	• Defining Protected Health Information (PHI) • Your role in protecting PHI and procedures for reporting compliance or privacy concerns • Allowable vs. non-allowable exchange of information • Your role in preserving and supporting continuity of care	All	Initial
Aging Out Process	• Support from WellCare • Youth-Led Transition Planning Model • Role of Independent Living Specialist	Private Child Care Agencies	Initial and on-going

WellCare of Kentucky has provided technical assistance to private child care providers around services, prior authorization processes, concurrent review processes, and appeals, among

other topics. We meet with providers, including the Children's Alliance, Bart Baldwin Agency and their providers, outpatient and community-based service providers, private child residential and foster care providers, on a consistent basis. WellCare of Kentucky's utilization management staff recently held a training for all targeted case management providers regarding utilization management criteria and the concurrent review process.

HIPAA TRAINING

WellCare currently provides training to providers on what is and is not an allowable exchange of information in a HIPAA compliant organization, to preserve and support continuity of care. Initial and annual ongoing education on HIPAA compliance is provided to all WellCare providers, including defining Protected Health Information (PHI), their role in protecting PHI and procedures for reporting compliance or privacy concerns at WellCare. Because we are aware that providers may be concerned about sharing information and unintentionally violating HIPAA provisions, WellCare use a high-touch approach to education on HIPAA, including practice vignettes.

c. Describe how the Contractor will educate Law Enforcement Officials, the courts, judges, attorneys, and judges about the Kentucky SKY program.

WellCare of Kentucky understands the key role that the courts and law enforcement play in ensuring the safety and well-being of children and youth in foster care and has planned a comprehensive program of education. We will provide at least one training per quarter for law enforcement officials, the courts, judges, and district and county attorneys, including the Kentucky Administrative Office of the Courts, the Kentucky County Attorneys Association, and the Kentucky Department of Public Advocacy, as in **Table G.4-3**. In addition, we would like to extend the training to Court Appointed Special Advocates (CASA) and guardians ad litem.

Topics will include:

Table G.4-3: Kentucky SKY Law Enforcement and Judges Education Topics

Topic	Learning Objectives
Kentucky SKY Overview	• Program overview: • Purpose • Roles/responsibilities of DCBS, DJJ and DBHDID and how they will work with WellCare • Roles/responsibilities of WellCare
Enrollee Needs	• System of Care Approach • Unique physical health and behavioral health needs of Kentucky SKY populations
High Fidelity Wraparound	• Overview of Wraparound Process and Care Planning • Assessment/Identification of needs • Youth-guided, family-led care planning • Accessing the care coordinator
Trauma-Informed Care	• Trauma-informed care training with University of Louisville Kent School of Public Health • WellCare policies and procedures for referral and escalation • Community referrals

Topic	Learning Objectives
ACES	• ACES and their impact on Enrollees • Defining ACES • What is the ACE Study? • Prevalence; Effects
Crisis Intervention Services	• Outline of crisis services covered and overview of providers • Crisis intervention • For communities that already have a Crisis Intervention Team (CIT) in place, WellCare commits to have a staff member attend a committee meeting during the first year of implementation to brief them on the Kentucky SKY program
Neonatal Abstinence Syndrome	• What is NAS? • Preventing NAS • Signs and symptoms of NAS • Complications of NAS • Testing and treatment of NAS
Family First Prevention Services Act	• Impact on Kentucky SKY Enrollees • Other federally mandated services or programs impacting Enrollees
Aging Out Process	• Support from WellCare • Youth-Led Transition Planning Model • Role of Independent Living Specialist
Other topics	• Psychotropic medication oversight • Human trafficking • Emotional de-regulation

To provide the training for the courts, judges and attorneys, we will work through the Administrative Office of the Courts (AOC), which has an extensive program of training and education and offers participants Continuing Education Units (CEUs). We will also work in collaboration with the Eastern Kentucky University Training Resource Center, which provides training opportunities for the high-fidelity wraparound model, training for DCBS staff and foster parents, and training for the Department of Behavioral Health, Development and Intellectual Disabilities (DBHDID). This training will also be provided to the Family Resource Center.

For local police officers, we have received feedback that the best way to provide education opportunities is to collaborate with the Department of Criminal Justice Training (DCJT), which offers a catalog of training options for police officers to obtain their 40 hours of annual required training. We will partner with DCJT to develop training offerings for law enforcement personnel. In addition, we propose to partner with police departments to offer 25-minute trainings during their daily briefings. Because law enforcement is unique to each county, city and within the state, WellCare SKY will partner with state police, county sheriff offices and school police to develop training program specific to their needs.

5. Kentucky SKY Enrollee Services

G.5. SKY ENROLLEE SERVICES

a. **Describe the Contractor's proposed approach for coordinating with the Department, DCBS, and DJJ to ensure Kentucky SKY Enrollees begin receiving services immediately upon entering Foster Care. Please include the Contractor's experience expediting enrollment in other markets.**

b. **The eligibility of Kentucky SKY Enrollees often changes due to their status in Foster Care or the juvenile justice system. Describe the Contractor's proposed process for resolving Enrollment and eligibility discrepancies. Include the Contractor's approach for collaborating with the Department, DCBS and DJJ in resolving eligibility issues.**

c. **Describe the Contractor's proposed process to assign Kentucky SKY Enrollees to a PCP within two (2) Business Days of Enrollment. Include a discussion of the Contractor's approach to:**

   i. Assist Kentucky SKY Enrollees to select a PCP and auto-assign Kentucky SKY Enrollees who do not make a selection within the required timeframes

   ii. Work with the Department, DCBS, DJJ, Foster Parents, and Adoptive Parents to assign PCPs

   iii. Track data to confirm that every Kentucky SKY Enrollee is assigned to a PCP.

   iv. Inform PCPs of new Kentucky SKY Enrollees within the required timeframes.

   v. Confirm that PCPs received the list of assigned Kentucky SKY Enrollees

   vi. Provide a sample of the report the Contractor will use to notify PCPs of their assigned Kentucky SKY Enrollees.

d. **Describe the Contractor's proposed process for communicating with Kentucky SKY Enrollees about their PCP assignments and encouraging Kentucky Care Enrollees to schedule regular appointments with their assigned PCPs and keep scheduled appointments. Include how the Contractor will identify and work with Kentucky SKY Enrollees to resolve barriers to keeping appointments and how the Contractor will work with resources available at the Department, DCBS and DJJ to communicate with Kentucky SKY Enrollees. Include a discussion of how this process would differ when communicating about their Dental Provider assignment and encouraging Kentucky SKY Enrollees to schedule and keep regular appointments with Dental Providers.**

e. **Foster Care (FC) Enrollees and Juvenile Justice (JJ) Enrollees often experience changes in placement. These placement changes may require assignment of new PCPs and Dental Providers. Describe the Contractor's proposed process to assess a FC or JJ Enrollee's access to a PCP and Dental Provider timely after a change in FC Enrollee or JJ Enrollee placement and assigning a new PCP or Dental Provider if the prior Provider no longer meets access standards.**

f. **Describe the Contractor's process for engaging Adoptive Parents who request to opt out of the Kentucky SKY program to stay enrolled, including:**

   i. Process for outreach and engagement of Adoption Assistance (AA) Enrollees.

ii. Conducting surveys with AA Enrollees to determine the reason for opting out of the Kentucky SKY program.

iii. Attempts for periodic re-engagement after Disenrollment.

iv. Include how the Contractor will use results from the survey to improve the program.

g. Provide the Contractor's proposed plan for providing Kentucky SKY Enrollees with ID cards in the required timeframes (be issued initially within five (5) Calendar Days of receipt of the eligibility file from the Department and reissued within five (5) Calendar Days of a request for reissue) in the following instances:

i. Report of a lost ID card.

ii. A Kentucky SKY Enrollee name change.

iii. A new PCP assignment.

iv. FC or DJJ Enrollee moves to a new placement or for any other reason that results in a change to the information disclosed on the Kentucky SKY Enrollee's ID card.

h. Describe how the Contractor will address and manage crisis calls during business hours as well as after hours.

i. Describe the processes, protocols and guidelines the Contractor will use to achieve maximum stability and the best outcomes for Kentucky SKY Enrollees in crisis as well as avoid inappropriate and unnecessary Emergency Care and hospital admissions. Describe how the Contractor will prioritize emergency and crisis calls over routine calls, protocols that will be in place to support warm transfers, and what technology the Contractor will have to enable direct telephonic/computer connectivity to emergent and crisis intervention resources.

j. Describe trainings and resources the Contractor will provide to call center staff related to recognition and management of crisis calls to ensure the most expedient and risk-reducing outcomes, including a description of the level and type of training.

G.5. SKY ENROLLEE SERVICES

a. Describe the Contractor's proposed approach for coordinating with the Department, DCBS, and DJJ to ensure Kentucky SKY Enrollees begin receiving services immediately upon entering Foster Care. Please include the Contractor's experience expediting enrollment in other markets.

WellCare of Kentucky will comply with the Department for Medicaid Services' (DMS) expectations and requirements as specified in Section 22 Enrollee Services and Section 41 Kentucky SKY PROGRAM of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix,** provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

EXPEDITING ENROLLMENT

We are prepared and equipped to deliver services to Kentucky SKY Enrollees immediately upon entering Foster Care. We understand that service delivery requires coordination with a variety of stakeholders who have information vital to successful care coordination, beginning with the Department for Medicaid Services (DMS), Department for Community Based Services (DCBS), and Department of Juvenile Justice (DJJ).

Our preparation for this task is based on our history as an MCO dedicated exclusively to government health programs. We answer calls promptly with trained, efficient, culturally competent staff. We quickly activate to link Enrollees to seamless service delivery. We streamline their access to resources offered by other stakeholders where we have already laid the groundwork prior to the Enrollee ever picking up the phone. We meet the Enrollee where they are, focusing on their strengths and their preferences for obtaining information. For the Kentucky SKY program, our preparation is further tempered by our experience with children and youth in child welfare and our commitment to ensuring that each Enrollee is quickly connected with services that are tailored for them, youth-guided and family driven.

Getting Prepared: Coordination Begins Before Contract Start

WellCare understands the need to begin collaboration well before the first Enrollee comes into managed care. We work closely with DMS, DJJ, DCBS, and other stakeholders such as CASA, the courts, and foster care agencies such as KY FACES, in cross-organizational discussions on roles and responsibilities and current processes. We will build on this culture of shared commitment to openly discuss concerns, streamline current processes and remove barriers.

We have Care Coordinators working with Enrollees involved in Kentucky's Foster Care system. We have relationships with the Commonwealth's key child welfare stakeholders, including Children's Review Program, Children's Alliance, Bart Baldwin's Agency, Orphan Care Alliance and Kentucky Partnerships for Families and Children. This on-the-ground experience is assisting us to develop key program components for Kentucky SKY Enrollees, including enrollment, data transfer, eligibility coordination, and crisis intervention services.

Expediting Enrollment

To ensure that children and youth entering foster care begin receiving services immediately, WellCare proposes to assign a Field Outreach Coordinator (FOC) in each DCBS office. Depending upon the number of Enrollees and the intensity of services required, the FOC may serve daily (five days per week) in the DCBS office or on a routine schedule between multiple offices. The FOC will serve as the first contact for DCBS when a child enters Foster Care.

If the child or youth coming into foster care is already a WellCare Medicaid Enrollee, the FOC will immediately schedule the comprehensive assessment and take all necessary steps to initiate or resume services the Enrollee needs. If the child or youth is not a WellCare Medicaid Enrollee, the FOC will work with the DCBS benefits worker to trigger enrollment of the child or youth into WellCare.

We will accept all official notification of eligibility such as from the DJJ or DCBS and will begin care coordination immediately. While we will rely on the 834 enrollment file for official

eligibility, we understand that in many situations enrollment for Kentucky SKY will occur on an emergency basis due to a child's removal from the home or an enrollment that occurs while a child is inpatient. These enrollments can occur well ahead of the receipt of the enrollment file. We propose that we work with DCBS to develop a file that DCBS staff can use to inform us of a child entering the foster care system immediately, before the enrollment is completed and the child's information is provided on the 834 file. We also will collaborate with DCBS and DJJ to provide our FOCs with access to TWIST, the state automated child welfare information system and JORI, the state automated DJJ JORI information system. This will allow the WellCare FOC to quickly begin the outreach and assessment process and ensure the Enrollee begins receiving services to address any immediate needs.

Our FOC will note any missing demographic information in the Enrollee's file and any enrollment or eligibility concerns and will follow to resolution. The FOC also will inform DMS of any needed edits to the official state eligibility file. Our Care Coordinator will ensure the Enrollee's continuity of care needs are met including, for instance, that all current medications are filled and available, and will provide for any transitional needs, including DME and appointment-scheduling for behavioral health support.

If an Enrollee comes into foster care after-hours and with an immediate need for services such as DME or an inpatient admission, our dedicated SKY Enrollee Call Center or our 24-Hour Nurse Line will step in to assist in addressing those immediate needs without waiting for the 834 file.

Ensuring Service Delivery

Upon notification of enrollment, WellCare's FOC will obtain all available information, including from DJJ and DCBS, and outreach for any missing or incomplete data. The FOC will obtain the DCBS Service Plan, review it with the DCBS worker and work with the DCBS worker to develop a plan for initiating care coordination. Based on this plan, the FOC will assign a Care Coordinator to the Enrollee to begin scheduling required assessments, ensure a smooth transition and begin developing a person-centered care plan. The FOC will serve as "One Call" coordinator for all stakeholders, removing any barriers and eliminating the early confusion that sometimes can accompany emergency placements and initial enrollments.

Our Care Coordinator will ensure that required assessments and services are provided promptly and within required timeframes. The DCBS and DJJ Service Plans will be collected and reviewed. If the member is in DJJ, our Care Coordinator will request the Criminogenic Needs Questionnaire and Risk and Criminogenic Needs Assessment. The Care Coordinator will begin conducting a Comprehensive Needs Assessment (consisting of a trauma screen, a community resource assessment, a health risk assessment, a medication profile review, a past claim history review, a care giver assessment, a cultural assessment, a depression screen and a substance use screen and smoking/vaping screen), assisting in scheduling the CANS (if not already complete) assessment, and scheduling the PCP appointment where the PCP will complete EPSDT required appointments and a screening for Adverse Childhood Events (ACEs) screen.

In 2016, the WellCare Kentucky child welfare case management team recorded 8,000 individual contacts with the Department for Community Based Services (DCBS), parents, Enrollees, and providers for care coordination and collaboration.

The Enrollee's Care Coordinator will schedule an Assessment Team meeting to occur within ten days of notification of enrollment. At this meeting, the Enrollee's assigned Care Coordinator will ensure that assessment and screening results are shared as needed with DCBS, DJJ and the Enrollee's providers and ensure that any previous medical records are transferred to their new PCP. The Care Coordinator provide each foster caregiver with access to WellCare's ClearSKY app loaded on their mobile device and ensure they know how to use the app to access the Enrollee's past history, current Medical Passport and list of current providers, including the PCP, dental provider and any specialty providers. If the enrollee does not own a mobile device, the Care Coordinator can issue a tablet with the ClearSKY app pre-loaded. The Care Coordinator also will report out the Enrollee's progress to involved case workers and maintains contact to expedite any needed reports for the court.

During the Assessment Team meeting, participants will create the initial care plan and assign tasks to the Enrollee's Multidisciplinary team. The Care Coordinator will then work with the care giver, Enrollee, providers and state guardian to ensure the care plan is enacted. The Care Coordinator will schedule a second meeting at the end of 30 days to review the care plan tasks, update new information provided, create an ongoing care plan and assign the Enrollee into ongoing care management.

Within five calendar days of receipt of the 834 Enrollment File, WellCare will send a Enrollee Information Packet containing all requirements in Section 41.11.2 Kentucky SKY Enrollee Information Packet and Enrollee Handbook of this Contract to the state Social Worker or the DJJ Children's Benefit Worker, as appropriate for each new Enrollee, either via mail or a secure portal depending upon the worker's preference. For Adoption Assistance (AA) Enrollees, we will mail the Packet to the AA Enrollee or Adoptive Parent, also within five calendar days of receipt of the 834 eligibility file. Upon request from the state Social Worker or Children's Benefit Worker, we also will mail the Packet to the Enrollee's Foster Parent, Caregiver, or DJJ Residential Treatment Facility. Our welcome letter in each packet will include the name and contact information for the Kentucky SKY Care Coordinator and the 24/7 telephone number of our dedicated Kentucky Sky Enrollment Services Call Center.

ONGOING DIALOGUE

As a managed care plan well-known in Kentucky by both stakeholders and Medicaid beneficiaries, WellCare is dedicated to ongoing dialogue and feedback from the community. We already understand and are involved in solutions to expedite service to our Enrollees, provide them with outstanding service, and ensure them access. We already have a provider network that understands the immediacy and sensitivity needed by the Foster Care Enrollee and we have established relationships with DCBS.

EXPERIENCE IN DELIVERING EXPEDITED AND ANTICIPATORY SERVICE

We are experienced in collaborative planning for the delivery of immediate and needed service to children and youth in foster care and juvenile justice. For example:

- In Nebraska, as a new entrant to the state, we combined our stakeholder outreach with intensive recruitment of new staff with experience in juvenile justice, child welfare, and children with special needs. We hired and trained 175 associates across all positions and levels, in order to quickly serve Enrollees at go-live and ongoing.
- Since Nebraska has the nation's high rate of children in foster care, including children in out-of-home and residential placement, we created "Grand Rounds" with the state's child and family services representative to discuss challenging cases and identify children who are able to move into community-based services from more restrictive forms of care.
- In Arizona, our affiliate has systems in place to identify children at risk of removal by the State's child welfare agency so that enrollment can be expedited. Through care coordinator evaluation and monitoring, specialized programs such as an enhanced opioid management program, provider referral and information, and schools and data reporting from the crisis network, we are able to identify families in crisis and develop a "ready program" so that the child's continued service is seamless.

b. The eligibility of Kentucky SKY Enrollees often changes due to their status in Foster Care or the juvenile justice system. Describe the Contractor's proposed process for resolving Enrollment and eligibility discrepancies. Include the Contractor's approach for collaborating with the Department, DCBS and DJJ in resolving eligibility issues.

As a managed care plan with extensive experience in the Child Welfare population, including in the Commonwealth, we focus on implementing strategies to identify and resolve enrollment and eligibility issues before they impact the Enrollee's access to services. Since 2016, we have securely processed over 400 million Enrollee transactions via the 834 enrollment file. With our volume and performance experience, we ensure all new, existing, or disenrolled Enrollees are accounted for and their correct information routed to our management information systems (MIS) to avoid enrollment and eligibility discrepancies. We collaborate with DMS on eligibility and enrollment and will experience no learning curve to interface with DMS' file transfer protocols or to seamlessly exchange data with the enrollment broker, AHS. Our experienced Kentucky-trained Enrollment and Eligibility System (EES) team facilitate enrollment transactions and remediate file discrepancies usually within 24 hours. Our system is agile, accommodating quick adjustments in response to contract changes or enrollment procedures and our excess system capacity can easily absorb enrollment increases.

We will provide specific, designated staff for DMS, DJJ and DCBS to contact in the event of an enrollment or eligibility issue. Our Enrollee Call Center will maintain a contact list of assigned care coordination staff to assist with after-hours enrollment and eligibility issues, so frequent in this population, and to provide transition and care coordination in the event of an emergent Enrollee situation, such as emergency placement, removal, or relocation.

RESOLVING ROUTINE ENROLLMENT AND ELIGIBILITY ISSUES

WellCare has a robust, tested process in place to resolve enrollment and eligibility discrepancies. In our experience, there are two major areas where discrepancies are noted: at the start of enrollment and at the point of first service when the Enrollee tries to receive provider or pharmacy services.

At the Start of Enrollment

When we receive the 834 file, our system generates a report of SKY Enrollees who are new to the program and a report of those who have disenrolled. Systematically, we audit the new files and submit any variance to DMS. Variances might include an address not within the Commonwealth, an Enrollee at or over age 26, or indication that a child's adoptive parents have elected other health coverage for the Enrollee. In these cases, we review the Kentucky Health Choices database to confirm that the data received on the 834 matches with the data held in the database. Our FOC will contact the Enrollee or caregiver to confirm the coverage or identify if a discrepancy exists. Once the root cause of discrepancy is identified, our FOC will correct the discrepancy with DMS.

Corrections and updates to an Enrollee's record will be electronically routed to the WellCare Enrollment Department, which also can flag our FOC if any issues are detected. Routine file audits conducted by the Enrollment Department also can serve as an early warning for eligibility issues. To assist DMS in validating enrollment and eligibility information and correcting any errors, WellCare will collaborate with DMS to build a routine report to provide DMS with eligibility information, including terminations of eligibility we have encountered.

Resolving Eligibility Discrepancies

While Ethan's adoptive mother was struggling to figure out how to get Ethan the care he needed during a crisis precipitated by his medical and behavioral health needs, she received an erroneous notice that Ethan's Medicaid coverage had lapsed. She had given Ethan into state care as a dependency case because she felt she couldn't meet Ethan's complex needs and now Ethan had been admitted to the Children's Assessment Transitional Service center, a residential treatment center at Home of the Innocents. Ethan's mom contacted Laura N., Ethan's WellCare Care Coordinator, who immediately helped disentangle the problem and walked Ethan's mom through the steps to work with DMS to restore Ethan's Medicaid eligibility.

At the Point of Care

For eligibility and enrollment issues at the point of care, we educate our network providers to contact our toll-free Enrollee Services call center with any concerns and train our provider call center staff to resolve the issue in real-time to minimize any negative impact for the Enrollee.

Our Enrollee Services staff access the KY HealthNet system to check the Enrollee's status. In most instances, our staff determine that one of three things has occurred:

- The Enrollee is listed as eligible and enrolled in WellCare and the provider's information was incorrect. In this case, our staff informs the provider of the correct information.
- The Enrollee, who appears to be eligible, has lost eligibility. In this case, our staff contacts WellCare's Enrollee Services Department which works directly with DMS to reinstate

eligibility. In complex cases, Enrollee Services may also bring the FOC into the situation for additional support and documentation.

- The Enrollee is eligible but enrolled with another MCO. In this case, under the Kentucky SKY program, we will contact our Enrollee Services to have the Enrollee's enrollment changed to WellCare.
- The Enrollee has lost eligibility and does not appear to be eligible.

Our FOC will notify and work with the DCBS to resolve the eligibility or enrollment issue and to ensure that they have the correct information. We also will monitor claims from providers delivering services during this "gap" period to ensure that reimbursement is timely and not impacted by the eligibility issue. Our primary concern is to ensure that the Enrollee receives the provider services to which they are entitled, and that the provider is compensated appropriately for services rendered. In most cases, we can resolve the issue during the provider call, instructing them to provide the service with reassurance that the claim will be paid.

In cases where a state Social Worker or DJJ Children's Benefit Worker calls our Enrollee Services call center to resolve an eligibility or enrollment problem, our call center staff validate the caller is authorized to receive information and/or to speak for the Enrollee under both HIPAA and the confidentiality of information requirements of DMS or DJJ. No confirmation of Kentucky SKY enrollment nor any information to any caller regarding Enrollees in Kentucky SKY will be provided without a verification and authorization check. As part of our "one call" service to DJJ and DCBS, if the worker cannot be verified but insists that they are authorized to obtain information and speak on behalf of the Enrollee, our call center immediately will engage the support of a DCBS-based FOC to help resolve the matter as expeditiously as possible.

Resolving Emergent Enrollment and Eligibility Issues

As already noted, discrepancies can occur when the Enrollee is already in crisis, at the point of an emergency removal, a sudden and unplanned placement change, or during in-facility treatment. To minimize disruption during an already difficult time for the Enrollee, the Social Worker or Benefit Worker, and the Enrollee's caregivers, we will develop a Priority Care Protocol to ensure that Enrollees with emergent or transition needs receive care even while eligibility issues are being resolved. Our FOC will print and provide these Enrollees with a temporary Enrollee ID at their field-assigned DCBS office location, enabling the Enrollees and their caregivers to access needed services, such as prescription refills for medication left behind or urgent/emergent care. As eligibility issues are re-checked and enrollment processes, our Care Coordinators will document details in a temporary electronic record to ensure coordination of care going forward. This also will allow our Care Coordinators to share information with the Enrollee's providers and respond to requests from DJJ or DCBS, as appropriate.

We will assign care coordinators to the dedicated Kentucky SKY Enrollee Call Center to assist with after-hours enrollment and eligibility issues.

Collaboration to Avoid Discrepancies and Delay of Care

We understand that the Kentucky SKY Enrollees will have immediate, unique care coordination and medical management issues that require immediate attention. Many also will have experienced trauma, have existing medication regimens, and have complex medical needs. Because we have served children in foster care since 2011, we know that delays in care due to eligibility or other administrative issues are unacceptable.

WellCare will promote collaboration with DMS, DCBS and DJJ in resolving eligibility issues by having our Regional Managers and DJJ Liaison meet at least quarterly with DMS, DCBS and DJJ representatives in each region. The participants will identify barriers, discuss recent issues and develop workable strategies for real-world situations, such as placement changes, new fictive placements and movements of adoptive Enrollees from Kentucky SKY into other Medicaid categories. Our Quality Department will provide needed resources for systemic plan improvements using the Plan-Do-Study-Act Model in order to develop and road-test solutions quickly. As needed, we can establish ad hoc work groups with governmental stakeholders to remediate any technology interface issues that are impacting eligibility, create routine telephonic touch-points to ensure that emergency placement protocols are working smoothly for our partners, and conduct training sessions with new Social Workers and Benefit Workers to explain processes and introduce local WellCare staff.

c. Describe the Contractor's proposed process to assign Kentucky SKY Enrollees to a PCP within two (2) Business Days of Enrollment. Include a discussion of the Contractor's approach to:

ASSIGNING SKY ENROLLEES TO A PCP WITHIN TWO DAYS OF ENROLLMENT

We understand that immediate access to a PCP for coordination and continuation of care is essential to the Kentucky SKY population. WellCare will comply with DMS requirements for PCP selection and auto-assignment for Kentucky SKY Enrollees within two days as stipulated in Attachment F. 41.14 of this contract and all federal regulations. Our number one priority is to ensure that the Enrollee's caregiver, foster parent, parent, DCBS or DJJ social worker, or the Enrollee (if emancipated), has the ability to select the PCP of their choice. Once chosen, PCPs will be assigned within two business days of receipt of notification via the 834 enrollment file or electronic notification from DMS or DJJ of the enrollment in Kentucky Sky. The Enrollee's caregiver, foster parent, parent, DCBS or DJJ Social Worker, or emancipated Enrollee is provided a temporary ID card provided by the embedded FOC or will have the potential to print Enrollee ID cards from the portal. We will also permit Enrollees to change their PCP at any time.

i. Assist Kentucky SKY Enrollees to select a PCP and auto-assign Kentucky SKY Enrollees who do not make a selection within the required timeframes

There will be times when it is not possible for a PCP to be selected quickly. To that end, our DCBS-embedded FOC will reach out to the involved parties after notification of enrollment to determine if a PCP with whom the Enrollee has a relationship is within access standards based on the official residence of the Enrollee, the location of the DCBS case, the Adoptive Parent's official residence, or the DJJ residential facility. For Former Foster Care Enrollees, assignment will be based on the county of residence.

We will follow this process whether WellCare is notified via the 834 enrollment file or via electronic notification from DMS or DJJ. We understand that a PCP selection must be made within two business days of our notification or WellCare will auto-assign the Enrollee.

While we prefer that the Enrollee select their PCP, if no PCP is selected, we will promptly auto-assign the Enrollee based on this Contract's requirements using our proven process that places a premium on quality. To ensure Enrollees have timely access to their PCPs and that PCPs are aware of their assigned panel, WellCare strives to process all 834 files and assign PCPs within 24 hours of receipt. Our Florida plan, which includes children in foster care, meets this requirement 100% of the time.

Our auto-assignment process adheres to GeoAccess® standards provided by our state partners and recognizes PCPs with high quality performance metrics. Because of the sensitive needs of this population, for Kentucky SKY Enrollees the process also prioritizes PCPs who have traditionally provided services to at-risk and Foster Care children and youth or have professional background in trauma-informed care and ACEs. We have found that PCPs who understand the population's needs, the immediacy often required in their care and the involvement of multiple critical stakeholders in the Enrollee's life provide more responsive, inclusive support and services to the Enrollee. Our auto-assignment algorithm also prioritizes network providers who follow the guidelines of the American Academy of Pediatrics in their *Health Foster Care America* initiative.

ii. Work with the Department, DCBS, DJJ, Foster Parents, and Adoptive Parents to assign PCPs

On initial enrollment, our locally-based FOC will reach out to the Enrollee's assigned state social worker and all related parties, including DMS as needed, to determine if the Enrollee has an established relationship with a PCP in the Enrollee's Medical Region or within the access standards for the Enrollee's location. As stated above, our preference is to maintain the Enrollee's current PCP (assuming the Enrollee's Guardian/Parent wishes to continue the relationship) for continuity of care.

In our Enrollee Handbook, orientation, and website, we will notify Foster Parents and Adoptive Parents of the need to maintain a PCP within access standards. We will instruct them to notify our Care Coordinator or Enrollee Services call center for any change of residence, concern about the current assigned PCP, or other need to change PCP (for instance, if the parent's other child have an in-network PCP and the parents wish to have the Foster Child be seen by that provider). All requests by Foster Parents and Adoptive Parents for PCP re-assignment on behalf of their child will be honored.

We also will discuss the assignment and auto-assignment process and any barriers to prompt initial PCP-of-choice assignment at joint monthly meetings with DMS, DCBS, and DJJ. By monitoring satisfaction with the assignment process as a routine item, we can develop improvements, create better early communications, and plan for any staffing or other changes at the stakeholder level that may impact our ability to meet the required timeframes for initial PCP assignment.

For placement changes post-enrollment for a Foster Care or JJ Enrollee, within one business day of receipt of notification, our FOC will work with the assigned state social worker to assess whether the Enrollee's access to the currently assigned PCP is still viable. If a new PCP is required because of the placement change, our FOC will work with the assigned social worker, Caregiver, or Foster Parent and assist in the selection of a new PCP based on factors such as distance, preferred gender, preferred language, quality, PCMH status, and familiarity with the Foster Care population. While we understand that the process of re-assignment must be complete within three business days of our receipt of notification of the Enrollee's relocation, either through the 834 eligibility file or written or telephonic notification from DMS or DJJ, it is our goal that Enrollees who relocate will select their PCPs in discussion with their care coordinator or FOC rather than be subject to auto-assignment.

If a Caregiver, Foster Parent, or Adoptive Parent (or an emancipated AA Enrollee) wishes to change PCP based on the Enrollee's needs, our Care Manager/Care Coordinator or Enrollee Services call center can assist in new selection and reassignment at any time.

For any PCP change, we will send a new ID card with the selected PCP assignment to the Enrollee within 5 business days of the receipt of the 834 file or 5 business days of the request for reassignment. The ID card will include the PCP's name, address, and telephone number. Our Core Processing System will electronically push the information about the assigned PCP downstream for all subsequent Enrollee contacts, including for care management and Enrollee Services. The Core Processing System will update changes to the PCP's Enrollee panel in our Provider Portal daily which exceeds this contract's requirement of an available PCP roster on the first day of each month.

iii. Track data to confirm that every Kentucky SKY Enrollee is assigned to a PCP.

Once a PCP is selected or auto-assigned, the information is loaded in our Core Processing System and immediately available and integrated into our downstream systems and applications, such as CareCentral for Care Coordination, Care Management and Utilization Management and CAREConnects for integrated Enrollee services, provider portals and websites, Enrollee mobile applications and other internal processes. Kentucky SKY Enrollees will be identified as a priority population and processed daily for Care Management assignment and engagement, helping to ensure that all assessments are monitored and completed in a compliant, timely fashion. This also ensures that all staff who provide direct Enrollee support, such as our Enrollee Services call center, have access to information for authorized caller verification and to support provider relations, claims, quality, and all plan-level functions.

iv. Inform PCPs of new Kentucky SKY Enrollees within the required timeframes.

WellCare's Provider Portal serves as a one-stop shop for providers to access needed information, including PCP assignment, panel additions and deletions, authorization support and training and claims support. The portal also allows provider to access our web-based tracking portal to view an Enrollee's care gaps, upload Enrollee information, and notify us when those care gaps have been closed or when the closure is not picked up by claims or encounters.

When a change is made to a provider's Enrollee panel, the change is submitted electronically to the Provider Portal. Providers can sort the updated list of their panel to quickly identify new Enrollees and Enrollees with outstanding care gaps.

We train providers in portal use upon entry to the network and our field-based Provider Relations staff provide additional assistance as needed. Providers can use our web chat function to interact with the health plan provider services team or to get real-time assistance with registration, login or technical issues with the portal.

v. Confirm that PCPs received the list of assigned Kentucky SKY Enrollees

WellCare is committed to providing immediate access to service to Enrollees in Kentucky SKY, which includes confirming that PCPs know when a Kentucky SKY Enrollee has been assigned to their practice. We will begin by training all our Kentucky SKY providers on the information available to them through the Provider portal, including a Member 360 view of each Enrollee on their panel. Upon assignment of an Enrollee to a PCP, in addition to updating the provider roster, we will automatically generate an email to the PCP notifying them that there is a new Enrollee on their panel and encouraging them to log onto the Provider portal to acknowledge receipt of the updated panel list. In addition, WellCare's Care Coordinator will conduct outreach and confirm that the PCP has received the list and has access to the information, including previous medical records that they need to begin providing care immediately.

vi. Provide a sample of the report the Contractor will use to notify PCPs of their assigned Kentucky SKY Enrollees.

Please see **Attachment G.5.c.vi. Sample Notification to PCP of Assigned Kentucky Enrollees.**

d. Describe the Contractor's proposed process for communicating with Kentucky SKY Enrollees about their PCP assignments and encouraging Kentucky Care Enrollees to schedule regular appointments with their assigned PCPs and keep scheduled appointments. Include how the Contractor will identify and work with Kentucky SKY Enrollees to resolve barriers to keeping appointments and how the Contractor will work with resources available at the Department, DCBS and DJJ to communicate with Kentucky SKY Enrollees. Include a discussion of how this process would differ when communicating about their Dental Provider assignment and encouraging Kentucky SKY Enrollees to schedule and keep regular appointments with Dental Providers.

WellCare's proposed process for communicating with Kentucky Sky Enrollees about PCP assignment and encouraging them to schedule and keep regular PCP appointments is grounded in a singular purpose: to ensure that Kentucky's most vulnerable children and youth receive routine care to avert health problems and early detection to diagnose and treat any condition. We recognize that foster and adoptive parents and caregivers of Enrollees with behavioral issues, unstable living environments, and tremendous daily stress will spend much time on management of existing physical and behavioral health diagnoses and are less likely to be attentive to routine health care. Providers, in

WellCare will issue electronic tablets with embedded applications to foster caregivers to ensure the caregiver has access to the Enrollee's history, Medical Passport, and providers.

turn, are more likely to focus on existing special health needs, such as depression, autism, and severe asthma, over more routine health checks.

Our process will focus on strategies and tactics that have proven successful in delivering EPSDT and other PCP and dental services to children and youth who have multiple health issues, such as the nearly 34,000 children and youth with special health care needs that we serve in Florida, or who are in child welfare or juvenile justice programs. Our tactics include extensive and ongoing outreach and engagement, care coordination, education for caregivers, and Enrollee incentives.

INITIAL COMMUNICATION ON PCP AND DENTAL ASSIGNMENT AND APPOINTMENTS

Immediately after enrollment and PCP assignment, we will notify the Enrollee (and their Caregivers) in writing and provide an ID card as described above. We also will notify the assigned providers of the addition to their enrollment roster.

Along with the ID card, we mail the Enrollee a New Enrollee Packet, compliant with this contract, including an Enrollee Handbook. The Enrollee Handbook includes a complete list of all EPSDT health check services, the age of the child for each service, and a simple explanation as to why these services are so important for a child's wellbeing. We also remind caregivers of Enrollees to contact our call center for help scheduling appointments and provide special information for Enrollees with asthma or diabetes.

As part of our enrollment process, we also will provide a new Enrollee orientation during the comprehensive care management assessment care plan process. During this orientation the Care Coordinator reminds the Enrollee and their caregivers of their PCP's location and hours and attempts to set an initial appointment. The Care Coordinator also explains the WellCare Healthy Rewards Program and the benefits the Enrollee can receive automatically for completing certain routine care visits.

After the comprehensive assessment upon enrollment, the Care Coordinator or FOC will notify the Enrollee's PCP of any care gaps, including any needed EPSDT primary care services that should be completed at the first appointment. To avoid care gaps during the transition, WellCare will allow PCPs to bill for EPSDT services for a new Enrollee even if the EPSDT service has already been billed within the given time frame.

Additionally, the Enrollee's WellCare Care Coordinator will reach out to the Enrollee regarding all care gaps, including the annual dental exam and other dental services. As needed, the Care Coordinator will provide instruction and coaching to the Caregiver about the need for services, growth and developmental milestones, and the role of the PCP as a true partner in their Enrollee's move toward stability and permanency. The Care Coordinator also will

- Assist in appointment scheduling
- Offer transportation assistance and work to remove other social need barriers to maintaining a preventive health schedule
- Coordinate with school-based clinics and nurses to determine what preventive services can be offered at school, a setting that can be more comfortable for some Enrollees than a provider's office

- Collaborate with the Enrollee's circle of support and/or community advocates, such as special education advocates, to reinforce the need for the Enrollee to schedule and maintain preventive PCP appointments and obtain all EPSDT services
- Involve the services of our community-embedded Community Health Workers for a personal home or provider office visit with the Enrollee to remove barriers to care, encourage healthy behaviors, and instruct on self-help, such as diabetes management at school for the Enrollee and how to properly store and dispense medications for the caregiver.

ENCOURAGEMENT AT MULTIPLE TOUCH-POINTS

We will use every opportunity to remind Enrollees of the need for PCP visits and preventive care. Our Enrollee education process recognizes the need for multiple varied and innovative strategies to effectively communicate the benefits of self-care to our Enrollees and their caregivers. We will attempt to engage Enrollees early in their enrollment and then consistently reinforce the messaging. We will address the importance of preventive care, the periodicity schedule and the depth and breadth of EPSDT services, how and where to access services, including transportation and scheduling assistance, and will remind Enrollees that services are provided without cost.

With our dental benefits administration subcontractor, WellCare is launching a multi-modal outreach program in 2019, (including mailings, phone calls and text messaging) to reach the 12% of our foster care Enrollees who have not had a dental visit in the previous two years. Based on our subcontractor's previous success, we anticipate increasing the rate of Enrollees in this group who get their recommended dental visit by as much as 33%.

We also will remind our Enrollees that their PCP is their navigator for many services besides "a check-up." We will instruct PCPs on how to obtain a variety of Enrollee services specifically for the Kentucky SKY population, such as wrap-around services from community agencies, assistance with social determinants of health (such as food scarcity), educational assistance, behavioral health services for the Enrollee and/or the Caregiver, and 24/7 telephonic assistance for all PH and BH questions and crisis through our 24-Hour Nurse Line.

To encourage Enrollees to make and maintain their appointments, WellCare will

- Send out "Happy Birthday" reminders of needed annual services. Based on our research, we mail these cards two months prior to the Enrollee's birthday so Caregivers have time to plan their schedules. We also send out immunization reminders. These reminders have proven very successful in our other state plans. Between HEDIS reporting years 2016 and 2017, our Florida adolescent well-care visits rates improved by over 4%, well-child visits in the first 15 months of life improved by 13.5% and visits in the 3rd, 4th, 5th and 6th years by more than 6%.
- Reach out Enrollees or Caregivers of EPSDT-eligible Enrollees who have not seen their assigned PCP soon after initial enrollment to assist in appointment scheduling, provide education on the need for the visit, and discuss needed dental services. Our EPSDT Coordinator also can assist in re-assigning an Enrollee to a different PCP or dentist if, upon

discussion, it seems that another network provider is a better fit for the Enrollee. In our experience, some Enrollees and Caregivers who are auto-assigned because they did not choose to make a selection discover that they do have a preference in network provider. The EPSDT Coordinator will arrange the new assignment and offers to schedule the appointment. We also will mail a follow-up letter encouraging the appointment if one is not made.

- Capitalize on Enrollee or caregiver-initiated calls to our call center to remind them about recommended screenings, check-ups, and immunizations. Our care gap identification analytics are integrated into our contact management system, CAREConnects, so that they are readily available to our Enrollee Services representatives. This allows our representatives to address the reason for the call and then to remind them of existing and upcoming care gaps. The representative also will offer to schedule appointments and remove barriers and will connect the family to the assigned care coordinator to assist. For adopted Enrollees, a health coach will outreach twice per year and is available to assist between those visits. The health coach will remind the adoptive parents of appropriate EPSDT services.
- Monthly, using our data management solution, WellCare runs a care gap data model identifying Enrollees who may be due or non-compliant for important EPSDT services to target specific outreach and education. We will use this same process to identify and target Enrollees who have not had dental screenings. We also will electronically “push out” this care gap information on the ClearSKY app we provide to each foster parent so that they can see all their child’s needed appointments and screenings in one view. We will use ClearSKY to communicate with foster parents on the importance of maintaining a relationship with the Enrollee’s PCP and dental provider and offer detail on contacting us immediately if they experience a barrier to service.
- Provide a variety of colorful, age-appropriate health information materials that meet or exceed all contractual standards for readability, font size, language, and alternative formats. We distribute materials via the Enrollee portal.

IDENTIFYING AND RESOLVING BARRIERS TO CARE

Every WellCare staff who interacts with our Kentucky SKY Enrollees will be responsible for identifying and resolving any immediate barriers to PCP access. As examples:

- Our Care Coordinator will work directly with the Enrollee and caregiver to remove any individual barriers that prevent scheduling and keeping appointments with PCPs or dentists, such as pre-appointment reminders , assistance with transportation, and re-assignment assistance to a more preferred PCP or dentist, and developing personalized home-reminders of upcoming appointments (e.g. refrigerator calendars, etc.)
- Our dedicated Kentucky SKY call center agents also will provide reminders, set appointments, arrange transportation, and notify the Care Coordinator for barriers related to unmet social needs impacting appointment compliance (e.g. child care arrangements for other children).
- We will permit Enrollees or their caregivers to change PCPs at any time.

We know from our experience with children involved in the foster care or juvenile justice systems in other states that there are sometimes barriers unique to these Enrollees when accessing PCP and dental services. These Enrollees often have experienced serious trauma and have behavioral health and development differences that negatively impact their ability to enter a provider's office or receive routine services and treatments. WellCare is committed to ensuring access for all Enrollees and we work with our providers to ensure that every Enrollee feels safe, comfortable, and valued during provider appointments. For example, we will:

- Provide training in Trauma-Informed Care, including identifying secondary trauma, to all providers, including pediatric dentists. We will track which providers have received the training and our Provider Relations staff will connect a provider to additional training if necessary.
- Provide the American Association of Pediatrics' (AAP) Trauma Toolbox for Primary Care for Children with Adverse Childhood Experiences to prepare practitioners for these visits, as well as AAP policy statements on management of pediatric trauma.
- Provide materials for download to help prepare providers, Enrollees and caregivers for upcoming visits, including the AAP Parent Guide, Caseworker Guide, and Pediatrician Form found on the AAP Healthy Foster Care website.

We already have worked with our dental services provider, Avesis, to develop a methodology to provide sedation for children or youth who require it in order to overcome their previous trauma and anxiety and receive dental services safely.

IMPROVING COMMUNICATION WITH ENROLLEES THROUGH COLLABORATION WITH DMS, DCBS, AND DJJ

WellCare will work closely with our partners in DMS, DJJ, and DCBS toward the common goal of ensuring that all Kentucky SKY Enrollees receive the preventive physical and dental services they need for good health. In our monthly meetings we will collaborate on issues and ideas to communicate with and encourage Enrollees and their caregivers to maintain relationships with their PCPs and dentists. We will discuss best practices from our other plans serving this population and import those practices to Kentucky SKY where appropriate.

To maintain daily, transparent communications with DMS on time-sensitive issues and to develop a true collegial relationship, WellCare proposes to embed an FOC in each DCBS/DJJ office. Depending upon the number of Enrollees and the intensity of services required, the FOC may serve daily (five days per week) in the state office or on a routine schedule. The FOC will serve as the first WellCare contact for DCBS/DJJ when a child enters foster care and serve as a navigator for anything the field-based staff needs from WellCare to best serve Enrollees. FOCs will monitor the delivery of needed assessments and reports, especially for court-ordered reports, and bring WellCare resources to eliminate any local barriers to access.

Our Care Coordinators/Care Managers also will work closely with the Enrollee's assigned DCBS or DJJ Social Worker during the Assessment Team meeting on coordination of care issues. In cases where Enrollees have significant care gaps or have not been able to maintain a relationship with their PCP (and, for instance, use the Emergency Department or Urgent Care

routinely), we will coordinate with our state stakeholders on the best approaches for the individual Enrollee and their caregiver.

Encouraging Dental Appointment Compliance

WellCare gives the same priority to dental care for our children and youth as we do for physical and behavioral health services. For Kentucky SKY, our processes for encouraging Enrollees to schedule and attend regular dental appointments will be the same as those for PCP services as discussed above. We will outreach annually to encourage appointment scheduling and send reminders. Our staff will work to remove barriers to care such as transportation. Our dedicated call center staff will remind Enrollees and caregivers of needed preventive dental care. Provider Services will work with our dental network to alert them to the impact of trauma on the Kentucky SKY population.

We will assign a dentist to each Enrollee upon receipt of the 834 eligibility file either based on preference or auto-assignment, using the same process as for PCP assignment. Each Enrollee's Care Coordinator will coordinate with the dentist and, as appropriate, include the dentist on the Enrollee's Care Coordination team. We will contractually require our dental providers to involve DCBS or DJJ staff, the Enrollee's Foster Parents or Adoptive Parents, other dental specialists and non-dental professionals in coordinating the provision of dental care services, including complex dental services for Kentucky SKY Enrollees with special needs. Through our partnership with Avesis and Big Smiles, the largest mobile dental provider covering the entire Commonwealth, we will ensure that every foster child, adopted child and DJJ child has access to consistent dental services.

SKY Smiles

In 2018, nearly 12% of our foster care enrollees had not had a dental visit in the previous two years. As a result, WellCare launched a multi-modal outreach program (mailings, phone calls, text messaging) to increase dental exam utilization for these enrollees. We received approval from the Commonwealth for our proposed messaging to this population, which focuses on improving the health and lives of enrollees in foster care through regular dental checkups which helps keep their teeth clean, maintains oral health, and helps find problems early. Based on our dental benefits administration subcontractor's success rates with this outreach for other vulnerable populations with lapsed dental utilization, we anticipate increasing Annual dental visit rates by as much as 33% among our foster care enrollees who do not have record of a dental visit in the previous 24 months once this project has concluded.

Culturally Competent Outreach and Education. We will provide culturally and linguistically competent education and outreach for enrollees and their caregiver team on the importance of having a dental home, combined with targeted outreach to help ensure they are taking full advantage of their dental benefits.

Tele-dentistry. We will use tele-dentistry technology to help ensure Kentucky SKY enrollees and their dental home team can continue to work together, even if the enrollee needs to move to a foster home outside of the 50 miles/50 minutes access standards. Using synchronous modalities, we will connect Kentucky SKY enrollees with their dental home provider(s) by scheduling and deploying Public Health Hygienists to the enrollee's home, school or other

community-based location to help facilitate the virtual appointment. In the case that treatment in a brick and mortar provider office is required, care coordination will ensure that the best care is received in every instance. Included with care coordination is our ability to assist with scheduling so that our members are provided care at a time and location that is most convenient for them and their care providers. Finally, this set of tools ensures maintained engagement so that continuity of care is preserved, and our members maintain consistent progress in their treatment plans. Our use of tele-dentistry will be aligned with the Commonwealth's new tele-health regulatory requirements.

Dental Home: In 2020, every SKY Enrollee will be assigned to a primary care dentist and, if necessary, an orthodontic dental home. These dental assignments will follow the Enrollees through their foster care experience to maintain stability in this important caregiver relationships. The dental home will ensure continuous access to comprehensive and coordinated care for all preventive, acute, and ongoing oral health needs. If we are unable to maintain the Kentucky Sky Enrollee's relationship with their previous dental provider team, we will facilitate the transfer of care to their new providers and will pay for all treatment in progress.

e. Foster Care (FC) Enrollees and Juvenile Justice (JJ) Enrollees often experience changes in placement. These placement changes may require assignment of new PCPs and Dental Providers. Describe the Contractor's proposed process to assess a FC or JJ Enrollee's access to a PCP and Dental Provider timely after a change in FC Enrollee or JJ Enrollee placement and assigning a new PCP or Dental Provider if the prior Provider no longer meets access standards.

ACCESS TO PCP OR DENTAL PROVIDER AFTER CHANGES IN PLACEMENT

WellCare understands that unplanned placement changes for Enrollees in Kentucky SKY – while necessary – may be disruptive to their care as well as to other aspects of their young lives. With ours and our affiliates experience serving child welfare and juvenile justice Enrollees nationwide, we understand the reasons for and the results of placement changes. We already have processes in place to ensure ongoing delivery of service, access to PCP and dental providers, evaluation of access after a placement change and reassignment of providers when needed, continuity of care management and care plans, and transparent communications with our state stakeholders and the foster parents so critical to smooth placement changes.

ASSESSMENT OF ACCESS AFTER A PLACEMENT CHANGE

We will receive notification of a change in Enrollee placement from:

- As part of the high fidelity wrap-around plan or transition into permanency
- Direct telephonic notification from DMS or DCBS or DCBS official notification to our embedded FOC
- Direct contact with an Enrollee, caregiver, foster parent or adoptive parent during a change of address call
- The daily 834 enrollment file with notification of new address

We will assess the Enrollee's access to their currently assigned PCP and dental provider. Using Geographic Access standards as defined in the contract, we will determine if access standards are met at the Enrollee's new location.

If the PCP and/or dental provider no longer meet the access standards, we will notify the DCBS Social Service Worker, designated DJJ staff, caregiver, foster parent, adoptive parent, or Enrollee and request that a new PCP and/or dental provider be selected. If part of a planned transition, this process will be finalized the day the transition occurs. If the placement change is unplanned, this process will be finalized within two business days or we will auto-assign the Enrollee to a new PCP and/or dental provider. We will search our providers based on the Enrollee's preferences (i.e., gender, language, etc.) to offer informed choice and to meet the Enrollee's needs.

We expect that through our care coordination program and the co-location of our FOCs in each DCBS/DJJ regional office, the number of auto-assignments necessary after an unplanned placement change will be minimal. Since our care coordination team will have an ongoing relationship with care providers, parents, Enrollees and DCBS/DJJ staff, we anticipate this will expedite a more tailored selection of a new PCP or dentist.

Once the new assignment is made, we will reissue an ID card to the Enrollee with the name, address, and telephone number of the new PCP. In addition, Enrollees, their caregiver or our FOCs can print new Enrollee ID cards at any time from our ClearSKY app that WellCare will provide to foster parents.

f. Describe the Contractor's process for engaging Adoptive Parents who request to opt out of the Kentucky SKY program to stay enrolled, including:

WellCare's goal is to maintain Enrollees who are children of Adoptive Parents (referred to here as AA Enrollees) in Kentucky SKY. WellCare is well positioned to provide an array of physical and behavioral health services to the AA Enrollee, along with continuing care coordination, wrap-around services, 24-Hour Nurse and Behavioral Advice Line Support, and a network of providers who are sensitive to the unique needs of this population. While we understand that some Adoptive Parents may want to move their child away from all the trappings of their child's former life in Foster Care and we will refer Adoptive Parents or AA Enrollees who wish to disenroll from Kentucky SKY to DMS or its agent, it is also our role to help them understand the advantages of continuing coverage under the program in order to continue receiving specialized services. WellCare Care Coordinators who are working with foster youth and children who are in the process of being adopted will provide information and education to the adoptive parents about the benefits to the child of retaining their enrollment in Kentucky SKY.

WellCare understands that an AA Enrollee can elect to disenroll from Kentucky SKY without cause during the Open Enrollment period and for cause at any time, and that the Enrollee may remain with WellCare or select another MCO contracted with the Commonwealth's Medicaid program. An AA Enrollee may request disenrollment without cause during the 90 calendar days following the date of their initial enrollment in the program or the date DMS or its Agent sends the Enrollee notice of enrollment, whichever is later. AA Enrollees may request disenrollment without cause every 12 months thereafter.

i. Process for outreach and engagement of Adoption Assistance (AA) Enrollees.

ADOPTIVE PARENTS WHO WISH TO DISENROLL THEIR CHILD

When an AA Enrollee or Adoptive Parent nevertheless indicates that they wish to disenroll, our FOC will either take the parent's call directly or via a warm transfer from the call center or Care Coordinator. The FOC, using communications techniques and scripts to probe for underlying cause, discusses the AA Enrollee's reasons for the disenrollment request. In an engaging, non-judgmental manner, the FOC will discuss gently the reasons behind the request for disenrollment.

We have learned from experience in other state child welfare programs that sometimes AA Enrollees have misconceptions about health care coverage post-adoption. Some AA Enrollees believe they must switch plans or must take the coverage other family members have post-adoption in order to retain their coverage. They sometimes think that, if the family relocates to a different Kentucky county, they must switch coverage. They also may be under the misconception that, post-adoption, they may not continue with their current PCP and thus want to switch coverages to stay with the same PCP they have under Kentucky SKY or, conversely, may want a different PCP and do not understand they can select providers from our entire network. Some AA Enrollees may be entering college in another part of Kentucky and do not understand that they may keep their coverage even while in school.

Depending on the Enrollee's responses, the FOC shares information on the advantages of remaining in Kentucky SKY and clear up any confusion or misinformation. Our FOC also encourages the AA Enrollee to compare Kentucky SKY benefit and value-added benefits under WellCare with other coverages available to the Enrollee.

In other cases, the AA Enrollee may have a complaint or core issue with WellCare. Our FOC and Inquiry Coordinator will work with the Enrollee to resolve the issue, explaining that even if the Enrollee disenrolls, we are committed to our Enrollees' satisfaction and want to deliver on that promise. If the AA Enrollee still decides to disenroll after working with our staff, we refer them to DMS or its agent to complete the disenrollment and follow the Transition/Coordination of Care Plan contained in Appendix J Transition/ Coordination of Care Plan.

For example, a newly adoptive parent reached out to WellCare to disenroll a month after completing adoption of a medically complex foster child. The adoptive parent believed that the child would not be able to continue to receive the current services offered under WellCare's Medically Complex foster program. During the phone call, the child's Care Coordinator was able to explain that WellCare would continue to maintain a presence in the child's care, would continue benefits and that the current Care Coordinator would continue to work with the family post-adoption. The adoptive parent was surprised and happy to learn that the current benefits and care management assistance would continue and dropped the request to disenroll.

ii. Conducting surveys with AA Enrollees to determine the reason for opting out of the Kentucky SKY program.

WellCare will survey AA Enrollees post-disenrollment to determine the reasons for the disenrollment, to obtain feedback on our programs and services, and as part of continuous quality improvement. With DMS permission, we will develop an easy-to-complete but

comprehensive survey for AA Enrollees, mailed to their homes with a postage paid return. The mailed survey also will include an online address and unique password allowing the Enrollee to complete the survey at their leisure on line, with secure delivery to WellCare.

Using standard survey scales and best practices for question development, we recommend that the survey explore reasons for the disenrollment, both generic by category and specifically with space to write in a personal reply as well as utilizing a rating scale of 1 – 5 for level of satisfaction with the following:

- WellCare services
- Enrollee's Kentucky SKY PCP
- Other delivery services, such as dental and behavioral health
- Value-added services and Enrollee Rewards
- WellCare's Care Coordination services
- If the Enrollee would allow additional personal follow-up post-survey
- Open-ended question giving the Enrollee an opportunity to discuss any part of their experience with the Kentucky SKY program.

We will mail the survey to each disenrolled AA Enrollee within 30 days of verification of disenrollment and follow-up with one telephone call to request that the survey be completed either by mail or on- line or by calling the FOC directly to complete the survey and discuss their experiences with WellCare.

iii. Attempts for periodic re-engagement after disenrollment

Our program of re-engagement will include some or all of the following:

- Outbound calls to the former Enrollee by our FOC or Care Coordinator after a review of the Enrollee's record in CareCentral, our service management platform, and notes from the disenrollment interview discussed above to note any dissatisfaction or challenges during enrollment.
- Twitter and Facebook notices to former AA Enrollees about the benefits of re-enrolling in Kentucky SKY with an offer of assistance from our staff to assist with re-enrollment; and reminders that Kentucky SKY is available to them until age 26.
- Reminder post-card (or emails to those AA Enrollees who indicated email as their preferred method of contact while enrolled in WellCare) that re-enrollment in Kentucky SKY for former AA Enrollees is possible until age 26 and to contact us with any questions.
- For former Enrollees whose mail is returned as undeliverable or whose contact information is no longer valid, we will task our REACH program with trying to contact these "unable to contact" Enrollees.

iv. Include how the Contractor will use results from the survey to improve the program.

Survey results will be analyzed by our Quality Improvement Committee, which includes participation from all key operational and medical management departments, as part of our continuous quality improvement efforts. We will monitor data around the number of AA Enrollees who disenroll, their geographic locations and other personal demographics, their

utilization, and PCP selections to determine any patterns for commonalities that require further exploration. Survey results also will be shared with our Enrollee Outcomes Advisory Group and our Provider Panels.

We will require individual departments to investigate any specific concerns offered by the former Enrollee, such as a review by Provider Relations of any suggestion that a provider was not compliant with appointment access standards.

Survey results will be part of our Enrollee satisfaction analysis, along with other common quantitative reports such as the annual CAHPS Survey, data from our Enrollee call center, and care management surveys, and our qualitative Enrollee satisfaction analysis, such as from focus groups, work with community-based organizations, and our Enrollee Advisory Board.

We will share results with our Provider Advisory Panels and with DMS and other governmental partners in a format and frequency determined by DMS. We also will share with DMS any written information, anecdotal discussions and results of our disenrollment interviews with former Enrollees that will be useful for DMS planning.

Additional Review for Improvements

We also will engage community-based organizations involved in adoption, such as the Orphan Care Alliance, for advice on policies, perceived barriers, or issues that might be an obstacle for AA Enrollees' continued enrollment. Our experience has shown that the adoptive community sometimes has misunderstandings about the role of managed care organizations during the foster care and adoptive process that we may need to address to relieve adoptive parents of unwarranted concerns. The Orphan Care Alliance and similar community organizations also may have advice on the best methods of communication with adoptive parents to assist our engagement and re-engagement effort.

g. Provide the Contractor's proposed plan for providing Kentucky SKY Enrollees with ID cards in the required timeframes (be issued initially within five (5) Calendar Days of receipt of the eligibility file from the Department and reissued within five (5) Calendar Days of a request for reissue) in the following instances:

WellCare is committed to ensuring that we issue an accurate ID card to Kentucky SKY Enrollees within five calendar days of our receipt of the 834 enrollment file or a request for a reissue of the ID card for any reason. From our experience with children and youth in foster care, we know that ID cards for children in foster care may need to be reissued frequently due to placement changes, name changes, or other factors.

WellCare of Kentucky mails a new Enrollee welcome packet within the first five business days of Enrollment. The packet includes an Enrollee Handbook, a Quick Start guide, and an Identification Card (ID card) and letter (separate mailing). The ID card includes the PCP's name, the Enrollee's Identification Number, and the BIN/IIN and PCN number with the toll-free phone number for pharmacy provider assistance as well as Enrollee assistance.

When they need a reissued card, Enrollees or their caregivers can request it by calling the 24/7 telephone number of our dedicated Kentucky Sky Enrollee Services Call Center or via our Enrollee portal. They also can forward their ID card to their provider's office via our MyWellCare mobile app. For Kentucky SKY Enrollees, we offer the option that they can print it

themselves from our ClearSKY app provided to all caregivers. If needed, the Care Coordinator or FOC can assist them in printing it. Providers also can call our call center to confirm an Enrollee's active enrollment.

i. Report of a lost ID card.

When an Enrollee or Enrollee's caregiver reports to their Care Coordinator, FOC or DCBS or DJJ case worker that they have lost their ID card, we request they access the ClearSKY app on their issued tablet device to print a new card. If necessary, their Care Coordinator, FOC or case worker can use the ClearSKY app to print the new card. In addition, we will mail a new card within five calendar days upon request.

ii. A Kentucky SKY Enrollee Name Change.

When we are informed of an Enrollee's name change through an 834 enrollment file, that name change is reflected on the Enrollee's ID card available for printing through our ClearSKY app within five calendar days. They will automatically receive a new card reflecting the name change or can request one by calling the Enrollee Services Call Center or via the MyWellCare mobile app.

The Enrollee's Care Coordinator will provide information to adoptive parents or enrollees on DMS processes for documenting name changes. Once the DMS processes are complete, the Care Coordinator will work with enrollment services to "watch" the process take place and ensure that the correct information is loaded into the system and the Enrollee is able to receive the new ID card. The new Enrollee ID card will be mailed within five calendar days.

iii. A new PCP assignment.

When a new PCP is assigned, our system automatically generates a new ID card that is available for printing through our ClearSKY app within five calendar days. If necessary, their Care Coordinator, FOC or case worker can use the ClearSKY app to print the new card. A new card will be mailed within five calendar days.

iv. FC or DJJ Enrollee moves to a new placement or for any other reason that results in a change to the information disclosed on the Kentucky SKY Enrollee's ID card.

When a child or youth in foster care is moved to a new placement and the new placement results in either a change in the Enrollee's PCP or a change in residential address, our system automatically generates a new ID card that is available for printing through our ClearSKY app within five calendar days. If necessary, their Care Coordinator, FOC or case worker can use the ClearSKY app to print the new card. The new ID card will also be mailed within five calendar days.

h. Describe how the Contractor will address and manage crisis calls during business hours as well as after hours.

A crisis situation can occur at any time on any day. At WellCare, there is no "wrong door" when it comes to seeking help for a crisis. During business hours, Enrollees, providers, DCBS/DJJ staff, and parents will be directed through a warm hand-off to the care management team who can provide immediate assistance. The care management team immediately begins addressing the crisis by accessing additional local resources, identifying providers for immediate assistance,

calling emergency services, or scheduling a face-to-face appointment. The team works on developing a plan of care that addresses the crisis and includes follow-up steps for the Enrollee and their care team. We continue to work with the Enrollee, care provider, parent, and DCBS/DJJ workers until the crisis has stabilized, and ongoing support has been identified and established.

Both during and outside of business hours, WellCare of Kentucky operates a Behavioral Health (BH) toll-free crisis services hotline answered by highly qualified staff 24 hours per day, seven days per week, year-round throughout the Commonwealth. Our Enrollee Services Call Center representatives are also trained to correctly identify a crisis and work with the staff at our crisis services hotline. When a crisis call is identified, the representative conducts a warm hand-off, provides support for the remainder of the call, and ensures that information is documented in our system for immediate follow-up by a care coordinator/care manager.

BEHAVIORAL HEALTH (BH) CRISIS SERVICES HOTLINE

Applying a person-centered approach to service, our hotline associates provide crisis triaging to assess Enrollees' behavioral and physical health, pharmacy requirements, and social determinants of health needs, including need for crisis services. BH crisis line clinicians who assess, de-escalate, triage, and address specific BH emergencies are licensed and include Licensed Clinical Social Workers, Licensed Mental Health Counselors (LMHCs), Registered Nurses (RNs) and Intellectual/ Developmental Disability (IDD) professionals with advanced BH training.

Our call management system, including our Automatic Call Distribution (ACD) system, fully integrates our call center operations so that a caller may receive BH crisis support seamlessly even when calling the Enrollee Services line or our 24-Hour Nurse Line. Additionally, our service line professionals are able to get all the information they need for an Enrollee at "one touch" to facilitate quick resolution. This responsiveness supports on our "no wrong door" point of entry for calls supporting the caller regardless of the day or time of the call or the caller's need.

Our BH crisis line is always answered by trained staff. Calls are never answered by automated means, never receive a busy signal and are never put on hold. We have no maximum call duration limits and allow callers and our answering BH Clinicians take whatever time is necessary to resolve the Enrollee's issue completely. We provide extensive training to all call center staff across all lines in BH crisis protocols. Training reinforces the differences between the needs of a Kentucky SKY Enrollee compared with other Medicaid Enrollees, especially as related to trauma, Adverse Childhood Experiences (ACEs), and confidentiality of information and the caller authorization process.

Our BH crisis line meets or exceeds all contractual standards for metrics. During the first quarter of 2019, there were 408 calls to the hotline with 100% answered by the fourth ring, zero calls receiving a busy signal and zero calls placed on hold. The system can immediately connect a caller to the local Suicide Hotline telephone number and other Crisis Response Systems. During the first quarter of 2019 four calls were connected with the Suicide Hotline or emergency services. Our system has and our staff are trained to use patch capabilities to 911 Emergency Service.

In 2017, our call centers handled 12.7 million calls of all types with experience, care, and compassion and in December 2017 alone, our BH Services Hotline received 525,941 calls, of which 56 were emergent or life threatening. Please see our response to C. 23 for more information about our delivery of BH services during and after the crisis call.

We understand our obligation to contribute to a statewide emergency Behavioral Health hotline in an amount equal to our proportional share of Medicaid Enrollees per Contract year as sited in Section F. 33.6 of this Contract.

APPROACH TO ADDRESSING CRISIS CALLS

Enrollees (and their caregivers and providers) can reach our BH crisis line by telephoning the number found on our website, the ID card, and our Enrollee materials. They also can reach the BH crisis line by dialing our Enrollee call center line or via our 24-Hour Nurse Line. Since our dedicated Kentucky SKY Enrollee call center will operate 24/7, our trained representatives will be able to quickly assess whether the caller needs BH crisis support. If so, they will use our tested protocols and technology to swiftly deliver the caller to BH Crisis staff without delay, on-hold time, or call-backs.

Figure G.5-1 shows that our approach to addressing BH crisis calls from Kentucky SKY Enrollees will be the same no matter whether the call comes during business hours for the plan or after hours.

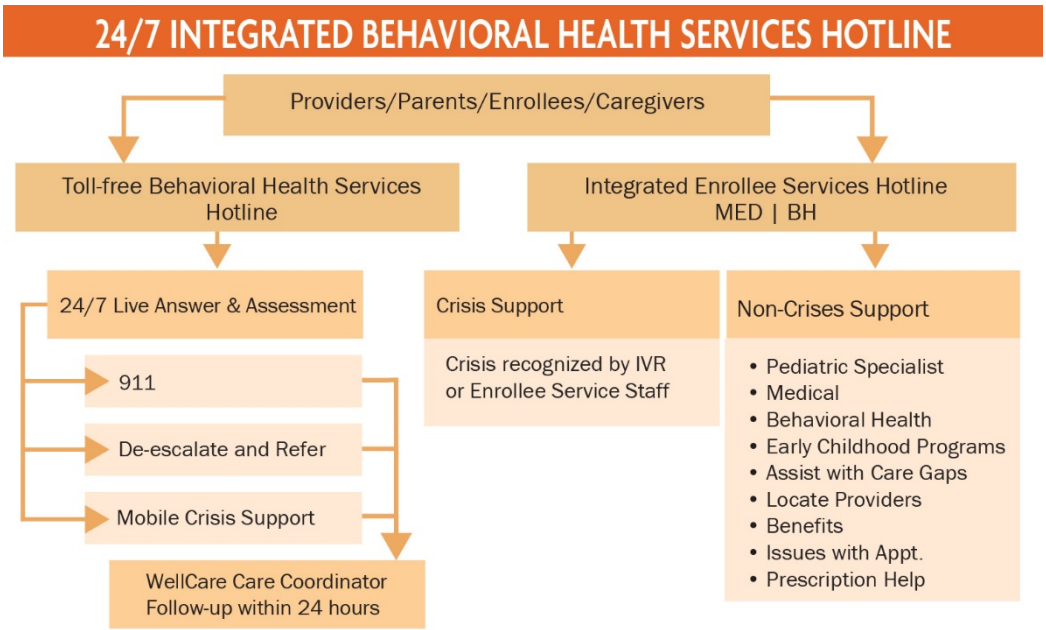


Figure G.5-1: BH Crisis Call Flow

The illustration demonstrates the simple process flow for any BH crisis call coming to our integrated service. Since all lines operate on the same technology platform with the same reporting capabilities, no call or its information is lost. All integrated lines have access to a language line for immediate language translation services, including access to American Sign Language interpreters and all staff receive cultural competency training at hire and annually.

On our crisis line, BH clinicians assess and make an immediate determination of an Enrollee's acuity level, document the call as either routine, urgent, emergent or life threatening and follow related protocols until the crisis is resolved. This includes activating emergency services or local mobile crisis providers when available, or helping the Enrollee de-escalate and connect to their Provider, depending on need. Crisis call procedures will be followed for all callers in crisis, regardless of eligibility or plan provisions.

FITT-Acute Crisis Intervention and Diversion Program

To address Kentucky's need for true mobile crisis treatment, we recently contracted with Lifecare to provide the FITT Program of virtual residential treatment for youth living with caregivers in a community setting. This is an intensive in-home program partnering with families to resolve crises, avoid out-of-home placement and provide skills for future crisis prevention. It also serves as a step down from inpatient or PRTF; and an alternative for youth at risk of hospitalization and PRTF. Just a few examples of what the FITT Program provides include:

- Door and window alarms
- Prescription lockboxes
- Respite for parents
- Access to a same-day prescriber

Care Management Follow-Up

For any crisis call received outside of normal business hours, Enrollees assessed with emergent needs will receive a follow-up call from our care management team within one business day. All calls are captured through a feed to our CareCentral clinical platform, a fully integrated system that logs, tracks, and displays individual Enrollee diagnoses, needs, utilization, and experience, across the full array of medical, behavioral, pharmacy and social service resources. Each BH Crisis Line call is documented as a change in the Enrollee's condition requiring expedited follow-up from the local care management staff within one business day, including connection with the Enrollee's providers.

Care Management supervisors are alerted daily of crisis calls received. The supervisor is provided a detailed description of the crisis call, Enrollee information, as well as the steps the clinician followed during the call. The supervisor immediately assigns the Enrollee to a Care Coordinator for follow up, if the Enrollee is not already engaged. The Care Coordinator follows up with the Enrollee within hours of the notification of the crisis, at least within 24 hours. As part of the follow up process, the Care Coordinator will research the Enrollee's medical record. Through this research, if the Enrollee is high risk on the LACE assessment, the Care Coordinator will include this information in the follow up process and assist the Enrollee in all identified needs once the crisis issue has resolved.

MANAGING BH CRISIS CALLS THROUGH SOPHISTICATED TECHNOLOGY

WellCare's telephone technology and desk-top tools assist our staff in managing every BH crisis call efficiently, so staff can concentrate on the caller's immediate need.

- CAREConnects, our call management platform, immediately generates emergency/crisis script guidance when our answering staff activate a red button. Staff uses the script to carry and document the call, beginning the de-escalation process, while CAREConnects automatically triggers a licensed BH clinician to join the call. There is no call transfer. Instead, a warm connection occurs between the licensed BH clinician and our Enrollee. The answering staff remains on the line and works with the clinician until the immediate situation is safely resolved or until released by the clinician from the call.
- Our word recognition program, Interaction Analyzer, automatically flags calls based on specific keywords that have been identified as high risk. For example, when a Enrollee mentions words or phrases such as “I’m going to kill myself,” “I’m having difficulty,” “Emergency,” or “Having a hard time,” the system recognizes the word and directs the WellCare staff member to immediately escalate the call to a supervisor or to the BH Crisis Line clinicians for prompt intervention and resolution. Our lexicon includes more than 100 key words and continues to be refined and expanded.
- WellCare’s NICE IEX workforce management platform ensures we have the right staff at the right time to handle all incoming Kentucky Enrollees calls, including on the BH Crisis Hotline. The platform pulls data from historical Kentucky call center volume and, based on experience, factors in predictable events that spike calls. With this predictive modeling capability, the platform generates optimal steady state staffing levels.
- Because answering BH crisis calls immediately is critical, our Genesys® instruments generate service level data every 30 seconds enabling our call center analysts to respond in almost real-time to any dips in performance, monitoring performance against contractual standards and maintaining efficient, speedy answer to every incoming call. We monitor and measure performance for the BH Services Hotline standards as required by this Contract and will submit performance reports summarizing call center performance as indicated. We also shall conduct ongoing quality assurance to ensure these standards are met.
- Our “one-touch” desktop tools allow for immediate access to all needed materials and supports. For example, our Knowledge Management platform provides staff with an entire Kentucky Medicaid library, including information about benefits, so they can delivery accurate, consistent answers to Enrollee questions. Our Integrated Enrollee assistance provides information across all the Enrollee’s domains including physical and BH services and providers, pharmacy, unmet social needs, and Enrollee history with WellCare.

i. Describe the processes, protocols and guidelines the Contractor will use to achieve maximum stability and the best outcomes for Kentucky SKY Enrollees in crisis as well as avoid inappropriate and unnecessary Emergency Care and hospital admissions. Describe how the Contractor will prioritize emergency and crisis calls over routine calls, protocols that will be in place to support warm transfers, and what technology the Contractor will have to enable direct telephonic/computer connectivity to emergent and crisis intervention resources.

ACHIEVING MAXIMUM STABILITY

Our processes, protocols and guidelines for achieving maximum stability and best outcomes for Kentucky SKY Enrollees in crisis include:

Expanding Our Network of Mobile Crisis Services

WellCare has an expansive network that includes every crisis services provider in Kentucky, but we are always seeking to improve the network, especially to address the growing need. As shown below, there has been an increase year over year of distinct Enrollee crisis service utilization.

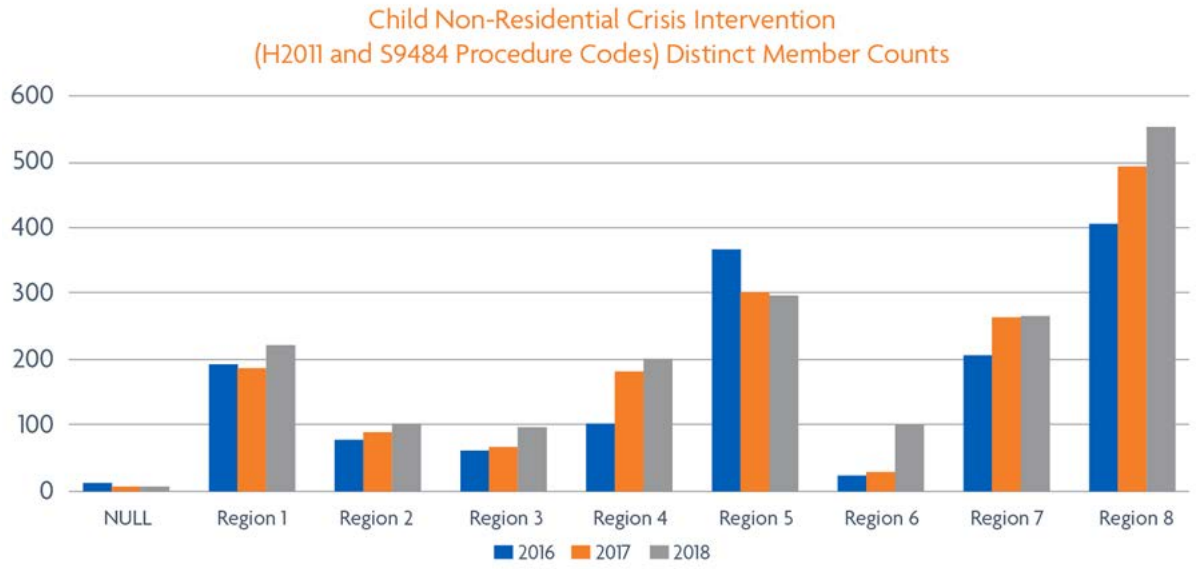

Figure G.5-2: WellCare Kentucky Use of Child Non-Residential Crisis Intervention

In addition to the recent partnership with Lifecare Solution described below, WellCare is undertaking efforts to develop a true crisis response team network. Given the lack of crisis services available in Kentucky, we are in discussion with potential out-of-state providers, such as Saint Francis Ministries, on expanding services to Kentucky. We continue our discussions with our contracted Behavioral Health Service Organizations (BHSO) providers on offering these services. We also are working with our community mental health centers across the state to expand crisis services. For example, we are in discussions with Lifeskills in Bowling Green to explore potential models for the delivery of crisis services, including a model WellCare partnered to create in Arizona of post-crisis transitional care for Enrollees who present in crisis at a psychiatric emergency care center.

BEST PRACTICE | WellCare in Arizona partnered with ***Connections Health Solutions*** to expand access to a new service they are launching for post-crisis transitional care, designed specifically for the General Mental Health/Substance Use population. Connections AZ has recently developed its ***Comprehensive Transitional Care Program for the Post-Crisis Episode*** for members who present in crisis at a Connections' psychiatric emergency care center. Their model focuses on short-term, high-touch interventions by an interdisciplinary team that includes peers, nurses, physicians and social workers. Post-crisis, members are still recovering and need extra time and attention to ensure that they get connected to the next level of care and support them while they recover from the crisis episode, such as helping them get their medications or make their next appointment. WellCare Arizona not only paid for these services but worked with Connections AZ to share data and coordinate post-crisis care for their members jointly. This helped to further reduce unnecessary ED holds.

FITT-Acute Crisis Intervention and Diversion Program

To address Kentucky's need for true mobile crisis treatment that has trended upward in certain Regions, shown in **Figure G.5-2**, we recently contracted with Lifecare to provide the FITT Program of virtual residential treatment for youth living with caregivers in a community setting. This is an intensive in-home program partnering with families to resolve crises, avoid out-of-home placement and provide skills for future crisis prevention. It also serves as a step down from inpatient or PRTF; and an alternative for youth at risk of hospitalization and PRTF. Just a few examples of what the FITT Program provides include:

- Door and window alarms
- Prescription lockboxes
- Respite for parents
- Access to a same-day prescriber

Avoiding Inappropriate ER and Hospital Admissions

WellCare has prioritized the reduction of inappropriate ER use and hospital admissions and tailored both network monitoring and care management interventions to increase stability for Enrollees in crisis. These interventions include:

- *Medical home:* Establishing a medical home for Enrollees is one of key interventions we can undertake to reduce inappropriate ER use and hospital admissions and increase stability. We will begin assigning PCPs to our foster care Enrollees beginning in July 2019 and will provide trauma training to all medical home providers. The medical home provider will be responsible to oversee and coordinate all services the Enrollee receives and our CC Team will support the medical home by facilitating information exchange, involving them in all Individual Health Plan (IHP) meetings, helping them locate appropriate specialists when needed, and providing scheduling and transportation assistance to ensure Enrollees access recommended care.
- *Crisis and Safety Planning:* For families and caregivers of children and youth involved in the child welfare system, it is critical to have a crisis and back-up plan, including the availability of back-up Care Coordinators. The back-up or crisis plan ensures children receive needed care for their safety and well-being. As part of our Care Coordination activities, our Care Coordinators work with Enrollees, families and caregivers to create a crisis and back-up plan as part of their plan of care. Included in the plan of care is family/guardian education on signs/symptoms of crisis, identification of a back-up Care Manager if the assigned Care Coordinator is temporarily unavailable, linkages to community-based crisis services, and access to our 24-Hour Behavioral Health Crisis Line and 24-Hour Nurse Line. Crisis and back-up plans are given to families and necessary medical professionals. Our Care Coordinators also encourage families to share the plans with those involved in the child's care and school.
- *Discharge Planning and Comprehensive Discharge Planning Support:* WellCare KY's transition of care process provides early identification of all medical, behavioral, and social issues that might require post-inpatient intervention, such as transportation, home health, medication, or durable medical equipment. The Enrollee-centric process involves the attending physician, facility discharge planner, our concurrent review professional staff, the

Enrollee and his/her caregivers, ancillary providers, care coordinators, when appropriate, and community resources. Discharge planners review the draft discharge plan and adjust it as necessary with each subsequent clinical review prior to the Enrollee's discharge. Under the Kentucky SKY program, if an Enrollee is admitted to an inpatient facility, our concurrent review staff will notify the Care Coordinator. Prior to an Enrollee being discharged, our BH Discharge Coordinators schedule outpatient follow-up appointments and continuing treatment to occur within seven days. They also provide telephonic appointment reminders and conduct outreach within 24 hours to Enrollees who miss an appointment. Please see our response to C.23 for further information about discharge planning.

