William Jones
Chief Executive Officer

February 5, 2020

Amy Monroe, CPPB
Commonwealth of Kentucky
Finance and Administration Cabinet
Office of Procurement Services
New Capitol Annex
702 Capitol Avenue, Room 096
Frankfort, KY 40601

Dear Ms. Monroe:

WellCare Health Insurance Co. of Kentucky, Inc. (WellCare of Kentucky) is pleased to submit the attached response to the Office of Procurement Services RFP 758 2000000202.

Thank you for the opportunity to respond to the RFP. WellCare of Kentucky has been serving Medicaid beneficiaries in the Commonwealth of Kentucky since 2015. WellCare of Kentucky values the relationship it has with the Commonwealth since 2011 and looks forward to continued collaboration with the Department to provide quality services to the most vulnerable populations in Kentucky.

As required by Section 60.6 Technical Proposal Content of the RFP, we would like to confirm the following:

- WellCare of Kentucky understands that deviations from the contract are not allowed;
- If awarded a contract as a result of this solicitation, WellCare of Kentucky shall comply in full with all requirements of the Kentucky Civil Rights Act, and shall submit all data required by KRS 45.560 to 45.640;
- WellCare of Kentucky swears that pursuant to KRS 11A.040, it has not knowingly violated any provisions of the Executive Branch Code of Ethics;
- WellCare of Kentucky swears that it is in compliance with Prohibitions of Certain Conflicts of Interest;
- WellCare of Kentucky certifies that in accordance with Federal Acquisition Regulation 52.209-5, Certification Regarding Debarment, Suspension, and Proposed Debarment and to the best of our knowledge and belief, it and/or its principals are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any State or Federal agency.

WellCare of Kentucky certifies that the thumb/flash drives submitted with our hard copy/paper proposal have been properly scanned for infected viruses. Using Symantec Endpoint Protection, version 14.2.1023 virus software and version to scan the drives, our IT department supervised this process. To summarize, our systems are set up to automatically perform virus scanning on all network and other drives as files are moved to them.

Therefore, by placing our files on a shared network drive we are ensuring that these files will automatically be scanned for virus and other malware signatures.

WellCare of Kentucky provides its subcontractor information on the following pages in table format and includes the name of the subcontractor company, address, telephone number and contact name, if applicable.

WellCare of Kentucky has noticeably labelled proprietary information on each sheet and provided it in a separate sealed cover marked “Proprietary Data”. We have included one marked original hard/paper copy marked “Proprietary Data” and 10 marked “Proprietary Data” thumb/flash drives.

WellCare
Beyond Healthcare. A Better You.

WellCare has been a trusted partner of the Commonwealth since the inception of Managed Care in 2011. We have grown to become the largest MCO in Kentucky with the highest Member and Provider Satisfaction. Our #1 ranking in Quality in Kentucky is driven by our comprehensive and integrated Care Model that includes Social Determinants along with strong Provider partnership. This has all resulted in members choosing WellCare more than any other MCO in the Commonwealth. Our commitment and dedication to provide the best care and service will continue, and our focus on improving health outcomes and partnering with our Provider and Stakeholder communities to bring innovative solutions will continue to move us forward.

Sincerely,

William Jones
Chief Executive Officer
WellCare Health Insurance Company of Kentucky, Inc.

B.

DISCLOSURE OF VIOLATION OF STATUTES

B. DISCLOSURE OF VIOLATION OF STATUTES

Pursuant to KRS 45A.485, contractors are required to reveal final determinations of violation of certain statutes incurred within the last five (5) years and be in continuous compliance with those statutes during the contract. Where applicable, the vendor is required to complete and submit Report of Prior Violations of Tax and Employment Laws.

B. DISCLOSURE OF VIOLATIONS OF STATUTES

To the best of our knowledge and belief, WellCare of Kentucky has had no violations of the statutes mentioned in KRS 45A.485 during the lookback period, nor have there been any final determinations of violations thereof, and we have been in continuous compliance with those statutes therefore completion of the Report of Prior Violations of Tax and Employment Laws is not applicable.

C.

KENTUCKY TAX REGISTRATION APPLICATION

WellCare®
Beyond Healthcare. A Better You.

C. KENTUCKY TAX REGISTRATION APPLICATION

Revenue Form 10A100, Kentucky Tax Registration Application effective July 2008, is a form to be completed by any person or entity wishing to contract with the Commonwealth to provide goods or services subject to sales and use tax pursuant to KRS 139.200. The form is located at this web-link as Attachment 5:
http://finance.ky.gov/services/eprocurement/Pages/VendorServices.aspx.

In accordance with administrative regulation 200 KAR 5:390, this form has to be completed and submitted, before a contract can be awarded. Section 2 of the regulation also notes: "Failure to submit the required documentation or to remain registered and in compliance with the sales and use tax filing and remittance requirements of KRS 139.540 and KRS 139.550 throughout the duration of the contract shall constitute a material breach of the contract and the contract may be terminated."

C. KENTUCKY TAX REGISTRATION APPLICATION

Please see the attached completed Revenue Form 10A100, Kentucky Tax Registration Application. It is named **Attachment 60.6.C Kentucky Tax Registration Application.**

10A100(P)(7-13)

10A100(P)(7-13)

SECTION I — CORPORATE INCOME AND/OR LIMITED LIABILITY ENTITY TAX ACCOUNT

Must be completed if you answered "YES" to ANY of the questions 39 through 49.

For Official Use Only CP/LL #

71. A. Has a Corporation Income and/or Limited Liability Entity Tax Account already been assigned to this business? ☐ Yes ☒ No

B. If yes, list the Corporation Income or Limited Liability Entity Tax Account Number ☐☐☐☐☐☐

72. A. Is your entity exempt from Corporation Income Tax and/or Limited Liability Entity Tax under Kentucky law? ☐ Yes ☒ No

B. If yes, select the exemption type below:

- ☐ Financial institution, as defined in KRS 136.500, except banker's banks organized under KRS 287.135 or KRS 286.3-135
- ☐ Savings and loan association organized under the laws of this state and under the laws of the United States and making loans to members only
- ☐ Bank for cooperatives
- ☐ Production credit association
- ☐ Insurance company, including farmers or other mutual hail, cyclone, windstorm, or fire insurance companies, insurers, and reciprocal underwriters (does not include insurance agencies)
- ☐ Corporation or other entity exempt under Section 501 of the Internal Revenue Code
- ☐ Religious, educational, charitable, or like corporation not organized or conducted for pecuniary profit
- ☐ Corporation whose only owned or leased property located in this state is located at the premises of a printer with which it has contracted for printing provided that: 1. The property consists of the final printed product, or copy from which the printed product is produced; and 2. The corporation has no individuals receiving compensation in this state as provided in KRS 141.120(8)(b)
- ☐ Public service corporation subject to tax under KRS 136.120
- ☐ Open-end registered investment company organized under the laws of this state and registered under the Investment Company Act of 1940
- ☐ Any property or facility which has been certified as a fluidized bed energy production facility as defined in KRS 211.390
- ☐ An alcohol production facility as defined in KRS 247.910
- ☐ Real estate investment trust (REIT) as defined in Section 856 of the Internal Revenue Code
- ☐ Regulated investment company (RIC) as defined in Section 851 of the Internal Revenue Code
- ☐ Real estate mortgage investment conduit (REMIC) as defined in Section 860D of the Internal Revenue Code
- ☐ Personal service corporation as defined in Section 269A(b)(1) of the Internal Revenue Code
- ☐ Publicly traded partnership as defined by Section 7704(b) of the Internal Revenue Code that is treated as a partnership for federal tax purposes under Section 7704(c) of the Internal Revenue Code, or their publicly traded partnership affiliates. (Publicly traded partnership affiliates shall include any limited liability company or limited partnership for which at least eighty percent (80%) of the limited liability company member interests or limited partner interests are owned directly or indirectly by the publicly traded partnership.)
- ☐ Qualified investment partnership (QIP) as defined in KRS 141.206(15)(a) &(b)
- ☐ Statutory trust or series of a statutory trust
- ☐ Cooperative described in Sections 521 and 1381 of the Internal Revenue Code *(Select category below)*
  - ☐ Farmers' agricultural and other cooperatives organized or recognized under KRS Chapter 272
  - ☐ Advertising cooperatives
  - ☐ Purchasing cooperatives
  - ☐ Homeowner's associations including those described in Section 528 of the Internal Revenue Code
  - ☐ Political organizations as defined in Section 527 of the Internal Revenue Code
  - ☐ Rural electric and rural telephone cooperatives

C. If **Political Organization** selected above, are you required to file Federal Form 1120-POL? ☐ Yes ☐ No

73. A. Is this entity treated Federally as a division of a parent company and not separately taxed as its own entity? ☐ Yes ☒ No

B. If yes, select the division type below:

- ☐ Qualified Subchapter S-corporation Subsidiary (QSUB)
- ☐ Qualified Real Estate Investment Trust Subsidiary (QRS)

74. If an out-of-state entity, is your Kentucky activity limited to the mere solicitation of the sale of tangible personal property and exempt from Corporation Income tax due to Public Law 86-272? ☐ Yes ☒ No

75. If an out-of-state entity, date that activity or receipt of pass through income began or will begin in Kentucky

76. *Corporation Income and/or Limited Liability Entity Tax* correspondence should be mailed to:

☒ Use the same address as listed on Page 1, Section B, Question 7

REGISTRATION WITH THE SECRETARY OF STATE BY A FOREIGN ENTITY

D. REGISTRATION WITH THE SECRETARY OF STATE BY A FOREIGN ENTITY

Pursuant to KRS 45A.480(1)(b), an agency, department, office, or political subdivision of the Commonwealth of Kentucky shall not award a state contract to a person that is a foreign entity required by KRS 14A.9-010 to obtain a certificate of authority to transact business in the Commonwealth ("certificate") from the Secretary of State under KRS 14A.9-030, therefore, foreign entities should submit a copy of their certificate with their solicitation response. If the foreign entity is not required to obtain a certificate as provided in KRS 14A.9-010, the foreign entity should identify the applicable exception in its solicitation response. Foreign entity is defined within KRS 14A.1-070. Businesses can register with the Secretary of State at: https://secure.kentucky.gov/sos/ftbr/welcome.aspx.