- *Members Empowered to Succeed (METS):* Under this program, WellCare works with Enrollees who are stepping down from intensive services or who need more specialized services to tailor authorizations and services to the specific needs of the Enrollee and their family/caregiver, while recruiting natural and community supports as part of the care plan. In our Medicaid program, the METS program has resulted in a 6% reduction in ER use**.**

Educating Foster Families, Providers, Staff and Law Enforcement About Trauma-Informed Care

In partnership with the University of Louisville Kent School of Social Work, WellCare will develop and offer trauma-informed care training to Providers, our Enrollee-facing staff, law enforcement officials, courts, judges and attorneys. Working with the Orphans Care Alliance and Kentucky Partnerships for Families and Children, WellCare will offer foster parents training on intervention tools including Empowered to Connect, Trauma Competent Caregiving and Trust Based Relational Intervention (TBRI ®) and on training needs identified by foster and adoptive parents on our Foster and Adoptive parent advisory committee,

PRIORITIZING EMERGENCY AND CRISIS CALLS

In addition to directly accessing our BH Crisis Line or our 24-Hour Nurse Line, both available 24/7, Enrollees (and their caregivers and providers) can access emergency or crisis support by dialing our Enrollee call center line. Since our dedicated Kentucky SKY Enrollee call center will operate 24/7, our trained representatives will be able to quickly assess whether the caller needs crisis support. If so, they will use our tested protocols and technology to swiftly deliver the caller to BH Crisis staff or 24-Hour Nurse Line staff without delay, on-hold time, or call-backs.

We provide extensive training to all call center staff across all lines in crisis protocols. We train call center staff to listen for phrases and situations indicating that the caller is in crisis. This staff training is augmented by our word recognition program, Interaction Analyzer, which automatically flags calls based on specific keywords that have been identified as high risk. If the caller uses one of those keywords, the system recognizes the word and directs the WellCare staff Member to immediately escalate the call to a supervisor or to the BH Crisis Line clinicians for prompt intervention and resolution.

Once on our BH Crisis line or 24-Hour Nurse Line, BH clinicians (on the BH Crisis Line) or RNs (on the Nurse Line) assess and make an immediate determination of an Enrollee's acuity level, document the call as either routine, urgent, emergent or life threatening and follow related

protocols until the crisis is resolved. This includes activating emergency services or local mobile crisis providers when available, or helping the Enrollee de-escalate and connect to their Provider, depending on need.

Warm Transfers

CAREConnects, our call management platform, is set up so that there is no call transfer. Instead, when an Enrollee experiencing a crisis calls the non-clinical staff of the Enrollee Call Center, the staff activates the red crisis button on the system that immediately generates emergency/crisis script guidance. Staff uses the script to carry and document the call, beginning the de-escalation process, while CAREConnects automatically triggers a licensed BH clinician to join the call. If the crisis call is not a BH crisis, CAREConnects automatically triggers a RN from our 24-Hour Nurse Line to join. There is no call transfer. Instead, a warm connection occurs between the licensed BH clinician or RN and our Enrollee. The answering staff remains on the line and works with the clinician until the immediate situation is safely resolved or until released by the clinician from the call.

Technology/Computer Connectivity

On our crisis line, BH clinicians assess and make an immediate determination of an Enrollee's acuity level, document the call as either routine, urgent, emergent or life threatening and follow related protocols until the crisis is resolved. This includes activating emergency services or local mobile crisis providers when available, or helping the Enrollee de-escalate and connect to their Provider, depending on need. Crisis call procedures will be followed for all callers in crisis, regardless of eligibility or plan provisions.

j. Describe trainings and resources the Contractor will provide to call center staff related to recognition and management of crisis calls to ensure the most expedient and risk-reducing outcomes, including a description of the level and type of training.

Our "no wrong door" point of entry ensures that Enrollees can easily access support no matter which line they call, but it is crucial that our Enrollee Call Center staff are prepared are well-prepared and equipped to recognize and manage crisis calls when they receive them.

We provide extensive training to all call center staff across all lines in crisis protocols. Training reinforces the differences between the needs of a Kentucky SKY Enrollee compared with other Medicaid Enrollees, especially as related to trauma, Adverse Childhood Experiences (ACEs), and confidentiality of information and the caller authorization process.

RECOGNIZING A CRISIS CALL

Hotline Training Curriculum. Through WellCare University, our learning and development hub, our Enrollee Services staff train for 160 hours in a blended training environment. Training modules are delivered by Instructor-led Training, E-Learning, and supervised experiential training. Curriculum includes training on trauma informed care, recognizing a critical incident, steps needed to respond to a crisis, and words and phrases to listen for that may indicate a crisis. We provide scenario-based training curriculum for all non-clinical BH services hotline staff members, which includes a focus on identifying trigger words and crisis situations and requires that each staff associate passes an exam before transitioning to live support. The program includes self-led training curriculum and a designated "nesting period" where staff receive one-

on-one crisis call coaching by a qualified supervisor. Our BH clinicians also receive training in accessing emergency crisis services and in the treatment and management of BH conditions, including specific behaviors related to IDD individuals.

We train Enrollee Call Center staff to listen for phrases and situations including: directly expressing urges to harm themselves or someone else; suicide attempts; speech that is slurred, tangential or not making sense; Enrollees who are emotionally distressed and cannot be calmed down; and Enrollees unable to be assisted due to disposition.

This staff training is augmented by our word recognition program, Interaction Analyzer. When an Enrollee calls our Enrollee Call Center, Interaction Analyzer automatically flags calls based on specific keywords that have been identified as high risk. For example, when an Enrollee mentions words or phrases such as “I’m going to kill myself,” “I’m having difficulty,” “Emergency,” or “Having a hard time,” the system recognizes the word and directs the Enrollee Call Center staff to immediately escalate the call to a supervisor or to the BH Crisis Line clinicians for prompt intervention and resolution. Our lexicon includes more than 100 key words and continues to be refined and expanded.

MANAGING A CRISIS CALL

CAREConnects, our CRM (Customer Relations Management) platform, immediately generates emergency/crisis script guidance when our answering staff activate a red crisis button. Staff uses the script to carry and document the call, beginning the de-escalation process, while CAREConnects automatically triggers a licensed BH clinician to join the call. There is no call transfer. Instead, a warm connection occurs between the licensed BH clinician and our Enrollee. The answering staff remains on the line and works with the clinician until the immediate situation is safely resolved or until released by the clinician from the call. Please see **Attachment G.5.j Sample Crisis Call Script** (provided electronically) for an example of a WellCare call script. We will tailor new call scripts for our Kentucky SKY Enrollees.

Our BH crisis line system can immediately connect a caller to the local Suicide Hotline telephone number and other Crisis Response Systems. Our system has and our staff are trained to use patch capabilities to 911 Emergency Service.

Please refer to our response to C.16, Enrollees, Eligibility, Enrollment and Disenrollment, under Technical Approach, for additional information regarding our experience, processes, procedures and compliance to the requirements in the Draft Medicaid Managed Care Contract and Appendices.

6. Provider Network

WellCare®
Beyond Healthcare. A Better You.

G.6. PROVIDER NETWORK

a. Explain the Contractor's plan to develop a comprehensive Provider Network that meets the unique needs of Kentucky SKY Enrollees. The plan must address the following:

i. Approach to contract with PCPs and specialty Providers who are trained or experienced in Trauma informed Care and in treating individuals with complex special needs, and who have knowledge and experience in working with children in Foster Care and those children receiving Adoption Assistance.

ii. Recruitment strategy, including processes for identifying network gaps, developing recruitment work plans, and carrying out recruitment efforts.

iii. Strategy for contracting and retaining specialists unique to the Kentucky SKY populations and perhaps different from those in the Medicaid managed care Provider network and how the Contractor will provide access to specialists not included in the Provider Network.

iv. Process for continuous network improvement, including the approach for monitoring and evaluating Provider compliance with availability and scheduling appointment requirements and ensuring Kentucky SKY Enrollees have access to care if the Contractor lacks an agreement with a key Provider type in a given DCBS Service Region or DJJ Community District.

v. How the Contractor will ensure appointment access standards are met when Kentucky SKY Enrollees cannot access care within the Provider Network.

b. Provide an example of how the Contractor has contracted for similar networks for similar populations in other programs. Provide a workplan to contract with Kentucky SKY Network Providers, with accountabilities and timelines.

G.6. PROVIDER NETWORK

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 41.0 Kentucky SKY Program of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

As an incumbent MCO, we currently serve the single largest concentration of Foster Care, Adoption and Adult Guardianship children across the Commonwealth with approximately 8,100 children relying on our passion for individualized and holistic care to empower them to reach their unique goals. Since 2011, our Enrollees have received comprehensive services through our existing **contracted network, currently more than 34,500 providers**.

In anticipating implementation of the Kentucky SKY program we have already reached out to each stakeholder, including the DMS, DCBS, DJJ and foster parents, to identify specific providers who are not already in our network for recruitment. We will also expand the network by adding new services around mobile crisis, in home services, telehealth, child-psychologists, child-psychiatrists, speech pathologists, occupational therapists and other key specialty providers. As part of network development, we will ensure each of the providers delivering services to

Kentucky SKY Enrollees have the training, knowledge and experience necessary to deliver services to this vulnerable population.

WellCare of Kentucky is committed to ensuring access to care for foster care children who often come into care with more intensive needs, a history of lack of access to care and unmet needs. See **Table G.6-1** for detail on our preliminary 2019 HEDIS performance for some of the key access measures for Kentucky SKY Enrollees.

Table G.6-1 Access to Primary Care Practitioners

Children's and Adolescents' Access to Primary Care Practitioners	2019 All Children*	2019 Foster Care*	2017 National Medicaid Mean
12-24 Months	98.0%	97.0%	94.6%
25 Months - 6 Years	92.0%	94.0%	86.6%
7-11 Years	96.0%	97.0%	90.0%
12-19 Years	96.0%	96.0%	88.6%

*(Preliminary Un-Audited Results)

a. Explain the Contractor's plan to develop a comprehensive Provider Network that meets the unique needs of Kentucky SKY Enrollees. The plan must address the following:

In delivering a comprehensive network, our aim is to ensure an appropriate statewide provider network with 24 hour emergency access and crisis services. This network will facilitate enhanced coordination of care and access to trauma-informed services, the completion of required assessments and health services within the mandated timeframes and the sharing of health records in a timely manner to reduce duplication of services.

Our Kentucky SKY network development activities are led by Bill Jones, Plan President; Kentucky SKY Behavioral Health Director Dr. Tim Houchin, with board certifications in Psychiatry, Child and Adolescent Psychiatry and Forensic Psychiatry; Kentucky SKY Medical Director; Provider Network Director Bonnell Gustafson Irvin; Executive Administrator Lori Gordon; and Provider Relations Liaison Leann Magre. Together this team has 30 years of combined Kentucky MMC program experience.

Our current Kentucky Medicaid network is fully compliant with Network Access and Adequacy standards as defined in Section 28.2 and is the **largest and most comprehensive network of all Kentucky MCOs, based on our review of online provider directories**.

We currently have **over 99.9% of all Kentucky Medicaid providers under contract**. See **Table G.6-2** for a sample of our top hospital systems and provider groups by region. Hospital systems include those PCP and Specialty providers associated with those systems.

Table G.6-2 Top Hospital Systems and Provider Groups by Region

Region	Hospital Systems and Provider Groups
Region 1	Hospital Systems: Baptist Health Paducah, Caldwell Medical Center, Crittenden County Hospital/Health Systems, Jackson Purchase Medical, Livingston Hospital and Healthcare, Lourdes, Marshall County, and Murray Calloway PCP Groups: ARCARE, Baptist Health Medical Group Paducah, Caldwell Medical Associates, Jackson Purchase Primary Care Hickman, Marshall County Surgical and Medical Group, Mercy Health, Murray Medical Associates, Pediatric Group of Paducah, Pinelake Physician Practice, Pennyroyal Family Health, Primary Care Medical Center Specialty Groups: Baptist Health Medical Group Paducah, Bloom Behavior Therapy, Physician Specialists of Murray, Four Rivers Behavioral Health, Marshall County Surgical and Medical Group, MD Partners, Mercy Health, Pinelake Physician Practice (Pediatric Cardiology), Recovery Works Paducah
Region 2	Hospital Systems: Baptist Health Madisonville, Deaconess Hospital, Deaconess Hospital, DBA The Heart Hospital, Jennie Stuart Medical Center, Methodist Hospital Community, Ohio County Hospital, Owensboro Health Muhlenberg, Owensboro Health Owensboro, St Vincent Hospital Evansville, Trigg County Hospital PCP Groups: Baptist Health Medical Group, , Community Health Centers of Western Kentucky, Bridgewater Medical, Regional Healthcare Affiliates, Vanderbilt Integrated Providers - PED Specialty Groups: A New Start, Bluegrass Family Allergy, Owensboro Health Medical Group, The Pennyroyal Regional Center, River Valley Behavioral Health, Sunrise Children's Services, University of Louisville Research Foundation Pediatric Hematology Oncology, Gastroenterology, and Neonatal.
Region 3	Hospital Systems: Baptist Health La Grange, Baptist Health Louisville, Breckinridge Memorial Hospital, Carroll County Memorial Hospital, Flaget Memorial, Hardin Memorial, Norton Audubon, Norton Brownsboro, Norton Children's, Norton Hospital, Norton Woman's and Children's, Kentucky One (Jewish Hospital Louisville, Jewish Hospital Shelbyville, St Mary and Elizabeth), Springview Hospital, Twin Lakes Regional Medical Center, University of Louisville PCP Groups: Bullitt County Family Practitioners, Brownsboro Park Pediatrics, Hardin Professional Services, Heartland Primary Care, Louisville Patient Centered Medical Home, Norton Community Medical Associates, Kentucky One Primary Care, Leitchfield Pediatrics, Park Duvall Community Health Centers, Family Health Centers (Americana, East Broadway, Fairdale, Iroquois, Phoenix, Portland, Southwest, West Market), JenCare, Shawnee Christian Health Center, One Pediatrics, Prospect Pediatrics, University of Louisville Physician's Specialty Groups: Bridgehaven, Centerstone, Children Heart Specialist, Home of the Innocence, First Urology, Hardin Professional Services, Isaiah House, New Beginnings Family Services, Pediatric and Neonatal Specialists, Pediatric Heartcare Partners, Recovery Works Elizabethtown, Sunrise Children's Services, StepWorks, ,

Region	Hospital Systems and Provider Groups
	Transformations, University of Louisville Research Foundation Pediatric (Hematology/Oncology, Pediatric Neurology, Infusion Center, Pediatric Nephrology), Uspiritus Inc.
Region 4	Hospital Systems: Casey County Hospital, Cumberland County Hospital, Jane Todd Crawford Memorial Hospital, Lake Cumberland Regional Hospital, Logan Memorial Hospital, Monroe County Medical Center, Russell County Hospital, TJ Samson, Taylor County Hospital, The Medical Center Bowling Green, The Medical Center at Albany, The Medical Center at Caverna, The Medical Center at Franklin, The Medical Center at Scottsville, Tristar Greenview Regional Hospital, Wayne County Hospital PCP Groups: A Plus Family Health Care, Bowling Green Internal Medicine, Butler County Family Care, Casey County Primary Care, Caverna Primary Care Clinic, CHC DBA Medical Center Primary Care, Cumberland Family Medical, Family Medical Center of Hart County, Fairview Community Health, Graves Gilbert Clinic, Lake Cumberland Physicians Network, Monticello Medical Associates, One Cross Medical Clinic, Primary Care Associates of Russellville, Somerset Internal Medicine, Southfork Medical Clinic, TJ Health Columbia, TJ Health Edmonton, TJ Health Greensburg, TJ Health Russell Springs, TJ Samson Family Medicine, Taylor Regional Pediatrics Specialty Groups: A New Beginning Achievement Center, Allergy Asthma and Immunology, Foothills Academy, Graves Gilbert Clinic, Hopebridge, Interventional Pain Specialists, Lake Cumberland Physicians Network, University of Louisville Research Foundation Pediatric Cardiology, Uspiritus, Inc.
Region 5	Hospital Systems: Baptist Health Systems (Lexington, Richmond), Ephraim McDowell Regional Medical Center (Danville, Stanford), LifePoint (Bluegrass Community, Bourbon Community, Clark Regional, Georgetown Community), Kentucky One Health (St. Joseph (Berea, Mt. Sterling, East Lexington, Lexington), and the University of Kentucky Medical Center PCP Groups: White House Clinics, Kentucky Medical Services Foundation, Baptist Health Medical Group, HealthFirst Bluegrass, Bates, Miller and Sims, Horizons Healthcare, Children's Clinic (Estill County), Sterling Health, Clark Regional Physician Practices, Danville Pediatrics and Primary Care, Kentucky One Health Medical, Ephraim McDowell, Danville Family, St Joseph Primary Care, Bluegrass Community Health Centers, Clay City Pediatrics, Fast Pace, Madison Primary Care, Annville Clinic, Cumberland Family Medical, Primary Care of the Bluegrass Specialty Groups: Bluegrass Orthopedics, Bluegrass.Org, KVC, Rebound Recovery, Advanced Dermatology, Lexington Women's Health, Kentucky Medical Services Foundation, Baptist Health Medical Group, Kentucky One Physician Services, Clark Regional Physician Practices, Ephraim McDowell Multispecialty Clinic, Sunrise Children's Services, Psychological and Behavioral Consultants, SAFY, Key Assets KY, Hopebridge
Region 6	Hospital Systems: St Elizabeth Healthcare (Edgewood, Florence, Ft. Thomas, Grant County), Cincinnati Children's Hospital Medical Center, Nationwide Children's Hospital,

Region	Hospital Systems and Provider Groups
	Mercy Health, Shriner's Hospital for Children, The Christ Hospital, TriHealth Hospitals, University of Cincinnati PCP Groups: St. Elizabeth Physicians, Health Point, Triad, The Christ Hospital Medical Association, University of Cincinnati Physicians, Ironton Health Care, SOMC Medical Care Specialty Groups: St. Elizabeth Physicians, Pediatrics of Florence, Health Point, River Hills Pediatrics, The Christ Hospital Specialists, University of Cincinnati Specialists, Cincinnati Children's Hospital Specialists, Children's Home of Northern KY, Holly Hill Children's Home, Diocesan Catholic Children's Home, MEBs Counseling, SAFY, Hopebridge
Region 7	Hospital Systems: ARH (Morgan County), Cabell Huntington Hospital, Fleming Co Hospital, King's Daughters Medical Center (Ashland and Portsmouth), Our Lady of Bellefonte, Three Rivers, St. Claire Regional PCP Groups: Lewis Primary Care, Community Family Clinic, Family Medicine Associates of Flemingsburg, Ohio Valley Physicians, Ashland Children's Clinic, Kid Care, Faith Family Practice, St Claire Regional Family Medicine, Lewis County Primary Care, KDMC Family Care Centers, Bellefonte Primary Care, Morehead Primary Care, ARH Clinics, King's Daughter Care Centers, Ashland Pediatric Associates Specialty Groups: ARH Specialists, Kentucky OneHealth Specialists, King's Daughters Medical Center, Bellefonte, Three Rivers, St. Claire Specialists, Ramey Estep, University Physicians (Cabell), Valley Health, Lighthouse Professional Counseling
Region 8	Hospital Systems: ARH (Our Lady of the Way, Barbourville, Harlan, Hazard, Mary Breckinridge, McDowell, Middlesboro, Tug Valley, Whitesburg), Baptist Corbin, Highlands Regional Medical Center, Kentucky River Medical Center, Kentucky OneHealth (St Joseph London), Paul B. Hall Medical Center, Physician Services of Memorial, Pikeville Medical Center, Williamson Memorial PCP Groups: Mountain Comprehensive Health Care, Primary Care Centers of Eastern KY, Big Sandy Healthcare, Quantum, United Clinics, Juniper Health Care, ARH, Mountain After Hours, Kentucky Mountain Health Alliance, Hometown Family Care, Harold Primary Care, Bright Future, Neil G. Barry, Parkway Pediatrics, Dr. Dahhan, Grace Community Health Center, East Bernstadt Medical Clinic, Clover Fork Clinic, Middlesboro Medical Mall, Ulrich Medical Clinic, Corbin Pediatric, Mercy Clinic, St. Joseph Health System, Newborn & Kids Health Center, Baptist Health Medical Group Specialty Groups: ARH, Baptist Health, Pikeville Medical Center, Highlands Regional, London Women's Care, Physician Services of Memorial, Cumberland Valley, Mountain Comprehensive, NECCO, Addiction Recovery Care, Odyssey, Sunrise Children's Services

Partnership

To support the unique needs of Kentucky SKY Enrollees and this contract we will outreach to each stakeholder, including the Department, DCBS, DJJ and foster parents, to identify specific providers who are not already in our network that we need to recruit. We will also expand the network by adding new services around

mobile crisis, in home services, telehealth, child-psychologists, child-psychiatrists and other key specialty providers. Specifics of our approach include:

- Interview stakeholders including DCBS, DJJ , foster parents and youth, teaching and children hospitals to identify key providers as well as any potential barriers to care
- Expand our network of mobile crisis services through the network expansion activity that has already occurred with Lifecare Solution in Louisville to develop a true crisis response team network. Lifecare is planning to expand service into additional Kentucky counties. Given the lack of crisis services available in Kentucky, we are also in discussion with potential out of state providers, such as Saint Francis Ministries, on expanding services to Kentucky. We continue our discussions with our contracted Community Mental Health Centers (CMHC) and Behavioral Health Service Organizations (BHSO) providers on offering these services

Private Child Care Providers
All Private Child Care providers with Medicaid numbers are currently in our network.

- Contract with Therapeutic Foster Care Providers which are not already in our network for in home services to SKY Enrollees. Our current assessment shows of the 43 Private Child Care Providers (with over 170 individual sites), 70% are already in our network. The remaining 30% are not Medicaid providers at this time. We have already begun introducing these providers to Medicaid managed care by personally outreaching to each to invite them to our recent Provider Summits. We understand the need to educate these new providers, including Bair Foundation, Home of the Innocents and KVC, early and often.
- Collaborate with DMS, DCBS and DJJ in the use of telehealth for any specialty to ensure access for Kentucky SKY Enrollees. Telehealth is a useful tool to mitigate wait times for key Kentucky SKY specialty providers such as psychiatry, child psychiatry, child psychology, pediatric neurology, neuropsychology and applied behavioral analysis.
- Provide telehealth equipment and support for foster parents to connect foster youth to behavioral health clinicians. In our Virtual Integration Program, PCP providers use a tablet enabled screening tool and refer, as needed, to a virtual behavioral health provider. Virtual behavioral health visits can happen immediately and follow-up can also occur from the youth's home via a device provided by WellCare of Kentucky. WellCare of Kentucky's telemedicine program aligns with legislative guidelines in KRS 205.559 and KRS 205.5591
- Integrate our dental vendor into all network development activities to ensure adequate access to a network of dentists and pediatric dentists, who are responsible for coordinating all dental care for Kentucky SKY Enrollees. This includes processes for Enrollees to access orthodontic care when they move
- Support the SKY network with a regional team of experts in the Kentucky SKY program who live in the communities they serve. This team will wrap supports around Kentucky SKY providers and assist them in all aspects of contracting and delivering services to Kentucky SKY Enrollees. Our SKY provider relations team includes our SKY Provider Liaison who is responsible for supporting the resolution of provider access and availability issues. Both the Provider Liaison and the regional SKY Provider Relations representatives will have detailed knowledge of Kentucky providers, including behavioral health providers, patterns of care/referral in Kentucky, the Kentucky SKY program, provider contracting, billing,

authorizations, and claims submission. In support of the Kentucky SKY program, our SKY provider engagement team also includes a **coding educator** will also work directly with SKY providers on coding practices beginning four months in advance of program go-live

i. Approach to contract with PCPs and specialty Providers who are trained or experienced in Trauma informed Care and in treating individuals with complex special needs, and who have knowledge and experience in working with children in Foster Care and those children receiving Adoption Assistance.

"On behalf of Saint Francis Ministries, a national and international child and family services provider and advocacy organization, it gives us great pleasure to write in support of WellCare of Kentucky's proposal to provide Medicaid managed care services, including those prevention and intervention services designed to improve the wellbeing of children and families impacted by issues of trauma.
WellCare has a trauma-informed, evidenced based strategy related to how to ameliorate these issues in collaboration with organizations seasoned in this practice such as Saint Francis Ministries."

– PAGE B. WALLEY, PH.D
PRESIDENT/CHIEF PUBLIC POLICY OFFICER, SAINT FRANCIS MINISTRIES

WellCare of Kentucky has an **existing provider network composed of approximately 5,500 PCPs, 26,000 specialty Providers and more than 2,300 behavioral health professionals**. We will build on our existing market expertise to catalog these provider's knowledge and experience. We will supplement that existing provider knowledge with training on Trauma informed care and the requirements for providing Health Care and Behavioral Health Services to Kentucky SKY Enrollees, as identified in Section 41.14.1. Training will include medical consent requirements, required timelines for services and assessments, specific medical information required for court requests and judicial review of medical care, the Care Coordination team and how to contact the Care Coordinator, to name a few. Existing regional teams will be supplemented our specialized regional team of SKY program experts who will onboard providers to the Kentucky SKY program.

"We applaud your efforts to deliver holistic, comprehensive, and integrative services to the most vulnerable in our society. We look forward to partnering with you to accomplish this critical need in Kentucky."

– BIBHUTI K. SAR, MSW, PHD
PRINCIPAL INVESTIGATOR/DIRECTOR, CENTER FOR PROMOTING RECOVERY AND RESILIENCE
KENT SCHOOL OF SOCIAL WORK, UNIVERSITY OF LOUISVILLE

We are partnering with the University of Louisville to implement a Trauma Informed Care training program across the Commonwealth. The University of Louisville has a well-regarded trauma-informed training program through the Kent School of Social Work. This partnership includes curriculum development, building capacity, launch and evaluation. Training will be conducted by Webinar or in person.

IDENTIFYING PROVIDERS WITH TRAINING AND EXPERTISE

As an incumbent MCO with the largest concentration of foster care children, we know which providers are engaging with foster care children and their level of training and expertise in Trauma informed Care, treating individuals with complex needs, and knowledge and experience in working with children in Foster Care and those receiving Adoption Assistance. We will catalog this knowledge using the market expertise of our internal staff including Provider Relations Liaison Leann Magre, Executive Administrator Lori Gordon, and their Care Coordination team.

We will also conduct interviews with teaching and children hospitals such as the University of Louisville, UK Health Care Kentucky Children's Hospital and Norton Children's Hospital, local DCBS and DJJ offices and foster parents to identify key providers.

Beyond contracting, we will launch an effort to transform and expand evidence-informed treatment throughout the Commonwealth through processes to systematically identify provider resources who have been formally trained in the use of behavioral health assessment instruments and the use of evidence-based practices like trauma-focused cognitive behavioral therapy (TF-CBT), dialectical behavioral therapy (DBT), parent-child interactional therapy (PCIT), rapid eye movement desensitization and reprocessing (rEMDR), and others. Our Kentucky Provider Network Development team has already identified approximately 600 behavioral health providers with evidence-based specialty training, including a recent launch of Multisystemic Therapy (MST) through Home of the Innocents. In addition, our Florida health plan used WellCare's enhanced processes to systematically identify and catalog more than 800 Florida providers who have essential subspecialty training and expertise that is used in coordinating care for children with special healthcare needs, especially those with serious behavioral health conditions.

CONTRACTING WITH PCPS

WellCare of Kentucky currently has contracts with most in-state PCPs so our primary focus here will be on reimbursement, partnerships for quality and extending additional training and support to these providers in their role as the single point of accountability and coordination, primarily for primary care.

Getting the Right Care
We have seen a 9.5% increase in PCP visits since 2016 and a 9.5% decrease in emergency room visits for the foster child population.

In preparation for assignment of the MMC foster child population to PCPs, we analyzed our PCP network to identify the PCPs currently delivering services to these Enrollees. Over 400 PCPs were identified with 27% of Enrollees seeing PCPs associated with the Kentucky Primary Care Association (KPCA) IPA and 6% seeing PCPs associated with Saint Elizabeth. We will be approaching both of these providers on models of care to best support the Kentucky SKY population, such as health homes or value based purchasing.

To ensure continuity of care for new Enrollees transitioning from other MCOs, we conduct a gap analysis using the claim history provided by DMS of PCPs rendering services to SKY Enrollees through other MCOs who are not in our network. We will include those providers in our Network Development work plan with personal outreach to discuss contracting. Transition

of care is our paramount concern for Kentucky SKY Enrollees since many of these children have been with their providers for years.

Enhanced reimbursement will be offered to PCPs managing Kentucky SKY Enrollees in the form of a care management fee. This fee is to compensate the PCP for the additional roles and responsibilities they are assuming. We will also offer a Partnership for Quality (P4Q) incentive program that incents a reduction in emergency room usage, timeliness of initial outreach by the PCP and the completion of assessments in a timely manner.

As the Kentucky SKY program matures, we will also **identify high-quality providers for a SKY Preferred Provider designation**. For example, year-one we will identify PCPs with large numbers of foster care children assigned to them and will conduct an assessment to identify their best practices for foster care. If the assessment identifies them as delivering high-quality services to their patients, they will be designated as a SKY Preferred Provider. Enrollees can be auto-assigned to Preferred Providers based on quality scores. We will also engage these providers for input on our training materials and for participation on our Kentucky SKY quality committees. In future years we will expand this SKY Preferred Provider designation to specialty providers.

BUILDING HEALTH HOMES FOR KENTUCKY SKY ENROLLEES

In collaboration with the DCBS and DMS, WellCare of Kentucky will establish a Health Home Pilot where PCPs receive an additional care management fee for enhanced behavioral health coordination. These **practices will conform to the standards set forth by the American Academy of Pediatrics recommendations for foster care**. As part of the pilot, the Kentucky SKY Care Coordination team will work hand in hand with the provider to ensure they have access to records for this enhanced coordination responsibility and assist with utilization management approvals.

We will expand this concept statewide based on the results of the pilot. We have had exploratory discussions with KPCA IPA about a health home pilot for Kentucky SKY Enrollees assigned to them. Our analysis shows that 27% of our current foster care population sees PCPs associated with the KPCA IPA.

We are also exploring value based purchasing (VBP) reimbursement through discussions with key providers such as Home of the Innocents, which offers foster care residential services as well as primary care and dental services. Home of the Innocents provides comprehensive services to both children who are cared for in their residential facility and to children in the surrounding community. They have a multitude of services available in their Open Arms Children's Health Center including primary care, behavioral health services, PT/OT/ST as well as imaging services. Additionally they address social determinants of health through a food bank and clothes closet onsite at their facility. Home of the Innocents leadership understands that a VBP agreement is essential for them in order to begin to move away from a fee-for-service model which is not sufficient to cover their costs into a shared savings and ultimately full risk agreement where they will be rewarded for managing care of our Enrollees. This is a new concept for them so we will move them along the continuum, sharing with them the data they need to efficiently manage the care of the children they are serving.

CONTRACTING WITH SPECIALTY PROVIDERS

WellCare of Kentucky currently has contracts with most in-state specialty providers so our primary focus here will be on extending access and availability through the use of telehealth and training our specialty providers on all aspects of the Kentucky SKY program, in accordance with Section 41.14.1. Trauma-informed training for Specialty providers will be conducted through the University of Louisville either in person or by webinar.

Getting the Right Care
We have seen a 22% increase in Specialty visits since 2016 and a 9.5% decrease in emergency room visits for the Foster Child Population.

As with PCPs, we will ensure continuity of care for new Enrollees transitioning from other MCO's using the claim history provided by DMS to conduct a gap analysis of Specialty providers rendering services to the SKY population who are not currently in our network. We will include those providers in our Network Development Work plan with personal outreach to secure contracts.

To incent specialty care we will offer financial incentives and value based purchasing to specialists involved in complex care and reward them for addressing care needs. In addition, Gold Carding will be offered to specialty and behavioral health providers who have a demonstrated record of cost efficiency and quality. For instance, while WellCare of Kentucky contracts with nearly all psychiatric and ABA testing providers in the Commonwealth, we know there is still opportunity to increase access for these types of providers by offering Gold carding, which incentivizes providers by relaxing prior authorization requirements for these services.

To increase access to specialty providers, we will collaborate with DMS, DCBS and DJJ in the use of telehealth to ensure access for Kentucky SKY Enrollees. Telehealth is a useful tool to mitigate wait times for key Kentucky SKY specialty providers such as psychiatry, child-psychiatry, child-psychology, pediatric neurology, neuropsychology and applied behavioral analysis.

Our Virtual Integration Program allows PCP providers use a tablet enabled screening tool and refer, as needed, to a virtual behavioral health provider. Virtual behavioral health visits can happen immediately and follow-up can also occur from the youth's home via a device provided by WellCare of Kentucky. We will provide telehealth equipment and support for foster parents to connect youth to behavioral health clinicians through this program.

We are currently laying the groundwork to address payments for behavioral health services applied to foster care children in private facilities

ii. Recruitment strategy, including processes for identifying network gaps, developing recruitment work plans, and carrying out recruitment efforts.

As we develop our recruitment strategy, we first analyze our existing network to identify potential gaps in the provision of services to Kentucky SKY Enrollees using a variety of analysis tools, data sets and regional staff input. Through this comprehensive analysis, we review Enrollee needs and utilization patterns, including county-by-county waiver information; risk stratification data for all sets of services; and heat maps. We deploy our provider network recruitment strategy for all provider types, including PCPs, Specialty providers, hospitals,

FQHCs, Behavioral Health Multi-Specialty Groups, BHSOs, Psychiatric Residential Treatment Facilities (PRTFs), Residential Crisis Stabilization units, Therapeutic Foster Care Providers, CMHCs and Dental providers to ensure delivery of a comprehensive Kentucky SKY provider network.

IDENTIFYING NETWORK GAPS

Our identification process includes:

- Analyze GeoAccess Reports to evaluate that time and distance standards using DMS defined standards at the regional and county level
- Review claim history files provided by DMS to conduct a gap analysis of providers rendering services to Kentucky SKY Enrollees through other MCO and include them in our work plan
- Catalogue the market expertise of our internal staff including Provider Relations Liaison Leann Magre, Executive Administrator Lori Gordon, and their Care Coordination team to identify providers with the necessary training and expertise to manage the care of Kentucky SKY Enrollees
- Interview teaching and children hospitals such as the University of Louisville, UK Health Care Kentucky Children's Hospital and Norton Children's Hospital to identify key providers as well as any potential barriers to care
- Interview local DCBS and DJJ offices, foster parents and youth to secure the names of key providers in their region and identify any concerns or barriers to care
- Obtain input from our regional Provider Relations Representatives, Enrollee Service Representatives and Care Coordinators who serve as key resources for identifying any gaps in the network
- Catalog Therapeutic Foster Care Providers currently rendering therapy services to SKY Enrollees
- Review Out-of-Network and Closed Panel reports to identify potential gaps and opportunities to enhance our network

Our Existing Local Presence

WellCare of Kentucky currently supports the Kentucky MCC program through a dedicated Kentucky provider engagement team of nearly 75 associates who conduct network development and provider engagement in full support of the Department's goals. We will build on that existing presence as we implement the Kentucky SKY program.

In addition to the above data, we use Enrollee complaints and grievances, staff feedback, CAHPS survey data, and others to measure the adequacy of our provider network.

Periodically, our Kentucky SKY Medical Director, Care Coordination and Network Management team will conduct network assessments to ensure we are meeting the needs of SKY Enrollees. As part of these assessments, we engage local providers and community partners who routinely care for this population and with whom we have strong existing relationships, such as University of Louisville, UK Health Care Kentucky Children's Hospital and Norton Children's Hospital as well as the DCBS and DJJ to review and validate the information. Ongoing network assessments, including recommended actions, will be presented to our SKY Enrollee Outcomes Committee

and Collaboration Optimization Committee. These committees include DCBS, DMM, DMS, provider and foster parent participation.

DEVELOPING RECRUITMENT WORK PLANS

Using the results of this analysis we create detailed recruitment work plans to target providers and fill network gaps. Our recruitment work plans include frequent data feeds to test network progression using GeoAccess tools. We i**dentify** available providers and **target** them through the development of a recruitment work plan with timelines and accountabilities for each network development activity. We then **contract** by deploying a team of local resources to meet with non-participating PCPs, specialty providers and Therapeutic Foster Care providers. We comprehensively **train** all providers in our network to ensure they are ready to partner with us as active participants in the SKY program using our dedicated SKY Provider Relations representatives.

We know the best way to **recruit and retain** providers in our network is to fully support them so our dedicated SKY field teams and highly trained SKY Provider call center wrap support around the provider to ensure services are delivered and the providers are paid for the services they deliver. At program go-live and until stability is established, a team of experienced Provider services associates are available in a Command Center environment to respond immediately to provider questions and facilitate the prompt resolution of issues. Regional staff is also deployed to key providers with large Enrollee volume for rapid onsite resolution.

CARRYING OUT RECRUITMENT EFFORTS

Our recruitment efforts will be led by Provider Network Director Bonnell Gustafson Irvin, with the support of the entire Regional team. Our current Kentucky Network Development team includes a senior director, two managers and five associates. We will add additional team members as needed to meet Kentucky SKY program objectives. Meetings will be established with each of the Therapeutic Foster Care providers which do not currently participate in Medicaid. Our first step will be helping these providers secure a Medicaid number so they can complete contracting as well as explaining the contracting and credentialing process to them. We will also personally outreach to each non-participating PCP and specialty provider identified on the recruitment work plan to discuss participation in the Kentucky SKY network.

iii. Strategy for contracting and retaining specialists unique to the Kentucky SKY populations and perhaps different from those in the Medicaid managed care Provider network and how the Contractor will provide access to specialists not included in the Provider Network.

Our network strategy includes the specific recruitment of specialists unique to the Kentucky SKY populations which are not currently in our network. This includes providers delivering therapeutic foster care services to the Kentucky SKY population. As providers new to Medicaid, we will wrap local field support around them and assist with all aspects of contracting, including helping them secure a Medicaid number so they are eligible for contracting. We will also collaborate with DMS to expand access to Psychiatric Residential Treatment Facilities (PRTFs) to include PRTF 2's in addition to the PRTF 1's currently in network.

Our network assessment shows that of the 43 Private Child Care Providers (representing over 170 individual sites), 70% are already in our network. The remaining 30% are not Medicaid

providers at this time. **All Private Child Care Providers with Medicaid numbers are currently in our network.** We have already begun introducing these "new to Medicaid" providers to the SKY program by personally outreaching to each to invite them to our recent Provider Summits so they become familiar with Medicaid Managed Care. We understand the need to educate these new providers early and often.

Our regional team of Kentucky SKY experts will wrap supports around these providers to assist them in all aspects of enrolling in Kentucky Medicaid, contracting to become a provider with WellCare of Kentucky, delivering services to Kentucky SKY Enrollees, and billing and receiving reimbursement for services.

As we recruit our SKY Provider Relations Representatives, we will look for associates who have experience working with behavioral health providers and understand specialized billing services. These representatives will be responsible for teaching the basics of Medicaid to these nontraditional providers and helping them transition into an accredited BHSO status so they have the ability to bill for all they do. We will use our high touch Provider Engagement model to help the new BHSO providers understand all the needed processes to request, provide and be compensated for services provided.

When contracting with residential providers, as part of a BHSO, we will require evidence they meet the requirements of a Qualified Residential Treatment Provider (QRTP), as required under the Family First Preservation Services Act. We will also secure evidence that a provider is following the Building Bridges Initiative (BBI) principles by asking providers to complete the self-assessment and develop a work plan to move toward BBI improvement.

We understand the need to interface with the DJJ system as relates to care plans and access to services and that there will be a bridge between juveniles potentially moving in and out of DJJ residential homes. As part of network development, we will work closely with the DJJ to identify any unique providers which we need to contract with.

RETENTION STRATEGIES FOR SPECIALISTS UNIQUE TO KENTUCKY SKY

Our Providers Recommend Us
In our 2018 Provider Satisfaction survey, 93.4% of providers said they would recommend us to other providers.

WellCare of Kentucky's retention strategies are an integral part of our larger Provider Engagement Model. Through this model, we seek to advance quality-driven provider networks and support retention of high quality providers. Our experience has shown that non-traditional providers such as therapeutic foster care providers have varying degrees of size and sophistication, and that comprehensive support of these providers is necessary to assure the seamless delivery of Kentucky SKY services to our Enrollees. Many of these providers do not have Medicaid experience with billing or documenting medically necessity criteria.

Support for these providers will be anchored by a regional team of experts in the Kentucky SKY program who live in the communities they serve. This team will wrap supports around Kentucky SKY providers and assist them in all aspects of contracting and delivering services to Kentucky SKY Enrollees so they understand how to contract with us, how to bill for services, and are being reimbursed appropriately for the care they are providing. Our SKY provider relations

team includes our SKY Provider Liaison who is responsible for supporting the resolution of provider access and availability issues. Both the Provider Liaison and the regional SKY Provider Relations representatives will have detailed knowledge of Kentucky providers, including Behavioral Health providers, patterns of care/referral in Kentucky, the Kentucky SKY program, provider contracting, billing, authorizations, and claims submission. Our provider engagement team includes a **coding educator** who works work directly with SKY providers on coding practices beginning **four months in advance of program go-live**. This local team is supported by our and highly trained SKY Provider call center.

Our comprehensive suite of services is aimed at meeting these providers where they are to increase quality of care along with provider and Enrollee satisfaction. Components include:

- In person training by the SKY provider relations representatives (with expertise in authorization and billing) including helping the provider secure a Medicaid Number and providing the level of support needed to setup and use the secure provider portal to verify eligibility, view care needs and access clinical and administrative tools including no cost electronic claim submission, claim status, and claim editing/rebilling
- Advance training by our Coding Educator who works directly with SKY providers on coding practices starting four months prior to program go-live
- Regional forums, training partnerships with the DCBS and DJJ and a robust, in- person provider engagement and training model where we work one-on-one with providers.
- User friendly computer based training modules that are available on line 24/7 to accommodate busy schedules and a video training series to support ongoing education, in addition to in person training
  SKY provider relations representative support around authorizations, changes in fee schedule, training on medical necessity criteria and general training on how to ask for and get services approved

PROVIDING ACCESS TO SPECIALISTS UNIQUE TO THE KENTUCKY SKY NOT INCLUDED IN THE PROVIDER NETWORK

While we anticipate contracting with the vast majority of specialists unique to the Kentucky SKY populations, we realize there are instances where providers may choose not to participate in our network. The most common reasons we have encountered in our current Kentucky Foster Care population are:

- Providers not willing to accept Medicaid Enrollees
- Providers not willing to accept Medicaid rates

Solving Complex Access Issues Through Collaboration

WellCare of Kentucky successfully solved an access issue for a young adopted Enrollee with complex trauma and attachment issues. While this Enrollee has been in higher levels of care consistently, treatment progress was not evident and safely returning home was not possible. This Enrollee was preparing to discharge from a subacute hospital level of care but was not ready for a home environment. WellCare of Kentucky outreached to a private child care provider, usually only able to serve children in state custody, and asked if this provider might consider serving this Enrollee outside of the normal system process. WellCare of Kentucky also involved The Department as permission to step outside of the current system of care had to be secured. The provider accepted this Enrollee and through a single case agreement, WellCare of Kentucky and this provider agreed to a daily rate and Enrollee was admitted into their program. From this program, the Enrollee has since transitioned to another residential provider and is beginning to make treatment progress. Her adopted family is involved in her treatment and progress.

The most important thing is getting care for the Enrollee so we authorize out of network utilization. Typically this is accomplished by executing single-case, non-participating agreements which authorize care for a specific case and arranging any necessary transportation. The Kentucky SKY Provider Liaison is responsible for supporting the resolution of provider access and availability issues and will coordinate the out-of-network access.

iv. Process for continuous network improvement, including the approach for monitoring and evaluating Provider compliance with availability and scheduling appointment requirements and ensuring Kentucky SKY Enrollees have access to care if the Contractor lacks an agreement with a key Provider type in a given DCBS Service Region or DJJ Community District.

We monitor our network on an ongoing basis and engage in network development activities that expand our network beyond mere compliance with network availability and scheduling appointment requirements. Tools include a combination of GeoAccess reports, monthly out-of-network reports, network accessibility audits, open/closed panel reports, provider satisfaction surveys, Enrollee grievances, quality of care issues, utilization trends, HEDIS results, and more.

Our Kentucky SKY Medical Director, Behavioral Health Director Dr. Timothy Houchin, SKY Program Director, care coordinators, provider relations representatives, community partners and advisory boards serve as best sources for identifying opportunities to improve access.

Areas of improvement may be identified formally through our quality infrastructure or informally through inter-departmental connections. In such situations, our local medical directors, provider relations representatives, care coordinators and local quality teams work to implement corrective actions that are tailored to the specific issue identified and the cause. For example, a lack of access to a provider type in a specific area could lead to an investment opportunity where we may give incentives to providers to expand into the area or service type.

MONITORING COMPLIANCE WITH AVAILABILITY AND SCHEDULE APPOINTMENT REQUIREMENTS

WellCare of Kentucky's network providers are contractually required to comply with appointment availability and scheduling requirements. Providers, who continuously fail to meet contract requirements, following active, supported remediation efforts, may be terminated. We have processes in place to monitor, and resolve any issues with the timeliness of appointment access within our network which is described below:

Appointment Accessibility Surveys: Our Network Integrity Team partners with an external vendor to conduct telephone surveys to assess appointment availability, appointment wait time, and after-hours coverage. We re-audit any providers who fall short of standards and follow-up with a corrective plan as needed. Findings are shared with the Provider Relations Team to ensure appropriate follow-up and education is provided to providers failing to meet accessibility standards.

Getting Care Quickly
WellCare of Kentucky's 2018 Child Medicaid CAHPS results were outstanding with 88.71% of children Getting Needed Care and 94.75% Getting Care Quickly.

Enrollee and Provider Grievances/Complaints: Our associates (Enrollee Advocates, Enrollee Services Representatives and Service Managers) review, log and categorize grievances and complaints by cause, disposition and type for review and follow-up. Feedback generated from our Enrollee and Provider Advisory Groups also provide us with regional or systemic trends which are addressed by our Enrollee Advocates before a formal complaint is filed.

Grievance/complaint information is shared with WellCare of Kentucky's Network Integrity and Quality Improvement Teams to monitor access to care, used by our Network Development Team to identify the need and opportunities for expanding access to care, and allows our Provider Relations Team to follow-up and work with providers.

Enrollee and Provider Satisfaction Surveys: WellCare conducts annual surveys which include key questions about the quality and adequacy of our Provider network. Our Quality Improvement Team reviews the results of the survey and shares the results with our Network Development and Provider Relations Teams to identify areas of opportunities for additional contracting as well as service improvements.

Additionally, our health plans participate in the Consumer Assessment of Health Providers and Systems (CAHPS®) survey conducted annually by an independent National Committee for Quality Assurance (NCQA) certified vendor. Through this tool, we evaluate data related to Enrollees' perceptions of quality of care and service, including getting needed care and getting that care quickly.

Because the CAHPS results are anonymous, we implemented a "mock survey" which allows us to obtain the detail behind the results and thereby identify providers specifically. The mock survey allows us to determine areas of opportunity to improve access. These results are used to implement engagement activities (on-site visits, provider education, etc.) to address identified opportunities and work with providers to improve the Enrollee experience.

Closed Panel Reports: Our Provider Relations Team review monthly closed panel reports to identify providers with recently closed panels. Provider Relations Representatives outreach to each provider in an attempt to have them re-open their panel. Closed panel percentages are reviewed by specialty to determine if additional providers are needed. Our Provider Relations Representatives also visit our provider groups to review and verify their details, including panel status. We will also have a Provider Accuracy Audit in place that will samples network data reporting for analyzing and reporting on the information reported to us, including panel status.

Out-of-Network Paid Claims: The Network Development and Provider Relations Teams monitor out-of-network paid claim reports to identify providers that are not currently contracted with WellCare. This information is shared with the Network Development Team to begin recruitment activities.

WellCare of Kentucky Regional Staff: Our regional provider representatives, Enrollee Service Representatives and Care Coordinators serve as key resources for identifying any gaps in the network. Because they are regionally based, they understand the provider landscape across each Region.

Our reporting tools enable us to continuously monitor network performance and identify solutions to prevent or remediate access issues. Solutions include targeted outreach and education of providers failing to meet our contractual standards, followed by continuous monitoring. Providers, who continuously fail to meet contract requirements, or follow active, supported corrective action efforts, may be terminated.

Our comprehensive monitoring program has shown results, with PCP and Specialty appointment availability in the third quarter of 2019 far exceeding our goal of 90% compliance, as shown in **Table G.6-3**. Telephonic surveys measured the ability to schedule appointments within 30 days for routine care and 48 hours for urgent care.

Table G.6-3 Telephonic Survey Results (through Q3 2019)

Provider Type	Urgent	Routine
PCPs	95.20%	98.00%
Pediatricians	98.41%	95.24%
Specialty Care Providers	86.42%	93.83%

ENSURING ACCESS TO CARE WHEN AN AGREEMENT A KEY PROVIDER IN A REGION OR DISTRICT IS LACKING

Ensuring the quality of care and service delivered to our SKY Enrollees is our primary priority regardless of whether a provider is participating with us. While we prefer to leverage our contracted providers who have undergone credentialing, we understand SKY Enrollees may require access to out-of-network providers. This is especially true for SKY Enrollees where placement moves are common or where continuity is of paramount concern. Our utilization management program features an Enrollee and provider-friendly system for authorization of

out-of-network services. Our supporting policies, procedures, and systems provide the necessary flexibility for our staff to authorize care to out-of-network providers, and for our staff to continue to work with these providers in the ongoing coordination of our Enrollee's care. As requests for out-of-network care are found to be in our Enrollee's best interest, we take the necessary steps to authorize services, including assessing the quality of the provider, documenting expectations, coordinating care, and monitoring and assessing the care provided. If we lack an agreement with a key provider in a DCBS service region or DJJ community district, the case is referred to the Kentucky SKY Provider Liaison responsible for supporting the resolution of provider access and availability issues. The Provider Liaison has detailed knowledge of Kentucky providers, including Behavioral Health providers, and patterns of care/referral in Kentucky.

The Provider Liaison outreaches to the provider to arrange for a single case agreement to provide services to the Enrollee and work with the Enrollee's assigned Care Coordinator to authorize service. The Provider Liaison keeps the DCBS Service Region or DJJ Community District informed as to the resolution of the access and availability issue. At the same time, we facilitate coordination of transportation for Enrollees if they lack available transportation to the provider. In accordance with Section 29.3 Covered Services will be reimbursed at no more than 100% of the Medicaid fee schedule/rate unless the Covered Service falls under the EPSDT benefit.

In conjunction with the single case agreement, we extend provider contracts, discuss the benefits of participation in the SKY Network and seek to resolve the provider's reasons for not contracting with WellCare of Kentucky

v. How the Contractor will ensure appointment access standards are met when Kentucky SKY Enrollees cannot access care within the Provider Network.

WellCare of Kentucky's approach to measuring and verifying provider compliance with appointment access standards is described in our response to Question G.6.a.iv above and includes:

- Conducting annual appointment accessibility surveys
- Documenting, addressing and follow-up with SKY Enrollee and provider about appointment access grievances/complaints
- Conducting annual Enrollee and provider satisfaction surveys that help gauge accessibility
- Reviewing monthly closed panel reports
- Monitoring out-of-network paid claims reports
- WellCare of Kentucky regional staff field knowledge

In the rare instance the Enrollee is not able to access care within the SKY provider network we take immediate steps to ensure appointment access standards are met. The case is referred to the Kentucky SKY Provider Liaison responsible for supporting the resolution of provider access and availability issues. The Provider Liaison will uses his or her detailed knowledge of Kentucky providers and patterns of care/referral to identify a provider who can **deliver the needed service within the required timeframe** and outreach to the provider to arrange for a single case agreement to provide services to the Enrollee and work with the Enrollee's assigned Care Coordinator to authorize services. At same time will extend provider contracts and discuss the

benefits of participation in Kentucky SKY. In accordance with Section 29.3 Covered Services will be reimbursed at no more than 100% of the Medicaid fee schedule/rate unless the Covered Service falls under the EPSDT benefit.

b. Provide an example of how the Contractor has contracted for similar networks for similar populations in other programs. Provide a work plan to contract with Kentucky SKY Network Providers, with accountabilities and timelines.

WellCare of Kentucky and our affiliate Medicaid MCOs have more than 53 combined years of experience managing provider networks that care for children involved in the foster care or adoption assistance system. Today, our networks of more than 270,000 physical health, behavioral health and community-based providers throughout eight states, including Florida, Kentucky, New Jersey, Nebraska, Missouri, Michigan, Hawaii, and South Carolina, manage almost 28,000 Enrollees in the foster care or adoption assistance system, including the 8,100 currently enrolled in WellCare of Kentucky.

KENTUCKY EXPERIENCE

As an incumbent MCO in Kentucky, WellCare of Kentucky currently serves the single largest concentration of Foster Care, Adoption and Adult Guardianship children across the Commonwealth including all eligibility classes found in Section 41.2 Eligibility for Enrollment in Kentucky SKY.

WellCare of Kentucky has coordinated care for Enrollees involved in the foster care system since the inception of its contract to provide Medicaid managed care services for DMS in 2011. WellCare of Kentucky's statewide network of more than 34,500 providers cares for over 8,100 children and adolescents in foster care throughout the 120 counties in the Commonwealth. Contracted providers include PCPs, FQHCs, specialty providers, behavioral health providers, retail, specialty and mail-order pharmacies, ancillary providers, acute care hospitals, facilities, home health and DME providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations.

NATIONAL EXPERIENCE

CMS Health Plan

WellCare's most recent implementation involving foster care and special needs children is the Children's Medical Services (CMS) Health Plan, a plan for children with special needs that provides a comprehensive system of care that is centered around the family and caregiver. Under the contract with the Florida Department of Health, WellCare of Florida is the sole MCO for the CMS Health Plan, which went live February 1, 2019 and covers all 67 Florida counties. The CMS Health Plan covers children who are under age 21 and eligible for Medicaid or are under age 19 and eligible for Florida Kid Care, and have special health care needs that require extensive preventive and ongoing care. CMS Health Plan's network of 43,000 providers includes 350 Medical Foster Care Parent Providers as well as a network of Prescribed Pediatric Extended Care (PECC) providers for therapy services while at the PPEC. CMS Health Plan covers more than 68,000 children and adolescents, including 200 Medical Foster Care children and other foster care children in the general population.

CMS Health Plan's contracted providers include PCPs; FQHCs, specialists, behavioral health providers, retail, specialty and mail-order pharmacies, ancillary providers, acute care hospitals, facilities, medical foster care parent providers, prescribed pediatric extended care, home health and DME providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations. In building this network, transition of care was our paramount concern since many of these children had been with their providers for years. WellCare of Florida worked closely with state agencies to identify the services these children were receiving through a series of reports by provider type. Network gaps were systematically identified and personal outreach occurred to secure contracts. As a result of these efforts, implementation occurred with minimal disruption to the Enrollees.

Florida Staywell

Our Florida Affiliate, Staywell, has coordinated services for foster care system-involved Enrollees since 1998 when they began their support of Medicaid Enrollees including those who were involved in foster care systems. Staywell's network of 59,400 providers cares for its more than 9,600 children and adolescents who are in the care of the state's foster care system. Staywell's contracted providers include PCPs, FQHCs, specialists, behavioral health providers, retail, specialty and mail-order pharmacies, ancillary providers, acute care hospitals, facilities, home and community-based (HCBS) providers, long term services and support (LTSS) providers, home health and DME providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations.

Meridian

Our affiliate Medicaid plan, Meridian, has coordinated care for children involved in Michigan's foster care system through its contract to provide Medicaid managed care services for the Michigan Department of Health and Human Services since 2016. Meridian's network of 40,000 providers cares for nearly 1,900 Enrollees involved in Michigan's foster care system throughout 83 Michigan counties. Meridian's contracted providers include PCPs, FQHCs, specialists, behavioral health providers, retail, specialty and mail-order pharmacies, ancillary providers, acute care hospitals, facilities, home health and DME providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations.

WellCare of New Jersey

Our New Jersey affiliate, WellCare of New Jersey, has coordinated care for foster care-involved Enrollees since the inception of its contract to provide Medicaid managed care services for the Department of Human Services (DHS) in 2014. WellCare of New Jersey's network of 29,300 providers cares for its nearly 300 children and adolescents who are in the care of the state's foster care system. WellCare of New Jersey's contracted providers include PCPs, FQHCs, specialists, behavioral health providers, retail, specialty and mail-order pharmacies, ancillary providers, acute care hospitals, facilities, home and community-based (HCBS) providers, long term services and support (LTSS) providers, home health and DME providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations.

Ohana Health Plan

`Ohana Health Plan, our Hawai`i Medicaid affiliate, has coordinated care for children and adolescents in the state's foster care program since 2009, when it originally contracted with the Department of Human Services (DHS) to provide Medicaid managed care services. `Ohana's network of 9,600 providers cares for nearly 200 Enrollees who are in foster care. `Ohana's contracted providers include PCPs, FQHCs, specialists, behavioral health providers, retail, specialty and mail-order pharmacies, ancillary providers, acute care hospitals, facilities, LTSS providers, home health and DME providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations.

WellCare of South Carolina

Our Medicaid affiliate in South Carolina, WellCare of South Carolina, has been contracted with the Department of Health and Human Services (DHHS) to provide Medicaid managed care services to foster care youth, as a WellCare company, since January 2013. WellCare of South Carolina's network of 29,000 providers cares for its nearly 100 foster care Enrollees who are under the care of the Department of Social Services (DSS). WellCare of South Carolina's contracted providers include PCPs, FQHCs, specialists, behavioral health providers, retail, specialty and mail-order pharmacies, ancillary providers, acute care hospitals, facilities, home health and DME providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations.

WellCare of Nebraska (through 1/23/2020)

Previously, WellCare affiliate in Nebraska coordinated care for foster care-involved Enrollees since the inception of its contract to provide Medicaid managed care services for the Department of Health and Human Services (DHHS) effective January of 2017, WellCare of Nebraska's network of 23,500 providers cares for its more than 2,700 children and adolescents in Nebraska's foster care system across all 93 Nebraska counties. WellCare of Nebraska's contracted providers include PCPs, FQHCs, specialists, behavioral health providers, retail, specialty and mail-order pharmacies, ancillary providers, acute care hospitals, facilities, home health and DME providers, LTSS providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations.

Missouri Care (through 1/23/2020)

Previously, Missouri Care coordinated care for children involved in Missouri's foster care system through its contract to provide Medicaid managed care services for the Division of Medical Services (now the MO HealthNet Division), as a WellCare company, since March 2013. Missouri Care's network of 34,800 providers cares for its nearly 2,700 Enrollees involved in Missouri's foster care system throughout 114 Missouri counties and the city of St. Louis. Missouri Care's contracted providers include PCPs, FQHCs, specialists, behavioral health providers, ancillary providers, acute care hospitals, facilities, home health and DME providers, urgent and emergency care facilities, and non-traditional community and faith-based organizations.

WORK PLAN FOR CONTRACTING WITH KENTUCKY SKY NETWORK PROVIDERS

Our work plan for contracting with Kentucky SKY Network providers is included as **Attachment G.06-b Work Plan for Contracting with Kentucky SKY Network Providers**. This work plan includes accountabilities and timelines.

Please refer to our response to C.17, Provider Network, under Technical Approach, for additional information regarding our experience, partnerships, processes, procedures and compliance to the requirements in the Draft Medicaid Managed Care Contract and Appendices.

G.6 Provider Network

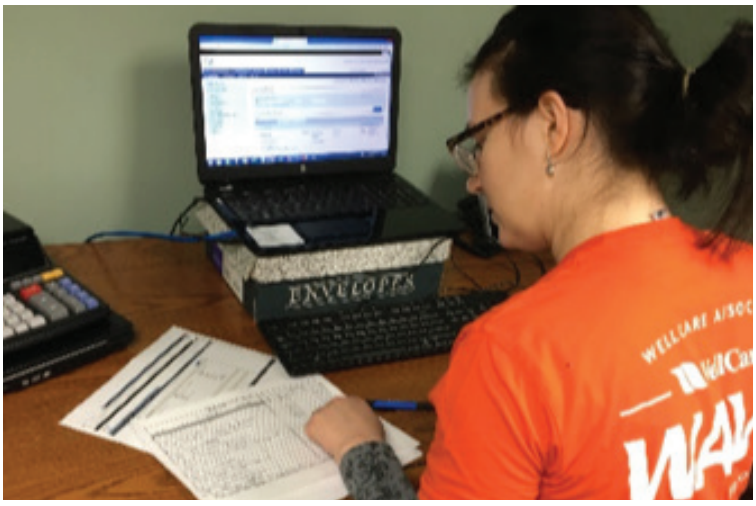
- Attachment G.6.b Workplan for Contracting with Kentucky SKY Network Providers

WellCare of Kentucky Workplan for Contracting with Kentucky SKY Network Providers			
Timeline	**Goals and Tasks**	**Accountability**	**Status**
June 2019	• Review RFP requirements related to provider network for any new requirements • Initiate development of Provider or service gap list based on specialty types and network access parameters • Determine network sizing for resource planning • Draft Provider Participation Agreement/Amendment • List of provider who have a signed contract	Business Development, Network Development, Provider Services	**Complete**
July/ Aug 2019	• Review list of providers who are currently serving SKY enrollees and determine those who are currently contracted with WellCare. • Determine capacity of in-network provider who are currently serving SKY enrollees • Meet with various advocacy agencies and DCBS/DHH and DBHDID to determine additional providers who may be needed for the network • Develop network access strategies for rural/underserved areas such as telehealth, provider incentives, etc.	Network Development, Business Development, Provider Services Legal	**In Process**
Sept 2019	• Further develop Provider list to ensure appropriate number of pediatricians, BH providers and providers with experience in trauma-informed care. • Obtain and analyze state fee-for-service file for additional prospective providers • Develop resource model to support network development and management activities	Network Development, Business Development, Provider Services	**In Process**
Oct 2019	• Submit Provider Participation Agreement to DMS for approval • Submit amendment to contract with existing Medicaid Providers for approval • Build out range of reimbursement options for fee-for-service, PPS for FQHC and RHCs shared savings and value-based purchasing	Business Development, Legal. Network Development, Provider Reimbursement	
Nov 2019	• Develop contract cover letter and marketing materials • Draft network recruiting phone script	Network Development	
Dec 2019	• SKY Provider Participation Agreements and Amendments approved and in place • Obtain approval for cover letter and marketing materials • Hire and train additional contracting staff to supplement current market resources • Hire and train additional PR staff and Provider Liason • Initiate contracting and amendments with key Providers through face-to-face meetings • Initiate negotiations with key facilities and Provider groups • Deploy field team for face-to-face outreach	Network Development, Provider Services, Provider Reimbursement	

Jan 2020	• Release Provider Mailing for SKY program information and offer to contract • Begin existing Medicaid network amendment process • Begin processing incoming amendments, contracts and credentialing applications • Establish weekly Geo-Access reports to track progress • Conduct weekly meeting to track progress, discuss barriers and remediation strategies • Ongoing telephonic and face-to-face contact with key Providers • Continue processing incoming documents • Ongoing weekly review of network development progress, including subcontractor networks	Network Development, Provider Services	
Feb 2020	• Ongoing telephonic and face-to-face contact with key Providers • Continue processing incoming documents • Ongoing weekly review of progress, • County-by-county blitz visits to non-respondents • Develop Provider training materials and Provider Welcome letter	Network Development, Provider Services	
March 2020	• Begin statewide regional Provider information forums • Conduct Webinars to answer provider questions • Ongoing telephonic and face-to-face contact with key Providers • Continue processing incoming documents • Ongoing weekly review of progress, • Access-compliant network contracts in house and in credentialing/configuration workflow for directory production and July 1, 2020 implementation	Network Development, Provider Services, Digital Communications	
April 2020	• Ongoing telephonic and face-to-face contact with key Providers • Continue processing incoming documents • Ongoing weekly review of progress, • Provider education material in place including Provider orientation, Provider resource guide, job aids and behavioral health toolkit	Network Development, Provider Services	
April/ May 2020	• Begin regional orientation sessions to continue 30 days post implementation. Includes program overview, question and answer period, job aids and quick guides with training material on the website • Provider Welcome Letters mailed • Online training and webinars in place	Network Development, Provider Services	
May 2020	• Ongoing telephonic and face-to-face contact with key Providers • Continue processing incoming documents • Ongoing weekly review of progress • Begin outreach by local Provider services representatives to conduct • training • Provider manual on website • Provider website and secure portal operational • Submit SKY network to the Division at least 60 calendar days prior to contract start date (or as specified	Network Development, Provider Services	

June 2020	• Provider Call Center operational • Activate Provider Engagement Model with ongoing field-based Provider support and training through field-based associates including Provider services representatives, operations account managers, SKY medical director, pharmacy director, quality practice advisors and patient care advocates • Ongoing telephonic and face-to-face contact with key Providers • Continue processing incoming documents • Ongoing weekly review of progress, including subcontractor networks	Network Development, Provider Services, Digital Communications	
July 2020	• Go Live and Command Center activated • Activate team of experienced Provider services associates in Command Center environment with regional staff deployment to key Providers • Ongoing training of newly enrolled Providers within 30 days of enrollment • Ongoing oversight of subcontractor networks in place	Provider Services, Quality	
August 2020 and ongoing	• **Provider network listing to the DMS – monthly** • **GeoAccess reports demonstrating compliance with Report 25 standards - quarterly** • **Targeted network recruitment to close identified gaps in services** • **Network Adequacy exception report – quarterly** • **Timely Access report - quarterly** • **Ongoing monitoring of Provider compliance with availability and scheduling requirements** • **Quarterly Provider forums in regional venues across the state with material also placed on Provider website** • **Create quick reference guides and refine specialized training for SKY program**	**Network Development, Provider Services**	

7. Provider Services



WellCare®
Beyond Healthcare. A Better You.

G.7. PROVIDER SERVICES

Provide the Contractor's proposed approach to Provider outreach and education. Include a description of how initial training will differ from ongoing training. Describe proposed training materials including but not limited to:

a. Coordinating services;
b. Care Coordination Teams;
c. Training in Trauma-informed Care (include sample materials);
d. Crisis services;
e. Child and Adolescent Needs and Strengths (CANS);)
f. High Fidelity Wraparound approach;
g. Impact of ACEs;
h. Neonatal Abstinence Syndrome (NAS);
i. Six Seconds Emotional Intelligence (SEI); and
j. Screening for and identification of Behavioral Health needs.

G.7. PROVIDER SERVICES

Provide the contractor's proposed approach to provider outreach and education. Include a description of how initial training will differ from ongoing training. Describe proposed training materials including but not limited to:

WellCare of Kentucky will comply with the Department for Medicaid Services' (DMS) expectations and requirements as specified in Section 27 Provider Services and Section 41.14.1 Education and Training of Network Providers of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

WellCare Kentucky has over eight years of experience with six Regional offices and a proven, field-based, provider-facing outreach and education program with 18 Provider Relations representatives and managers established regionally across the state. WellCare's Provider Relations (PR) representatives live in the region where they support providers, giving them both proximity to the providers they support and familiarity with their communities. We will build on this foundation to serve the Kentucky SKY program, including the hiring of a Kentucky SKY dedicated PR Manager and two dedicated PR representatives, ensuring that we can meet the specific outreach and education needs of its providers.

PROPOSED APPROACH TO PROVIDER OUTREACH AND EDUCATION

WellCare Kentucky will build on the foundation of its robust MMC Provider Relations functions, establishing a separate Provider Relations team to serve the Kentucky SKY program, creating a provider services function that will act as the point of contract specifically for providers serving SKY Enrollees. WellCare will establish this separate PR team to best serve the new providers, including 30+ private child care providers who will be new to a managed care system and may need extra assistance learning new systems and resolving any issues that arise at intervention. The dedicated team will be augmented and supported by the larger provider relations team

particularly during implementation to rapidly deploy the proper training to all providers across the state. Both teams will be cross-trained on the Medicaid and SKY programs so they can assist each other during times of high provider demand.

PRIOR TO IMPLEMENTATION

Prior to implementation of the Kentucky SKY program, we will work with DMS, DCBS, and DJJ to develop and implement a series of provider and community summits to introduce the program, respond to questions and concerns and begin familiarizing providers with the tools and support available to them as they prepare for implementation. We will use a combination of our six regional offices and other local sites across the Commonwealth to provide the most convenient options for our provider. This is similar to the approach WellCare took at DMS' request prior to implementation of the State's waiver program.

Prior to Kentucky SKY implementation, we will host regional provider summits to answer questions and offer tools and supports to the network.

ONGOING OUTREACH AND EDUCATION

As required, WellCare conducts provider orientation within 30 Days after we place a newly contracted provider on an active status. During the launch of Kentucky SKY, our entire provider relations team will be mobilized to train and educate our new providers on how to interact with WellCare. This will include 18 Provider Relations representatives and managers and five Hospital Services specialists and managers who live throughout every region in Kentucky. Orientation is conducted in compliance with WellCare's SKY Provider Orientation and Education Plan, which we will submit within 60 Days of contract execution, when material changes are made, and annually. Our ongoing model of provider orientation relies on trainings held in the providers' offices during monthly on-site visits, a bi-weekly webinar of rotating topics based on provider needs and an annual Provider Summit. Our monthly, in-office, face-to-face meetings with providers are the primary way we communicate and train our providers.

PROPOSED TRAINING MATERIALS

Please see our response to **Question G.4** Kentucky SKY Contractor Educational and Training Requirements for additional information about provider training topics. WellCare Kentucky's provider education will cover the topics outlined in **Table G.7-1**:

Table G.7-1: Proposed Training Materials for Select Kentucky SKY Provider Education Topics

Proposed Training Materials	Initial vs. Ongoing
a. Coordinating Services	
• Our Provider Orientation materials including information about: • The importance of the provider's role in coordinating services, including behavioral health and physical health services • Tools available to providers to expedite coordination of services, including fax notifications when a patient is hospitalized.	Initial and then a periodic refresher webinar with any new information or guidance

Proposed Training Materials	Initial vs. Ongoing
b. Care Coordination Teams	
• Our Provider orientation materials, including information about: • Introduction to our interdisciplinary Care Coordination Teams with roles established according to American Academy of Pediatrics (AAP) guidelines • Assignment to Enrollees to meet individual needs • Roles and responsibilities	Initial and then a periodic refresher webinar with any new information or guidance
c. Training in Trauma-informed Care	
• Trauma-Informed Care in Kentucky, presentation by Diane Gruen-Kidd, LCSW; DBHDID • Webinars from The National Child Traumatic Stress Network: https://www.nctsn.org/resources/training/webinars?search=&resource_type=21&trauma_type=All&language=All&audience=30&other=All • Models of Trauma-Informed Integrated Care Part I: Comprehensive Care for Children and Youth in the Child Welfare System; and • Part II: Identifying and Responding to Early Childhood Trauma in the Pediatric Setting; and • Developmental and Medical Issues for Young Foster Children • Materials for Trauma-Informed Care training will be developed in conjunction with the University of Louisville Kent School of Social Work. Please see **Attachment G.7.c Sample Trauma Informed Care Training Materials**, provided electronically.	Initial and then a periodic refresher webinar with any new information or guidance
d. Crisis Services	
• Crisis Intervention: Helping Patients Regain Safety and Control; CE Direct Course CE582	Crisis Intervention: Helping Patients Regain Safety and Control; CE Direct Course CE582
e. Child and Adolescent Needs and Strengths (CANS)	
• Project SAFESPACE CANS Training for Clinicians • Kentucky Child Adolescents Needs and Strengths (KY-CANS) manual Older Child Version • Kentucky Child Adolescents Needs and Strengths (KY-CANS) manual Younger Child Version	Initial and then a periodic refresher webinar with any new information or guidance
f. High Fidelity Wraparound Approach	
• Training materials from the National Wraparound Implementation Center at https://docs.wixstatic.com/ugd/272564_229abdf2f2b94459813d6a7e87fcd16f.pdf	Initial and then a periodic refresher webinar with any new

Proposed Training Materials	Initial vs. Ongoing
	information or guidance
g. Impact of ACES	
• Webinar from the National Child Traumatic Stress Network: Understanding the Impact of Childhood Trauma, Adversity and Toxic Stress on the Body and Mind: The Role of Integrated Healthcare at https://www.nctsn.org/resources/training/webinars?search=&resource_type=21&trauma_type=All&language=All&audience=30&other=All	Initial and then a periodic refresher webinar with any new information or guidance
h. Neonatal Abstinence Syndrome (NAS)	
• Understanding Neonatal Abstinence Syndrome for the General Pediatrician; Providers Clinical Support System webinar developed by AAP; at https://pcssnow.org/event/understanding-neonatal-abstinence-syndrome-for-the-general-pediatrician/ • Neonatal Abstinence Syndrome: Off to a Shaky Start; CE Direct Course CE581	Initial and then a periodic refresher webinar with any new information or guidance
i. Six Seconds Emotional Intelligence (SEI)	
• Unlocking EQ at https://www.6seconds.org/certification/	One-time initial
j. Screening for and identification of Behavioral Health needs	
• WellCare BH Toolkit, Age 17 and Younger • WellCare BH Toolkit, Adult • SAMHSA Guide to Behavioral Health Integration for Safety-Net Primary Care Providers • https://www.integration.samhsa.gov/integrated-care-models/CIHS_quickStart_decisiontree_with_links_as.pdf	Initial and then periodic refresher webinar with any new information or guidance
Additional Training Building Bridges Initiative	
• Building Bridges Self-Assessment Tool • Instructional Guide: Strategies for Successful Implementation of the Self-Assessment Tool • Webinar: Overview of BBI • A BBI Guide: Finding and Engaging Families for Youth Receiving Residential Interventions: Key Issues, Tips and Strategies for Providers • BBI: Performance Guidelines and Indicators Matrix • All at http://www.buildingbridges4youth.org/products/tools	Initial and then periodic refresher webinar with any new information or guidance

KENTUCKY SKY PROVIDER RELATIONS FUNCTIONS

WellCare's provider outreach and education functions are an important element of our "high-touch, high-tech" Provider Engagement Model, which we will tailor to meet the specific needs

of providers in the Kentucky SKY program. Our PR representatives lead the Provider Engagement Model and are the first point of contact with providers. The field-based team of PR representatives is also supported by an existing team of cross-trained representatives to help as needed and an on-demand Provider Call Center staffed for the Kentucky SKY program. The fully-staffed call center will be available Monday through Friday 8:00 am – 6:00 pm Eastern Standard Time, including federal holidays. Finally, we also employ a Kentucky-based Operational Account Representative team of claim support specialists who provide local assistance with complex claims issues. This team is available to meet with providers when there is a claims dispute and discuss or adjust the issue in real time during the meeting.

Our call center callers are greeted by an Interactive Voice Response (IVR) system, which provides callers with clear, easy-to-follow instructions and includes provisions to speak to a live representative during normal business hours or leave a voice message anytime. CAREChannels, our telephone and communication platform, is designed to enhance the provider experience. Our enhanced speech recognition automated call distribution system effectively answers, routes, tracks and reports all calls and inquiries. Our secure provider portal allows providers to process authorizations 24 hours a day, 7 days a week. Authorizations are never required for emergency care. After-hour calls into UM are transferred directly to nurses on-call who address emergent needs. Should consultation be required with the Medical Director, the associate will outreach directly to the Medical Director by telephone to discuss the situation live.

Our secure Provider portal allows Providers to process authorizations, submit claims, manage their assigned Enrollees, and provider many other self-help features 24 hours a day, 7 days a week in a secure environment. The provider portal also includes innovative features like a chat function with claims support staff if the provider has a question. If the provider uses this online chat feature, their inquiry is pushed to the front of the support queue for a quick response. As we do today, we will continue to issue newly-contracted providers a Provider Manual within five business days from inclusion of the provider in our network and provide online access to the Provider Manual and any changes or updates. The Provider Manual and all provider materials are available both online and in hard copy format upon request of the provider.

Please refer to our response to C.17, Provider Services, under Technical Approach, for additional information regarding our experience, partnerships, processes, procedures and compliance to the requirements in the Draft Medicaid Managed Care Contract and Appendices.

G.7 Provider Services

8. Covered Services

G.8. COVERED SERVICES

a. Describe the Contractor's approach for ensuring the successful completion of required assessments and screenings. Please include a description of the following:

i. How the Contractor will coordinate with Kentucky SKY Enrollees, the Department, DCBS, DJJ, and families. Address the involvement of any other sister agencies in the description.

ii. How the Contractor will ensure assessments are initiated immediately upon a Kentucky SKY Enrollee's Enrollment in the Kentucky SKY program.

iii. How the Contractor will meet standards for Early and Periodic Screening, Diagnostic and Treatment (EPSDT) screening.

iv. Any challenges that the Contractor anticipates in completing required assessments and how it will mitigate these challenges.

v. Provide examples of how the Contractor has succeeded in providing assessments to individuals similar to those required for the Kentucky SKY Enrollees.

vi. Include examples of Trauma assessment or screening tools the Contractor would recommend the Department consider for the use in identifying Trauma in Kentucky SKY Enrollees.

b. Submit the proposed screening tool the Contractor will use to develop the Kentucky SKY Care Plan. Include a description of how the Contractor will use the results of assessments that sister agencies have conducted in developing the Care Plan. Provide examples of prior tools the Contractor has used for other similar programs and detail how these tools have contributed to the Contractor achieving program goals.

c. Describe its comprehensive approach to providing Crisis Services, including in home services, to Kentucky SKY Enrollees.

d. Describe the Contractor's experience in providing services through a holistic, person-centered approach, utilizing a High Fidelity Wraparound approach.

e. Describe how the Contractor will develop and provide interventions that will help develop resiliency in Kentucky SKY Enrollees who have been exposed to Trauma and ACEs.

G.8. COVERED SERVICES

a. Describe the Contractor's approach for ensuring the successful completion of required assessments and screenings. Please include a description of the following:

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 33.6 Behavioral Health Services Hotline, Section 34.3.C Enrollee Needs Assessment and Section 41.17 Required Assessments and Screenings of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

ENSURING SUCCESSFUL COMPLETION OF REQUIRED ASSESSMENTS/SCREENINGS

WellCare has several years of experience serving children and youth in foster care as part of the Medicaid managed care program with a high-touch comprehensive assessment process to identify needs and pinpoint the right services. As we prepare for implementation of the Kentucky SKY program, we are building on our experience and working with local and national experts to ensure that our screening and assessment processes incorporate the unique factors, such as trauma and placement change history, that impact children and youth in foster care.

We recognize that during the initial implementation of Kentucky SKY, there will be a larger-than-normal influx of Enrollees. Our implementation plan will include measures to ensure we are prepared to handle that influx smoothly. As part of our implementation plan, we will collaborate with DCBS and DJJ to identify and prioritize Enrollees with complex behavioral health and medical needs to ensure they are immediately assessed and have a plan of care in place. We will also work with the other managed care organizations who will be transitioning Kentucky SKY members to WellCare to identify and prioritize Enrollees with complex behavioral health and medical needs as part of the transition of care process. We ensure continuity of all approved services, medications, and durable medical equipment during and after the transition period. As an example of how we have handled this type of Enrollee influx, we will build on the successes and lessons learned by our affiliate, WellCare's Florida Children's Medical Services (CMS) Health Plan. Their sole source, statewide contract to provide services to 68,000 children and adolescents, including 200 medically complex children in "Medical Foster Care" and other foster care children in the general population went live Feb. 1, 2019. Because of the significant health care needs of this population, their top priority was quickly performing assessments to identify and coordinate care to address the most immediate service needs. They worked closely with involved state agencies to obtain pre-implementation reports by provider type on the services these children were receiving prior to implementation through a series of reports by provider type.

HEALTH RISK ASSESSMENTS (SCREENINGS) AS PART OF WELCOME CALLS

We will mail an Enrollee Welcome Packet within five calendar days of receiving the 834 file. It is our standard practice to conduct a New Enrollee Welcome call soon after that. During the Welcome call, our Enrollee Services Representative (ESR) will ask the enrollee or caregiver to confirm receipt of the Welcome Packet, verify their PCP assignment and allow us to help them make the Enrollee's first appointment, and conduct the Health Risk Assessment (HRA). We make multiple attempts to contact the Enrollee to conduct the HRA and may use text, email or direct mail to reach them.

As our trained ESR completes the Welcome call, CAREConnects, our customer relationship management tool, generates pop-ups on their desktop alerting them of open care needs including EPSDT screenings or overdue immunizations and make appointments with the Enrollee's legacy physicians, assign the Enrollee a new PCP, or find a specialist. Through the coordination by the ESR, we remove any barriers the Enrollee has to access care helping them get to their appointment including transportation, language assistance, or any other resources needed.

The telephonic New Enrollee Welcome call we describe above will work well for adopted Enrollees or former foster care Enrollees when the Kentucky SKY program is initially implemented. After the initial implementation of the Kentucky SKY Program, our experience indicates that new Enrollees coming into the program as children in foster care will require a more high-touch approach. In these cases, the WellCare Field Outreach Coordinator (FOC) will collaborate with the Enrollee's DCBS guardian and complete the HRA within one business day. In these cases, further automated outreach should not be necessary.

i. How the Contractor will coordinate with Kentucky SKY Enrollees, the Department, DCBS, DJJ, and families. Address the involvement of any other sister agencies in the description.

CURRENT APPROACH

As part of our guiding principle that services should be family-focused and youth-driven, we coordinate with Enrollees and families to work within a trauma-informed approach to completing screenings and assessments. We recognize that some children and youth entering foster care may not have been receiving medical care regularly, may be missing immunizations or assessments, and may be uncomfortable with medical or dental exams.

WellCare coordinates with DMS, DCBS and DJJ to receive referrals for screenings and assessments. Currently, there are multiple avenues through which WellCare may receive notification that a child or youth is entering foster care and requires screening and assessment. WellCare's Field Outreach (FO) coordinator receives many referrals directly from DCBS and DJJ regional offices. Other referrals come to our Care Coordinators during their quarterly meetings with DCBS regional offices. It is common, also, for WellCare's lead foster care staff to receive emails and calls from DCBS, DJJ, foster parents, adopted parents or private child care providers with referrals.

PROPOSED ENHANCED APPROACH

Under the Kentucky SKY program, we will enhance opportunities for collaboration by co-locating Field Outreach Coordinators (FOCs) into DCBS offices and meeting with DJJ offices on a regular basis to establish a collaboration plan that meets the specific needs of each region and office. We also propose exploring with DCBS and DJJ the use of a referral form that can be submitted electronically if DCBS and DJJ staff indicate that would be useful. Our FOCs will coordinate with our care management team to identify a care manager who is located closest to the Enrollee, care provider, provider, and/or parent for outreach, and to begin the assessment process.

OTHER CURRENT COORDINATION EFFORTS

Children's Review Board and DJJ Placement Services Division

WellCare works with the Children's Review Board as they refer and place DCBS foster children into private child care. For DJJ, WellCare works with the Placement Services Division as they identify placements for DJJ Enrollees. WellCare collaborates with these placement entities to ensure that assessments, medical records, and information needed is obtained for timely referral.

Office for Children with Special Health Care Needs

For medically complex children in foster care, WellCare coordinates with the Office for Children with Special Health Care Needs. The Enrollee's Care Coordinator participates in the child's Interdisciplinary Care Team (ICT) to coordinate assessments and plan services.

DCBS Recruitment and Certification Team – Wendy's Wonderful Kids Workers

We coordinate as necessary with the DCBS Recruitment and Certification Team, Wendy's Wonderful Kids workers. WellCare supports DCBS as they work on presentation summaries to prepare Enrollees for the adoption process.

Family Resource Centers

WellCare works with Family Resource Centers (FRCs) to assist with referrals and identify needed providers as service needs are identified.

ii. How the Contractor will ensure assessments are initiated immediately upon a Kentucky SKY Enrollee's Enrollment in the Kentucky SKY program.

WellCare of Kentucky is strongly positioned to ensure that we convene the Assessment Team that will conduct face-to-face assessments of all new Enrollees within ten days. The FOC in each regional DCBS office will be positioned to quickly learn when a child or youth enters foster care. The FOC will ensure that we **assign** a Care Coordinator within **one business day** and the Care Coordinator will in turn schedule an Assessment Team meeting within ten days of our notification of the enrollment. The Care Coordinator will request the DCBS and DJJ Service Plans, any assessment conducted by DCBS and DJJ (including the CANS screen), the CANS, the Criminogenic Needs Questionnaire, and the Risk and Criminogenic Needs Assessment. The Care Coordinator will set up appointments for any screenings and/or assessments that have not been completed or have been identified as needed from a previous screening or assessment.

As recommended by the American Academy of Pediatrics, within **72 hours** of a child entering foster care, a complete well-child visit will be conducted. A trauma assessment, identification of past medical and behavioral health history assessment, substance use assessment, suicide assessment, and social determinants of health assessment will all be conducted and updated. We currently serve the largest concentration of children and youth in foster care in the Commonwealth and because so many of the Kentucky SKY-eligible population will not have to change MCO at go-live, they will be able to retain their current providers, care plans and permanency plans.

For Kentucky SKY Enrollees who are currently enrolled in another Medicaid MCO, we propose that in addition to electronically sending a list of their existing SKY-eligible Enrollees, transferring MCOs also identify those with a Medically Complex designation or other agreed indicators of immediate need and provide information about those Enrollees' needs and care. As required, our Care Coordinator, assigned within one business day, will ensure that the Assessment Team has the information it needs to make timely and appropriate authorizations and referrals. To do so, the Care Coordinator will follow up as needed, including holding case conferences to discuss the Enrollee's needs and care and will conduct outreach to current providers to obtain additional information to inform the assessment and care planning process once the child or youth is enrolled in WellCare.

For new Enrollees we haven't previously identified, our embedded FOCs will closely collaborate with the staff of the regional DCBS office to quickly identify when a child newly enters the foster care system. This will enable them to quickly convene an Assessment Team meeting,

assign a Care Coordinator, work with the Enrollee and family to identify and assign a PCP and conduct the required assessments.

iii. How the Contractor will meet standards for Early and Periodic Screening, Diagnostic and Treatment (EPSDT) screening.

WellCare is highly invested in ensuring that the children we serve receive timely and appropriate health screening, preventative care and necessary treatment. We promote EPSDT services, including screenings, by providing education and training to parents and caregivers, providers, and community partners and by offering incentives to caregivers to ensure that Enrollees receive this preventive care. Kentucky SKY will utilize the American Academy of Pediatrics Healthy Foster Care America health care standards that include the following fundamental principles:

- Children and teens in foster care should be seen early
- Children and teens in foster care should be seen often upon entry into foster care
- Children and teens in foster care should have an advanced health care schedule
- Children and teens in foster care should be seen often while they are in foster care
- Children and teens in foster care should have comprehensive evaluations

CAREGIVER EDUCATION

Throughout our Enrollee-facing materials, we provide information on the availability and importance of EPSDT services, including developmental screenings. We will continue to highlight EPSDT services as we prepare Enrollee-facing materials for the Kentucky SKY program. For example, our New Enrollee Packet and our SKY Enrollee Handbook will include the information. Enrollees will receive a letter from WellCare during their birthday month listing the EPSDT screens appropriate for their age. On our ClearSKY app, caregivers will receive "push" notifications of any gaps in care, including EPSDT screenings. We provide Healthy Rewards incentives to Enrollees' caregivers to encourage them to ensure that the children in their care complete their well-child visits and receive required EPSDT screens.

In addition to the above techniques, which the Kentucky SKY program will share with our Medicaid program, we will rely on the Enrollee's Care Coordinator to ensure that EPSDT assessments are performed on a timely basis. During the comprehensive assessment, the Care Coordinator will discuss with the Enrollee and their caregiver the importance of EPSDT screenings, outline with the caregivers the appropriate screenings and preventive services appropriate to the child and work with the caregiver to schedule the first appointment with the PCP. The Care Coordinator will follow up with the caregivers of Enrollees to ensure that an appointment with the PCP has occurred within the first 30 days.

PROVIDER EDUCATION

At enrollment and on an on-going, monthly basis, WellCare will provide a "push" notification to each PCP of their EPSDT eligible children who are missing EPSDT services, including screenings and assessments. Each PCP's Provider Relations representative confers with them often over the list of patients with care gaps and works with PCPs to ensure that Enrollees have received services, screenings and assessments within the first 30 days, operating within the context of a

trauma-informed approach. We conduct medical chart audits and corrective action plans with providers on a consistent basis and during this process check to ensure that providers are providing required EPSDT screenings.

iv. Any challenges that the Contractor anticipates in completing required assessments and how it will mitigate these challenges.

WellCare has been providing services to children and youth in the foster care system since 2011 and we have experience in addressing barriers and challenges in completing required assessments. For example:

- It isn't uncommon for a child or youth newly into care to arrive at their provider for services such as an EPSDT screening and for the provider to encounter difficulties verifying the Enrollee's eligibility or enrollment information. WellCare will assign a temporary identification number for these Enrollees and will be available 24/7 to help providers resolve these issues. We train our staff to assure the provider that they can go ahead and provide the service and we will pay the claim.
- Although transportation is the responsibility of the Enrollee's caregiver, if there are transportation issues that present a barrier to an Enrollee accessing timely assessments, WellCare will coordinate non-emergency transportation services.
- Sometimes services take longer than anticipated or the Enrollee struggles to be able to engage through the entire appointment. WellCare will support providers as they work to complete necessary assessments and exams for Enrollees' complex needs. If additional time, extra appointments or other interventions are needed, WellCare will work with the provider, the care provider and Enrollee to authorize the time needed and the frequency needed to complete appointments. Examples of situations where Enrollees may need multiple appointments include Enrollees with an autism diagnosis, Enrollees with high levels of trauma, and Enrollees with multiple complex issues.

v. Provide examples of how the Contractor has succeeded in providing assessments to individuals similar to those required for the Kentucky SKY Enrollees.

WellCare has experience providing assessment to similar populations, including children with special health care needs.

- Upon contract start-up, WellCare NJ successfully completed Comprehensive Assessments for all new LTSS Enrollees and subsequently updated care plans for all Enrollees at a high risk level within 90 days and other Enrollees at lower risk levels within 180 days of the contract go-live date.
- Upon contract start-up February 1, 2019, WellCare's Florida Children's Medical Services (CMS) Health Plan quickly performed assessments for 68,000 children and adolescents, including 200 medically complex children in "Medical Foster Care" and other foster care children in the general population. They collaborated with involved state agencies to obtain as much information as possible on these children prior to implementation and were able to achieve a smooth transition for these high-needs children.

vi. Include examples of Trauma assessment or screening tools the Contractor would recommend the Department consider for the use in identifying Trauma in Kentucky SKY Enrollees.

WellCare proposes to work with DMS, DCBS and DJJ to evaluate trauma assessment and screening tools and select the tool(s) that best meet the needs of SKY Enrollees. We recommend reviewing several different assessment tools that are nationally-recognized, evidence-based and person-centered and allow providers to select and use the tool that they feel is most appropriate to meet the needs of the child or youth.

Assessment tools for evaluation might include the Trauma Symptom Checklist of Children (TSCC) or the Child PTSD Symptom Scale. Samples of these tools are provided in **Attachment G.8.a.vi-1 Child PTSD Symptom Scale, Attachment G.08.a.vi-2 Review of Child and Adolescent Trauma Screening, Attachment G.8.a.vi-3 CYW ACEQ User Guide** (provided electronically)**, Attachment G.08.a.vi-4 TSCC Description** and **Attachment G.08.a.vi-5 KY SKY Trauma Questions** (provided electronically)**.**

b. Submit the proposed screening tool the Contractor will use to develop the Kentucky SKY Care Plan. Include a description of how the Contractor will use the results of assessments that sister agencies have conducted in developing the Care Plan. Provide examples of prior tools the Contractor has used for other similar programs and detail how these tools have contributed to the Contractor achieving program goals.

WellCare will assume that all children and youth coming into the Kentucky SKY program have complex needs and require care coordination**.** Our Comprehensive Enrollee Needs Assessment tool will include all required elements including assessment of:

- Enrollee's immediate, current and past health care, mental health, history of suicide attempts, and SUD needs
- Past trauma, including history of abuse, neglect, grief/loss, and violence
- Psychosocial, functional, and cognitive needs;
- Social Determinants of Health, including employment and housing status, and frequent moves or disruptions of care
- Ongoing conditions or needs that require treatment or care monitoring
- Current care being receiving, including health care services or other care management
- Current medications, prescribed and taken
- Support network, including caregivers and other social supports

In addition, we propose to include:

- Caregiver screening
- Placement history
- Biological family history, including mental health, SUD, and suicide
- Support system
- Cultural and educational needs
- Developmental history
- Prior behavioral health and medical history
- Prior time in foster care
- History of prevention services

- Current family stressors
- Family history of trauma, secondary trauma, violence

We will require Primary Care Providers (PCPs) to complete screenings for Adverse Childhood Events (ACEs) on all Enrollees.

Please see **Attachment G.8.b Proposed Screening Tool to Develop the Kentucky SKY Care Plan** (provided electronically).

ASSESSMENTS FROM SISTER AGENCIES

When our embedded FOC learns that a child or youth is entering foster care and we assign a Care Coordinator and convene the Assessment Team meeting, our Care Coordinator will ensure that the Assessment Team has the information it needs to make timely and appropriate authorizations and referrals. To do so, the Care Coordinator obtain the results of assessments that sister agencies have completed. For example, the Care Coordinator will obtain any previous assessment by the Children's Review Board to determine level of care or the Placement Services Division of DJJ. For medically complex children in foster care, the Care Coordinator will ensure the Assessment Team has access to previous assessments, including the most recent Individual Health Plan (IHP) and latest encounter summaries. The Care Coordinator will follow up as needed, including holding case conferences to discuss the Enrollee's needs and care and will conduct outreach to current providers to obtain additional information to inform the assessment and care planning process.

In addition, we propose to assist sister agencies in performing required assessments by:

- Engaging a clinician to perform a CANS assessment if the DCBS screening indicates a full CANS assessment is necessary and a licensed therapist is not otherwise available to perform the assessment timely to inform the Enrollee's plan of care attached to CANs assessment, refers to therapist for CANS, which drives plan of care.
- Completing the required assessment after 30 days to verify the level of care required when an Enrollee is placed with a Qualified Residential Treatment Provider (QRTP).

PRIOR TOOLS FOR SIMILAR PROGRAM

Launched at our Hawaii affiliate plan, WellCare's Healing Futures program is designed for our pediatric population experiencing adverse childhood experiences (ACEs). Its mission is to raise awareness and provide education around ACEs leading to pediatric trauma, to promote trauma-informed care (TIC), and ultimately to improve long-term social, physical health, and behavioral health outcomes. The program elements include early identification, referrals to professional treatment, and connections to community resources. This newly created specialty program aims to accomplish the following;

- Improve behavioral health follow up and EPSDT (Early and Periodic Treatment, Screening, and Diagnosis) follow up for pediatric Enrollees with PTSD and acute stress reaction diagnoses and at-risk populations (e.g., foster care)
- Grow the number of trauma informed care providers, including behavioral health, in our network and increase referrals, as appropriate

- Increase closed-loop referrals to our Community Connections program for Enrollees with PTSD and acute stress reaction diagnoses to connect them with social services resources available in their local area.

In addition, WellCare New Jersey (NJ) has successfully used a proprietary Care Needs Screening tool to identify Enrollees who potentially need and are eligible for long-term services and supports. The Care Needs Screening tool includes questions about LTSS-like needs by exploring an Enrollee's ability to perform Activities of Daily Living (ADLs), such as getting out of bed, bathing, dressing, toileting, and feeding oneself and Instrumental ADLs (IADLs) like preparing meals and managing money. Screening questions help us discover whether or not an Enrollee needs assistance with daily tasks from a family member, caregiver, or other natural or professional supports. The Enrollee's response to each question about ADLs, IADLs, and cognition is assessed for the level of assistance needed, e.g., no assistance, supervision only, limited assistance, extensive/max assistance, and total dependence.

c. Describe its comprehensive approach to providing Crisis Services, including in home services, to Kentucky SKY Enrollees.

WellCare provides a comprehensive approach to providing Crisis Services, including in home services, to its current Enrollees. Under Kentucky Sky, we will enhance and expand this approach to better serve the total Foster Care, Juvenile Justice, and post-adoption population state-wide. Because of our experience, we know that the approach to providing crisis services must begin at enrollment with the development of a comprehensive care plan developed in collaboration with the Enrollee's entire circle of support. We ensure that care planning is youth guided and family driven, and that it includes all appropriate supports in an effort to prevent a crisis from occurring. We ensure that if a crisis does occur, its impacts on the Enrollee and the caregivers are mitigated, especially because we know that placements often can be adversely affected by an Enrollee's crisis. We include as part of our total support extensive personal education for caregivers with emphasis on Foster Parents, Adoptive Parents, and Fictive Kin who may not have enough experience to understand the warning signs or triggers for their child's crisis.

Crisis Services

Ethan, age 8, was experiencing a crisis, displaying aggressive behaviors at home and at school trying to self-harm. He'd been living at home with his adoptive mother since he was six weeks old, but now she had given him into state care as a dependency case because she felt she couldn't meet his complex needs. He had been placed at Home of the Innocents but had been hospitalized on several occasions. Laura N., his WellCare Care Coordinator, stepped in and took a high-touch approach to working with Ethan's case manager, therapist, education coordinator, program manager, and adoptive mother to complete assessments and develop a plan of care for Ethan. Laura N. worked closely with our METS team to identify specific goals to demonstrate Ethan's progress towards recovery and authorize evidence-based approaches to help him step down from repeated hospital admissions.

Our comprehensive approach includes

- Face-to-face Emergency Services available twenty-four (24) hours a day, seven (7) Days a week
- 24/7 availability of telephonic licensed clinical support from our Nurse Line and Behavioral Health Crisis Line for routine, urgent, and emergent issues
- In-community mobile crisis intervention services and in-home services
- Development of a care coordination plan by the Multidisciplinary team and in collaboration with DCBS and DJJ, caregivers, providers, and Enrollee's circle of support such as Residential Placement Staff, with a crisis plan as part of total coordination
- Education for caregivers on what to do and whom to contact during a crisis and how to implement the crisis plan, along with guidance on what constitutes both a BH and a physical health crisis for their particular Enrollee
- Provider education on acceptable after-hours telephonic support for Enrollees so that an incident does not become a crisis
- Discussions, no less than quarterly, with the Department and DBHDID on the efficacy of our existing crisis response for Enrollees and to receive feedback on changes or additions to service.
- Extensive training and refreshers for all Enrollee-facing staff in the management of an Enrollee or caregiver crisis call, including for care management and care coordination staff, training on recognizing unmet social needs and their effect on total wellbeing

IMMEDIATE LINK TO CRISIS SERVICES: OUR BEHAVIORAL HEALTH CRISIS LINE

We are experienced in the delivery of crisis services required by Enrollees in the Foster Care and Juvenile Justice system and the need for comprehensive, compassionate, and rapid response. Our 24/7 BH Crisis Line, already serves as a gateway to all needed BH crisis support for Enrollees and their caregivers in Kentucky Medicaid. With "no wrong door," the BH Crisis Line staff take calls directly from Enrollees and caregivers, from any WellCare staff who believes an Enrollee is or may soon be in crisis and from providers and our state partners, such as DJJ Social Workers. Our BH Crisis Line also provides the BH clinical expertise for our 24-Hour Nurse Line and our Enrollee Services line, taking crisis and urgency calls via warm transfer on a shared call platform for speed and safety.

We staff our BH Crisis Line with Licensed Mental Health Counselors, Registered Nurses and IDD professionals with advanced BH training, and licensed social workers. Using scientifically valid and tested protocols, they immediately assess the caller's acuity level and then triage and address the specific BH emergency or urgency. Following the protocol for life-threatening, urgent, or routine intervention, the clinicians deliver care selected for the Enrollee from our full array of comprehensive services and in accordance with access standards established by DMS. This includes:

- Using patch capabilities to activate local 911 Emergency Services
- Immediately connecting to the local Suicide Hotline or other local Crisis Response system
- Dispatching local mobile crisis providers to the Enrollee
- Arranging an urgent assessment with a community provider

- Bringing the Enrollee's BH provider to the call and/or arranging follow-up services from the provider
- Arranging treatment with a BH provider within
- Bringing an on-call Care Manager into the call, if needed, for personal support

All Enrollee contacts with our BH Crisis Line are captured through a feed to our CareCentral clinical platform. The call is documented as a change in the Enrollee's condition requiring expedited follow-up on the next business day by a local BH care manager to determine if additional services are required. This allows for comprehensive review of the circumstances for the call to the BH Crisis Line with a goal of maintaining the Enrollee's stable placement and wellbeing.

ENHANCING EXISTING CRISIS SERVICES

Currently, WellCare contracts with every Kentucky-based mobile BH crisis unit to serve our existing Enrollees. In addition to the recent partnership with Lifecare Solution described below, WellCare is undertaking efforts to develop a true crisis response team network. Given the lack of crisis services available in Kentucky, we are in discussion with potential out-of-state providers, such as Saint Francis Ministries, on expanding services to Kentucky. We continue our discussions with our contracted Behavioral Health Service Organizations (BHSO) providers on offering these services. We also are working with our community mental health centers across the state to expand crisis services. For example, we are in discussions with Lifeskills in Bowling Green to explore potential models for the delivery of crisis services, including a model WellCare partnered to create in Arizona of post-crisis transitional care for Enrollees who present in crisis at a psychiatric emergency care center.

FITT-Acute Crisis Intervention and Diversion Program

To address Kentucky's need for true mobile crisis treatment, we recently contracted with Lifecare to provide the FITT Program of virtual residential treatment for youth living with caregivers in a community setting. This is an intensive in-home program partnering with families to resolve crises, avoid out-of-home placement and provide skills for future crisis prevention. It also serves as a step down from inpatient or PRTF; and an alternative for youth at risk of hospitalization and PRTF. Just a few examples of what the FITT Program provides include:

- Door and window alarms
- Prescription lockboxes
- Respite for parents
- Access to a same-day prescriber

Preventing a Crisis

WellCare understands that preventing the need for crisis services, especially for the Kentucky SKY population, is as much a priority as managing the Enrollee's crisis. As part of crisis prevention, we use our clinically sound, multi-dimensional, data analysis and risk stratification model, Identification and Stratification (ID/Strat). We identify Enrollees at the highest risk level, those who are being discharged from any BH facility, including Residential Placement, and Enrollees with special needs for additional preventive strategies, recognizing that even the perception of a crisis may be enough to trigger a caregiver's request for placement change or discourage a Foster Parent or Fictive Kin. Then, we deploy a range of services that may include:

- **WellCare at Home**, an integrated team approach that supplements the Enrollee's multi-disciplinary team and supports providers in the delivery of care management and high-quality care to improve health outcomes while reducing inappropriate use of the emergency room, inpatient settings and other higher cost services. This locally-driven care management model with a single line of accountability, a single integrated technology system, and coordination for social service gaps and unmet needs ensures the administration of a seamless continuum of care management with a goal to reducing or eliminating the need for in-facility services.

Among our SKY-eligible Enrollees with co-occurring mental health and substance use issues, ER visits/1000 decreased by 14%, inpatient mental health admits/1000 increased by 3%, PCP visits/1000 increased by over 7%, and specialist visits/1000 increased by 84% from 2016 to 2019.

- **Medical home**: Establishing a medical home for Enrollees is one of key interventions we can undertake to reduce the likelihood of a crisis. We will begin assigning PCPs to our foster care Enrollees and will provide trauma training to all medical home providers. The medical home provider will be responsible to oversee and coordinate all services the Enrollee receives and our CC Team will support the medical home by facilitating information exchange, involving them in all Individual Health Plan (IHP) meetings, helping them locate appropriate specialists when needed, and providing scheduling and transportation assistance to ensure Enrollees access recommended care.
- **Crisis and Safety Planning**: For families and caregivers of children and youth involved in the child welfare system, it is critical to have a crisis and back-up plan, including the availability of back-up Care Coordinators. The back-up or crisis plan ensures children receive needed care for their safety and well-being. As part of our Care Coordination and Case Management activities, our Care Coordinators work with Enrollees, families and caregivers to create a crisis and back-up plan as part of their plan of care. Included in the plan of care is family/guardian education on signs/symptoms of crisis, identification of a back-up Care Coordinator if assigned Care Coordinator is temporarily unavailable, linkages to community-based crisis services, and access to our 24-Hour Behavioral Health Crisis Line and 24-Hour Nurse Line. Crisis and back-up plans are given to families and necessary medical professionals. Our Care Coordinators also encourage families to share the plans with those involved in the child's care and school.
- **Members Empowered to Succeed (METS)**: Under this program, WellCare works with Enrollees who are stepping down from intensive services or who need more specialized services to tailor authorizations

As of June 2018, **WellCare achieved the following quality and cost outcomes for our Members Powered to Succeed program** for Medicaid Enrollees in our Kentucky, Florida, and Georgia markets:

- Behavioral health inpatient admissions were **reduced by 6.7%**
- Behavioral health outpatient visits were **reduced by 51%**
- **Increased pharmacy claims for Enrollees by 5.2%** due to increased medication adherence
- Overall behavioral health expense was **reduced by $227** PMPM
- Achieved an estimated program **savings of $2,709,522** for participating Enrollees

and services to the specific needs of the Enrollee and their family/caregiver, while recruiting natural and community supports as part of the care plan. In our Medicaid program, the METS program has resulted in a 6% reduction in ER use.

- **Discharge Planning and Comprehensive Discharge Planning Support**: WellCare KY's transition of care process provides early identification of all medical, behavioral, and social issues that might require post-inpatient intervention, such as transportation, home health, medication, or durable medical equipment. The Enrollee-centric process involves the attending physician, facility discharge planner, our concurrent review professional staff, the Enrollee and his/her caregivers, ancillary providers, care coordinators, when appropriate, and community resources. Discharge planners review the draft discharge plan and adjust it as necessary with each subsequent clinical review prior to the Enrollee's discharge. Under the Kentucky SKY program, if an Enrollee is admitted to an inpatient facility, our concurrent review staff will notify the Care Coordinator. Prior to an Enrollee being discharged, our BH Discharge Coordinators schedule outpatient follow-up appointments and continuing treatment to occur within seven days. They also provide telephonic appointment reminders and conduct outreach within 24 hours to Enrollees who miss an appointment. Please see our response to C.23 for further information about discharge planning.
- To appeal to youth who may be reluctant to reach out for assistance before a crisis is triggered, we offer digital, interactive clinical support through mobile and online supports to empower our youth in addressing their BH issues. MyStrength, an evidence-based platform, provides Enrollees with interactive programs on depression, anxiety, stress, substance use, chronic paint, and sleep challenges. It also supports the spiritual aspects of whole-person care. MyStrength's integrated model includes CBT, mindfulness, motivational interviewing and ACT protocols with personalized pathways that facilitate user interaction, mood trackers, and additional tools to measure effectiveness and improvement.

MyStrength has shown a 43% rapid symptom reduction within the first two weeks of engagement, proving to be 83% as effective as face-to-face therapy at a fraction of the cost and reducing total paid claims for engaged members by 70%

Our **My WellCare Mobile App** provides access for Enrollees, families, and caregivers to our digital health library, which includes information on mental health, substance use, self-help tools such as computerized Cognitive Behavioral Therapy (cCBT), and our vignette series of *People Like M*e with stories from those with lived experience with mental health and substance use.

We also are piloting a new program in collaboration with JOOL Health Coach, a personal coaching smartphone application that encourages youth to check in with their peers and engage in healthcare services. With tailored tracks specific to different populations, Enrollees have access to a transition-aged youth pathway for those with SUDs, including SUD assessments, resources and referral information to help youth and their families learn about their SUD and local available treatment options.

d. Describe the Contractor's experience in providing services through a holistic, person-centered approach, utilizing a High Fidelity Wraparound approach.

WellCare has experience in Kentucky using the holistic, person-centered Wraparound approach and, nationally, using a High Fidelity Wraparound approach to serve similar populations.

KENTUCKY EXPERIENCE

WellCare participates in the IMPACT program which employs a wraparound approach to improve outcomes for children and youth with Serious Emotional Disturbance (SED). This program through the Community Mental Health Centers is funded primarily through the Department of Behavioral Health and Developmental and Intellectual Disabilities. While WellCare is not funding the service provided by the Wraparound Coordinator, the services and supports identified through the Enrollee's wraparound service plan are covered by WellCare. WellCare works in collaboration with the Enrollee's Impact team and supports the plan and care developed. WellCare participates in Regional Interagency Council meetings, RIAC, as a member of the community and is engaged in shared work toward improving access and availability of services for children and their families. Through this collaboration with RIAC, WellCare can better leverage our Community Connection program to support any identified needs. Prior experience of the Wraparound Model comes from LeAnn Magre, our Provider Relations Liaison. LeAnn worked with Kentucky Partnership for Families and Children and the Department of Behavioral Health and Developmental and Intellectual Disabilities to create and train the Wraparound model for Impact and Impact Plus Care Coordinators and behavioral health professionals.

NATIONAL EXPERIENCE

In addition, the WellCare in Florida implemented a High Fidelity Wraparound approach as a tailored mental health approach for those who have experienced or been exposed to violence and trauma. WellCare partnered with Children's Home Society in Region 11 of Florida to offer this as an In Lieu of service.

Preparing for high fidelity wraparound

In preparation for implementing a High Fidelity Wraparound approach, WellCare Kentucky is prepared to provide training on the approach to our Enrollee-facing staff, network providers, the courts, judges and attorneys. Please see our response to G.4 Education and Training for additional information.

e. Describe how the Contractor will develop and provide interventions that will help develop resiliency in Kentucky SKY Enrollees who have been exposed to Trauma and ACEs.

We propose to adopt the evidence-based approach recommended by the Annie E. Casey Foundation. The Foundation believes that the three key ingredients for building resilience and helping young people success are: 1) caring relationships; 2) high expectations; and 3) opportunities to participate and contribute. They recommend a framework that emphasizes: 1) competence and strengths; 2) developing assets rather than focusing on reducing risks; 3) fostering pathways to resiliency, not just resilient behaviors; and 4) interventions that focus on families, schools and communities.

The role of WellCare in this framework is to promote stability, so that the young person can develop caring relationships with adults who, in turn, will provide high expectations and opportunities for the youth to participate and contribute. To promote stability, we will develop and provide interventions focused on families, schools and communities.

PROMOTING STABILITY

We will promote stability by providing supports to families and providers so that placements aren't disrupted. Our interventions to promote stability will include:

- *Respite* – In addition to providing access to respite services, we will help Enrollees and families identify and implement natural supports available to provide respite to caregivers consistent with a high fidelity wraparound approach. If natural resources are not available, the WellCare will work with community resources to identify potential support services through foster parent support groups, etc.
- *Peer Support* – WellCare has partnered with Orphan Care Alliance (OCA), giving them $15,000 to support their OCA Connect Groups, which support foster and adoptive parents around the state. OCA Connect is an opportunity for foster and adoptive parents to journey together by meeting monthly for support and encouragement. Each meeting is led by a professional that guides the discussion to create a safe community for sharing stories and offering encouragement. OCA Connect conversations don't leave the room and parents will know they aren't alone in their challenges. While OCA Connect Groups have been well established in Lexington and Louisville, OCA hopes to provide these services in Paducah, London, Pikeville, and Ashland. In addition, WellCare is partnering with Kentucky Partnerships for Families and Children to ensure training for youth and parent peer support is offered and available. Through the training offered by KPFC, not only will WellCare ensure adequate training for peer support positions, but also will offer youth and their families the opportunity to attend the youth and family leadership training conferences provided by KPFC. These conferences and training opportunities assist youth and families to be engaged as leaders within the child welfare system.
- *Foster Parent Education* –Through OCA, we will offer foster parents trainings on trauma-informed care based on various intervention tools including Empowered to Connect, Trauma Competent Caregiving and Trust Based Relational Intervention (TBRI ®) with one of four TBRI ® Practitioners. In addition to the training and support offered by OCA, WellCare will engage KPFC to assist in training development needs for foster and adopted parents. Through our Enrollee Outcomes Advisory Committee, WellCare will hear directly from foster parents and adopted

WELLCARE'S MENTAL HEALTH FIRST AID (MHFA) INITIATIVE

Raise awareness of mental health issues within our own organization and position "champions" across the company who can be of assistance to their peers.

Better equip our non-clinical staff who have regular contact with our enrollees to be able to recognize and respond appropriately to those experiencing and demonstrating mental health related symptoms.

Train our partners in the community (such as providers, schools, and non-clinical employees of community-based organizations) in MHFA in order to better serve our enrollees in the community.

parents and work with them and their communities to identify and address the needed supports and training.

- *Support for School Environment* – In our experience, trouble in the school environment is often the trigger for a disruption in a child's placement. In addition, engaging natural supports through the Assessment Team meeting and High Fidelity wraparound support model is key to successful implementation of an Enrollee's care plan and one of the natural supports is the Enrollee's school and social circle. We propose to partner with the Family Resource Centers to identify ways in which we can complement the services they provide to families in the school-based setting. We will work to identify key school personnel who are connected to Enrollees and engage them in the care planning process. As we learn about the important supports that schools may need to assist in maintaining an Enrollee's success, WellCare can effectively work to identify resources to assist to meet the need.

f. Describe the role of non-medical factors (e.g., placement changes) that may drive inappropriate utilization of medical resources and how the Contractor will account for those factors in the delivery approach. As part of the response, include how the Contractor will identify and leverage non-Medicaid resources that may be available in a community environment, including how it will assist such community-based resources that may serve an important role in the Kentucky SKY Enrollees' overall physical and Behavioral Health care needs and goals even if they are not traditional Medicaid services. Provide examples of any community organizations that the Contractor anticipates involving to provide services to support Kentucky SKY Enrollee' needs and goals.

NON-MEDICAL FACTORS DRIVING UTILIZATION

Enrollees in the Kentucky SKY population share the social determinants needs of other Medicaid populations. For example, Enrollees over 18 may need assistance with housing, job skills training, secondary education, and connection to food pantries and completing SNAP applications.

Placement Disruptions

In addition to SDOH, as we've served children and youth involved in the child welfare system, we've observed that placement changes are very disruptive to services for children and youth in foster care and may lead to overutilization of resources. It is emotionally draining for a child or youth to be displaced, which may lead to behavior changes, including violence and delinquency. It also is disruptive to the logistics of a child's care. When a child moves:

- Their prescription drugs may be left behind at their old location, meaning they must be replaced at the new home
- Their medical information may not follow them, which can lead to duplication of services that have already been provided, including immunizations and other preventive services.

ACES

Every Kentucky SKY Enrollee has experienced Adverse Childhood Experiences (ACEs) and trauma. Removal of a child is a last resort and by the time removal occurs, many children have experienced significant neglect or the impact of physical abuse either to them or a parent or sibling. Some have never felt safe: according to the University of Louisville's CANS pilot, about

20% of the Commonwealth's foster care population reported being a victim or witness to criminal activity and 10% to community violence. These children experience further trauma from being removed from their homes and separated from parents and siblings.

Accounting for These Factors

Youth-guided, family-driven care planning is the key avenue to account for these non-medical factors. Working with the Enrollee's circle of support, the Enrollee's Care Coordinator will carefully plan to address these factors. For example, if there are SDOH barriers that may prevent the Enrollee from appropriately accessing care, the Care Coordinator will mitigate them, often by calling on non-Medicaid resources.

SOCIAL DETERMINANTS OF HEALTH

WellCare Care Coordinators identify SDOH needs during the comprehensive assessment process, which includes the Centers for Medicare & Medicaid Services (CMS) Center for Medicare and Medicaid Innovation's Accountable Health Communities Health-Related Social Needs (HRSN) Screening Tool. This tool provides ten simple questions that ask about living situation, food, transportation, utilities, and safety. For foster and adoptive parents and for Enrollees age 17 and older, we use the additional supplemental questions that ask about financial strain, employment, family and community support, education, physical activity, substance use, and mental health. The information is captured in CareCentral, our care coordination platform.

Care Coordinators then work with our trauma-trained Community Action Team to outreach to the Enrollee/family to address the unmet social resource need, documenting all additional identified needs and the resources provided in the Enrollee's CareCentral record.

PREVENTING DISRUPTIONS IN PLACEMENT

As discussed in Subsection e above, we will pursue several interventions designed to try to prevent the disruption of placements, including:

- Respite for caregivers
- Peer support for foster and adoptive parents
- Foster parent training on trauma-informed care
- Partnering with Family Resource Centers in the school to complement their work

ADDRESSING THE IMPACT OF TRAUMA

WellCare will address the impact of trauma by:

- Providing education and training to WellCare staff, providers, law enforcement and courts as well as families and caregivers about ACES and about trauma-informed care.
- Reducing the stress of transitions and new experiences by providing opportunities for children to visit face-to-face with a new family prior to moving, to engage in "getting to know you" activities and allowing practice outings and practice visits.
- Engaging resources to promote relationship development and strengthening each child's sense of belonging. That might take the form of providing transportation a child's school

even after a placement change has moved them out of their previous neighborhood boundary or to school sporting events to encourage peer relationships.

- Working with the Enrollee and family to develop a safety and crisis plan, identifying and planning to ameliorate anticipated Enrollee and family needs.

IDENTIFYING AND LEVERAGING NON-MEDICAID RESOURCES

Community Impact model

In 2008, WellCare launched Community Connections to proactively identify Enrollees with unmet social service needs, remove barriers to appropriate access and healthy lifestyles, and build strong community partnerships we can leverage to benefit Enrollees and families. Since launching our Community Connections Program in Kentucky, we have connected more than 31,000 people to over 165,000 services across the Commonwealth. A ***Robert Wood Johnson Foundation study documented a 53% reduction in inpatient spending among individuals who accessed a social service through Community Connections.*** We continue to invest in new technology, training, and operations to enhance our model and our ability to identify and address social barriers to health.

WellCare Works

WellCare will connect youth who are preparing to age out of foster care with tools, training and other resources to prepare to enter the workforce. In addition to helping them prepare to test for a General Education Diploma, build a resume and prepare for interviews, our WellCare Works program facilitates access to community-based education and supported employment resources, volunteer opportunities that can help them network and build work experience, and connects them to community supports that address barriers to working like transportation.

Examples of Community Organizations Engaged to Provide Services

- WellCare has partnered with Orphan Care Alliance (OCA), giving them $15,000 to support their OCA Connect Groups, which support foster and adoptive parents around the state. While OCA Connect Groups have been well established in Lexington and Louisville, OCA hopes to provide these services in Paducah, London, Pikeville, and Ashland.
- WellCare also is engaging OCA to offer foster parents trainings on trauma-informed care based on various intervention tools including Empowered to Connect, Trauma Competent Caregiving and Trust Based Relational Intervention (TBRI ®) with one of four TBRI ® Practitioners.
- WellCare is partnering with Kentucky Partnerships for Families and Children (KPFC) to ensure training for youth and parent peer support is offered and available.
- WellCare also is engaging KPFC to work with our Enrollee Outcomes Advisory Committee to develop training for foster and adopted parents.
- Roo's Wish provides clothing to children in foster care; through their partnership with Orphan's Care Alliance, can also fulfill larger needs, such as beds.

Please refer to our response to C.20, Covered Services, under Technical Approach, for additional information regarding our experience, partnerships, processes, procedures and compliance to the requirements in the Draft Medicaid Managed Care Contract and Appendices.

WellCare
Beyond Healthcare. A Better You.

The Child PTSD Symptom Scale (CPSS) – Part I

Below is a list of problems that kids sometimes have after experiencing an upsetting event. Read each one carefully and circle the number (0-3) that best describes how often that problem has bothered you IN THE LAST 2 WEEKS.

Please write down your most distressing event:

_____

Length of time since the event:

_____

0	1	2	3
Not at all or only at one time	Once a week or less/ once in a while	2 to 4 times a week/ half the time	5 or more times a week/almost always

1.	0	1	2	3	Having upsetting thoughts or images about the event that came into your head when you didn't want them to
2.	0	1	2	3	Having bad dreams or nightmares
3.	0	1	2	3	Acting or feeling as if the event was happening again (hearing something or seeing a picture about it and feeling as if I am there again)
4.	0	1	2	3	Feeling upset when you think about it or hear about the event (for example, feeling scared, angry, sad, guilty, etc)
5.	0	1	2	3	Having feelings in your body when you think about or hear about the event (for example, breaking out into a sweat, heart beating fast)
6.	0	1	2	3	Trying not to think about, talk about, or have feelings about the event
7.	0	1	2	3	Trying to avoid activities, people, or places that remind you of the traumatic event
8.	0	1	2	3	Not being able to remember an important part of the upsetting event
9.	0	1	2	3	Having much less interest or doing things you used to do
10.	0	1	2	3	Not feeling close to people around you
11.	0	1	2	3	Not being able to have strong feelings (for example, being unable to cry or unable to feel happy)

12.	0	1	2	3	Feeling as if your future plans or hopes will not come true (for example, you will not have a job or getting married or having kids)

0	1	2	3
Not at all or only at one time	Once a week or less/ once in a while	2 to 4 times a week/ half the time	5 or more times a week/almost always

13.	0	1	2	3	Having trouble falling or staying asleep
14.	0	1	2	3	Feeling irritable or having fits of anger
15.	0	1	2	3	Having trouble concentrating (for example, losing track of a story on the television, forgetting what you read, not paying attention in class)
16.	0	1	2	3	Being overly careful (for example, checking to see who is around you and what is around you)
17.	0	1	2	3	Being jumpy or easily startled (for example, when someone walks up behind you)

The Child PTSD Symptom Scale (CPSS) – Part 2

Indicate below if the problems you rated in Part 1 have gotten in the way with any of the following areas of your life DURING THE PAST 2 WEEKS.

	Yes	No	
18.	Y	N	Doing your prayers
19.	Y	N	Chores and duties at home
20.	Y	N	Relationships with friends
21.	Y	N	Fun and hobby activities
22.	Y	N	Schoolwork
23.	Y	N	Relationships with your family
24.	Y	N	General happiness with your life

Review of Child and Adolescent Trauma Screening Tools

Title	Acronym	Source	Year of Pub	#Items	Ages	Respondant	Cost/Accessibility	Language(s)	Interpretation Considerations	Approach	3 Es	CEBC Grade/Empirical Support
Acute Stress Checklist for Children	ASC-Kids	Kassam-Adams	2006	29	8-17	Youth	Free; Author requests to be contacted and that those who use it, "reference it appropriately."	English, Spanish	There is no manual for the ASC-Kids it is used in the same way as other self report scales and is self explanatory.	Designed to assess child acute stress reactions within the first month after exposure to a potentially traumatic event	Experiences	2 studies providing evidence for appropriate R/V of English version and 1 study supporting R/V of Spanish version.
Child and Adolescent Needs and Strengths - Trauma Comprehensive Version	CANS-Trauma Version	Kisiel, Lyons, Blaustein, Fehrenbach, Griffin, Germain, Saxe, Ellis; Praed Foundation, & National Child Traumatic Stress Network	2011	110	0-18	Clinician	Free	English	Manual/Video available for administration training	A multi-purpose tool developed for children's services to support decision making, including level of care and service planning, to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of service	Effects	While certain psychometric properties have been established for the CANS-MH (CBEC: B), currently there are few published articles examining the psychometrics of the CANS Trauma or NCTSN CANS. Publications are in process.
Child PTSD Symptom Scale	CPSS	Foa, Johnson, Feeny, Treadwell	2001	Part 1: 17 / Part 2: 7	8-18	Youth	Free	English, Korean, Russian, Spanish	Clinical training recommended Suggested Cut Off: 11	17-item PTSD symptom scale and a 7-item functional impairment scale	Experiences/ Effects	CEBC: A; Randomized trials with ethnically diverse children suggest that the measure can detect change in PTSD symptoms that are due to treatment; 2013: Good R/V with adolecent female sexual assault survivors
Child Reaction to Traumatic Events Scale - Revised	CRTES	Jones, Fletcher, Ribbe	2002	23	6-18	Youth	Free	English, Spanish	Prior Experience Psych Testing/Interpretation suggested	Assess psychological responses to stressful life events: arousal, avoidance, and intrusion symptoms	Experience/ Effects	Poor psychometric support for use of 15-item version and 23-item version is in development.
Child Report of Post-traumatic Symptoms	CROPS	Greenwald & Rubin	1999	25	7-17	Youth	$15-20 -both CROPS and PROPS with unlimited permission to copy	English, Bosnian, Dutch, Finnish, French, German, Hindi, Italian, Kinyarwandan, Marathi, Persian, Spanish	Prior Experience Psych Testing/Interpretation	Measure of a child's post-traumatic stress symptoms for the previous 7 days	Experiences/ Effects	> 2 studies: good internal consistency, test-retest reliability, criterion validity, convergent and discriminant validity, and sensitivity to change although more research is needed examining the use of the measure with clinical samples.
Child Stress Disorder Checklist - Screening Form	CSDC-SF	Saxe	2004	4	2-18	Caregiver	Free	English	Does not require specialized training for administration or interpretation; It is recommeded that children with a score of 1 or more be referred for a more comprehensive assessment (Bosquet et al., 2004).	Observer report measure designed for use as a screening instrument to identify children at risk for having or developing Acute Stress Disorder (ASD) and/or Posttraumatic Stress Disorder (PTSD).	Experiences/ Effects	Initial development data and further peer-review assessment indicate adequate reliability and validity among child and adolescent burn victims or with accute injuries. The measure has yet to be examined in terms of relationship to diagnostic classifications or for sensitivity/specificity. Has not be examined with youth younger than 6 years old.
Child Trauma Screening Questionnaire	CTSQ	Kenardy, Spence, Macleaod	2006	10	7-16	Youth	Free; Author requests to be informed of the intended use.	English, Arabic, Croatian	A score equal or above 5, indicates the child is at high risk of developing PTSD. Sensitivity Rate Score: At 1 month: 0.85 (0.65-1.04). At 6 months: 0.82 (0.59-1.05) Specificity Rate Score: At 1 month: 0.75 (0.67-0.82). At 6 months: 0.74 (0.66-0.82)	The CTSQ assesses for reexperiencing (5 items) and hyperarousal symptoms (5 items). Child version of adult version (TSQ) which has	Experiences	Some early evidence for R/V among youth with medical trauma although more evaluation needed with samples for different types of truama. CTSQ was developed as a predictive screening and was significantly better than chance at predicting PTSD symptoms at six months. Majority of items refer to an "accident" which may limit use with non-accidental events that lead to trauma.
Children's PTSD Inventory	C-PTSD-I	Saigh	2000	Interview - 18 minute administration	6-18	Youth	$161 Introductory Kit (includes 25 administrations); $70 each additional 25 administrations	English, French, Spanish	Training of the administrator entails <4 hours of supervised analog training with feedback. Diagnostic cutoffs for each symptom cluster and overall diagnosis based on DSM-IV criteria. Sensitivity Rate Score: 0.87 Specificity Rate Score:0.95 Positive Predictive Power: 0.72 Negative Predictive Power:0.98	1st subtest: assesses potential exposure to traumatic events (if youth does not meet the criteria, interview is terminated). 2nd-4th subtests: symptoms of reexperiencing, avoidance and numbing, and increased arousal. 5th subtest: areas of significant distress.	Events/ Experiences/ Effects	Strong psychometric results suggest good potential for this brief interview intrument, including with ethnically diverse youth. It's usefulness is enhanced by the combination of information on exposure to specific stressful or traumatic events as well as the existence of PTSD symptoms.
Diagnostic Infant and Preschool Assessment - PTSD Section	DIPA-PTSD	Scheeringa	2004	63; semi-structrued interview	0-6	Caregiver	Free	English	4 Hours Training by Experienced Clinician	An interview for caregivers to describe/endorse several domains associated with PTSD	Events/ Experiences/ Effects	In 2010 study with 1-5 year olds, researchers supported preliminary R/V of PTSD scale. Additional research needed with larger and more diverse sample.
Diagnostic Interview for Children and Adolescents - Acute Stress Disorder Module	DICA-ASD	Saxe	2004	58; semi-structured interview	7-18	Youth	Free	English	4 Hours Training by Experienced Clinician	Measures acute traumatic stress symptoms and provides a diagnosis of ASD in children and adolescents	Experiences/ Effects	Psychometric support ongoing, but preliminary support for R/V. Measure is important, as it yields both ASD symptomatology and diagnostic information obtained through Child Self-Report.
Dimensions of Stressful Events Rating Scale	DOSE	Fletcher	1996	50	2-18	Clinician	Free; Contact author	English	26 items assessing aspects of the stressful event and 24 items specific to sexual abuse; measure is completed by a clinician who is familiar with the child/caregiver. A score of 24 or higher on the DOSE was found to maximize the sensitivity-specificity tradeoff when predicting clinically significant posttraumatic stress according to the TSCC PTS scale, with a sensitivity of .73 and a specificity of .52.	Assesses aspects of stressful experiences that are likely to increase the chance of posttraumatic stress reactions and is intended to help characterize the level of distress associated with stressful events and better delineate the specific traumatizing aspects of such events	Events/ Experiences	With 2 studies examining the measure, DOSE shows promise as a valid and reliable measure of the traumatic potential associated with diverse stressful experience
Global Appraisal of Individual Needs (short)	GAIN-SS	Dennis, Feeney, & Stevens	2005	20	13-17	Youth	$100/year per agency for 5 years unlimited use of paper assessment; $500/year for access to web application	English, Spanish	Online training for the GAIN Short Screener is available, but not required. There is no certification process for the GAIN-SS, and reading the GAIN-SS Administration and Scoring Manual is often sufficient instruction. The manual is free to download for licensed GAIN users and can be accessed by logging into our secure site.	Responses to items provide screening information that loads onto 4 subscales: Internalizing Disorder, Externalizing Disorder, Substance Disorder, Crime/Violence.	Expereinces/ Effects	Although the measure has good support for R/V as a screening tool, few items are specifically related to trauma-screening.

Life Event Checklist	LEC	Blake, Weathers, Nagy, Kaloupek, Charney, & Keane	1995	17	18-99	Adult	Free	English	Measure can only distributed by qualified mental health professionals and researchers	Respondent checks whether the event (a) happened to them personally, (b) they witnessed the event, (c) they learned about the event, (d) they are not sure if the item applies to them, and (e) the item does not apply to them.	Events	No evaluation for use of measure with children. The LEC has demonstrated adequate psychometric properties as a stand-alone assessment of traumatic exposure, particularly when evaluating consistency of events that actually happened to an adult.
Lifetime Incidence of Traumatic Events, Student/Parent Forms	LITE-S/P	Greenwald & Rubin, Sidran Institute	1999	16	8-99	Caregiver or Youth	$15-20 - both version (S/P) with unlimited permission to copy	English	Simple and easy to administer/interpret	The LITE is a screening tool designed for clinical and normative settings (i.e., mental health, school, and medical settings). It was developed to be a brief and easy to use one-page measure to screen for stressful and/or traumatic events.	Events	Limited empirical support for use. Authors report preliminary support for R/V, but recommend using discretion with measures until further evidence of R/V is provided.
Los Angeles Symptom Checklist - Adolescent Version	LASC - Adolescent Version	Foy, Wood, King, King, & Resnick	1995	43	13-18	Youth	Free	English, Spanish	Simple language, short phrases. No event or functioning items.	Symptom checklist tool that includes 17 PTSD symptom items as well as items related to abusive drinking, girlfirend problems, and excessive eating.	Experiences/ Effects	1 study that reported appropriate levels of reliability and measure appeared to detect distress and PTSD as a function of trauma exposure among 639 adolescents.
Parent Report of Post-Traumatic Stress Symptoms	PROPS	Greenwald & Rubin	1999	32	7-17	Caregiver	$15-20 - both CROPS and PROPS with unlimited permission to copy	English, Bosnian, Dutch, Finnish, French, German, Italian, Kinyarwandan, Persian, Spanish, Ugandan	Prior Experience Psych Testing/Interpretation; Cutoff Score of 16 indicates cause for clinical concern. Unlike many other measures of PTSD, PROPS appears to be equally sensitive to PTSD symptoms of both genders.	Measure of parent report of the child's post-traumatic stress symptoms for the previous 7 days.	Experiences/ Effects	> 2 studies: good internal consistency, test-retest reliability, criterion validity, convergent and discriminant validity, and sensitivity to change although more research is needed examining the use of the measure with clinical samples.
Pediatric Emotional Distress Scale	PEDS	Saylor, Swenson, Reynolds, Taylor	1999	21	2-10	Caregiver	Free	English, Spanish	The measure yields scores on the following scales: 1) Anxious/Withdrawn, 2) Fearful, and 3) Acting Out. Limited age range; Evidence for use with ethnically diverse sample; No support to differentiate trauma from MH problems	Screening tool (not diagnostic). Items assessing symptoms observed in past month (some of which are anchored in traumatic event).	Expereinces/ Effects	Some promise for psychometric support, however, more research is needed. Ohan, Myers, & Collett (2002) suggest more research is needed to determine whether the PEDS can distinguish between trauma exposed children and other clinical samples.
Post Traumatic Symptom Inventory for Children	PT-SIC	Eisen	1997	30	4-8	Youth	Free	English	Prior to administration or interpretation, training by experienced clinician (<4 hours) suggested.	Interview with child assessing their endorsement of common symptoms for children who have experienced trauma.	Experiences	Very limited psychometric evaluation. Poor evidence for test sensitivity; No evidence for use in ethnically diverse settings
PTSD Checklist (child and parent forms)	PCL-C/PR	Ford	1999	17	6-18	Caregiver	Free	English	Can be easily administered; interpretation should be completed by a clinician	Assessment of symptoms indicative of post-traumatic stress.	Experiences/ Effects	Two studies provide initial evidence for reliability and concurrent validity among medically injured youth and youth in an opt psychiatric clinic.
PTSD in Preschool Aged Children	PTSD-PAC	Levendosky, huth-Bocks, Semel, & Shapiro	2002	18	2-5	Caregiver	Free	English	There is no training required to administer and only minimal trainng by a psychologist needed to interpret. One would need familiarity with the DSM-IV criteria for PTSD to adequately interpret the measure	The PTSD-PAC is a measure of PTSD symptoms in young children. It measures symptoms from the DSM-IV criteria B, C, and D. It also includes items from the DC: 0-3 criteria for PTSD in infants and very young children. It should be used for PTSD screening purposes only.	Experiences	The measure has been used with only one small sample of children and has limited evidence supporting psychometric characteristics.
SCARED Brief Assessment of Anxiety and PTS Symptoms	SCARED brief version	Muris, Merchelbach, Korver, Meesters	2000	9	7-18	Youth	Free	English	Does not require specialized training for administration or interpretation. Suggested cutoff scores: Anxiety: 3+ = clinical PTSD: 6+ = clinical	Brief assessment of Anxiety and PTSD	Experiences/ Effects	Preliminary results based on school children in Netherlands support further examination of measure and suggest the measure may have promise (evidence for R/V).
Trauma and Attachment Belief Scale	TABS	Pearlman	2003	84	9-99	Self	$121 Inro Kit (includes 25 youth administrations; $48 for 25 additional forms)	English	Suggested guildines for interpretation includes manual/video and prior experience psych testing/interpretation	Based on Constructivist Self-Development Theory; assesses 5 domains: safety, trust, independence, power, intimacy, and self esteem	Expereinces/ Effects	Limited empirical support for use. Differences in mean scores based on ethnic group; more widely used to assess vicarious trauma than direct trauma.
Trauma Symptom Checklist for Children	TSCC	Briere, PAR	1996	54	8-16	Youth	$172 Inro Kit (includes 25 youth administrations; $66 for 25 additional forms)	English, Spanish	Interviewers need to be thoroughly familiar with the manual. A higher score reflects greater symptomatology. T scor es at or above 65 for any clinical scale are considered clinically significant. Not designed as diagnostic tool.	Assesses the effects of childhood trauma	Experiences/ Effects	Psychometrics strongly supported by research. Considered one of the "gold standard" measures for trauma assessment.
Trauma Symptom Checklist for Young Children	TSCYC	Briere, PAR	2005	90	3-12	Caregiver	$230 Intro Kid (includes 25 administrations; $50 for 25 additional forms)	English, Spanish	Interviewers need to be thoroughly familiar with the manual. A higher score reflects greater symptomatology. T scor es at or above 65 for any clinical scale are considered clinically significant.	Evaluate acute and chronic posttraumatic symptomatology in young children	Experiences/ Effects	Normative data; Psychometrics supported by multi-site sample of children exposed to mulitple forms of trauma. Spanish version not evaluated for psychometric characteristics.
Traumatic Events Screening Inventory - Revised	TESI-CRF-R/ TESI-PRF-R	Ippen, et al.	2002	24	6-18	Youth (parallel parent report form available)	Free	English	Prior Experience in Psych Testing/Interpretation suggested.	Interview screening tool that assesses a number of potentially traumatic events and the child's reaction to the event.	Events/ Experiences	Measure has not been evaluated for psychometric characteristics.
UCLA PTSD Reaction Index	UCLA PTSD-RI	Pynoos, Steinberg	1998	48	6-18	Youth	$1.20-1.30/instrument or other discounted fee for federal, state, county or agency-wide uses.	English, Arabic, Armenian, Chinese, Farsi/Persian, Filipino/Tagalog, French, German, Greek, Hebrew, Japanese, Norwegian, Russian, Spanish	Revised version of CPTSD-RI. Prior Experience in Psych Testing/Interpretation suggested.	Questionnaire to screen for exposure to traumatic events and assess PTSD symptoms in school-age children and adolescents. Items connected to intrusion, avoidance, and arousal criteria.	Experiences	Several stidies have supported psychometric characteristics of measure, although further assessment of the measure with moderate sample sizes and in other adolescent PTSD screening samples with similar or different PTSD base rates is essential to further establish the instrument's reliability and validity.

Violence Exposure Scale for Children - Revised	VEX-R	Fox & Leavitt	1995	25	4-10	Youth (parallel parent report form available)	Free	English, Hebrew, Spanish	Training for administration inclues < 4 Hours Training by Experienced Clinician	Measure of community violence exposure that includes drawings to accompany questions and thermometer-type rating scale. Questions about minor and severe violence victimization and witnessing violence in the home, school, and neighborhood.	Events	Very limited psychometric support for measure.
When Bad Things Happen Scale	WBTH	Fletcher	1992	90	7-14	Youth (parallel parent report form available)	Free; Contact author	English		Latest version, R4, measures PTSD, anxiety, depression, dissociation, omens, survivor guilt, self-blame, fantasy, denial, self-destructive behavior or thoughts, antisocial behavior, risk taking, and changes in eaching habits.	Expereinces/ Effects	Limited and mixed empirical support for psychometric strength. Existing evaluations of measure include very small samples.
Young Child PTSD Screen	YCPS	Scheeringa	2010	6	3-6	Caregiver	Free	English	Of the 17 PTSD symptoms, two of them are rarely if ever endorsed (sense of a foreshortened future and lack of memory for the event). If youth have five of the 15 remaining symptoms, the ratio of endorsed symptoms is one out of three. Thus, the minimal number of symptoms in the screen could be three symptoms but to ensure a margin of confidence it was decided to include six symptoms and require two symptoms to be endorsed for a positive screen.	Intended to screen shortly following an acute traumatic event (2-4 weeks).	Experiences	There is some evidence for content validity, however, the measures has not been used in a research study and no other psychometric information is available.

"3 E's" - Event, Experience, Effects
Event (e.g., checklist of potentially traumatizing events)
Experience (e.g., avoidance, intrusive thoughts, trauma-specific reactions that suggest traumatized response to an event)

Effects (e.g., general symptoms that do not clearly suggest traumatized response, but are possibly or likely related)

CEBC Assessment Ratings

A - Reliability and Validity Demonstrated - 2 or more published, peer-reviewed studies have demonstrated that the measure is reliable and valid.

B - Reliability and/or Validity Level Above Face Validity Demonstrated - 1 published, peer-reviewed study demonstrates that the measure is reliable and/or valid beyond the level of face validity.

C - Does Not Reach Acceptable Levels of Reliability and/or Validity - A preponderance of published, peer-reviewed studies have shown that the measure does not reach acceptable levels of reliability and/or validity

NR - Not Able to Be Rated - Adequate published peer-reviewed studies demonstrating reliability and/or validity are not yet available for this measure.

Created in connection with the California Screening, Assessement, and Treatment (CASAT) Initiative, Rady Children's Hospital-San Diego, Chadwick Center for Children and Families

Trauma Symptom Checklist for Children - Alternate Version

Briere, J.
1996

Description of Measure

Purpose

To assess the effects of childhood trauma through the child's self-report.

Conceptual Organization

The 54-item Trauma Symptom Checklist for Children (TSCC) consists of two validity scales (Underresponse and Hyperresponse), six clinical scales (Anxiety, Depression, Post-traumatic Stress, Dissociation, Anger, and Sexual Concerns) and 8 critical items. The measure is written at a level appropriate for the language and reading capabilities of children 8-16 years of age (Briere, 1996).

The TSCC-Alternate Version (TSCC-A) is a shortened version of the TSCC that excludes the 10 items that comprise the Sexual Concerns scale and one critical item relating to sexual issues. The TSCC-A addresses human subjects concerns that children might be upset by reference to sexual issues. It is recommended that the TSCC be used in clinical and forensic settings where sexual victimization is more likely to be found, and the TSCC-A be used in school settings (Briere 1996).

Item Origin/Selection Process

The TSCC is the children's version of the Trauma Symptom Checklist for adults. Items for both measures were selected based on factor analyses and consultation with experts in the field of psychopathology (Briere, 1996).

Materials

Test and manual are available from the publisher.

Time Required

10 minutes

rev. 3/14/2011

9. Health Outcomes

G.9. HEALTH OUTCOMES

Describe what measures beyond traditional Healthcare Effectiveness Data and Information Set (HEDIS) scores the Contractor would recommend to determine that its Care Management, Care Coordination, and Utilization Management services and policies are having a meaningful impact on the health outcomes of Kentucky SKY Enrollees.

G.9. HEALTH OUTCOMES

Describe what measures beyond traditional healthcare effectiveness data and information set (HEDIS) scores the contractor would recommend to determine that its care management, care coordination, and utilization management services and policies are having a meaningful impact on the health outcomes of kentucky sky enrollees.

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 19 Quality Management and Health Outcomes and Section 41.9 Quality Management and Health Outcomes of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

WellCare of Kentucky will build on a strong foundation of positively impacting the health outcomes of our Enrollees in foster care, the juvenile justice system, and receiving adoption assistance.For the past three years, our HEDIS scores for these Enrollees have been higher on many measures for our overall Child HEDIS results. This fact is notable because this population has more intensive needs and worse health on average than the overall child population due to the impact of trauma and a history of lack of access to care and unmet needs prior to entering foster care.

For example, in 2018 HEDIS scores for our Kentucky SKY-eligible population compared to scores for our overall child population were:

- Equal to or higher than 54% of all child measures.
- Higher on nine of 19 Childhood Immunization Status measures, including influenza and MMR.
- Higher on Immunizations for Adolescents Combo 2, as well as for HPV which also exceeded the national Medicaid mean.
- Higher on Well-Child Visits in the First 15 Months of Life, Well-Child Visits in the Third, Fourth, Fifth and Sixth Years of Life, and Adolescent Well-Care Visits.
- Equal to or higher than scores for three of the four age groups for the Children and Adolescents Access to Primary Care Practitioners . These 2019 preliminary scores, provided in **Figure G.9-1**, were also higher than the 2017 national Medicaid mean for all four age groups.

Children's and Adolescents' Access to Primary Care Practitioners	2019 All Children*	2019 Foster Care*	2017 National Medicaid Mean
12-24 Months	98.0%	97.0%	94.6%
25 Months - 6 Years	92.0%	94.0%	86.6%
7-11 Years	96.0%	97.0%	90.0%
12-19 Years	96.0%	96.0%	88.6%

*(Preliminary Un-Audited Results)

Figure G.9-1: Access to Primary Care Practitioners

We understand that determining our impact on the health outcomes of the Kentucky SKY population requires measures beyond traditional HEDIS that reflect the unique needs of these Enrollees and the barriers that impede stability and permanency. We will use HEDIS but will also use measures that reflect what we have learned over the past eight years about these children and youth, how the Kentucky system of care works, and how we can most effectively apply Care Management, Care Coordination, and Utilization Management services and policies to support health and permanency goals.

MEASURES

ER visits/1000 for our SKY-eligible enrollees fell by 3% and Primary Care Visits/1000 improved by 8% from 2016 to 2019.

Our SKY Director of Quality, Kathryn Miller, will spearhead our collaboration with DMS, DCBS, and DJJ to develop and implement performance measures that will help us determine our impact on health outcomes. Other leadership that will participate include our pediatrician Medical Director, Behavioral Health Director Dr. Timothy Houchin, Provider Relations Liaison LeAnn Magre, Executive Director Lori Gordon, and our Senior Director of Quality Improvement Laura Betton. Our SKY Enrollee Outcomes Committee (described below) will also provide input into measure development. Our Quality Improvement Committee will review, adopt, and oversee implementation of the measures.

We have developed a preliminary set of proposed measures we will use to provide meaningful insight into our impact on well-being, health, stability, and permanency for SKY Enrollees. These measures, described below, align with the types of measures and reports required by the current contract, incorporate key aspects of care that we know are important for this population, and reflect stability and permanency. We may also use these measures to identify providers with specialized expertise and outstanding performance to recommend to DCBS, Enrollees, and caregivers as preferred providers for SKY Enrollees.

WellCare understands that the SKY program represents a new and innovative approach for this population. We are prepared to partner with DMS, DCBS, DJJ, and DBHID to develop a comprehensive reporting dashboard, inclusive of mutually agreed upon metrics, that will be easily interpreted and demonstrative of how WellCare is impacting the health outcomes of SKY Enrollees.

Operational Measures

We will track and evaluate operational measures that help us determine the impact of our services and policies related to timeliness and effectiveness. Examples of operational measures include the following.

Sample Operational Measures	
% of new Enrollees who have care plans developed within 30 days	#/% Enrollees in each level of Care Coordination
% of Enrollees receiving ID cards within 5 business days of enrollment or any other qualifying event	% Enrollees with ER use outreached within 24 hours
#/% Enrollees assigned a Care Coordinator and CC Team within 1 business day of notification/enrollment	% Enrollees with inpatient discharge outreached within 24 hours (PH and BH)
#/% new Enrollees assigned to a PCP within 24 hours of notification/enrollment	Length of stay in complex and intensive tiers of Care Coordination
#/% foster parents completing WellCare of Kentucky training by topic or engagement in training programs	% Enrollees who meet care plan goals and are moved to a lower Care Coordination tier
Average # of business days for completion of clinical and dental services for new Enrollees (also identifying those that were not completed within the timeframe)	Average # of business days for completion of Trauma Assessment for new Enrollees (also identifying those that were not completed within the timeframe)

Utilization Measures

In addition to the utilization measures we track for all Enrollees, there are a number of utilization measures that provide particular insight into our impact on this population's outcomes. The table below provides some key examples but is not exhaustive.

Sample Utilization Measures	
Decertification of services • # PA requests • % PA requests approved/denied • % appeals upheld/overturned w/dispositions	**Psychotropic medication utilization** • #/% overall and by age range with 1+ psychotropic prescription (denominator – all FC Enrollees)

<table>
<tr><th colspan="2">Sample Utilization Measures</th></tr>
<tr><td>High Levels of Care
ED utilization
PH admissions, discharges, 30 day readmissions
BH/PRTF admissions, discharge, 15/30 day readmissions
ALOS by level of care</td><td rowspan="2">#/% overall and by age range with 1+ psychotropic prescription (denominator – FC Enrollees prescribed psychotropics)
Utilization by key diagnoses (such as ADHD), or lack of specific diagnosis
Average # of psychotropics prescribed (denominator - # Enrollees prescribed any psychotropic)
#/% Enrollees by age ranges with 4+ psychotropic prescriptions (by overall FC pop and by FC Enrollees with a prescription)
Utilization by dosage amount
% Enrollees with psychotropic prescription and no therapy</td></tr>
<tr><td>Telehealth
Number and types of services using telehealth
Provider types accessed using telehealth</td></tr>
<tr><td rowspan="2">Seclusion and Restraints
%/# of Enrollees in facilities for whom seclusion is used
%/# of Enrollees in facilities for whom restraints are used (physical and chemical)
% reduction in use of seclusion and restraints (physical and chemical)</td><td>Crisis Services
# calls to crisis line per month
#/% Enrollees receiving mobile crisis services per month</td></tr>
<tr><td>Other
% of Enrollees with ER use who saw PCP within 48 hours of ER visit</td></tr>
</table>

Evidence Based Practice Measures

We will track measures based on a wide range of evidence-based practices (EBPs), such as the American Academy of Pediatrics/Child Welfare League of America recommendations for the increased frequency and intensity of preventive and primary care services for children and youth in foster care. Critically, we will measure how many Enrollees are receiving care from providers with certification in trauma-informed care and ongoing trauma training our network providers receive. We also plan to add measures that reflect improvement using evidence-based tools such as the CANS, Child Report of Post-traumatic Symptoms (CROPS), and the Ohio Youth Problems, Functioning, Satisfaction Scales.

We will evaluate provider adherence with EBPs as described in our response to Question G.10 Population Health Management and Care Coordination. In addition, WellCare of Kentucky will track Enrollee assessments and ensure they are placed with Qualified Residential Treatment Providers when the CANS and other assessments indicate the Enrollee can only be served adequately in a QRTP environment. Under the Family First Preservation Services Act, all Enrollees placed in a residential setting must be assessed to meet specific criteria to remain in this setting instead of a home-based setting.

Sample Measures for Evaluating Use of Evidence Based Practices	
% Enrollees receiving EPSDT services per the AAP guidelines for periodicity for children in foster care, by age group	% new Enrollees with PCP visit within 5 days
% Enrollees receiving recommended number of High Fidelity Wrap Around contacts within specified timeframes	% private childcare providers with completed Building Bridges self-assessment on EBPs implemented as required for qualified residential treatment provider requirements
% Enrollees receiving treatment from a provider certified in trauma-informed care, by provider type and service type	#/% providers, by type, completing trauma-informed care training annually
% Enrollees showing improvement over time according to evidence-based assessment tools	% providers with documented adherence to EBP, by EBP by provider type
% of Enrollees in QRTP who meet criteria per assessment	% of Enrollees in QRTP when home environment is indicated by assessment

Placement Stability and Permanency Measures

Stability and permanency measures will be critical in evaluating our impact. Everything we do will be aimed at the ultimate goal of achieving permanency for the child or youth through maximizing health outcomes and wrapping services and supports around the Enrollee and family. Below we provide examples of stability and permanency measures we recommend tracking and evaluating.

Sample Stability/Permanency Measures	
#/% Enrollees with out-of-home placement	#/% Enrollees with transfer out of residential facilities
#/% Enrollees with placement changes	#/% Enrollees with transfer out of foster homes
#/% placement changes due to medical/BH issues	#/% Enrollees with transfer from facility to community
Average # placements by age group, tenure in foster care	#/% planned adoptions completed
#/% Enrollees with incidence of maltreatment, by placement type	#/% Enrollees exiting foster care
#/% Enrollees with incidence of maltreatment reoccurrence, by placement type	#/% Enrollees exiting foster care with permanency goals met

Sample Stability/Permanency Measures	
Quality of life, including improvement in schoolwork or activities and emotional well-being, as assessed on the Short Form (SF) 10	#/% Enrollees who return to foster care system following transfer out
#/% Enrollees maintained in community for 6, 12, 18 months following discharge	Average length of time between transfers out and re-entry into foster care

Other Measures

Other types of measures we know are important for this population include continuity with a PCP and caregiver satisfaction with the training we provide. Enrollee and caregiver satisfaction with our Care Coordination services as well as overall customer service and performance will also be important to measure.

Sample Other Measures	
Average # PCP changes	% Enrollees with same PCP for 6, 12, 18 months
CAHPS measures	Satisfaction with Care Coordination
Satisfaction with training	# Complaints and grievances per month by topic

PERFORMANCE IMPROVEMENT PROJECT

WellCare of Kentucky will collaborate with DMS, DCBS, and DJJ on design and implementation of Performance Improvement Project (PIP). Based on our experience with this population, we have identified use of seclusion and restraints in inpatient settings to be an important target for improvement. Below we provide a summary of our planned PIP, which is detailed in **Attachment G.9 WellCare of Kentucky SKY Performance Improvement Project**, provided electronically.

Rationale

The use of seclusion and restraints is now viewed as a crisis intervention technique to be used only as a last resort when less restrictive measures have failed. Evidence indicates the use of seclusion and restraints should be reduced, with continued effort to raise awareness of the potential harm that use of seclusion and restraints can cause, especially in those individuals who have already experienced trauma in their lives (U.S. Department of HHS, 2010). During the first quarter of 2019, WellCare of Kentucky used published data from the Joint Commission to identify incidents of the use of seclusion or restraint. We identified twelve facilities reporting such incidents, indicating opportunities for improvement.

Scope

We will implement an enhanced educational program targeted to the twelve identified facilities to reduce use of seclusion and restraints through increasing use of evidence-based alternatives. In future years, we will use contracting strategies to encourage enhanced compliance.

Target Population

All Kentucky SKY Enrollees receiving behavioral health treatment at the identified facilities.

Improvement Goals

By the final measurement year, reduce reported incidents of the use of seclusion and restraint by behavioral health facilities by 25% compared to the baseline measurement year (403 for 1st quarter 2019). This goal is based upon Center for Medicare and Medicaid Services (CMS) recommendations for attainable comparison rates that reflect meaningful improvement.

Interventions

Regular communication, monitoring, auditing, training, development of prevention tools, and feedback, following seclusion and restraint guidelines established CMS, JCAHO, SAMHSA, and National Association of State Mental Health Program Directors (NASMHPD). Interventions will be focused on supporting facilities to implement NASMHPD*'s Six Core Strategies© Approach to Reduce the Use of Seclusion and Restraint* to minimize conflict and facilitate immediate resolution when conflict occurs to prevent escalation of behavior.

- Conduct face-to-face meetings with behavioral health facility leadership to partner and collaborate on ways to develop/train staff, identify violence prevention as a priority, develop a violence and seclusion and restraint prevention plan, and improve oversight of untoward events.
- Collaborate with behavioral health facility partners to establish consistent definitions of violent events; guidelines for the use of seclusion and restraint; recognition of imminent danger; identify reportable injuries and appropriateness of stat medication administration; compile historical data by events/hours; and to mandate ongoing compiling of data for analysis to effect positive change.
- Collaborate with behavioral health facilities to develop and implement staff training in matching interventions with behaviors; use of prevention tools to de-escalate a potentially violent situations; introduction of trauma-informed services; and the importance of debriefing after the use of seclusion and restraint.
- Collaborate with behavioral health facilities to develop and implement violence, seclusion and restraint prevention tools to include: assessing the risk factors for violence and the use of seclusion or restraint; assessing risk factors for potential injury or death; implementation of a universal trauma assessment form; development of safety and crisis plans; and directives to identify triggers and preferences.
- Collaborate with behavioral health facilities to include a debriefing phase as a part of their process whenever seclusion or restraints are used. This debriefing process should include: an analysis of each critical event; examination of what occurred before during and after the event; and determine what could have been done to prevent the event from occurring again and what could have been done better during the event.

Monitoring and Evaluation

Quality Improvement staff will use the Behavioral Health JCAHO Report on Use of Seclusion and Restraint to monitor and track the percentage of reported incidents of the use of seclusion and restraint by behavioral health facilities among SKY Enrollees receiving behavioral health

treatment. Data collected will be reviewed, analyzed, and reported for the performance indicator and for the quarterly Intervention Tracking Measures (ITMs). Any identified plateaued or decreasing trends will be further analyzed to identify the root cause and any addition barriers with interventions revised and/or added as needed. Any changes will be included in subsequent PIP reports.

Increasing or Sustaining Improvement

We will use results to inform practice through sharing data and feedback, including comparison with peers, during joint operating committees with each provider. We will also provide feedback acknowledging best practices and encouraging providers to evaluate changes in staff turnover, staff injury, and Enrollee/staff satisfaction as reduction in seclusion and restraint occurs. In addition, we will develop contracting strategies to reward high performing providers and collaborate evaluating the effectiveness of measures adopted and our impact

EVALUATING THE EFFECTIVENESS OF MEASURES ADOPTED AND OUR IMPACT

We will incorporate all final measures as well as our PIP within our Quality Management Plan. This includes tracking and trending in the Quality Work Plan and comprehensive review as part of our Annual Evaluation.

To ensure specialized focus on the health and other outcomes of our Kentucky SKY Enrollees and address SKY operational and quality metrics and processes, we are incorporating internal and external expertise with this population into our Quality Management Committee (QIC) structure. We will add two new committees to our existing QMC structure: a Collaboration Optimization Committee and a SKY Enrollee Outcomes Committee. Each committee will report into the QMC oversight committee.

SKY Collaboration Optimization Committee

This committee will monitor the effectiveness of collaboration and coordination among WellCare of Kentucky, DMS, DCBS, and DJJ across all operational areas and issues. The committee will recommend policy and process changes to facilitate our joint cooperative performance to improve quality and outcomes.

Committee membership will include:

- 1 DMS representative
- 2 DCBS representatives including one from a Service Region office
- 2 DJJ representatives including one from a Community District office
- WellCare of Kentucky SKY Provider Relations Liaison LeAnn Magre (Chair)
- WellCare of Kentucky SKY Executive Director Lori Gordon
- WellCare of Kentucky SKY Medical Director
- WellCare of Kentucky SKY Behavioral Health Director Dr. Tim Houchin
- WellCare of Kentucky SKY Quality Improvement Director Kathryn Miller
- WellCare of Kentucky Enrollee Services Manager Elizabeth Starr
- Residential treatment provider

- PCP
- Foster and adoptive parents
- Former Foster Enrollee

The Committee will meet monthly for the first six months post-implementation and quarterly thereafter. Meetings will include formal reviews for two to four cases of collaboration and coordination among WellCare of Kentucky and our cabinet partners. Cases to review will be identified by Committee members or by WellCare of Kentucky if none are identified. Committee members will discuss opportunities to improve communication, handoffs, operational policies, and training to improve the Enrollee experience and contribute to improved health outcomes.

The Committee will also review key process metrics relating to the ability of Enrollees to receive timely and effective care such as speed of notification, enrollment, health assessments, and provider visits for new or transitioning Enrollees.

SKY Enrollee Outcomes Committee

This committee will monitor the quality of care and service for all Kentucky SKY Enrollees receiving Medicaid services and the network of providers who deliver services.

Committee membership will include:

- WellCare of Kentucky SKY Medical Director (Chair)
- WellCare of Kentucky SKY Behavioral Health Director Dr. Tim Houchin
- WellCare of Kentucky SKY Provider Relations Liaison LeAnn Magre
- WellCare of Kentucky SKY Executive Director Lori Gordon
- WellCare of Kentucky SKY Quality Improvement Director Kate Miller
- WellCare of Kentucky SKY Provider Services Manager, Tony Piagentini or Provider Network Director, Bonnell Irvin
- PCPs
- Specialists
- Foster and adoptive parents
- Former Foster Enrollee

The Committee will meet quarterly to review key metrics as identified by WellCare of Kentucky, DMS, DCBS, and DJJ including identification of potential new metrics to address potential gaps in care or service. The Committee will also identify training opportunities for staff, providers, and foster and adoptive parents. Summary findings will be reported to the QMC, which will incorporate findings into required reporting to DMS on whether Kentucky SKY Enrollees' health outcomes improved as a result of our Care Coordination activities.