D. REGISTRATION WITH THE SECRETARY OF STATE BY A FOREIGN ENTITY

WellCare of Kentucky is not a foreign entity. No registration with the Secretary of State is necessary nor is a submission of a certificate.

REQUIRED ANNUAL AFFIDAVIT AND OTHER AFFIDAVIT(S)

WellCare®
Beyond Healthcare. A Better You.

E. REQUIRED ANNUAL AFFIDAVIT AND OTHER AFFIDAVITS

Please see the attached completed and signed affidavits:

- **60.6.E Affidavit Attachment A-1**
- **60.6.E Affidavit Attachment A-2**

60.6.E Affidavit A-3 does not apply to WellCare of Kentucky.

ATTACHMENT A (1)

Affidavit Effective Date:	January 15, 2020
Affidavit Expiration Date:	January 15, 2021
Maximum Length One-Year	

REQUIRED AFFIDAVIT FOR BIDDERS, OFFERORS AND CONTRACTORS **PAGE 1 OF 2**

FOR BIDS AND CONTRACTS IN GENERAL:

I. Each bidder or offeror swears and affirms under penalty of perjury, that to the best of their knowledge:

a. In accordance with KRS 45A.110 and KRS 45A.115, neither the bidder or offeror as defined in KRS 45A.070(6), nor the entity which he/she represents, has knowingly violated any provisions of the campaign finance laws of the Commonwealth of Kentucky; and the award of a contract to the bidder or offeror or the entity which he/she represents will not violate any provisions of the campaign finance laws of the Commonwealth.

b. The bidder or offeror swears and affirms under penalty of perjury that, to the extent required by Kentucky law, the entity bidding, and all subcontractors therein, are aware of the requirements and penalties outlined in KRS 45A.485; have properly disclosed all information required by this statute; and will continue to comply with such requirements for the duration of any contract awarded.

c. The bidder or offeror swears and affirms under penalty of perjury that, to the extent required by Kentucky law, the entity bidding, and its affiliates, are duly registered with the Kentucky Department of Revenue to collect and remit the sales and use tax imposed by KRS Chapter 139, and will remain registered for the duration of any contract awarded.

d. The bidder or offeror swears and affirms under penalty of perjury that the entity bidding is not delinquent on any state taxes or fees owed to the Commonwealth of Kentucky and will remain in good standing for the duration of any contract awarded.

e. The bidder or offeror swears and affirms under penalty of perjury that the entity bidding, is not currently engaged in, and will not for the duration of the contract engage in, the boycott of a person or an entity based in or doing business with a jurisdiction with which Kentucky can enjoy open trade, as defined in Executive Order No. 2018-905.

f. The bidder or offeror swears and affirms that the entity bidding, and all subcontractors therein, have not violated any of the prohibitions set forth in KRS 11A.236 during the previous ten (10) years, and further pledge to abide by the restrictions set forth in such statute for the duration of the contract awarded.

FOR "NON-BID" CONTRACTS (I.E. SOLE-SOURCE; NOT-PRACTICAL OR FEASIBLE TO BID; OR EMERGENCY CONTRACTS, ETC):

II. Each contractor further swears and affirms under penalty of perjury, that to the best of their knowledge:

a. In accordance with KRS 121.056, and if this is a non-bid contract, neither the contractor, nor any member of his/her immediate family having an interest of 10% or more in any business entity involved in the performance of any contract awarded, have contributed more than the amount specified in KRS 121.150 to the campaign of the gubernatorial slate elected in the election last preceding the date of contract award.

REQUIRED AFFIDAVIT FOR BIDDERS, OFFERORS AND CONTRACTORS PAGE 2 OF 2

b. In accordance with KRS 121.330(1) and (2), and if this is a non-bid contract, neither the contractor, nor officers or employees of the contractor or any entity affiliated with the contractor, nor the spouses of officers or employees of the contractor or any entity affiliated with the contractor, have knowingly contributed more than $5,000 in aggregate to the campaign of a candidate elected in the election last preceding the date of contract award that has jurisdiction over this contract award.

c. In accordance with KRS 121.330(3) and (4), and if this is a non-bid contract, to the best of his/her knowledge, neither the contractor, nor any member of his/her immediate family, his/her employer, or his/her employees, or any entity affiliated with any of these entities or individuals, have directly solicited contributions in excess of $30,000 in the aggregate for the campaign of a candidate elected in the election last preceding the date of contract award that has jurisdiction over this contract.

As a duly authorized representative for the bidder, offeror, or contractor, I have fully informed myself regarding the accuracy of all statements made in this affidavit, and acknowledge that the Commonwealth is reasonably relying upon these statements, in making a decision for contract award and any failure to accurately disclose such information may result in contract termination, repayment of funds and other available remedies under law. If the bidder, offeror, or contractor becomes non-compliant with any statements during the affidavit effective period, I will notify the Finance and Administration Cabinet, Office of Procurement Services immediately. I understand that the Commonwealth retains the right to request an updated affidavit at any time.

REQUIRED AFFIDAVIT FOR BIDDERS, OFFERORS AND CONTRACTORS CLAIMING RESIDENT BIDDER STATUS

FOR BIDS AND CONTRACTS IN GENERAL:
The bidder or offeror hereby swears and affirms under penalty of perjury that, in accordance with KRS 45A.494(2), the entity bidding is an individual, partnership, association, corporation, or other business entity that, on the date the contract is first advertised or announced as available for bidding:

1. Is authorized to transact business in the Commonwealth;
2. Has for one year prior to and through the date of advertisement
   a. Filed Kentucky corporate income taxes;
   b. Made payments to the Kentucky unemployment insurance fund established in KRS 341.49; and
   c. Maintained a Kentucky workers' compensation policy in effect.

The BIDDING AGENCY reserves the right to request documentation supporting a bidder's claim of resident bidder status. Failure to provide such documentation upon request shall result in disqualification of the bidder or contract termination.

SUBCONTRACTOR REPORT FORM

Notice: Vendors/Contractors are required to report all subcontracts valued at $500,000 or more (Note: information is not required for contracts below the second tier). The subcontracts reported on this form must be for a specific line item(s) of work on a contract/project your firm has with the Commonwealth of Kentucky, i.e., you should not report contracts your firm has with a company to clean your office building, to provide security for your office, to routinely service your vehicles or equipment, to upgrade your warehouse, etc. Type or print legibly. Do not use pencil; use black or dark blue ink. A substitute or alternate version of this form will not be accepted or processed. Incomplete forms will not be processed.

1) Business Name (REQUIRED): WellCare of Kentucky, Inc

2) Solicitation or Contract Number (REQUIRED): Contract Number: MA 7581600000005 / Solicitation Number 758 2000000202

3) Project Name or Contract Description: Medicaid Managed Care Services

4) Indicate if your company has entered into agreements with subcontractors valued at $500,000 or more (check one):

☐ Our company **has not** entered into agreements with subcontractors valued at $500,000 or more (skip section 5 and complete section 6).

☒ Our company **has** entered into agreements with subcontractors valued at $500,000 or more (complete section 5 and section 6).

5) Provide subcontract information as follows (attach Additional Reporting Sheets if necessary):

Name of Subcontractor	Contact Person	Telephone Number (including area code)	Street Address, City, State and Zip Code	Subcontract Amount
Avesis Third Party Administrators, Inc	Phyllis Oppenheim	800-522-0258 ext 283	10324 South Dolfield Rd. Owings Mills, MD 21117	$97,992,026
CVS Caremark	Jason Stenta	401-770-1980	One CVS Drive, Woonsocket, Rhode Island 02895	$684,434,899
Novu, LLC	Jason Panos	800-337-9406	841 Prudential Drive, Suite 204, Jacksonville, FL 33207	$1,494,196
Progeny Health	Ellen Stang	610-832-2001	500 Plaza Drive, Secaucus, NJ 07094	$1,774,734

6) Certification: I certify that the information contained in this report and any Additional Reporting Sheets or other attachments, is true and accurate to the best of my knowledge and belief. Further, I am authorized to sign this form on behalf of the company. If necessary, the company will update this report should it enter into additional subcontracts valued at $500,000 or more.

PROPOSED SOLUTION

I. PROPOSED SOLUTION

Behind the Proposed Solution tab, you will find the Proposal Solution content in response to Section 60.7 of this RFP.

A.

Executive Summary

A. EXECUTIVE SUMMARY

Provide an Executive Summary that summarizes the Vendor's proposed staffing and organizational structure, technical approach, and implementation plan. The Executive Summary must include a statement of understanding and fully document the Vendor's ability, understanding and capability to provide the full scope of work. Address the following, at a minimum:

1. The Vendor's statement of understanding of the healthcare environment in the Commonwealth, the Kentucky Medicaid program and vision for this procurement, and needs of Medicaid Enrollees.
2. An overview of the Vendor's proposed organization to provide coordinated services under the Contract.
3. A summary of the Vendor's strategy and approach for administering services for Enrollees.
4. A summary of the Vendor's strategy and approach for establishing a comprehensive provider network.
5. A summary of innovations and initiatives the Vendor proposes to implement to achieve improved health outcomes for Enrollees in a cost effective manner. Include a discussion of challenges the Vendor anticipates and how the Vendor will work to address such challenges.