Ongoing Evaluation

Ongoing, we will identify modifications to initial measures as well as additional measures that are needed. In addition to evaluation through our quality program, we will identify needed changes through our continuing collaboration with DMS, DCBS, and DJJ. We will work with our cabinet partners to review both our performance on all adopted measures as well as the extent

to which the measures are providing meaningful information on our impact the Kentucky SKY Program and Enrollees. We will also leverage our analytics team, which will review our performance along with performance of WellCare plans serving this population in other states. Our team of statisticians will complete quarterly quality analytics and semi-annual comprehensive population profiles to evaluate both our performance on adopted measures and the usefulness of the measures in evaluating our overall impact.

G.9 Health Outcomes

- Attachment G.9 WellCare of Kentucky SKY Performance Improvement Project (Provided Electronically)

10. Population Health Management and Care Coordination

WellCare Launches Digital Life Coach Program for At-Risk Foster Youth in Kentucky

WellCare
Beyond Healthcare. A Better You.

G.10. POPULATION HEALTH MANAGEMENT AND CARE COORDINATION

a. Describe plan for identifying and coordinating care for those Kentucky SKY Enrollees with the most immediate service needs leading up to and immediately following implementation of the Kentucky SKY program.
b. Describe how the Vendor would identify and monitor new Kentucky SKY Enrollees with high physical or behavioral health needs to ensure continuity of care.
c. Describe how the Vendor will stratify Kentucky SKY Enrollees into tiers for Care Management services.
d. Provide a description of the Vendor's targeted evidence based approaches applicable to the Kentucky SKY populations. Provide details on the Vendor's approach for ensuring Network Providers' compliance with evidence based approaches mandated by the Vendor for Kentucky SKY Enrollees.
e. Provide a description of the Vendor's approach for ensuring Network Providers are providing Trauma-informed Care to Kentucky SKY Enrollees.
f. Describe how the Vendor will use telemedicine and telehealth to improve quality or access to physical and Behavioral Health services.
g. Describe how the Vendor will capture data related to Social Determinants of Health and incorporate this information into its Care Management approach.
h. Describe how the Vendor will coordinate with DMS, DCBS, DJJ, and physical and Behavioral Health Providers to ensure each Provider has access to the most up-to-date medical records for Kentucky SKY Enrollees.

G.10. POPULATION HEALTH MANAGEMENT AND CARE COORDINATION

a. Describe plan for identifying and coordinating care for those Kentucky SKY Enrollees with the most immediate service needs leading up to and immediately following implementation of the Kentucky SKY program.

WellCare of Kentucky will comply with DMS of Medicaid Services' (DMS) expectations and requirements as specified in Section 34 Population Health Management Program, Section 41.10 Utilization Management, Section 41.19 Population Health Management Program, and Section 41.20 Kentucky SKY Enrollees with Medically Complex Needs of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

WellCare of Kentucky today provides population health management and Care Coordination services to approximately 8,100 Kentucky SKY-eligible children and youth, the single largest concentration of any Medicaid MCO in the Commonwealth. Our Provider Relations Liaison, LeAnn Magre, leads our dedicated team of field-based Care Coordination professionals with a true passion for helping these Enrollees improve health outcomes, build resiliency, maintain stability, and achieve their permanency goals.

WellCare is the only Kentucky Medicaid MCO that has already implemented a field-based model for these Enrollees, having recognized several years ago that effectively managing this population requires a high touch approach and strong relationships and processes with DCBS, DJJ, and other stakeholders.

As a result, we have improved outcomes such as the following for our foster care, juvenile justice, and adoption assistance Enrollees.

- From 2017 to 2019 HEDIS scores for well-child visits in the third, fourth, fifth and sixth years of live increased 10%. Adolescent well-care visits increased 28%. Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents had a significant increase for all ages and is in the top 75 percentile and had a 68% increase. The use of first-line psychosocial care for children and adolescents on antipsychotics increase (12-17 years) 9%. HEDIS scores for all five Immunizations for Adolescents measures, Adolescent Well Care, Timeliness of Prenatal Care, and Chlamydia Screening increased from 2017 to 2019.
- Among those with co-morbid physical and behavioral health (BH) issues, inpatient admissions/1000 decreased by 11%, ER visits/1000 decreased by 13%, and specialist visits/1000 increased by 29% from 2016 to 2019.
- Among those with co-occurring mental health and substance use issues, ER visits/1000 decreased by 14%, inpatient mental health admits/1000 increased by 3%, PCP visits/1000 increased by over 3%, and specialist visits/1000 increased by 7% from 2016 to 2019.

As DMS places its trust in a single point of accountability for our children and youth, WellCare is uniquely positioned as a leader to bring the vision of the Families First Prevention Services Act to life and support our Commonwealth partners in moving the program forward.

Below we provide an overview of how we have customized our Population Health Management model and Care Coordination approach for Kentucky SKY, followed by our responses to Question G.10.a-Question G.10.h.

CUSTOMIZING TO MEET THE UNIQUE NEEDS OF THE KENTUCKY SKY POPULATION

Our model for Kentucky SKY builds on our experience working in the field with our current SKY-eligible Enrollees, their caregivers, DCBS, DJJ, and other stakeholders to address the unique factors that make population health management (PHM) and care coordination for this population different than it is for other Medicaid populations.

Over the past eight years, we have continually refined our PHM model and care coordination approach to align with the goals, needs, and processes of the DCBS, the Children's Review Program (CRP), and DJJ. Fundamentally, our task is to integrate Medicaid with the child welfare system of care and support every child and youth to achieve their permanency, placement and safety goals. This has included WellCare's ongoing collaboration with DCBS and CRP for program development and our strategy development for the next stage of the Foster Care Program. For example, to address the increasing role that parental substance abuse plays in the need for foster care in Kentucky, a key strategy is implementation of services to adhere to the Families First Prevention Service Act by 2021.

Customized Population Health Management Model

PHM for a foster care population includes the components included for any Medicaid population (as described in our response to Question C.24 Population Health Management). However, to effectively meet their needs, our PHM model will go beyond standard PHM in some key ways.

Population Trauma Management. Every Kentucky SKY Enrollee has a history of trauma, which influences health, behavior, ability to participate in care, and other factors that impact their outcomes, placement stability, and permanency. Everything we do and all stakeholders will be grounded in trauma-informed care and approaches.

Expanded Approach to Preventive Care. Preventive and well-child services will be provided at a greater frequency and intensity as recommended by the American Academy of Pediatrics and Child Welfare League of America. The AAP/CWLA standards are built into our model through provider contract requirements, provider training, our approach to defining and identifying care gaps, Care Coordination requirements, and our quality assessment and performance improvement approach. Our Missouri plan already uses these standards for the foster care Enrollees they serve.

ER visits/1000 for our SKY-eligible enrollees fell by 3% and Primary Care Visits/1000 improved by 8% from 2016 to 2019.

Our prevention approach will incorporate prevention of placement disruption, which requires family preservation services and coordination with DCBS in working with Enrollees and their biological, foster, and adoptive families and fictive kin to promote stability and achieve permanency goals. Our approach will also include abuse, neglect, and maltreatment prevention efforts, such as education, training, peer support, and connection to respite for family caregivers. As noted above, WellCare will implement the Families First Prevention Services Act as of October 1, 2019, earlier than the 2021 requirement.

Population-Specific Approach to Utilization Management. In addition to the AAP/CWLA standards, we will use numerous evidence-based guidelines that go beyond what is typical for a traditional Medicaid child population (see our response to G.9). Additionally, our UM approach will reflect that strict adherence to medical necessity is not always in the best interests of children in this population. For example, it may be necessary to authorize continuing inpatient care when medical necessity criteria is no longer met because an appropriate post-discharge placement is not yet available, and "social transportation" to keep a child in the same school following placement changed to a residence in a different part of town.

Figure G.10-1 depicts our overall Kentucky SKY PHM model.

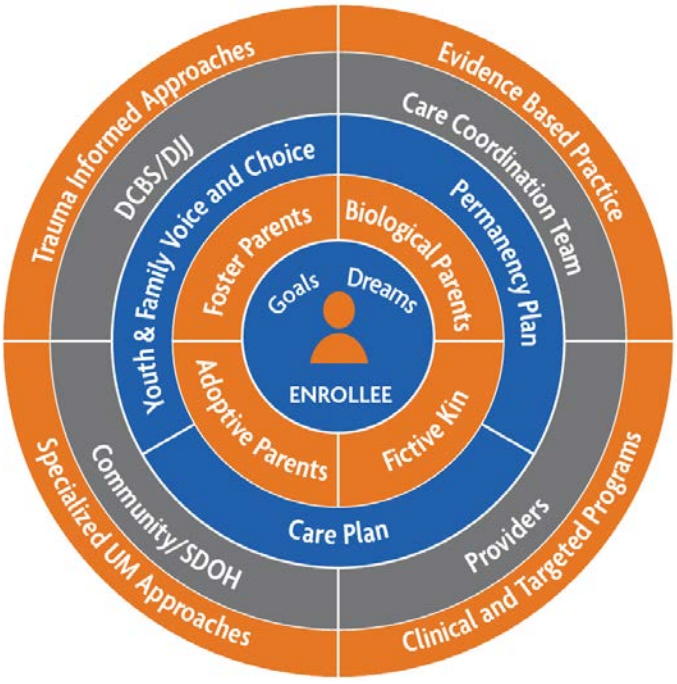

Figure G.10-1: WellCare Kentucky SKY Population Health Management Mode

CUSTOMIZED CARE COORDINATION

Our Care Coordination approach and processes, which we describe throughout the response to this question, reflect the many ways in which working with this population requires a tailored approach. **Table G.10-1** provides some of the key examples of the unique factors we have addressed in customizing our Care Coordination approach for Kentucky SKY.

Table G.10-1: Unique Factors in Providing Care Coordination to Kentucky SKY Enrollees

Need to initiate Care Coordination services prior to receipt of the enrollment file.
Multiple, changing stakeholders to coordinate with and educate on Enrollee condition and needs.
Consent issues can slow the process of planning, coordinating, and monitoring care.
More transitions to coordinate due to placement changes.
Impact of caregiver needs and capabilities on utilization of and lengths of stay in higher levels of care.
May need to coordinate with out of state providers, caregivers, and other stakeholders.
More intensive needs of the population drives additional staffing needs.
Transition age youth and former foster care Enrollees require significant support for self-advocacy, maintain Medicaid, and accessing social determinants resources as they age out.
The care plan must support and be integrated with the permanency plan, which requires an enhanced approach to goal setting, implementation, and monitoring.
The MDT must carefully weigh all care plan and permanency plan goals to ensure that services are effective and must approach service modifications holistically.
Court expectations and timeframes often drive treatment. It is critical to educate and include judges and court system staff on the MDT to provide the frame of reference needed for decision making. For example, some judges order services that cannot be covered by Medicaid unless medically necessary, but a court order does not in itself support medical necessity.

PLAN FOR IDENTIFYING AND COORDINATING CARE FOR IMMEDIATE SERVICES NEEDS PRE/POST IMPLEMENTATION

WellCare of Kentucky is strongly positioned to ensure continuity of care for Kentucky SKY Enrollees at program implementation. Our experience transitioning Kentucky children and youth with immediate services needs includes those with immediate service needs such as children with special health care needs (SHCN), significant BH conditions, prescribed medications, ongoing courses of treatment, scheduled surgeries, dependence on ventilators or other technology, in residential care, or other critical needs that require ongoing services with no gaps when changing service delivery systems. In our experience, a significant percentage of children entering the foster care system have immediate service needs.

Because so many of these children and youth are already our Enrollees, a significant portion of the Kentucky SKY-eligible population would not have to change MCO at go-live and could

continue with their current providers and care plans with no impact whatsoever. However, it is not our Enrollee concentration alone that distinguishes us from other MCOs.

We have worked intensively with DCBS, DJJ, the Office of the Commission for Children with SHCN (Children's Commission), the Children's Review Program, the court system, and the Children's Alliance to establish partnerships and put effective processes in place to improve health outcomes and promote resilience, stability, and permanency for these children and youth. Our foster care enrollment continues to grow, increasing by 30% in 2018**. This is strong evidence that WellCare is highly trusted and is the preferred MCO for DCBS caseworkers.**

Below we describe our plan for identifying and coordinating care for those with the most immediate service needs leading up to and after implementation.

Quickly Identifying and Coordinating Care for Enrollees with Immediate Service Needs

WellCare's most recent implementation involving foster care and children with special health care needs (SHCN) is the Florida Children's Medical Services (CMS) Health Plan. Through this program, which went live February 1, 2019, WellCare of Florida holds a sole-source, statewide contract to provide comprehensive, enrollee and family-centered services to over 68,000 children and adolescents. This includes 200 medically complex children classified as "Medical Foster Care" and other foster care children in the general population. WellCare's CMS network includes, among others, 350 Medical Foster Care Parent Providers as well as a network of Prescribed Pediatric Extended Care providers for therapy services. Because of the significant health care needs of this population, our top priority was quickly identifying and coordinating care for the most immediate service needs to ensure continuity and prevent gaps in care. WellCare of Florida worked closely with involved state agencies to obtain pre-implementation reports by provider type on the services these children were receiving prior to implementation through a series of reports by provider type. Collaboration with our state partners and intensive care management outreach and coordination with enrollees, families, and providers achieved a smooth transition for these high needs children.

COLLABORATIVE PRE-IMPLEMENTATION PLANNING

Ensuring continuity and preventing gaps for Enrollees with the most immediate needs requires collaborative pre-implementation planning with all system stakeholders. Our Kentucky SKY leadership team (described in detail in our response to Question 2.c Staffing), with assistance from our dedicated Kentucky SKY Care Coordination staff, will work with DMS, DCBS/DJJ, other MCOs, and other important system partners to develop a comprehensive and effective plan to identify and coordinate care for Enrollees with immediate needs. We recommend a multi-phase planning process to begin upon contract award.

Phase 1

The first phase will include defining, collectively as partners, what is meant by "most immediate service needs" so not one Enrollee falls through the cracks. WellCare will share our experience identifying foster care Enrollees with the most immediate needs and some key indicators we

use. This phase will also include but not be limited to designing work flows and processes, including those related to the transition of clinical and non-clinical Enrollee information.

Examples of Indicators of Immediate Needs

- Medically Complex designation
- Behavioral health admission within last six months
- Technology-dependent
- Current prescriptions
- Existing care plans
- Open authorizations, including for PRTF and acute/subacute levels of care
- Scheduled surgeries
- Waiting for placement in facilities
- Enrollees currently living outside of Kentucky

For example, WellCare will provide technical support and participate in development of a process to generate a temporary Medicaid ID within 24 hours of a court order. This will allow us to open a record in CareCentral and begin collecting and integrating information about the child's needs and previous care prior to receipt of the 834, which will enhance our ability to provide timely, appropriate, coordinated services. We will also provide our ClearSky solution for secure, HIPAA-compliant access by DCBS and DJJ staff to an integrated view of critical information about children for whom they are responsible, such as the Medical Passport and care plans/Individual Health Plans. In addition, we will finalize an approach for locating our Field Outreach Coordinators (FOCs) onsite at DCBS regional offices and protocols for FOCs and Care Coordinators to work onsite with DCBS and DJJ staff.

Phase 2

This phase will involve planning and implementing comprehensive outreach and education on the transition plan to providers, stakeholder groups, and foster and adoptive parents as well as former foster care youth. We recommend a concurrent approach to ensure all are on the same page at the same time. WellCare will collaborate with DMS, DCBS, DJJ, and selected network providers that serve on our quality committees as well as key statewide provider organizations such as The Children's Alliance and stakeholder organizations such as the Kentucky Foster and Adoptive Care Association to develop outreach and education timeframes, methods, locations, messaging, materials, and responsible parties. *The overriding message to providers and stakeholders will be to continue providing and accessing care during and after implementation with no changes until a new assessment and care plan are completed and new authorizations put in place.*

Providers. We recommend holding educational sessions in each area of the Commonwealth to reach providers of varying size, geographic reach, and services offered. We will partner with experts essential to our success, such as the Children's Alliance; Bart Baldwin's Agency; Children's Review Board; and large private childcare providers and foster home providers, many of which have multiples offices throughout the Commonwealth. We also will partner with DMS and other MCOs to outreach to providers serving other Kentucky SKY-eligible Enrollees that are not in the WellCare network to ensure they participate in education opportunities. We will encourage provider participation by providing education sessions in local, easy to access sites, posting training materials on WellCare's provider Portal, and providing virtual connection opportunities.

Stakeholders, Foster/Adoptive Parents, Former Foster Care Youth. Educational sessions for stakeholders groups, foster and adoptive parents, and former foster care youth at multiple site locations and times make them as accessible as possible. For instance, we recommend delivering presentations at state regional offices to ensure foster and adoptive parents know that the transition information is supported by DCBS and DJJ. We also will recruit the assistance of other MCOs to outreach to the parents of their Enrollees who will transition to WellCare. We will share materials from these sessions through WebEx presentations and virtual connection opportunities. Our education focus areas for foster and adoptive parents will include information about WellCare, Kentucky SKY, key staff contacts, Enrollee specific material, and specific contact information for questions, ensuring that they have current information on the resources available to ensure successful and timely transitions.

Phase 3

The third phase will be deploying the workflows and processes designed to begin identifying and coordinating care for Enrollees with the most immediate needs. We describe our proposed approach to this phase below.

LEADING UP TO IMPLEMENTATION

Identification

Because we are already familiar with the needs of our existing Enrollees, we will place a heightened focus on those who will be new to WellCare. However, we will also have a process to identify current Enrollees with immediate needs.

Enrollees Who Are New to WellCare

A key element of pre-implementation identification will be review of information for Kentucky SKY eligibles who are currently enrolled in another Medicaid MCO. While other MCOs will be required to electronically send a list of their existing SKY-eligible Enrollees prior to go live, WellCare proposes that they also identify those with a Medically Complex designation or other agreed indicators of immediate need and provide information about these Enrollees' needs and care. This information would include but not be limited to:

- The most recent Individual Health Plan meeting documentation
- Open authorizations with information on the treating provider
- Care plans
- Recent assessment results
- Medication history and current filled medications.

Our Care Coordination staff will immediately begin reviewing all received information from MCOs along with the one year of recent claims data provided by DMS. Our staff will follow up as needed with other MCO staff and providers we are able to identify, including requesting case conferences to discuss the Enrollee's needs and care. Critically, we will also use these conferences and other interactions to obtain information we would not get through electronic records transfer, such as personal information based on their interactions with the Enrollee and/or their support networks. This type of information exchange will give us the opportunity

to understand the Enrollee's story by moving beyond paper to real life interactions that provide insight into root causes and underlying needs.

Current WellCare Enrollees

Prior to implementation, WellCare will stratify current Enrollees to prioritize for outreach and assessment by identified level of risk. The CCT will begin to assign Enrollees based on their current level of risk, anticipating the Enrollees who may need a specific level of care management from the date of go live. In addition, we will implement an outreach campaign with adopted and former foster Enrollees, alerting them to the new program and to expect Care Coordinator outreach.

Coordination

We will begin coordinating care prior to go-live. As we identify open authorizations, our Care Coordination staff will work with our Utilization Management (UM) team and the relinquishing MCO to pre-load authorizations into our system. UM staff will create tasks in CareCentral to outreach to providers with the new authorization information to ensure authorizations are in place on Day 1.

Care Coordination staff will review Enrollee information against placement location, if known, so that we can pre-assign as many Enrollees as possible to an appropriate Care Coordinator and CCT. Team composition may change after we complete a comprehensive assessment, but initial assignment of a team will facilitate outreach to existing providers and integrated review of Enrollee information to identify any potential gaps or issues with the current care plan.

The assigned Care Coordinator will begin outreaching to current providers to obtain additional information that will identify immediate needs as well as inform the assessment and care planning process once the child or youth is enrolled in WellCare. This will include any specialists providing treatment as authorized by the prior MCO. Care Coordinators will also reinforce with providers the importance of continuing to provide existing services with no change until after a comprehensive assessment is completed and a new care plan is developed and authorized. Our provider Relations team will assist with this education and will offer non-network providers serving SKY-eligible individuals a WellCare contract to ensure continuity of care. For those non-network providers unwilling to contract with WellCare, SCAs will be completed.

IMMEDIATELY FOLLOWING IMPLEMENTATION

Identification

While we anticipate identifying a high percentage of new Enrollees with immediate needs through the process outlines above, our Care Coordinators will continue to seek additional or more recent information that may be available about the child's needs. For example, an Enrollee may have developed a new or changed need since the prior MCO last reviewed the care plan. In addition, our staff will thoroughly review all of the information provided by DCBS at implementation as well as information contained within the enrollment file to identify any additional immediate needs. As described in more detail in our response to Question G.5 Enrollee Services, our Field Outreach Coordinator (FOC) co-located at DCBS regional offices will

assist us to identify new Enrollees with immediate needs that we may not previously have identified through completing an initial screening and interaction with DCBS staff.

We will conduct face-to-face assessments of all new Enrollees within five to seven days to validate the information received and to identify additional needs of previously identified Enrollees. We will use the information obtained prior to go-live to prioritize outreach. Additionally, we will also use the initial face-to-face meeting to identify other Enrollees with immediate needs who were not identified through the process above.

Our Clear SKY solution will provide DCBS, DJJ, and foster and adoptive parents with secure, HIPAA-compliant access to an integrated view of critical Enrollee information such as the Medical Passport and the care plan or Individual Health Plan.

The Care Coordinator, through educational sessions, phone calls, and in-person meetings, will ensure Enrollees providers, Foster Parents, Adoptive Parents, and other members of the Enrollee's support network have the information and community resources available to meet their needs in preparation for their transition. For example, we will provide Foster Parents with secure, HIPAA-compliant access to our ClearSky mobile application to view the child's Medical Passport, care plan/IHP, and other key information and support such as the nurse line, BH line, and Care Coordinator contact information. If the parent does not have their own device, we will provide a tablet, and internet access if needed, to ensure they can access ClearSky.

Coordination

Upon implementation, Care Coordination will review all available information for new Enrollees to validate Care Coordinator and CCT assignments for those already identified and to determine appropriate assignment for those not previously identified. All Enrollees will be assigned a Care Coordinator and CCT within one business day of enrollment into the program.

Pre-loaded authorizations will be effective as of go-live. Our Care Coordinators will work with the UM team to outreach to providers of new Enrollees to ensure they have the records, authorizations, and relevant information needed to immediately initiate services. All new Enrollee information will be available to providers via the medical passport which they can access on the provider Portal

During our initial face-to-face assessment, the Care Coordinator will determine whether the Enrollee has any other immediate needs that require rapid initiation of services and ensure the Care Coordination Team (CCT) has the information it needs to make the timely and appropriate authorizations and referrals for the Enrollee. For those not previously identified with immediate needs, the Care Coordinator will contract prior MCOs and providers for information needed to coordinate care plan/IHP development. Using all available information, the Care Coordinator will facilitate development of the care plan or IHP, as applicable, as described in response to Question G.10.c below. We will ensure approved care plans and authorizations are communicated to providers, DMS, DCBS, and DJJ by electronic or direct communications. All information will be documented in CareCentral and automatically loaded into the Medical Passport.

b. Describe how the Vendor would identify and monitor new Kentucky SKY Enrollees with high physical or behavioral health needs to ensure continuity of care.

WellCare already has several years of experience identifying and monitoring care for high needs foster care Enrollees in Kentucky to ensure continuity of care. Currently, 9% of our foster care Enrollees are in our top two case management tiers, and we serve 44 Enrollees who have been designated as medically complex by the Children's Commission.

> **Of our current Kentucky SKY-eligible enrollees, 15% have co-morbid physical and behavioral health conditions and 4% have co-occurring mental illness and substance use.**

Our Care Coordinators already routinely participate in Individual Health Plan (IHP) meetings, working work hand-in-hand, and often face-to-face, with the Children's Review Program and the Children's Commission to ensure continuity and appropriate treatment and placement for Kentucky's children and youth in foster care. We also currently serve 50 Enrollees in the juvenile justice system, many of whom have high physical and/or behavioral health needs, and our Care Coordinators work closely with DJJ regional leadership to ensure their needs are identified, monitored, and met. We will build on these relationships to quickly identify and monitor new Enrollees with high needs and promote health, healing, and permanency from the earliest point possible.

IDENTIFICATION OF NEW ENROLLEES WITH HIGH PH/BH NEEDS

WellCare will have procedures in place to identify quickly when a high needs Enrollee comes into care and processes to help us identify their needs. Our strategy for Kentucky SKY is to assume that every new Enrollee is complex until the assessment and care planning process indicates differently. Our identification procedures will include the following.

- Obtaining information from DCBS. Our FOC and Care Coordinators will be embedded in DCBS/DJJ offices, which will facilitate quicker notification of a child coming into care. The FOC or Care Coordinator receiving the notice will immediately ask the DCBS/DJJ staff providing the notice if they are aware of any existing PH or BH needs and request any information DCBS has already collected during the removal process, through the initial assessment, results of the CANS if completed, and other prior DCBS/DJJ assessments (Needs-Q, RCNA, and DCBS/DJJ Service Plans/Case Plans) if the child was previously in care. We will use all available information from DCBS to assign a Care Coordinator and begin assembling an appropriate CCT. These staff will immediately begin researching and outreaching to obtain information about the child's needs.
- Leveraging Existing Information in CareCentral. The Enrollee may be, or may previously have been, a WellCare Enrollee. The CCT will identify any information we may already have in our system, such as existing or previous care plans, medications, utilization history, open authorizations, and treating provider information. For any current or former WellCare Enrollee, the CCT will immediately outreach to treating providers to obtain the most up-to-date information on their needs and care.
- Checking Medicaid and Managed Care Eligibility. The CCT will check KY Health Choices to determine whether the child is already Medicaid-enrolled and in an MCO. If the child is in fee for service, such as those receiving home and community-based waiver services, the CCT will outreach to DMS's Member Services to request information as well as to identify

treating providers and outreach to them for information on services and care needs. If the child is in another MCO, the CCT will outreach to the MCO to request the care plan, authorization and provider information, any utilization and claims data, and other information that will give us insight into their needs and ongoing care. We will also identify and request a case conference with any assigned case manager to discuss the child's needs and care.

- Querying the Kentucky HIE. The CCT will query the Kentucky HIE to identify any claims submitted for the child's care. This will help us identify diagnoses that indicate high needs and the treating providers. It will also help us identify recent ED and inpatient utilization, including NICU stays, indicating potentially urgent and unmet needs.
- Meeting Face-to-Face with the Enrollee/Caregiver. The assigned Care Coordinator will outreach to the caregiver within 24 hours of notification that the child is in care to ensure immediate needs are met and schedule an initial face-to-face meeting. The meeting will occur with the Enrollee and caregiver within five to seven days of notification to begin the comprehensive needs assessment process and identify high needs.
- Reviewing Medically Complex Assessment Results. The assigned Care Coordinator, who will be a nurse Case Manager, reviews results of the assessment completed by DCBS Medical Support Section to identify high needs and will coordinate with the DCBS Medical Support Section staff and the Children's Commission's Medically Complex Liaison and nurse (if engaged) with arranging the initial IHP within 30 days of the medically complex designation. The IHP is another key source of information about a child's needs. However, in WellCare's experience with foster care Enrollees, the assessment is typically not complete by the time we are notified that the child is in care. We use the information if it is available, but we do not wait to begin arranging services to address the child's needs immediately.

Ensuring Continuity of Existing Services

Because we know a significant percentage of the Kentucky SKY population has high needs and to make our absolute best efforts to ensure continuity of care and immediately address any unmet needs, **WellCare will assume all children entering care are high needs.** Upon notification, a BH Care Manager will be assigned as the Care Coordinator and will immediately begin the high fidelity wrap around process for a child with indicators of BH needs to ensure continuity and delivery of needed care. For those with complex physical health needs, including but not limited to those with a Medically Complex designation, we will assign a nurse Care Manager as the Care Coordinator to ensure continuity and quickly arrange for needed services. Our highest priority will be to identify and continue existing services and put new services in place quickly to meet ongoing and urgent needs.

Honoring and Coordinating Existing Authorizations. If we identify any existing services or ongoing treatment, the Care Coordinator will be empowered to quickly enter authorization information into our system and reach out to current providers to provide authorization information regardless of network participation status. For non-network providers, the CCT will alert our Provider Relations team, which will quickly contact the provider to offer a contract or if necessary complete a single case agreement.

We will honor existing authorizations for up to 90 days and until we complete the comprehensive needs assessment, develop a care plan, and authorize new services. The Care Coordinator will educate the Enrollee, caregiver, and provider to continue the services with no change until new services are authorized. We will collaborate with PCPs and specialists of prior MCOs to ensure continuity of care for Enrollees with SHCN receiving services authorized in a treatment plan by their prior MCO. Because WellCare already has a broad network, we anticipate that most new Enrollees already receiving services will be engaged with a provider in our network. As a PCP, specialist, or other provider alerts us to an immediate service need, the CCT will develop an initial care plan and initiate the service approval so that the Enrollee can continue current services without any interruption.

Immediately Authorizing Services for Unmet Needs. If the child has urgent needs but no ongoing authorization or current provider, the assigned Care Coordinator will help DCBS/DJJ and the caregiver select and rapidly access a conveniently-located provider with appropriate expertise. Our CCT will coordinate with our UM team to quickly authorize care and provide authorization information to the provider. We will expedite this process for children and youth requiring PRTF services through our Care Coordinators assigned to specific PRTFs who will be able to leverage their relationships with the providers and their presence onsite to facilitate authorizations.

Supporting Placements to Ensure Continuity. Our Care Coordinators and CCT will work with the Children's Review Program and DCBS case worker to identify an appropriate placement to meet the Enrollee's needs. For Enrollees with juvenile justice involvement, our CCT will work with DJJ regional and local staff on placement of the Enrollee. As requested, this will include expediting the scheduling of appointments for assessments and facilitating Providers' timely submittal of assessment results used to determine residential placements as well as compiling and submitting assessment results to the appropriate DCBS or DJJ staff within required timeframes.

Further, our staff will ensure the placement has access to treatment services needed for the Enrollee and their family, as appropriate. We will provide the caregiver with education about the child's condition(s) and needs, including but not limited to information on evidence-based care recommendations, the importance of medication adherence, how to recognize symptoms and exacerbations, and 'red flag' education on when to contact the provider or emergency services. If CRP has difficulty identifying an appropriate placement for a high needs child, we will collaborate on what supports WellCare could offer as a value-added benefit to encourage provider/caregiver willingness and ability to take the child and continue serving the child to preserve a current placement

Supporting Successful Community Placements

Ten year old 'Julie' has been at Our Lady of Peace for three years. She has tubular sclerosis with seizures, is non-verbal, and needs assistance with all activities of daily living (ADLs). Her unique medical issues and history of unsafe behaviors have made it a challenge to find a foster home that can appropriately manage her complex needs and keep her safe. The WellCare Case Manager is working with DCBS, Our Lady of Peace, and community providers to identify an appropriate community placement and determine the education, training, and support potential foster parents will need to provide adequate care. As part of this process, our Case Manager is advocating for a very structured transition process with involvement of the identified foster family prior to the transfer to promote trust and ensure the family is prepared to meet her needs. The Case Manager has already secured specialized DME to ensure Julie is ready with the correct equipment once an appropriate foster home is identified.

MONITORING HIGH NEEDS ENROLLEES TO ENSURE CONTINUITY

The care plan (or Individual Health Plan for medically complex Enrollees) delineates the schedule and methods for monitoring high needs Enrollees to ensure continuity of care. It serves as a roadmap for monitoring and making course corrections quickly when indicated. Once the care plan/IHP is in place, we use a variety of methods for monitoring and ensuring continuity of care. While many of the basic processes and methods for monitoring apply to all Enrollees with high needs, there are some distinctions between monitoring for those with physical health (PH) needs versus those with behavioral health (BH) needs.

Processes that Apply for all Enrollees

Care Planning

As noted above, we will immediately assign new Enrollees a Care Coordinator and CCT within one day of notification. Those with high BH needs will be assigned a BH Care Manager as their Care Coordinator, and those with high PH needs will be assigned a nurse Care Manager as their Care Coordinator. As we learn more about the child's needs, we may modify the CCT to ensure representation of appropriate expertise. The assigned Care Coordinator will identify high needs and determine the intensity of monitoring needed to ensure ongoing continuity of care through the methods described above and our comprehensive needs assessment process, which we will initiate during the face-to-face meeting to occur within 5-7 days of notification. This will include assessing all Enrollees to identify any special health care needs and ongoing special conditions that require a course of treatment or regular care monitoring. (See our response to Question G.8 for a detailed description of the assessment process.)

For all Enrollees with high needs, we engage all stakeholders and complete a care plan/IHP within 30 days of enrollment but sooner if possible. Care plans/IHPs identify Enrollee goals and all identified clinical and non-clinical service needs including treatment for trauma and connection to SDOH resources. The care plan/IHP delineates how all goals and needs will be addressed and documents the monitoring, follow-up, and reassessment and revision schedule and methods to reflect intensity required.

Addressing Barriers

Our Care Coordinators and CCT use strategies specifically designed to address barriers to continuity in this population. These include but are not limited to:

- Using a person-centered approach to ensure the care plan reflects the Enrollee's and family's voice and choice, which improves their adherence.
- Engagement of peer support to further promote their ownership of the care plan and improve adherence.
- Engaging community supports to wrap around the child and family voice to ensure the care plan is their plan and enable them to access services and comply with treatment plans.
- Sensitivity to the role of fear in Enrollee willingness to engage in treatment. For example, we will offer access to 'test run' dental visits to allow the child to become familiar with a dental provider and office prior to treatment.
- Celebrate meeting small milestones when goals are met. A continual focus on the progress the Enrollee has made supports recovery and resiliency and sets the stage for further improvement.

Ensuring Continuity and Stability Requires Active Listening and Trust

Our Care Coordinators and CC Teams recognize the importance of listening carefully to the care provider - to listen to the emotions and thoughts behind the words stated, which helps us detect potential crises or other issues that may disrupt current care and placement. The relationship developed with the caregiver will be key to preserve continuity of services as well as placement stability. The care provider is the expert on what they and the enrollee need and our Care Coordinators and CC Team will yield to their expertise.

Medical Home and Provider Monitoring

We will begin assigning PCPs to our foster care Enrollees at the start of the SKY contract.. We already have processes in place (described in detail in our response to Question G.5 Enrollee Services) to find the right PCP for each Enrollee and will provide trauma training to all medical home providers to support effective treatment. The medical home provider will be responsible to oversee and coordinate all services the Enrollee receives. In addition to the information and data analytics we make available to medical home providers on our provider portal, our Care Coordinators and CCT will support the medical home through facilitating information exchange, involving them in all IHP meetings, assisting them to locate appropriate specialists when needed, and providing scheduling and transportation assistance to ensure Enrollees access recommended care. Our staff will coordinate with the medical home to discuss implementation of the care plan/IHP and the child's progress.
The Care Coordinator and CCT will interact at least bi-monthly (and more frequently as needed) with specialists and other providers to obtain monitoring information about the Enrollee's progress and share information from other treating providers to promote integration of care.

Regular Enrollee/Caregiver Contact

The assigned Care Coordinator will monitor continuity of care and progress through regular face to face and other contact with Enrollees and their caregivers. This will occur at a minimum according to contract requirements but will occur more frequently as needed. For example, a child who is technology-dependent (such as on a ventilator) may require daily monitoring for

some period after moving to a new placement to ensure the caregiver is confident and capable in operating equipment.

Regular Interaction with DCBS/DJJ Staff

Our FOC, Care Coordinator, and CCT will interact as often as daily with DCBS and DJJ staff to discuss Enrollee progress and needs. Co-locating our staff in regional offices will facilitate this communication and promote timely exchange of information that may alert us to a new or changed need or Enrollee/caregiver difficulty in accessing services.

Regular IHP Meetings

The assigned Care Coordinator will convene and facilitate formalized care plan/IHP development and review meetings. At a minimum these meetings will occur per contract frequencies but will be more frequent based on Enrollee needs.

Ongoing Review of Data

Care Coordination staff will review a wide variety of data daily, weekly, and monthly to monitor Enrollee utilization and progress. This will include review of claims and utilization data including daily Admission, Discharge, and Transfer (ADT) data received from our network hospitals, pharmacy fills and adherence data, any gaps in recommended care according to evidence-based guidelines (such as the specialized AAP periodicity schedule or recommended preventive care for chronic conditions such as asthma), data we collect on Enrollee access to SDOH resources (see our response to Question G.10.g below), and information on Enrollee and caregiver calls to our CCHL. Our staff will also review data we obtain from the TWIST and JORI systems and DCBS and DJJ staff such as placement changes.

Medically Complex Enrollees

For our Enrollees who are designated medically complex by the DCBS Medical Support Section, we will assign a nurse Case Manager. The Case Manager will provide nursing consultative services to SSWs, Foster Parents, Fictive Kin, and caregivers for children and youth in Out of Home Placement, both in-state and out-of-state, who are determined by the Medical Support Section to be Medically Complex. The Case Manager coordinates with DCBS Medical Support Section staff to obtain the Medically Complex designation for a child and as indicated, provides information on improvements and changes to the child's needs that may allow withdrawing the designation.

Among those with co-morbid physical and behavioral health (BH) issues, inpatient admissions/1000 decreased by 11%, ER visits/1000 decreased by 13%, and specialist visits/1000 increased by 29% from 2016 to 2019.

We will also assign a nurse Case Manager as the Care Coordinator for other Enrollees who have high PH needs but do not have a medically complex designation, such as those with asthma, diabetes, or other chronic health issue that is not severe enough to meet the Medically Complex designation but still requires consistent care management to ensure access to appropriate care and services.

Immediate Support for Continuity

Upon receipt of the medically complex designation, the Care Coordinator will immediately begin the process of obtaining the child's medical records and identifying services that need to be continued as described above. The SSW will be able to access all records WellCare is able to obtain through our ClearSky solution that will allow timely, HIPAA-compliant, secure access to the most up-to-date information we have on each Enrollee. The Care Coordinator will also outreach to the SSW and coordinate scheduling the initial home visit within 30 days of enrollment (or receipt of medically complex designation, whichever is earlier) with the Enrollee and caregiver to identify medical and behavioral health issues and needs.

IHP Development

The Care Coordinator will ensure the Medically Complex service team members are invited to all IHP sessions, including, but not limited to, the SSW, FSOS, Medically Complex Liaison, Foster Parents, Adoptive Parents, Fictive Kin, Caregivers, and medical and other service Providers. This includes out of state providers for Enrollees in out of state placements. As appropriate, we invite local education agency representatives to participate to ensure integration with and support for the Individual Education Plan (IEP) and help them identify and address health issues in the IEP.

Our Care Coordinator will convene and facilitate the initial IHP session to assess the child's ongoing needs. This will include sharing all available information with the care team prior to the meeting and providing any updates during the meeting to ensure all involved have as complete and current an understanding of the child's history as possible. Another key responsibility of the Care Coordinator will be to promote Enrollee and family voice and choice through the IHP process and advocate for what they feel is important. We use a person-centered process and Motivational Interviewing, along with culturally and linguistically competent education on Enrollee conditions to support active, effective Enrollee and family involvement.

The Care Coordinator facilitates the process with a goal of reaching a consensus across all IHP participants on what the care plan should look like to best meet the Enrollee's/family's goals and needs. We understand that DCBS as the official guardian has final authority over the IHP. Once the IHP is completed, the Care Coordinator signs the plan, distributes the signed copies to all Medically Complex service team members, and coordinates with our UM team to put authorizations in place and initiate services.

Ongoing Monitoring and Support

Ongoing, the Care Coordinator provides training, on-going training and support to caregivers and completes monthly home visits to the child separate from the SSW to monitor needs and care. This includes review of documentation in the medical passport to confirm appointments for medical, BH, vision or dental care, receive of immunizations, and relevant clinical history that may provide insight into new or changed care needs. As needed, the Care Coordinator supports the Enrollee and family to maintain the medical passport and keep it up to date. The Care Coordinator identifies any barriers to continuity and adherence and uses a person-centered process to develop solutions with the Enrollee

and caregiver. For example, if an Enrollee can or will only use a specific brand of nutritional supplement that is not on the approved list, the Care Coordinator will work with the DME supplier to access that brand.

At all times, the Care Coordinator is available to act as a resource to the biological family and SSW in identifying and planning for the Enrollee's health care needs when family reunification or permanent relative or Fictive Kin placement has been addressed as an outcome in the family service plan. The Care Coordinator also assists DCBS personnel as requested regarding the Enrollee's health care needs.

Regular IHP Reviews

At least every three months, the Care Coordinator will convene and facilitate a meeting with the Medically Complex service team to review the IHP, the child's current needs and progress, and re-evaluate the child's continued Medically Complex determination. The IHP will be updated at least every six months to reflect changes to the Enrollee/family goals and needs. The Care Coordinator updates the IHP as determined by the Medically Complex service team and distributes signed copies to each team member. The IHP will also be available via ClearSky.

Monitoring Appropriateness of Ongoing Medically Complex Designation

When indicated by ongoing monitoring or recommendations of the Medically Complex service team, the Care Coordinator will recommend a change in the child's Medically Complex designation based on current and projected needs. The Care Coordinator will outreach to the SSW and Medically Complex Liaison to review changes in the child's needs or services and will follow the final decision of the Medical Support Section on whether to remove the Medically Complex designation.

Enrollees with High BH Needs

A BH clinical Case Manager will serve as the Care Coordinator for Enrollees with high BH needs to ensure a High Fidelity Wraparound approach. Immediately upon notification or enrollment (whichever is earlier), the Care Coordinator will engage the DCBS/DJJ SSW, work to identify current service needs, begin the assessment process, and identify all the stakeholders connected to the Enrollee to participate in the MDT.

Assessment Team Meeting

Within ten days, the Care Coordinator will schedule and facilitate the Assessment Team meeting to identify needs, identify and gather assessments that have already been completed, secure providers and schedule assessments, and initiate care planning. A key focus will be encouraging and advocating for the Enrollee's voice in their behavioral health care, along with the care provider/family involved. Understanding the Enrollee's goals for their care will assist the Assessment Team to develop achievable goals and objectives for the care plan. These goals and objectives

Among those with co-occurring mental health and substance use issues, ER visits/1000 decreased by 14%, inpatient mental health admits/1000 increased by 3%, PCP visits/1000 increased by over 7%, and specialist visits/1000 increased by 84% from 2016 to 2019.

drive the components of the care plan: placement, treatment, and transition.

- Placement. Before treatment and services can be developed, the Enrollee needs a place to live. The living environment is often dictated on issues of safety but for those over 18, preference is also a driver. As part of the assessment process, the Care Coordinator assists in coordinating the completion of the CANS assessment, which is usually completed at commitment to DCBS and every three months. The CANS assessment outcomes will assist the Assessment Team in deciding the most appropriate living environment.
- Treatment. Once placement is decided, treatment services can be identified. The CANS assessment identifies treatment focus, and additional assessments may be needed and incorporated to ensure an accurate picture of the Enrollee's treatment needs. The Assessment Team can decide to refer for psychological testing, further trauma assessment, assessment of human trafficking risk, suicide risks, or other assessment. The Care Coordinator will continue to encourage the Enrollee to verbalize their thoughts around their treatment needs. Often, youth have very good insight into what they need, and meeting the Enrollee where they are is important to treatment success. Additionally, because high behavioral health needs often bring crisis issues, the Care Coordinator will coordinate development of a crisis and safety plan with specific steps for the care provider and Enrollee to take in a crisis situation.

WELLCARE'S MENTAL HEALTH FIRST AID (MHFA) INITIATIVE

Raise awareness of mental health issues within our own organization and position "champions" across the company who can be of assistance to their peers.

Better equip our non-clinical staff who have regular contact with our enrollees to be able to recognize and respond appropriately to those experiencing and demonstrating mental health related symptoms.

Train our partners in the community (such as providers, schools, and non-clinical employees of community-based organizations) in MHFA in order to better serve our enrollees in the community.

- Transition. Once treatment goals and objectives are established, transition is the next primary area of focus. Youth and family voice are again critical. Returning home or into a home environment is often the goal. A realistic discussion of steps necessary to safely live in a home environment must occur, carefully listening to the youth and engaging them in discussion of their hopes and dreams. Careful planning of goals and objectives with specific steps in place to assist the youth toward their identified transition plan is key. Other areas of focus include school supports and services, community supports and services, and natural supports for the overall care plan.

At the end of 30 days, the Care Coordinator facilitates a second Assessment Team meeting and updates the care plan. The CCT will work with BH facilities, including acute and PRTF, for discharge planning as needed. With the assistance of the hospital-based care manager, discharge and clinical planning will occur with DCBS and DJJ and the Enrollee/Enrollee family (see our response to Question 11 for details).

Within the population of Enrollees with high BH needs are several sub-groups of Enrollees with very specialized needs that require additional focused planning and monitoring. These include but are not limited to intellectual and developmental disabilities (IDD), sexual acting-out issues, behavioral dysregulation, suicidal ideation and self-harm behaviors, frequent placement

disruption, and unique medical and behavioral health needs that limit options for placement and care. WellCare's Care Coordinators will leverage special training and experience to work effectively with these Enrollees and develop individualized care plans that are tailored to the Enrollee's unique needs.

Table G.10-2: Specialized Needs That Require Additional Focused Planning and Monitoring

Specialized Need	Key Focus Areas
IDD	Appropriate psychological testing, educational planning and IEP supports within the school, behavioral planning services, transition planning, need for referral to waiver-based programs and supports.
Sexual Acting-Out	JSO risk assessment and treatment identification, ensuring provider expertise and recommendations, risk and safety planning.
Behavioral Dysregulation	Understanding the trauma drivers, understanding the youth voice, understanding evidence-based models to assist, behavioral planning, and psychological testing.
Suicidal Ideation and Self-Harm	Strong safety planning, understanding the trauma drivers, understanding medication and polypharmacy.
Frequent Placement Disruptions	Understanding of placement challenges and supportive services that may be needed to help engage a placement.
Unique Medical and BH Issues	Understanding of how to engage the school system, engage the IEP planning, and access school resources through the Family Resource Centers

Enrollees Engaged with Both DJJ and DCBS

Effective case management for dually-committed Enrollees requires specific expertise with the rules of the court system. For these Enrollees, the court is a key driver of the care planning process. WellCare Care Coordinators for these Enrollees have a history of working within the court system, understand the requirements judges and court officials are looking for, and recognize whether an Enrollee's needs are most appropriately addressed through treatment or community resources. The Care Coordinator will work directly with the court, court-designated worker, and the DJJ team to align the needs of the court system with Kentucky SKY services. When specific assessments are court-ordered, the Care Coordinator will quickly engage our UM staff to determine whether the assessment evaluates for a medical or BH condition. If so, we quickly coordinate the authorization and work with the provider on timely scheduling and reporting results back to the court. If the court order is for an assessment or other service that falls outside of WellCare-covered services, the Care Coordinator and CCT will work with the court system, DJJ, Enrollee, and family/support to identify community or natural resources. Often, behaviors mask clinical needs, and our Care Coordinators will have the expertise and training to make this distinction and support medical necessity determinations for court-ordered services.

c. Describe how the Vendor will stratify Kentucky SKY Enrollees into tiers for Care Management services.

WellCare uses an innovative, multichannel risk stratification methodology to determine risk within our population and identify individual Enrollee risk levels. Our Identification and Stratification (ID/Strat) process leverages multiple data sources integrated through our information systems platform to conduct ongoing identification of Enrollees with high and emerging risk including those with complex and/or multiple medical and behavioral health issues, high service utilization, intensive healthcare needs, or who consistently access services at the highest level of care.

We will build on this process for Kentucky SKY to quickly and accurately identify Enrollee risks and place them into the appropriate case management tier to meet their varied level and intensity of care needs. We will use a combination of advanced predictive analytics and risk scoring along with information from our high-touch comprehensive assessment and monitoring process to pinpoint risks and needs and identify the right interventions and intensity of services to improve outcomes and promote placement stability and permanency. A critical differentiator of our stratification process is that it incorporates the unique factors (such as trauma and placement change history) that impact risk for those in foster care that are not typically encountered among the traditional Medicaid population.

PREDICTIVE ANALYTICS AND RISK SCORING

Our ID/Strat Engine uses an advanced, proprietary algorithm that pulls from a variety of claims, utilization, assessment, and other data housed in our integrated data warehouse to identify the demographic, diagnoses, utilization, and other factors that together provide a picture of an individual's risk for future resource use and condition progression. For Kentucky SKY, our data warehouse will maintain not just data we receive and generate (such as from claims and assessments) but also data pulled from the Kentucky HIE to incorporate any claims generated for the child prior to their entry into the foster care system. Additionally, we will collaborate with DCBS and DJJ to develop processes for accessing data from the TWIST and JORI systems to integrate with information in our MIS to promote a holistic view of each Enrollee.

Included in our ID/STRAT algorithm are rules for co-morbid behavioral health and substance use disorders, co-morbid physical health conditions, co-morbid physical and behavioral health conditions, out-of-home placement, private duty nursing services, and other factors that may necessitate a higher level of case management. The algorithm weights each factor in the context of how all factors combine to affect risk. This contextual weighting enables identification of risks that are not typically picked up through more traditional models. Additionally, our algorithm was specifically designed to identify BH risk, which is often unaccounted for in traditional models but is critical for Medicaid populations and particularly the foster care population. Upon first launching this tool in 14 states, WellCare identified 20% more Enrollees than were identified as high risk by our previous tool, and half of those had a BH diagnosis.

Our ID/Strat Engine generates a variety of risk scores to provide a comprehensive, nuanced picture of individual risks. These include:

- *CDPS Risk Score:* Standard algorithm that identifies the presence of chronic disease and specific impactable conditions, such as pregnancy, behavioral health conditions, asthma and diabetes.
- *Per Member per Month Medical Expense:* The average of total claims expense for each Enrollee for each month over a specified period.
- *Value of Future Adherence:* Medication Adherence Risk Score: A claims-based predictive modeling algorithm that calculates a value of future adherence score based on an Enrollee's current prescribed medications. This data source was developed originally to increase medication adherence based on an Enrollee's historical patterns of compliance and their responsiveness to a variety of interventions. We are expanding this index to include additional medications and supplemental data sets to predict a member's overall medication adherence because the lack of adherence is directly correlated to admissions.
- *Decision Point Predictive Risk Score:* A proprietary algorithm that assigns a future risk score based on admission/readmission risk, ED use, and specific disease progression predictions.
- *Modified LACE+ Index Risk Score:* Updated upon each admission with electronic Admission, Discharge, and Transfer data we receive from hospitals, the LACE+ score helps to identify Enrollees most at-risk for readmission and those who would benefit for enhanced discharge planning and community supports.
- *Social Determinants of Health (SDOH) Risk Score:* We generate an SDOH risk score using data we collect on Enrollee utilization of social service resources.

Our ID/Strat Engine continuously runs against Enrollee data as it is refreshed to enable timely identification of new or changed risk factors. While all Kentucky SKY children and youth will be enrolled in Care Coordination, this continuously refreshed risk scoring will aid us in ensuring stratification to the appropriate tier with changes to a higher or lower tier as the nature, complexity, and intensity of their needs change.

To ensure the ongoing sensitivity and specificity of our risk stratification algorithm, our population health solutions team, along with medical economics, reporting and analytics, and clinical leadership teams, meet every six months to evaluate the performance of our model. Using historical utilization data trends and performance, the team evaluates if factors are appropriate and if they are appropriately weighted. During our most recent evaluation, we identified that members who did not have a PCP visit over a six-month timeframe were at a higher risk for admissions and readmissions. Based on these findings, the team adjusted the algorithm to weight the lack of PCP visits more heavily as a consideration for identification and risk stratification. We anticipate making adjustments as we gain experience with the specific needs, utilization patterns, and other factors among the Kentucky SKY population.

Stratification

An important differentiator of our stratification approach is that **we will we will treat all new Enrollees as if they are in the highest tier (complex)** to ensure rapid response to continuity of care needs as well as any unmet needs. Once services are in place and the child is stable, we will use information from our comprehensive assessment process to build a fuller picture of the child's ongoing risks and needs.

This will include all information we are able to obtain, including recent claims history from DMS, information from DCBS, and information from previous MCOs and providers when the child comes into care, as well as initial provider assessments and input from DCBS and the caregiver about the level of support needed to promote placement stability and progress toward permanency. This involves much more than the child's clinical needs. For example, in our experience a child with a history of multiple placement disruptions is at higher risk for poor outcomes even in the absence of a high or moderate risk clinical condition. We look to information from the CANS as well as other assessment results related to ACEs as one indicator that a child should be stratified into a higher risk level.

For those already enrolled, ongoing stratification combines ID/Strat results along with information such as:

- Results of our comprehensive assessment and reassessment process
- DCBS, DJJ, and provider assessment results including CANS, Needs-Q, RCNA and other evidence-based assessment tools
- Claims and utilization data, including admissions, readmissions, ED visits, and new diagnoses
- Gaps in recommended preventive and chronic care services
- Prior authorization requests for new services
- Medications and adherence data
- Referrals from providers or community organizations (e.g., WIC, Healthy Start, Early Steps)
- Utilization of our 24-Hour Nurse Line and 24-Hour Behavioral Health Crisis Line
- Referrals from our Community Assistance Line liaisons
- Number of placement changes and disruptions, which increases risk for utilization of services
- DCBS, DJJ, caregiver, and provider concerns and recommendations obtained during IHP meetings, family team meetings, and face to face and other interactions with our Care Coordination staff and FOC.
- The Enrollee's voice and thoughts regarding their needs for medical and BH services and interactions with service providers.

Based on all available information, our Assignment Engine generates a risk score from 1 (low) to 3 (high) for each Enrollee, stratifying Enrollees by risk, cost and impactability. The score is reported on our daily census report which our Care Coordination staff reviews to assign the Enrollee to the appropriate case management tier for services tailored to the Enrollee's current level of need for intervention.

As indicated in 41.10.4, our Care Coordination staff will meet no less than quarterly with DCBS/DJJ to identify, discuss, and resolve any health care issues and needs for Enrollees. If the DCBS/DJJ service plan indicates a need for case management, DCBS/DJJ and the CCT will develop a plan for case management. The case management plan will be based on the identified needs as well as information from our stratification process. The Care Coordinator will sign the DCBS/DJJ service plan, indicating agreement and confirming the case management plan has been identified. If an agreement cannot be met for the case management plan, a summary of the issue and resolutions discussed by DCBS/DJJ and WellCare will be forwarded to DMS.

CASE MANAGEMENT TIERS AND SUPPORT PROVIDED AT EACH TIER

WellCare at Home is our field-based, fully integrated Care Coordination program, which includes case management, disease management, and preventive care interventions. We have already adapted this program for our current foster care Enrollees to provide intensive, field-based support for improved outcomes as well as placement stability and permanency. We will further enhance the support we provide under the Kentucky SKY program through a tiered model that aligns with DMS requirements and reflects our lessons learned about the unique needs and intensity of services required to improve health, quality of life, and permanency outcomes for this population in Kentucky.

Figure G.10-2 below shows our tier structure, along with the ratio of staff to Enrollees, criteria, and services provided at each tier as well as the anticipated percentage or number of Enrollees we anticipate serving at each tier based on our experience with Kentucky foster care Enrollees.

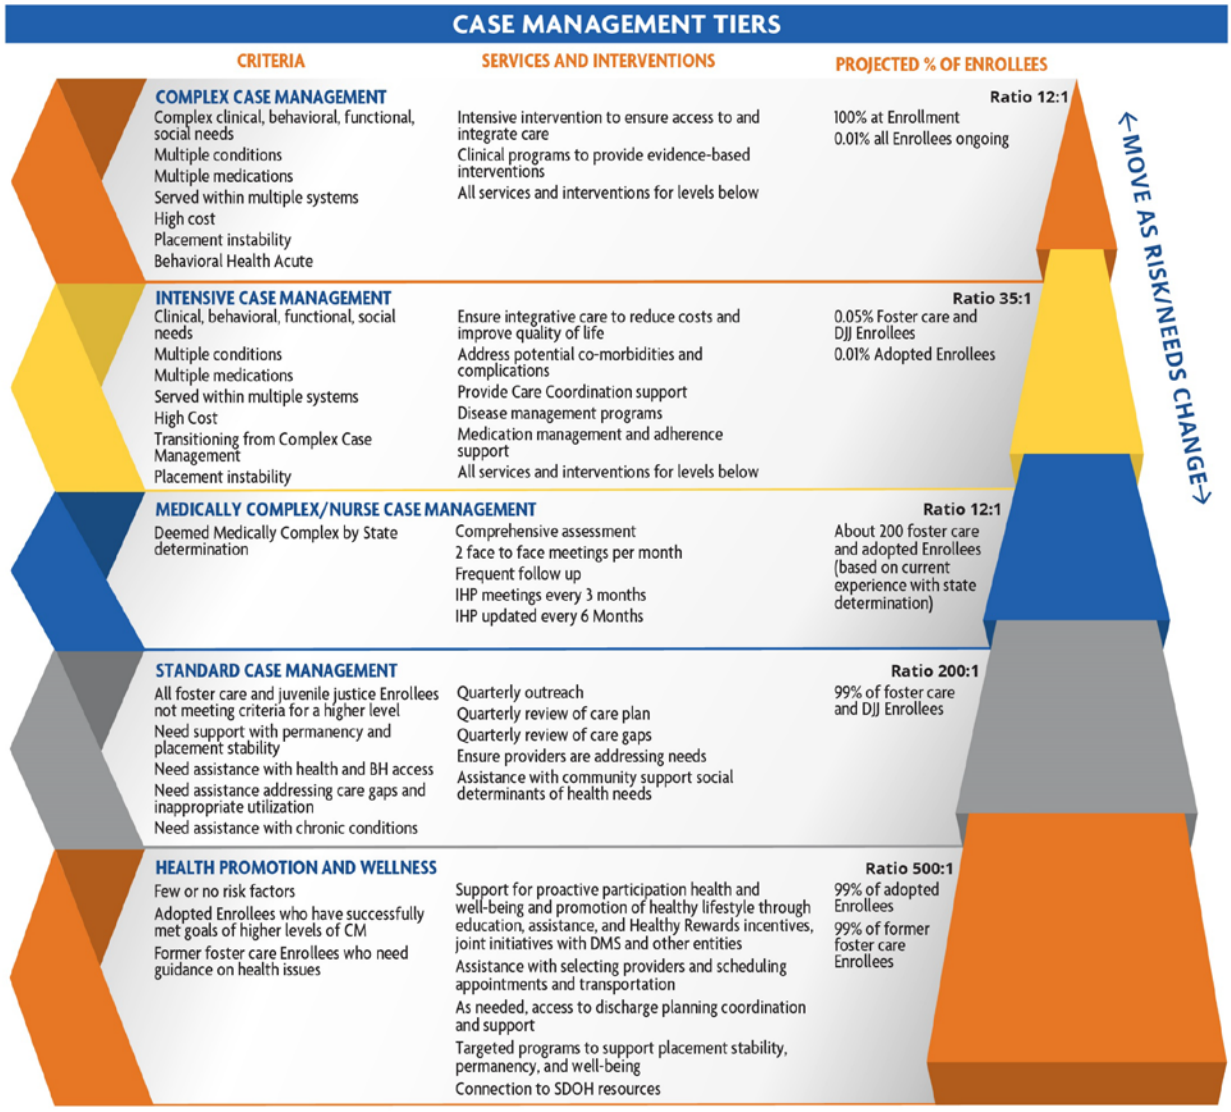

Figure G.10-2: WellCare Case Management Tiers

Through our WellCare at Home program, our Care Coordinators interact with Enrollees in their homes and communities, provider offices, and other appropriate settings. Contact frequency will comply with contractual minimums but will be ***more frequent*** based on each Enrollee's needs and preferences as well as caregiver needs and preferences.

Enrollees will move up or down in tiers as risk level and needs change so that intensity of services is tailored to meet each Enrollee's needs. Regardless of tier, all Enrollees with have access to Care Coordination Services and an interdisciplinary CCT. Each CCT will be led by an appropriate Care Coordinator and include clinical and non-clinical representatives based on each Enrollee's needs. (See our response to Question G.2.c.xii Care Coordinators and Care Coordination Teams for a complete description of how we will staff CCTs.)

Below we described the services and programs available to Enrollees across care management tiers based on their individual needs

CARE COORDINATION SERVICES

CCTs are responsible for coordinating across the continuum of care to integrate physical and behavioral health, pharmacy, dental, and other covered services as well as non-covered services and community resources to meet SDOH needs. All of these services must also be integrated with services in the child's permanence plan in order to support their placement stability and help them achieve permanency goals. Services provided by our Care Coordinators and CCTs are trauma-informed, person-centered, culturally competent, using a strengths-based approach with a focus on resiliency. We also emphasize education and support that caregivers, transition age youth, and former foster care Enrollees need to participate fully in shared decision-making related to care plans, Individual Health Plans, and provider treatment plans.

Comprehensive Needs Assessment

Our comprehensive needs assessment (CNA) process and tools are described in detail in our response to Question 8 Covered Services. Our staff convene Assessment Team meetings as required and needed to support Enrollee needs and continually monitor Enrollee progress and convene ad hoc meetings when conditions and needs change. We have enhanced the CNA tool in our CareCentral system through branching logic to document the number of placements and disruptions for each Enrollee. This will assist us to appropriately identify Enrollee risk and develop interventions designed to promote stability.

We are incorporating ACE scoring into our assessment process. We partnered with Maryhurst to pilot the use of an ACE scoring tool and will use results to identify any needed modifications to the tool or process in order to scale it for the entire Kentucky SKY population. However, all interventions and care planning are trauma-informed since we know all Enrollees have experience some level of trauma.

Support and Coordination for the Enrollee's Multidisciplinary Team

Our Care Coordinators proactively participate in the CRP-led multidisciplinary team (MDT) to help all involved clearly understand the child's clinical, social, and other needs. This includes sharing information we obtain from previous MCOs or providers about the child's needs and

care upon entry into foster care, the care plan, utilization data, and other information; facilitating conferences with network providers as requested; and supporting Enrollee and caregiver voice and choice. For example, our Care Coordinators support the MDT through the court-led Path to Permanency Program to ensure the courts understand the child's clinical needs as well as information such as what their home setting is like and what they need to successfully attend school. We participate face to face as often as possible to build relationships and ensure close coordination with the CRP, DCBS and DJJ caseworkers, DCBS Service Region Administrator for the region, court staff, as well as providers such as Our Lady of Peace or the Ridge Hospital.

Our Care Coordinators as well as Utilization Management staff participate in weekly integrated meetings to assess our high risk Enrollees for proper diagnoses, and review medications and discharge plans. Recommendations for interventions and next steps for the Enrollee are shared with the MDT to support comprehensive, integrated treatment planning. When indicated or requested, our Pharmacy and BH Medical Directors conduct in-depth medication reviews to support MDT recommendations to prescribers. Our staff also make recommendations for network providers that offer trauma-informed treatment.

We propose to **coordinate grand rounds with judges as extensions of the MDT.** Given the significant role of family courts in mandating treatment and services for this population, grand rounds with the family court judiciary will ensure the full MDT, including the presiding judge, has a complete clinical and psychosocial history and that the care plan is in alignment with court ordered treatment.

Care Plan Development

We use predictive modeling information, information from DCBS and providers, and results of all assessments and screenings to develop, within 30 days of enrollment, a child and family-centered care plan that integrates with and fully supports the permanency plan. Based on our experience over the past several years working with foster care Enrollees, we have moved away evolved to a person-centered approach that recognizes the case worker's central role but puts the focus squarely on Enrollee and caregiver goals and expectations of interventions as the foundation of the care plan.

Our Care Coordinators have a primary mission to promote Enrollee and family voice and choice throughout the planning process and advocate for what the Enrollee and family state are important to them. We will promote the **Building Bridges Initiative** (BBI) framework with DCBS, DJJ, providers, and other stakeholders during care planning to advance a youth guided, family driven process that adheres to BBI principles.

Principles of the Building Bridges Initiative

- Youth guided
- Family driven
- Individualized and strengths based
- Collaborative and coordinated
- Culturally and linguistically competent
- Research based
- Comprehensive, integrated, and flexible
- Evidence and practice informed
- Sustained positive outcomes

The Care Coordinator facilitates collaboration among the Enrollee, family/caregiver, and MDT to develop a care plan that addresses the Enrollee's goals and holistic health and social needs as well as caregiver needs to improve health outcomes and support

stability and permanency. This includes educating all stakeholders about benefits available through WellCare, the availability of trauma-informed treatments, and the importance of distinguishing BH conditions from the impact of trauma. Understanding that it is often necessary to address trauma before other interventions will be effective, Care Coordinators work with all stakeholders to create a phased action plan that reflects prioritization of trauma treatment when appropriate rather than concurrently treating trauma and providing other treatment.

Care plans include measurable goals, outcomes, interventions, and covered and non-covered services for the Enrollee's goals, condition(s), and needs, including placement needs. The final care plan and all interactions with the Enrollee, caregiver, and MDT are documented in the Enrollee's record in CareCentral. This includes next steps, interventions, providers, medications, education to be provided to the Enrollee and caregiver, how care gaps will be addressed, and referrals to SDOH resources as well as a schedule for follow up and monitoring. Documentation also includes involvement of the PCP, Dental Provider, Behavioral Health Providers, specialists and other providers in development of the care plan.

The Care Coordinator provides the CCT with all information needed to make timely and appropriate authorizations and referrals, such as information from prior MCOs and Providers needed for current providers to develop treatment plans. The CCT will communicate approved Care Plans and authorizations timely to providers, DMS, DCBS, and DJJ as required, via electronic or direct communications. The Care Coordinator will ensure that SKY Enrollees, providers, Foster Parents, Adoptive Parents, Fictive Kin, Caregivers, DCBS and DJJ have the most current information about community resources to meet the Enrollee's needs and will proactively connect Enrollees to these resources. Care Coordinators will leverage our Community Connections program as described in more detail in response to Question G.10.g below.

The Care Coordinator will spearhead regular MDT review and update of the care plan, following the same person-centered, comprehensive process we use for initial development. Review will consider progress toward care plan goals as well as toward permanency goals, with modifications as needed and agreed by DCBS and the MDT. This will occur on a regular schedule as outlined in the care plan, as well as whenever the Enrollee's needs or placement change.

Ongoing Management and Interventions

The assigned Care Coordinator and CCT provide a point of consistency across the care management process even when caseworkers, caregivers, and providers change. Additionally, CareCentral becomes a comprehensive source of information about the child's care. This allows us to support a consistent approach and 'historical memory' to monitoring and evaluating the child's progress. The Care Coordinator is proactive in collaborating with the MDT to regularly monitor implementation of the care plan, assess effectiveness of interventions, and evaluate progress toward care plan and permanency goals. This includes monitoring and sharing information gleaned from claims and utilization data in our system to provide all stakeholders with a holistic view of the child, including medication adherence, new diagnoses, acute episodes, inappropriate utilization, care gaps, and SDOH resources accessed.

Coordination of Placement Changes

An important service we provide is coordination of care through placement changes to minimize disruption and ensure continuity of care. The process for ensuring timely Enrollees access to PCPs and dental providers during a placement change is described in detail in our response to Question G.5 Enrollee Services. We expect that co-location of our FOCs in DCBS regional offices will minimize the number of auto-assignments necessary after a placement change. Since the FOCs will have a collegial relationship with DCBS staff, we anticipate this will expedite a more tailored selection of a new PCP and/or dentist. We recognize that not all placement changes are emergencies and we expect in some cases for our FOCs to discuss potential providers with DCBS staff in advance of placement to determine what providers would be preferred. The FOC will work with the Care Coordinator to evaluate provider options when a change is necessary.

The Care Coordinator and CCT will facilitate communication between the relinquishing and receiving providers as well as transfer of medical records. The Care Coordinator will also work with the relinquishing and receiving caregivers, if caregivers change, to coordinate exchange of information such as about the Enrollee's needs, preferences, and habits. The Care Coordinator will also help the caregiver as needed with scheduling appointments for the Enrollee with the new providers and arranging transportation, registering the Enrollee in school if applicable, and locating and connecting the Enrollee and caregiver to SDOH resources in the new community. Additionally, the Care Coordinator will provide reminders to the caregiver about the importance of the child taking medications to the new placement and will help ensure the child's clothing and personal possessions move with them.

Addressing Root Causes and Connecting to What Matters Most to the Individual

A 19-year old enrollee was incarcerated following multiple hospitalizations and residential placement disruptions due to self-harm and aggressive behaviors. Our assessment identified that she was a survivor of sexual abuse and human trafficking and lacked positive support from her biological family. Our Case Manager met with the enrollee and her detention center caseworker to discuss treatment and develop a person-centered care plan based on her goals for her future. The care plan included therapy, trauma-informed interventions, and in-person meetings at the detention facility to prepare her to leave the facility, as well as an action plan for her to complete her GED and take a college entrance exam. She was eventually accepted to Western Kentucky University (WKU). Once she started school, our Case Manager helped her create a support system and connected her to WKU resources including on-campus therapy and medical services. She continued her studies at WKU and had no further hospitalization or justice system involvement.

Coordination of Transitions Out of Care

As described in detail in our response to Question G.12 Aging Out Services, WellCare has developed a comprehensive, multifaceted solution to prepare our transition age Enrollees for aging out of the foster care system. The cornerstone of our solution is our Transition Age Youth and Young Adults Program which begins at age 14 and continues throughout the remainder of the Enrollee's tenure in our plan. A central feature of the program is youth-led transition

planning, with intensive education, encouragement, and designated Transition staff to support youth voice and choice. A Transition Coordinator will oversee our efforts, which will include early education and support for development of independent living skills, encouraging the youth to dream about and set goals for their life after foster care, education on how to actively participate in the DCBS/DJJ transition planning process and support during that process, ensuring all stakeholders understand the Enrollee's goals and needs and the benefits available to meet them, and educating the youth about post-secondary and other options and connecting them to the opportunities and community resources they need to build a life they love. The program will also include our Youth Peer Support Specialist to provide the perspective of lived experience. Through this program we will provide a variety of innovative tools and partner with key community organizations such as Kentucky Partnership for Children and Families and the First Lady's Youth Leadership Council to support youth self-advocacy.

The Transition Coordinator, Youth Peer Support Specialist, assigned Care Coordinator, and CCT together will comprise the youth's Transition Team. The Transition Team will be responsible for ensuring continuity of care from pediatric to adult providers, including assisting the Enrollee to choose providers and facilitating case conferences and transfer of information. While a key focus of our Transition Program is educating youth about the benefits of maintaining their Medicaid coverage through age 26, if the youth opts to transition out of Kentucky SKY, the Transition Team will attempt to identify other sources of health coverage and assist as needed to complete applications and transfer records and information to new providers.

Our Transition Coordinator and Family Peer Support Specialist will also support Care Coordinators to work with our adoptive parents to transition Enrollees out of Kentucky SKY when desired by the parent. As with transition age youth, adoptive parents often require education to understand the benefits of maintaining Medicaid coverage. Many adoptive parents assume their employer-based or other coverage provides more benefits or higher quality care than Medicaid. We educate them on differences in benefits, such as the significantly greater BH benefits available under Medicaid as well as EPSDT requirements for Medicaid to cover all medically necessary services. Additionally, we help them determine differences in out of pocket costs between Medicaid and their commercial coverage. If the parents nevertheless opt the child out of Medicaid, our CCT ensures continuity of care by assisting with transfer of records, facilitating case conferences between relinquishing and receiving providers as needed, and being available ongoing to answer questions from new providers.

Coordination of Transitions Across Care Settings

Our formalized Discharge Planning Program uses an integrated, evidence-based approach to coordinating discharge planning and transitions across care settings. This program is described in detail in our response to Question G.11 Utilization Management. For Kentucky SKY, a key focus of our Discharge Planning Program will be on assisting DCBS to ensure availability of appropriate post-discharge placements through securing post-discharge treatment resources and other support the receiving placement needs to fully meet the child's care needs. This will minimize the need for market exception days and quickly move the Enrollee to the least restrictive setting.

Coordinating Transitions Across Care Settings

A 10-year old adopted enrollee with an intellectual disability was not progressing toward her treatment goals despite being in a PRTF for about ten months. Our Care Manager made multiple attempts to work with the provider to adjust the treatment plan and interventions, but it became evident that an alternative treatment environment was necessary to effectively address her attachment disorder. The Care Manager searched for an appropriate alternative but none of the identified providers were able to accept her either due to her age or to her intellectual disability. Leann Magre, our Senior Manager of Foster Care, Adoption, and Guardianship, outreached to Home of the Innocents (HOI) and their Executive Vice President of Clinical Operations to discuss the child's needs, history, and reasons for lack of progress, and to explore treatment options at HOI. Because HOI is a private child care provider, usually a child must be in the state's custody to access their services. However, through collaboration with HOI, the Department, and the child's parents, WellCare was able to secure a bed at HOI and arranged a single case agreement to pay for the service. Our Care Manager coordinated transition of records and medications, as well as the child's clothing and possessions, to the new setting. After about six months, the child made enough progress to transition to Maryhurst PRTF. The Care Manager once again coordinated the transition, including ensuring the new provider had full information about the child's history, needs, reasons for lack of progress at the initial PRTF and changes to treatment approach that facilitated progress. Because of her unique needs, WellCare paid a higher than usual rate for the PRTF service. This child has continued to make treatment progress in the new setting and the parents have expressed that they are very encouraged.

WellCare Programs to Support Enrollee Health, Stability, and Permanency

All Enrollees have access to our full range of wellness, clinical, and condition management programs as needed, tailored to the unique needs of Kentucky SKY Enrollees. We have also developed specialized programs for this population. All programs, shown in **Figure G.10-3**, will feature trauma-informed and evidence-based Enrollee, family and provider interventions. These programs will be delivered by the assigned Care Coordinator to ensure a trauma-informed approach and minimize the number of staff interacting with the Enrollee, caregiver, and DCBS/DJJ caseworker.

PROGRAMS TO SUPPORT HEALTH, STABILITY, AND PERMANENCY

- Wellness
- High Risk OB
- Disease Management
- Comprehensive Psychotropic Drug Oversight
- Pharmacy Toolbox
- Substance Use Diversion
- SKY Smiles (dental)
- Unbundling Pilot
- Discharge Planning
- Frequent BH Readmissions
- Intensive Placement Support
- Transition Age Youth and Young Adults
- Sexual orientation, gender identity, gender expression
- Suicide Prevention
- Ensuring Adoption Success for Enrollees
- Abuse and Neglect Prevention
- Human trafficking

Figure G.10-3: WellCare Programs to Support Health, Stability, and Permanency

Our Discharge Planning Program and Transition Age Youth and Young Adults Program are described above. Below we describe our other programs.

Wellness Program

Wellness, including Early and Periodic Screening, Diagnostic and Treatment (EPSDT) services, is integrated into our care model for children and adolescents. As noted previously we will use AAP/CWLA guidelines for well-child visits for Kentucky SKY, which provide for a higher frequency and intensity of preventive and primary care. The Care Coordinator determines during initial and ongoing assessment and monitoring whether the child is current with recommended services and treatments based on age and needs. We provide assistance scheduling or keeping appointments or arranging for transportation as needed. Care Coordinators monitor via interaction with the Enrollee/caregiver and providers as well as through claims data to verify that appointments have been kept, services delivered, and, if necessary, referrals provided. We also provide a variety of supports and incentives to ensure timely receipt of recommended EPSDT or Child Health Check Up services, including:

- Data Integration and Analytics: To get a complete picture of the health services children receive, we combine the results of EPSDT screenings with other HEDIS measures. Monthly, our quality improvement team monitors use of services across a variety of preventive and chronic care coordination measures to identify potential care gaps. This data is supplied to our case management staff, Member Services staff, quality practice advisors, members and providers.
- Member Outreach and Education: We facilitate the completion of EPSDT services through complementary efforts that include inbound and outbound telephonic outreach, notification and reminder letters, web-based on mobile application alerts and social media.
- Healthy Rewards: We incentivize teen and young adult Enrollees and caregivers of child Enrollees to engage in healthy behaviors like EPSDT visits through our financial incentive program, Healthy Rewards. Enrollees earn cash-value incentives through reloadable debit cards and gift cards when they complete health- related activities like well-child visits and immunizations. Rewards move with the child through placement changes to be available for current caregiver use on the child's behalf.
- Provider Education: Through our provider education program, we train and educate providers about covered services, EPSDT services, and WellCare tools. For the Kentucky SKY program we will add targeted education on the unique needs of this population including the specialized AAP guidelines. We supply provider-specific reports and rosters that identify members due for EPSDT visits. This enables providers to actively monitor compliance, follow-up with Enrollees, and maximize appointments for children and adolescents. We alert providers of important EPSDT milestones. Additionally, as part of our Partnership for Quality (P4Q) program, eligible providers earn quality bonuses for completing EPSDT-related services. For Kentucky SKY, we will provide quality bonuses for providers completing services according to the higher frequency and intensity of the AAP/CWLA standards.

In addition, we will collaborate with DMS and DCBS to establish a Health Home Pilot to provide PCPs serving these Enrollees with an additional case management fee for enhanced behavioral health coordination. Our Care Coordination team will work hand in hand with the provider to

ensure they have access to records for this enhanced coordination responsibility and assist with utilization management approvals. We will expand this concept statewide based on the results of the pilot. We have had exploratory discussions with KPCA IPA about a health home pilot for Kentucky SKY Enrollees assigned to them. Of our current SKY-eligible Enrollees, 27% have a relationship with a PCP associated with the KPCA IPA.

High Risk OB Case Management

WellCare partners with Bluegrass Care Navigators Healthy Start Project to connect enrollees to the project's post-discharge coaching model for infants with neonatal abstinence syndrome and their parents.

Our High Risk OB Program is designed to intervene as early as possible in pregnancy to help the pregnant Enrollee address any and all issues that can affect the pregnancy outcome as well as the her overall health. We consider all pregnant foster care and juvenile justice Enrollees to be high risk due to their age and history of trauma. Our OB nurses have experience in obstetrics, newborn care, substance use disorder and other factors that increase risk for poor outcomes. When we identify a pregnant Enrollee, we will assign an OB nurse to be part of the Enrollee's CCT through seven weeks post-partum. The OB nurse will coordinate with the assigned Care Coordinator to educate, guide and encourage that mom to make the best choices for her and her unborn child.

We also assist with social issues (such as homelessness, sexual assault, domestic violence, and mental illness) and connect the Enrollee to services and resources to support pregnancy loss as well as grief and loss due to the baby being placed in state custody or placed for adoption.

Disease Management Programs

- WellCare has implemented successful disease management programs to address our Kentucky Enrollees' chronic conditions such as asthma, diabetes, mental health and substance use, sickle cell, and cancer. For example, from 2016-2018, ER visits/1000 fell by almost 16%, readmissions/1000 fell almost 4%, and specialist visits/1000 increased by almost 22% for those with an asthma diagnosis.
- All of our existing DM programs will be available to our Kentucky SKY Enrollees. These programs use evidence-based risk assessment tools and self-management practices tailored to the Enrollee's readiness to change which is influenced by their experience of trauma. We identify and address psychosocial issues and barriers to care, caregiver supports, and environmental and functional needs. Our aim is to prevent, reduce, and delay exacerbations and disease progression; integrate condition management with other services received; and prevent potentially preventable events.

Our approach to disease management for Kentucky SKY recognizes the importance of minimizing the number of individuals who contact the Enrollee, caregiver, and DCBS/DJJ. Our WellCare At Home model integrates disease management with Care Coordination, and disease-specific evidence-based guidelines are fully embedded into all aspects of our program. All Care Coordinators are trained to provide evidence-based disease management education, including recognizing and identifying signs and symptoms of exacerbations of chronic conditions, educating around clinical practice guidelines, and using teach-back methods.

Care Coordinators engage Enrollees and caregivers to set goals and gauge knowledge and comfort level in managing their conditions. We provide individualized education, training and support necessary for Enrollees and caregivers to become proficient in self-care as well as confident in their abilities. For example, a Care Coordinator working with a child diagnosed with seizures focuses self-management practices on understanding triggers, warning signs, improved seizure control, safety issues, and lifestyle and behavior modification. In working with the family and caregivers of children with respiratory conditions, a Care Coordinator directs self-management training on equipment use (i.e., peak flow meters, inhalers, and nebulizers) and medication administration (i.e., proper use of inhalers).

Our approach is focused differently based on the age of the Enrollee. For younger children, disease management interventions and education are targeted at the foster caregiver/adoptive parent. As children get older and start planning for transition, interventions and education focus more heavily on the Enrollee and teaching them about their condition and how to effectively manage it. We work directly with our former foster care Enrollees to support them in managing their conditions.

Comprehensive Psychotropic Drug Oversight Program

For prescribing providers and Enrollees prescribed antipsychotics, antidepressants, and medications for the treatment of attention deficit hyperactivity disorder (ADHD), we provide our comprehensive psychotropic drug oversight program. Our program, which is based on nationally recognized guidelines and the U.S. Food and Drug Administration (FDA)-approved indications, is managed and executed by our Pharmacy and Therapeutics Committee, our BH Medical Director, our SKY Medical Director and BH Medical Director, and our Director of Pharmacy. Our program focuses on three critical areas:

- Ensuring appropriate medication use and follow-up for children dispensed medication to treat ADHD
- Promoting optimal medication adherence for those diagnosed with targeted conditions, including depression and schizophrenia
- Ensuring appropriate use of antipsychotics.

Through this program we provide highly targeted Enrollee/caregiver and provider training and education, Enrollee-specific medication profiles, ongoing data collection regarding usage and prescribing patterns, and real-time surveillance through our prior authorization rules and online point-of-service (POS) claim adjudication system edits.

We use our Pharmacy Toolbox to measure and monitor prescribing patterns and usage for a variety of pharmacy-related measures. Toolbox reports display real-time utilization, drug evaluation review, and physician data by month and year-to-date. For example:

- Our “Atypical Antipsychotics for Enrollees Under 10” pharmacy toolbox report provides detailed reporting for those under 10 years of age who are prescribed atypical antipsychotics (excluding those diagnosed with autism).
- Our “Pediatric Prescribing of ADHD Medications” pharmacy toolbox report provides detailed reporting for those under 17 years of age using medications for the treatment of ADHD.

- Our "Polypharmacy of Behavioral Health Medications" pharmacy toolbox report provides detailed reporting of those who have two or more prescriptions for different antipsychotic medications.

Substance Use Disorder Program

This program will provide educational prevention services to at-risk youth to divert them for abusing substances, specifically opioids. We will collaborate with community partners, such as Court Appointed Special Advocate (CASA) and other community advocacy groups who have close relationships with youth in foster care. We have already secured a Memorandum of Understanding from CASA to assist with the program.

The Health Belief Model (HBM) will guide our intervention. This model looks at the participants perceived susceptibility to addiction, severity of addiction, as well as the benefits and barriers to remaining drug free. HBM takes into account a person's perceived self-efficacy in preventing addiction or overcoming addiction. The intervention will have several components based on the HBM. There will be an educational component to discuss the health risks of addiction, including death, and how family history can increase susceptibility to addiction. Mentors, who are previous foster children, will present the benefits of staying drug free, and discuss how they addressed barriers to either avoiding or overcoming addiction. We will have a "cue to action" which may include the recent death of the musician Prince, for example. Finally, we will address issues of self-efficacy by educating participants on drug treatment centers for those suffering with addiction. We will also discuss educational opportunities and job training opportunities to secure employment and avoid drug abuse.

SKY Smiles

In 2018, nearly 12% of our foster care Enrollees had not had a dental visit in the previous two years. WellCare is launching a multi-modal outreach program (mailings, phone calls, text messaging) to increase dental exam utilization for these Enrollees. We recently received approval from the Commonwealth for our proposed messaging to this population, which focuses on improving the health and lives of Enrollees in foster care through regular dental checkups which helps keep their teeth clean, maintains oral health, and helps find problems early. Based on our dental benefits administration subcontractor's success rates with this outreach for other vulnerable populations with lapsed dental utilization, we anticipate increasing annual dental visit rates by as much as 33% among our foster care Enrollees who do not have record of a dental visit in the previous 24 months. Our SKY Smiles Program will also include the following components.

Connection to a Dental Home. Every Kentucky SKY Enrollee will be assigned to a primary care dentist and, if necessary, an orthodontic dental home. These dental assignments will follow the Enrollees through their foster care experience in an attempt to maintain stability in this important caregiver relationships. The dental home will ensure continuous access to comprehensive and coordinated care for all preventive, acute, and ongoing oral health needs. In addition, a dental home provides education, anticipatory guidance, and a trusted referral source for more complex needs. Through our partnership with Avesis and Big Smiles, the

largest mobile dental provider covering the entire Commonwealth, connection to a dental home with continuity of care will be assured. Big Smiles can travel to Enrollee communities to ensure consistent care.

Culturally Competent Outreach and Education. We will provide culturally and linguistically competent education and outreach for Enrollees and their caregiver team on the importance of having a dental home, combined with targeted outreach to help ensure they are taking full advantage of their dental benefits.

Tele-dentistry. We will use tele-dentistry technology to help ensure Kentucky SKY Enrollees and their dental home team can continue to work together, even if the Enrollee needs to move to a foster home outside of the 50 miles/50 minutes access standards. Using synchronous modalities, we will connect Kentucky SKY Enrollees with their dental home provider(s) by scheduling and deploying Public Health Hygienists to the Enrollee's home, school or other community-based location to help facilitate the virtual appointment. Asynchronous modalities for tele-dentistry are not currently DMS approved. However, we understand DMS may consider amending its telehealth regulation to accommodate this modality in the coming months. If so, we will utilize asynchronous modalities (store and forward of photographs) as well.

In the case that treatment in a brick and mortar provider office is required, care coordination will ensure that the best care is received in every instance. Included with care coordination is our ability to assist with scheduling so that our members are provided care at a time and location that is most convenient for them and their care providers. Finally, this set of tools ensures maintained engagement so that continuity of care is preserved, and our members maintain consistent progress in their treatment plans. Our use of tele-dentistry will be aligned with the Commonwealth's new tele-health regulatory requirements.

Continuity of Care for Treatment in Progress. Consistent with the 2017 Medicaid Final Rule on Medicaid Managed Care, we will follow established procedures to ensure continuity of care for dental treatment in progress. In the event we are unable to maintain the Enrollee's relationship with their previous dental provider team, we will facilitate the transfer of care to their new providers and will pay for all treatment in progress. In the case of orthodontic care, if the Enrollee's new orthodontist uses a different type of kit or a different type of braces, we will pay for the new orthodontist provider to remove the existing wires and install new ones so that care may be continued. In any instance where care is being transferred between providers, we will review the prior authorization decision and course of treatment.

In the event the previous provider has been paid for services that will now be rendered by the new orthodontist, we will pro-rate the services and institute a recoupment. If orthodontic treatment began for a Kentucky SKY Enrollee who was previously on a self-pay or commercial plan, we will review orthodontic records to determine if the case qualifies for coverage. If the referring dental insurer has a process that is similar or more generous than ours, we will honor the treatment plan. If the referring plan has a process that is more restrictive, we will adjust the plan to align with our more generous coverage.

Trauma-Informed Dental Care. Our dental benefits administration (DBA) subcontractor has a relationship with the founder of P.A.N.D.A (Prevent Abuse and Neglect through Dental Awareness). P.A.N.D.A is dedicated to engaging dentists and dental professionals in identifying child abuse and neglect, elder abuse, domestic violence and human trafficking. Our DBA subcontractor's Vice President of Dental Quality and former Chief Dental Officer for CMS is a P.A.N.D.A. trainer and can deliver professional development for network dental providers on:

- Understanding the problem of abuse and neglect of persons of any age.
- Understanding the clinical signs and symptoms of possible abuse and neglect.
- Understanding the responsibilities for dental professionals in preventing family violence.

This training covers important topics like precipitating causes and contributing factors to child abuse, the clinical signs of abuse and neglect one might encounter in the dental office, and professional liability. Through their relationship with the professional education site, Dr. BiCuspid, our subcontractor's presentation of P.A.N.D.A. content has been recorded and is available for continuing education administered by IMV, Ltd., an American Dental Association (ADA) CERP Recognized Provider.

Dental Care for Enrollees with Special Health Care Needs (SHCN). For Enrollees with disabilities, medical needs often take priority over their oral health care, despite the fact that many medical conditions may affect oral development or be accompanied by complications such as oral trauma, bruxism, oral infections, and gingival overgrowth. In addition, some dentists are reluctant to treat individuals with disabilities because of a lack of familiarity with, or misperceptions about, the office and clinical practices that are required to meet their needs. While all dental benefits administrators are required to solicit and publish information about whether a dentist serves Enrollees with SHCN, there are currently no required, objective criteria that an office needs to meet to declare their ability to serve these Enrollees. Because there is wide variation in what Enrollees with SHCN may need to have safe and successful dental treatment, this self-declaration by dentists may not provide enough information to help members make the best choice when selecting a dental provider.

To address this, we are working with our DBA subcontractor to offer **Sensi-Dentistry™**, a special needs dentistry program created to address the unmet needs of those with SHCN. Sensi-Dentistry improves access to care, Enrollee experience, and health outcomes through provider training on SHCN, detailed assessment of provider ability to meet the needs of Enrollees with SHCN, a Find-a-Dentist tool to help families find dentists who have completed Sensi-Dentistry training (available July 2020), education for families on how to choose a Sensi-Dentistry trained dentist, a pre-appointment visit for the Enrollee and family to meet the dentist and explore the dental office, and reimbursement to providers for additional time needed to serve those with SHCN.

In addition, we will offer mobile sedation dentistry to allow Enrollees who require anesthetic to complete oral health treatment to receive care in a dental sedation center or even in their dentist's office, rather than in a costlier hospital setting. This additional care delivery mechanism can play a vital role in improving access and health.

Unbundling Pilot Program

The goal of this program is to provide mental and medical health interventions and intensive assessments to help to prepare children to transition to the appropriate placement in the least restrictive setting. We have partnered with Home of the Innocents to implement this program.

For children who meet program criteria, HOI's Children's Assessment and Transitional Service Center will provide four core services: Medical and Mental Health, Emergency Housing, Assessment/Placement Recommendations, and Collaborative discharge planning. Behavioral Health Services will be provided by HOI's Child and Family Services Program and medical services will be provided by Open Arms Children's Health, as clinically indicated. Participants may:

- Step down to an HOI foster care home as part of the treatment continuum, based upon availability and the child's individualized treatment needs
- Step up to an HOI residential unit as part of the treatment continuum, based upon availability and the child's individualized treatment needs.

While outcomes are not yet available, we anticipate outcomes to include reduction in number of placements, prompt and proficient placement, increased utilization of placement best practices, limiting further trauma, and increasing the efficacy of caregiver training for the special needs children/youth being placed in their care.

Frequent BH Readmission Program

For Enrollees with frequent BH readmissions, we propose to conduct weekly rounds with DCBS and DJJ. Our Care Coordination staff including BH clinicians, Pharmacy Director, and BH Medical Director will collaborate with caseworkers to develop step down plans and intensive supports for community maintenance such as crisis planning and intervention, Mental Health First Aid for caregivers, and medication management. Because these Enrollees often have complex clinical needs, it may be necessary to be creative and build what the Enrollee needs for placement. WellCare has already demonstrated the ability to assess needs and collaborate with DCBS, DJJ, and providers to create unique services to meet specific member needs, such as authorizing two providers to both meet with the Enrollee to support a smooth transition to a new provider and single case agreements to help an Enrollee access a specialized service not covered by Medicaid.

Intensive Placement Support Program

This program will provide intensive support for Enrollees who have high and specialized needs preventing DCBS from securing a permanent foster placement. We propose to conduct weekly rounds with DCBS for these Enrollees. Participants would include our nurse and BH Care Coordinators along with the DCBS caseworker. As needed, providers, caregivers and other stakeholders would be invited to participate and provide recommendations. This is where listening to the voice and experience of the caregiver as well as the youth is highly critical. The relationship between the caregiver and the Enrollee must be preserved. Once that relationship is beyond repair, placements disrupt. This program will focus on youth voice and creative solutions to provide what the youth tells us they need.

Sexual Orientation, Gender Identity and Expression (SOGIE) Program

Youth in foster care with diverse sexual orientations, gender identities, and gender expressions (SOGIE) at higher risk for negative outcomes than their heterosexual and cisgender peers in foster care. This includes negatives outcomes relating to health, placement stability, homelessness, and reunification with family of origin. To develop and implement best practice programs aimed at improving outcomes for foster care youth, the University of Maryland School of Social Work's Institute for Innovation and Implementation collaborated with the U.S. Department of Health and Human Services, Administration for Children and Families' Children's Bureau to establish the National Quality Improvement Center on Tailored Services, Placement Stability, and Permanency for Lesbian, Gay, Bisexual, Transgender, Questioning, and Two-Spirit Children and Youth in Foster Care (QIC-LGBTQ2S). The QIC-LGBTQ2S. WellCare will develop our SOGIE Program incorporating caregiver interventions and tools, curriculum, and intervention and evaluation approaches such as those recommended by QIC-LGBTQ2S.

Suicide Prevention

The Seven Core Components of the Zero Suicide Framework

LEAD system-wide culture change committed to reducing suicides
TRAIN a competent, confident, and caring workforce up-to-date in suicide care
IDENTIFY patients with suicide risk via comprehensive screenings
ENGAGE all individuals at-risk of suicide in a suicide care management plan
TREAT suicidal thoughts and behaviors using evidence-based treatments
TRANSITION individuals through care with warm hand-offs and supportive contacts
IMPROVE policies and procedures through a continuous quality improvement plan

Source: Zero Suicide, https://zerosuicide.sprc.org/

We will enhance our current suicide prevention education and support through implementation of Zero Suicide, a continuous quality improvement framework for health systems to transform suicide prevention efforts. Zero Suicide offers a toolkit that provides guidance in implementing the seven core components of the framework. Safety planning for both the Enrollee and the care provider is paramount when suicide is a risk. WellCare will work with the care team to ensure adequate safety plans are in place, assist the Enrollee to verbalize when their triggers and concerns begin to grow beyond their current coping skills, assist the care provider to be prepared with the exact steps they need to follow, and ensure the provider network is prepared for an acute admission and crisis need.

Ensuring Adoption Success for Enrollees (EASE) Program

This program will provide intensive education and support to adoptive families to ease the adoption process and promote a successful adoption and family transition. Care Coordinators will educate adoptive parents on what to expect throughout and following the adoption process, including common reasons for disrupted adoptions of children from the foster care system and services and resources available to prevent disruptions. We will connect adoptive parents to peer support, adoptive parent support groups, respite resources, family therapy resources for families with other children, and SDOH resources. WellCare will take our lead from the adoptive parents and youth on the specific supports they need for success. The care plan will address their unique support needs.

Abuse and Neglect Prevention Program

As part of our implementation of the requirements of the Families First Prevention Services Act in October 2019 (ahead of the required 2021 implementation deadline), WellCare will implement an Abuse and Neglect Prevention Program for Kentucky SKY. The aim of the program will be to educate foster caregivers and adoptive parents on abuse and neglect and assess for and address caregiver support needs such as parent peer support and respite as well as SDOH needs to ensure caregiver needs are met and prevent burnout and resentment. We will collaborate with DCBS and DJJ to finalize the program.

Human Trafficking Prevention and Healing Program

Children in foster care are at greater risk than the overall population for being victims of human trafficking and sexual exploitation. We will implement a dual-aim program to:

- Protect Enrollees from victimization through education about risks and how to identify and report potentially dangerous situations
- Help Enrollees who have been victimized to heal through specialized treatment and support resources.

WellCare will collaborate with the Attorney General's Office of Child Abuse and Human Trafficking Prevention and Prosecution (OCAHTPP), the Statewide Human Trafficking Task Force, and other community organizations to develop training and education for our Care Coordination staff, Enrollees, caregivers, and providers. For example, we will work with OCAHTPP to determine how we can leverage their training on how to recognize signs and report human trafficking. We will identify providers in our network with expertise treating victims of sexual abuse and human trafficking and connect Enrollees who have been victimized.

d. Provide a description of the Vendor's targeted evidence based approaches applicable to the Kentucky SKY populations. Provide details on the Vendor's approach for ensuring Network Providers' compliance with evidence based approaches mandated by the Vendor for Kentucky SKY Enrollees.

WellCare of Kentucky offers a comprehensive Quality Management program that leads the Commonwealth in 24 HEDIS® measures for 2019 (including Well-Child Visit measures, Medical Assistance with Smoking and Tobacco Use Cessation, Breast and Cervical Exams and Annual Dental Visits) and has maintained a two year NCQA accreditation status. **Since we became National Committee for Quality Assurance (NCQA) accredited in Kentucky in 2014, we have improved our accreditation scores from 79.0 in 2015 to 85.73 in 2018, and have the highest NCQA quality ranking in the State Medicaid program at 3.5.** In addition to having the highest quality rating, we also have the highest percentage of ratings of a 4 or higher in the 2019 – 2020 report. HEDIS measures reflect compliance with evidence-based guidelines for recommended clinical care and as noted above, we have also achieved HEDIS improvements for our current Kentucky SKY-eligible Enrollees.

In addition, we ensure provider compliance with other evidence-based standards such as through our medical record review audits for BH providers. In 2018 the majority of BH providers

at all three levels of care (inpatient, outpatient, and targeted case management) achieved passing scores and scores for all three levels improved over 2017.

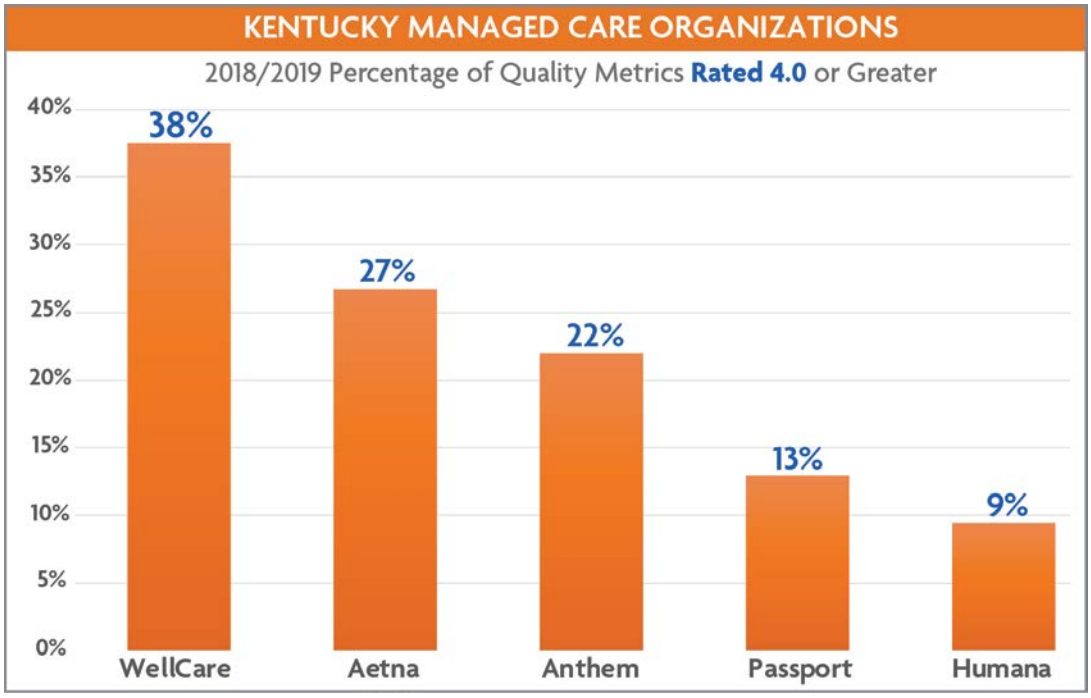

Figure G.10.d-1 WellCare Percentage of Quality Metrics

We know that improving outcomes for this population requires going beyond traditional HEDIS guidelines through adoption of alternative and additional guidelines tailored to the unique needs of children and youth in foster care. This will help us achieve better outcomes for Enrollees, decrease costs, and improve provider accountability. We will build on our successful experience promoting evidence-based approaches and ensuring provider compliance through our intimate knowledge of the Kentucky Medicaid landscape and the unique needs of Kentucky SKY Enrollees as well as our local, hands-on approach and our best-in-class reporting capabilities.

EVIDENCE BASED APPROACHES

Customizing for the Kentucky SKY Population

Evidence-based approaches and clinical practice guidelines are an essential component of our overall quality measurement and improvement program and provide a foundation for effective approaches to the care of our Enrollees. These guidelines are embedded in every aspect of our operations from care planning and utilization management to quality monitoring and reporting. Our physical health, BH, and pharmacy guidelines reflect evidence-based recommendations from leading specialty associations, colleges and societies (e.g., American Psychiatric Association, American Academy of Child and Adolescent Psychiatry, American Diabetes Association), as well as peer-reviewed literature and studies.

WellCare's extensive evidence-based practice resources are in strong alignment with the top diagnoses among our foster care and juvenile justice Enrollees. We already use a wide range of

evidence-based guidelines relevant to the population, such as for ADHD, antipsychotic drug use, asthma, autism spectrum disorder, depression, epilepsy, lead exposure, and obesity. We provide other examples in **Attachment G.10.d-1 BH Child and Adolescent CPGs**.

We will adopt additional evidence-based guidelines and approaches specific to the Kentucky SKY population to reflect their unique clinical and non-clinical care needs.

Our Utilization Management Advisory Committee (UMAC), comprised of network providers as well as our Medical Director and BH Medical Director, continuously reviews, updates, and as needed adopts new guidelines to reflect the latest evidence on effective care for our enrolled population. To ensure appropriate expertise for Kentucky SKY, we will establish a **SKY Enrollee Outcomes Committee** which will provide recommendations to the UMAC on appropriate evidence-based guidelines. The Enrollee Outcomes Committee will include representation of providers that serve these Enrollees (such as pediatricians and BH providers) as well as foster and adoptive parents and a former foster care youth. The committee will also include our SKY Medical Director and BH Medical Director. See our response to Question 9 Health Outcomes for more detail on the committee.

TOP DIAGNOSES

Diagnosis	% SKY Eligible Enrollees
SED	43%
Depression	19%
Asthma	14%
Obesity	12%
Bipolar	5%
Substance Abuse	4%
Serious Mental Illness	2%
Diabetes	1%
Hypertension	1%

Evidence-Based Approaches We Will Use

Well-Child Guidelines. A foundational evidence-based approach we will adopt, as described previously, will be the standards developed by the American Academy of Pediatrics and Child Welfare League of America. These standards differ from the guidelines for well-child care that apply to the traditional child Medicaid population in both the frequency and the intensity of services that should be provided.

Trauma-Informed Care. Understanding the impact of trauma on children and youth in foster care and how it affects every aspect of their care, we will adopt a range of evidence-based approaches for appropriately addressing trauma, grounded in SAMHSA's six key principles of a trauma-informed approach.

SAMHSA'S SIX KEY PRINCIPLES OF A TRAUMA-INFORMED APPROACH

- Safety
- Trustworthiness and Transparency
- Peer Support
- Collaboration and Mutuality
- Empowerment, Voice, and Choice
- Cultural, Historical, and Gender Issues

We will draw from sources that include but are not limited to:

- SAMHSA's National Registry of Evidence-based Programs and Practices (NREPP) which includes numerous evidence-based guidelines for trauma-informed approaches.
- The National Child Traumatic Stress Network's catalog of evidence-based trauma interventions.

- The Child Welfare Information Gateway (US Department of Health and Human Services, Administration for Children and Families' Children's Bureau).
- The California Evidence-Based Clearinghouse for Child Welfare.
- Building Bridges Initiative.

Care for Juvenile Justice Involved Youth. This subgroup has unique health and mental health care considerations such as traumatic injury, tuberculosis, sexually transmitted infection, reproductive health, high rates of psychiatric disorders, substance use, and suicide risk. In addition to evidence-based approaches we have already adopted, such as

American Academy of Child and Adolescent Psychiatry's (AACAP) *Transgender Youth in Juvenile Justice and other Correctional Systems*, we will leverage sources for evidence-based approaches to their care such as:

- American Academy of Pediatrics Committee on Adolescence. Health Care for Youth in the Juvenile Justice System.
- National Commission on Correctional Health Care. Standards for Health Services in Juvenile Detention and Confinement Facilities.
- US Department of Justice, Office of Juvenile Justice and Delinquency Prevention's Model Programs Guide.

Other Areas of Care. The table below provides some of the other relevant areas of care for which WellCare has already adopted or will adopt evidence-based guidelines and approaches. *This list is not exhaustive* but provides a sample of approaches that reflect the latest and consensus recommendations for effective care in these areas.

Table G.10-3: Examples of Evidence-Based Approaches We Will Use

Area of Care	Examples of Evidence-Based Approaches
Appropriate Utilization of Psychotropics	AACAP: *Practice Parameter for the Use of Atypical Antipsychotic Medications in Children and Adolescents* HEDIS guidelines on metabolic monitoring SAMHSA: *First and Second Generation Antipsychotics in Children and Young Adults: Systematic Review Update - March 16, 2017* SAMHSA: *Guidance on Strategies to Promote Best Practice in Antipsychotic Prescribing for Children and Adolescents*
Evidence-based BH treatment interventions	Child Parent Psychotherapy Trauma-Focused Cognitive Behavioral Therapy Parent Child Interaction Therapy Dialectical Behavior Therapy
Crisis Intervention Services	Mental Health First Aid
Substance Exposed Infants	SAMHSA: *Neonatal Drug Withdrawal*
BH Screening/Identification	Screening, Brief Intervention, and Referral to Treatment (SBIRT)

Area of Care	Examples of Evidence-Based Approaches
Suicide Prevention	Cognitive Behavioral Therapy for Suicide Prevention Dialectical Behavior Therapy Collaborative Assessment and Management of Suicidality
Developmental Disabilities	AACAP: *Practice Parameter for the Assessment and Treatment of Children and Adolescents With Autism Spectrum Disorder* AACAP: *Comorbidity Treatment in Autism Spectrum Disorders and Intellectual Disabilities*
Substance Use Disorder	SAMHSA. *Principles of Adolescent Substance Use Disorder Treatment*
Smoking Cessation	Public Health Service: *Clinical Practice Guideline on Treating Tobacco Use and Dependence, 2008 Update*

ENSURING PROVIDER COMPLIANCE

We will build on the effective processes we already have in place for ensuring provider compliance with our evidence-based approaches and guidelines, customizing for Kentucky SKY to promote the highest quality care for these Enrollees. Based on experience implementing new programs (including transitions from fee for service to managed care and implementation of value-based purchasing arrangements) in Kentucky and other states, WellCare understands how to educate, monitor, and support providers to adhere to or change practice.
Our compliance approach involves initial and ongoing education and training on our guidelines, incentives to encourage compliance, regular multichannel monitoring to identify providers that are not meeting expectations, intensive technical support and assistance to help providers improve and meet compliance goals, and a corrective action process for repeated non-compliance.

Education and Training

The shift to a sole-source contract emphasizes to providers the importance of differentiating between this population and the traditional Medicaid population and increases their awareness that these Enrollees may require alternative or additional treatment approaches. WellCare will reinforce this emphasis and increase awareness through inclusion of required evidence-based approaches in our comprehensive Kentucky SKY provider education and training program. This program, described in detail in our response to Question 8, will incorporate topics that are included in network-wide training (such as trauma-informed care and suicide prevention) as well as topics targeted to specific provider types (such as evidence-based BH treatment approaches targeted to BH providers).

Incentives

WellCare has achieved positive results ensuring provider compliance with evidence-based guidelines, such as incentivizing providers who meet HEDIS targets. We will provide incentives to PCPs to promote compliance with the AAP well-child guidelines through enhancing reimbursement in recognition of the increased intensity of services as well as configuring our system to accept claims for unlimited well child exams in accordance with AAP guidelines. We are also exploring development of additional incentives such as:

- Qualified Residential Treatment Provider (QTRP) incentive for meeting Building Bridges Initiative (BBI) standards. We will ask providers to complete a baseline self-assessment, collaboratively develop a work plan, and re-assess at established intervals to determine improvement and evaluate compliance.
- BH hospital and PRTF level 2 incentive for reducing seclusion and restraints and increasing alternative methods of addressing behaviors. This incentive will be part of our Performance Improvement Project described in our response to Question G.9 Health Outcomes.
- Placement Stability over six, 12, and 18 months. Longer placement tenure increases a child's feelings of safety and stability. This in turn leads to better progress toward development milestones as well as continuity of care.

Monitoring

WellCare's compliance monitoring for Kentucky SKY will incorporate our monitoring approaches used for our traditional Medicaid population (described in detail in our response to Question C.9 Quality Management and Health Outcomes) but will be enhanced to reflect the higher-touch, more intensive oversight necessary to promote quality for these Enrollees and ultimately support permanency. These more intensive monitoring approaches will include:

- *Care Coordination Monitoring of Enrollee Progress*. Care Coordinators and CCTs interacting face to face with Enrollees, caregivers, providers, DCBS, and DJJ discuss Enrollee progress on the care plan as well as the permanency plan. The frequent, immediate feedback received through our high fidelity wrap around approach will enable our staff to identify early any issues with provider compliance.
- *Review of Provider Self-Assessments.* We will ask providers to complete self-assessments to establish baseline compliance and measure progress toward compliance. For example, as noted above, we will ask QTRPs to complete a baseline BBI standards self-assessment to identify compliance gaps and follow-up self-assessments to monitor progress toward compliance.
- *Provider Audits.* Our Provider Relations Team will select and audit subsets of providers to which guidelines apply. We may select providers randomly, based on high volume, or when we identify low performance in established metrics. We will also audit through our Annual Medical Record Review (AMRR), described in more detail in our response to Question C.9 Quality Management and Health Outcomes.

We will also use other monitoring methods such as:

- *Appointment Accessibility Surveys.* Our Network Integrity Team partners with an external vendor to conduct telephone surveys to assess appointment availability, appointment wait time, and after-hours coverage. We re-audit any Providers who fall short of standards and follow-up with a corrective plan as needed. Findings are shared with the Provider Relations Team to ensure appropriate follow-up and education is provided to Providers failing to meet accessibility standards. For Kentucky SKY, appointment surveys for PCPs will help us monitor compliance with the increased frequency of AAP guidelines.
- *Grievances and Complaints.* Our Member Advocates, Member Services Representatives, and Care Coordination staff review, log and categorize grievances and complaints by cause, disposition, and type for review and follow-up. Feedback generated from our SKY Enrollee Outcomes Committee will also provide us with regional or systemic trends which are

addressed by our Member Advocates before a formal complaint is filed. Grievance and complaint information is reviewed by our Network Integrity and Quality Improvement Teams to monitor access to care, used by our Network Development Team to identify the need and opportunities for expanding access to care, and allows our Provider Relations Team to follow-up and work with Providers. Our Inquiry Coordinator will assist Enrollees, foster and adoptive parents, relatives, Fictive Kin and caregivers with grievances and complaints as needed. The Inquiry Coordinator will make decisions and report to DMS, DCBS, and DJJ any inquiries and complaints made by or on behalf of SKY Enrollees or providers.

For all monitoring, we will identify individual providers in need of follow up as well as track and analyze trends to identify needs for follow up and re-training network-wide or by provider type.

Technical Support

When we identify non-compliance and when a provider requests assistance, our regionally located Quality Practice Advisors (QPAs) will outreach and provide a range of technical supports to assist the provider to come into compliance. Currently, WellCare has three teams of regionally located QPAs responsible for assisting providers in closing care needs and educating them on HEDIS and HPR measures and other required guidelines. We will be expanding our QPA team to provide coverage in every DCBS and DJJ region and providing intensive education and training on our evidence-based guidelines, compliance requirements, and how to support our providers. Support may include gap analysis to determine processes the provider needs to put in place for compliance, re-training on guideline content, training for additional practice staff, and direction to external training and certification resources. QPAs will work face to face with providers at their locations. Care Coordination staff will assist as needed to reinforce QPA efforts including checking in with providers during MDT meetings to confirm the provider is following evidence-based approaches.

We will also deploy our **Members Empowered to Succeed (METS)** program to reinforce use of evidence-based approaches. The program, which started in Kentucky as a pilot and has now been deployed in all of our markets, assists Enrollees in stepping down from intensive services or obtaining more specialized or extended services. The METS team works closely with providers and our Care Coordinators to create an authorization plan that identifies specific goals to demonstrate progress towards recovery. For the Kentucky SKY program, this will include review of provider compliance with evidence-based approaches and technical assistance as needed to improve compliance. METS has delivered meaningful results, including a 6% reduction in ED utilization.

Corrective Action

When necessary, QPAs will develop formal corrective action plans for providers to bring them into compliance. Our process includes timeframes and milestones for demonstrating improvement. Corrective actions may include peer to peer consultation with our Medical Director, BH Medical Director, and Pharmacy Director as needed. Repeated non-compliance and failure to successfully complete corrective action plans will be grounds for termination.

e. Provide a description of the Vendor's approach for ensuring Network Providers are providing Trauma-informed Care to Kentucky SKY Enrollees.

Trauma-informed approaches and care are foundational to WellCare's Kentucky SKY program. While all involved in the child's care must be educated and trained to use trauma-informed approaches – including all our Enrollee-facing staff, DCBS and DJJ staff, foster and adoptive parents, fictive kin, biological parents, and other stakeholders – the providers treating the child or youth carry a uniquely important responsibility for delivering trauma-informed care. Our multifaceted approach to ensuring providers are providing trauma-informed care includes the following components.

CONTRACTING WITH PROVIDERS WITH EXPERTISE IN TRAUMA-INFORMED APPROACHES

Our network already includes providers with experience using evidence-based trauma-informed care approaches as described in detail in our response to Question G.6 Provider Network. As we build out our Kentucky SKY network, we are approaching network adequacy not just in terms of number of providers, but in terms of having the right providers with the right expertise to meet this population's needs.

Our Network Development team is identifying additional providers not currently contracted with us who have trauma expertise through asking about their trauma-informed care experience as part of the credentialing process. We are also asking our community partners such as Kentucky Partnership for Children and Families and the Kentucky Foster and Adoptive Care Association to help us identify trauma-informed providers that are not already in our network. We will outreach to identified providers and attempt to contract with them.

EXPANDING AVAILABILITY OF TRAUMA-INFORMED TREATMENT

WellCare knows from our experience serving the Kentucky foster care population that availability of trauma-informed providers is limited, particularly in more rural areas of the state. We are making efforts to transform and expand evidence-informed treatment throughout Kentucky.

We will model our efforts on our experience expanding availability of mobile crisis response, crisis stabilization, and other services that are not always readily available in every community in order to prevent out of home placements for youth living with caregivers in a community setting. Our most recent example, which we implemented June 1, is our crisis service expansion with LifeCare Family Services, a provider in Tennessee. WellCare has contracted with LifeCare to expand into the border area to increase availability of rapid response services to children and families in their natural environment using a strength-based approach with creative, flexible solutions. Using this experience as a model, we will identify providers in bordering states with trauma-informed expertise and work with them to expand services and service sites into Kentucky.

ASSESSMENT OF TRAUMA INFORMED PRACTICE

Using the National Child Traumatic Stress Network framework for trauma informed health care, we will work in collaboration with DCBS, the Kentucky Partnership for Children and Families, the University of Louisville Kent School of Social Work, and our providers and community

stakeholders, to develop a checklist for trauma-responsive care. This tool will include indicators that the provider understands and is implementing trauma-responsive care, such as:

- Child-friendly waiting areas and exam rooms
- Use of ACE assessments, trauma, PTSD and other behavioral health screens
- Use of seclusion or restraint
- Initial and continuing trauma-informed care education for office staff, nurses, and physicians.
- We will also use our credentialing and recredentialing processes to systematically identify provider resources with formal training in areas of trauma-informed care, the use of behavioral health assessment instruments, and the use evidence-based practices like trauma-focused cognitive behavioral therapy (TF-CBT), dialectical behavioral therapy (DBT), parent-child interactional therapy (PCIT), rapid eye movement desensitization and reprocessing (EMDR), and others. We will identify areas of subspecialty focus include sexual abuse, physical abuse, domestic violence, human trafficking and others. This drill down on expertise available in network will help us direct children and youth to providers that offer key evidence-based approaches for treating trauma.

PROVIDING COMPREHENSIVE PROVIDER EDUCATION AND TRAINING ON TRAUMA-INFORMED CARE

As described in detail in our response to Question G.8 Provider Training, our Healing Futures program is a comprehensive approach to educating and training the system of care about trauma, its effects, and evidence-based approaches for interacting with and providing treatment to children and youth who have had Adverse Childhood Experiences. To increase the trauma expertise of our overall network, we will provide training through our Provider Relations team via in-office meetings and group sessions, and through on-demand webinars and downloadable training materials on our Provider portal.

PROVIDING INCENTIVES FOR COMPLIANCE

To encourage providers to improve their ability to provide trauma informed care, our Delivery System Transformation work will include offering enhanced reimbursement for providers who are or become Trauma Informed Care practices. We will identify our Trauma Informed Care practices and connect Enrollees to them as Preferred Providers. This will include identifying those that have obtained training and/or certification beyond WellCare's Healing Futures trauma training.

REGULARLY MONITORING AND TAKING ACTION TO ENSURE COMPLIANCE

Our monitoring of individual providers as well as network trends in compliance with trauma-informed care guidelines will follow the processes outlined previously in our response to Question G.10.d above. Our QPA and METS teams will provide high-touch technical support when we identify providers that need assistance and when providers request additional support. This will include development of Individualized Provider Quality Plans. Our QPA team will use the checklist tool described above to assess provider progress meeting performance expectations, readiness for change, and capability to implement changes. This analysis

determines a baseline for provider performance and informs development of an individualized approach to improving trauma-informed and responsive care for key providers. We will implement corrective action, up to and including termination, for repeated non-compliance and failure to improve.

f. Describe how the Vendor will use telemedicine and telehealth to improve quality or access to physical and Behavioral Health services.

WellCare of Kentucky will leverage our telemedicine and telehealth capabilities to improve access to quality physical and behavioral health services for our Enrollees through new initiatives that make it possible for children and youth to receive care directly from the foster home, school, or facility that best suits their needs and at the convenience of their family, guardian, or foster parent. To support this approach, we will leverage WellCare Health Plans' model of services, including their national telemedicine/telehealth experience, resources, and suite of progressive mobile health applications that engage Enrollees in self-directed care and computerized cognitive behavioral therapy (cCBT).

With the passing of Senate Bill 112, which expands telemedicine/telehealth capabilities and the payment parity model, we can apply a more progressive strategy that facilitates expanded access to services for children in foster care, adopted children, and those in involved in the justice system through the Department of Justice (DJJ). For example, at WellCare's Florida health, we adapted quickly to the new direct-to-consumer model, engaging providers across the state to rapidly build an enhanced telemedicine/telehealth network for Enrollee access to primary care physicians (PCP), specialists, and behavioral health providers. Since Florida transitioned to a direct-to-consumer state, more than 5,000 Enrollees at our health plan have accessed telemedicine services.

Today, our providers, local Community Mental Health Centers (CMHC), and Federally Qualified Health Centers (FHQC) already use telemedicine/telehealth to connect their Enrollees to specialists and behavioral health providers, such as psychiatrists and mental health counselors, to help address their patients' whole-person needs. **In 2018, we paid claims to providers for over 6,800 telemedicine/telehealth services for over 20 different types of services.** The following section describes our approach for increasing access to services in the Commonwealth.

STRATEGY TO DRIVE NEW PROVIDERS TOWARD NEW TECHNOLOGY AND METHODS

Often, children in foster care experience multiple transitions to new foster homes or facilities in different regions of the Commonwealth, which makes it difficult to provide a consistent healthcare experience supported by a reliable PCP and multidisciplinary team (MDT). We believe that telemedicine/telehealth capabilities will help children in the foster care and justice systems, as well as adopted children, and biological parents working toward reunification have access to a team of physicians capable of providing long-term, consistent support. This continuity allows Enrollees to maintain relationships with physical and behavioral health providers, as well as other specialists critical to their stabilization and well-being.

Understanding the Environment. As an active participant in the Kentucky Health Telemedicine Network (KTHN) board meetings and the SB 112 Task Force, our team has contributed

recommendations regarding telemedicine/telehealth services, as well as methods for promoting its use by both providers and our Enrollees. We understand the local environment and DMS's vision for expanding these capabilities. As the KTHN Board transfers oversight of telemedicine/telehealth policy to the Cabinet of Health and Family Services (CHFS), we will continue to provide recommendations upon request as to how we can better serve the whole-person needs of all Enrollees, regardless of where they live.

Education to Inform Providers of the Direct-to-Consumer Model. Moving forward, our outreach efforts will introduce our providers to the new direct-to-consumer model, which will facilitate medical appointments for our Enrollees' physical and behavioral health needs from anywhere an Enrollee and their foster parent, family member, or guardian has access to an internet connection and video camera capabilities. Our SKY Provider Engagement Team and SKY Provider Liaison will proactively identify and meet face to face with providers, PCPs, and pediatricians to support enabling their facilities for these services. This process includes educating providers on the logistics, payment options, eligibility, technology, implementation, and best practices involved, coverage policies, and the benefits of telemedicine/telehealth for both Enrollees and providers. To facilitate an easy transition, we will educate them on the documentation and billing process to support DMS's new required billing fields and modifiers that identify the originating and recipient sites. We explain potential increased revenue resulting from preventing appointment cancellations and the potential opportunity for increased reimbursement from offering non-traditional appointment times.

Ongoing education includes in-person presentations in a variety of forums such as breakout sessions at our annual Provider Summits; on both our public website and the provider portal; and through our popular bi-weekly Webinar series. We will also coordinate services with the Fee-for-Service (FFS) program for Enrollees who can benefit from telemedicine/telehealth services in the local schools.

Provider Contracting. We are confident that our network of more than 33,500 providers caring for our population of approximately 8,100 children and adolescents in foster care throughout the Commonwealth will increase access to healthcare services for our SKY Enrollee population. To accommodate the needs of the Kentucky SKY program, we will be contracting with private child care providers not currently supporting Medicaid. In addition, we are identifying, partnering, and contracting with specialty providers to expand access to specialty services (e.g., applied behavioral health analysis, neuropsychology, trauma therapies, and mobile crisis). Telemedicine/telehealth technology will ensure access to these services, making them available when and where an Enrollee needs the service.

FACILITATING ACCESS TO TELEMEDICINE/TELEHEALTH FOR SKY ENROLLEES

As the telemedicine/telehealth landscape undergoes a progressive transformation in the Commonwealth, we will educate Enrollees and their foster parents, guardians, or adoptive parents on how that affects the way they receive care. Described below, our approach includes new initiatives developed for the SKY program that will facilitate better access to healthcare services for our Enrollees.

Technology Agnostic Software. We will be implementing a comprehensive education campaign to our providers, as well as families and schools in the Commonwealth to increase the adoption of telemedicine/telehealth services. With the advances in the telemedicine/telehealth industry, providers are securing affordable solutions to extend their reach of care. By encouraging our contracted providers to use a platform of their choosing without limiting their options, we enable them to provide services for all their Enrollees—not only those managed by WellCare of Kentucky. This method helps connect foster children and youth to behavioral health clinicians, PCPs, follow-up care, and specialty providers from the comfort and convenience of their home. As needed, we will work with DMS and DCBS to facilitate a device to foster parents if they do not have a laptop, device, or smartphone in the home.

This will help relieve the burden of transportation and time spent driving children or multiple children, as is often the case in a foster home, to and from medical appointments. Our care coordinators will assist foster parents, parents of adopted children, and families or facilities supporting youth in the justice system throughout the set-up process, which includes downloading the dedicated application based and enabling unique log-in information for each child. If a foster parent supports more than one child in the household, they will be provided with a unique log-in for each of the children in the home. Whenever a child transitions to a new home environment, the account is deactivated, and the foster parent will no longer have access.

Care Coordination. Using technology-enabled solutions such as telemedicine/telehealth improves communication among members of the Enrollee's multidisciplinary team (MDT), which is crucial to the care coordination process. By leveraging the proven, secure web-conferencing software of their choosing, providers can participate in calls, discharge planning, and transitions of care without leaving their office. This process allows family members, guardians, providers, and representatives from DCBS and DJJ to participate in meetings from any location. In addition, many of our providers and CMHC partners currently use this technology to connect Enrollees in the provider's office to specialists such as mental health counselors and psychiatrists. We will help expand this model by coordinating Enrollee care that maximizes the efficiency of their medical appointments and increases convenience for the Enrollee, MDT, and supporting foster parent or family member. For example, a child or youth in the foster care system must visit an LHD in person to receive their immunizations. We envision a model of support where the LHD and our care coordinator schedule additional medical appointments with their pediatrician or mental health counselor to be conducted during their visit using telemedicine/telehealth capabilities. For these collaborations, we will reimburse the presenting site as well as the consulting site. LHDs already provide care to our Enrollees, but we envision using them in this scenario as conduits to specialty care. As LHDs are located statewide (in all 120 counties), this will be especially beneficial for our Enrollees in rural areas.

WellCare Hotline Tele-Visit Routing. Our Nurse Advice Line (NAL) provides 24/7 support for our Enrollees' medical needs with qualified physicians, physician assistants, licensed nurse practitioners, and nurses. Our Behavioral Health Services Line provides crisis support, de-escalation, and guidance to either the Enrollee's care coordinator, PCP, emergency department, or local urgent care center depending on the severity of the issue. Our qualified staff will be trained on specific SKY Enrollee protocols for handling their calls and initiating next steps. For

example, if an Enrollee calls and needs assistance with a non-emergent issue, we will help initiate a real-time tele-visit with their provider to diagnose, treat, manage, and prescribe any necessary medications on the spot. This new initiative will ease the burden of foster parents caring for a sick child or who do not have access to a nearby healthcare facility.

In addition, regardless of whether or not an issue is immediately resolved, our SKY Enrollee guidelines dictate that the service line representative will immediately contact the care coordinator for follow-up care within 24 hours. All services will be outlined as part of the initial care plan, created within 30 days of the Enrollee's enrollment and identified as part of the care coordination plan—both created with DCBS and DJJ permission for all identified services.

Specialized Treatment Therapies. We will help coordinate the care and appointments for Enrollees who require access to specialized treatment therapies that often require several months of waiting to attend a scheduled appointment in the local region due to physician shortages. Enrollees will have access to psychiatrists and talk therapists specializing in CBT, as well as additional specialty providers and treatment therapies typically not readily available, as described in **Table G.10-4.** This may also include psychiatrists, child psychiatrists, child psychologists, pediatric neurologists, neuropsychologists, applied behavioral analysis specialists, speech therapists, as well as second opinions and other specialists required for consultation on medically complex cases.

Table G.10-4 Access to Specialty Providers

Enrollee Access to Specialty Providers through Telemedicine/Telehealth	
Certified Juvenile Sex Offender Treatment Providers	Through meeting with a certified juvenile sex offender treatment provider, an Enrollee receives a full risk assessment that identifies the potential for future acting out and determines the appropriate level of care—taking into consideration the safety of the individual, those around them, and the community. Often, young children act out because they are dealing with trauma and do not know how to process it on their own or correct their behaviors. The treatment provider highlights areas of concern and develops a focused treatment intervention based on a specific model of care for the entire MDT to follow. The intervention addresses the Enrollee's behaviors, pre-behaviors that occur before acting out, situations to avoid, and steps for the child or youth to take to understand the different stages in the thinking and behavior process that lead to acting out. Because these children are often simply living out their trauma, it is not always necessary for them to be admitted to residential treatment, which is why telemedicine/telehealth services can help bridge service gaps for Enrollees who require a lower level of care. This specialized training is a critical need for a child or youth dealing with the emotional difficulties of trauma and requires learning correct behaviors from a trusted professional.
Neuropsychological Testing	A specialized set of psychological examinations, neuropsychological testing identifies whether or not a physiological cause may be responsible for an Enrollee's intellectual or developmental disability or issue. This helps the care team determine if the issue can be addressed through therapy or if it

Enrollee Access to Specialty Providers through Telemedicine/Telehealth	
	requires more extensive treatment from a neurologist or other behavioral health specialist.
Applied Behavioral Health Analysis (ABA) Testing	A specialty model of care, providers certified in ABA provide specialized behavioral health interventions, functional analysis, and identify an individual's behaviors and the associated functions behind those behaviors. Once behavioral triggers have been identified, the ABA provider develops a behavioral intervention plan that is then taught to the foster parents, families, or guardians of the child so they can intervene before a negative behavior occurs. Instead, the child learns a new behavior and a better way of interacting with the world around them. ABA specialists are in high demand, with long wait lists that can prevent children and youth from receiving the high-level of care and attention they require and deserve. It is our goal to bridge this gap through telemedicine/telehealth services
Substance Use Disorder (SUD) Treatment Providers	We will facilitate access to SUD treatment providers for Enrollees, enabling them to receive therapy and counseling from the convenience of their home. We plan to promote (to providers and Enrollees) the option to use telemedicine/telehealth for the counseling and psychotherapy component of SUD treatment when outpatient services have been identified as the most appropriate level of care.

Remote Clinical Monitoring. For Enrollees with diabetes, asthma, or hypertension, remote clinical monitoring provides feedback between Enrollees, foster parents, families, guardians, providers, and care coordination staff. For example, remote clinical monitoring capabilities for diabetes facilitates coaching and support for testing blood glucose levels at home, as directed by the Enrollee's provider team. Using remote clinical monitoring equipment, data continuously transmits to the child's provider and WellCare of Kentucky's care coordination staff. Enrollees, foster parents, guardians, care coordinators, and providers receive early-warning alerts when an increase in symptoms occurs (e.g., blood glucose levels rise), enabling a quick response through Enrollee outreach and follow-up care to address the issue. Care coordinators use this information while working with the child, foster parent, family, guardian, and the treating provider to develop personalized program goals and update the care plan. We provide pre-visit reports, which contain actionable information about their current diabetes self-management, and access to Fit4D, a self-management support tool for youth and adolescents managing Type 1 and Type 2 diabetes. Additionally, we issue provider alerts for urgent issues such as a significant increase in symptoms or blood

Supporting Enrollees in the Home

Remote clinical monitoring results in healthier Enrollees, reduced utilization, and decreased medical costs. Applied nationally throughout WellCare's health plans, the biometric monitoring program shows that Enrollees with diabetes improved Hemoglobin A1c compliance rates from 7.54% to 15.45%.

glucose readings outside of the target range. We provide similar monitoring and alerts for asthma related to medication use and adherence.

Store and Forward Model. WellCare of Kentucky intends to embrace the "store and forward" telemedicine/telehealth option. This option can be used for radiology consultations (CT-scans, MRIs, MRAs, X-rays) in which a clinical expert reviews the given image and provides an assessment to the provider who is treating the Enrollee. The consult can occur while the Enrollee is still present in the treating provider's office or later at a more convenient time for both the treating provider and the clinical/radiology expert.

SUPPLEMENTAL MOBILE HEALTH APPLICATIONS FOR SELF-DIRECTED CARE

WellCare of Kentucky will provide our Enrollees, foster parents, guardians, and families with access to our suite of mobile health applications that engage Enrollees in self-directed care and computerized cognitive behavioral therapy (cCBT).

JOOL Health Coach. Last year, we collaborated on a new program for our foster care youth with JOOL Health Coach, a personal coaching smartphone application that encourages youth to check in with their peers and engage in healthcare services. With tailored tracks specific to different populations, Enrollees have access to a transition-aged youth pathway for those with SUDs. JOOL includes SUD assessments, resources, and referral information to help youth and their families easily learn about their SUD and the local treatment options available in their community. To date, over 100 youth to date are enrolled.

MyStrength. An online, evidence-based behavioral health therapy platform, depicted in **Figure G-10.4**, MyStrength provides our Enrollees with interactive clinical programs empowering them to address depression, anxiety, stress, substance use, chronic pain, and sleep challenges, while also supporting the physical (e.g., smoking cessation, diabetes) and spiritual aspects of whole-person care. MyStrength's integrated model includes computerized cognitive behavioral therapy (cCBT), mindfulness, motivational interviewing and Assertive Community Treatment (ACT) protocols with personalized pathways that facilitate user interaction, mood trackers, and additional tools to measure effectiveness and improvement.

MyStrength has shown the following benefits upon implementation: a 43% rapid symptom reduction within the first two weeks of engagement, 83% as effective as face-to-face therapy at a fraction of the cost, and a 70% cost reduction in total paid claims for Enrollees.

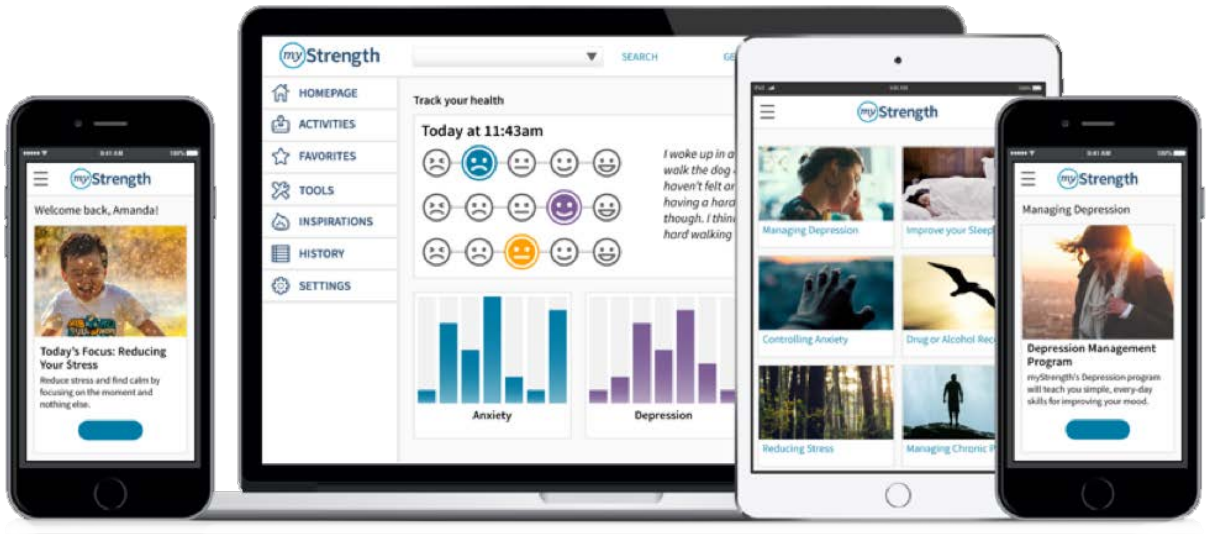

Figure G-10.4 MyStrength Behavioral Health Therapy Platform

AbleTo. The AbleTo program is a virtual CBT solution providing weekly coaching sessions with a coach and professional therapist to handle the behavioral health components of co-morbidities. The team helps the Enrollee set goals and build a program tailored to their personal needs. Coaching sessions occur twice a week at a time convenient to the Enrollee.

Fit4D. Supporting youth and adolescents with Type 1 and Type 2 diabetes, Fit4D is a support tool that includes chat messaging and push notifications. Through personalized education and coaching services, Fit4D supports Enrollees by teaching self-management behaviors and guidance for following treatment and care plan recommendations, as well as participating in preventive services. Health coaches speak to both the guardian and the Enrollee, or for older participants, help supplement diabetes treatment and education as Enrollees learn to manage treatment on their own.

MAP Health Management. This tool provides mobile peer support for SUD. MAP is a national vendor that matches Enrollees with a peer with the same lived experience as they go through detox and need support for their triggers. Addiction is a chronic disease – MAP's peer recovery support services extend the care continuum to match the chronic nature of the disease.

- Improve long-term engagement across SUD Enrollee populations to facilitate early intervention, motivate Enrollees to seek treatment when appropriate, reduce the impacts of relapse, and direct care needs such as readmission when appropriate
- Reduce out of network utilization for SUD treatment
- Capture and report on longitudinal outcomes data, including social determinants of health, on SUD populations and treatment programs.

This 24/7 recovery support solution matches a peer with the same 'lived experience' to an Enrollee in need. We understand that Enrollee engagement is key to recovery success, which is why providing this real-time, 24/7 access to support and ability to triage for additional services is critical. This connectedness helps Enrollees feel less alone and isolated.

g. Describe how the Vendor will capture data related to Social Determinants of Health and incorporate this information into its Care Management approach.

Social determinants of health are a well-known factor in health outcomes for Medicaid Enrollees. Enrollees in the Kentucky SKY population share the social determinants needs of other Medicaid populations. For example, Enrollees over 18 may need assistance with housing, job skills training, secondary education, and connection to food pantries and completing SNAP applications.

However, there are important nuances to SDOH needs among Enrollees in the foster care and juvenile justice systems, listed in **Figure G.10-5**, that require differences in approach.

UNIQUE CONSIDERATIONS FOR SOCIAL DETERMINANTS OF HEALTH WITHIN THE KENTUCKY SKY POPULATION

Foster family SDOH needs must be considered and addressed in order to meet the child's needs, which may change when their placement changes. For example, a foster family with only one foster child may easily be able to afford clothing and shoes, school uniforms and supplies, and activity fees, while the subsequent foster family with lower income and multiple foster children in their care may need assistance with these needs. Foster families may also need assistance securing needed items for a child placed in the home late in the evening when stores are closed.

This population has distinct SDOH needs related to the risk factors arising from Adverse Childhood Experiences, which may result in delinquency and violent behavior. Engaging SDOH resources can promote "protective factors" that mitigate those risks such as through supporting relationship development and strengthening a child's sense of belonging. Examples include providing transportation to school sporting events and fees for clubs and teams to encourage peer relationships and community involvement. Other protective factors can be supported through facilitating a child's sense of mastery. For example, assisting a child to continue with art lessons when her placement changes may foster her perception of her own self-efficacy as her drawing skills improve, as well as provide continuity through other changes in her life.

Trauma can impact a child's ability to connect with new people and adapt to new situations, and repeated placement changes that require the child to start over with foster family, school, and friends can result in secondary trauma. The ability to "be a normal kid" is vital to their well-being and striving to maintain continuity through placement changes is a key social determinant. For a child whose placement change moves them out of their previous neighborhood school boundaries, paying for additional transportation can enable the child to continue at that school with current friends and sports or other extracurriculars.

Figure G.10-5: Unique SDOH Considerations for Kentucky SKY Population

As described below, we assess and capture data about Enrollee SDOH needs and incorporate that data into the case management process using an approach that recognizes these and other important distinctions.

CAPTURING DATA

We capture data on Enrollee SDOH needs through the assessment process, coordination of care, and ongoing monitoring of Enrollee utilization. We also capture data on Enrollee referral to and use of external resources to meet SDOH needs. In addition, we collect z-codes to help us further pinpoint and track SDOH needs among our membership. All data is captured in CareCentral. Data generated through the case management process is captured in the Enrollee's record, while z-codes are captured in the claims system. CareCentral integrates both types of data so that we have a full picture of each Enrollee's needs, use of SDOH resources, and outcomes, and are able to trend to evaluate population needs and the effectiveness of our SDOH approach.

Data Captured Through the Case Management Process

WellCare's assessment process includes a comprehensive SDOH assessment which helps us identify underlying barriers to an individual's progress towards positive health outcomes. We have adopted the Centers for Medicare & Medicaid Services (CMS) Center for Medicare and Medicaid Innovation's Accountable Health Communities Health-Related Social Needs (HRSN) Screening Tool. This tool provides ten simple questions that ask about living situation, food, transportation, utilities, and safety. For foster and adoptive parents and for Enrollees age 17 and older, we use the additional supplemental questions that ask about financial strain, employment, family and community support, education, physical activity, substance use, and mental health. The tool gives us an overall view of an individual's needs and allows us to identify areas which require further assessment to identify types and intensity of needed support.

For our traditional Medicaid Enrollees, the assessment is performed by our Community Connections Help Line (CCHL) team when an Enrollee calls the Help Line. However, to facilitate relationship-building with our Kentucky SKY Enrollees and ensure that our staff who are responsible for quickly pulling together a care plan and ensuring continuity when a child comes into care, the assigned Care Coordinator and CCT will complete the SDOH tool during initial assessment, at every placement change, and during transition planning for Enrollees aging out of care and/or the Kentucky SKY program. In addition, we screen for new or changed SDOH needs at every Enrollee/caregiver contact and through regular communication with the child's DCBS and DJJ caseworkers. Care Coordinators complete the tool electronically via tablets which connect securely to CareCentral and populate the information into the Enrollee's CareCentral record.

We use a 'close the loop' process that ensures services are being received and that they are having the desired impact on clinical and permanency goals.

We also capture data through care coordination and monitoring. Care Coordinators are alerted to potential SDOH needs during interdisciplinary rounds, discharge planning, and coordination with DCBS and DJJ. Staff document these needs in the CareCentral record and address them as described below. In addition, ongoing monitoring of service utilization can identify gaps or inappropriate utilization that suggests the presence of an unmet SDOH need, such as missed appointments that may indicate the foster parent lacks transportation or child care for other children in the home.

We identify service needs and interventions for the Enrollee's care plan based on all information and data captured through claims, ongoing assessments, patient rounds, discharge planning, and case monitoring. The Care Coordinator ensures the care plan is communicated with the Assessment and Care Teams for implementation. The Care Coordinators document the resources provided in the Enrollee's CareCentral record, which tracks and analyzes services utilized all the way through disposition. This facilitates our 'close the loop' referral and connection process. We recognize that if one Enrollee is experiencing a SDOH need, other Enrollees may also be experiencing the same SDOH need. This process allows us to maintain a living data set of information around community resources and needs that is continually analyzed and trended to evaluate overall efficacy.

SDOH Data Generated by Providers

WellCare currently receives ICD-10 Z-codes on provider claims. We will educate providers on their use to identify social barriers for the Kentucky SKY population. Monthly, we will generate a report for the CCT to review with summary information and Enrollee detail that allows drill-down by assigned Care Coordinator and by Enrollee. Care Coordinators will work with our trauma-trained Community Action Team to outreach to the Enrollee/family to address the unmet social resource need, documenting all additional identified needs and the resources provided in the Enrollee's CareCentral record. Additionally, our Community Action Team will review the report, which will identify SDOH "hotspots" where specific types of needs appear particularly prevalent. The Community Action Team will engage our local partners in the area to develop solutions to address any gaps in available resources.

Our CommUnity Connections program works locally to meet family resource needs at any time of the day or night. Kentucky SKY Enrollees and families can call our toll-free CommUnity Connections Help Line 24/7 for help from a trauma-trained Peer Support Specialist who will connect them to social services in their communities.

WellCare has established strong partnerships with Providers across the state to promote the Community Connections Help Line within their practices for SDOH data collection. The Community Connections program uses data collected through CCHL calls to invest back in the community where gaps are located and support high referral agencies to ensure continued services are accessible in the community. The support the CCHL offers to Providers across the state allows them to focus on identified medical or behavioral health needs while Enrollees are in their office for appointments, instead of social resource needs.

Enrollee-Generated SDOH Data

WellCare has collaborated with JOOL Health to offer a one of a kind smartphone-based application that promotes health engagement and personal well-being. The application captures Enrollee-entered data for factors (such as health and life engagement, willpower/self-control, and resilience) that are impacted by ACEs and protective factors as described above, providing insight into SDOH needs.

The JOOL Life Coach (described in more detail in response to Question G.12 Aging Out Services) is aimed at engaging and improving purpose in life of transition aged youth. Among other features, the app provides a Purpose Composer, which asks the youth to identify four purposes: a personal purpose, a family purpose, a work/school purpose and a community purpose. An example of a school purpose could be "I want to be on time to school every day and exceed the expectations of my teachers".

It also has a charting feature that allows the youth to track daily alignment with their purpose; sleep, presence, activity, creativity and eating (SPACE); and personal outcomes. After ten days of charting, the application begins to give interactive visuals of what factors impact S.P.A.C.E., willpower and the Enrollee's outcomes the most. After fifteen days of charting, the application begins to forecast S.P.A.C.E, willpower and personal outcomes and then provides tips to improve the outcome.

The app stores the Enrollee inputs and charting data, which can then be used by the youth and the Care Coordinator to identify SDOH needs and evaluate efficacy of accessed resources. These identified needs and outcomes are captured by the Care Coordinator in the EHMR.

INCORPORATING SDOH DATA INTO CARE MANAGEMENT APPROACH

In 2008, WellCare was among the first Medicaid Managed Care plans to fully integrate social service needs into our care model and operations. Through our Community Connections, depicted in **Figure G.10-6**, we proactively identify Enrollees with unmet social service needs, remove barriers to appropriate access and healthy lifestyles, and build strong community partnerships we can leverage to benefit Enrollees and families. Since launching our Community Connections Program in Kentucky, we have connected 31,000 people to 165,000 services across the Commonwealth. A **Robert Wood Johnson Foundation study documented a 53% reduction in inpatient spending among individuals who accessed a social service through our Community Connections.** We continue to invest in new technology, training, and operations to enhance our model and our ability to identify and address social barriers to health. We will apply this model to the unique needs and barriers of the Kentucky SKY population, integrating the SDOH data we capture into the case management process to improve health outcomes and support the child's permanency goals.

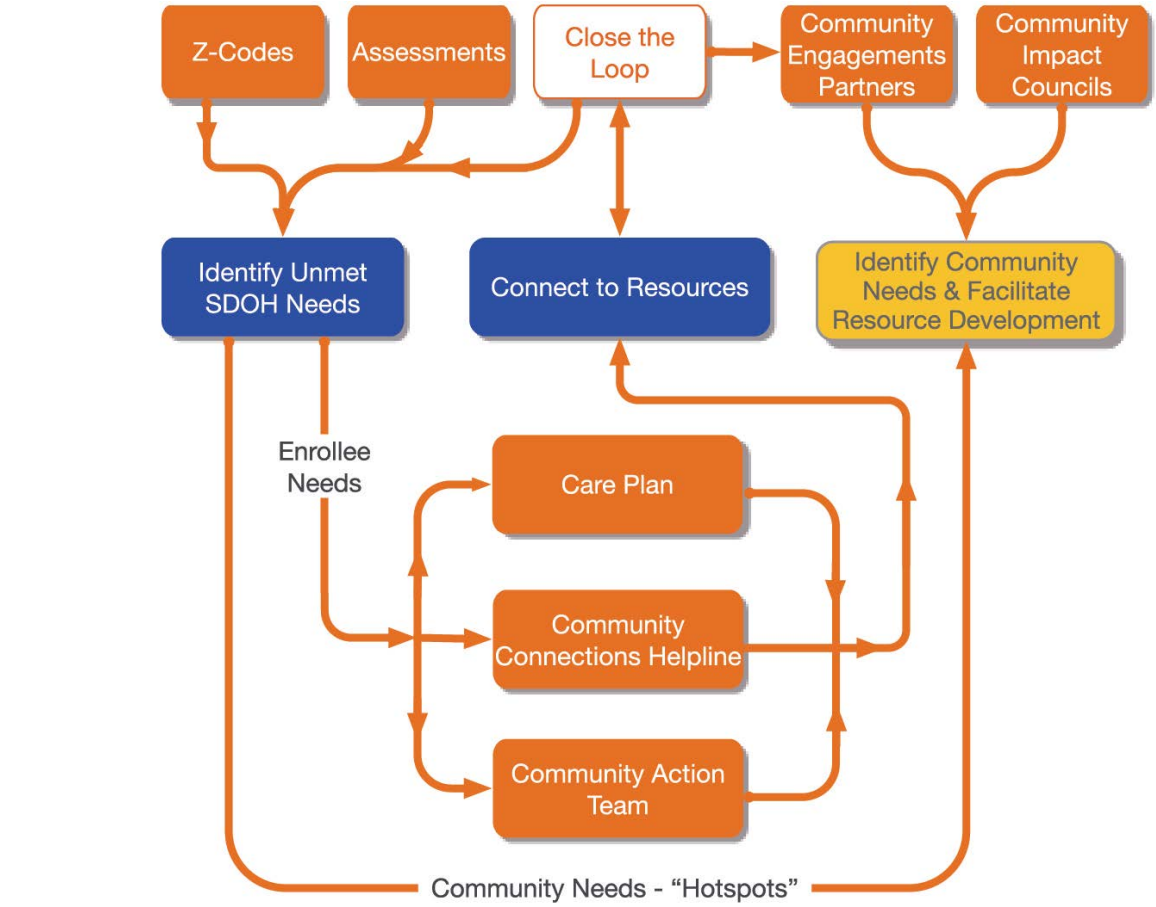

Figure G.10-6: Community Connections

Assessment and Care Planning

SDOH data is a fundamental part of the care planning process and supporting the permanency plan. All information we capture about SDOH needs is incorporated into care plan development and revision to ensure a holistic approach. Using Motivational Interviewing, the Care Coordinator helps the Enrollee and caregiver set goals for each identified need and develop an action plan that supports goal implementation and permanency goals. The Care Coordinator works with the MDT to review identified SDOH needs in the context of other information gleaned from the comprehensive assessment (including medical, behavioral, oral, and other health needs), Enrollee and caregiver goals, as well as the child's permanency goals. We are currently in discussions with DCBS to participate in meetings with their Independent Living Specialists to assist in identification of and addressing SDOH for transition age youth.

> **Exposure to ACEs increases risk for delinquent behavior and future adult offending but engaging SDOH resources can help promote many "protective factors" that can mitigate this risk.**

All care plans address SDOH needs including but not limited to needs such as:

- Housing
- Financial assistance such as for utilities
- Social, such as after school activities, academic and school clubs, sports participation
- Educational, such as academic support, GED, support for secondary education
- Job skills/job search support
- Food insecurity
- Clothing
- Interpersonal safety
- Social transportation
- Cultural and spiritual needs

The care plan describes the Enrollee's psychosocial needs and how such needs will be addressed to ensure the Enrollee's ability to live safely in the community and to support the permanency plan. The focus of the care plan is on what the Enrollee and family believe are important and the goals they set. We have found that Enrollee and family goals are often tied to a social determinant of health. Addressing SDOH needs is key to being successful at overall goal obtainment and progress toward good health.

Once SDOH are identified and incorporated into the care plan, the Care Coordinator and CCT uses our proprietary Navigator database to identify local resources and actively connect the Enrollee and caregiver to the SDOH resources identified as needed. Navigator catalogues local social services provided by community and faith-based organizations across Kentucky. In addition to support provided by the CCT to identify and connect to SDOH resources, Enrollees, caregivers, foster and adoptive parents, and DCBS and DJJ may access our CCHL via toll-free number or website at any time for assistance accessing the nearly 330,000 Kentucky resources listed to mitigate the Enrollee's and family's social barriers to health. All CCHL staff will be trained on trauma and the Kentucky SKY program.

If services were not able to be accessed for any reason or if different or additional resources are required to meet goals, the Care Coordinator refers the Enrollee to a new resource or coordinates with our Community Connections field engagement team to locate or create the needed resource. Currently, our Community Connections team is leading all WellCare markets with over 30,000 Enrollee referrals through our database. Our Community Connections teams work closely with our local **Community Engagement Partners** to help Enrollees quickly access local resources as well as to identify gaps in local resources that WellCare can help address.

WellCare's Community Connections Community Engagement Partners are individuals across the Commonwealth who are active on local boards of directors, county coalitions, and interagency workgroups. Our Care Coordinators regularly connect with them on new resources available and to troubleshoot barriers our enrollees face. Care Coordinators can often reach out immediately through these personal connections to facilitate rapid enrollee access to a needed community service.

Developing and Supporting Resources to Meet Enrollee Needs

As part of our population health management approach, we continually track and trend data to identify the needs of our enrolled population. This includes using SDOH data to identify our Enrollees' needs for social services that support their health and well-being outcomes. For the Kentucky SKY population, we also use SDOH data to evaluate population needs to support stability and permanency. We combine our SDOH data with public health surveillance data to create a complete picture of the Kentucky social service landscape, target our efforts to support local resources, and identify gaps.

Table G.10-5: Examples of Partnering with the Community to Deliver SDOH Resources

Roo's Wish	Roo's Wish provides clothing and other items needed by hospitalized foster and adopted children due to weight changes during their treatment. This support will allow these children to feel a sense of autonomy and empowerment as they are able to make decisions in selecting the items that they need. This will in turn work towards improving their self-esteem. We provided funding for items for our Enrollees.
Hotel Inc	In Warren County, we leveraged nontraditional partnerships to increase access to healthcare for homeless and housing insecure individuals. We supported Hotel, Inc. in their partnerships with EMS of the Medical Center of Bowling, the Bowling Green Police Department, and the Warren County Sheriff's Department to locate and provide services to through Hotel, Inc.'s four homeless street teams. Volunteers included RNs, nurse practitioners, paramedics, and trained core volunteers who conducted wellbeing checks and health assessments in the field. When they identify our Enrollees, they alert us so we can engage the Enrollee in Care Coordination. This effort resulted in connections with over 2,200 homeless individuals (almost 13% were WellCare Enrollees). Of our identified Enrollees, 43% were referred to Care Coordination with 62% of them moving into safe and stable housing arrangements.

KY Coalition Against Domestic Violence	The Coalition's Purple Purse fund offers emergency assistance for domestic violence survivors who have an immediate financial barrier to a basic need. We have provided $20,000 in grant funding from 2016-2018 to support the fund in helping individuals deal with unforeseen expenses they cannot address on their own, such as a car breaking down or difficulty paying rent due to missing work when a child is hospitalized.

Our **Community Impact Councils** (CIC) are collaborative assemblies of community and civic leaders representing a broad spectrum of stakeholders including local social service agencies, faith-based organizations, public representatives, and service providers. The CIC is facilitated by a WellCare Community Engagement Partner. The CIC has been designed to identify health issues at a community level using key health data in order to identify ways to improve. Local CICs are strongly rooted in local communities and CIC membership typically includes individuals who have strong connections in their community, with social and financial capital connected to their community. One particular area of attention is the availability and sustainability of social resource organizations (also called the social safety net) that remove social barriers to accessing health care, with examples provided in **Table G.10-5**, above. Our goal is to understand the community's existing services, pinpoint the most urgent gaps, and collaboratively identify action steps and partnering opportunities to address those priorities while seeking creative ways to proactively sustain social resource organizations and their services in local communities. Please see **Figure G.10-7** for additional information.

Our SDOH data supports our work with these partners to:

- Identify gaps in local resources.
- Evaluate the efficacy of the local social safety network.
- Enhance and sustain the social safety net by sharing data with community partners to increase the available services through grants, advocacy, and the WellCare Community Foundation.

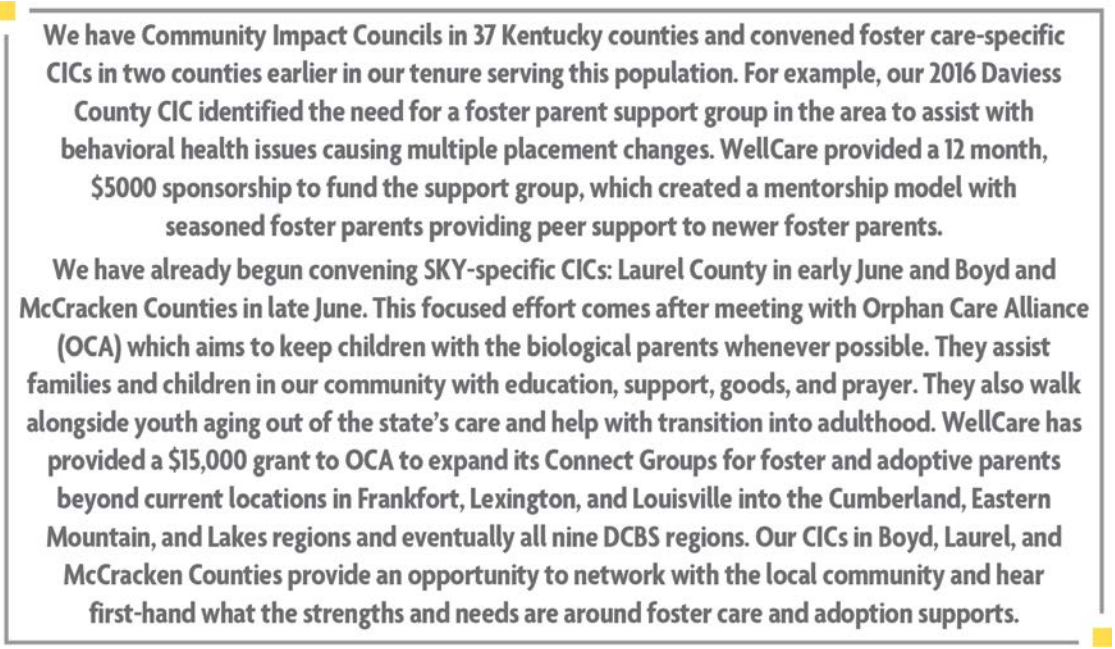

Figure G.10-7: WellCare Community Impact Councils

WellCare Works

A key example of an SDOH need for many Enrollees in the Kentucky SKY population is employment. This is a critical SDOH need for transition age youth and those who remain in the system until age 26. We have used SDOH data for our current foster care Enrollees to adapt and implement our WellCare Works program in areas where our foster care Enrollees with employment needs are located.

Building on research that indicates a strong link between improved health and social connectivity (including consistent employment), WellCare created WellCare Works to connect Enrollees to tools, training and other resources that promote social engagement and empowerment including:

- Preparing to test for a General Education Diploma (including reading, test prep, and more)
- Resume building and interview preparation
- Peer-based networking opportunities
- Training programs in multiple formats on several different topics including financial literacy, and more
- Facilitated access to:
  - On-the-job training opportunities
  - Community-based education and supported employment resources
  - Volunteer opportunities that can be used for networking or gaining applicable work experience
  - Community supports that help address social barriers to working like housing, transportation, affordable child care, and more.

Helping Enrollees Find Jobs and Create Housing Stability

Angela became homeless due to not getting enough hours at her housecleaning job. She reached out for help from Clean Start, a mission of Ashland Area Presbyterian Ministries which provides a one-stop shop for people in need. Through Clean Start, Angela was introduced to WellCare Works for job preparedness and placement support. WellCare Works provided her assistance in creating a resume and locating available jobs in her community. Today, Angela works with Kentucky Fried Chicken and has an apartment at Shelter of Hope while she seeks long-term housing. She has meaningful and sustainable employment, which is essential to creating and maintaining housing stability.

Because everyone connects differently, WellCare created these programs and tools to be accessed online, face to face (through our Welcome rooms for example) or telephonically. In addition, we have assembled a robust network of more than 190,000 resources (virtual, national, and local community based) to support our Enrollees and their families take charge of their personal health including social connectivity and employment.

We integrate WellCare Works with local employment resources targeted to areas where our job-age Enrollees are located. For example, we provided grants to Come-Unity Cooperative Care in Laurel County and The Gentry House Inc. in Calloway County for administrative support

and staff training on our WellCare Works platform. Their front line staff provided one on one support to our local Enrollees, including employment assistance and training on use of the WellCare Works platform. Through the platform, Enrollees can access multiple tools to learn, train, prepare, and secure employment and/or volunteer opportunities.

h. Describe how the Vendor will coordinate with DMS, DCBS, DJJ, and physical and Behavioral Health Providers to ensure each Provider has access to the most up-to-date medical records for Kentucky SKY Enrollees

Critical Enrollee Information To Support Providers

- Physical and behavioral health (BH) conditions and diagnoses
- Historical utilization of preventive, primary, and specialty care
- Prescribed medications
- Any ongoing course of treatment and treatment plans
- DME and medical supplies needed

Efficient provider access to up-to-date medical records is important for ensuring continuity of care for any population but is of critical importance for children in the foster care system, in which Enrollees frequently change placements, caregivers, and providers. To ensure continuity, avoid duplication, prevent gaps, and effectively address current needs, providers need as much information about the child's health and history as possible.

Once a child is enrolled with WellCare, our CareCentral health management system maintains a holistic record of the child's care and needs based on provider claims data, care plans, and other information we routinely collect as described in more detail in Question C.6 Management Information System. Providers will easily access this comprehensive data via the Medical Passport that will be available on the **WellCare Provider Portal** (Provider Portal).

The provider portal is our HIPAA compliant, web-based information sharing solution for providers, enabling authorized users to perform administrative functions (eligibility and benefits inquiry, claim and authorization submission, etc.) and communicate securely with WellCare staff via messaging and/or secure live chat. The Provider Portal offers access to the electronic health record for each WellCare Enrollee, comprised of a longitudinal view of medical, BH, and pharmacy utilization data, as well as Enrollee care plans, care gaps, and related care quality information.