A. EXECUTIVE SUMMARY

WellCare of Kentucky has been privileged to serve the Kentucky Medicaid program and our Enrollees over the last eight years. We have embraced our role as a supporter to the Department for Medicaid Services (DMS) as an agent of change to transform the Kentucky Medicaid program, and to achieve the goal of better health outcomes for Kentuckians. Through the years, we have understood the important responsibility placed on our shoulders and have developed comprehensive, Kentucky specific, innovative programs that are improving health in Kentucky. Since we became National Committee for Quality Assurance (NCQA) accredited in Kentucky in 2014, **we have improved our accreditation scores from 79.0 in 2015 to *85.73* in 2018, have maintained a two-year Commendable NCQA accreditation status, and have the highest NCQA quality ranking in the Kentucky Medicaid program at 3.5. *In addition to having the highest quality rating, we also have the highest percentage of ratings of a 4 or higher in the 2019 – 2020 NCQA Accreditation Report, see Figure A-1.***

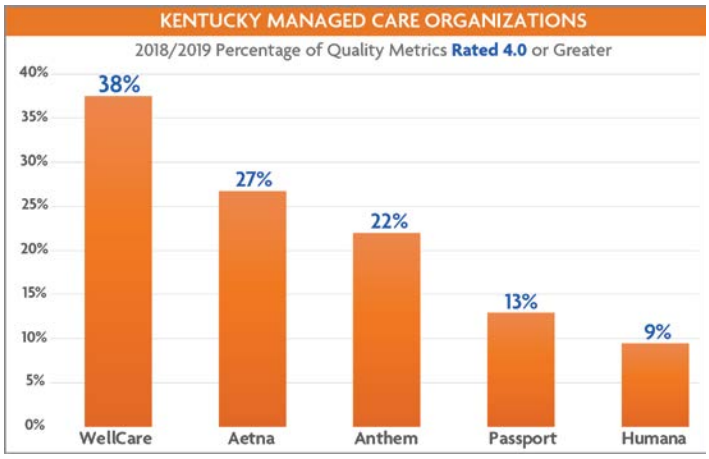

Figure A-1 WellCare of Kentucky Percentage of Quality Metrics

During our eight years of serving Enrollees in the Commonwealth, we have been and remain a stable and committed partner through various program launches, through large influxes of new Enrollees, the roll in of behavioral health services through Impact Plus, Medicaid expansion implementation, expansion into Region 3, and most recently, building an innovative and national leading community and work requirements platform and program to support the next phase of health evolution with our best in class Social Determinants Of Health (SDOH) program. We are excited to continue partnering with the administration, DMS, providers, community organizations, and all stakeholders in order to exceed the goals of the Kentucky Cabinet for Health and Family Services.

Kentuckians are entrenched in and care about their communities. WellCare of Kentucky appreciates and understands that each community has its own unique cultures and we are proud to be a part of the diversity that makes up the landscape of the Commonwealth. We also know that Kentucky Medicaid Enrollees' health is often directly tied to lifestyle and environmental conditions that are deeply ingrained in the generational poverty, isolation, and cultural nuances in both remote regions of rural Kentucky as well as the deep urban neighborhoods within Lexington and Louisville areas. Longstanding health challenges caused by high rates of smoking and obesity, along with higher rates of cancer and COPD, have been further exacerbated in recent years by behavioral health and substance use disorder (SUD) conditions. The scourge of Opioid SUDs has placed the Commonwealth at the heart of a national epidemic that requires all stakeholders, including managed care organizations (MCOs) to think differently about how we engage and empower individuals in recovery and resiliency while enhancing and supporting the system that serves them.

We have long collaborated with DMS to bring innovative solutions to address these unique challenges. We are proud to have played a role over the past eight years in the gains we have made as a state in national health rankings. But we know there's more work to be done and are eager to continue our collaborations on innovations as DMS sets a course forward to increase Empowerment for Enrollees, Partnership with Providers, Collaboration across stakeholder groups, Health Care quality enhancement, Innovation, and Cost effectiveness within the Medicaid program.

WellCare of Kentucky, Inc. ("WellCare of Kentucky") is a wholly owned subsidiary of WellCare Health Plans, Inc. (WellCare). On January 23, 2020 WellCare was acquired by Centene Corporation (Centene). WellCare is now a wholly owned subsidiary of Centene. **WellCare of Kentucky's leadership, staff, branding, and model for delivering services to the Commonwealth are not changing and we remain committed to partnering with DMS to ensure Kentucky's Enrollees, communities, providers and other stakeholders receive the integrated, whole-person care and services necessary to address all of their physical, behavioral, and social needs.** With the acquisition, WellCare of Kentucky is now also able to leverage the combined experience and best practices of our Centene affiliate health plans, which is now managing the care of more than 12.9 million Medicaid Enrollees across 30 states.

1. Understanding the Commonwealth, the Kentucky Medicaid program and vision for this procurement, and needs of Medicaid Enrollees.

WellCare of Kentucky looks forward to and hereby proposes to continue to serve the Commonwealth, DMS and the Enrollees in the Kentucky Medicaid program. WellCare of Kentucky's experienced leadership under Chief Executive Officer Bill Jones and Medical Director Howard Shaps, MD have full authority and accountability to deliver on contract commitments and continue our collaborative relationship with DMS. Being in Kentucky since Managed Care was implemented in 2011, WellCare of Kentucky is in the unique position of understanding the needs of our Medicaid Enrollees across the Commonwealth and partnering with DMS as we have evolved the program over the last eight years. Whether it was expanding Medicaid and integrating behavioral health in 2014 or working with the Commonwealth to increase the focus on Foster Care, WellCare of Kentucky has been at the Commonwealth's side throughout.

WellCare of Kentucky has always been committed to improving the health of Kentuckians by meeting them where they are on their health journey. We are dedicated to continuing our partnership with DMS to **ensure Kentuckians who are eligible for the Kentucky Medicaid Program and Kentucky Children's Health Insurance Program (KCHIP) are enrolling in the programs and have access to high quality and cost effective care and services**. We believe that health care is local and our approach begins with the 300 plus Kentuckians that serve as our team members, located throughout the Commonwealth in the same communities that our Enrollees and providers reside. With our six regional offices across the Commonwealth, we understand the issues, obstacles, and opportunities to provide better health care to our Enrollees. We also recognized early on that health care goes beyond the Enrollees physical and behavioral health needs. In 2011 WellCare of Kentucky implemented an industry leading SDOH program whereby we expanded our community relationships to serve the entire Medicaid population, even if they were not a WellCare of Kentucky Enrollee. Our Community Connections HelpLine (CCHL) made over 51,000 referrals to social resources in 2018 alone.

Making a Local Impact on SDOH
Since launching the Community Connections program in Kentucky, we have connected more than 31,000 people to 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program, including a 26% reduction in emergency department visits, and a 53% decrease in inpatient spending.

WellCare of Kentucky also understands that, at the center of the Commonwealth's vision for improving the health and outcomes of Kentuckians, is a fully integrated model of care. Our model leverages one integrated care team covering all care needs including physical, behavioral, pharmacy and unmet social needs. This team is supported by one single technology system that is purpose-built to specifically serve Medicaid programs. The result is a comprehensive set of Enrollee data through a single on-line platform that can used by providers to access and maintain a complete health record for the people they serve. This allows providers to better meet and coordinate their needs and for WellCare of Kentucky to continually improve quality. This has resulted in WellCare of Kentucky achieving the highest Medicaid quality rating in Kentucky and one of only two current Managed Care Organizations in

the Commonwealth with a Commendable NCQA Accreditation rating in Medicaid. Further, WellCare of Kentucky understands the importance of behavioral health services when managing Enrollees care, which is why we do not outsource our Behavioral Health programs. We have a dedicated team of nurses, social workers and others that focus on our Enrollees behavioral health needs. This has earned WellCare of Kentucky the highest NCQA rating for Mental and Behavioral Health Quality in Kentucky for the last two years, see **Figure A-2**.

Versatility

WellCare of Kentucky has developed an evidence-based Population Health program to support DMS' efforts to move Kentucky out of the bottom third in state performance in conditions such as Diabetes, COPD, Heart Disease, Obesity, healthy pregnancies/low birth-weight babies, and colorectal cancer screening. In particular, Opioid SUD solutions are vitally important which includes interventions like our Lock-in program, improved metrics to monitor provider behavior and education of the community – a responsibility shared among all stakeholders.

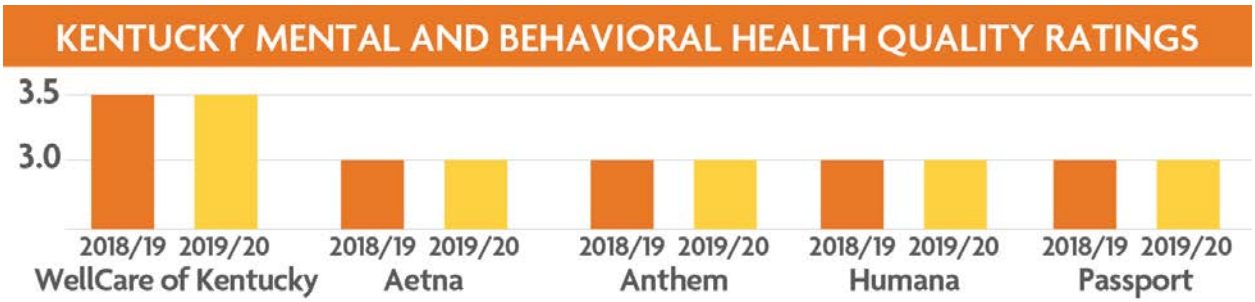

Figure A-2 Mental and Behavioral Health Quality Ratings

WellCare of Kentucky has maintained the largest network in Kentucky for Medicaid since 2011 with more than 34,500 participating providers. We believe that a collaborative approach with our providers yields the most innovative care, and the best outcomes. By doing so for the past eight years in Kentucky, **WellCare of Kentucky has earned the earned the highest 2019/20 NCQA Health Insurance Plan Rating among all Kentucky Medicaid MCOs.** Our network includes every hospital and FQHC across the Commonwealth and we are proud to be the only MCO to be continuously contracted with Appalachian Regional Hospital since inception. We also recognize the challenge of keeping providers in rural areas and have made investments in partnerships with the University of Kentucky, and Jefferson County Community Technical College to provide scholarships to doctors and nurses who decide to stay in a rural community to provide care.

We believe that our overall approach is why more Enrollees have chosen WellCare in Kentucky, each year for the past three years during open enrollment and why we have the lowest disenrollment rate in the Commonwealth.

With the highest Enrollee satisfaction scores of all the Kentucky Medicaid MCOs, our dedicated approach has made WellCare of Kentucky the plan of choice in the Commonwealth—with over 80% of Enrollees choosing our health plan as the best option.

2. *An overview of the Vendor's proposed organization to provide coordinated services under the Contract.*

WellCare of Kentucky's fully staffed, Kentucky based team puts the Enrollee at the center of everything we do. Our exclusive focus on government sponsored health programs enables WellCare of Kentucky to draw on programs, technology, and resources that are designed to serve low income and vulnerable populations. With the recent merger with Centene, we now have the opportunity to leverage the best practices of the combined organization that currently serves more than 12.9 million Medicaid managed care Enrollees, across 30 states.

While Kentucky has leveraged these national programs and infrastructure for the past eight years, WellCare's Shared Services organizations continue to innovate and improve our operating tools. Our care management system, CareCentral, has been enhanced to provide real-time information for the full array of data sources including clinical, behavioral, SDOH, pharmacy, HRAs, call center interactions Nurse Advice Line, Individual Care Plans, and ADT information from connected health systems and HIEs to provide a complete 360-degree view of each Enrollee. This tool completely integrates our in-house clinical and behavioral teams and empowers each associate who is serving an Enrollee to have the information necessary to effectively manage the Enrollee's unique needs at that time.

Our Community Connections program has a dedicated call center and specially designed SDOH tracking system built upon contractual relationships with over 30,000 service agencies across the country. Each Enrollee's interactions and referrals are documented and fed into CareCentral. We place Community Engagement Partners throughout Kentucky in order to understand those services that are most meaningful to our Enrollee's in each Community.

Our IT platform provides for Member and Provider access and will enable both Enrollees and Members to access CareCentral data through our portal as well as through our MyHealth app. Further, our systems are bi-directional, enabling Enrollees to receive notifications and reminders about care gaps and appointments and providers to have access to comprehensive, current patient profile information.

Our Population Health Management (PHM) program is an evidence-based, proactive approach centered on larger, socially grouped medical and behavioral needs and prevention efforts. Our program has seven clinical focus areas, or domains, each led by a clinical advisory board to review effectiveness, explore opportunities and innovations, and develop new programs and initiatives. Focus areas include Behavioral Health and SUD; Maternal and Child Health; Community and Long-Term Supports and Services (LTSS); High Acuity and Transitions; Medical Conditions; Advanced Illness; and Prevention and Wellness. Each one improves health outcomes through prevention and promoting healthy behaviors, early identification, and preventing deterioration or complexities. WellCare of Kentucky's population health domains align with DMS' population health condition priorities.

Our national ePMO (enterprise Project Management Organization) will be deployed to implement the new contract alongside our Kentucky based team. This team of experienced professionals is deployed for each new contract working with multiple populations and state programs. **Figure A-3** illustrates the range of this experience:

WELLCARE IMPLEMENTATION EXPERIENCE

The total is more than **1,880,000** members over 10 years.

Implementation Description	2019	2018	2017	2016	2015	2014	2013	2012	Pre 2012	Number of members Transitioned
WellCare Transition of Florida children with special healthcare needs, including foster care, to our statewide Children's Medical Services (CMS) Health Plan	✓									68,000 members
Staywell Transition of Florida Medicaid members, including the SMI and LTSS populations	✓									78,000 members
Harmony Health Plan Statewide Medicaid expansion into all Illinois counties		✓								190,000 members
Care 1st Health Plan Arizona Transition of Arizona members		✓								100,000 members
Missouri Care Statewide expansion of Medicaid managed care into all 115 counties			✓							179,000 members
WellCare of Nebraska Statewide implementation of Medicaid managed care for Heritage Health			✓							70,000 members
WellCare of South Carolina Transition of Medicaid members from Advicare Corp.				✓						30,000 members
WellCare of New York Statewide carve-in of behavioral health services for adult Medicaid members				✓	✓					71,000 members
WellCare of New Jersey Transition of 46k Healthfirst members & implementation of LTSS program						✓				46,000 members
Staywell Transition of Florida Medicaid members from FFS due to mandated managed care						✓				394,000 members
WellCare of Kentucky Transition of 43k members due to realignment of MCOs (open enrollment): enrollment of 28k members (Reg 3 expansion)							✓	✓		71,000 members
WellCare of Kentucky Transition of members due to realignment of MCOs							✓			63,000 members
`Ohana Health Plan Statewide implementation of the Hawaii QExA, QUEST and CCS programs								✓	✓	30,000 members
WellCare of Georgia Transition of Medicaid members									✓	490,000 members

Figure A-3 WellCare Implementation Experience

Additionally, we are now able to leverage our affiliate Centene health plans' past experience of successful implementations of more than 9.25 million Medicaid Enrollees across 23 states.

In addition to our national Shared Services resources, we have a team of over 300 associates located throughout the Commonwealth in our six offices, living and serving in the communities that our Enrollees and providers reside. We are the only MCO with Member and Provider facing staff deployed through six regional offices across the Commonwealth, including Nurses, Social Workers, Community Engagement Partners, Quality and Provider Relations staff. This local and integrated approach to our organizational structure, gives us the knowledge and flexibility to develop local programs that are more effective and meaningful to our Enrollees and providers. We established a Care Center located in Hazard that focuses on helping Enrollees navigate the Medicaid program and health care landscape. Our vision for this center is to improve Enrollee education, satisfaction, retention, and outcomes.

Our Leadership Team is the most tenured and experienced in Kentucky Medicaid and is solely focused on improving health outcomes for Kentuckians. We have built a culture that is

passionate about our Enrollees, the Commonwealth and our provider partners. Our stable team has less than 9% turnover and has achieved Highest Employee Engagement scores in the company for the past two years in addition to a top 10 finish in the 2018 and 2019 "Best Places to Work in KY".

3. A summary of the Vendor's strategy and approach for administering services for Enrollees.

Strategy – Our strategy for administering services for our Kentucky Enrollees centers around the 7 pillars listed below:

LOCAL, FIELD BASED ORGANIZATIONAL STRUCTURE

We continue to believe that our locally based team of nurses, social workers, quality, provider relations staff, and community advocates provides the best insights to the needs of the Commonwealth's Medicaid Enrollees. We live and work among our providers and Enrollees and understand their unique needs and focus on building individual relationships with them. Through these relationships, we are able to see the needs of the Enrollees, providers, and community up close. This allows us to identify and develop the right solutions, and build the trust needed to partner with providers so that we can improve health outcomes together – ultimately it is understanding our partners and communities, to build trust over time through outreach efforts, solid programs, and supports that truly improve health. This knowledge of our communities, providers, and Enrollees needs enables us to build and leverage tools that are a unique and customized solution for Kentucky.

INTEGRATED CARE MODEL

Our care model calls for a 360-degree view of our Enrollees, so every person that touches an Enrollee knows how to better serve them. We have an integrated care management program built by people who understand the complexity of health care and the factors that affect an Enrollee's wellbeing. This program is built to bring physical, behavioral and pharmacy care teams and programs together to better serve the whole person – while focusing intensely on social factors that prevent health improvement. Our Enrollee's ability to receive quality health care is dependent upon WellCare of Kentucky's collaboration with community stakeholders and local providers to consider all aspects of the Enrollee's health. This includes medical, behavioral, and social needs and a Care Team that looks across the entire spectrum, focusing on improved outcomes for our Enrollees. Our enrollee assessments, care planning and integrated care teams, provide the necessary structure to address each Enrollee's unique needs. Our balanced approach includes health promotion and wellness, targeted management of chronic conditions and complex care management programs.

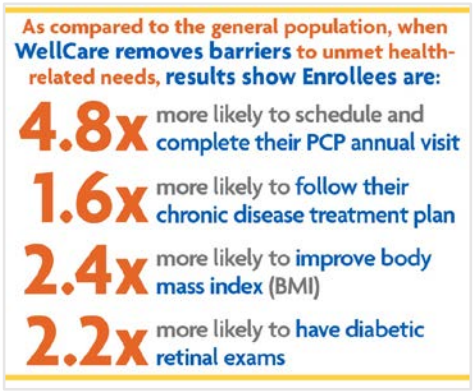
COMMUNITY CONNECTIONS

WellCare's Community Connections program (SDOH) began in Kentucky in 2011 and remains an industry leading program including formal contracts with community based organizations, trained outreach staff, dedicated CCHL (many of the CCHL staff have lived experiences from which to leverage Enrollee interactions) and a technology system that enables tracking of all

interactions as well as reporting contacts into Care Central. WellCare of Kentucky operates the most comprehensive and outcome based community program in the Commonwealth.

Using the social service data, the Community Engagement team identifies when services are needed and then mobilizes resources to (re)create the needed service by establishing community contracts to assess impact and pilot new outcome-focused payment models with community partners. Our team develops and implements innovative pilot programs focused on systemic, industry-leading solutions to drive social determinant integration into health care. Innovation pilot programs generate the data to evaluate the impact in local communities in three ways: improving health outcomes and increasing access to care, reducing avoidable costs by removing social barriers, and evaluating system effectiveness leading to social innovation.

Compared to demographically similar enrollees, individuals with social barriers removed are 4.8 times more likely to schedule and attend a PCP visit, 2.4 times more likely to improve BMI. Independent research on our Community Connections model has proven that such a dedicated focus to addressing SDOH results in a $450 savings for every social service accessed. We reinvest the health care savings from removing social barriers back into Kentucky communities through investments and contracting designed to increase data-sharing capabilities or sustain critical social services. Since 2011, WellCare of Kentucky's Community Connection Program has invested in nearly 400 innovative initiatives across the Commonwealth.