The provider portal has proven to be an important offering for medical data sharing with our providers. However, a key lesson learned during our eight years serving Kentucky foster care Enrollees is that this solution is not sufficient for ensuring continuity through two critical transitions: 1) the child's entry into foster care, and 2) provider changes that result from placement changes or other factors.

To ensure continuity through both types of transitions, WellCare worked with DCBS and DJJ to develop an intensive approach as described below to coordinate with DMS, DCBS, DJJ, and physical and BH providers to ensure each provider has access to the most up-to-date medical records during each transition. We will work with all stakeholders to further enhance our approach and take Kentucky's foster care program to the next level in ensuring quality care for this vulnerable population.

COORDINATING UPON ENTRY INTO FOSTER CARE

Providers are often challenged to provide quality care when a child enters the foster care system because services must be delivered within a short timeframe and in many instances historical medical records are not available. Children and youth in foster care often have limited access to healthcare prior to entering the system and even children who have received care in the past often do not have a regular provider. This situation can severely limit availability of medical records, and even when records are available, they are often not up to date.
Below we describe our current process for coordinating with DMS, DCBS, DJJ, and providers upon a child's entry into care, along with enhancements we plan to make for Kentucky SKY.

Facilitation of Medicaid and WellCare Enrollment

Upon notification of a new child entering foster care from DCBS staff or via receipt of records in the enrollment file, our Care Coordinators work with DCBS to ensure that the child's application for Medicaid is completed and submitted to the DJJ Child Benefit Worker as quickly as possible. Our staff contacts the DJJ Child Benefit Worker to confirm the child has been entered into DMS' Medicaid Management Information System (MMIS) and is officially enrolled in Medicaid. Once the child's enrollment is confirmed, our Member Enrollment Team expedites the child's enrollment into WellCare.

Enhancements: WellCare plans to work with DMS and DCBS to create a mechanism that alerts us within 24 hours of a judge signing the court order for the child to enter foster care. This will allow us to begin the next steps of the process earlier (e.g. contacting prior MCOs and/or providers for current/historic treatment information). For example, our interoperable MIS can support secure receipt and processing of both HIPAA and non-HIPAA standard file formats, and we will explore with DMS, DCBS and DJJ the potential to receive automated notifications that can drive immediate workflows with our staff to ensure timely transitions for new Enrollees.

We will obtain medical records from the Kentucky HIE which we will leverage for early needs identification. Additionally, we plan to co-locate Care Coordination staff in each DCBS region to support close collaboration, including but not limited to accelerating our timely receipt of notification that a child is entering care.

Initial Care Coordinator Engagement to Obtain Records and Information

Our Care Coordinator initiates engagement within 24 hours of the child's enrollment into WellCare. The Care Coordinator contacts the DCBS case worker to obtain any information DCBS has for the child, including but not limited to CANS results and the medically complex designation and information (as applicable) from the Children's Commission. The information our Care Coordinator collects also includes any known providers and their contact information, as well as information that DCBS may have about ongoing care, services, and medications and urgent unmet needs of the Enrollee.

Enhancement: WellCare will co-locate FOCs and Care Coordinators at DCBS offices in all nine DCBS regions to facilitate quick exchange of information about the child's needs and care.

Outreach to Previous MCO and Providers to Obtain Records and Information

While the Care Coordinator engages with DCBS, our CCT determines whether the child was previously enrolled in Medicaid fee for service or another MCO. If the child was in FFS, our staff outreaches to DMS to request any information related to treating providers and ongoing services. We then outreach to any identified providers to request records. If the child was in another MCO, we outreach to the MCO and request the child's records and identification of any PCP and treating providers. We outreach directly to these providers to request records. Additionally, our staff reviews any records available through the Kentucky HIE to identify providers that have submitted data for the Enrollee, and outreaches to request records.

Enhancements: We will implement several enhancements to our current process.

- Using Provider Facing Staff to Support Record Gathering. We will leverage our Provider Relations Representatives (PRRs) and Quality Practice Advisors (QPAs) to enhance the medical and BH record gathering process. Our PRRs and QPAs have regular and frequent face to face and telephonic contacts with our providers and work with our CCT daily. Once our CCT identifies historic/current providers for new Enrollees, the CCT will notify the PRR and QPA assigned to that provider (if an existing WellCare network provider) to accelerate the receipt of key clinical data for the new Enrollee.
- Electronic Exchange of Prior MCO Historic Medical/BH Information. Our MIS can receive and process HIPAA standard encounter data (or other state-specific historic processed claims data formats). We will work with DMS and other Medicaid MCOs to receive this historic data for new Enrollees. We will load this data into our interoperable MIS (EIM – see Question C.6), where our clinical staff and data analysts can use the historic information to identify providers and specialists who served the child, along with additional information on services utilized to inform care planning.
- Historic Pharmacy Information. Our MIS can receive and process NCPDP pharmacy utilization data and we propose to receive from DMS and/or MCO Pharmacy Benefit Managers (PBMs) prior prescription drug utilization history and load into EIM. Once that data is available in our MIS, our Pharmacy Director and Pharmacy Technicians can use our analytics utilities to identify any polypharmacy issues and other medication needs and patterns.

Integration of Received Records and Information

All records and information we receive for the child are integrated within our CareCentral platform (see Question C.6 Management Information System) and populate the child's record in our MIS which is then available to treating providers via the Provider Portal. This will form the basis for the Medical Passport. Our Provider Portal is designed for HIPAA compliance, and we employ Role Based Access Controls (RBAC) to implement specific job profiles that allow access and privileges to users commensurate with their job responsibilities, in full adherence to the HIPAA Minimum Necessary Rule.

Ensuring DCBS and DJJ Have Up to Date Records

The WellCare Care Coordinator alerts the DCBS or DJJ case worker face-to-face or via phone that we have been able to obtain records. The Care Coordinator describes information and

provides hard copies as requested. We also provide records as requested to the Children's Commission to support determination of whether the child is medically complex.

Enhancement: Our HIPAA-compliant ClearSKY solution will allow the assigned DCBS/DJJ case worker to securely access information about the child. Information via ClearSky will include the Medical Passport, medical records we are able to obtain, ongoing utilization data once the child begins receiving services, and the care plan/IHP. This will facilitate timely DCBS and DJJ access to comprehensive information about the child's needs and care.

Ensuring Physical and Behavioral Health Providers Have Up To Date Records

The Care Coordinator works with DCBS and DJJ to coordinate with the provider performing the initial assessment within 24-72 hours of the child coming into care, including participation in case conferences with the provider to discuss the records and information we have available. The assessment provider may access this information via our Provider Portal and when needed the Care Coordinator arranges for case conferences with previous providers to discuss the child's needs and care. The CCT outreaches to the new network PCP and physical and BH specialists to discuss the child's needs and availability of records via the portal. For all children and youth with special health care needs receiving services authorized by the prior MCO, the Care Coordinator and CCT collaborate with these providers to ensure continuity of care and a smooth transition into WellCare, including but not limited to facilitating case conferences with new providers. In addition, the Care Coordinator will authorize services identified on the initial care plan, incorporating any services authorized by the previous MCO, allowing all service providers to immediately receive approval from WellCare so that services can begin quickly.

COORDINATING WHEN PROVIDERS CHANGE

Coordination when providers change goes beyond our robust standard process that we use for all Enrollees, which is described in detail in our response to Question C.13 Enrollee Selection of PCP. While Enrollee records are available on the portal and we contractually require current providers to forward medical records to new providers, the need for timely services and the importance of ensuring new providers are fully aware of the child's care and needs requires a more intensive process.

For Enrollees in intensive or complex case management, the Care Coordinator and CCT are typically aware that a placement change is upcoming through their ongoing involvement in family team meetings and close monitoring of the Enrollee's progress. For Enrollees in the lowest level of case management, DCBS notifies us when a placement change is imminent.

In both cases, our staff work with DCBS and the Enrollee and caregiver as needed to identify appropriate providers and arrange appointments. During this process, our staff discuss the child's needs and care with the new providers and educate them about availability of records on the portal. We outreach to the relinquishing provider to request records be sent to the new provider and check in to confirm that records are sent timely. As needed, the CCT facilitates case conferences between previous and new providers to ensure a smooth transition of care.

- Attachment G.10.d-1 BH Child and Adolescent CPGs (Provided Electronically)

11. Utilization Management

G.11. UTILIZATION MANAGEMENT

a. **Describe how the Vendor will collaborate with Network Providers, the Department, DCBS, and DJJ to provide coordinated care for those Kentucky SKY Enrollees accessing psychotropic medications.**

b. **Describe how the Vendor will collaborate with the Department, DCBS, DJJ, hospitals, psychiatric residential treatment facilities (PRTFs), residential providers, physical and Behavioral Health Providers and others on Discharge Planning needs of Kentucky SKY Enrollees across all levels of care.**

G.11. UTILIZATION MANAGEMENT

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 20 Utilization Management and Section 41.10 Utilization Management of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix,** provided electronically.

Our Utilization Management (UM) program ensures our Enrollees receive the most appropriate, integrated, and effective treatment to achieve the best clinical outcomes. We accomplish this through the prospective, retrospective, and concurrent assessment of medical necessity and appropriateness of the allocation of medical and behavioral healthcare resources and services given, or proposed services, to meet a SKY Enrollee's needs. Our UM and care coordination staff collaborate and base decisions about care and services based on medical necessity, evidence-based clinical practice guidelines, and consideration of a Kentucky SKY Enrollee's holistic needs and their ability to achieve safety, permanency, and social and emotional well-being. **Our focus on shared decision-making means physical and behavioral health providers, pharmacists, Kentucky SKY Enrollees, foster parents, adoptive parents, fictive kin, caregivers, and Department, DCBS, and DJJ staff work together to make decisions and select treatments and care plan interventions based on clinical evidence that balances risks and expected outcomes with Enrollee and family preferences and values.** During shared decision-making, stakeholders openly discuss problems and strategies and rely on consensus to arrive at a decision. We acknowledge that DCBS serves as guardian for Kentucky SKY Enrollees and has the authority to approve whether a Kentucky SKY Enrollee can take psychotropic medications and when.

a. Describe how the Vendor will collaborate with Network Providers, the Department, DCBS, and DJJ to provide coordinated care for those Kentucky SKY Enrollees accessing psychotropic medications.

Our UM and care coordination programs use a data-driven approach to understand the needs of the populations we serve in Kentucky. We pay attention to the appropriate use of psychotropic medication use of our Kentucky Medicaid foster care and adoption assistance population. Our pharmacy director has certification and experience in behavioral health medications and participates in interdisciplinary care team meetings, shown in **Figure G.11-1**.

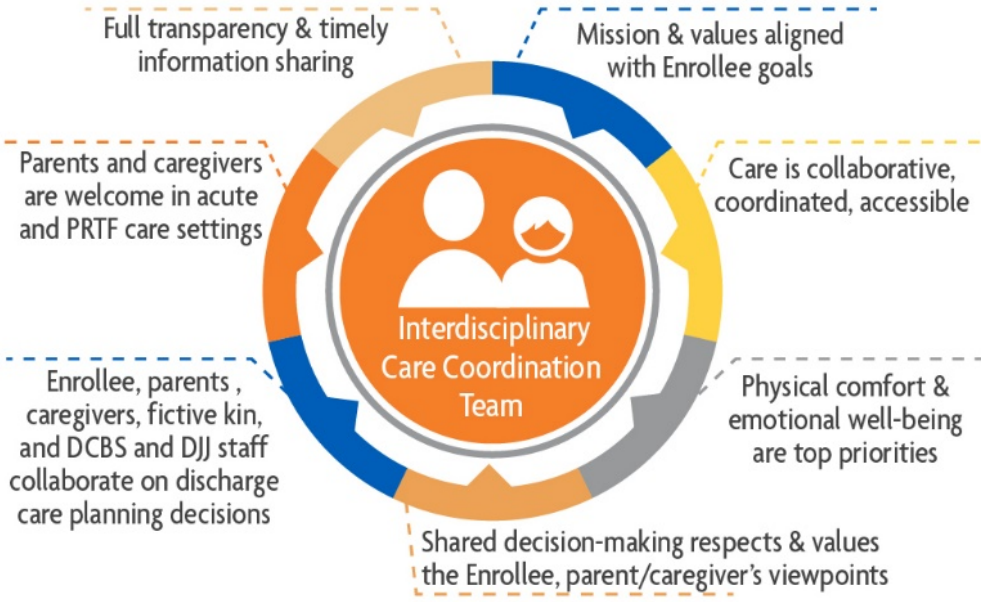

Figure G.11-1: Interdisciplinary Care Coordination Team

Kentucky Medicaid data shows that some Kentucky providers prescribe children in the foster care and adoption assistance population a combination of two, three, or even four psychotropic drugs. While some providers write psychotropic medication prescriptions without listing a specific mental health diagnosis in the Enrollee's record. Other providers report writing prescriptions for psychotropic medications for youth without clarity of who is authorized to provide consent. Not unlike youth in other Medicaid programs, our Kentucky Medicaid foster care and adoption assistance population:

- Is more likely to experience trauma
- Has an increased likelihood of social-emotional issues early in life
- Experience higher prescribing rates of atypical antipsychotics
- Is more likely to receive multiple medications

WellCare of Kentucky currently has approximately 8,100 Enrollees in our foster care and adoption assistance population. We collect and analyze pharmacy data specific to this population, including psychotropic medication utilization using criteria, including but not limited to:

- #/% overall and by age range with 1+ psychotropic prescription (denominator – all FC Enrollees)
- #/% overall and by age range with 1+ psychotropic prescription (denominator – FC Enrollees prescribed psychotropics)
- Average # of psychotropics prescribed (denominator - #FC Enrollees prescribed any psychotropic)
- #/% Enrollees by age ranges with 4+ psychotropic prescriptions (by overall FC pop and by FC Enrollees with a prescription)
- % Enrollees with psychotropic prescription and no therapy

Data for the foster care and adoption assistance population indicates (as of April 2019):

- Psychotropic use is increasing in the Kentucky Medicaid foster care and adoption assistance population--in some age groups it has more than doubled during the last year. Data for our Enrollees shows:
  - 14 children (0-6 years old) had prescription fills for one or more psychotropic medications in April 2019 compared to 2 children in April 2018
  - 241 children (7-12 years old) had prescription fills for one or more psychotropic medications in April 2019 compared to 158 children in April 2018
  - 436 children (13-18 years old) had prescription fills for one or more psychotropic medications in April 2019 compared to 368 children in April 2018
  - 15 children (children 13-18 years old had 9 of those prescriptions) have prescription fills for 4+ psychotropic medications compared to 9 children in April 2018
  - A total of 766 children and youth (0-18+ years old) had prescription fills for one or more psychotropic medications in April 2019 compared to 630 children in January 2018

- Today, our Kentucky Medicaid foster care and adoption assistance children have an average of 1.21 psychotropic medication fills each.
- Our Kentucky Medicaid foster and adoption assistance children 13-18 years old consistently had the highest volume of psychotropic medication fills during the last 18 months.
- Our Kentucky Medicaid foster and adoption assistance children 13-18 years old consistently had the highest volume of 4+ psychotropic medication fills during the last 18 months.
- During the last 18 months, one Kentucky foster/adoption assistance child 0-6 years old had prescription fills for 4+ psychotropic medications during a one-month time period in Q2 2018.

Our goals are to ensure the safety and quality of care for Kentucky SKY Enrollees, assure appropriate use of psychotropic medications, and promote other services and supports in addition to or as an alternative to psychotropic medications to achieve positive health outcomes. A critical component in improving appropriate use of psychotropic medications among children and youth in foster care is engaging, educating, and collaborating with providers, DMS, DCBS, and DJJ staff, and other key stakeholders. Currently, our care coordination team, using our monthly reporting algorithm, identifies children on multiple psychotropic medications and outreaches to engage in our field-based care coordination program. For children who take psychotropic medications and are engaged in our care coordination program, the integrated care team seeks input from our pharmacist. We also reach out to and consult with the DCBS Medical Director on specific children. We have made it a priority to increase our focus on monitoring of provider prescribing patterns for psychotropic medications, encourage providers to recommend alternatives to psychotropic medication, and intensify education and consultation with prescribers and facilitate additional collaboration with DMS, DCBS, and DJJ.

Polypharmacy Interventions: We have two programs within our drug utilization review (DUR) activities focused on polypharmacy or therapeutic duplication. Our point of sale (POS) program,

which the PBM manages, has an alert that checks for two or more medications from the same therapeutic class. When this occurs, the system generates a message to the pharmacist filling the claim. We review these alerts quarterly to identify any global trends.

In addition, we have a behavioral health polypharmacy program. Monthly, we review data to identify any Enrollees who may have more than one antipsychotic medication. Once identified, we send a letter alerting the provider and request a formal review of the Enrollee's medication profile. We perform a follow-up review of the Enrollee's medication profile during the next three months to determine whether a positive change has occurred. **We consider the letter a success if the Enrollee no longer meets criteria for the same measure at the time of the three-month follow-up. In 2018, we targeted over 400 Enrollees with a success rate of 60% -- meaning approximately 250 Enrollees no longer meet the criteria.**

Managing Antipsychotic Medications for Children: Our Pediatric Antipsychotic Utilization program identifies potential drug therapy issues, including excessive dose and multiple medication therapies for children 10 and under in the Medicaid population. When we identify drug therapy issues, we suggest recommendations to the provider via outreach. The program goal is to identify antipsychotic use in Enrollees less than 10 years old and identify potential drug therapy problems. We direct communication at the provider level to inform a prescriber about Enrollees with potential therapeutic opportunities. **In 2019, we performed targeted medication reviews for 860 Medicaid Enrollees under the age of ten.**

HOW WE COLLABORATE WITH NETWORK PROVIDERS, DMS, DCBS, AND DJJ TO PROVIDE COORDINATED CARE FOR KENTUCKY SKY ENROLLEES ACCESSING PSYCHOTROPIC MEDICATIONS

WellCare of Kentucky has a fully integrated, person-centered model of care with all services managed within our one entity, using one comprehensive approach, leveraging one integrated team, supported by one single system, CareCentral. This integration helps us better manage Enrollee whole-person care based on individual needs and collaborate with those involved in an Enrollee's care. Our Kentucky SKY care coordination framework facilitates collaboration with network providers, DMS, DCBS, and DJJ to provide coordinated care for all Kentucky SKY Enrollees. Care coordinators provide information to and assist providers, pharmacies, Kentucky SKY Enrollees, foster parents, adoptive parents, fictive kin, caregivers, as well as DCBS and DJJ staff with care coordination of psychotropic medications.

We tailor person-centered care to reflect the choice and voice of each Enrollee and their foster parent, adoptive parent, fictive kin and caregiver, as applicable, with input and collaboration from providers and DMS, DCBS, and DJJ staff. We focus on addressing a Kentucky SKY Enrollee's defined goals. On the Kentucky SKY contract, our care coordinators have the capability to make baseline UM decisions when they develop a Kentucky SKY Enrollee's initial care plan and initiate service authorizations. This is a change from our current Kentucky Medicaid contract. We anticipate this change will accelerate Kentucky SKY Enrollee access to needed care and services.

WellCare recognizes that children in DCBS custody frequently have complex physical and behavioral health conditions that require team-based care and treatment. DCBS, acting as the child's guardian, is tasked with making critical medical and behavioral health decisions. For example, a child's attending physician may advise the use of powerful mood stabilizing or antipsychotic medications that can have potentially serious side effects. Our care coordination framework supports shared decision-making activities and collaboration among our staff and network providers, DMS, DCBS, and DJJ throughout the UM and care coordination process--from screening and intervention to follow up and measuring program effectiveness to promote positive Enrollee outcomes:

Timely Screening and Early Intervention Help to Identify Enrollees using Psychotropic Medications

- Connect Kentucky SKY Enrollees with a care coordinator to quickly assess children entering the Kentucky SKY program to identify physical and behavioral health, pharmacy and social needs and gaps in care and then link them to providers to intervene as early as possible.
- Help providers seek or document consent from DCBS in the Enrollee's record for those taking psychotropic medications.

Wraparound Approach Supports Individualized Care and Service Planning

- Convene an interdisciplinary care coordination team led by a care coordinator as part of a wraparound approach to support individualized care planning to assure we facilitate collaboration from all stakeholders, including clinical and non-clinical representatives to meet the individual needs of Kentucky SKY Enrollees, including appropriate medication regimens.
- Collaborate with Kentucky SKY Enrollee, foster parents, adoptive parents, fictive kin, caregivers, care coordinator, providers, pharmacist, and DMS, DCBS, and DJJ staff; discuss coordination of and appropriate Kentucky SKY Enrollee use of psychotropic medications and alternative treatments; document the involvement of interdisciplinary care coordination team members and submit this information to DMS, DCBS, and DJJ.
- Encourage facilitated shared decision-making principles, a key component of person-centered healthcare, to empower and increase Kentucky SKY Enrollee and family and caregiver engagement and to encourage families to maintain a key and active role in the Enrollee's healthcare, including their understanding of the risks and benefits of psychotropic medications and their decision about whether or not to use psychotropic medications. Given the complexity of these decisions, WellCare believes that facilitated, shared decision-making can be a powerful process that brings together a team to meet and discuss care and treatment options. The primary DCBS guardian is always identified as a key constituent of this team. Other members of such teams are decided on a case-by-case basis depending on the needs of the child and may include the treating physical and behavioral health physicians, our care coordinators, the DCBS medical director, and WellCare's physical and behavioral health medical directors. We already have experience facilitating such shared decision-making teams. For example, we have identified many children on multiple psychiatric medications, often referred to as polypharmacy, with serious potential for side

effects. We have facilitated meetings between DCBS guardians, DCBS medical director Dr. David Lohr, our WellCare of Kentucky foster care director, a WellCare of Kentucky pharmacist, and our behavioral health medical director and child psychiatrist.

- Develop an individualized, customized care plan for services based on the youth's and family's strengths and needs; coordinate and provide needed physical and behavioral health care, pharmacy, and social services, monitor progress, and regularly revise the care plan as needed.
- Strengthen monitoring activities for Kentucky SKY Enrollees administered psychotropic medications and adherence to clinical practice guidelines to reduce inappropriate use of psychotropic medications.
- Increase education and engagement among Kentucky SKY Enrollee, foster parents, adoptive parents, fictive kin, caregivers, providers, and DMS, DCBS, and DJJ so they understand what psychotropic medications are for, how they are used, what side effects they may have and how to properly dispose of unused medications.
- Consult and share data with Primary Care Providers; educate them on how to secure consent for prescriptions for psychotropic medications in the Kentucky SKY population, the appropriate use of psychotropic medications, including use of psychotropic medication-related clinical practice guidelines, protocols, best practices, and the availability of telehealth for consultations with a child psychiatrist.
- Promote cross-agency data sharing to promote collaboration among physical and behavioral health providers, DMS, DCBS, and DJJ staff, and other system partners; and communicate and monitor progress and impact across the system of care to improve service delivery for Kentucky SKY Enrollees.
- Conduct ongoing training to ensure providers serving the Kentucky SKY population have the necessary knowledge and skills, e.g., know how to find and use evidenced-based clinical practice guidelines for prescribing psychotropic medications; delivering trauma-focused cognitive behavioral therapy; training about sexual abuse, attachment disorders, and adverse childhood events (ACES); and provide trauma-informed care.

Collaboration between UM and care coordination

- Monitor clinical coverage decisions specific to psychotropic medications.
- Monitor consistency of pharmacy utilization with Enrollee benefit plans.

Performance and outcome measurement to curb over prescribing and improve Enrollee outcomes

- Analyze Kentucky SKY pharmacy data to identify providers with outlier prescribing patterns for psychotropic medications and provide follow-up by our Medical Director and/or local pharmacy director for situations warranting intervention.
- Track and trend service utilization, outcomes, and expenditures for the Kentucky SKY population, including use of psychotropic medications.
- Collect data related to how many children receive mental health assessments for those with suspected mental health needs and the extent to which they receive timely and appropriate follow-up and treatment, including psychotropic medications and/or alternative treatments.

ADDITIONAL APPROACHES TO ENHANCE COLLABORATION

The following approaches enhance collaboration with and engage stakeholders is valuable to improving Kentucky SKY Enrollee health outcomes inclusive of oversight of and appropriate utilization of psychotropic medications:

Co-location of local, field-based care coordinators in DCBS offices heightens collaboration and timely interventions for KY SKY Enrollees: Collaboration and partnerships between WellCare of Kentucky staff and DMS, DCBS, and DJJ staff are essential to meeting DMS's goals for improved health outcomes. Today, our Kentucky field-based care coordinators serving the foster care and adoption services population are local and often work physically in DCBS and DJJ offices statewide. On the Kentucky SKY program, we will build upon existing relationships with DMS, DCBS, and DJJ staff and continue in-person outreach in local DCBS and DJJ offices.

Co-location enhances collaboration and coordination, problem solving, and information sharing with DCBS and DJJ staff. Today our regional teams of associates live and work in the regions and districts where DCBS and DJJ offices are located. We assign a local WellCare of Kentucky care coordinator to each DCBS Service Region. This care coordinator meets with his or her assigned Service Region and county level offices to establish and maintain internal relationships with DCBS and DJJ staff.

On our current Kentucky Medicaid contract, we conducted monthly meetings in each DCBS Service Region at contract go-live, with meetings occurring quarterly today. Care coordination staff conducts similar meetings with DJJ East and West Service Districts. Care coordinators conduct frequent Enrollee-specific treatment planning meetings with Service Region, county level, and Community District staff, collaborating to ensure each Enrollee in the foster care and adoption services population can access physical, behavioral health, pharmacy, and social services and is receiving the care he or she needs across the care continuum. We leverage established relationships during these meetings as we gain insight into Enrollees with existing care coordination and access needs. We collaborate with DCBS and DJJ staff to connect the Enrollee with needed services without duplicating them. We seek recommendations from DCBS and DJJ staff regarding provider and state agency educational and targeted-training needs.

As part of the Kentucky SKY program implementation and ongoing, we will expand upon existing relationships with regional staff in the Service Regions and Community Districts to address concerns, problem resolution, provider and state agency educational needs, and risk management for the Kentucky SKY program.

Monthly meetings enhance our partnership with the Commonwealth: The partnership between WellCare of Kentucky and DCBS and DJJ staff is critical to implementing reforms to address evolving needs and to learn about DCBS and DJJ recommendations for new provider training modules. We recognize the importance of leveraging the expertise of DCBS and DJJ staff when strategizing and problem solving about physical and behavioral health services for the Kentucky SKY population. WellCare of Kentucky will conduct formal meetings to ensure SKY Enrollees' needs are being met. **Monthly:** We will conduct Service Region and Community District program-level monthly meetings, which will focus on concerns, problem resolution, educational

needs and risk management. These meetings will occur in service regions at convenient locations for DCBS and DJJ staff. Our regionally based team members will attend these meetings in-person. We will offer WebEx and dial-in capabilities those who cannot attend in person. We will discuss with DCBS and DJJ staff a process for our staff to learn about and join already scheduled meetings and training to facilitate productive engagement, without adding to the already heavy workload of regional staff. **Quarterly:** We will conduct quarterly meetings, or more frequent if needed, Enrollee-focused meetings with DCBS staff to identify, discuss, and resolve identified healthcare issues, e.g., increase in psychotropic medication fills, and specific needs of Kentucky SKY Enrollees. This might include specialized Medicaid covered services, community services, and whether the child's current primary and specialty care providers are part of our network. Meetings will focus on identifying barriers to accessing care, specific treatment needs, or specific subpopulations or age groups that need stronger service options.

Our new Quality Team Provider Outreach Initiative will expand provider education about psychotropic medications: WellCare of Kentucky plans to work with our Quality team to expand engagement of network providers across the Commonwealth to provide targeted education about psychotropic medications. We will educate Kentucky providers to prescribe psychotropic medications only when it is in the foster youth's best interest because taking unnecessarily prescribed multiple psychotropic medications has the potential to damage a youth's health.

MCO Training at Pharmacies

In 2018, our pharmacy director and pharmacy manager conducted 547 provider meetings, engaging over 1,300 providers in the Commonwealth to provide education and one-on-one pharmacy-related training.

Our provider interventions currently include in-person provider visits from a Provider Representative (PR rep) and a quality practice advisor (QPA) on our quality team, sharing of best practices, and continuing education. Today in Kentucky, we have 16 QPAs who are nurses trained in quality education. They visit provider offices to review HEDIS measures and clinical practice guides and to address any issues the practice may have that is adversely contributing to quality scores or health outcomes. They provide detailed clinical profiles, open care needs, and chronic condition reports sorted by Enrollee, physician, or practice compared to state benchmarks. Our programs include provider incentives driven by related HEDIS measures to encourage participation and quality outcomes. **In 2019, WellCare of Kentucky QPAs made more than 6,000 visits to provider offices to educate providers and advance the Commonwealth's quality measures.**

Our QPAs have established relationships with providers. As part of this quality outreach initiative, QPAs will educate providers about use and over-utilization of psychotropic medication by children and youth in foster care and discuss the side effects and risks associated with psychotropic medication use. They will review claims data and educate providers who over prescribe psychotropic medications about appropriate prescribing. QPAs will present provider-specific data comparing provider practices to other practices and defined benchmarks.

In addition, WellCare of Kentucky conducts weekly educational webinars with PowerPoint presentations for providers every Friday, a sample agenda is provided in **Figure G.11-2.** Training focuses on specialized topics based on need or suggestion. We dedicated one webinar provider meeting to a pharmacy.

Figure G.11-2. Targeted educational webinar agenda for our pharmacy program training

Stronger focus needed on complex care case conferences with DCBS staff on the most challenging Enrollees: In Kentucky, our staff has made progress on sharing particularly challenging complex care cases for foster care and adoptive care Enrollees through collaboration among DCBS, care coordinators, other stakeholders, and our behavioral health Medical Director to enhance UM decision-making based on an Enrollee's whole-person needs. Our behavioral health Medical Director identifies specific Enrollees with challenging complex care needs and brings them to the attention of DCBS. WellCare of Kentucky recommends a stronger focus on a similar shared decision-making process with more frequent input from DCBS staff. WellCare of Kentucky is interested in pursuing more frequent collaboration with DCBS and an efficient process whereby we can convene timely complex case conferences for our most challenging cases.

b. Describe how the Vendor will collaborate with the Department, DCBS, DJJ, hospitals, psychiatric residential treatment facilities (PRTFs), residential providers, physical and Behavioral Health Providers and others on Discharge Planning needs of Kentucky SKY Enrollees across all levels of care.

Enrollee outcomes data shows us that specific, timely interventions are effective in successfully supporting individuals as they discharge from hospitals or facilities and move between settings. Care transitions are widely recognized as periods of heightened health risk, which can result in health complications and costly readmissions. Our Kentucky SKY formal discharge-planning program includes a comprehensive evaluation of a Kentucky SKY Enrollee's physical and behavioral health and social service needs. This is in addition to the identification of services and supports needed to transition into the most clinically appropriate, least restrictive setting possible following a Kentucky SKY Enrollee's discharge from an institutional clinical setting or residential placement, or a transition between levels of care. WellCare of Kentucky uses transparent UM processes and takes steps to quickly approve services needed post discharge to maintain a Kentucky SKY Enrollee in the least restrictive setting possible. **Our care coordinator outreach efforts continue to have a positive impact on reducing hospital readmissions in Kentucky. In 2018, WellCare of Kentucky's readmission rate for the number of Enrollees readmitted to an acute hospital or facility within 30 days of a discharge was down 3% from 2016.**

WellCare of Kentucky has experience with discharge management at the Commonwealth's four hospitals, including Western State Hospital (WSH), Eastern State Hospital (ESH), Central State Hospital (CSH), and Appalachian Regional Hospital (ARH). Through the first two quarters of 2019, 271 of our Medicaid Enrollees were discharged from these four hospitals. Approximately 40% of these Enrollees agreed to engage with our care coordinator in discharge planning and care coordination activities.

Our current experience serving the foster care and adoption population in the Kentucky Medicaid program informs our approach to meeting the Commonwealth's expectations and requirements for discharge management and transitional care management for Kentucky SKY Enrollees and their families. On the current contract, WellCare of Kentucky leadership staff meet with providers and with hospital and facility staff serving large groups of the foster care and adoption assistance population, e.g., Our Lady of Peace; Children's Alliance and PRTFs, to enhance discharge-planning processes, improve information sharing, and expand educational opportunities, such as pharmacy utilization of psychotropic medications and telehealth.

Behavioral Health P4Q: We introduced the Behavioral Health P4Q program in 2019 to address the prevalence of behavioral health conditions in Kentucky. Unique to WellCare of Kentucky, this program offers bonus payments to all 14 Kentucky CMHCs and behavioral health hospitals--including Bourbon Community, Sun Behavioral Kentucky, The Ridge, Lourdes and Baptist Corbin--for improving behavioral health-related measures. Measure include antidepressant medication management; medication adherence to antipsychotics; follow-up after behavioral health inpatient hospitalization; cardiovascular monitoring for Enrollees with schizophrenia; diabetes monitoring for Enrollees with schizophrenia and diabetes; diabetes screening for bipolar, schizophrenia, and antipsychotics; and metabolic monitoring for children on antipsychotics.

DISCHARGE PLANNING NEEDS OF KENTUCKY SKY ENROLLEES

We will collaborate with DMS, DCBS, DJJ, hospitals and other acute care facilities, PRTFs, residential providers, physical and behavioral health providers, the Children's Review Program, the DJJ Placement Services Division, and others on discharge planning needs of Kentucky SKY Enrollees across all levels of care. Today, we coordinate care for our Kentucky Medicaid and foster care and adoption service Enrollees across a full continuum of care. Our current Care Coordination team work hand in hand with our Utilization Management team to make sure we share and incorporate into the discharge planning process all clinical information and social determinants for health information. We encourage care coordination team planning with DCBS, DJJ, and AA parents, along with providers, to assure discharge planning consistency and ensure referrals for the next level of care are in process. To plan for discharge, clinical services need to be identified and appropriate placement and levels of supervision needed must be identified. Often, the hold up to identifying an appropriate discharge plan is due to the Enrollee's level of supervision need. Once the appropriate placement is identified, finding the correct level of clinical intervention can then be planned. Discharge planning also involves ensuring that social determinants of health and community resources are identified and planned. WellCare of Kentucky maintains written policies and procedures in place for discharge

planning focused on strengths-based, culturally competent, and medically appropriate treatment designed to meet Enrollee needs, including those identified with emotional and behavioral issues.

Notification of admission or discharge facilitates timely Enrollee engagement: WellCare of Kentucky uses predictive analytic ID/Strat results, admission, discharge, and transfer (ADT) feeds, direct facility EMR access, electronic prior authorization requests in 278 format, faxes, and HIE to identify Kentucky SKY Enrollees with an inpatient admission and who are experiencing a care transition. In addition to having hospital-based staff onsite in larger Kentucky hospitals and facilities, we require WellCare network hospitals to alert us when Kentucky SKY Enrollees have an inpatient stay or come to the Emergency Department with behavioral health issues.

In-person staff in large hospitals and enhances our engagement with Enrollees: To engage Enrollees quickly, we embed onsite inpatient care managers in high-volume hospitals and facilities and telephonic concurrent review nurses at low-volume hospitals and facilities to identify Kentucky SKY Enrollees experiencing an inpatient stay. Onsite inpatient care managers, concurrent review nurses, and our integrated care management system, CareCentral, enhance a care coordinator's ability to quickly engage Kentucky SKY Enrollees. Our approach to care management ensures each Kentucky SKY Enrollee needing discharge management and transitional care management has a single point of contact who follows-up with the Kentucky SKY Enrollee, family, network providers, and DMS, DCBS, and DJJ staff. Embedded onsite inpatient care managers and concurrent review nurses review inpatient hospital and facility stays for medical necessity. They review a Kentucky SKY Enrollees' status to assure the severity of presenting symptoms and the intensity of services provided support the ongoing need for an inpatient level of service.

Advanced analytics identify Enrollees at high risk of readmission: WellCare conducts predictive modeling and risk stratification to identify Kentucky SKY Enrollees at moderate or high risk of readmission, including the LACE+ index, at admission when discharge planning begins. Our LACE Index Scoring Tool for Risk Assessment of Hospital Readmission system alerts our care management staff about a Kentucky SKY Enrollee's condition. Activated at the time of ADT or other notification, this proprietary algorithm helps care coordinators prioritize care needs. It assigns a daily readmission risk score using length of stay, acuity, comorbidities, and ED use to predict the likelihood of readmission. **Use of the LACE tool, combined with WellCare's added analytics, increased the accuracy of the tool's predictive power by more than 60%.** The LACE+ score guides the level of transitional care management and the type (in-home or telephonic) and duration of support and interventions. In Kentucky, we stratify Kentucky SKY Enrollees into risk levels. The care coordinator completes medication reconciliation telephonically with the WellCare of Kentucky pharmacist.

The following information informs ID/STRAT risk stratification includes:

- A weekly assessment risk score using weighted questions to stratify Enrollees and identify those with statistically significant predictors for multiple readmissions.

- A monthly claims-based risk score using claims related to chronic conditions and enrollment data, e.g., considers aid category separately, a diagnostic classification algorithm, PMPM dollar thresholds, utilization requests, and impactable condition flags.
- A monthly pharmacy adherence score using claims, clinical, and intervention data to show Enrollee compliance with medication regimens based on claims history. It predicts an Enrollee's risk of specific medication outcomes, quantifies the financial value of better medication use, and assesses an Enrollee's receptivity to intervention.
- A monthly predictive risk score using admission, readmission, Emergency Department, and disease progression predictions to create a holistic risk profile.

DISCHARGE PLANNING FROM HOSPITALS AND OTHER ACUTE CARE FACILITIES

Effective discharge planning requires a team approach. Our Kentucky SKY discharge planning activities prioritize collaboration with hospital or facility staff, network providers, DMS, DCBS, and DJJ staff, the Children's Review Program, the DJJ Placement Services Division, community advocates and others to create a person-centered discharge plan and facilitate a Kentucky SKY Enrollee's proactive and successful transition to a lower level of care. Rapid responses often require same-day or next-day outreach for high-need Enrollees who are admitted to a hospital or facility. Onsite inpatient care managers, concurrent review nurses, and care coordinators add new Kentucky SKY information related to the hospital or facility admission in CareCentral.

Our care coordinator makes sure Kentucky SKY Enrollees have voice and choice during the discharge planning process and that a Kentucky SKY Enrollee's family has the training and support they need to keep a Kentucky SKY Enrollee safe and well. A Kentucky SKY Enrollee's discharge plan and transition care plan align with the DCBS case plan and our Kentucky SKY Enrollee's care plan in CareCentral. The transition care plan includes safe discharge into the most appropriate, least restrictive setting possible, access to the full range of services needed including behavioral health services, and possibly a plan for eventual reunification with the Kentucky SKY Enrollee's biological family.

Our Kentucky SKY care coordinator oversees discharge planning and care transitions, including:

- Provide timely, in-person and/or telephonic follow-up post discharge, scheduling Primary Care Provider post-discharge appointments (48 hours to 7 days), and referrals to specialists, appointment scheduling assistance, transportation, and social needs, follow up to confirm completed appointments, and referral management
- Conduct and update needed assessments
- Coordinate comprehensive medication management, medication reconciliation, and medication self-management, engaging a pharmacist
- Conduct Kentucky SKY Enrollee and parent or caregiver condition-specific education; how to recognize the red flags the youth's condition is worsening; self-management support; use of a personal health record; alternatives to using the Emergency Department; and wellness/prevention education
- Provide specialized training and education for parents and caregivers when a Kentucky Sky Enrollee has a medically fragile condition that requires special procedures or use of special equipment post discharge

- Create an individualized care plan with interventions, including Primary Care Provider, specialist, and behavioral health visit follow-up appointments, durable medical equipment (DME), in-home supports, and connection to peer support, as appropriate
- Connect Kentucky SKY Enrollees to community resources for health-related social needs using the resources of our Community Connections program. WellCare has extensive engagement and strong partnerships with community-based organizations that support Kentuckians with their social needs, including the Community Farm Alliance, Orphan Care Alliance, SOAR, Kentucky Home Place, Operation UNITE, and more
- Connect Kentucky SKY Enrollees to value-added benefits. Many of our value-added services are particularly valuable for Kentucky Sky Enrollees post hospital or facility discharge. For example, home-delivered meals for Enrollees discharged from an inpatient stay hospital, rehabilitation or skilled nursing facility; meal program for Enrollees discharged from a behavioral health facility; respite services for caregivers; and over-the-counter items - $10/month per Kentucky SKY Enrollee.
- Convene interdisciplinary care coordination team meetings of clinical and non-clinical representatives and strengthen collaboration with hospital and facility discharge planning staff, providers, pharmacies, Kentucky SKY Enrollees, foster parents, adoptive parents, fictive kin, caregivers, and DMS, DCBS, and DJJ staff to coordinate a broad spectrum community-based physical, behavioral, pharmacy, and social services post discharge across all levels of care.
- Facilitate collaboration and oversees information sharing between interdisciplinary care team members and DMS, DCBS, and DJJ staff
- Coordinate linkage to community services through our Community Connections program and follow up on referrals to community-based services to see if a Kentucky Sky Enrollee's and foster family's needs have been met
- Conduct timely in-home, high-touch engagement and follow-up with Kentucky SKY Enrollees with complex care needs. A high-touch, high-intensity home visit from a care coordinator after hospital discharge substantially reduces 30-day readmission rates for individuals with multiple chronic conditions. For individuals with complex chronic conditions, home visits reduce the likelihood of a 30-day readmission by almost 50 percent compared to less intensive forms of transitional care.

Our goal for discharge planning is to provide a proactive and well-coordinated plan for transitioning an Enrollee from an inpatient facility or PRTF to the most appropriate level of care while focusing on quality, safety, and Kentucky SKY Enrollee and family satisfaction. Another important goal is to engage Enrollees in person-centered services, supports, and resources that wrap around the Kentucky SKY Enrollee to minimize his or her risk for readmission. Assuring timely post-discharge follow-up physician and behavioral health specialist appointments is a key strategy to reducing readmissions.

CARE COORDINATION FOR KENTUCKY SKY ENROLLEES DISCHARGED FROM RESIDENTIAL CARE

We coordinate inpatient behavioral health discharges, e.g., from Our Lady of Peace or The Ridge, and work with the hospital clinical team to assist the Children's Review Program or DJJ Placement Services Division to engage with PRTF staff for admission to the program. Our clinical leadership team meets with PRTF leaders to establish and maintain relationships, points of contact, etc. to facilitate smooth behavioral health discharges. Discharge planning is often the first step to a Kentucky SKY Enrollee's recovery. Therefore, we begin planning as close to the point of a behavioral health admission as possible. Within the first 30 days, our care coordinator outreaches the DCBS/DJJ guardian and the PRTF to discuss initial thoughts of discharge placement and needs. The Children's Review program or DJJ Placement Services Division must be involved in the discussion to assist with placement identification and referral.

Well-Coordinated Discharge Plan

When our Kentucky foster care Enrollee, Ethan, age 8, was hospitalized during a crisis precipitated by his medical and behavioral health needs, his care coordinator facilitated a consultation call between our Medical Director, Ethan's providers, and his adoptive mother to decide next steps to stabilize him. When psychological testing recommended Applied Behavior Analysis, a service typically only provided to Enrollees with an autism diagnosis, the care coordinator worked with our UM staff to obtain authorization. Today, Ethan is stable, out of the hospital, and living at Home of the Innocents. The family's long-term goal plan is for Ethan to return to a less restrictive setting at home with his adoptive mother.

Prior to discharge, our care coordinator works with the PRTF discharge planner to get copies of documents related to our Kentucky SKY Enrollees care in their facility so we can coordinate getting this information into the Enrollee's record and share this Kentucky SKY Enrollee-specific information with the mental health provider who will be providing the Enrollee's aftercare. Essential information includes:

- Medical needs including allergies
- Medication; dosage; clinical rationale; prescriber
- Discharge diagnosis
- Prevention plan to address symptoms of harm to self or others
- Any other essential recommendations
- Appointments with after discharge service providers-date, time, place
- Contact information for internal providers
- Contact information for PRTF discharge planners or liaisons

For any Kentucky SKY Enrollee in a PRTF who is receiving or who has received psychotropic medication during their stay, we expect the clinical rational for each medication to be clearly documented on their psychiatric discharge summary or final evaluation. The reason for discharge should also appear on the PRTF's discharge summary.

Providing an appropriate continuum of behavioral health services and social supports is crucial to achieving a successful transition to home or a community setting and the best possible

outcomes for children and youth discharged from residential care. Many Kentucky SKY Enrollees are adolescents who have diagnoses of co-occurring mental health and substance youth disorders. In addition, family courts or the juvenile justice system may have had a key role in the placement of the youth in residential care, mandating a residential care placement as part of the disposition process. Our experience shows this population benefits from integrated care coordination, family-driven care, community-based support, collaboration between residential and community-based providers and government entities, and provider adoption of evidence-based and effective practices.

We use a high-fidelity model and strengths-based, culturally and linguistically competent approach that recognizes the importance of the family, school, and community and addresses a Kentucky SKY Enrollee's whole person needs. Youth discharged from residential care have a care coordinator who works collaboratively with residential and community-based providers and others involved in a Kentucky SKY Enrollee's care. The care coordinator facilitates shared decision-making with physical and behavioral health providers, pharmacists, Kentucky SKY Enrollees, families, and DMS, DCBS, and DJJ staff so they work together to make decisions and select treatments and care plans based on clinical evidence that balances risks and expected outcomes with Enrollee and family preferences and values. Collaboration with the DCBS caseworker is vital to successful discharge planning. We have multiple methods to collaborate with DCBS and DJJ staff regarding specific Kentucky SKY Enrollees.

The care coordinator seeks active engagement of the Enrollee and his or her family or support system to plan for and coordinate follow-up community-based care and services that become part of the Kentucky SKY Enrollee's care plan. This plan lists traditional steps toward recovery and management of co-occurring physical health conditions as well as a crisis and safety plan. Service planning, service delivery, and post discharge care coordination may include but is not limited to:

- An in-home evaluation of the family or living situation
- Coordinating with government entities for youth transitioning to an adult system of care or youth engaged with the courts and DJJ
- Coordinating with educational institutions
- Connecting Enrollees to peer support groups
- Arranging housing or alternative placement
- Engaging a peer support specialist to accompany the Kentucky SKY Enrollee to outpatient or other community services
- Connecting a Kentucky SKY Enrollee to educational or vocational opportunities

WellCare employs a peer support specialist who is a young adult with lived experience in the mental health system and who is a former foster care youth. The peer specialist serves as a mentor, navigator, and recovery support for youth in crisis. This peer support specialist can help a Kentucky SKY Enrollee understand treatment options, understand what groups, social and recreational activities are available in the community, and serve as someone to talk to when the Kentucky SKY Enrollee is confused or feeling unsure about where to go for help.

OTHER KEY COMPONENTS OF DISCHARGE MANAGEMENT AND CARE TRANSITIONS

In addition, the following discharge management and transitional care management includes the following key components:

Advanced technology helps us address an Enrollee's whole person needs: We maintain a single and centralized Enrollee record in CareCentral, our claims-fed care management system. CareCentral houses all behavioral health and medical UM and authorizations into a single Kentucky SKY Enrollee view. Fully integrated with our claims systems, CareCentral shows users a Kentucky SKY Enrollee's integrated health record, health history, diagnosis and treatment, outreach efforts, information received from providers, assistance with scheduling appointments, assessment data, medication history, health-related social resource needs, claims history, authorizations, and care plans. Authorized WellCare staff and providers have access to a complete picture of a Kentucky SKY Enrollee's needs across the entire spectrum of care when considering authorization decisions and utilization trends.

CareCentral offers automated notifications and workflows related to care transitions. It supports transitional care management activities by generating alerts based on ADT feeds, electronic and faxed prior authorization requests, predictive modeling, and other sources. It helps the care coordinator bring together a Kentucky SKY's Enrollee's entire interdisciplinary care coordination team (e.g., providers, behavioral health specialists, pharmacists, Enrollee, family, and DMS, DCBS, and DJJ staff). CareCentral's intuitive transitional care management workflows and alerts automate a care coordinator's activities like appointment scheduling, which improves care coordinator efficiency in directing the right transitional care to the right Kentucky SKY Enrollees at the right time.

Integrated leadership and staff and joint rounds improve health outcomes: Local leadership represents physical, behavior health, pharmacy, and social services expertise. This is integral to implementing cohesive population health strategies and programs to improve health outcomes and enhance care coordination and Enrollee satisfaction. Our Kentucky physical and behavioral health Medical Directors conduct joint rounds and consult on cases with comorbidity. We conduct interdisciplinary rounds on a weekly basis to collaborate on the coordination of care for inpatient Kentucky SKY Enrollees. This approach provides an opportunity for a team review of the clinical reasons for a Kentucky Sky Enrollee's admission to determine the appropriate path to discharge and remove any barriers that exist to an effective care transition. Through this approach, we review outpatient service requests and consider the Kentucky SKY Enrollee's entire history in the context of a requested service. We devote significant attention to investigating the nuances of integrated service delivery, soliciting perspectives from an array of providers, DMS, DCBS, and DJJ staff, and community advocates. We align our staffing infrastructure to Kentucky SKY program needs and Draft Contract requirements. Our staff operates under a single set of fully integrated policies aimed at whole-person care, operational integration across internal departments, and collaboration with external entities.

Compliance assessments and ongoing audits assure consistency: Throughout the year, an independent internal clinical service compliance unit performs compliance assessments and ongoing audits to ensure that application of criteria is accurate and consistent. WellCare

conducts online inter-rater reliability (IRR) testing using a commercially available IRR product for all clinical review staff involved in assessments, care and service plan development, and utilization decisions. This audit process assures a consistent Enrollee outcome and experience by evaluating all important elements of the record, including the comprehensive care needs assessment, discharge planning, Enrollee and foster family engagement, biological family engagement as appropriate, care coordination, and monitoring and follow-up for goal achievement. UM teams responsible for identifying opportunities for improvement and taking action receive summary reports, including staff training and coaching. Clinical leadership reviews daily management reports displaying patterns of decisions by health plan and by team to look for over and underutilization (e.g., the percentage of reviews that an RN sends to a physician).

We mirror these quality oversight practices with our pharmacy team. Our quality audit specialists conduct a daily review of prior authorizations to assure all processes, (e.g., turnaround times, process steps, and notice of decision) meet or exceed Commonwealth Contract expectations and statutory requirements. Each month, quality auditors randomly sample ten cases per UM associate, reviewing the chart for adherence to our rigorous review steps, clinical standards and program expectations, and for consistency in clinical decision-making.

Joint Operating Committee (JOC) meetings facilitate process improvement: We will continue to hold JOC meetings where we jointly meet with providers to review performance monitoring results; chart audit results (1:40 or more charts); IRR scores; health outcome and operating metrics; monthly, quarterly, and annual reporting; and agree to implement process improvements. As an example of a process improvement in Kentucky, one of our network providers, The Ridge, said they wanted access to concurrent reviews beyond normal business hours. Our staff brought his issue to the JOC meeting for discussion. The JOC-recommended solution was to extend the concurrent review process to 24 hours a day, 7 days a week for The Ridge. After implementing this solution, we expanded it to include Baptist Hospital.

12. Aging Out Services

G.12. AGING OUT SERVICES

Provide the Vendor's recommendations for enhancing the services and outcomes for FC Enrollees, Former Foster Care Enrollees, and JJ Enrollees aging out of Care and the Kentucky SKY program. Provide examples of services or tools the Vendor has used for other similar programs and detail how these tools have contributed to the Vendor achieving program goals.

G.12. AGING OUT SERVICES

Provide the Vendor's recommendations for enhancing the services and outcomes for FC Enrollees, Former Foster Care Enrollees, and JJ Enrollees aging out of Care and the Kentucky SKY program. Provide examples of services or tools the Vendor has used for other similar programs and detail how these tools have contributed to the Vendor achieving program goals.

WellCare of Kentucky will comply with the Department of Medicaid Services' expectations and requirements as specified in Section 41.22 FC and JJ Enrollees Aging Out of Kentucky SKY of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

Our experience serving Kentucky's foster care youth since 2011, described throughout this response, positions us strongly to enhance services and outcomes for foster care Enrollees, former foster care Enrollees, and JJ Enrollees aging out of Care and the Kentucky SKY program. We have significant experience working with DCBS and DJJ to support Enrollees as they transition out of care and Medicaid managed care. We also have processes already in place to maintain them in care to keep their health coverage as long as possible, and assist with transition out of care and Medicaid to ensure continuity of care.

WellCare Enrollees Maintaining Medicaid Coverage Beyond Their 18th Birthday		
Length of enrollment beyond 18th birthday	% Foster Care Enrollees	% Adoption Subsidy Enrollees
Less than 1 year	45.8	56.6
1-2 years	21.4	19.9
2-3 years	13.5	13.3
3-4 years	11.9	7.3
4-5 years	6.5	2.7
5+ years	1	.3

Figure G.12-1 Enrollees Maintaining Medicaid Coverage

Currently we serve about 1,000 Enrollees who are age 17 and older. Of these, 54% are 17, 36% are age 18, and 10% are 19 and older. Since 2014, WellCare of Kentucky has had 1,387 foster care Enrollees who were enrolled in our plan on the date of their 18th birthday. **Figure G.12-1** shows that of those, 92% (1,274) maintained Medicaid coverage and WellCare of Kentucky enrollment for some period of time following their 18th birthday. On average, our foster care Enrollees remained on Medicaid for an average of 1.5 years following their 18th birthday, and adoption subsidy Enrollees for an average of 1.2 years.

Our current process is to begin preparing for transition well before an Enrollee turns 17. Discussion with the Enrollee of their goals and needed preparation for adulthood begins as early as age 14. We currently serve 1,588 youth who are 14, 15, or 16. These discussions are a

standard part of our current care planning and monitoring approach for all youth as they enter the high school years. As the youth moves closer to aging out and gains more insight into what adult, post-foster care life may be like, we continually work with them to update their transition planning goals as those goals evolve.

Supporting Youth To Reach For Their Dreams

An enrollee in DJJ custody was transitioning from a structured DJJ placement and moving into college. While the Commonwealth paid for her room, board, tuition, and books, she had no resources available for dorm room needs, such as bedding. WellCare assisted by securing items needed for her dorm room and the Care Manager helped her move into the dorm and get settled. The Care Manager also ensured the enrollee had access needed health and behavioral health services and SDOH resources and followed up with her over a several week period to provide support. In May 2019, our enrollee graduated from college.

During the month of the Enrollee's 17th year, WellCare of Kentucky's field-based Care Coordination staff proactively outreaches and assists with the transition planning meeting in collaboration with the DCBS Independent Living Specialists and DJJ to build the official transition plan. During that first meeting, our Care Coordinator provides state staff, the Enrollee, caregiver, and other involved stakeholders (with necessary consent) an overview of the Enrollee's health conditions, historical utilization, and ongoing service needs (such as prescriptions, ongoing therapy needs, DME, and specialty care) as well as the transition activities that we have already completed with the Enrollee. The Care Coordinator also educates all involved on all health care benefits available through Medicaid, the process for maintaining Medicaid eligibility, and the importance of continuity of care.

Care Coordinators actively participate in all aspects of transition planning and ensure the WellCare of Kentucky care plan continues to align with and support the permanency plan and the transition plan. We also continually assess Enrollee needs for post-transition services as well as SDOH resources, knowing that these needs and the Enrollee's preferences for meeting them may evolve as the Enrollee approaches age 18.

In addition to our Kentucky experience, we are able to leverage WellCare Health Plan Inc.'s (WellCare's) experience serving transition age and former foster care Enrollees in other states, shown in **Figure G.12-2**.

We will build on our current process through our recommendations, services, and tools as described below to enhance services and outcomes for these Enrollees, such as engaging peer support to bring lived experience to assist the Enrollee through the transition process.

Figure G.12-2 Transitioning Enrollees in Other States

RECOMMENDATIONS FOR ENHANCING SERVICES AND OUTCOMES

Support Meaningful Youth Engagement in Improving Services and Outcomes

Through our ongoing work with our transition age, former foster care, and juvenile justice Enrollees, we have learned directly about the importance of supporting engagement of individuals who are impacted by our services. Individuals with lived experience bring a singular insight into the system and transition services and how we can best improve our approach and processes. They know what worked for them, and their input is necessary to craft programs and services that actually meet the needs of our youth.

Collaborate to Obtain Youth Engagement

WellCare of Kentucky will collaborate with DCBS, DJJ, Voices of the Commonwealth, Kentucky Partnership for Families and Children, and the First Lady's Youth Leadership Council to convene workgroups that are essential to continuous assessment of need and problem solving. We will partner with the identified stakeholders to develop a workgroup with foster care Enrollees, former foster care Enrollees and peer support specialists to identify opportunities for improving the aging out services and encouraging Enrollees to remain in foster care.

We demonstrate our ability to bring together partners and facilitate collective improvements for this group of Enrollees by our experience over the current contract implementing focus groups, work groups, and conference activities. For example, we facilitated transition-age youth focus groups focused on building our JOOL health coach tool (described below) and to identify what was most important to these Enrollees. They told us that they want to be heard, that they want support but not to be told what to do, and they want to know what their options are and how they can access what they decide they need as they move forward. During these focus groups, we provided education on their benefits and how to maintain eligibility once they aged out. In addition, during a meeting with Voices of the Commonwealth, the entire group verbalized that they did not know they could access the benefits and opportunities available to them. Our staff provided detailed information on how to access their current benefits, where to go and the process to ensure continued Medicaid coverage once they left the custody of the state, and how to self-advocate for their future needs.

Remove Barriers to and Incentivize Youth Engagement

Our experience also shows that many Enrollees require encouragement and incentives to assume a meaningful role in the identification of opportunities for service enhancements. To ensure ability to participate, Care Coordinators will outreach to Enrollees who desire or are invited to be part of these workgroups and identify obstacles to their engagement (e.g., limited time and transportation). Our Care Coordination Team and Community Connections staff will coordinate with our community partners to provide payment for time, travel assistance, and other support to enable their participation. In addition to providing vouchers for transportation to attend meetings and food during meetings, we encourage participation by providing incentives that recognize their valuable time, such as gift cards that Enrollees can use at local retailers.

Expand Training for Youth Self-Advocacy

We will partner with Kentucky Partnership for Children and Families (KPCF) to offer our transition age and former foster care Enrollees (including youth with a documented history of behavioral health needs and youth that live in group homes and independent living settings) the training and mentoring they need to become leaders in their own lives and communities. KPCF's leadership academy for youth in foster care supports youth to gain the knowledge and skills necessary to not only access health care, but also establish life skills that improve self-sufficiency over time and support successful youth transition to adulthood.

Leann Magre, Provider Relations Liaison, is a previous Board member of the Kentucky Partnership and will spearhead development of this initiative to expand their leadership academy to our Enrollees. We will offer scholarships to encourage their participation in the leadership academy. We also will work with the Kentucky Partnership to design and implement unique training methods to meet youth where they are, such as offering on-demand, visually appealing webinars that can be accessed on smartphones and laptops, as well as in-person sessions in locations these youth frequent such as local community colleges and university campuses.

"WellCare maintains a focus on lived experience always identifying transition age youth with, or at risk of, behavioral health challenges and their family members to share their voices and perspectives! On behalf of Kentucky Partnership for Families and Children, Inc., I am happy to encourage, and support, WellCare on their endeavor to secure the Kentucky SKY contract!"

– CAROL W. CECIL
EXECUTIVE DIRECTOR, KENTUCKY PARTNERSHIP FOR FAMILIES AND CHILDREN, INC.

Transition Age Youth and Young Adults Program

Based on our experience serving transition age youth and former foster care Enrollees in Kentucky, we have developed a comprehensive program to maintain Enrollees in care so they can continue to access Medicaid to age 26 and ensure successful transitions out of foster care and Kentucky SKY. The program provides multi-faceted services and support to enhance current services and improve health, well-being, and quality of life outcomes. Components of the program include the following.

Youth-Led Transition Planning Model

We will support enhancement of services and outcomes for foster care Enrollees, former foster care Enrollees, and juvenile justice Enrollees aging out of Care and the Kentucky SKY program by establishing our **Youth-Led Transition Planning Model**. This new model (depicted in the graphic below) will enhance our current successful approach to supporting smooth transitions and the lessons learned over the past eight years participating in transition planning with DCBS, DJ, our Enrollees, and other stakeholders. The model will support transitioning youth to build the skills required to assume meaningful leadership roles on two fronts: their own

personal planning and system-wide improvements, leading to youth truly having a voice and a choice.

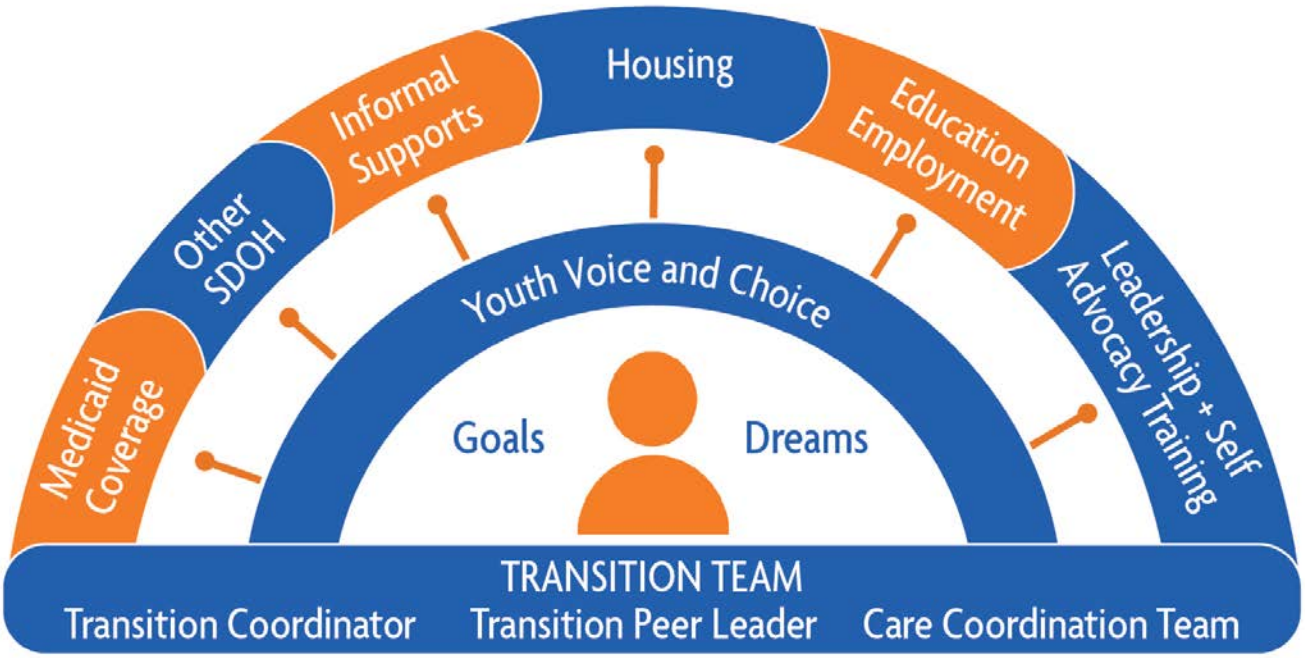

Figure G.12-3 WellCare of Kentucky's Transition Team

Dedicated Transition Team

Our designated Foster Care Transition Coordinator and Youth Peer Support Specialist will support the youth, DCBS/DJJ staff, and the assigned Care Coordinator through the process. The Transition Coordinator will be a Care Coordinator with extensive experience with the Kentucky foster care and juvenile justice systems and with transition age youth. Our Youth Peer Support Specialist will be a non-clinical individual recruited from among former foster care youth to provide the benefit of lived experience in supporting our Enrollees through this critical time.

Proactive Transition Planning. The Transition Coordinator will take the lead for our efforts to support DCBS, DJJ, Enrollees, and stakeholders in transition planning. This will include tracking our population to identify Enrollees age 14 and older and working with the assigned Care Coordinator to develop a plan for and begin implementing the pre-transition education and planning efforts described above. Together with the assigned Care Coordinator, our Transition Coordinator and Youth Peer Support Specialist will promote Enrollee voice and choice throughout the planning and transition process.

Preparing Youth for DCBS/DJJ Transition Planning. In addition to the ongoing work we already do with Enrollees starting at age 14, we will convene a Transition Team, depicted in **Figure G.12-3**, meeting with the youth and caregiver (in person or via phone, based on their preference) within three months prior to the initial transition planning meeting with DCBS or DJJ. The purpose of the Transition Team meeting, which will include a Youth Peer Support

Specialist as desired by the youth, will be to educate them about the DCBS or DJJ transition planning process (as applicable), their role, and how they can drive the process. Ongoing, the Transition Team will provide the education, support, and advocacy necessary to facilitate the Enrollee to drive the process.

Person-Centered Approach to Meet Youth Where They Are. Throughout transition planning, our Transition Team will deploy effective, person-centered strategies to support the Enrollee to engage in identifying transition needs and the right services, strategies, and action plans to address them. These staff will take the time during each Enrollee interaction to truly meet the youth where they are to ensure engagement and buy-in. They will use multi-channel education strategies and evidence-based approaches to ensure the Enrollee has a clear understanding of their health care conditions and needs, the importance of continuing access to health care services, and how developing and adhering to a plan to meet health, independent living, and social support needs will contribute to the Enrollee's goals for their life.

Supporting Youth Voice and Choice. The Youth Peer Support Specialist will provide intensive support for youth voice throughout the process. This will include how to assume an active role in identifying and addressing health care needs to prepare them to effectively participate in shared decision making with health care providers. It will also include educating them on what to expect following transition out of care so they can effectively participate in planning. We plan to engage with the Foster Club to provide their Transition Tool Kit to all transition age Enrollees. This Toolkit is another resource for supporting youth voice and choice and equipping them to self-advocate and achieve their wishes and dreams for their futures.

Identifying and Tracking Health and Social Service Needs. The Transition Team will meet at least every other month to identify and track the Enrollee's needs for health and social services. This will include working with DCBS, DJJ, Enrollees, and their support networks to assess home and community support needs to successfully transition to or remain in the community and to maintain ongoing stability and long term success, as well as SDOH needs that must be met to address their risks. We will work with Enrollees and their informal support network to identify immediate risks that put their success in jeopardy and develop feasible and thoughtful strategies to address these risks, including risks associated with communication obstacles, medical equipment malfunction, medication adherence, housing, education, mental health, and isolation.

We will use Transition Team meetings in addition to formal transition meetings with DCBS/DJJ to continuously assess Enrollee health status and other appropriate factors to determine if an Enrollee meets service criteria, including criteria for HCBS waiver services and initiating the waiver application process and supporting their placement on waiting lists, as needed.

Consideration of Post-Transition Goals and Options. A key area of focus for DCBS, DJJ, and Enrollee/informal support network education will be options for services and supports that are available once they transition, including post-secondary options and how to access disability services from educational institutions and employers. As described in more detail below, we will emphasize the importance of maintaining Medicaid coverage and the process for doing so.

If the youth chooses to remain in care and in Kentucky SKY, the Transition Team will provide support for the transition to adult services. This will include helping the youth identify and select a PCP and necessary specialists who serve adult patients, educating them about coverage differences and evidence-based recommendations for any ongoing care needs.

Coordination Out of Kentucky SKY. If the youth chooses not to continue in care and the Kentucky SKY program, the Transition Team will work with the youth to identify alternative sources of health care coverage, including other publicly funded coverage and resources such as public health departments. For example, we will connect youth in the Kentucky Homeplace coverage area (30 counties in Appalachia) to the organization for assistance from their Community Health Workers, who help more than 200 uninsured individuals each quarter to access health care coverage and would be able to assist. We will coordinate with any new providers to share medical records, the transition plan, and other information as authorized by the Enrollee to support continuity of care through disenrollment from Kentucky SKY.

We will connect youth to the Kentucky Cabinet for Health and Family Services' new website for transition age youth, Kentucky RISE (Resources for Independence, Success, and Empowerment) and help them apply to access vital records such as birth certificates.

Securing Important Documentation. The Transition Team will assist the Enrollee to collect and track important documentation essential for successful adult life, including the Enrollee's birth certificate and social security card. We will also educate the Enrollee on how to access their identification cards.

Maintain My Medicaid Initiative

WellCare of Kentucky will partner with DCBS/DJJ to encourage Enrollees to remain in care to access Medicaid services through age 26 and to locate Enrollees under age 26 who have left care and encourage them to re-enroll.

Supporting Youth to Maintain Medicaid. A key area of education during the Transition Team process will be educating the Enrollee about the services available through Medicaid and the importance of those services to the Enrollee's goals that they set for themselves. This will include ensuring the Enrollee understands their preventive, primary, and chronic care needs; mental health and substance use related needs; medications and the importance of consistent adherence; and the corresponding Medicaid coverage. It will also include educating them on requirements for maintaining Medicaid coverage including the re-certification process. The Transition Team will assist Enrollees, in-person or virtually, to reapply for Medicaid, including ensuring accurate Enrollee information, such as updated Enrollee address and phone number, to minimize future challenges accessing care.

Outreaching to Enrollees Who Have Left Care. We propose to take a proactive role in outreaching to Enrollees who leave care that DCBS and DJJ are unable to locate and providing education on the benefits of accessing Medicaid coverage. Monthly, our Transition staff would generate a list of Enrollees between ages 18-26 who are no longer on the 834 file and

determine whether they are enrolled in another Medicaid MCO. If not, we would partner with DMS and/or DCBS and DJJ to send an outreach message approved by DMS.

We recommend prioritizing electronic communication based on the feedback we receive from our youth regarding preferred contact methods. However, we would add phone, mailed, and in person outreach based on DMS direction. The outreach would include connecting the former Enrollee with the Medicaid benefits worker in their local area. It could also include sharing information with DCBS/DJJ such as former Enrollee contact information and any potentially urgent care needs such as continuation of medications, need for insulin, or a history of high BH needs or BH crisis.

If our contact information is no longer current, we can identify current phone number and email address for former Enrollees who participated in our JOOL program, which provides a smartphone and specialized mobile application to support Enrollee achievement of their own desired outcomes (see below for more detail). We will also request that providers that served the former Enrollee's providers conduct outreach based on the contact information they have and educate the former Enrollee on the benefits of reapplying for Medicaid and how to do so. If permitted, our staff can physically go to the provider location or other location and do direct education and outreach to the former Enrollee, or we may use telehealth methods to engage them. Our provider education for Kentucky SKY will include how they can assist us in identifying former foster care Enrollees accessing care and encouraging them to reapply for Medicaid or, if permitted by DMS, to contact WellCare of Kentucky for assistance.

Strengthen Independent Living Skills Training

DCBS requires foster care providers to create an independent living training plan as the child enters the teen years (age 14) and provide training to help them develop needed skills for adult life. This may include grocery shopping, ironing, how to establish a bank account, and other life skills. We will provide enhanced support to these providers to improve the timeliness and quality of these training plans. Our Provider Relations team will assist the provider to complete a gap analysis, comparing DCBS and WellCare of Kentucky-established requirements and benchmarks to the provider's current practice. One the analysis is complete, we will collaborate with the provider to develop a gap mitigation plan and offer technical support to ensure each child receives high quality, timely independent living training.

Ongoing Support to Meet SDOH Needs

Our experience demonstrates that youth aging out of foster care and the juvenile justice system as well as former foster care Enrollees have significant SDOH needs that can be obstacles to health, well-being, and positive outcomes if unaddressed. Key ways we will address this include the following.

Lifetime Access to Community Connections

All former foster youth will have lifetime access to assistance through WellCare's Community Connections program. As described in detail in response to Question G.10.f, our Community Connections program offers multifaceted support for SDOH needs. We will educate transitioning Enrollees about the support available through Community Connections, the

process for accessing it, and that they may continue to access this assistance indefinitely post-transition as needs arise with which they need help.

Post-Secondary Education and Training Support

As noted above, we will educate youth and all involved in their transition planning about post-secondary options including college, community college, and certification and other training programs available to support the youth's goals. About 600-700 Kentucky former foster care youth are enrolled in college at any given time. We will provide Welcome Home kits to Enrollees to help them settle into dorm rooms and apartments, such as bedding and towels, and connect them to community resources such as for assistance outfitting kitchens. We will also collaborate with DMS, DCBS, DJJ, and partners such as the Kentucky Community Technical College system and the University of Kentucky system to develop a plan to co-locate our staff on campuses where former foster youth are enrolled. We know from experience that some of these youth are homeless. Our plan would include Youth Peer Support Specialist outreach to connect homeless youth to housing supports, encourage them as applicable to reapply for Medicaid coverage, and educate them about the support our Community Connections program can provide.

COMMUNITY RESOURCE ASSESSMENT AND GAP PLANNING

We will work with our local community partners across the Commonwealth to crosswalk the needs of transition age and former foster care Enrollees with available resources in each region. We will identify gaps and work with the partners to identify ways to fill them.

Examples of Services or Tools

Below we provide examples of services and tools we have implemented in Kentucky to enhance services and outcomes for our transition age, former foster care, and juvenile justice Enrollees. Cookie cutter programs that may be used elsewhere are no substitute for approaches and tools that are tailored to the specific needs of youth in Kentucky, based on their input and the input of stakeholders in the Commonwealth. Solutions must be grounded in the voice of our youth here at home and must reflect Kentucky's foster care and juvenile justice infrastructure. The examples below demonstrate our understanding of the unique needs of the Kentucky SKY population and the Commonwealth's system of care and stakeholders.

VALUE ADDED BENEFIT TO PROMOTE TRANSITION SUCCESS

We pilot tested an innovative value added benefit to promote a successful transition between settings. Through the Key Assets program, we collaborated with Our Lady of Peace Hospital, Key Assets in Lexington, and Bluegrass Community Mental Health Center for Enrollees moving from the hospital to a family home. Ideally, a transition of care from one provider to the other for a high needs foster care Enrollee involves a face-to-face case conference to discuss the case and avoid the child having to tell the story all over again to the new therapist. However, Medicaid rules do not permit two providers to bill for providing the same service at the same time.

We paid the relinquishing provider as a value added benefit while the receiving provider billed for the Medicaid service. This approach helped achieve the program goal of avoiding re-traumatization of the child and promoting stability in the new placement through equipping the new therapist to begin meeting the child's needs immediately upon placement in the community.

In addition, we paid a foster parent to come to the group home to visit the child prior to the child switching placements to begin establishing a relationship, which helped us achieve our goals of a smooth transition for a high needs child and stability in the new placement. This overlapping approach can serve as a model for transitioning those who choose to leave care and will have a non-Medicaid source of care post-transition.

JOOL LIFE COACH

Our JOOL Life Coach mobile application (which will soon be rebranded as Kumanu) is aimed at engaging and improving purpose in life of transition aged and former foster care youth to improve health and life engagement, energy (vitality), willpower (self-control), resilience, lifestyle change, and health care costs. JOOL has helped us achieve program goals related to supporting appropriate access to care, overall well-being, and maintenance of Medicaid eligibility.

Those enrolled in the program are provided an overview of the program by the WellCare of Kentucky Care Coordinator along with their caseworker and current care provider, as depicted in **Figure G.12-4**. If the youth has a personal smart phone, we encourage them to use it, if possible. If they do not have access to a smartphone, WellCare issues one with limited capabilities. The Care Coordinator works with the Enrollee to download and set up the JOOL application on the phone.

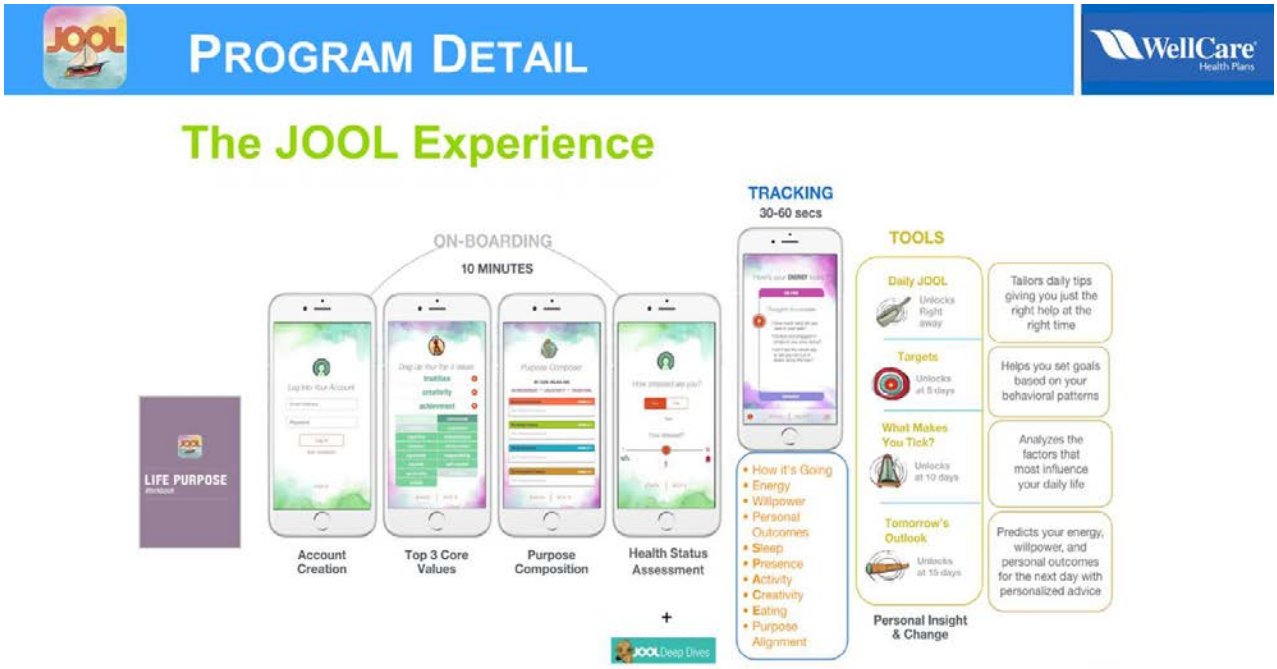

Figure G.12-4 The JOOL Experience

Onboarding. The JOOL application introduces the Enrollee to the program, walking them through the following onboarding steps:

- Core Values. The Enrollee chooses their top core values, such as tradition, responsibility, expertise, kindness, and independence.
- Purpose Composer. This step asks the Enrollee to identify four purposes, a personal purpose, a family purpose, a work/school purpose and a community purpose. An example of a school purpose could be "I want to be on time to school every day and exceed the expectations of my teachers".
- Health Risk Assessment (HRA). The Enrollee answers short questions about information such as age, gender, height, weight, stress level, diabetes, and feeling depressed.

Daily Charting. Once the onboarding is complete, the Enrollee begins daily charting in three areas:

- How aligned are they with their purposes for that day. For example, the Enrollee may be less aligned with the work/school purpose if they were late to school or reprimanded by a teacher.
- S.P.A.C.E. – Sleep, presence, activity, creativity and eating.
- Changes to the Enrollee's personal outcomes.

Personalized Support. The JOOL application "learns" about the Enrollee through charting. After five days of charting, the application establishes a baseline so that it can track how often the Enrollee's targets are met. After ten days of charting, the application begins to give interactive visuals of what factors impact S.P.A.C.E., willpower and the Enrollee's outcomes the most. After fifteen days of charting, the application begins to forecast S.P.A.C.E, willpower and personal outcomes and then provides tips to improve the outcome. Please see **Figure C.12-5** for an example of JOOL's tools.

Daily JOOLS. The application provides "Daily JOOLS", machine learning intelligent tips that get smarter over time. The tips are targeted messages that address executive functioning, S.P.A.C.E., outcomes, and other factors that encourage a healthier lifestyle and taking responsibility for health. For example, a key Daily JOOL discusses the importance of the need to re-certify Medicaid status.

Implementation. Currently, there are 250 WellCare of Kentucky Enrollees who meet the target population criteria. Virtually every Kentucky County has at least one potential program participant. WellCare and leadership from the Division of Protection and Permanency are collaborating to identify the Enrollees to target to pilot this application. The pilot will run for 12 months, followed by a full evaluation to determine outcomes and the best approach to implement it statewide.