COMPREHENSIVE PROVIDER NETWORK

We have maintained the largest network in Kentucky because we understand that Enrollees value choice as one step in empowering Enrollees to engage in their health. Our network strength and stability have been achieved as a product of cultivating relationships and building trust – by being present in all Regions and demonstrating that we are committed to help them serve Enrollees. WellCare of Kentucky's presence in Region 8 throughout the past eight years is a specific illustration of establishing building of trust and stability, which leads to improved quality and health outcomes for our Enrollees. This is why **we have over 34,500 participating providers in our network and the highest satisfaction rating of (based on an external survey).**

COLLABORATIVE AND TRANSPARENT PARTNERSHIPS

Relationships with all of the Stakeholders that impact our Enrollees are held in high regard at WellCare of Kentucky. We understand the importance of being transparent with our providers, and partnering with them, community stakeholders, and DMS in order to provide the best solutions aimed at improving health outcomes. We understand that the best and most innovative solutions come from the collective participation and engagement of all of us that deeply care about the Enrollees in the Commonwealth.

TECHNICAL AND ANALYTICAL CAPABILITIES

Our technology platform is designed to serve Medicaid programs and provides comprehensive and complete views of each Enrollee. This allows us to provide meaningful data to our partners to effectively address our enrollee's needs. Our analytic tools and resources provide the capability to quickly identify trends, care gaps, and improvement opportunities.

POPULATION HEALTH PROGRAMS AND INNOVATIVE SOLUTIONS

Population Health is a core competency at WellCare of Kentucky. We have developed programs focused on several of the DMS' identified priorities with several successes to date. Other priority programs are in development. Our developed programs include Diabetes, Healthy Weight Management, Tobacco use, Infant Mortality and Low Birth Weight. Many of our programs are supported by our Health Coaches who conduct continuous telephonic outreach to educate our most vulnerable Enrollees on recommended critical screenings and preventive services. Our programs align with the overall objectives of keeping Kentuckians health, managing enrollees with emerging risks, ensuring enrollee safety, and managing chronic illnesses.

4. A summary of the Vendor's strategy and approach for establishing a comprehensive provider network.

WellCare of Kentucky's contracted network includes 100% of all hospitals, 99% of all eligible PCPs, 100% of all FQHCs, more than 2,300 behavioral health professionals and meets all contract geo-access requirements. We have continuously supported our providers across the Commonwealth by deploying Quality Practice Consultants, PCAs, and PRRs across the Commonwealth along with our Community Advocates that help the provider improve the health of their patients. By understanding the specific issues that our provider partners face in the unique and varied communities they serve in, we have been able to establish a supportive, collaborative relationship with our network that has been a cornerstone, and has led to WellCare of Kentucky maintaining the largest network in the State. **Our provider satisfaction scores demonstrate that our model is working with an overall satisfaction rate of 90.7% and a willingness to recommend WellCare of Kentucky of over 91.6% in 2019.**

We continuously look for ways outside of contracting to strengthen our network and our provider community in Kentucky. In the medically underserved part of Kentucky, WellCare of Kentucky will support increased adoption of EHR systems through grants to fund the data entry efforts for historical records. We understand the importance of small, rural practices and the challenges they face by having transparent, in person conversations with them. We also recognize the provider shortage in these areas. Since 2016, we have invested over $100,000 in scholarships to keep graduating doctors and nurses serving in Rural Kentucky. We believe that telehealth has huge potential. WellCare has successfully launched telehealth solutions in other states and is prepared to work with network providers to leverage the new law to improve access to care in rural areas as well as to support hard to find specialists such as psychiatry and dermatology.

In order to focus on program development and continuous improvement, WellCare of Kentucky recently established a ***Provider Advisory Group that includes over 20 providers from across the***

***Commonwealth*.** Our intent is to bring this group together, and hear our provider's voice in the development of new Population Health programs, changes to current programs to improve Healthy Weight Management, SUD, Pregnancy Health, and others. We also want to hear from them, how WellCare of Kentucky can be a better partner and improve the overall provider experience with us. Our objective is to create one team with WellCare of Kentucky and the provider community at the table, providing the best solutions to improve health outcomes and quality.

5. A summary of innovations and initiatives the Vendor proposes to implement to achieve improved health outcomes for Enrollees in a cost effective manner. Include a discussion of challenges the Vendor anticipates and how the Vendor will work to address such challenges.

WellCare of Kentucky has continued to work with providers, state agencies including DMS and other MCOs to improve overall health care quality and outcomes in a cost effective manner. The following summary of our innovations and initiatives has been presented throughout the Executive Summary and are repeated here:

INTEGRATED CARE MODEL AND POPULATION HEALTH

We will continue to build out our integrated care model and population health programs. We are currently building new or next version Population Health Programs including NICU, Maternity, Opioid 2.0, Neonatal abstinence, Healing Futures (child behavioral health), Smoking Cessation, Diabetes, COPD, and Hypertension. We are also exploring remote patient monitoring to receive biometric data and share it with our providers, deploying resources to an Enrollees' home in real time when a potential issue arises (e.g. blood sugar spike for Diabetics, oxygen monitor alert for Enrollees with COPD, etc.).

We continue to innovate in our SDOH of Health programs and will be expanding our WellCare Works program, to reach Enrollees in all 120 counties. We are proud that in 12 months we reached Enrollees in 109 counties covering 91% of the Commonwealth with our WellCare Works platform. We fully expect by mid-year 2020 that Enrollees in all 120 counties will have accessed our innovative solution to getting Enrollees back to work. Our latest innovation includes data-informed outcome-based contracting with community partners. These community contracts assess impact and connect to enterprise priorities including quality outcome data, Enrollee retention, and Enrollee and provider satisfaction. Utilizing our partnerships locally, Community Engagement Partners work with Community Based Organization to assess their capacity for connecting WellCare of Kentucky Enrollees to Case Management, their Primary Care Physician, Workforce Innovation Programs, and more. Based on that capacity, we provide payment to Community Based Organizations for the outcomes based in their community contract. The community level data analysis helps drive decisions around priorities, investment and innovation opportunities focused on systemic, industry-leading solutions to drive social determinant integration into health care. Innovation pilot programs generate the data to evaluate the impact in local communities by improving health outcomes and increasing access to care, reducing avoidable costs by removing social barriers, and evaluating system effectiveness leading to social innovation.

COMPREHENSIVE PAYER/PROVIDER ANALYTICS

WellCare of Kentucky recognizes that the amount and type of data available on an Enrollee or population is a powerful tool in improving health. We have already implemented an integrated system, built specifically for Medicaid that provides our team and our provider community a 360-degree view of the Enrollees they serve. We will continue to introduce innovations that include the integration of SDOH into our predictive analytics, earlier trend identification to support program development and individualized Enrollee intervention, and an improved risk stratification model that allows us to move even further towards prevention by including community factors in our scoring. We recognize the importance of the KHIE data and will begin to integrate that information into our platforms. Additionally, providers who do not have an EHR will be required to sign a Participation Agreement with KHIE and sign up for Direct Secure Messaging services so that they can share clinical information with Enrollees' other providers. We are also proposing to provide a grant of up to $1000 for our eligible independent providers who successfully implement EHRs for the first time. Our objective is to collaborate with our provider and stakeholder communities, share this data transparently, and drive quality improvement, improved outcomes, and increased Enrollee and provider engagement and satisfaction.

IMPROVED MEMBER ENGAGEMENT

We recognize that Enrollee engagement is critical to improving their health. WellCare of Kentucky has implemented a very successful Unable to Contact program, launched Enrollee education programs, and offered incentives for preventative and follow up care. While this has made a significant improvement in the outcomes for engaged Enrollees, we must continue to build on our success and broaden our reach. We will be introducing improvements to our Enrollee portal and social media strategy, which will improve communication and engage Enrollees in several different ways. The portal will be more interactive and easy to use and our multi-faceted social media approach will allow Enrollees to receive information in the way they are most likely to receive and consume it. We have recently received approval from DMS to launch a series of six member focus groups across the Commonwealth, beginning in February 2020, enabling a diverse representation of people to be heard on a number of key topics. This direct feedback will enable WellCare of Kentucky to continue to find better ways to engage our Enrollees, provide high quality care, and address gaps identified by our membership. We will also be implementing additional tools to measure the Enrollee experience that will inform our engagement strategy and toolset including our Health Coaches explained in detail in Section C.9 Quality Management and Health Outcomes. Finally, we recently completed a 3,200 square foot expansion to our Enrollee Care Center in Hazard that will help more Enrollees navigate their health care and connect them to solutions that improve their overall health.

INCREASED ACCESS AND AVAILABILITY

Introducing Telehealth more broadly across Kentucky is a key innovation that will improve access and availability for our Enrollees. Based on feedback from our providers, we will look to roll this out generally, but also with an emphasis on targeted programs or conditions such as stroke care, SUD treatment, and Diabetes. We understand the challenges of provider availability in rural Kentucky and have built a strong network of providers. However, we must

begin to introduce more innovation that improves access and addresses not only the limited number of providers in these areas, but the social barriers such as transportation, child care, etc. that prevent our Enrollees from seeing their providers. Our focus on telehealth will also be supplemented by a virtual high touch model that will allow our clinical and support teams to wrap around our provider and Enrollees to be sure that they get the integrated, whole person care they need.

NEXT GENERATION CONTRACTING MODELS

We understand the need to align our payment structures to drive improvements in quality and outcomes. We will be expanding our Value Based Contracting models to a broader array of provider types, not simply focused on mainstream providers like PCPs, Hospitals, and Specialists. We will examine the opportunity to better align our models with Population Health quality and outcome goals by introducing value based payment structures for Population Health issues such as SUD treatment and diabetes. For those providers that achieve quality and improved outcomes, we will look to expand our Gold Card program that removes authorization requirements for those providers, easing their administrative burden and driving improvements in quality, cost, and improved health.

Table A-1 below summarizes the challenges WellCare of Kentucky anticipates and how we will work to address such challenges.

Table A-1 Challenges and Initiatives

Challenge	Initiative	Response
Very low EHR adoption in rural areas, particularly Region 8	Electronic Health Record	WellCare of Kentucky will fund a pool of $100,000 per year with $1,000 grants to cover transition costs (file conversions) for PCPs implementing EHR solutions in Region 8. We would encourage other MCOs to participate in funding to increase grant size.
Availability of Providers in Rural KY	Telehealth	Investment and focus on keeping providers in Rural areas
Members move, change contact info	Unable to Contact	Build upon the early success of our UTC programs
Getting Enrollees to engage in their health and follow up	Member Engagement	Outbound center, quality programs focused on Enrollee engagement. Successes: Over 70% of our Enrollees have seen a PCP in 2018 and over 70% of our kids have had a PCP and dental visit.
Social Determinants continue to evolve	Expanding Social Determinants	Provider education to increase awareness and volume Enrollees utilizing Community Connections HelpLine (CCHL) and continue to expand our community partnerships

Challenge	Initiative	Response
Alignment of reimbursement to quality and outcomes	Value Based Contract Models	Intensify efforts through specialized provider relations outreach and education; expand provider interest with peer success stories

SUMMARY

WellCare of Kentucky is proud of the collaborative work we have done with DMS, Enrollees, providers, community organizations, and other stakeholders across Kentucky over the past eight years. We believe that we have the characteristics that DMS seeks for the next contract – Collaboration, Kentucky leading Quality, Enrollee satisfaction and Provider satisfaction, nimbleness when challenges arise and a strong, experienced Kentucky team. As the largest Medicaid plan in the Commonwealth, with the highest quality rating, the highest provider satisfaction, a top 10 place to work in Kentucky, and with more Enrollees choosing WellCare of Kentucky than any other MCO in the State, we feel that we are a partner that DMS can count on to deliver on its objectives and goals. We would be proud and honored to be a partner in the remaining work to be done to make the Kentucky Medicaid program the best in the country.

B.

Company Background

1. Corporate Experience

B.1. CORPORATE EXPERIENCE

a. Describe the Vendor's experience in the provision of managed care services to the populations specified in this Contract. Include the following information in the response:

i. Experience in implementation of population health management programs and initiatives. Include information about how the Vendor has addressed social determinants of health.

ii. Three (3) examples of initiatives the Vendor has implemented for Medicaid managed care programs that have supported improved outcomes. Describe whether such initiatives were cost effective and resulted in sustained change.

iii. A summary of lessons learned from the Vendor's experience providing similar services to similar populations.

iv. How the Vendor will apply such lessons learned to the Kentucky Medicaid managed care program.

B.1. CORPORATE EXPERIENCE

a. Describe the Vendor's experience in the provision of managed care services to the populations specified in this Contract. Include the following information in the response:

WellCare of Kentucky has a rich history of fostering strong partnerships with providers, offering an integrated care model to all populations specified in the new Contract, establishing trusting partnerships with our state partners, and addressing barriers to care and services in local communities across the Commonwealth.

Since 2011, WellCare of Kentucky has collaborated with the Kentucky Department for Medicaid Services (DMS) as a managed care partner to strengthen and enhance achievement of its goals for the Medicaid managed care system. Together, we have focused on and implemented initiatives and programs to better coordinate and integrate quality care for Enrollees in Contract-specified populations throughout the Commonwealth. The driving force behind these innovative initiatives and programs has been our willingness to partner with Commonwealth staff, providers, and community-based organizations to empower and encourage Kentucky Enrollees to take an active role in their own health, make informed decisions about their health care, and close their care needs, ultimately leading to improved health outcomes. **We have been ranked #1 or #2 for both Enrollee and provider satisfaction for the last two years.** We have improved Kentucky Enrollee access to providers, resulting in an increase in Primary Care Provider visits **from 64.5% in 2013 to 70.1% in 2018**. Because of our focus on closing care needs and encouraging preventive care, **91% of our HEDIS measures, including all three Well-Child Visit measures, Medical Assistance with Smoking and Tobacco Use Cessation, Breast and Cervical Exams and Annual Dental Visits, have improved year-over-year from 2013 to 2019**, WellCare of Kentucky has the highest percentage of HEDIS scores of 4 or greater among all Kentucky Medicaid managed care organizations (MCOs) in 2019, see **Figure B.1-1.**

WellCare of Kentucky uses an individualized, integrated approach to care for our Enrollees based on their unique physical, behavioral, pharmacy, and social needs. Our approach to integrated service delivery begins with our One Team philosophy—which has been the cornerstone of our organizational culture and the culmination of WellCare Health Plans, Inc.'s (WellCare's) 30 years of experience building a fully integrated, holistic approach to Enrollee care and population health management.

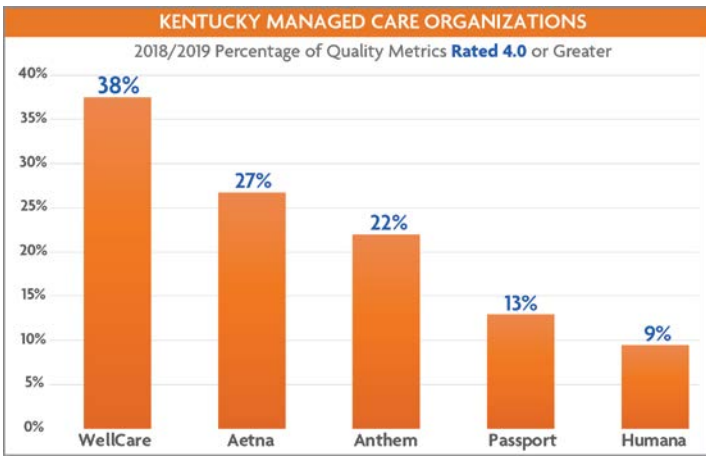


Figure B.1-1 *WellCare Percentage of Quality Metrics*

Our One Team philosophy applies to every aspect of our organization, from the executive leadership staff led by our Chief Executive Officer, William (Bill) Jones, to the fully integrated case management and care coordination team, to our Community Connections social determinants of health (SDOH) resource program, and across all functional areas and staff who support Kentucky Enrollees.

Person Centered

From the inception of our Kentucky Medicaid program, WellCare of Kentucky has championed the availability of integrated service delivery through a comprehensive, integrated network with Enrollees and providers supported by community-deployed associates. **Today, WellCare of Kentucky has the largest and most comprehensive provider network of all the current Kentucky Medicaid managed care organizations (MCOs).** Prior to and continuing after launching our Kentucky Medicaid program, we engaged with Kentucky's behavioral health community in an intentional process to assure Enrollees had access to services and to engage key stakeholders in relationships that facilitate collaboration and coverage. **During our tenure in Kentucky, we have consistently maintained the largest behavioral health network, which today includes more than 2,300 individual behavioral health professionals.** To assure comprehensive behavioral health services for Kentucky Enrollees, we made the decision in 2011 to insource behavioral health services because this was the best approach to meeting the Commonwealth's goals for fully integrated care--we have never subcontracted Medicaid behavioral health services in Kentucky. In addition, we also insource all of our pharmacy clinical programs, formulary design, utilization determinations, high risk care management and specialty drug management -- including medication therapy management, medication reconciliation and Enrollee adherence. Our community presence across the Commonwealth includes six regional offices in Daviess, Warren, Jefferson, Fayette, Boyd, and Perry counties. This helps us maintain close contact with regional Commonwealth staff, providers, and other local stakeholders like community mental health centers (CMHCs), hospitals, and residential treatment facilities. This community presence has been a significant factor in our achieving status as **the only MCO in the Commonwealth with a 3.5 NCQA rating for behavioral health-related metrics.**

Our provider network team supports providers through a number of specialized roles, including Quality Practice Advisors (QPAs), Provider Relations Representatives (PR Representatives), Operations Account Representatives (OARs), and Patient Care Advocates. These specialized roles are field-based and are a manifestation of our commitment to meet each provider where they need support.

To supplement the care offered by physical and behavioral health providers, we have made significant investments to incorporate community resources in the holistic care of our Enrollees. Our award-winning, proprietary Community Connections program began in Kentucky in response to the Commonwealth's goals for truly integrated care. This means addressing our Enrollees' unmet social resource needs. Community Connections improves the health, vitality, and engagement of our Enrollees and communities by empowering Enrollees and sustaining the social safety net throughout Kentucky. The program identifies available social safety net providers across all eight Kentucky regions, assesses existing and potential gaps in the social safety net network, and identifies ways to sustain Kentucky's safety net network. The program features a catalogue of community-based programs and services, staff and mechanisms to connect Enrollees to these resources, community outreach activities, and events, community planning councils, and a granting program. For example, **WellCare of Kentucky donated $100,000 to Volunteers of America (VOA) to open a new residential addiction treatment program in Manchester, Kentucky, for new and expectant mothers after VOA identified a need in eastern Kentucky. Previously, there had been no options for this population within an hour's drive of Clay County.** We describe the features and benefits of our Community Connections program and how we address SDOH in greater detail later in this section.

Addressing Enrollees' social needs is an important part of our integrated solution. When we connect Enrollees to social services like job, education, and utility assistance, we see:

- Improved medication adherence rates
- Increased independence
- Lower hospital admissions
- Improved physical and behavioral health outcomes

EXPERIENCE PROVIDING MANAGED CARE SERVICES TO THE POPULATIONS SPECIFIED IN THIS CONTRACT

WellCare of Kentucky has a long-time presence and longevity in Kentucky, **serving as the largest Kentucky Medicaid health plan based on enrollment with the highest year-over-year voluntary enrollment increases, serving 35.8% of Kentucky's total Medicaid managed care population, as of January 2020**. In 2012, we established six regional offices to put resources and services close to providers, Enrollees and stakeholders. During the 2012-2013 period, WellCare of Kentucky stood with DMS in two important ways: 1) We made sure the Commonwealth had a completely statewide MCO by serving Enrollees in Region 8; 2) We helped DMS roll in additional service and provider types into behavioral health.