Customizing Based on Youth Input. We held a focus group on November 30 with young adults who recently aged out of the Kentucky Foster Care program. One of the more vocal outcomes of the research was that an incentive may be needed to help Enrollees to reach certain milestones of the program, such as the fifteen days of continuous journaling mentioned above.

JOOL SCREENSHOTS

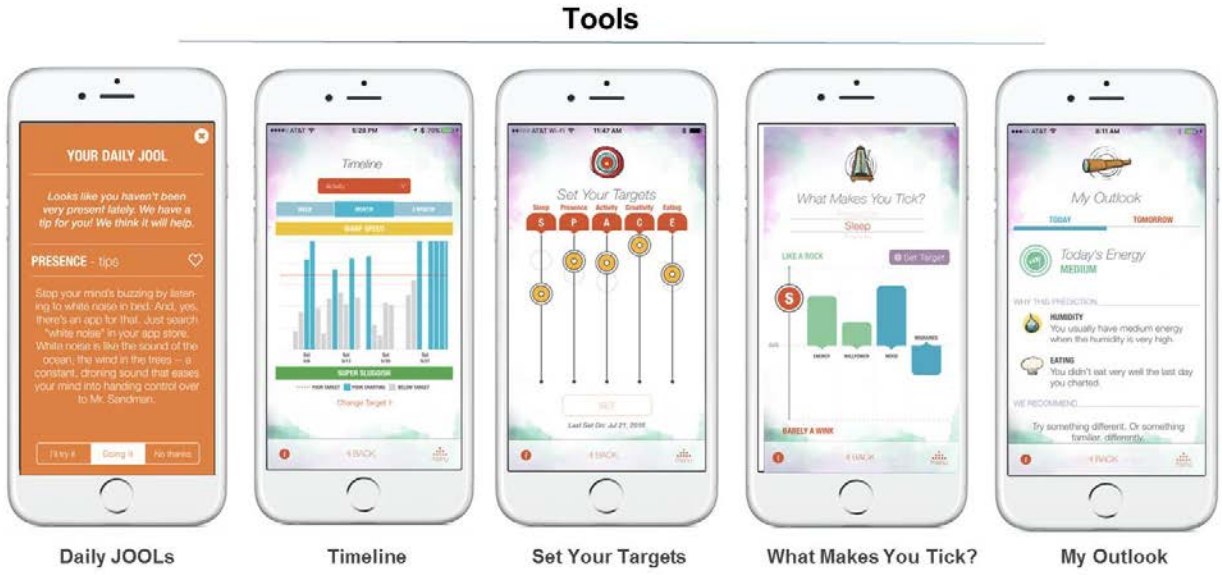

Figure G.12-5 JOOL's Tools

As a result, the program will include some small incentives to help ensure as many Enrollees as possible reach the important milestones of the application. The following incentives will be used in the program:

- Age appropriate, no cost, mobile phone games. Popular games such as Candy Crush, Sims, Farmville, Angry Birds or many other family friendly titles.
- Gift card incentives for Enrollees who reach certain milestones in the program. The following incentives will be available:
  - $25 gift card for program Enrollees who use their own phone.
  - $25 gift card for finishing the program (12 months).
  - $10 gift card each at 3 months, 6 months and 9 months

We will not require the Enrollee to turn the phone back in to us at the end of the 12 month program, however, the cellular service will be discontinued. The Care Coordinator will assist the Enrollee with contact information on the LifeLine phone program.

WELLCARE WORKS

As described previously in subsection G above, our WellCare Works program connects Enrollees to tools, training and other resources that promote social engagement and empowerment. Since launching the Community Connections Program in Kentucky, **we have connected 31,000 people to 165,000 services across the Commonwealth**. We have provided grant funding to local community organizations to train Enrollees to use the WellCare Works platform which provides multiple tools to learn, train, prepare, and secure employment and/or

volunteer opportunities. WellCare Works helps us achieve program goals for meeting employment and financial needs, which are key social determinants of health that, in turn, impact ability to access care and health outcomes. For this population, employment and financial independence also help build resiliency.

COMMUNITY COLLABORATION AND REINVESTMENT

Through our Community Connections Program, we promote collaboration among WellCare of Kentucky, Enrollees, and stakeholders to identify and address obstacles to successful transition and provide community investment funds to support initiatives that address these obstacles. This helps us achieve program goals related to meeting social determinant of health needs (which impacts health outcomes as well as resiliency) as well as to improving integration of effort across the health and social services systems. Our community reinvestment funds support community partner trainings, mentoring programs, internships, and transition assistance tools, e.g. computers and one time financial awards to support transitions (e.g., scholarships to pursue a post-secondary degree or trade-school certificate). Examples of collaboration with the community and reinvestments we have made to support the aging out population include the following.

Supporting the Transition Age Foster Care Conference

WellCare of Kentucky participated in and supported the work of the Commonwealth Transition Age Foster Care Conference. For the June 2018 conference, which focused on preparing for employment, WellCare of Kentucky was a primary sponsor. Leann Magre and some of our dedicated foster care Care Coordinators hosted a workshop on preparing for the job interview process. One topic was conveying a professional appearance. To further support the youth in this area, we set up a Professional Clothes Closet to show participants the types of clothing items and outfits that would help them dress appropriately for interviews and work, and to allow the youth to “shop” for appropriate clothing that they could wear to interviews. Participants left the conference more prepared to apply for, interview for, and secure a job.

Fostering Goodwill

Fostering Goodwill in Fayette County works with youth age 18-24 who age out of the child welfare system to assist them in developing skills and obtaining resources to promote a successful transition to adulthood. They assist youth in obtaining a permanent, safe, and secure environment that promotes independent living and self-sufficiency. The group also provides financial, housing, counseling, employment, education and other appropriate support and services such as collecting necessity household items.

We provided funding to cover food and travel vouchers for youth to participate in Fostering Goodwill’s monthly Fostering Success group meetings that promote basic life skills such as the importance of maintaining their health, legal advice, the need to have health insurance, encouraging them to get needed services within the community, mental health, credit education, employment training, sex education, parenting skills, career preparation, and more. The funding also supported ongoing provision of mentoring for these youth.

Pathways Inc. - Transition Age Youth Launching Realized Dreams

Transition Age Youth Launching Realized Dreams (TAYLRD) aims to positively impact the lives of 16-25 year olds who have, or are at-risk of developing, behavioral health challenges by improving access to high-quality, culturally and developmentally appropriate supports and services across the state. TAYLRD also provides supported employment and supported education services to those aged 16 - 25 years old, who are diagnosed with a behavioral health condition. Appropriate employment in this population is a known factor in recovery and lifelong health improvements. We provided funding to support provision of basic needs and clothing help to youth with employment and educational goals who are homeless and experiencing mental health and/or substance use disorders.

True Up Louisville

True Up Louisville in Jefferson County assists foster children aging out of the system to create educational and/or vocational paths and provides system navigation and application assistance to help them meet their goals. We provided grant funding to support the organization's Awareness Fairs and Experiential Education Series. This included:

- Collateral material to promote the fairs and participation (i.e. poster, pamphlets, etc.).
- True Up website landing page specifically promoting Fall experiential fairs
- Professional Services fees for paid and earned media to promote events throughout the community
- Resource Center/Peer-to-Peer Support
- Rewards/Incentives for participants of True Up's Peer-to-Peer pilot program
- Support for the organization's Resource Center.

13. Use Cases for Kentucky SKY

G.13. USE CASE 1 - VENDOR

Based on feedback from experienced DCBS Social Service Workers, certain providers in the Eastern Mountain Service Region have limited knowledge of trauma-informed evidence based practices. The DCBS caseworkers have documented numerous examples where Emergency Department (ED) staff and physicians/office staff neglected to conduct and document trauma assessments on children and youth, exacerbated trauma when physical assessments were performed on pre-teen girls, and failed to seek medical records before ordering duplicate testing/services.

Describe how the Vendor would address and ensure the delivery of trauma informed care by the contracted provider network for the Kentucky SKY membership. In particular, address how it assesses providers' knowledge of trauma informed care, the approach for targeted provider education at regional and state levels, as needed, and plans for collaborating with DCBS staff. At minimum, address the following in its response:

a. Evidenced based practices and trauma-informed care for the Kentucky SKY membership;
b. Unique needs of children and youth in Foster Care;
c. Access to and sharing of medical records
d. Provider contracting;
e. Provider education and ongoing support;
f. Performance monitoring;
g. Cultural competency; and
h. Community engagement.

G.13. USE CASE 1 - VENDOR

Our approach to improve the quality of trauma-informed care (TIC) delivered through our network is rooted in our local field-based structure and long-standing relationships with providers in Kentucky. Our Quality Improvement team works collaboratively with their counterparts from other functional areas, such as Care Coordinators, Community Connections staff, Operations Account Managers, and Provider Relations Representatives (PR Reps). In addition, we routinely meet in-person with our providers, DCBS, DJJ, law enforcement, community non-profit, and faith-based partners to discuss barriers and gaps in care delivery. We collaborate to identify opportunities to strengthen the delivery system and social safety net. Our strategy to address the lack of trauma screenings, TIC and duplication of medical testing brought to our attention by DCBS in Eastern Kentucky involves multiple mechanisms including: locally-based provider engagement model, with initial and ongoing training and performance monitoring; onsite ED and hospital-based staff; provider summits; joint operating structure agreements; preferred provider incentives.

WellCare is the only MCO serving Region 8 continuously since 2011.

Locally based Provider Engagement Model (PEM): In responding to DCBS concerns in Eastern Kentucky our PR Reps will hold a joint meeting with DCBS, SKY Care Coordinators, Quality Practice Advisors and Patient Care Advocates to identify trends and understand DCBS concerns. A data-driven plan will be developed using use our Quality Performance Metric Engine which incorporates data (e.g., clinical and medical records documentation, CAHPS, claims, complaints,

appeals, grievances, encounters, authorizations, quality of care incidents, care management documentation, pharmacy data, social determinants of health data, etc.) from a multitude of administrative, hybrid, and supplemental sources. We identify SKY members in Eastern Kentucky and assure Providers have a list of youth who require trauma screens, and TIC. In addition, we work directly with providers, ED and office staff on:

Assessment of Trauma Informed Practice. Using the National Child Traumatic Stress Network framework for TIC, we will work in collaboration with DCBS, the Kentucky Partnership for Children and Families, the University of Louisville Kent School of Social Work, our providers and community stakeholders, to develop a checklist for TIC. This tool will include indicators that providers understands and are implementing TIC. For example, child-friendly waiting areas and exam rooms, performance of ACE assessments, trauma, PTSD and other behavioral health screens, limiting seclusion or restraints, and staff education.

Individualized Provider Quality Plans. The PEM team reviews baseline quality results on their trauma assessment and other quality measures (e.g., well-child visits, adolescent well care) and develops a comprehensive plan for each provider in the delivery of TIC. Key input to the plan comes from the provider and their office staff as well as**: Patient Care Advocates (PCA)** WellCare quality experts responsible for supporting rural health providers and who are co-located in our larger practices on a rotating basis to help close care gaps for patients. PCAs have firsthand knowledge of provider practice patterns, barriers to high quality care and population needs. **Quality Practice Advisors (QPA)** who monitor data analytics using P360, our Quality Provider Profiling Program. These reports assess provider progress meeting performance expectations, readiness for change, and capacity to implement changes. **DCBS, Members and Community Stakeholders** who offer feedback through satisfaction surveys, grievances and as part of our SKY Collaboration and Optimization Committee.

Local and Regional Training: Our integrated team hosts regional training forums in partnership with the DCBS and DJJ, augmented with online training, available 24/7.

Appointment Agendas: Appointment agendas are child and youth-specific guides including a comprehensive record of their health status for our most complex enrollees including care needs and missed diagnosis data that can be used as a tool for visits.

Electronic Medical Records (EMR) Exchange: To minimize duplicative procedures, we work directly with providers to connect and use electronic health information in their care planning. We help providers overcome technical challenges and create solutions to fit their needs. For example, we have provided grants to assist small practices and rural providers in connecting to EMR; and we train providers on how to use the Kentucky Health Information Exchange. CareCentral, our electronic care management platform is configured to be interoperable with Health Information Exchanges, EMR platforms, and state-specific electronic Admission, Discharge, and Transfer feeds. This inter-operability results in our network providers having up-to-date and real time information via our Online Provider Portal.

Onsite Hospital Staff. Our contract agreements require hospitals to notify us when a KY SKY is admitted to a hospital (ED or inpatient). We offer a dedicated discharge team that includes onsite Care Managers, who are RNs, in our highest volume hospitals for care planning and

service authorizations. We employ telephonic RNs for smaller hospitals, skilled nursing facilities, and other rehabilitation facilities or settings. Our dedicated team is trained in TIC. By asking key questions such as whether trauma screens have been conducted and if pediatric care staff have completed trauma training, they help to teach and model best practices for our providers.

Provider Summits. To ensure our Eastern Kentucky partners provide TIC we actively solicit input on barriers and work to address them. WellCare hosts provider summits that bring together physicians and practitioners from across disciplines and provider types. Often when WellCare hosts these types of summits they are the first time practitioners from medical, behavioral and social services have sat in the same room to brainstorm barriers and opportunities for promoting high quality care delivery. These meetings:

- Provide evidence-based information and training on TIC
- Understand TIC models that are working in the region
- Understand the challenges that providers face in developing and sustaining TIC
- Determine what WellCare can do to help providers develop TIC

During these summits we engage state and national presenters to share best practices and challenges in implementing TIC. For example we engage peer leaders such as Ramey Estep to present on TIC and the needs of youth in foster care. We invite individual practitioners such as Mark Hamm with Phoenix Preferred Care to host peer-to-peer panels and facilitated discussions on barriers and best practices. In response to the barriers and recommendations identified by providers, WellCare schedules follow-up sessions and assigns work groups (with internal and external membership) to develop actionable recommendations to reduce barriers. Steps we have already taken include:

- Creating an expanded benefit that that allows providers to be reimbursed for consultation and coordination between PCP and behavioral health practitioners;
- Allowing claim payments for two types of services from a provider on the same day (e.g., ACE screening or BH consult and Well-child visit);
- Utilizing Care Coordinators to improve provider communication and collaboration.
- Providing BH and PCP practices a list of providers that jointly serve patients

We continuously promote professional collaboration and dialogue through our advisory committees, quality infrastructure and stakeholder feedback process. For example, in 2016, when WellCare's quality team identified issues with discharges from the Appalachian Regional Hospital (ARH), we met regularly with ARH and our Community Mental Health (CMHC) partners to identify strategies for collaboration and improve the process.

Joint Operating Committees. We establish agreements that include routine meetings (monthly or quarterly) with large health systems and practices (CMHC's, Hospital and physicians) to review operational challenges and expand successes. Our Joint Operating Structure includes provider training, discussions of quality concerns and delivery system challenges. We jointly develop policies and procedures, workflows, position descriptions and other documentation to support TIC and evidence-based practice. We review care gap data, utilization trends and provider relations information to discuss performance issues and challenges. Our joint

agreements also include co-location of staff; clinical rounds for complex Members; quality chart audits; metric monitoring; and process improvement planning.

Preferred Provider Incentives. Enhanced reimbursement is offered to PCPs managing Kentucky SKY Enrollees in the form of a care management fee. This fee compensates the PCP for their additional roles and responsibilities as a medical home. We also offer a Partnership for Quality (P4Q) incentive program that incents reductions in emergency room use, timeliness of initial outreach by the PCP and the completion of trauma informed health assessments in a timely manner. As the KY SKY program matures, we will identify high-quality providers as "SKY Preferred Providers". For example, year-one we will identify PCPs serving large numbers of foster care children, conduct an assessment to identify best practices and adherence to quality standards. Practices identified as delivering high-quality services will be designated as a SKY Preferred Provider for DCBS. We will engage these providers for input on training materials and participation on quality committees. In future years we will expand the SKY Preferred Provider designation to specialty providers.

a. Evidenced based practices and trauma-informed care for the Kentucky SKY membership

WellCare understands that Adverse Childhood Experiences (ACEs) correlate with poorer overall health, increased treatment needs, asthma, ADHD, autism, obesity, mental health issues, and violent behavior. Our **Healing Futures Program** is designed to improve the wellbeing and resiliency of our pediatric population through early ACE identification, timely and appropriate interventions by TIC-trained professionals, and engagement with relevant community resources. As part of our enterprise-wide implementation we are identifying providers with TIC-training to expand our network. We ensure that SKY enrollees receive holistic, integrated care from a trauma-informed perspective across the Commonwealth through trainings held in the providers' offices during monthly on-site visits, a bi-weekly webinar and annual Provider Summit. We are partnering with the University of Louisville, Kent School of Social Work, to implement a TIC training program. Our partnership includes curriculum development, building capacity, launch and evaluation. Training via Webinar and in-person using modules identified elsewhere in our response (see Section G.06 and G.07) such as: Trauma-Informed Care and Adverse Childhood Events using materials and trainings from Kentucky DCBS, DJJ University of Louisville, and The National Child Traumatic Stress Network.

b. Unique needs of children and youth in Foster Care

During initial and ongoing training our PEM, toolkits and online training modules offer information on the unique needs of children in foster care. We will also leverage our partnership with the Kentucky Partnership for Families and Children, Inc. to provide trainings and educate the public regarding children's behavioral health needs including our Community Connections helpline and tools available to expedite social safety net services and family caregiver support. In addition to trauma awareness our formal provider trainings described in our response (see Section G.06 and G.07) include information on the importance of:

- Coordinating Services
- Child Adolescents Needs and Strengths
- Crisis Intervention Services
- High Fidelity Wraparound
- Neonatal Abstinence Syndrome
- Emotional Intelligence

- Behavioral Health Integration
- Building Bridges Initiative

c. Access to and sharing of medical records

Our management information system (MIS) links claims, customer service, case management and utilization review in one secured, interoperable, integrated and purpose-built platform to collect, analyze, process, integrate and report data in support of our enrollees. Using this platform, PCPs, BH specialists, DCBS, community partners and other providers have 24/7 role-based access to a 360-degree view of each enrollees' services and health status that incorporates key clinical, demographic, social and lifestyle data. We provide real time actionable data, such as care gaps, admissions, ED visits, claims and prescription history, authorizations and Clinical Practice Guidelines. WellCare will work with DCBS to fully automate the **Medical Passport**, including vital documentation such as birth certificates, so that that SKY enrollees will retain an up-to-date health portfolio and comprehensive summary, throughout placement and health care transitions. We work with **Kentucky Health Information Exchange** and immunization registries to link essential health data to the enrollee record and update our PCP care gap reports. **Telehealth** visits are integrated into the overall care plan, including documentation of the service provided. WellCare also reimburses providers for store-and-forward communications to allow them to share x-rays, MRIs and other documentation to support diagnoses within the medical record. **Other supplemental data** includes laboratory results, pharmacy data, historic state encounter files, electronic health record output files and validated historic hybrid medical record results. EHR output files are used to create transparency and reduce redundancy when sharing enrollee health records. We manually collect EHR data from Providers who do not have the ability to produce output files. This gives us and the PCP insight into services received but not captured on claims and supports utilization by reducing over-utilization and duplication of services.

d. Provider contracting

A Welcome Packet is sent within five days of contract execution and providers are assigned to our dedicated PR Rep, who completes orientation, and other required trainings within 30 days of providers joining our network. The PR rep ensures the provider, and their office staff can access our Provider Portal and easily access online training materials and library of clinical practice guidelines. The PR Rep also engages in a discussion to identify the provider's key challenges and their level of understanding of TIC, DCBS requirements and working with youth in the foster care system. Through enhancements to our credentialing and recredentialing processes, we will systematically identify providers with formal training in areas of TIC care, the use of behavioral health assessment instruments, and the use evidence-based practices like trauma-focused cognitive behavioral therapy (TF-CBT), dialectical behavioral therapy (DBT), parent-child interactional therapy (PCIT), rapid eye movement desensitization and reprocessing (EMDR), and others. We will also identify areas of subspecialty focus include sexual abuse, physical abuse, domestic violence, human trafficking and others to direct enrollees to providers unique to their needs.

e. Provider education and ongoing support

Provider education and ongoing support starts with on-boarding and initial training (see Section a-d above). This is supported with WellCare's **Clinical Practice Guidelines** which incorporate

Healthy Foster Care of America American Academy of Pediatrics (AAP) guidelines for PCPs; the national Building Bridges framework with a focus on reducing seclusion and restraint for hospitals, PRTFs, and private childcare providers. For all youth, our guidelines align with AAP Bright Futures guidelines for health supervision of infants, children and adolescents to support developmental screening for, and sensitivity to, mental health needs, exposure to violence and adverse events during health care visits. In addition, WellCare's **Internal Integrated Clinical Team** uses a variety of methods to help providers understand TIC and coordinated care on a case specific basis, including: assistance with discharge planning; integrated clinical case conferences; weekly integrated "Medical Behavioral Grand Rounds" on complex cases; and integrated care plans for all SKY enrollees. **Behavioral Health and EPSDT Toolkits,** support providers as they deliver care including ACE, trauma and substance use screens, medication guides, comorbidity, intervention, and referrals to promote recovery and resiliency.

f. Performance monitoring

We continuously monitor performance and assess the quality of our provider's practice, regularly presenting the results using the following tools and reports we offer education on performance and identify opportunities.

P360 Program	P360 establishes the initial baseline and improvement benchmarks for provider's quality and continually measures progress towards meeting these goals.
HEDIS® Provider Performance Profiles	A monthly dashboard that shows each provider their performance on quality metrics as compared to his state peers and national benchmarks. Patient level detail is also provided to help providers determine which patients need attention.
P4Q Portal	This interactive portal has drill down capabilities to show providers current incentive earnings and potential earnings based assigned Members and services.
Provider Dashboard	Our Enterprise Provider Dashboard (EDP) Report integrates with our online provider portal aggregating quality, utilization, risk adjustment and operational data to create an overall performance dashboard. Produced at the individual provider, practice, regional and statewide level, the EDP compares Providers to their peers for quality, risk, utilization, and operations. The EDP includes Items such as care needs reports that can be drilled-down at the Member level; P4Q data; 7 and 30 day readmission rates, ED visits, inpatient claims and more.

Member and Provider Grievances, Complaints	Member support representatives review, log, and categorize grievances and complaints by cause, disposition, type for review and follow-up. Data is shared with our PR Reps for provider follow-up
Quality of Care Incidents	Quality of Care (QOC) incidents are identified through claims and grievance data, a root cause analysis is conducted on each incident. We track and trend QOC events to determine if there are issues needing PEM follow-up with the provider.
Annual Medical Record Review	We sample provider charts for compliance with our CPGs and provide feedback to Providers on identified quality issues.

g. Cultural competency

We routinely share disparity data with providers, including race, ethnic, gender, and geographic disparities for assigned-Members and an analysis of the impact on the region. During trainings the PR Rep reviews the practice's obligation to deliver services to assigned-Members in a culturally competent manner as well how to access: member materials developed in English, Spanish, and large-print; oral translation through the WellCare language line supporting over 200 languages; free onsite sign and oral interpretation service that providers can schedule online prior to patient visits; free interpreters through Video Relay Service so patients who are deaf or hard of hearing will never be at a disadvantage when visiting the practice; Cultural Competency Training, through our Provider Portal including how to deliver effective cross-cultural communication; how to recognize bias in communication; and how to understand and respect cultural and religious preferences in care planning.

h. Community engagement

To design community collaboration strategies in Eastern Kentucky we leverage our Community Connections Model and existing Kentucky relationships. Together we conduct an initial gap analysis to determine how our support and expertise will be of greatest benefit to address gaps and opportunities for health. We deploy local teams dedicated to collaboration, Community Engagement Partners identify and continually engage with organizations for ongoing and future investment opportunities around unmet health-related social resource needs. Community Impact Councils (CIC), comprised of local community leaders, social service organizations, and WellCare representatives, bring stakeholders together to find solutions and address gaps. Knowing Eastern Kentucky is a predominately rural area, the local Community Engagement Partner would work with Susan Howard, Regional Administrator for DCBS to create a CIC similar to one conducted in rural Western Kentucky that supported a regional conference providing training on TIC. In Eastern Kentucky, WellCare would invite representatives from local organizations in the Eastern Mountain Service Region of Breathitt, Floyd, Johnson, Knott, Lee, Leslie, Letcher, Magoffin, Martin, Owsley, Perry, Pike and Wolfe counties. Some of these organizations would include representatives from the Kentucky River Health Department, Mountain Comprehensive Care Center, Judi's Place for Kids, Kentucky River Children's Advocacy

Center, Hazard-Perry County Community Ministries, East Kentucky Dream Center, local DCBS offices, Appalachian Regional Hospital, Highlands Health Systems, and Pikeville Medical Center. The CIC guides local projects to improve TIC and support healthy childhoods for our SKY enrollees. WellCare brings a strong community focus to all of our programs. In June 2019, WellCare was recognized, for the third consecutive year, as one of the 50 most community-minded companies in the U.S to by Points of Light, the world's largest organization dedicated to volunteer service.

G.13. USE CASE 2 - KIMBERLY

Kimberly, 15 years old, has been in foster care for two years with placements in three different Service Regions during that period. She was placed in foster care following a report from her school that she came to school exhausted and hungry. Kimberly's teacher, who had been concerned about her outbursts at school, was able to get Kimberly to describe violence at home between her mother, Linda, and Linda's boyfriend. Kimberly would care for her two younger siblings, ages five and two, when the adults in the house fought and used drugs. Twice a week, Kimberly asked neighbors for food for her siblings, and occasionally stole money from Linda's boyfriend to buy food at a nearby gas station/food mart.

Upon investigation, the Social Service Worker found a filthy house without food in the refrigerator or kitchen cabinets. Kimberly's siblings were dirty and hungry. Kimberly told the Social Service Worker that Linda and her boyfriend would fight and use drugs "all of the time". Kimberly's siblings were placed in separate foster homes but have since been reunited with their mother. Linda now lives in eastern Kentucky, approximately 200 miles from Kimberly's current foster home.

After coming into foster care, Kimberly has been suspended from school four times for behavior issues. She has a pattern of absences, and is currently failing most of her classes. Kimberly has a 17 year old boyfriend and is sexually active. Attempts at reunification with her mother have failed after Linda expressed concerns over Kimberly's anger and hostility.

During a recent appointment for birth control, the PCP noted multiple cuts on Kimberly's arms and legs as well as healed scars. She told her physician that she was depressed, couldn't focus on school, and wanted to run away from home. The PCP prescribed an antidepressant and referred her to a behavioral health specialist. Kimberly was reluctant

to visit a specialist and scheduling appointments was challenging for her foster parents given the lack of providers within 45 miles of their home. Kimberly's foster parents contacted the Social Service Worker about their concerns over Kimberly's behavioral health issues and the availability of providers.

To her classmates and on social media, Kimberly began describing her suicidal thoughts. Over the weekend, Kimberly's foster parents found her unconscious with a suicide note on the bedside table. Kimberly had overdosed on pain medication she found in her foster parents' medicine cabinet.

Kimberly had to stay in the ED for three days pending availability of a bed. Her foster parents discussed care options with the Social Service Worker and described their fears once Kimberly returns home. The Social Service Worker was unable to find a residential facility with an available bed and the hospital initiated plans to discharge Kimberly.

Describe how the Vendor would address Kimberly's situation and coordination with the DCBS Social Service Worker, the ED, residential facilities, behavioral health providers, foster parents, and mother. At a minimum, address the following programs and services:

a. Care management, including coordination with the foster parents;
b. Discharging planning between levels of care;

c. Network adequacy and availability of services;
d. Availability and utilization of telehealth for behavioral health services;
e. Applicable evidence based practices; including psychotherapeutic interventions;
f. Prescribing psychotropic medications and documentation in medical records (e.g., rationale, follow-up assessments and monitoring, etc.);
g. Coordination of transportation, if needed;
h. Provider contracting;
i. Provider education and support;
j. Access to and sharing of medical records; and
k. Maintenance of the care plan.

G.13. USE CASE 2 - KIMBERLY

WellCare's discussion of this Use Case includes additional information about Kimberly and her family for the purpose of better demonstrating how we support KY SKY members. ***WellCare does not foresee any limitations or exceptions to providing the programs and services listed.***

Overall Approach and Assumptions: WellCare understands the importance of Trauma-Informed Care for children, youth and their families. Through our comprehensive discharge planning processes and telehealth network Kim will have consistent access to behavioral health care regardless of where she is living. Kim's WellCare Care Coordination Team will ensure that Kim has voice and choice in her care planning and that her foster home has the training and support they need to keep Kim safe. In alignment with the DCBS case plan, Kim's WellCare care plan includes safe discharge into the most appropriate, least restrictive setting possible, access to physical and behavioral health, social services and eventual reunification with her biological mother and two younger siblings.

Innovations for Kimberly

- Hospital-based staff
- Respite in the ED for Foster Parents
- Telehealth access to Behavioral Health services
- Intensive In Home Supports
- Technology enabled visits with mom and siblings
- Technology enabled life coaching (JOOL) and self-management (MyStrength)

a. Care management, including coordination with the foster parents.

Identification and Enrollment: The WellCare Care Coordination staff are alerted to Kim's ED admission by the WellCare hospital-based care management team. In addition to having hospital based staff onsite in our larger hospitals and automated ADT feeds, all WellCare network hospitals are required to alert us when any of our SKY members are seen in the ED with behavioral health (BH) issues. Kimberly is immediately assigned to Ellie, a WellCare Care Coordinator serving Owenton, Kentucky. Ellie is a master's level Social Worker and has extensive experience working with adolescents with BH challenges. Ellie has been trained and certified in High Fidelity Wraparound. During Kim's first 30 days of enrollment, Ellie will work to fully assess and determine Kim's on-going Care Coordination and Care Plan needs.

During Kim's stay in the ED, the WellCare hospital team works with ED staff to transition Kim to an acute inpatient setting with SUN Behavioral Health. Kim and her foster parents are

introduced to our respite support team, who are specialized respite providers with crisis stabilization training who offer the foster parents breaks during Kim's ED and inpatient stay.

Engagement with DCBS, DJJ, Youth, Family, Fictive Kin, Foster Parents, Guardians, Providers, and School Staff: Within the first 24-hours of engagement, Ellie will speak directly with the DCBS social worker to confirm Kim's most recent case plan goals, level of family involvement, Care Coordination Team (CCT) members, including her assigned Guardian Ad Litem and obtain the DCBS Service Plan 106B. Ellie will confirm Kim's PCP with Warsaw Family Practice and dental home with the Owen Dental Center. Ellie verifies that all releases of information are up-to-date and documented in CareCentral, WellCare's fully integrated care management system. Ellie obtains and populates CareCentral with information from Kim's most recent DCBS trauma screenings and Child and Adolescent Needs and Strengths Assessments (CANS) assessment.

Comprehensive Needs Assessment: During the first five days of enrollment and as Kim's medical condition stabilizes, Ellie schedules a face to face meeting with Kim to get to know her and understand her perspective on what she needs and wants. Because Kim is sexually active, Ellie confirms with the hospital that a pregnancy test was completed. Ellie will also collaborate with Kim's PCP to determine if changes in Kim's birth control method may be exacerbating Kim's depression and anxiety. Ellie meets with the hospital discharge planners, DCBS, and Kim's foster parents, the Bells, to understand Kim's readiness for step down as well as what the foster family needs to support Kim. In addition, with DCBS consent, Ellie schedules a call with Kim's biological mother Linda and the DCBS workers assigned to Kim's younger siblings. Kim's younger siblings are also enrolled in WellCare, Ellie speaks with their WellCare Care Coordinator in Pike County to be introduced to Linda via a 3-way call.

Ellie's goal is to gain a holistic understanding of Kim's needs and personal strengths, caregiver strengths, preferences, abilities, social service barriers, physical health and BH status, and goals, including the identification of: guardians/surrogate decision makers; urgent and short-term needs; youth and family support, caregivers, and engagement with providers; back-up caregiver plans; emergency response plans; school, post-secondary education; and vocational needs. During the assessment process the team will also determine if this is Kim's only suicide attempt and whether it was impulsive based on the coincidental discovery of the pain medication or planned in advance. Ellie's information gathering and comprehensive assessment reveals a variety of factors influencing Kim's health:

Medical/Pharmacological	Behavioral	Social/Family/Cultural
• No recent dental visits • PCP visit for birth control • Pregnancy test negative • Doesn't want medication – wants to avoid becoming like "her loser mother" • Able to perform all ADLs and IADLs • Foster parent lack education on: proper medication disposal and storage	• Has not processed trauma of parental neglect and being separated from her siblings • Regrets not keeping younger siblings safe; parentification • Depressed and fearful for younger siblings • Angry at "the system" • Kim regrets overdose, and reports it was impulsive not planned • Cutting historically spikes with each placement change • No therapists within 45 minutes of foster family	• Wants to see siblings • Has not had contact with bio Mom, since mother got clean and sober • Supportive foster family, concern over lack of resources, moderate to high risk of unplanned placement change • Foster family does not have back-up caregivers • Kim does not affiliate with any religion • English is primary language • Very active on social media
Educational/Vocational	**Legal**	**Transitions**
• Struggling in school • Has no current career goals	• Guardian Ad Litem not active since last placement change • Linda is clean and sober and is approved to work on reunification with Kim • Linda has CASA support	• Multiple placement changes • Wants to be with younger siblings • Linda is 200 miles away in Pike County

Integrated Care Planning and Care Coordination Team Ellie speaks with the hospital discharge team to determine if Kim can safely return to her foster home with intensive Wraparound supports. Ellie also arranges a discussion with the NorthKey Community Mental Health Center's crisis stabilization and support team regarding the ability for intensive in home services as Kim discharges. Currently, NorthKey offers only outpatient services in Owenton. The wait to see a female therapist in the Owenton clinic is far too long for Kim's needs and the closest therapist is 45 minutes away. Through an agreement with NorthKey by using a single case agreement, NorthKey has agreed to provide intensive in home services with a Community Support Specialist and individual therapy two times a week with licensed clinician via telehealth. NorthKey also offers crisis services in Owenton to support Kim and the Bells. Discharge includes:

- Intensive in home services via single case agreement with NorthKey, dates and times and duration scheduled with foster parents and Kim
- Introduce Kim to a therapist through NorthKey, who can support Kim, regardless of her physical location, via a telehealth connection and WellCare issued tablet
- Update Kim's Child and Adolescent Needs and Strengths (CANS)
- Complete a psychiatric evaluation, including assessments such as the Clinician Assessment of Post-Traumatic Stress (CAPS-5) and Minnesota Multiphasic Personality Assessment (MMPI-A), as recommended by the NorthKey child psychiatrist.

- Develop a signed Suicide Prevention/Safety Plan and Contract with Kim including:
  - Foster family education on proper medication storage and disposal. This includes understanding what other medications are in home, disposal of those no longer needed and providing a lockbox for current medications, including over the counter drugs that could be lethal in large quantities.
  - A safety contract with Kim that identifies her triggers, people who she feels safe talking to and agreements on how the adults will respond to keep her safe.
  - NorthKey mobile crisis team clinician participation in safety plan development and access to CareCentral progress reports from the CCT for the most up-to-date information to stabilize the situation, should a crisis response be required.
  - Adding the safety plan and contacts to Kim's Medical Passport

Care Plan Monitoring and Follow-up: During Kim's intensive in home service period, Ellie checks-in daily with the foster parents. Ellie and the CCT will identify the longer term services and supports Kim and her caregivers need to be successful, including addressing Kim's trauma, planning for family reunification and preventing future suicide attempts and hospitalizations.

PCP Follow-up: Ellie will follow-up with the PCP to ensure that Kim has received education around her birth control and is adhering to her refill schedule. WellCare medical homes are required to coordinate with Kim's behavioral health providers. Ellie monitors and supports coordination through discussions with Kim, her foster parents and the CCT.

Social and Peer Support: Peer Support Specialist (PSS) serve as mentors, navigators and recovery supports for youth in crisis. Ellie offers Kim the option of working with a PSS to help her understand treatment options, and social and recreational activities are available in the community. Kim agrees to meet Athenia. Athenia becomes a mentor that Kim can to talk when she is feeling unsure about where to go for help. Through our closed-loop referral system with community partners, Ellie also connects Kim with FosterClub. FosterClub helps Kim connect with peers online, provides education and support to help youth realize their goals. Ellie provides Kim with information on free events at the Owenton library such as yoga, walking, and painting which can help reduce stress and promote wellness. Ellie teaches Kim about WellCare's life coaching app, JOOL. Through the app, Kim will complete her own health risk assessment and identify core values and goals most important to her. Once goal setting is complete, Kim enters daily notes; overtime the app provides daily tips, customized for Kim and her goals.

Foster Family Support: Ellie provides the Bells with psychoeducational material on depression and trauma. Ellie will explore whether Kim can get involved in after school activities or tutoring to assist with her school performance and provide the Bells with a break in caregiving. Ellie works with DCBS to ensure that the Bells have access to approved formal respite at least monthly, the DCBS respite services can be augmented as needed for the Bells through WellCare 's value added benefit. With the services received, the Bells begin to feel more supported and better able to help support Kim with her recovery journey.

Coordination with the School: Ellie confirms with DCBS that Kim's school plan includes the development of an individual education plan, 504 plan, or other education plan as needed. Ellie coordinates with The Family Resource Youth Services Center Coordinator, Janetta Briscoe at

Owen County High School to make sure key staff are aware of Kim's safety plan and trauma informed interventions. Ellie will explore Kim's strengths at school, including teachers, paraprofessional staff or coaches who may provide mentoring, respite or tutoring for Kim. As part of the single case agreement with NorthKey, in school support is available as needed. As Kim transitions back to school, her NorthKey will consult and arrange for individual therapy immediately after school on her first and third days back to assess how she is doing.

Family Reunification: Ellie, Linda, Linda's Court Appointed Special Advocate (CASA), the WellCare team serving Pike County and the DCBS case worker assigned to Kim's younger siblings discuss reunification support. Kim's reunification plan includes supportive family meetings that involve the Bells, Linda and Kim as well as parent/child sessions for Linda and Kim. Linda has access to our secure video conferencing capabilities at local provider sites to keep in touch with Kim and attend sessions. Linda also receives education in understanding Kim's anger and how to address Kim's outbursts. Kim's goals, programs and services include:

Member/Family Goal	Programs and Services	Focus Area
Kim: I want to see my siblings	• Technology enabled virtual visits weekly • Trauma informed parent/child sessions with Linda via telehealth monthly • In person visits as recommended by therapist	Permanency
Kim: I want to be happy	• Trauma Informed Cognitive Behavioral Therapy via telehealth • MyStrength and JOOL apps with WellCare tablet • Peer Support Specialist • FosterClub	Behavioral Health
Foster parents: We want Kim to be healthy	• PCP follow-up within 7-days of SUN discharge and regular EPSDT visits	Physical Health
	• Dental assessment and visits	Oral Health
Foster parents: We want Kim to do well in school	• Family Resource Center engagement • In school support by community support specialist as part of single case agreement with NorthKey	Educational
Foster parents: We want to support Kim	• Education and skill building with Foster Family to understand Kim's triggers and how to respond • Respite	Behavioral Health
Linda: I want to know Kim and I can get along	• Education and skill building with Linda to understand Kim's triggers and how to respond	Behavioral Health

b. Discharging planning between levels of care.

At each key junction in Kim's care; from the hospital to her foster home; and foster home to home, Ellie remains in daily and weekly contact with the CCT. Prior to each discharge Ellie completes a comprehensive evaluation of Kim's physical and behavioral health and social service needs; identifies services and supports needed to support a successful transition; verifies that services are in place prior to discharge. Following her transition to a new setting

Ellie follows-up within 24 hours of Kim's discharge to verify the transition, assess Kim's stability, answer questions, and resolve any new barriers to care.

Hospital to Foster Home: Following her return to the foster home, the CCT meets to assess the effectiveness of the intensive in home services. Over the next 30, 60 and 90-days the team monitors the frequency and intensity of services, Kim progress in using new coping skills and the Bell's level of understanding and comfort with Kim's in-home plan and adjusts accordingly.

Foster Home to Home: As Kim works to reunite with her mother, Ellie and CCT work with Kim's providers to develop trauma-informed safety plan with Linda. As family sessions progress from video to face-to-face meetings and home visits; Ellie collaborates with the Orphan Care Alliance (OCA) in Pike County to provide additional support for Linda and Kim. OCA works to wrap services around the family to assist with the reunification. OCA offers to help Linda with items such as transportation, and handyman services as she reestablishes her family in Pike County. Ellie will also provide a connection to the East Kentucky Dream Center (EKDC) in Pikeville for access to clothes, toiletries, and food for families in need through food boxes and free meals.

c. Network adequacy and availability of services.

Our Kentucky network includes more than 34,500 providers statewide. We continually monitor access and availability. In the first quarter of 2019, 100% of Pediatricians provide urgent care within 48-hours and 97.8% were able to see enrollees within 30-days for routine care. During that same period 91.9% of our specialty providers were compliant with urgent standards and 98.2% were compliant with routine standards.

d. Availability and utilization of telehealth for behavioral health services.

Kim's care plan includes a connection to a NorthKey telehealth provider as part of her hospital discharge plan. While NorthKey has a clinic in the Bells' home town, access to a therapist to meet Kim's needs is not available. Kim's in-home Community Support Specialist provides direct consultation to her foster home and in the school. As Kim progresses through her treatment and begins to transition back home in Pike County, Kim will have access to her clinician via her WellCare issued tablet. Ellie also sets up secure video conferring with the Pike County WellCare team to support Linda's participation in care planning and engagement in family sessions with Kim.

e. Applicable evidence based practices; including psychotherapeutic interventions.

Ellie uses our evidence-based Clinical Practice Guidelines that integrate Trauma-Informed Care, High Fidelity Wraparound, Trauma-Informed Cognitive Behavioral Therapy (TI-CBT), and more to guide the psychotherapeutic interventions in Kim's care plan. Based on Kim's assessment results, TI-CBT is identified as most appropriate to address her depression and anger. Kim and her therapist will work on understanding trauma, understanding Kim's triggers and how she can manage her thoughts and behaviors in response to those triggers. Ellie also introduces Kim to the WellCare suite of online self-help BH tools, MyStrength, which Kim can access on any internet platform and discuss with her therapist. MyStrength offers modules for understanding insomnia, anxiety, panic and phobias; alcohol and substance use; and depression.

f. Prescribing psychotropic medications and documentation in medical records (e.g., rationale, follow-up assessments and monitoring, etc.).

Ellie ensures that all consents and releases are obtained, properly executed and included in Kim's electronic record. Kim has indicated an unwillingness to take anti-depressants. Ellie shares this concern with DCBS and Kim's PCP. DCBS honors Kim decision. Ellie and the CCT talk with the PCP to determine if other medications, such as Kim's birth control may be contributing to her depression and anger. For all medications, pertinent information such as dosage, frequency and duration are recorded in CareCentral, contraindications, side effects and red flags are documented and Kim and her caregivers receive individualized education, including how to administer and monitor.

g. Coordination of transportation, if needed.

Kim initially reconnects with her mother and siblings through WellCare telehealth network and technology enabled 'virtual visits' and BH family sessions. To support in-person visits Ellie will work with DCBS and the foster parents to develop a schedule whereby the SSW and Bell's rotate transport to Pike County and locate half-way points that work for Linda to meet them for in-person supervised visits.

h. Provider contracting.

WellCare will draw on our longstanding relationship with Kentucky providers to form the foundation of our network. WellCare has established a Preferred Provider status for PCP's and other providers who complete trauma-informed trainings and demonstrate that tools and techniques have been integrated into their practice. Preferred Provider status reward providers who exemplify evidence based practice with differential rates and performance incentives. While NorthKey is a network provider, the services Kim needed were not available in her region. A single case agreement, outlining the services (frequency, duration and payment rates) was developed to support Kim's intensive in-home supports.

i. Provider education and support.

Kim will benefit from a well-trained and fully supported WellCare provider system. Our provider training is based on the American Academy of Pediatrics Healthy Foster Care of America guidelines. Ellie works as part of locally based team with WellCare's Provider Relations Representatives (PR) who live and work in the communities they serve. Ellie and the PR team review health care gaps, barriers to care and provider performance to identify any provider that may need additional support. Throughout Kim's care Ellie and the WellCare PR team speak directly with the PCP, dentists, BH providers, and office staff to answer questions about DCBS, managed care and Kim's health care needs.

j. Access to and sharing of medical records.

CareCentral integrates physical and BH, pharmacy and community support information into our Care Coordination processes. Using this platform, Ellie, Kim's PCP, DCBS, community partners and the CCT have 24/7 access to a 360-degree view of Kim's services and health status that incorporates key clinical, demographic, social and lifestyle data. CareCentral provides actionable data, such as care gaps, admissions, ED visits, claims and prescription history,

authorizations and Clinical Practice Guidelines. WellCare will work with DCBS to fully automate the Medical Passport using functionality in our Member portal. This will include vital documentation such as birth certificates, so that SKY enrollees retain a comprehensive summary and up-to-date health portfolio, which follows them throughout DCBS and health care transitions.

k. Maintenance of the care plan.

Kim's care plan will be maintained electronically in CareCentral, including signed copies. Ellie will review and update the care plan monthly, the care plan will reflect and include a detailed description CCT members and their involvement in the Care Plan including the Kim's PCP, dental home, BH providers, specialist, community partners and caregivers. The care plan will include frequency and method for updating and revising goals, monitoring and follow-up activities.

G.13. USE CASE 3 - SHAKIRA

Shakira, 16 years, entered foster care two months ago after her primary caregiver, her grandmother, Mrs. Miller, passed away. Shakira was nine years old when she went to live with her grandmother in Lexington after her mother was incarcerated twice for shoplifting and drug possession with intent to sell.

Before the death of her grandmother, Shakira was an excellent student, a member of the swim team, played the clarinet in the school band, and hoped to go to the University of Kentucky (UK) to fulfill her dream of becoming a veterinarian. She had a boyfriend, Mike, who was the star player on the school's baseball team. Mrs. Miller had a full-time job with a modest income and was supportive of her granddaughter's studies and extracurricular activities. Shakira and her grandmother had discussed UK scholarship opportunities with the high school counselor.

Three months ago, Shakira's PCP confirmed that she was pregnant in her first trimester. Shakira and her grandmother discussed options: keep the baby, adoption, and abortion. Eventually, they decided to keep the baby to raise in their home. Mike and his parents strongly recommended adoption and refused to be involved in the baby's support or upbringing. Within a week of the final discussion with Mike, Mrs. Miller died from a myocardial infarction. She was found in her home by Shakira when she came home from band practice.

Shakira stayed with school friends for two weeks but the school counselor contacted DCBS and Shakira was placed in foster care. After two weeks in a Lexington group home, Shakira was placed in a private foster home in Bowling Green. Shakira began seeing an OB/GYN and made plans to keep her baby. She was also diagnosed with depression resulting from the death of her grandmother and transition to a foster home in Bowling Green. Shakira stopped talking about her dream to become a veterinarian.

Shakira's foster parents wanted both Shakira and her baby to stay with them as a teen mother and baby in foster care. The foster parents expressed concerns to the DCBS Social Service Worker, however, about Shakira's depression, poor school performance, and development of her skills to care for a baby.

Describe how the Vendor would address Shakira's situation and coordination with the DCBS Social Service Worker, the foster family, physical and behavioral health providers, transition from the family to the community, and community resources. At a minimum, address the following programs and services:

a. Care management;
b. Access to and coordination between physical health providers (e.g., OB/GYN, pediatrician) and behavioral health providers;
c. Access to network providers;
d. Discharge planning for all levels of care;
e. Coordination of school based services and an Individualized Education Plan
f. Community services for parenting skills;
g. Applicable evidence based practices;
h. Coordination of transportation, if needed; Options for aging out of foster care and risk management;

j. Social determinants of health;
k. Provider education and support;
l. Access to and sharing of medical records; and
m. Maintenance of the Care Plan.

G.13. USE CASE 3 - SHAKIRA

WellCare's discussion of this Use Case includes additional information about Shakira and her family for the purpose of better demonstrating how we support KY SKY members. ***WellCare does not foresee any limitations or exceptions to providing the programs and services listed.***

Overall Approach and Assumptions: WellCare uses a strengths-based and integrated approach to empower Shakira, and youth like her, to actively engage in health care decisions. WellCare engages Shakira in goal setting and care plan development, ensuring voice and choice in her care. We will work with the school, DCBS and her social support network in Lexington to identify Fictive Kin to support a return to Lexington, her friends and the school where she was most successful, if possible. Shakira will benefit from our comprehensive prenatal, infant health and early childhood supports program, WellCare BabySteps. In alignment with the DCBS case plan, Shakira's WellCare care plan will support her through a healthy pregnancy and successful transition to adulthood.

Innovations for Shakira

- Enrollment staff co-located with DCBS
- Integrated pre-natal, behavioral and infant health care, including telehealth
- Collaboration to find Fictive Kin
- College Welcome Kit and Scholarship
- Technology enable Medical Passport
- Support through adulthood

a. Care management

Identification and Enrollment: Kim, our WellCare Field Outreach Coordinator, who is co-located with DCBS in Lexington, alerts the Care Coordination Supervisor in Bowling Green of Shakira's placement and that she is pregnant. Kim works with the Child Benefit Worker and WellCare team to verify all paperwork is submitted and that Shakira's WellCare enrollment is complete. This includes the selection of PCP through Graves Gilbert with Shakira's DCBS Social Service Worker (SSW). Within 24-hours of her enrollment with WellCare Shakira is assigned to Beth, a WellCare Care Coordinator with maternity experience who has been trained and certified in High Fidelity Wraparound. For the next 30-days, Beth will employ the high fidelity wraparound model to assess and develop Shakira's care plan

Engagement with DCBS, DJJ, Youth, Family, Fictive Kin, Foster Parents, Guardians, Providers, School Staff: Beth calls Shakira's SSW to verify members of Shakira's CCT, including Shakira's current caregivers, guardians, OB and selected PCP with Graves Gilbert. Beth obtains a copy of the DCBS Service Plan 106B and discusses the status of Shakira's school performance and her educational needs. Beth and the SSW agree on a case management plan, and schedules a visit to meet Shakira and her foster family within one week. Beth contacts Shakira's former PCP in Lexington to augment her information with past visit information and her OB/GYN in Bowling Green to obtain the most up-to-date records of recent visits. Beth ensures the OB/GYN has attended WellCare's SKY Training Program and sends web links and material to the OB/GYN

office to make sure they understand their responsibilities for KY SKY members including information on trauma-informed care. Beth verifies that Shakira's labs are up-to-date and common causes of depression in pregnancy, such as transient hypothyroidism or anemia have been assessed and ruled out. She verifies Shakira has a Dental Home and makes sure all of her providers are documented in CareCentral system, our integrated care management system.

Comprehensive Needs Assessment: During her home visit Beth meets first with Shakira, she completes a PHQ-9, a pregnancy risk assessment, and Comprehensive Needs Assessment. Beth has obtained access to the DCBS trauma screening tools and schedules a Child and Adolescent Needs and Strengths Assessments (CANS) with a clinician specifically trained to complete this assessment through our agreement with LifeSkills Community Mental Health Center. Beth's goal is to gain a holistic understanding of Shakira's needs and personal strengths, caregiver strengths, preferences, abilities, social service barriers, physical health and BH status, and goals, including the identification of: guardians/surrogate decision makers; urgent and short-term needs; youth and family support community, caregivers, and engagement with providers; back-up caregiver plans; emergency response plans; school, post-secondary education; and vocational needs. The assessment reveals a variety of factors influencing Shakira's health:

Medical/Pharmacological	Behavioral	Social/Family/Cultural
• Healthy, athletic • Proud of healthy lifestyle e.g., swimming • Committed to prenatal care and her baby's health • No current pregnancy complications • Does not want medication for depression for fear it will harm baby • Able to perform all ADLs and IADLs	• Has not processed trauma of finding her grandmother • Depression resulting from the loss of her grandmother and hometown (i.e., situational, adjustment disorder) wants to be able to visit her grandma's grave "whenever I want" • Swimming is joyful and calming • Music makes her feel energized • No current suicide risk	• Wants to see friends in Lexington and baby's father • Has strong connection to her church, friends of grandma and swim coach • Supportive foster family, low risk of unplanned placement change • Likes foster family, wants to be treated like an adult • Foster family has back-up caregivers (DCBS approved) and transportation • Not sure how to care for a newborn/uncertain about being a young mom • English is primary language
Educational/Vocational	**Legal**	**Transitions**
• Struggling in school • Was college-bound and hasn't given up totally but unsure how to do it now • Scholarship possibilities • Was pursuing veterinary	• Recently assigned Guardian Ad Litem, has not met • Has Fictive Kin possibilities • Baby's father not involved	• Did not feel comfortable in group home • Wants to return to Lexington

During her visit, Beth also meets jointly with Shakira and her foster parents, the Bells. Beth explains the WellCare program and how it can help coordinate home, school, social and both physical and behavioral health needs. Beth discusses the WellCare BabySteps maternity care

management program, which includes specialized maternity support and education, rewards for prenatal visits, and post-delivery follow-up. Shakira will receive childbirth and parenting education, nutritional services, assistance with WIC sign up, breastfeeding education, counseling and depression screening both prenatally and after delivery. Shakira is proud of her healthy lifestyle and athletic background, she is committed to good prenatal care. Beth makes sure the Bells and Shakira are aware of the "FRESH RX for Moms" program at the Community Farmers Market in Bowling Green. The program, launched with support from WellCare, offers moms-to-be on Medicaid $20 in fresh fruits and vegetables weekly over a 21 week period. "FRESH RX for Moms" also includes incentives, taste testing, and assistance from a registered dietitian. Beth talks to Shakira about the opportunity to meet new friends; many of the moms-to-be are new to the area and bond over their shared experience. Beth uses motivational interviewing and her expertise in trauma-informed care and high-fidelity wraparound to help convince Shakira to talk to someone about her depression and her grief. With her permission, Beth helps Shakira and the Bells schedule an appointment to meet with a therapist at LifeSkills Community Mental Health Center. Beth is aware that LifeSkills can help Shakira develop and maintain a therapeutic connection, regardless of her placement, via our telehealth network agreement. Beth expedites Shakira's appointment through WellCare's close and longstanding relationship with the administration at LifeSkills, who have also undergone WellCare's extensive SKY Training program. No prior authorization is required for the first twelve therapy sessions, including initial evaluations. Beth schedules a visit in five days.

Integrated Care Planning and Care Coordination Team: Prior to making her second home visit, Beth discusses the viability of moving Shakira back to Lexington with her SSW. The social worker agrees that it may be an option but is concerned about timing and ensuring access to Fictive Kin who are able to support both Shakira and her baby. Beth shares the names of significant social supports that Shakira mentioned during their meeting. As Beth learns of more church and community connections, she shares them with the DCBS team to explore Fictive Kin placement in Lexington. Beth schedules a call with her WellCare team members in Lexington to discuss local resources and the viability of a transition home for Shakira. A WellCare Care Coordinator serving Lexington joins Shakira's team via video conference to ensure any transition back to Lexington, if possible, is seamless. Shakira asks that her former swim coach and grandmother's pastor be added to her CCT. Beth also adds Shakira's LifeSkills therapist and newly appointed Guardian Ad Litem (GAL). Shakira's goals and services include:

Member/Family Goal	Program and Services	Focus Area
Shakira: I want to be back in Lexington	• Provide DCBS with information on potential Fictive Kin placements	Permanency
Shakira: I want to stay healthy for me and my baby	• Schedule regular PCP, Dental and OB/GYN visits • Ensure a global authorization is entered in CareCentral to streamline access to prenatal care • Provide Shakira with Well Care smartphone to access prenatal advice, appointment reminders,	Prenatal Care

Member/Family Goal	Program and Services	Focus Area
Shakira: I want to be happy	• Assessment and counseling with LifeSkills, including art and music therapy • Reconnect Shakira to swimming program	Behavioral Health
Shakira: I want to keep in touch with friends and Mike	• Provide transportation to local and regional swim meets for Shakira to support her friends • Work with the GAL to approve outreach to baby's father, Mike	Behavioral Health
Shakira: I want to be able to provide for my baby	• Support Shakira's college plans	Education
	• Introduce Shakira to HOPE Center for Pregnancy for baby supplies and support • Enroll Shakira in the Family Enrichment Center for parenting classes • Share WellCare BabySteps educational material and access to enhanced supports	Social Determinants of Health
Foster Family: We want to support Shakira and her baby	• Family sessions with Shakira at LifeSkills • Confirm back-up caregiver plans and respite	Behavioral Health
Foster Family: We want Shakira to be successful in her new school	• Enroll Shakira in South Warren High School's veterinary program • Work with Family Resource Center and Shakira's old school to transfer previously successful strategies	Education

The Care Plan is completed in CareCentral and is signed by Beth, Shakira, her SSW and the Bells. The signed care plan is distributed to all members of the CCT, who also have access to the care plan electronically to monitor for changes and support interventions they are accountable for.

Care Plan Monitoring and Follow-up: Now that the assessments are completed and the initial care plan has been developed, WellCare's stratification engine, which factors in risks, cost and impactability as required in Section 41.10.2, is activated. Our stratification process also factors in specific SKY and pregnancy criteria as well as a predictive modeling algorithm. While Shakira is relatively stable, her newness to Foster Care, recent behavioral health decline, trauma and pregnancy, trigger the Intensive Care Management program. (The WellCare BabySteps program automatically moves pregnant adolescents to more intensive care management due to the complexity of teen pregnancy.) Beth monitors progress and supports communication across providers through monthly care plan meetings, sharing of written progress notes and meeting summaries with CCT members. Through the guidance of Shakira's GAL, connection with the baby's father is arranged. While this formal plan is owned by DCBS and the GAL, WellCare assures our processes are in alignment. If the baby's father is identified as a WellCare member, additional service options and coordination may be offered as appropriate. Once the baby is born, and if the father maintains his legal rights, WellCare will work with him, along with

Shakira, to ensure the baby's medical and social service needs are meet. As the team tracks real-time changes in Shakira's needs, Beth, Shakira and her CCT continually reassess her Level of Care designation and adjust the frequency of care plan and in-home meetings accordingly.

b. Access to and coordination between physical health providers (e.g., OB/GYN, pediatrician) and behavioral health providers.

While our provider agreements require this kind of provider collaboration, Beth monitors and supports coordination through discussions with Shakira, her foster parents and the CCT. Shakira's PCP serves as her medical home responsible for communication and integrated care planning with all specialty providers. Shakira's CCT is critical to coordination between Shakira's physical, behavioral health and dental home. During one of Shakira's CCT meetings, Shakira's LifeSkills therapist updates the team on Shakira's progress. While her depression hasn't abated completely, continued therapy is favored over anti-depressant medication. The team agrees to re-visit progress every two months.

c. Access to network providers

WellCare's Kentucky network includes more than 34,500 providers statewide. We continually monitor access and availability. In the first quarter of 2019, 100% of Pediatricians provide urgent care within 48-hours and 97.8% were able to see enrollees within 30-days for routine care. During that same period 91.9% of our specialty providers were compliant with urgent standards and 98.2% were compliant with routine standards.

d. Discharge planning for all levels of care

The WellCare team will provide continuity and consistency for Shakira, regardless of her physical location, throughout her pregnancy and postpartum. If Shakira transitions to Lexington, WellCare teams in both locations will work simultaneously in CareCentral to update information, appointments and CCT membership in real time. Our integrated system assures that communication is seamless for Shakira and her providers. WellCare BabySteps follows Shakira through pregnancy and the baby's first year of life. Records for Shakira and her baby will be linked and the CCT will have role-based access to immunization records, well-child visits and developmental progress. As Shakira makes progress in her behavioral health treatment, the CCT will explore group sessions, peer supports and other step downs in the intensity of her care plan and services.

e. Coordination of school based services and an Individualized Education Plan

Beth verifies that DCBS, Shakira, the school and foster family are coordinating around her IEP needs. Beth speaks with the Warren County Public Schools Student Support Services foster care coordinator to ensure that Shakira has resources to be successful in school. The CCT recommended that DCBS pursue enrollment at the South Warren High School. LifeSkills. Shakira is introduced to the schools veterinary program where the "bring your animal to school day" may help rekindle her interest in college. The school also offers swimming and band to support areas where Shakira excelled in the past. Beth connects Shakira with the Family Enrichment Center for parenting classes, which include free transportation for Shakira to attend.

f. Community services for parenting skills

Beth enrolls Shakira in WIC and engages the Barren River District County Health Department Health Access Nurturing Development Services (HAND). The HAND provides Shakira a mentor to walk her through her child's development and help her build a healthy and safe home for her child. At LifeSkills she will also receive assistance from Sandy Hackbarth, the Early Childhood Mental Health Specialist and the Early Childhood Coordinator who works with families, DCBS, hospitals, and OBs to make sure the infant gets the needed services pre and post-delivery to prevent further DCBS involvement.

g. Applicable evidence based practices

WellCare protocols rely on evidence based practices in trauma informed and responsive care, High Fidelity Wraparound, assessing adverse childhood events (ACES), Cognitive Behavioral Therapy (CBT) and more. Our BabySteps program is based on American College of Obstetricians and Gynecologists (ACOG) and other national guides. Shakira's care plan will be customized to build on her strengths and internal motivating factors, i.e., veterinary sciences, swimming and band with these guidelines as its base. Her therapist works to Shakira and her foster family adjust and understand each other's strengths. Beth arranges for a WellCare smartphone for Shakira that will provide Shakira will tools and tips on prenatal care, her baby's growth as well as appointment reminders. Shakira is empowered with education on nutrition, lactation, and tools to monitor her health status. Once her baby is born, Beth will continue to guide Shakira in caring for her newborn using EPSDT guidelines.

h. Coordination of transportation, if needed

Shakira foster parents have indicated a willingness to provide transportation for Shakira. However, should she need additional support Beth educates Shakira and her foster parents on how to contact and schedule rides through the NEMT provider. Beth also provides contact information and route information for the Community Action of Southern Kentucky's GO BG transit service and reminds Shakira that the Family Enrichment Center will provide free transportation to parenting classes.

i. Options for aging out of foster care and risk management

WellCare recognizes that Shakira will need support as she strives to raise her young child and return to the college track. Beth continually assesses Shakira's strengths and risk and her parenting skills. As Shakira reaches age 17, Beth will discuss her options for leaving foster care at age 18, what that means for her baby's custody status and services and supports. Beth will engage the DCBS Independent Living Specialist through the Kentucky RISE program to assist with these discussions about independent living planning and secondary education. If Shakira wants to pursue veterinary education, her CCT will help identify the ancillary supports she will need to be successful in college such as knowing resources on campus, who to contact and how to ask for help. WellCare will support Shakira with a Welcome Home Dorm Kit to help her settle into her college dorm or apartment with bedding, towels and help outfitting their room. Shakira is also eligible for a $1000 in support for expenses not covered by the Commonwealth. At each juncture in Shakira's life, her transition plan will include an updated assessment of the: home and community support's Shakira needs for independence; social barriers to health and

independence; educational or workplace supports; risks for her and her baby, such as transportation, childcare and food security; peer support and employment. Shakira's CCT will help Shakira understand the benefits and risks for remaining in foster care as well as transitioning out of custody so that she can make good decisions.

j. Social determinants of health

When Beth conducts her initial Comprehensive Assessment, it includes an evaluation of Shakira's social barriers to health. Beth evaluates new risks and barriers during her weekly and monthly meetings with Shakira and her caregivers. Beth accesses our Community Connections database of local partnerships with community organizations and makes closed loop referrals. Beth connects Shakira to the Youth Services Center Coordinator at South Warren High School to support Shakira in following through with her plans for college. The Family Enrichment Center, offer Shakira added support for parenting; their twelve session course offers day or night classes, free transportation and includes topics on discipline communication, self-esteem, and conflict resolution. Beth also provides a walk-through of WellCare Works, an online program which Shakira can access at home to help her with assessment tools, resume building, job search, and interviewing practice for volunteer and paid employment opportunities, such as volunteering at Bowling Green Humane Society.

k. Provider education and support

Our provider training is based on the American Academy of Pediatrics *Healthy Foster Care of America* guidelines. Beth works as part of locally based team with WellCare's Provider Relations Representatives (PR) who live and work in the communities they serve. Throughout Shakira's care Beth and the PR team will speak directly with the PCP, OBGYN, and office staff to answer questions about the foster care system, managed care and any health care gaps or barriers to care that Shakira may have.

l. Access to and sharing of medical records

Our CareCentral platform integrates physical and behavioral health, pharmacy and community support information into our care coordination and care management processes. Using this platform, Beth, Shakira's providers, DCBS, community partners and the CCT have 24/7 role-based secure access to a 360-degree view of Shakira's services and health status that incorporates key clinical, demographic, social and lifestyle data. CareCentral provides actionable data, such as care gaps, admissions, ED visits, claims and prescription history, authorizations and Clinical Practice Guidelines. WellCare will work with DCBS to fully automate the Medical Passport using functionality in our Member portal. This will include vital documentation such as birth certificates, so that SKY enrollees retain a comprehensive summary and up-to-date health portfolio, which follows them throughout DCBS and health care transitions.

m. Maintenance of the care plan

Shakira's care plan will be maintained electronically in CareCentral, including signed copies. Beth will review and update the care plan monthly, the care plan will reflect and include a detailed description of CCT members and their involvement in the Care Plan including the Shakira's OB/GYN, dental home, BH providers, specialists, community partners and caregivers.

The care plan will include frequency and method for updating and revising goals, monitoring and follow-up activities.

G.13. USE CASE 4 - KIRK

Kirk is a 3 year old with cerebral palsy (CP), hydrocephalus with a ventriculoperitoneal (VP) shunt, and seizures. He was placed in foster care when he was two months old after his parents terminated parental rights. Kirk has been in six different foster homes in four different Service Regions. He is on multiple medications for his CP symptoms, including anticonvulsant medication. His infant VP shunt was replaced when Kirk turned two years old but two foster homes have reported problems with the shunt and repeated followup visits with the pediatrician and pediatric neurosurgeon. Access to a pediatric neurosurgeon and the availability of Kirk's medical records as his placements change have been a significant problem. In addition, medication management and pharmacy records are problematic for the DCBS Social Service Worker and foster parents.

Kirk's current foster family lives in a rural community in Webster County. They have discussed adoption with the Social Service Worker but expressed concerns with access to the care that he needs in the long-term. The family has attempted to access care at the nearest children's hospital but availability of appointments was problematic. The family now must travel to Cincinnati Children's Hospital, which is more than a nine hour roundtrip commute. The travel and time off from work are hardships for the foster family but their primary concern is for Kirk's health. The foster family is concerned about availability of primary care and dental providers, clinical specialists (e.g., pediatric neurosurgeons), specialists to support his cognition, behavior, communication and developmental needs, medications to treat his CP symptoms and associated conditions, physical therapy, durable medical equipment, planned family respite care, etc.

Describe how the Vendor would address Kirk's situation and coordination with the Social Service Worker, the foster family, in-state and out-of-state providers, and community resources. At a minimum, address the following programs and services:

a. Care management, including coordination to address fragmented care and timeliness of care;
b. Availability of services and network access, including out-of-state providers;
c. Availability of services, such as skilled nursing services;
d. Access to school based services;
e. Applicable evidence based practices;
f. Coordination of transportation, as needed;
g. Community resources;
h. Social determinants of health;
i. Planned respite care;
j. Provider education and support;
k. Access to and sharing of medical records; and
l. Maintenance of the care plan.

G.13. USE CASE 4 - KIRK

WellCare's discussion of this Use Case includes additional information about Kirk and his family for the purpose of better demonstrating how we support KY SKY members. ***WellCare does not foresee any limitations or exceptions to providing the programs and services listed.***

Overall Approach and Assumptions. WellCare understands that availability and access to care are critical for all KY SKY enrollees and life sustaining for our medically complex enrollees. To close gaps in access in rural areas, our network includes cross-border Providers, we work aggressively in rural counties to enroll providers and support them with technology enabled consultations with larger health systems and specialist and through telemedicine. In alignment with the DCBS case plan, the overall goals of Kirk's WellCare care plan include access to necessary services to stabilize his medical condition and address developmental needs, support for Kirk's foster family and his DCBS permanency plan.

Innovations for Kirk

- Largest Provider Network in Kentucky, including cross-border providers
- Enrollment staff co-located with DCBS
- Foster Parent Training, Respite Support and long-term planning
- Technology-enabled Medical Passport

a. Care management, incl. coordination to address fragmented care and timeliness of care

Identification and Enrollment: Kirk's case comes to the attention of Jenny, a WellCare Field Outreach Coordinator who is co-located with the DCBS staff. Jenny works with DCBS to verify that Kirk has been identified and approved as Medically Complex through the DCBS Medical Support Section. Jenny confirms that Kirk's transition to WellCare and enrollment is complete. WellCare uses a fully integrated IT platform to enroll new members and immediately assign them to a team in their region. CareCentral, our care management information system, is immediately populated with details from the enrollment 834 files, DCBS daily enrollment report and one year's claims history. Within 24-hours of his enrollment Kirk is assigned to Molly, a WellCare Nurse Case Manager, who is an RN, trained and certified in High Fidelity Wraparound, serving Webster County.

Engagement with DCBS, DJJ, Youth, Family, Fictive Kin, Foster Parents, Guardians, Providers, School Staff. Molly immediately reaches out to the DCBS worker to verify and gather Kirk's foster family and provider contacts, most recent Individualized Health Plan (IHP), his DCBS Service Plan 106B and confirm DCBS case plan goals. Molly and DCBS worker agree on a case management plan and discuss the best match of a PCP and dental home for Kirk and his foster parents. Kirk is in a rural region with limited access to Medicaid enrolled providers. Molly contacts the network team to discuss Kirk's options and whether single case agreements are needed to support Kirk's access to care. The network team has located an in network pediatrician at the Bridgewater Medical Center, Dr. Michael Jones, to serve as Kirk's PCP. Molly contacts Kirk's foster family to schedule an in-home meeting. At the same time, Molly will outreach to the Medically Complex Liaison, and Kirk's former MCO to request his most recent care coordination notes. She will speak directly with her MCO counterparts to understand Kirk's Individual Health Plan (IHP) and continuity of care needs. Molly ensures that all necessary authorizations are entered and approved in CareCentral. CareCentral is automatically populated with one year's claims history upon Kirk's enrollment so that Molly can evaluate care gaps and identify providers. Molly speaks with Kirk's care team at the Cincinnati Children's Hospital to request records and ensure CareCentral includes his most up-to-date lab results and physician recommendations.

Comprehensive Needs Assessment. During the first week of Kirk's enrollment, Molly makes her first home visit. Molly verifies the information gathered from her file review and enrollment research. In addition, Molly determines if Kirk and his foster family, the Strongs have unmet care needs. Molly learns that the Strongs are very committed to supporting Kirk, however access to care, including PCP, dental and other specialist has been an issue. Traveling nine hours roundtrip to the Cincinnati Children's Hospital is exhausting for Kirk. The Strongs are worried that overtime, neither Kirk nor they will be able to maintain the travel routine. Molly explains the WellCare program to the Strongs and discusses her role as a Nurse Case Manager. Molly and the Strongs worked to identify other gaps and also talk about who should be added to Kirk's Care Coordination Team. Molly's goal is to gain a holistic understanding of Kirk's needs, caregiver strengths, needs, preferences, abilities, social service barriers, functional needs, physical and BH status, and goals, including the identification of: guardians/surrogate decision makers; urgent and short-term needs to accelerate access to needed services; child and family supports, caregivers, and engagement with providers; back-up caregiver plans; emergency response plans; early childhood education and developmental services. The assessment reveals a variety of factors influencing Kirk's health:

Medical/Pharmacological	Behavioral	Social/Family/Cultural
• CP and problems with VP Shunt; seizures • Specialized Care is 9 hours roundtrip • No assigned PCP or dental • No recent EPSDT screenings • No recent medication reconciliation • Needs assistance with ADLs	• Kirk was relinquished at two months • Frequent placement moves disrupting attachment to care givers • Kirk does not have friends due to unstable medical condition and multiple placement changes	• Supportive foster family, moderate to high risk of unplanned placement change due to care giving burden • Foster family does not have consistent access to respite • Foster family has not received training specific to Kirk's home care routine • English is primary language
Educational	**Legal**	**Transitions**
• No recent developmental assessments • IEP in process	• TPR at two months old • Foster Home is interested in adoption • Guardian Ad Litem, assigned but located in another region	• Continuity of Care closer to home

Integrated Care Planning and Care Coordination Team. Learning that the Strongs have no information on Kirk's medications and only know what is printed on the bottles in his bag when he arrived, Molly uses CareCentral's claims history to reconstruct Kirk's medication history and determine his most recent prescribers. Molly reviews Kirk's medical history with the WellCare Pharmacist to determine if his claims history aligns with his medication plan and whether drug interactions, dosage or side effects may be concerning. The WellCare Pharmacy Director reaches out directly to Kirk's prescribers and joins Molly in a discussion with DCBS and the Strong's to review concerns and questions. Molly consults with the WellCare interdisciplinary team, including our pediatric care Medical Director, Pharmacist, Nurse Case Managers and

Community Advocates, during the team's weekly case conference. Molly discusses Kirk's problematic shunt and seizures. The team notes Kirk's placement history, having lived in six different homes and four different regions, it is likely that his caregivers were not adequately trained on his specific needs and VP shunt monitoring and care routine. Molly works on developing a Kirk-specific, in-home caregiver checklist to train Kirk's foster parents and caregivers and promote consistency. The Medical Director also joins Kirk's Care Coordination Team (CCT) and speaks directly with the Cincinnati Children's Hospital team to discuss their observations and care plan.

The WellCare Network team identify Vanderbilt Children's Hospital as the hospital closest to Kirk's home and speak directly with our contract liaison at the hospital to secure an appointment for Kirk. Molly reaches out to DCBS and the Strong's by phone to let them know Vanderbilt is available and that a transfer of Kirk's care will reduce their commute time by 5 hours (more than half the current trip). Kirk's PCP at the Bridgewater Medical Center will also serve as a telehealth location whereby the Strongs can check-in with Vanderbilt team, reducing the number in-person visits and commutes each month. With DCBS approval Molly completes the referral to the Complex Care Program at the hospital which specifically works with patients who have Cerebral Palsy along with other health issues such as seizures and hydrocephalus. The team also agrees that Molly will engage the Owensboro Office of Children with Special Health Needs to help identify in-home home PT services, pediatric neurology closer to home and to work as a partner to provide in-home training of caregivers.

Recognizing the need to establish life-long supports for Kirk and his caregivers, Molly discusses a referral to the River Valley Community Mental Health Center with DCBS. River Valley can determine Kirk's eligibility for a Michelle P or Home and Community Based Service waiver. The CMHC is a valuable partner in finding and training in-home support workers and specialized transportation to support the foster parents and minimize caregiver burnout.

Following several discussions with the CCT, including the Medically Complex Liaison, Kirk's goals, program and services include:

Member/Family Goal	Program and Services	Focus Area
Foster Family: We want to better understand Kirk's needs and how to help him	• Education and training on Kirk's medical condition and shunt care by WellCare Nurse Case Manager • Education and training on Kirk's IEP rights and foster parent responsibilities • Referral to Kentucky Cerebral Palsy Resources • Develop a home care checklist for Kirk's medical care	Permanency
Foster Family: We want to know services are there Kirk anytime day or night	• 24/7 Nurse Advice Line, with on-call staffing from nurses up-to-date in Kirk's plan and medical needs	Health
DCBS: We want to stabilize Kirk's medical condition and maintain continuity of care	• PCP assignment with Dr. Jones • Medication Reconciliation with PCP • PCP referral for skilled nursing in-home with Office for Children with Special Health Care Needs to monitor shunt and caregiver training	Health

Member/Family Goal	Program and Services	Focus Area

	• Establish Dental home
	• Developmental evaluations for Kirk's cognition, behavioral, and communication needs and determining his need for:
	  • Physical therapy (in-home)
	  • Mobile vision screening
	  • Speech language services (in-home)
	  • Durable medical equipment	

DCBS: We want to support Kirk moving to adoption	• Transition of Care closer to home using Vanderbilt and Office for Children with Special Health Care Needs in Owensboro for pediatric neurology and in-home services • Training for foster parents on Kirk's medical routine • WellCare supported Foster parent respite to augment DCBS respite hours • Transportation Support for the foster family	Permanency
DCBS: We want Kirk to have a network of long-term services and supports	• Referral to Early Childhood Director at Webster County Schools to address IEP needs	Educational
	• River Valley Community Mental Health assessment and eligibility determination for Michelle P and HCBS waivers	Long Term Services and Supports

Care Plan Monitoring and Follow-up. Molly's care plan monitoring and on-going follow-up with Kirk and his caregivers is designed to coordinate all aspects of his care and ensure provider communication. Molly will stay in contact with the Strongs at least weekly, including two face to face visits with Kirk and a monthly plan update. Molly will also ensure that the IHP is reviewed with the Medically Complex Liaison and team members no less than every three months. Molly schedules a full IHP update meeting at least every six months. Molly verifies the contact information for Kirk's team members and creates an IHP meeting calendar for the coming year. This meeting calendar is accessible to all team members via the WellCare portal which provides them with up-to-date information on Kirk's care, providers, upcoming appointments, care plan meetings and assessments. Additionally, Molly ensures that everyone receives meeting invitations, summaries, reminders and a signed copy if the IHP.

b. Availability of services and network access, including out-of-state providers

WellCare's network agreements include access and availability standards that are continually monitored. In the first quarter of 2019, 100% of Pediatricians are compliant with urgent appointment availability standards (within 48-hours) and 97.8% were able to see enrollees within 30-days for routine care. Our network includes cross border hospitals and health systems. Kirk's dental care will be provided through Avesis and Community Care of Kentucky Inc. Avesis offers Sensi-Dentistry, a special needs dentistry program for individuals with special health care needs. The program includes: training for providers to help understand the needs of individuals with special health care needs; detailed assessment of the provider's ability to meet the needs of individuals with special health care needs; a Find-a-Dentist tool to help families

find dentists who have completed the Sensi-Dentistry training; education for families on how to be choose a dentist to meet an individual's needs; a pre-appointment visit for the child and family to meet the dentist and explore the dental office; provider reimbursement for additional time needed to serve individuals with special health care needs.

c. Availability of services, such as skilled nursing services

We work with the Office for Children with Special Health Care Needs in Owensboro, to access skilled nursing services for Kirk. Molly helps the Strongs identify optimal days and times for Kirk and discusses authorizations with the PCP. To limit fragmentation and care gaps Molly is able to authorize services and supports identified through the Initial IHP and care plan without additional prior authorizations. During each subsequent plan update, Molly verifies Kirk's providers understand the required steps and have submitted all necessary information for continued authorization of identified services.

d. Access to school based services

Molly works with DCBS to confirm that an IEP is in progress to support a potential referral for Kirk to the Peggy Grant of Audubon Area Head Start. Head Start promotes school readiness for young children birth to age five. Molly and DCBS reach out to Kim Saalwachter, the Early Childhood Director at Webster County Schools to discuss Kirk's early educational needs. Molly also stops by the Family Resource Center to pick-up information to help the foster family understand Kirk's special education rights and services.

e. Applicable evidence based practices

Molly uses evidence-based condition-specific guidelines that are fully integrated and embedded into all aspects of our care coordination program, including CareCentral. Molly will help the Strongs learn how to recognize and identify signs and symptoms of exacerbations of Kirk's conditions using WellCare clinical practice guidelines and teach-back methods. The team develops a "Kirk-specific" checklist for his VP shunt monitoring and care routine. The checklist becomes part of Kirk's automated Medical Passport to promote consistency across caregivers and settings. Molly also trains the Strongs in trauma informed care, explaining that Kirk's multiple foster home placements may cause issues with attachment and relationship building. Through this teaching process, the Strongs gain an understanding of the trauma and are better prepared to address Kirk's needs.

f. Coordination of transportation, as needed

Kirk's foster parents will receive mileage reimbursement for all trips over 120 miles from their home, in addition Molly will educate the foster parents on how to contact and schedule rides through the NEMT provider. Molly and the CCT also craft the care plan to limit the frequency of trips, using telehealth capacity in the PCP office for check-ins and consultations with the Vanderbilt team.

g. Community resources

Molly leaves a list of online support groups and parent groups for children with Cerebral Palsy, including how to access the Kentucky Cerebral Palsy Resource website. She also discusses the availability of the Ronald McDonald House in Tennessee which is 5 blocks from the Vanderbilt

Children's hospital. While sitting with Kirk at the hospital his foster parents can access the Ronald McDonald Family room where families and friends of seriously ill children can enjoy quiet time, have snacks and the support of caring volunteers. To assist in easing some of the tension that Kirk's foster parents will naturally feel they can access information regarding his medical conditions via Vanderbilt's Family Resource Center.

h. Social determinants of health

All WellCare assessments include an evaluation of social determinants of health for both Kirk and his caregivers. Molly will assess Kirk's and his families support needs regarding health literacy, food security, peer support, economic security and transportation. WellCare leverages the power of our community partnerships to support our Members. WellCare's Community Connections model includes a robust resource directory of organizations that can provide non-covered services. Molly has direct access to Community Connections, our data base of over 335,000 resources supporting access child-care, food, employment, health literacy, vocational and other supports necessary to holistically support Kirk and his foster family.

i. Planned respite care

Molly verifies that the Strongs are receiving planed respite through the DCBS medically complex foster care agreement. She identifies that the Strongs have had long gaps between respite visits due to a lack of caregiver training and availability. Molly works with the Owensboro Office of Children with Special Health Needs to develop a list of trained respite workers suitable to match Kirk's needs. She also talks with the school team about teachers and para-educators who may be interested in additional work outside of the classroom. Kirk's plan includes added respite services, paid for by WellCare, to offer the Strongs additional support.

j. Provider education and support

For children with complex medical conditions, the WellCare Medical Director and Pharmacy Director speak directly with treating physicians to understand and support their care plan. In addition, Molly works as part of locally based team with WellCare's Provider Relations Representatives (PR) who live and work in the communities they serve. Molly and the PR team review health care gaps, barriers to care and provider performance to identify any provider that may need additional support. Throughout Kirk's enrollment, Molly and the WellCare PR team are in communication with his providers to answer questions about the foster care system, managed care and health care gaps.

k. Access to and sharing of medical records

Serving as the backbone and focal point of our electronic care management system, the CareCentral platform integrates physical and BH, pharmacy and community support information into our Care Coordination processes. Using this platform, Molly, Kirk's PCP, DCBS, community partners and the CCT have 24/7 role-based access to a 360-degree view of Kirk's services and health status that incorporates key clinical, demographic, social and lifestyle data. This view is continually refreshed, and Molly and the CCT are automatically alerted to updates in Kirk's information so that they can quickly identify any needs and address them in real-time. CareCentral provides actionable data, such as care gaps, admissions, ED visits, claims and prescription history, authorizations and Clinical Practice Guidelines. WellCare will work with

DCBS to fully automate the Medical Passport, including vital documentation such as birth certificates, so that that SKY enrollees will retain a comprehensive summary and up-to-date health portfolio, which follows them throughout DCBS and health care transitions.

l. Maintenance of the care plan

Kirk's IHP and Care Plan will be maintained electronically in CareCentral, including signed copies. Molly will review and update the IHP monthly, as needed, based on her home visits and Medically Complex service team discussions and no less than every six months. The IHP will reflect and include a detailed description CCT members and their involvement in the IHP and signatures including Kirk's PCP, dental home, BH providers, specialist, community partners and caregivers. The IHP and Care Plan will include frequency and method for updating and revising goals, monitoring and follow-up activities.