We have a history of making sure our Enrollees do not have gaps or interruptions in services during Contract transitions. In 2011, WellCare of Kentucky implemented an industry-leading

Community Connections social determinants of health program whereby we expanded our relationships and collaborated with Kentucky's community-based organizations to better serve all of our Enrollees' holistic needs. WellCare of Kentucky values its relationship with the Commonwealth and considers our Kentucky contract one of our best examples of collaboration and stability. To illustrate our network stability, we are proud to be the only MCO to contract continuously with Appalachian Regional Hospital since inception of our Kentucky Medicaid program in 2011 and to maintain our contractual relationships with every Kentucky hospital system today.

Over the past eight years, our leadership staff and subject matter experts have worked with DMS to continually enhance its Medicaid managed care system to improve care for populations with chronic and complex conditions, align payment incentives with quality goals, and drive quality care to improve health outcomes. We design population health strategies to make sure Enrollees get care in the right place, in the right amount, and at the right time. We saw the following population health improvements from 2016 to 2018:

- *Asthma:* inpatient admits reduced by 10% and non-emergent Emergency Department visits reduced by 20%
- *Heart disease:* inpatient admits reduced by 6% and non-emergent Emergency Department visits reduced by 14%
- *Diabetes:* inpatient admits reduced by 4% and non-emergent Emergency Department visits reduced by 12%
- *Obesity:* inpatient admits reduced by 2% and non-emergent Emergency Department visits reduced by 17%
- *Tobacco Use:* inpatient admits reduced by 9% and non-emergent Emergency Department visits reduced by 16%
- *Infant Mortality:* Well-Child visits during the first 15 months post birth increased by 24% (ranked first of Kentucky Medicaid MCOs)
- *Behavioral Health and Substance Use:* inpatient admits reduced by 6% and non-emergent Emergency Department visits reduced by 18%

Today, we our experience comprises a full range of population health management and supporting services included in the current Contract scope of work for our Kentucky Medicaid Enrollees, which includes (as of January 2020) approximately:

- 215,071 individuals in the Temporary Assistance for Needy Families/Kentucky Children's Health Insurance Program (TANF/KCHIP) population
- 23,814 individuals in the Dual Eligible population
- 42,146 individuals in the Supplemental Security Income (SSI) population (adults and children)
- 8,260 individuals in the foster care and juvenile justice system and adoption assistance population
- 787 individuals in the Former Foster Care population
- 136,853 individuals in the Medicaid Expansion population

We serve diverse populations across the Kentucky and have the majority of complex Enrollees in Regions 7 and 8 - the most rural parts of eastern Kentucky. Our longevity and size enables us to deeply understand the needs of our specific populations in the disparate parts of the Commonwealth. For example, we understand that our TANF and KCHIP Enrollees prevalence of conditions vary by population type (i.e., child, adult, pregnant, etc.), as noted below. Our Dual Eligible Enrollees suffer from high degree of complex, chronic conditions that are often co-occurring, exacerbating their impact--most importantly their behavioral health.

TANF/KCHIP Population: A percentage of our total Kentucky Medicaid population, approximately 39%, are children in the TANF population, 8.35% are adults in the TANF population, 88% are TANF pregnant adults, and 2.35% are KCHIP Enrollees. With regard to chronic diseases for all of our TANF/KCHIP subpopulations, the most prevalent chronic condition is psychiatric. Specifically, our TANF/KCHIP subpopulations experience the following:

- Enrollees in our **KCHIP population** are generally healthy compared to the other Kentucky Medicaid populations we serve. The most prevalent chronic condition is psychiatric (14%). Other chronic conditions include asthma (6%), COPD (1%), hypertension (1%), and depression (4%).
- Like Enrollees in KCHIP, Enrollees in our **TANF-child population** are generally healthy compared to the other Kentucky populations we serve. Also like KCHIP, the most prevalent chronic condition in the TANF-child population is psychiatric (16% or 2% higher than KCHIP). They also experience pulmonary chronic conditions (13%).
- The most prevalent chronic conditions in the **TANF-adult population** are psychiatric conditions (27%). Other chronic conditions include cardiovascular (24%); gastro, hypertension, and depression (20%); and substance use disorder (13%).
- The most prevalent chronic conditions in the **pregnant TANF-adult population** are psychiatric conditions (19%). Other chronic conditions include depression (12%), gastro (11%), and substance use disorder (8%).

Our TANF subpopulations live in all eight DMS Regions with the highest concentration of our TANF Enrollees living in Region 8, Region 5, and Region 4 respectively.

Dual Eligible Population: Our Dual Eligible population experiences a high percentage chronic conditions, including co-occurring and co-morbid conditions. This population has the highest rate of cardiovascular chronic conditions (71%) of the Kentucky Medicaid populations we serve. They also experience high rates of hypertension (51%), pulmonary (42%), gastro conditions (42%), diabetes (34%), COPD (20%), depression (12%), and substance use disorder (12%). A significant majority of our Enrollees in the Dual Eligible population lives in Region 8 - almost four times as many Enrollees as other DMS Regions.

SSI Population: As of January 2020, our SSI population comprised 10.0% of our total Kentucky Medicaid membership with approximately 8.0% SSI adults and 2.0% SSI children. Worth noting 11.8% of our SSI population in Region 8 includes SSI adults, compared to the statewide average of 7.9% SSI adults. The most prevalent chronic condition in our SSI-child population is one or more psychiatric conditions (57%) -- a higher rate than any other Kentucky Medicaid population we serve. Our SSI-adult population Enrollees has the highest rate of hypertension (56%) and cardiovascular (61%) chronic conditions of the populations we serve. The SSI-adult population

also experiences a high rate of psychiatric conditions (39%). Our SSI population has the highest rate of asthma (13% of SSI adults and 12% of SSI children) than any other population we serve today. The majority of our SSI-adult and SSI-child population lives in Region 8.

Former Foster Care Population: As of January 2020 we have approximately 8,300 Enrollees in our Former Foster Care population. We have significant experience working with Department for Community Based Services (DCBS) and Department of Juvenile Justice (DJJ) to support Enrollees as they transition out of foster care and Medicaid managed care. We have processes already in place to maintain them in care to keep their health coverage as long as possible and to assist with their transition out of care and Medicaid to ensure continuity of care. Our foster care Enrollees remain on Medicaid for an average of 1.5 years following their 18th birthday, and adoption subsidy Enrollees remained for an average of 1.2 years. Our former foster care population receives treatment for the following primary chronic conditions: psychiatric conditions (34%), depression (22%), and substance use disorder (13%). Our experience demonstrates that youth aging out of foster care and the juvenile justice system as well as former foster care Enrollees have significant social service needs, which can be obstacles to their health, well-being, and positive outcomes if unaddressed. We facilitate Enrollee access to assistance through our Community Connections program, including social services and training. For example, WellCare of Kentucky will partner with Kentucky Partnership for Children and Families (KPCF) to offer our transition age and former foster care Enrollees (including youth with a documented history of behavioral health needs and youth that live in group homes and independent living settings) the training and mentoring they need to become leaders in their own lives and communities. KPCF's leadership academy for youth in foster care supports youth to gain the knowledge and skills necessary to not only access health care, but also establish life skills that improve self-sufficiency over time and support successful youth transition to adulthood. Enrollees in our former foster care population live in all regions with the highest concentration in Region 5 and Region 8.

Medicaid Expansion Population: In 2013, the Commonwealth moved to a statewide Contract that included Region 3 and added a new Enrollee eligibility category: Medicaid Expansion Enrollees. Kentucky implemented traditional Medicaid Expansion in January 2014 under the ACA, which led to a substantial increase in Medicaid enrollment. WellCare of Kentucky successfully passed the readiness review, also with no corrective actions, prior to the launch of the Region 3 and Medicaid Expansion populations. This successful transition to the new Contract provides evidence of our adaptability to a new regulatory environment and our ability to make quick business rule changes to accommodate new regulatory guidance and new programs. We made the technology investments necessary to handle the Medicaid Expansion population. This Contract more than doubled our Medicaid Expansion enrollment, from approximately 45,000 to 140,000 Medicaid Expansion Enrollees within six months of the program's launch. As of January 2020, we serve 136,853 Medicaid Expansion Enrollees, which is approximately 32% of our total Kentucky Medicaid membership. The majority of our Medicaid Expansion Enrollees live in Region 8, Region 5, and Region 4 respectively.

NATIONAL EXPERIENCE SERVING MEDICAID MANAGED CARE POPULATIONS

WellCare has provided Medicaid managed care services for state Medicaid programs for over three decades. WellCare provides health care services for more than 7 million Americans, including Medicare Advantage and Medicare Part D, in addition to more than 4.11 million Medicaid Enrollees nationwide, including populations similar to Kentucky Medicaid. In addition to Kentucky, as of year-end 2019 ,WellCare managed the care for Medicaid Enrollees in 11 other states, including Arizona, Florida, Georgia, Hawaii, Illinois, Michigan, Missouri, Nebraska, New Jersey, New York, and South Carolina. Further, today we are the largest Medicaid managed care plan in Kentucky, Florida, Georgia, Illinois, Michigan, and Missouri. During the last 24 months, WellCare won procurements for new Medicaid business in North Carolina for the statewide Medicaid program and in Florida for the Children's Medical Services (CMS) Health Plan, a program offering high-touch services for 68,000 children with special health care needs, including 250 foster care children who are medically fragile. We were also selected as the primary managed care organization for Florida's statewide Serious Mental Illness population.