G.13. USE CASE 5 - ENRICO

Enrico, age 16, has a history of violence, aggression, and destructive behavior. Both parents live in the home and Enrico has five siblings, ages two – nine years. Spanish is the primary language spoken by his parent and Enrico often had to interpret for his parents when talking with health care professionals, school officials, and law enforcement. He has a history of harming his parents, siblings, and a family pet. When in middle school he started fires at school and physically bullied younger students. Once in high school, Enrico began experimenting with drugs and alcohol, and was suspended twice for bullying students and destruction of school property. After physically attacking a high school teacher, Enrico was arrested and placed in a DJJ regional juvenile detention center. The charges against Enrico were later dropped so that he could receive treatment.

Enrico's parents refused his request to return home and DJJ and DCBS coordinated his placement in foster care. His behavioral issues in a private foster home (e.g., aggression and destructive behavior) caused him to be relocated to a group home. Despite repeated requests from Enrico, there has been no contact between Enrico and his family since he entered foster care.

Enrico has been prescribed two psychotropic medications at the higher end of the dosage range but hasn't been evaluated by his PCP or behavioral health provider in over a year.

In addition to his ongoing behavioral issues, Enrico has moderate persistent asthma and has a history of several ED visits and one hospitalization related to his asthma over the past two years. His BMI is 25.

With his Social Service Worker, Enrico discussed his loneliness, desire to return home, and regrets over hurting his family, especially his parents. Enrico especially misses his siblings and is anxious to see them or to talk with them over the phone. He expressed his frustration over not being able to talk with his family to discuss how they "can be a family again." He shared his confusion over who could help him with talking or meeting with his family.

Enrico is ambivalent about remaining in foster care once he reaches his 18th birthday. Sometimes he expresses a desire to leave foster care and, at other times, he states his understanding of the support needed to transition into the community and possibly reconcile with his family. Enrico's poor performance in school has intensified his feelings of failure and caused him to question whether staying in foster care will be of any value to him.

Describe how it would address Enrico's situation and coordination with the DCBS Social Service Worker, group home, physical and behavioral health providers, and his family. At minimum address the following programs and services:

a. Care Management, including coordinated management of his physical and behavioral health conditions
b. Discharge planning for all levels of care;
c. Language accessibility;
d. Psychotropic medications and documentation in medical records (e.g., rationale, follow up assessments and monitoring);
e. Evidence based psychotherapeutic interventions;

f. Social determinants of health;
g. Community resources;
h. Aging out of foster care;
i. Access to and sharing of medical records; and
j. Maintenance of the care plan.

G.13. USE CASE 5 - ENRICO

WellCare's discussion of this Use Case includes additional information about Enrico and his family for the purpose of better demonstrating how we support KY SKY members. ***WellCare does not foresee any limitations or exceptions to providing the programs and services listed.***

Overall Approach and Assumptions: WellCare's Healing Futures program was designed specifically with children like Enrico in mind. Focused on identifying children at risk for numerous health, social, and behavioral problems throughout their lifespan, including substance use disorders, WellCare Healing Futures uses evidenced based practices, such as trauma-informed care and high-fidelity wraparound to help our young members stabilize and ease into adulthood with an individually defined path to recovery and resiliency. Enrico will benefit from an integrated approach to care planning that includes culturally competent processes and providers to address his asthma, physical and behavioral health, pharmacological, juvenile justice and social needs. In alignment with the DCBS case plan, WellCare's overall approach is to help Enrico identify his goals and priorities, promote improved family dynamics and successfully transition to adulthood.

Innovations for Enrico

- Enrollment staff co-located with DCBS
- Technology enabled meetings with family
- Technology enabled life coaching (JOOL)
- WellCare Works support through adulthood

a. Care management, including coordinated management of his physical and behavioral health conditions.

Identification and Enrollment: WellCare uses a fully integrated IT platform to enroll new members and immediately assign them to a team in their region. CareCentral, our care management information system, is immediately populated with details from the enrollment 834 files, DCBS daily enrollment report and one year's claims history. The Care Coordination Supervisor also receives additional information from Jerry, a WellCare Field Outreach Coordinator who is co-located with DCBS staff to support all aspects of eligibility and enrollment. Jerry compiles the most recent case notes and information on Enrico's residential placement and uploads it to CareCentral. Jerry works with DCBS Social Service Worker (SSW) to select a PCP that matches Enrico's needs and is accessible to his group home placement, at the Boys and Girls Haven in Louisville. Most of the members at Boys and Girls Haven work with Dr. Matthew Kinney for primary care at the Opens Arms Clinic at Home of the Innocents. WellCare confirms Dr. Kinney as the PCP assignment with the SSW. Within 24-hours of enrollment, Enrico is assigned to Maria, a WellCare Care Coordinator serving Jefferson County, who has been trained and certified in High Fidelity Wraparound. Maria has extensive experience working with adolescents. For the next 30 days, Maria will employ the high fidelity wraparound model to assess and work with Enrico to develop his care plan.

Engagement with DCBS, DJJ, Youth, Family, Fictive Kin, Foster Parents, Guardians, Providers, School Staff: Maria immediately reaches out to the SSW to verify contact details for Enrico's Care Coordination Team (CCT), obtain the DCBS Service Plan 106B and confirm DCBS case plan goals. DCBS and Maria discuss a dental home assignment for Enrico, the Open Arms Clinical at Home of the Innocents that provides dental services. Maria reviews the DJJ Community Services Case Plan, the Criminogenic Needs Questionnaire and the Risk and Criminogenic Needs Assessment; and the DCBS results from Enrico's DCBS Child and Adolescents Needs and Strengths (CANS). Maria recognizes that Enrico's involvement with DJJ requires that the Judge receive regular progress updates. Maria being part of a panel discussion at a local WellCare community training workshop, has presented to Judges, law enforcement, local district and county attorneys and others about High Fidelity Wraparound, Trauma and cultural considerations in working with youth. Maria will speak with DCBS and Enrico about inviting the Judge in Enrico's case to join the CCT. Maria, DJJ and DCBS agree on a case management plan.

Comprehensive Needs Assessment: That same week, Maria meets with Enrico and the group home staff to gain a holistic understanding of Enrico's needs and personal strengths, his family's strengths, abilities preferences, social service barriers, physical and behavioral health status, and goals. Maria will identify: guardians/surrogate decision makers; urgent and short-term needs to accelerate access to care; youth and family supports, other caregivers, level of engagement with providers; back-up caregiver plans; emergency/crisis response plans; school, post-secondary education; and vocational needs. Maria asks Enrico a series of questions about what he enjoys doing, what he feels good about and what accomplishment he is most proud of this month. Enrico talks about playing soccer with his father and younger brothers. Enrico reports being bored in school, he is most proud when he solves a "real life problem" like how many hours he needs to work to buy a smartphone. Maria asks Enrico about his asthma and other medications. Enrico notes he does not like taking medication, he views it as a sign of weakness. Maria learns that Enrico did not understand many medical terms used by his former PCP, thus Enrico would ignore them when he translated for his mother.

Following her meeting with Enrico, Maria uses the WellCare language line, providing real time translation services, to contact Enrico's parents. Maria will determine what Enrico's family needs to participate in care planning. Enrico's mother, Camila, reports that her husband Mateo refuses to allow Enrico in the house until he "proves he is a man and not a bully". Using motivational interviewing techniques, Marie elicits concrete goals and expectations that Camila and Mateo have for their son. Camila expresses concern over how to attend meetings with her younger children. Maria asks about the most convenient times, day or evening and talks to Camila about meeting via secure video conferences at a provider or WellCare office location. Maria offers to ask DCBS to request a Court Appointed Special Advocate (CASA) to help Camila understand the DJJ process and resources. The results of Maria's assessment reveal several factors influencing Enrico's health.

Medical/Pharmacological	Behavioral	Social/Family/Cultural
• Asthma and BMI of 25 • No recent PCP or dental visits	• Lacks comprehensive, culturally sensitive, biopsychosocial evaluation • Unclear diagnosis	• Spanish is parents primary language, Enrico speaks English and Spanish

• Enrico and his family do not understand his health needs • Enrico and his family view medication as a sign of weakness • No asthma action plan • Able to perform all ADLs and IADLs	• At risk of placement change due to history of aggression • Sad over not seeing family • Confused about why parents won't let him come home • Does not get along with peers, aggressive • No current suicide risk	• Family does not understand legal or health care system • Parents don't want Enrico home due to past violence with younger siblings • Parents have no back-up caregiving support • Parents cannot attend meetings due to five younger siblings and work schedule
Educational/Vocational	**Legal**	**Transitions**
• Struggling in school • Likes "real world" work • Likes math	• No CASA involved • No Guardian Ad Litem • DJJ involved, charges dropped in lieu of treatment	• Enrico does not know what he wants other than to "be a family"

Integrated Care Planning and Care Coordination Team: Maria consults with the WellCare interdisciplinary team, including the Medical Director, Pharmacist, Nurse Care Managers and Community Advocates, during the team's weekly case conference. WellCare's Medical Director is concerned about Enrico's medications and dosage given the lack of a Substance Use Disorder assessment, Enrico's history of non-compliance with his medication and lack of a clear diagnosis. The Medical Director schedules a call with Dr. Kinney at Open Arms. Maria and the WellCare team discuss the need to obtain a child and adolescent psychiatric assessment and recommendations for any additional psychological testing for Enrico. Although he is fluent in English, Enrico's results may not be accurate if cultural considerations are not addressed in testing. **The team prioritizes a complete Biopsychosocial evaluation by a Board Certified Child and Adolescent Psychiatrist**, through our agreement with Centerstone. No prior authorization is required for Enrico's BH assessment. Centerstone will also complete and update CANS during the evaluation process. Because Enrico has a strong connection and loyalty to his family, the CCT works to support his group home placement and does not recommend introducing Enrico to a new foster home. The results of Enrico's testing include a diagnosis of disruptive mood dysregulation disorder (DMDD). His substance use assessment confirmed that Enrico is not currently using drugs and alcohol but is at risk to reoffend due to his unresolved trauma and DMDD. Maria uses the results of his updated assessments and Enrico's personal goals and preferences, as well those of his family, to guide CCT discussions with Enrico and his team in developing his care plan which includes:

Member/Family Goal	Programs and Services	Focus Area
Enrico: I want to see my younger siblings	• Technology enabled virtual visits with siblings, as guided by Enrico's BH plan with Centerstone and with Boys and Girls Haven	Permanency

Member/Family Goal	Programs and Services	Focus Area
Enrico: I want to play soccer with my brothers	• Disease management education for Enrico to understand his asthma and triggers with PCP	Physical Health
	• Creation of Asthma Action Plan with PCP and shared with home, school and group home	Physical Health
	• Sports physical and soccer club membership through WellCare's value added benefit program	Physical Health
	• Assign dental home to assess dental health and needs	Oral Health
Enrico: I want to be a family again	• Anger management group at Boys and Girls Haven	Behavioral Health
	• Substance use education and prevention through Boys and Girls Haven	
	• Individual therapy to understand his diagnosis, process his trauma of removal from home and learn self-management and social skills with Centerstone	Behavioral Health
	• Facilitated family meetings with Enrico and his parents to develop respectful communications and realistic expectations with Centerstone	Permanency
	• Medication assessment and reconciliation with Centerstone in consultation with Boys and Girls Haven	Behavioral Health
Enrico: I want to study real world stuff	• Enrollment in Boy and Girls Haven School Program	Education
	• Aptitude assessment with Boys and Girls Haven	Education
Enrico: I want to stand on my own two feet	• Assess work-based learning opportunities at the Kentucky Youth Career Center	Vocational
	• WellCare Works online to learn about volunteer and employment options, coaching and resume writing	Social Determinants of Health
	• Life Coaching, goal setting and self-management with JOOL, online app.	Social Determinants of Health

Member/Family Goal	Programs and Services	Focus Area
Parents: Enrico needs to be a man and stop being a bully	• Family education and training with Camila and Mateo to understand DMDD and Asthma with certified medical translator • Create family goals and identify steps for success with Enrico, Camila and Mateo with certified medical translator	Behavioral Health
Parents: Enrico needs to be responsible for his illegal actions	• Engagement with CASA	Legal

Care Plan Monitoring and Follow-up: Now that the assessments are completed and the initial care plan has been developed, WellCare's stratification engine, which factors in risks, cost and impactability as required in Section 41.10.2, is activated. Our stratification also factors in specific criteria, such as number of placement changes, as well as a predictive modeling algorithm. Enrico has an elevated risk of placement change, due to his history of violence and substance use, this coupled with his age and transition to adulthood triggers the Intensive Care Management program. Maria uses monthly care plan meetings, sharing of written progress notes and meeting summaries with CCT members to support coordination.

b. Discharge planning for all levels of care

WellCare's KY formal discharge planning program includes a comprehensive evaluation of Enrico's physical and BH and social service needs; and the identification of services and supports needed to transition into the most clinically appropriate, least restrictive setting possible. Discharge planning will focus on the frequency and duration of services he may need from the Boys and Girls Haven. Using a "Building Bridges" framework, the Boys and Girls Haven will work on transitioning Enrico from 24 hour supervision and intervention, to intermittent check-ins. Centerstone will work on moving Enrico from individual therapy once a week, to every other week, to once a month as he progresses. The frequency of family meetings and therapy will increase as progress is discussed and Enrico and his family become comfortable with a return home. Maria will transition the services Enrico receives at the group home to community and home based settings based on his family needs. Enrico will begin overnight visits with his family as they work towards eventual discharge. Once home, in-home supports will be added, such as respite and behavioral supports. In alignment with Family First Preservation Services Act, Centerstone will complete the CANS assessment (every 3 months) to ensure that Enrico continues to meet criteria for placement. If Enrico is assessed to be ready to step down into a home environment before his family is ready to accept him home, the CCT will explore Fictive Kin placements or supervised community living. To assist with continuity of care, WellCare works with Centerstone and Boys and Girls Haven to use telehealth for therapy and psychiatry appointments when Enrico returns home.

c. Language accessibility

Enrico's parents and providers use WellCare's certified medical translators to support his health care planning and decision making. Maria, his parents and entire team have 24/7 access to WellCare's language line. The WellCare language line provides real-time translation in over 200 languages. In addition, all WellCare staff receive training in: how to access translation services and TTY devices for the hearing and speech impaired; how to deliver effective cross-cultural communication; how to recognize bias in communication; and how to understand and respect cultural and religious preferences in care planning.

d. Psychotropic medications and documentation in medical records (e.g., rationale, follow up assessments and monitoring)

Maria ensure that all consents and releases are obtained, properly executed and included in Enrico's electronic record. WellCare Medical and Pharmacy Directors consult with Enrico's guardian and providers to help them understand the risks and benefits of each medication and answer any questions they may have. The CCT ensures that Enrico's medication protocol is designed to minimize any exacerbation of his asthma and weight due to his psychotropic medications and possible psychiatric systems due to this asthma inhalers/systemic steroids. Maria will monitor Enrico's claims and PCP reports in CareCentral to ensure that Enrico is attending appointments, is refiling his medication, is receiving routine bloodwork and adheres to his Asthma Action and BH plan. Because WellCare is a fully integrated health plan, our physical and behavioral health, and pharmacy staff are available to Enrico, the group home staff, providers and Enrico's family to meet and discuss questions, concerns and options. All pertinent information such as dosage, frequency and duration are recorded in CareCentral, contraindications, side effects and red flags are documented and Enrico and his caregivers receive individualized education on his medications, including how to administer, monitor and follow-up with providers. In addition, Maria will assess Enrico's medication adherence and answer any questions at each face to face meeting and ensures the Dr. Kinney completes a medication reconciliation at least monthly.

e. Evidence based psychotherapeutic interventions

Maria uses WellCare Clinical Practice Guidelines that include trauma informed and responsive care, High Fidelity Wraparound, Child and Adolescent Mental Health, understanding families and the impact of adverse childhood events (ACES), Cognitive Behavioral Therapy (CBT), crisis stabilization and more to guide the psychotherapeutic interventions in Enrico's care plan. The CCT addresses his DMDD, trauma involved in his removal from the home and his Asthma Action Plan. Centerstone has therapists that are trained in cognitive behavioral therapy, certified in trauma focused cognitive behavioral therapy and trained in interpersonal therapy for adolescents.

f. Social determinants of health

All WellCare assessments include an evaluation of social determinants of health. Maria leverages the power of our community partnerships to support Enrico and his family to better participate in care planning. Community Connections, our data base of over 335,000 resources offers Maria access to information on child-care, food, employment, health literacy, vocational

and other supports. Maria identifies the Cabbage Patch Settlement House to assist Camila with her younger children's needs. Cabbage Patch offers basic supplies (clothing, food) and assistance with rent, utilities and medical expenses. The Americana Community Center also helps Camila in learning English.

g. Community resources

Maria introduces Enrico to WellCare Works, which provides him with online tools, training, and other resources to promote social engagement and empowerment. WellCare Works serves as a complement to his Boys and Girls Haven learning plan and helps with finding on-the-job training and volunteer opportunities, resume writing; and community supports to address social barriers such as transportation to and from work. WellCare Works will get Enrico on the road to "being a man and not a bully" as his father has stated.

h. Aging out of foster care

Maria meets with Enrico and the DCBS Independent Living Specialist to create a plan for exploring career and secondary education options. Maria also works with Enrico to use our on-line life coaching app, JOOL. Our JOOL Life Coach mobile application is aimed at engaging and improving purpose in life of transition aged and former foster care youth to improve health and life engagement, energy (vitality), willpower (self-control), resilience, lifestyle change, and health care costs. Through a series of self-guided steps, Enrico completes a basic health screening. He enters his core values such as kindness, independence, family, tradition and his goals. After charting his daily progress, the app generates "Daily JOOLS", tips customized for him that get smarter over time to encourage Enrico to build a healthier lifestyle and taking responsibility for his health.

As Enrico reaches ages 17, 20, and 25, his transition plan will include an updated assessment of: home and community support's he needs for independence; social barriers to health and independence; educational or work place supports; risks such as medication compliance to stabilize his DMDD; and any specialized supports to address his BH needs such as Peer Support or other BH services. Enrico's CCT will help him understand the benefits and risks for remaining in foster care as well as transitioning out of custody so that he can make good decisions. The CCT will help Enrico weigh all his options when he turns 18 and plan for, if leaving care, where will he live, what income will he have, and plan for his health. If he stays in care, he can access independent living options that can support him with an apartment and access to supervision/mentoring to help him as he transitions into adulthood. Enrico is eligible for DCBS college support and WellCare's value added benefits of a Welcome Kit (e.g., towels, bedding, household supplies) for his dorm or apartment. The CCT will make sure Enrico knows the resources on campus and in the community and who contact.

i. Access to and sharing of medical records

Serving as the backbone and focal point of our electronic care management system, the CareCentral platform integrates physical and BH, pharmacy and community support information into our Care Coordination processes. Using this platform, Maria, Enrico's PCP, BH specialist, DCBS, community partners and the CCT have 24/7 role based access to a 360-degree view of Enrico's services and health status that incorporates key clinical, demographic, social

and lifestyle data. This view is continually refreshed, and Maria and the CCT are automatically alerted to updates in Enrico's information in real-time. CareCentral provides actionable data, such as care gaps, admissions, ED visits, claims and prescription history, authorizations and Clinical Practice Guidelines. WellCare will work with DCBS to fully automate the Medical Passport using functionality in our Member portal. This will include vital documentation such as birth certificates, so that SKY enrollees retain an up-to-date health portfolio, which follows them throughout DCBS and health care transitions.

j. Maintenance of the care plan

Enrico's care plan will be maintained electronically in CareCentral, including signed copies. Maria will review and update the care plan monthly; the care plan will reflect and include a detailed description of CCT members and their involvement in the Care Plan including Enrico's PCP, dental home, BH providers, specialist, community partners and caregivers. The care plan will include frequency and method for updating and revising goals, monitoring and follow-up activities.

G.13. USE CASE 6 - MARY

Mary is a five year old who was placed in foster care in Louisville when her mom left her in the car for six hours while visiting and drinking with friends. This is Mary's second placement in foster care within the past year.

Based on the initial assessment by her PCP, it was determined that Mary is deaf, has numerous dental caries, and is malnourished. She has almost no language (minimal speech) and has not been taught sign language. Her affect is flat, and she has almost no expression. After a more detailed assessment, Mary was diagnosed as being cognitively delayed.

The DCBS Social Service Worker was unable to locate medical, dental or pharmacy records, or evidence that Mary had been prescribed hearing aids. Mary's mother provided vague information about visits to a pediatrician, immunization history, and dental care.

Describe how the Vendor would address Mary's situation and coordinate with the DCBS Social Service Worker, parent, and providers. At minimum, address the following programs and services:
a. Care Management including coordination of multispecialty developmental evaluations and care;
b. Discharge planning for all levels of care;
c. Applicable evidence based practices;
d. School based services;
e. Social determinants of health;
f. Community resources;
g. Access to and sharing of medical records; and
h. Maintenance of the care plan.

G.13. USE CASE 6 - MARY

WellCare's discussion of this Use Case includes additional information about Mary and her family for the purpose of better demonstrating how we support KY SKY members. ***WellCare does not foresee any limitations or exceptions to providing the programs and services listed.***

Overall Approach and Assumptions: WellCare's approach to supporting Mary, starts with a comprehensive evaluation of her physical, behavioral, social service, and pharmacological needs. Our local approach to care planning is child focused and family centered. WellCare will leverage our long standing relationships with our network providers to fill in gaps in Mary's medical history and create a unified health record that will follow Mary, regardless of her location. In alignment with the DCBS case plan we will address her hearing and developmental needs, coordinate with the school, support the foster family and Mary's permanency plan.

Innovations for Mary

- Enrollment Outreach staff co-located with DCBS
- Streamlined access to care in one location

a. Care Management including Coordination of Multispecialty Developmental Evaluations and Care

Identification and Enrollment: Kim, a WellCare Field Outreach Coordinator who is co-located with the DCBS staff in Louisville is briefed on Mary's recent placement during her daily new enrollment meeting with DCBS. Kim works with the DCBS social worker to complete Mary's eligibility paperwork and confirms with the Child Benefit Worker that Mary's eligibility is complete. She will verify with the team that Mary is formally enrolled with WellCare. WellCare uses a fully integrated IT platform to enroll new members and immediately assigns Mary to a WellCare Team in Louisville. CareCentral, our care management system, is populated with one year's claims history, details from the 834 enrollment files and DCBS new enrollment report regarding Mary's services and providers. Kim alerts the Care Coordination Supervisor that Mary's records are missing and her health history is unclear, they discuss Mary's special needs and review options for a PCP and dental home. Kim shares this feedback with the DCBS social worker and Open Arms Children's Health where Dr. Matt Kinney will be assigned Mary's PCP is confirmed. In addition, Open Arms offers dental services and will become Mary's dental health home. Within 24-hours of her enrollment Mary is assigned to Jane, a WellCare Care Coordinator in Louisville who is a master's level social worker with early childhood experience, trained and certified in High Fidelity Wraparound. Kim uses the CareCentral messaging system so that Jane is aware of recent DCBS discussions and decisions. For the next 30 days, Jane will employ the high fidelity wraparound model to assess and develop Mary's care plan

Engagement with DCBS, DJJ, Youth, Family, Fictive Kin, Foster Parents, Guardians, Providers, School Staff: Jane immediately reaches out to the DCBS worker to gather Mary's foster family and CCT information. Jane obtains the DCBS Service Plan 106B and confirms DCBS case plan goals and the level of involvement of Mary's biological mother in care planning. Mary's biological mother Ellen, has not complied with her court ordered treatment and is currently unable to have contact with Mary. Jane ensures that all necessary consents and releases are entered in CareCentral. Jane also contacts Mary's former MCO to determine her level of engagement in care coordination. She will speak with her MCO counterparts to understand Mary's care plan and continuity of care needs. Jane learns that Mary's mother did not engage in her former MCO's care coordination program. Jane reviews Mary's claims history to identify past providers, labs, medications, hospital and ER visits. Jane will also access Mary's history through the Kentucky Health Information Exchange, including immunization records. Using CareCentral Jane is able to recreate Mary's provider history and see where gaps exists in her well-child visits, developmental, vision and lead screens and immunizations. Jane also verifies that Mary did not receive audiology services. Jane evaluates Mary's EPSDT screening history and resets her periodicity schedule based on her age, AAP Bright Futures guidelines and identified gaps. Jane forwards this information to the PCP. Jane reviews all the information gathered with the DCBS worker and together they agree on a case management plan.

Comprehensive Assessment: During Mary's first week of enrollment, Jane visits Mary's foster family, the Kelletts, to meet Mary and discuss her role as Care Coordinator. During her visit Jane explains the WellCare program. Jane verifies the information she has gathered from her file review and enrollment research. In addition, Jane asks the Kelletts a series of questions to determine if they have concerns or unmet needs in supporting Mary. Jane's goal is to gain a

holistic understanding of Mary's needs, caregiver strengths, needs, preferences, abilities, social service barriers, functional needs, physical and BH status, and goals, including the identification of: guardians/surrogate decision makers; urgent and short-term needs to accelerate access to care; youth and family supports, caregivers, and engagement with providers; back-up caregiver plans; emergency/crisis response plans; early childhood education and services.

The Kelletts outline multiple gaps in their information for Mary. They note that they have not had training in how best to communicate with Mary. They are concerned that Mary shows little to no affect. Jane discusses common behaviors secondary to hearing loss, as well those common to young children who have suffered neglect and who have been removed from their home. She offers education to support them in understanding what Mary may be experiencing. Jane's comprehensive assessment reveals a variety of factors influencing Mary's health:

Medical/Pharmacological	Behavioral	Social/Family/Cultural
• Gaps in EPSDT screenings • Missing most recent immunizations • Malnourished • Multiple dental needs • Hearing loss, no evidence of audiology services • No language development • Can complete ADLs with age appropriate non-verbal prompts	• Parental neglect and two placements this year disrupting attachment to care givers • Flat affect	• Supportive foster family, currently low risk of unplanned placement change • Foster family does not have consistent access to respite • Foster family has not received training specific to Mary's trauma or health needs • Limited social skills and interaction with peers • Foster Family does not know sign language
Educational	**Legal**	**Transitions**
• Recently assessed as cognitively delayed • No kindergarten or preschool history	• Mother not complying with court ordered treatment • No Guardian assigned	• 2nd placement in foster care this year

Integrated Care Planning and Care Coordination Team: Jane schedules a CCT team meeting for the following week. Jane reports that audiology and other services are being coordinated through an appointment with the Open Arms Children's Health Clinic at Home of the Innocents (HOI). Jane explains that Open Arms will provide a complete medical, dental and behavioral assessment, including pediatric audiology services and outpatient physical, speech and occupational therapies, nutrition and vision services. Because of our partnership with the HOI, Mary will be able to access services in one location. This alleviates the need to have the Kelletts coordinate across providers or schedule multiple appointments across the city.

Home of the Innocents also offers psychological services by Dr. Lisa Powell. Dr. Powell reviews Mary's recent cognitive assessments and will assess Mary for autism as well as failure to thrive. If autism is suspected, the team agreed on a referral to HopeBridge, a WellCare specialized

provider, for autism treatment. The CCT and the Kelletts discuss questions they have in understanding their role in making decisions for Mary relative to Mary's biological mother, DCBS and Guardian Ad Litem. The CCT clarifies roles and discusses an in-home support plan for the Kellett's to be guided by the results of Mary's HOI assessments. Mary's plan includes:

Member/Family Goal	Programs and Services	Focus Area
Foster Family: We want to better understand Mary's needs and how to help her	• Education and training on Mary's hearing loss by HOI	Communication
	• Education and training on Mary's trauma by HOI	Behavioral Health
	• Support groups and education from Kentucky Hands and Voices	Communication
	• Education and training on dental health by HOI on how to maintain Mary's dental health and identify when she might need urgent or emergent dental care	Oral Health
	• Education and training on nutritional needs by HOI	Physical Health
	• Respite Support supplemented by WellCare	Permanency
	• ASL classes at Southeast Christian Church	Communication
	• 24/7 Nurse Advice Line, with on-call staffing from nurses up-to-date in Mary's plan, behavioral and medical needs	Health

DCBS: We want to make sure all Mary's health needs are met	• Developmental evaluations at HOI for Mary's behavioral, and communication needs and determining her need for:
	  • Autism/failure to thrive
	  • Physical therapy
	  • Vision screening
	  • Speech language services
	  • Supplemental Nutrition
	  • Durable medical equipment/Communication Devices and hearing aids/diapers
		Physical and Behavioral Health

	• Supplemental Nutrition	Physical Health
	• In-home speech, OT/PT and nutrition as recommended by CCT	
DCBS: We want to complete Mary's IEP process	• Support and coordinate with Mary's IEP • Referral to the Heuser Hearing and Language Academy for Kindergarten	Educational

Care Plan Monitoring and Follow-up: Now that the assessments are completed and the initial care plan has been developed, WellCare's stratification engine, which factors in risks, cost and impactability as required in Section 41.10.2, is activated. Our stratification also factors in specific SKY criteria such as risk of placement change, and special health needs as well as a predictive modeling algorithm. Although Mary has an all-inclusive medical home and is stable, her special health needs triggers the Complex Care Management program. The team confirms a schedule for monthly team meetings to review Mary's care plan and how to access Mary's WellCare Member portal which will provide them with up-to-date information on her care plan, providers, upcoming appointments, care plan meetings and assessments. Jane monitors her progress and supports communication across providers through monthly care plan meetings, sharing of written progress notes and meeting summaries with CCT members.

b. Discharge planning for all levels of care

Decision on Mary's level of care will be guided by the results of her CANS and updated assessments competed by the Open Arms Children's Health Clinic. Discharge planning will be very slow for Mary because of the complexity of her needs. It will take time to assess her hearing needs and if hearing aids or potential surgery can assist. It will take time for her to learn to communicate any of her thoughts and needs to the adults around her. It will take time for the Kelletts to feel comfortable providing care to Mary without consistent support from the CCT and Home of the Innocents. Because of Mary's age and level of complex needs, her plan is updated monthly with careful attention to her service needs as she demonstrates progress. Speech therapy, occupational therapy, communication training, parent support of the Kelletts, and behavioral health services will be monitored monthly by the CCT and adjusted as needed. Once the assessment for autism has been completed and Hopebridge is engaged, discharge planning from Hopebridge will also be a gradual transition. Hopebridge provides education and therapy. Services range from 2 to 3 days a week for 3 hours to 8 hours daily. As Mary makes progress in her services, decisions to reduce frequency and intensity will be made.

c. Applicable evidence based practices

Jane will WellCare's Clinical Practice Guidelines to guide the physical and behavioral interventions in Mary's care plan, including Trauma-informed are and attention to Mary's hearing loss, dental care and developmental needs. Mary's audiology services will be provided by Little Ears within Home of the Innocents. Services will focus on identifying the level of Mary's hearing ability and will be guided by EPSDT special service guidelines to develop interventions. The primary work will be on helping Mary and the Kelletts communicate with each other. Mary will work on expressing her wants and needs, such as when she is hungry, sleepy or upset. The Kelletts will work on how to express encourage, praise and words of comfort. ASL classes will help both the Kelletts and Mary learn communication skills, which will supplement Mary's speech therapy. If needed, Hopebridge offers behavioral consultation and plans developed by a certified ABA providers. Mary's dental coverage will be provided through our Home of the Innocents in partnership with WellCare's dental provider, Avesis. Avesis has trained the dentists at Home of the Innocents in Sensi-Dentristry, a special needs dentistry program for individuals with special health care needs. The program includes: training for providers to help understand the needs of individuals with special health care needs; detailed assessment of the provider's ability to meet the needs of individuals with special health care

needs; a Find-a-Dentist tool to help families find dentists who have completed the Sensi-Dentistry training; education for families on how to be choose a dentist to meet an individual's needs; a pre-appointment visit for the child and family to meet the dentist and explore the dental office; provider reimbursement for additional time needed to serve individuals with special health care needs.

d. School based Services

Jane and the CCT determine that Mary's mother never enrolled her in pre-school or Kindergarten. DCBS sets up an IEP meeting and Jane provides the social worker with any up-to-date list of Mary's most recent assessments, to avoid duplication of diagnostic services. Jane and the team discuss the feasibility of enrolling Mary in Kindergarten with the Heuser Hearing and Language Academy. The Academy can support her with cognitive development and work on improving Mary's social skills.

e. Social determinants of health

All WellCare comprehensive assessments include an evaluation of social determinants of health for both Mary and her caregivers. Jane will assess the Kellett's needs such as health literacy, food security, peer support, economic security, child-care and transportation. Jane has direct access to Community Connections, our data base of over 335,000 resources supporting these social service needs. The Southeast Christian Church, who is teaching ASL, also has support services as part of their ministries and the Orphan's Care Alliance, located in Louisville, can be a direct support to the Kelletts. Jane also engages the assistance of WellCare's peer support parent, Brittany, to help guide and support the Kelletts as they access services, appointments and address Mary's needs. Making sure that Mary is able to be warm, have access to food, have a safe place to sleep, have clean clothes, and people to respond to her attempts to communicate is paramount.

f. Community resources

Acknowledging the importance of ongoing support for the foster family, Jane refers the Kelletts to Kentucky Hands & Voices. This parent-driven organization provides families with resources and information needed to improve communication and learning outcomes for children who are deaf. The Kelletts have access to emotional and social guidance with the "Guide By Your Side" family support program. By enrolling in the program, a specially trained "guide", who is a parent of a child who is deaf or hard of hearing, would be assigned to support them as they foster Mary. The guide will answer questions and address any reservations they might have in supporting Mary. Jane also discusses American Sign Language classes for the Kelletts that are offered free at Southeast Christian Church. As their skill level grows, the Kelletts also support Mary's sign language acquisition at home and better understand her social support needs. The Kelletts may also access education and support through the Kentucky School for the Deaf, Statewide Family Support Center. The Center provides workshops, resources, and networking with other families.

g. Access to and sharing of medical records

Serving as the backbone and focal point of our electronic care management system, the CareCentral platform integrates physical and BH, pharmacy and community support information into our Care Coordination processes. Using this platform, Jane, Mary's PCP, BH

specialist, DCBS, community partners and the CCT have 24/7 role based access to a 360-degree view of Mary's services and health status that incorporates key clinical, demographic, social and lifestyle data. This view is continually refreshed, and Jane and the CCT are automatically alerted to updates in Mary's information so that they can quickly identify any needs and address them in real-time. CareCentral provides actionable data, such as care gaps, admissions, ED visits, claims and prescription history, authorizations and Clinical Practice Guidelines. WellCare will work with DCBS to fully automate the Medical Passport, including vital documentation such as birth certificates, so that that SKY enrollees will retain a comprehensive summary and up-to-date health portfolio, which follows them throughout DCBS and health care transitions.

h. Maintenance of the care plan

Mary's care plan will be maintained electronically in CareCentral, including signed copies. Jane will review and update the care plan monthly, the care plan will reflect and include a detailed description CCT members and their involvement in the Care Plan including the Mary's PCP, dental home, BH providers, specialist, community partners and caregivers. The care plan will include frequency and method for updating and revising goals, monitoring and follow-up activities.

G.13. USE CASE 7 - JULIE

Julie is a 17-year-old who has been in the foster care system for ten years. She has minimal contact with her family.

Julie has been placed in residential care. She has been diagnosed with an intellectual disability and low IQ and has a long history of mental health treatment in outpatient and inpatient settings. She has highly variable emotional states, typically brief in duration and reactive to circumstances.

At the time of admission to residential care Julie's medication regimen included chlorpromazine, fluoxetine, lurasidone, lamotrigine, trazodone, and oxcarbazepine. There is limited information about the chronology of medication treatment and no records of psychotherapy services. Julie is not able to provide much information about her response to the medication regimen, and there are no other sources of information. She continues to demonstrate frequent shifts in emotions and aggressive behaviors. On one occasion, she became physically aggressive, which led to assault charges and a 72-hour incarceration.

The Social Service Worker and behavioral health providers are evaluating treatment in a setting that is a lower level than acute care but more structured than a PRTF.

Describe how the Vendor would address Julie's situation and coordination with the DCBS Social Service Worker, and physical and behavioral health providers. At minimum address the following programs and services:

a. Care Management;
b. Discharging planning for all levels of care;
c. Prescribing psychotropic meds and documentation in medical records (e.g., rationale);
d. Evidence based psychotherapeutic interventions;
e. Viability of aging out of foster care;
f. Option for transitioning to an applicable waiver;
g. Access to and sharing of medical records; and
h. Maintenance of the care plan.

G.13. USE CASE 7 - JULIE

WellCare's discussion of this Use Case includes additional information about Julie and her family for the purpose of better demonstrating how we support KY SKY members. ***WellCare does not foresee any limitations or exceptions to providing the programs and services listed.***

Overall Approach and Assumptions: WellCare's approach to supporting Julie starts with a comprehensive reevaluation of her physical, behavioral, social service and pharmacological needs. Our Pharmacy, Medical and Long Term Services and Support (LTSS) specialist will provide consultation and guidance to Julie's Care Coordination Team (CCT). Julie's level of care determination will be guided by evidence based clinical practice guidelines that take into

Innovations for Julie

- Enrollment staff co-located with DCBS
- Technology enabled Medical Passport
- Long standing partnerships with Maryhurst and other specialized providers

account behavioral and physical health needs of persons with an ID/DD. In alignment with the DCBS case plan we will work to identify the least restrictive, most clinically appropriate and integrated care setting for Julie as she transitions to adulthood.

a. Care Management

Identification and Enrollment: WellCare uses a fully integrated IT platform to enroll new members and immediately assigns them to a WellCare Team. CareCentral, our care management system, is populated with one year's claims history, details from the 834 enrollment files and DCBS new enrollment report regarding Julie's services and providers. Kaya, our WellCare Field Outreach Coordinator, who is co-located with DCBS, alerts the Care Coordination Supervisor that Julie is in an out-of-state residential placement and requires expedited assessments and appointment scheduling. Kaya verifies that all paperwork is submitted and that Julie's WellCare enrollment is complete. This includes the selection of PCP with Julie's DCBS Social Service Worker (SSW) that is familiar with working with enrollees who have ID/DD and mental health challenges. Within 24-hours of her official enrollment with WellCare Julie is assigned to Sharon, a WellCare Care Coordinator who has experience working with individuals with ID/DD and who is trained and certified in High Fidelity Wraparound. For the next 30 days, Sharon will employ the high fidelity wraparound model to assess and develop Julie's care plan.

Engagement with DCBS, DJJ, Youth, Family, Fictive Kin, Foster Parents, Guardians, Providers, School Staff: Sharon reviews Julie's enrollment information and contacts her DCBS Social Worker (SSW) to discuss Julie's most recent case plan activity and obtains the DCBS Service Plan 106B. The DCBS social worker indicates that a referral was made to Purchase Youth, however due to her low IQ, recent aggression, assault charges Purchase Youth declined Julie's referral. Because of the complex and specialized nature of Julie's enrollment profile, DCBS works with the Children's Review Program to refer to the Maryhurst 5S Pathways to Permanency program. Maryhurst accepts Julie and she is admitted to the program. Maryhurst partners with Dr. Elaine Martin for primary care services. Sharon works with DCBS to assign Julie to Dr. Martin for PCP assignment and Foundations Family Dentistry as her dental home. Sharon confirms whether Julie's family is part of her CCT. The DCBS worker shares that Julie's only remaining family is an Aunt who maintains minimal contact. Sharon confirms Care Coordination Team (CCT) membership including Julie's Guardian Ad Litem, the residential program, Julie's aunt if she can be located, and DCBS social worker. Julie is also a member of the team, however her DCBS social worker has reservations about Julie's ability to actively participate. Sharon and the SSW agree on a case management plan. Sharon schedules a visit to the residential facility, within the week, to meet with Julie and her Guardian Ad Litem (GAL).

Comprehensive Needs Assessment: Sharon's goal in meeting with Julie and her guardian is to gain a holistic understanding of Julie's needs and personal strengths, caregiver strengths, preferences, abilities, social service barriers, physical health and BH status, and goals, including the identification of: guardians/surrogate decision makers; urgent and short-term needs to accelerate access to needed services; social service needs and barriers; youth and family support community, caregivers, and engagement with providers; back-up caregiver plans; emergency/crisis response plans; school, post-secondary education; and vocational needs.

Sharon is trained in all aspects of person-centered planning, which includes proven methods for engaging Julie in the process. Sharon explains to Julie and the GAL who she is and how she helps people sort out where they want to live and what they like to do during the day. Sharon spends time with Julie on the first visit to get to know her. Sharon asks Julie about her likes and dislikes and who she likes to spend time. Julie responds in simple one or two word answers, but asks to go outside after about 20 minutes. Julie's GAL indicates she has had Julie on her caseload for approximately four years. Sharon learns that Julie is an only child and suffered neglect and abuse as a young child. Julie's aunt is her only surviving family and is not able to support Julie due to her own cognitive limitations.

During her first week of interviews with the GAL, residential staff, Julie's DCBS history files and claims data Sharon attempts to recreate when and why various medications where added to Julie's regime. The goal of Sharon's research is to identify the behavioral triggers and antecedents for each of the medications. Sharon's research uncovers reports of Julie wandering away during the day, trying to climb out windows at night, and screaming at staff uncontrollably. Maryhurst staff report that Julie has a disrupted sleep cycle whereby she is up at night and dozes many times during the day. The results of Sharon's comprehensive assessment reveals a variety of factors influencing Julie's health:

Medical/Pharmacological	Behavioral	Social/Family/Cultural
• No PCP or dental history • No recent adolescent well care visits • Multiple antipsychotic medications • Julie appears active and likes to swing and play outside after dinner • Able to perform all ADLs • Julie cannot perform IADLs	• Trauma/early sexual abuse, and neglect untreated • Unstable mood, inadequate treatment • No BH provider history • No recent psychological or functional assessments • Problems sleeping • Effectiveness of medications unclear	• Minimal contact with Aunt, only surviving relative • Julie cannot engage in community activities unsupervised • Julie does not have a support network and does not affiliate with a 'hometown' • English is primary language • No affiliation with religion or culture
Educational/Vocational	**Legal**	**Transitions**
• In residential school program, often dozes off • No recent cognitive or functional assessments	• Involved Guardian Ad Litem • No family or Fictive Kin to serve as guardian	• No LTSS planning or applications completed

Integrated Care Planning and Care Coordination Team: Sharon consults with the WellCare Pharmacy and Medical Director to review Julie's current medication list. During her meeting with the Maryhurst staff they provide Sharon with a list of six different medications, with no medication history, data on effectiveness or recent PCP reconciliation. Using the WellCare automated system, the Pharmacy team identifies at least fifteen serious drug-drug interactions.

The Medical Director works directly with Dr. Nichols at Maryhurst to coordinate a review of Julie's medication with DCBS; together with the WellCare Pharmacist, they determine what meds to stop and which to titrate to a lower dose. WellCare uses a shared decision making process to develop a safe and measured approach to deprescribing whereby they discuss the risks associated with each medication and drug-drug interactions, as well as potential side effects of each medication. Sharon schedules check-ins weekly between Medical staff at the facility and the WellCare pharmacy and BH specialist to discuss Julie's physical and behavioral health needs as her medications are adjusted and her behaviors are carefully documented by the Maryhurst team. Julie's initial Care Plan goals and focus areas include:

Member/Family Goal	Programs and Services	Focus Area
Julie: I want to be happy	• Julie will received trauma-informed therapy from a Maryhurst therapist with experiencing working with youth with ID/DD	Behavioral Health
GAL: I want Julie to get consistent evidence based care	• Julie will be assigned to Maryhurst PCP Dr. Elaine Martin	Physical Health
	• Trauma-informed dental assessment	Oral Health
	• Medication assessment and monitoring with Dr. Nichols at Maryhurst	Physical and Behavioral Health
	• Maryhurst will create an individualized plan to assess and develop skills to live as independently as possible in the least restrictive setting	LTSS
	• Maryhurst will determine Julie's eligibility for an SCL waiver and prepare necessary applications	LTSS
GAL: I want Julie to received individualized educational supports	• DCBS and Maryhurst will work with Julie's IEP team to update and align her IEP with most recent assessments	Education

Care Plan Monitoring and Follow-up: Now that the assessments are completed and the initial care plan has been developed, WellCare's stratification engine, which factors in risks, cost and impactability as required in Section 41.10.2, is activated. Our stratification also factors in specific SKY criteria, such as placement changes and medication history as well as a predictive modeling algorithm. Because Julie transitioned from out of state to a new facility and has multiple unmet needs, she remains a Complex Care Coordination program until her medications are stable and all dental, PCP and behavioral health and educational assessments are completed. Sharon's monitoring and on-going follow-up with Julie and her caregivers is designed to coordinate all aspects of her care and ensure communication across providers, Maryhurst, her guardian and DCBS. Sharon monitors her progress and supports communication across providers through monthly care plan meetings, sharing of the signed care plan, written

progress notes and meeting summaries with CCT members. In all CCT meetings, Julie will be invited and encouraged to share her voice regarding her care. If she continues to struggle with this, Sharon will connect the WellCare Youth Peer Support team member, Athenia, to meet with Julie and help guide her through the CCT process. Athenia is a former foster youth with lived experience in the foster care system. She has an idea of what Julie is going through and can offer support and guidance.

b. Discharge planning for all levels of care

Should Julie require hospitalization, Sharon will work with Maryhurst to ensure that a bed-hold is authorized and Julie's supports are maintained. During the course of any hospitalization Sharon works with the hospital based planning team, DCBS and Maryhurst staff to create a safe and successful discharge to Maryhurst. If it is determined that Maryhurst is not able to care Julie's changing needs, Sharon will work with DCBS to develop a plan for her step down. As Julie begins to stabilize and make treatment progress, discharge planning will be focused on reducing the frequency and intensity of her treatment services. This will begin with decreasing the amount of time needed for individual therapy and group therapy. Julie will begin to demonstrate better self-care skills and demonstrate that she can be away from 24-hour a day supervision at small amounts of time. As this happens, Julie will be able to go for walks without staff, go on outings in the community, and possibly volunteer or find a part time job. Eventual discharge from Maryhust will also be discussed and planned. Because of Julie's age of 17, it is likely that she will turn 18 while still in treatment at Maryhurst. Depending on the treatment progress made, Julie will have different options to consider for her discharge plan. The CCT will monitor Julie's progress carefully. The DCBS worker and GAL will determine if Julie will be able to provide her own self-care as an adult or if she will need a structured setting with supervision as an adult. Options for discharge are discussed as part of the planning process. To be in compliance with Family First Preservation Services Act, the CCT engages Centerstone to complete the CANS assessment every three months. This assessment confirms that Julie continues to need the qualified residential treatment provider level of care and can remain at Maryhurst. If at any time the CANS assessment determines that Julie is ready for a home environment, the CCT will work to identify an appropriate home environment to meet her needs.

c. Prescribing psychotropic meds and documentation in medical records (e.g., rationale)

Sharon ensures that all consents and releases are obtained, properly executed and included in Julie's electronic record. The WellCare Medical and Pharmacy Directors consult with Julie's guardians and providers to help them understand the risks and benefits of each medication and answer any questions they may have. WellCare Medical Director and Pharmacy Directors will consult with Julie's guardian and providers to ensure that her medication protocol is designed to stabilize her mood and support her participation in care planning. Sharon will monitor Julie's claims and PCP reports in CareCentral to ensure that Julie is receiving routine bloodwork and health checks. Because WellCare is a fully integrated health plan, our physical and behavioral health, and pharmacy staff are available to Julie, the Maryhurst staff, providers and Julie's family to meet and discuss questions, concerns and options. All pertinent information such as dosage, frequency and duration are recorded in CareCentral, side effects and red flags are

documented and Sharon reviews them with the Maryhurst staff during monthly care plan meetings.

d. Evidence based psychotherapeutic interventions

WellCare embraces a fully integrated approach to care, built on evidence-based and best practices. Our Clinical Practice Guidelines integrate physical and behavioral health considerations and address availability, accessibility, coordination and continuity of care. WellCare protocols rely on evidence based practices in trauma informed and responsive care, High Fidelity Wraparound, Child and Adolescent Mental Health, understanding families and the impact of adverse childhood events (ACES), Cognitive Behavioral Therapy (CBT), crisis stabilization and more. Sharon will use these Clinical Practice Guidelines to support evidence based practice and guide psychotherapeutic interventions in Julie's care plan to address her sleep issues and trauma. Maryhurst has therapists available with specific training and certification in trauma focused cognitive behavioral treatment and are skilled in working with individuals with intellectual disabilities. Maryhurst also employs the Building Bridges Initiative model. This model is focused on ensuring that Julie has her voice in her treatment and life planning as well as ensuring her safety through the reduction in seclusion and restraint. Because of the trauma informed model Maryhurst and the CCT uses, Julie begins to feel safe, begins to discuss her memories of trauma, and begins to find her voice in her treatment and life planning.

e. Viability of aging out of foster care

Even though Julie is beginning to make small increments of treatment progress, Julie's GAL and Maryhurst team indicate that Julie is unable to navigate a transition out of foster care. Sharon meets with Julie's GAL and the Maryhurst staff to create a plan for exploring waivers and home and community based services and supports as Julie moves into adulthood. At each juncture in Julie's life, her transition plan will include an updated assessment of: home and community support's Julie needs for independence; social barriers to health and independence; educational or work place supports; health status; risks such as medication compliance; and any specialized supports to address her behavioral health needs; communication devices, adaptive equipment or home modifications. While Julie is upset that she will not be able to be on her own at 18, she is gaining insight that she does need help and support. Julie begins to identify the types of supports she may need and what helps her the most. Julie is able to state that she needs help remembering to take her medication, remembering her coping skills when she gets upset, and needs to know someone is around to help when she needs that help. It is decided with Julie's agreement that she will recommit to DCBS at age 18 and will continue in care until age 21. During those three years, Julie will continue her treatment at Maryhurst, transitioning into Treasure Home, a community based home under the Maryhurst continuum of care. At Treasure Home, she will practice her "adulting" skills yet have the support of staff that she has verbalized she needs. Treasure Home helps her prepare for eventual transition into Supportive Community Living (SCL). Sharon ensures that the Treasure Home staff are aware of and access to WellCare Works, our suite of online tools that helps Julie and her providers learn about jobs and find volunteer and paid employment options to support her to be as independent as possible. Prior to her 21st birthday, DCBS will refer her to a SCL provider.

f. Option for transitioning to an applicable waiver

Sharon works with Julie, DCBS and the GAL to outline a timeline for Julie's eligibility determinations and waiver application. Sharon identifies all social service needs including housing, transportation, food, peer support, assistance with utility payments, etc. Sharon collaborates with the CCT to begin the Supported Community Living waiver application for Julie. Julie is referred to Centerstone for the application process to begin. Once the application process has concluded, including any testing needed that identify Julie's need for this type of long term program, Julie will be placed on the SCL wait list. Because Julie will essentially be homeless if she has to leave Maryhurst, she will be placed at the top of the SCL waitlist and classified as "emergency".

g. Access to and sharing of medical records

Serving as the backbone and focal point of our electronic care management system, the CareCentral platform integrates physical and BH, pharmacy and community support information into our Care Coordination processes. Using this platform, Sharon, Julie's PCP, BH specialist, DCBS, community partners and the CCT have 24/7 role-based access to a 360-degree view of Julie's services and health status that incorporates key clinical, demographic, social and lifestyle data. This view is continually refreshed, and Sharon and the CCT are automatically alerted to updates in Julie's information so that they can quickly identify any needs and address them in real-time. CareCentral provides actionable data, such as care gaps, admissions, ED visits, claims and prescription history, authorizations and Clinical Practice Guidelines. WellCare will work with DCBS to fully automate the Medical Passport using functionality in our Member portal. This will include vital documentation such as birth certificates, so that SKY enrollees retain a comprehensive summary and up-to-date health portfolio, which follows them throughout DCBS and health care transitions.

h. Maintenance of the care plan

Julie's care plan will be maintained electronically in CareCentral, including signed copies. Sharon will review and update the care plan monthly, the care plan will reflect and include a detailed description CCT members and their involvement in the Care Plan including the Julie's PCP, dental home, BH providers, specialist, community partners and caregivers. The care plan will include frequency and method for updating and revising goals, monitoring and follow-up activities.

G.13. USE CASE 8 - AMANDA

Amanda, 10 years old, was born with multiple heart defects that affected blood flow between her heart and lungs. Amanda was placed into foster care when she was five (5) after her mother, a substance abuser, was incarcerated for neglect of a dependent. She has had multiple openheart surgeries, bouts of pneumonia, and frequent ED visits. Amanda's initial placement was with her aunt who could no longer care for her due to the stress of managing Amanda's level of care. Amanda's second foster home placement is with a family located in eastern Kentucky with two (2) additional foster children, ages 6 and 8, in the home. The family has one car and transportation is an issue when it is needed to transport Amanda to appointments with her PCP, pediatric cardiologist, behavioral health therapist, dentist, and other specialists. Amanda's foster father works full-time as an assistant bank manager and her foster mother does not work outside of the home.

Amanda is on thirteen (13) medications and is oxygen dependent. She frequently exhibits behaviors such as defiance, impulsivity, and disruptiveness. She has been diagnosed with depression and has extended crying spells that trigger tachycardia and cyanotic episodes. Amanda has growing fatigue and is refusing to eat anything other than yogurt, fruit, and breakfast cereal. Amanda has multiple caregivers who assist with activities of daily living, medication management, and monitoring oxygen levels. Amanda participates in home bound school services provided by the public school system, as her health permits.

Over the past six months, Amanda has been to the emergency room nine (9) times for respiratory/cardiac distress. She had three inpatient admissions for pneumonia and evaluation of her cardiac status. During her last visit with the pediatric cardiologist, the family was advised that Amanda's oxygen levels were worsening with significant changes in cardiac function. The pediatric cardiologist recommended another open heart surgical procedure, but advised the family that a heart transplant may be the only viable long-term solution. The foster family met with the cardiologist's Nurse Practitioner to develop a plan for building Amanda's strength prior to surgery or placement on a transplant list. The foster family is struggling to figure out how to keep up Amanda's spirits up and improve her appetite.

Amanda meets the designation of a Medically Complex Child pursuant to 922 KAR 1:350, The Kentucky SKY Contractor is responsible for providing Care Management and nursing consultative services to enrollees who are determined by the Medical Support Section staff to be Medically Complex.

Describe how the Vendor would address Amanda's situation and coordination with the DCBS Social Service Worker, Medically Complex Liaison, foster family, all providers, and community resources. At minimum, address the following programs and services:
a. Care management, including the assignment of the Nurse Case Manager;
b. Involvement of Medically Complex service team;
c. Discharge planning between levels of care;
d.Individual Health Plan development and maintenance within specified timeframes;
e. Availability of and access to providers;
f. The Medical Passport;
g. Training and support for caregivers;
h. Coordination of transportation, as needed;

i. Coordination of physical and behavioral health services;
j. Community resources;
k. Assistance with the Individualized Education Plan;
l. Social Determinants of Health;
m. Planned respite care;
n. Applicable evidence-based practices;
o. Sharing and review of medical records; and
p. Maintenance of the care plan.

G.13. USE CASE 8 - AMANDA

WellCare's discussion of this Use Case includes additional information about Amanda and her family for the purpose of better demonstrating how we support KY SKY members. ***WellCare does not foresee limitations or exceptions to providing the programs and services listed.***

Overall Approach and Assumptions: WellCare understands that medically complex youth, such as Amanda require an integrated approach to care. Our Transplant Team works seamlessly with the Care Coordination Team to assess and create an integrated plan for her developmental, behavioral and physical health, pharmacological, educational and social service needs, as well as the needs of her caregivers.

Innovations for Amanda

- Enrollment Outreach staff co-located with DCBS
- Integrated behavioral and physical health care
- Remote patient monitoring

a. Care management, including the assignment of the Nurse Case Manager

Identification and Enrollment: Amanda's comes to the attention of Kim, a WellCare Field Outreach Coordinator who is co-located with the DCBS staff in Laurel County. Kim confirms that Amanda's transition of care paperwork is complete, and Amanda has been enrolled with WellCare. This includes the selection of PCP with Amanda's DCBS Social Service Worker (SSW) who matches the needs of Amanda and her foster parents. Amanda receives her pediatric services, including cardiology through University of Kentucky Health Care and receives dental services through Dr. Ronald Dowell. Kim sends Amanda's case summary and most recent Individualized Health Plan (IHP) directly to the WellCare Nurse Case Management supervisor. The Case Management Supervisor immediately assigns Amanda to Molly, a WellCare Nurse Case Manager who is an RN trained and certified in High Fidelity Wraparound. Molly outreaches, to Amanda's former MCO and speaks directly with her MCO counterparts to understand Amanda's health status and continuity of care needs. Molly verifies that all necessary authorizations are entered and approved in CareCentral, our WellCare integrated care management system. Molly also alerts the WellCare Medical Director and Transplant Team to Amanda's medical history. Molly will employ the high fidelity wraparound model to assess Amanda's care coordination needs, her Individualized Health Plan and develop a care plan

Engagement with DCBS, DJJ, Youth, Family, Fictive Kin, Foster Parents, Guardians, Providers, School Staff: Molly contacts the Medically Complex Liaison and DCBS SSW to verify Amanda's CCT membership and contact information. Molly and the SSW confirm DCBS case plan goals, review the DCBS Service Plan 106B and agree on a case management plan. Molly confirms the

level of involvement of Amanda's family in her care. Although she was overwhelmed with caregiving, Amanda's Aunt is not restricted from seeing Amanda. Molly ensures that all necessary releases are authorized and entered in CareCentral. CareCentral is automatically populated with one year's claims history upon enrollment so that Molly can evaluate care gaps and identify providers. During her first week, Molly schedules an in-home meeting. While Molly is engaging with Amanda and the foster family, the WellCare Medical Director and Transplant Team reaches out to Amanda's cardiologist to discuss her profile and most recent health issues.
Comprehensive Needs Assessment: During Molly's first home visit, she verifies the information gathered from her file review. Molly learns that the Rings have two other foster care children in the home with medical needs, whose conditions are stable. Because the children were placed at different times, from different regions, they received services from different health plans and provider networks. The Rings report that they spend a great deal of time coordinating provider visits and in-home caregivers. The Rings are committed to Amanda and concerned they don't understand her behavior and finicky appetite. Molly explains the WellCare program and discusses her role as a Nurse Case Manager. Molly's goal is to gain a holistic understanding of Amanda's needs, caregiver strengths, needs, preferences, abilities, social service needs and barriers, functional needs, physical and BH status, and goals, including the identification of: guardians/surrogate decision makers; urgent and short-term needs to accelerate access to care; youth and family supports and caregivers; engagement with providers; back-up caregiver and emergency plans; education and developmental services.
Molly meets with Amanda and asks her a series of questions about what she enjoys doing, how she spends her free time and who is important to her. Amanda talks about her Aunt and how she enjoyed living with her. Amanda reports that she still talks to her Aunt on the phone and sometimes her Aunt comes to visit her at the Rings house. Amanda reports not liking very many things to eat and how sad and frustrated she gets when she can't do things. She misses her friends. Molly's assessment reveals a variety of factors influencing Amanda's health:

Medical/Pharmacological	Behavioral	Social/Family/Cultural
• Multiple heart defects • History of pneumonia and ED use • Fatigue and refusing to eat all but limited menu items • Multiple medications	• Early childhood trauma/neglect • Depression, with crying that triggers tachycardia and cyanotic episodes • Misses her Aunt and other friends • Defiance, impulsivity, can be disruptive	• Supportive foster family, moderate to high risk of unplanned placement change due to care giving burden • Foster family has multiple medically fragile children in the home with differing services and in-home providers • English Amanda's primary language • Family has one car
Educational	**Legal**	**Transitions**
• Home Bound IEP plan	• Mother incarcerated • Guardian Ad Litem	• Complex Medical issues making transitions more difficult

Integrated Care Planning and Care Coordination Team: Molly schedules a care planning meeting with the Rings, DCBS and the Medically Complex Liaisons. Molly guides the Care Plan conversation based on her most recent assessment and talks about the alignment of Amanda's Individualized Health Plan (IHP) with her Care Plan. The team agrees that UK HealthCare will serve as Amanda's medical home. Her PCP with Parkway Pediatrics will offer a location for telehealth visits, consults and coordinate with UK and her dental provider as needed. The CCT agrees that the IHP, Care Plan and CCT activities will be combined into a unified care plan driven by the UK's medical team with WellCare support for Amanda and the Rings. The UK team also schedules an evaluation for Amanda with a UK psychiatrist familiar with working with children who have medically complex needs and depression. In addition, an OT/PT/Speech Language evaluation will be scheduled to work on her strength and to determine if her eating habits are due to sensory or other issues. The UK psychiatrist and medical team will consult with the foster family and Amanda's local therapist to address her crying and depression and determine how to best address her eating habits. During her care plan discussions with Molly, Amanda expressed an interest in having more predictable visits with Aunt. DCBS agrees that Molly can extend an invitation for the Aunt to join the CCT. Molly will also talk with her about providing back-up care and respite. Lastly, Molly recognizes that stability of foster placement is essential for Amanda to maintain her medical team and focus on her strength. Molly ensures that the Rings have the support they need to care for Amanda and their other foster children. Molly asks her WellCare colleagues supporting the other foster children in the Rings home to meet jointly so that they can develop:

- A coordinated plan for all in-home services supporting the children to minimize disruptions and improve predictability of household and transportation schedule
- A plan with the 24/7 Nurse Advice Line that includes alerting the Nurse Case Manager familiar with Amanda's needs and those of the other youth in the Rings home.
- Routine respite for the Rings, whereby they have no caregiving responsibilities for any of the three foster youth

Amanda's care plan includes:

Member/Family Goal	Programs and Services	Focus Area
Amanda: I want to talk to my Aunt more often	• Amanda and her Aunt will talk every Sunday night	Behavioral Health
Amanda: I want to see my friends from my Aunt's neighborhood	• Amanda and the Rings will set up 'virtual visits' for Amanda and her friends via Skype on her WellCare issued tablet	Behavioral Health
Foster Parent: We want Amanda to be happy and to eat	• Amanda will be evaluated by a UK psychiatrist familiar with medically complex children	Behavioral Health
	• Amanda will meet with a therapist via telehealth service to help her process early trauma, depression and her feelings on having a limiting health condition	Behavioral Health
Foster Parent: We want to support Amanda the best we can	• Transportation support through "Healthy Stops"	Physical Health
	• WellCare supported Foster parent respite to augment DCBS respite hours	Permanency

Member/Family Goal	Programs and Services	Focus Area
	• Behavioral health consultation and education for the Rings to understand Amanda's challenges and create an in-home plan to address her behavior	Behavioral Health
	• Coordination of all in-home caregiving schedules	Permanency
Amanda: I don't want to be sick anymore	• Attend all scheduled cardiologist visits and follow doctor recommendations • Set up office-based and telehealth check ins with physician office for monitoring	Physical Health
DCBS: We want Amanda to get stronger	• Nutritional consultation and supplemental nutrition	Physical Health
	• OT/PT/speech language evaluation and in-home follow-up as determined	Physical Health
	• In-home respiratory services and remote patient monitoring	Physical Health

Care Plan Monitoring and Follow-up: Molly's care plan monitoring and on-going follow-up with Amanda and her caregivers is designed to coordinate all aspects of her care and ensure provider communication. Amanda will remain a Complex Care Coordination enrollee. Molly will stay in contact with the Rings at least weekly, including two face to face visits with Amanda and a monthly plan update. Molly provides CCT members with up-to-date information on Amanda's care, providers, upcoming appointments, care plan meetings and assessments. Molly sends meeting invitations, summaries, reminders and a signed copy of the IHP and Care Plan.

b. Involvement of Medically Complex service team. Molly is part of a team of Nurse Case

Managers who are specifically trained to work with the Medically Complex Service Team. Within the first 30 days, Molly works with the Medically Complex Liaison to schedule a meeting to review and update Amanda's IHP. The WellCare Medical Director, Pharmacy Director, Behavioral Health Medical Director and Transplant Team Coordinator also attend the first IHP meeting. Molly ensures that the DCBS SSW, Family Services Office Supervisor (FSOS), Medically Complex Liaison, foster parents, caregivers, Amanda's aunt, and other providers are invited to each IHP meeting. Molly provides consultation services to Amanda's SSW, FSOS, foster parents, and caregivers and works directly with the Medically Complex Liaison and care team to answer questions, assess and address barriers to care. Molly will distribute the signed copies to the medically complex service team members. Every three months the team will re-evaluate the IHP and services. Every 6 months, a new IHP will be developed.

c. Discharge planning between levels of care

Our contract agreements require that hospitals notify us when a SKY enrollee has been admitted to the hospital (ED or Inpatient). Molly works directly with hospital staff to reassess Amanda's needs. Molly and CCT add a remote patient monitoring program to Amanda's plan to help minimize the need for ED visits. Amanda receives a pulse oximeter which measures the amount of oxygen in her blood and send updates directly to Molly and her physician, in real time, to proactively address signs of a worsening condition. Through telehealth, Mrs. Ring is able to connect with Amanda's cardiologist nurse practitioner and determine if an earlier appointment is needed or if other urgent care is warranted. Amanda is also enrolled in our in-

home respiratory therapy program where a respiratory therapist visits two times weekly to assess Amanda's condition and report progress to her cardiologist. During all hospitalizations, Molly works with the hospital discharge team to assess Amanda's medical, BH and social service needs prior to discharge and to determine her ability to be safely transitioned. This includes meeting with the Rings to ensure their understanding of Amanda's health condition, any necessary medication protocols, including side effects and availability of refills as needed. Molly reviews the in-home caregiver schedule to make sure it aligns with the discharge plan. Molly provides scheduling assistance to ensure necessary follow-ups are scheduled prior to her leaving the hospital. Prior to the day of discharge, Molly confirms that all necessary in-home equipment has been delivered and the Rings and Amanda's caregivers are trained in its use. On the day of discharge Molly checks in with the Rings to answer any questions, review medication protocols, and reconciles Amanda's medications. Molly will continue with check-ins, daily if needed, and no less than weekly, until the Rings are confident in the routine and Amanda's condition is stable.

d. Individual Health Plan development and maintenance within specified timeframes

Molly will also ensure that the IHP is reviewed with the Medically Complex Liaison and team no less than every three months. Molly schedules a full IHP update meeting at least every six months. Molly verifies the contact information for Amanda's team and makes sure they have secure role based access to information via the WellCare member and provider portal which will provide them with up-to-date information on Amanda's care, providers, upcoming appointments, care plan meetings and assessments. Molly sends meeting invites, summaries, and a signed IHP.

e. Availability of and access to providers

WellCare of Kentucky currently has the largest network in the Commonwealth. We routinely works with UK HealthCare and other large health systems on behalf of enrollees who are medically complex. Our Care Coordinators, Medical and Pharmacy Directors work as part of one team, with care decisions driven by peer-to-peer discussions and authorizations verified as part of the care planning process.

f. The Medical Passport

WellCare will work with DCBS to fully automate the Medical Passport using functionality in our Member portal. This will include vital documentation such as birth certificates, so that SKY enrollees retain a comprehensive summary and up-to-date health portfolio, which follows them throughout DCBS and health care transitions. DCBS or the Rings can retrieve information as needed through the portal. Molly updates Amanda's passport so that Amanda always has a comprehensive summary and up-to-date health portfolio.

g. Training and support for caregivers

Molly will provide education and training for the Rings to understand Molly's medical and behavioral health needs as well as how to use remote monitoring and other equipment. The Rings have access to the 24/7 Nurse Advice Line that includes an alert to the Nurse Case Manager, familiar with Amanda's needs and those of the other youth in the Rings home. Molly will also provide education, in collaboration with Amanda's BH provider, regarding how to address her social and developmental needs in light of her early trauma and medical needs.

Molly explains that early neglect and her multiple placement changes may cause issues with attachment and relationship building. Molly will work Amanda's providers to develop a checklist for her home care and monitoring care routine. The checklist becomes part of Amanda automated Medical Passport to promote consistency across caregivers and settings. Through this teaching process, the foster family is better prepared to address Amanda's needs as they arise. Amanda's aunt will also participate in training and uses the checklist to monitor when Amanda visits.

h. Coordination of transportation, as needed

Molly works with the Rings to determine what level of transportation support they need. She provides them with information on the "Healthy Stops" a program built in partnership with WellCare and community agencies in Laurel County, that allows individuals to access Rural Transit Enterprises Coordinated, Inc. (RTEC) public transportation for medical trips; including dental, vision, behavioral health, primary care, pharmacy, labs, and any other doctor's appointments as well as education, trips for job placement, food access, and to non-profit organizations.

i. Coordination of physical and behavioral health services

Amanda's CCT is critical in supporting coordination between Amanda's physical and behavioral providers, including her dental home. While our provider agreements require this kind of collaboration from providers, Molly monitors and confirms collaboration is occurring by holding CCT meetings and check-ins with her foster home and providers. UK serves as her medical homes responsible for communication and integrated clinical care with her PCP and specialty providers.

j. Community resources

Molly connects the foster family to the Orphan Care Alliance (OCA), an organization dedicated to serving children and families affected by foster care and adoption. The OCA assist the Rings with education and support. The Family Support ministry offers trainings on trauma based on various intervention tools including Empowered to Connect, Trauma Competent Caregiving and Trust Based Relational Intervention (TBRI ®).

k. Assistance with the Individualized Education Plan

Currently, Amanda's IEP includes homebound education due to her fragile medical condition. As Amanda improves, the IEP will be adjusted to allow Amanda to attend school in small increments. With the permission of DCBS, Molly will reach out to the Family Resource Center Coordinator and IEP coordinator to communicate Amanda's improvement and help the school identify when it may be appropriate to adjust the IEP to accommodate Amanda's changing health needs.

l. Social Determinants of Health

To support the Rings in their challenges to find healthy foods that Amanda likes, Molly gives them information on how to access Come-Unity Cooperative Care. This community non-profit is a WellCare partner for food pantry services and can provide food items for Amanda to try. In addition, the Come-Unity Cooperative can support Amanda and the Rings with clothing and household needs to support Amanda's placement.

m. Planned respite care

Molly will review the Rings respite needs. She will ask whether in-home or out-of-home respite is most useful and what days and times are most supportive. Molly will supplement the Rings DCBS respite allowance, if needed, with WellCare's value-added benefit. Molly works with DCBS to develop a list of trained respite workers suitable to match Amanda's needs. She also talks with the Family Resource Center liaison about teachers and para-educators who may be interested in additional work outside of the classroom.

n. Applicable evidence-based practices

Providers in the WellCare network are trained in trauma informed care, the understanding of ACEs, and the American Academy of Pediatric Healthy Foster Care America guidelines. Dr. Ronald Dowell, Amanda's dentist, has been trained by WellCare's dental provider, Avesis in Sensi-Dentist, a program focused on helping dentists engage individuals with special health care needs. Because of her heart condition, Dr. Dowell has to be in constant contact with Amanda's PCP and cardiologist when providing care. Intrust Health Care uses an in-home trauma-informed cognitive behavioral treatment model. Amanda's therapist is able to engage the Rings in family sessions, helping them to gain more understanding of Amanda's trauma and triggers.

o. Sharing and review of medical records

Serving as our core electronic care management system, the CareCentral platform integrates physical and BH, pharmacy and community support information into our Care Coordination processes. Using this platform, Molly, Amanda's PCP, Cardiologist, DCBS, community partners and the CCT have 24/7 access to a 360-degree view of Amanda's services and health status. CareCentral provides actionable data, such as care gaps, admissions, ED visits, claims and prescription history, authorizations and Clinical Practice Guidelines. WellCare will work with DCBS to fully automate the Medical Passport using functionality in our Member portal. This will include vital documentation such as birth certificates, so that SKY enrollees retain a comprehensive summary and up-to-date health portfolio, which follows them throughout DCBS and health care transitions.

p. Maintenance of the Care Plan

Amanda's IHP and Care Plan will be maintained electronically in CareCentral, including signed copies. Molly will review and update the IHP monthly, as needed, based on her home visits and Medically Complex service team discussions and no less than every six months. The IHP will reflect and include a detailed description CCT members and their involvement in the IHP and signatures including Amanda's PCP, dental home, BH providers, specialist, community partners and caregivers. The Care Plan and IHP will include frequency and method for updating and revising goals, monitoring and follow-up activities.

J.

PERFORMANCE BOND

J. PROOF OF ABILITY TO OBTAIN PERFORMANCE BOND IN THE AMOUNT OF $30,000,000

Please see the attached letter which proves WellCare of Kentucky and WellCare Health Plans' ability to obtain a performance bond in the amount of $30 million. It is named **Attachment 60.6.J Performance Bond Letter.**

RE: WellCare Health Insurance of Kentucky, Inc. d/b/a WellCare Health Plans of Kentucky
Solicitation No: RFP 758 2000000202

To Whom it May Concern:

Since 2008, Liberty Mutual Surety has had the continued privilege of providing surety bonds for WellCare Health Plans, Inc. and their subsidiaries to include WellCare Health Insurance of Kentucky, Inc. d/b/a WellCare Health Plans of Kentucky. Liberty Mutual has provided favorable consideration to performance and payment bonds in excess of $30,000,000 in the past for WellCare on contracts in excess of $50,000,000. WellCare Health Plans, Inc. continues to remain an account in excellent standing with Liberty Mutual Surety and qualifies for significant surety credit.

Liberty Mutual Surety has reviewed Solicitation No: RFP 758 2000000202 for WellCare Health Insurance of Kentucky, Inc. d/b/a WellCare Health Plans of Kentucky and in our view WellCare qualifies for the underlying bond. At WellCare's request, Liberty will support the required performance and payment bonds.

You understand of course, that any arrangement for surety credit is a matter between WellCare Health Plans, Inc., their wholly owned subsidiary WellCare Health Insurance of Kentucky, Inc. d/b/a WellCare Health Plans of Kentucky, and Liberty Mutual Surety and we assume no liability to third parties or to you if for any reason we do not execute a final bond. Liberty Mutual Surety reserves the right to review terms and conditions of any proposal, contract documents, bond forms, financial arrangement and other underwriting considerations at the time of a final bond request.

Liberty Mutual Insurance Company has an A.M. Best rating of A, financial category XV, and US Treasury Listing of $1,289,139,000.

If you have any questions or need any additional information, please do not hesitate to contact me.

Sincerely,

Adam Rehn

This Power of Attorney is made and executed pursuant to and by authority of the following By-laws and Authorizations of The Ohio Casualty Insurance Company, Liberty Mutual Insurance Company, and West American Insurance Company which resolutions are now in full force and effect reading as follows:

ARTICLE IV – OFFICERS: Section 12. Power of Attorney.
Any officer or other official of the Corporation authorized for that purpose in writing by the Chairman or the President, and subject to such limitation as the Chairman or the President may prescribe, shall appoint such attorneys-in-fact, as may be necessary to act in behalf of the Corporation to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations. Such attorneys-in-fact, subject to the limitations set forth in their respective powers of attorney, shall have full power to bind the Corporation by their signature and execution of any such instruments and to attach thereto the seal of the Corporation. When so executed, such instruments shall be as binding as if signed by the President and attested to by the Secretary. Any power or authority granted to any representative or attorney-in-fact under the provisions of this article may be revoked at any time by the Board, the Chairman, the President or by the officer or officers granting such power or authority.

ARTICLE XIII – Execution of Contracts: Section 5. Surety Bonds and Undertakings.
Any officer of the Company authorized for that purpose in writing by the chairman or the president, and subject to such limitations as the chairman or the president may prescribe, shall appoint such attorneys-in-fact, as may be necessary to act in behalf of the Company to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations. Such attorneys-in-fact subject to the limitations set forth in their respective powers of attorney, shall have full power to bind the Company by their signature and execution of any such instruments and to attach thereto the seal of the Company. When so executed such instruments shall be as binding as if signed by the president and attested by the secretary.

Certificate of Designation – The President of the Company, acting pursuant to the Bylaws of the Company, authorizes David M. Carey, Assistant Secretary to appoint such attorneys-in-fact as may be necessary to act on behalf of the Company to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations.

Authorization – By unanimous consent of the Company's Board of Directors, the Company consents that facsimile or mechanically reproduced signature of any assistant secretary of the Company, wherever appearing upon a certified copy of any power of attorney issued by the Company in connection with surety bonds, shall be valid and binding upon the Company with the same force and effect as though manually affixed.

I, Renee C. Llewellyn, the undersigned, Assistant Secretary, The Ohio Casualty Insurance Company, Liberty Mutual Insurance Company, and West American Insurance Company do hereby certify that the original power of attorney of which the foregoing is a full, true and correct copy of the Power of Attorney executed by said Companies, is in full force and effect and has not been revoked.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed the seals of said Companies this 10th day of January, 2020.