WellCare of Kentucky, Inc. ("WellCare of Kentucky") is a wholly owned subsidiary of WellCare Health Plans, Inc. (WellCare). On January 23, 2020. WellCare was acquired by Centene Corporation (Centene). WellCare is now a wholly owned subsidiary of Centene. **WellCare of Kentucky's leadership, staff, branding, and model for delivering services to the Commonwealth are not changing and we remain committed to partnering with DMS to ensure Kentucky's Enrollees, communities, providers and other stakeholders receive the integrated, whole-person care and services necessary to address all of their physical, behavioral, and social needs.**

With the acquisition, WellCare of Kentucky is now also able to leverage the combined experience and best practices of our Centene affiliate health plans, which is now managing the care of more than 12.9 million Medicaid Enrollees across 30 states. Centene is a veteran leader in providing managed care services to and improving health outcomes for Medical Assistance and public sector populations. With over 35 years' experience, historically as of year end 2019, Centene's expertise includes providing Medicaid and Medicaid-related health plan coverage to 8.7 million individuals in 27 states through government-subsidized programs, including Temporary Assistance for Needy Families (TANF), Modified Adjusted Gross Income (MAGI), the Children's Health Insurance Program (CHIP), Supplemental Security Income (SSI)/Aged, Blind and Disabled (collectively ABD), Substitute Care, Medicaid Expansion Populations, LTSS, and Medicare-Medicaid Plans (MMPs). Centene has built and retained partnerships with more than 994,310 physicians and 6,340 hospitals, many of them academic institutions, nationwide. Centene brings deep organizational expertise serving individuals with complex needs as well as supporting the providers who serve them.

We are a leader in helping Enrollees transition from other MCOs and fee-for-service (FFS) Medicaid programs to our health plans. The following matrix displays the range of this experience:

WELLCARE IMPLEMENTATION EXPERIENCE

The total is more than **1,880,000** members over 10 years.

Implementation Description	2019	2018	2017	2016	2015	2014	2013	2012	Pre 2012	Number of members Transitioned
WellCare Transition of Florida children with special healthcare needs, including foster care, to our statewide Children's Medical Services (CMS) Health Plan	✓									68,000 members
Staywell Transition of Florida Medicaid members, including the SMI and LTSS populations	✓									78,000 members
Harmony Health Plan Statewide Medicaid expansion into all Illinois counties		✓								190,000 members
Care 1st Health Plan Arizona Transition of Arizona members		✓								100,000 members
Missouri Care Statewide expansion of Medicaid managed care into all 115 counties			✓							179,000 members
WellCare of Nebraska Statewide implementation of Medicaid managed care for Heritage Health			✓							70,000 members
WellCare of South Carolina Transition of Medicaid members from Advicare Corp.				✓						30,000 members
WellCare of New York Statewide carve-in of behavioral health services for adult Medicaid members				✓	✓					71,000 members
WellCare of New Jersey Transition of 46k Healthfirst members & implementation of LTSS program						✓				46,000 members
Staywell Transition of Florida Medicaid members from FFS due to mandated managed care						✓				394,000 members
WellCare of Kentucky Transition of 43k members due to realignment of MCOs (open enrollment): enrollment of 28k members (Reg 3 expansion)							✓	✓		71,000 members
WellCare of Kentucky Transition of members due to realignment of MCOs							✓			63,000 members
`Ohana Health Plan Statewide implementation of the Hawaii QExA, QUEST and CCS programs								✓	✓	30,000 members
WellCare of Georgia Transition of Medicaid members									✓	490,000 members

Figure B.1-2 WellCare Implementation Experience

WellCare's national experience (as of yearend 2019) managing transitions of care encompasses Arizona, Florida, Georgia, Hawaii, Illinois, Kentucky, Michigan, Missouri, Nebraska, New Jersey, New York, and South Carolina, totaling more than 1,880,000 Enrollees to WellCare, as illustrated in **Figure B.1-2.** We are also preparing to implement our Medicaid program in North Carolina. WellCare has an extensive array of resources and full scalability to accept large or small groups of transitioning Enrollees and provide covered services. We designed our standardized processes and advanced platforms to support growth. This ability to scale is a key aspect of our operational practices. Our expert national transition team supports local transition activity for large groups.

WellCare shares and customizes, as needed, best practices and innovations among our Medicaid programs nationwide. From the beginning, Kentucky's diverse and unique geography and demographics inspired WellCare of Kentucky to innovate and create transformative initiatives to meet the needs of Enrollees. WellCare of Kentucky has a stable and knowledgeable leadership and operational management team. For the last two years, WellCare of Kentucky made the top ten list of "Best Places to Work in Kentucky." Our Kentucky Medicaid leadership team comprises thought leaders with significant managed care and Kentucky

Medicaid expertise. They have spearheaded many of WellCare's most innovative programs, including:

Snapshot of WellCare's National Managed Care Experience

- 30 years of nationwide managed care experience
- 12 Medicaid managed care contracts nationwide
- In January 2018, Fortune magazine named WellCare Health Plans, Inc. as one of the "World's Most Admired Companies."
- All of WellCare's health plans eligible for quality accreditation are NCQA accredited.
- WellCare is the number one or two health plan status in over 80% of our Medicaid programs for NCQA Quality Ratings
- The only national Medicaid managed care plan to be re-awarded 100% of rebid Medicaid contracts

WellCare at Home: Our field-based WellCare at Home program is a critical component of our fully integrated, person-centered, community-based approach to care coordination and case management. This program originated in Kentucky and proved the value that a high-touch, in-home approach brings to increasing Medicaid Enrollee satisfaction and to improving health outcomes. Relying on Care Managers who are nurses or social workers, WellCare at Home is fully integrated and tailored to each Enrollee's needs by considering their physical health, behavioral health, pharmacy, and social resource needs. In 2015, we expanded our WellCare at Home program nationwide to all of our other WellCare Medicaid affiliates.

Reach Program: Our unable-to-contact program combines high-tech data collection and mining of contact information with in-person outreach to find and engage Enrollees. It improves our ability to locate and engage high-risk Enrollees in case management. We intensified our unable-to-contract program in the Eastern Region of Kentucky when we deployed local enrollee outreach coordinators (community health workers) to find people in Region 8. **This resulted in a 19.6% reduction in Emergency Department care and a 21.4% reduction in overall medical expenses for Kentucky Enrollees engaged.** Today, these efforts have evolved to include mining of rich data sources of our internal data (e.g. eligibility, clinical notes), outside data bases (e.g. pharmacy, physician offices) and the use of a comprehensive data search company, Lexus/Nexus. This data and the ability to permanently store and display this information at every customer service, clinical and quality interaction, powers our field and community outreach.

Community Connections: Our comprehensive, industry-leading, closed loop SDOH program described later in this section comprises a rich, in depth registry of national and Kentucky community resources, a call center of trained community health workers, and our rich approach to community engagement.

WellCare of Kentucky's eight plus years of Kentucky Medicaid program experience combined with our WellCare and Centene affiliate health plan's national experience is unmatched – especially our Kentucky staff's knowledge of Commonwealth agencies and the Kentucky Medicaid program as well as our local presence and successful execution of the required scope of services. This knowledge and long-term experience, when combined with our proposed population health management solutions, provides the Commonwealth with a best in class solution to meeting the current and future needs of the Kentucky Medicaid managed care program.

WellCare Core Values
- Partnership
- Integrity
- Accountability
- One Team

i. Experience in implementation of population health management programs and initiatives. Include information about how the Vendor has addressed social determinants of health.

OUR EXPERIENCE IMPLEMENTING POPULATION HEALTH MANAGEMENT PROGRAMS AND INITIATIVES

Population Health Management is the aggregation of Enrollee data across health information technology resources, the analysis of that data into a single, actionable Enrollee record, and the actions through, which WellCare and providers can improve clinical and cost outcomes. Based on clinical best practices, our population health strategy is grounded in an eight-year history in Kentucky, collaborating with providers, community partners, and DMS and other state agencies. Our programs take an integrated approach to promote wellness and prevention, improve chronic condition management and self-management, and includes partnerships with communities to improve population health through intervention channels at the Enrollee, provider, and system levels to deliver the highest impact to our most vulnerable populations.

Population Health Management begins with our successful experience maintaining a single and centralized Enrollee record in our integrated case management/care coordination system, CareCentral. Fully integrated with our claims systems, CareCentral shows users an Enrollee's integrated health record, health history, diagnosis and treatment, outreach efforts, information received from providers, assistance with scheduling appointments, assessment data, medication history, health-related social resource needs, claims history, authorizations, and care plans. CareCentral captures all of this behavioral, medical, pharmacy and social determinant information into a single, 360 degree Enrollee view. CareCentral helps us integrate care delivery for our Enrollees. CareCentral aggregates health data from electronic health records, claims, and other sources; standardizes data in one central place; and analyzes data for population health management purposes. With all of the data in one place and all of our staff working in one place, we can run advanced predictive analytics and risk stratification. This risk stratification uses non-traditional data sources, such as medication adherence and social resources, to improve our predictive accuracy. This approach helps us quickly identify, outreach, and engage in case management for Enrollees who are at high-risk of needing intensive and costly services.

In addition, part of our care delivery model is to use data to make sure providers are delivering the best quality population health outcomes. CareCentral supports population health care

delivery by informing recommendations to improve Enrollee health, e.g., identifying and quickly engaging Enrollees at high-risk for hospital/facility readmission or our high-risk pregnant Enrollees. In addition, value-based programs reward providers with incentive payments based on the quality of care provided rather than the services delivered. These rewards are paired with dynamic clinical information, such as diagnosis, care plans, care gaps, provided to groups through file transfers, on our provider portals and in printed format. These tools can be configured and drilled down by Enrollee, family, condition, care gap, PCP, group or zip code. Our goal aligns with DMS' goal to provide better care for Enrollees, improve population health management, and reduce health care costs.

WellCare's Population Health Management Program

Our Population Health Management program is an evidence-based, proactive approach centered on larger, socially grouped medical and behavioral needs and prevention efforts. Our program has seven clinical focus areas, or domains, each led by a clinical advisory board to review effectiveness, explore opportunities and innovations, and develop new programs and initiatives. Focus areas include: Behavioral Health and Substance Use Disorder (SUD); Maternal and Child Health; High Acuity and Transitions; Medical Conditions; Advanced Illness; and Prevention and Wellness. Each one improves health outcomes through prevention and by promoting healthy behaviors, early identification, and preventing deterioration or complexities. WellCare's population health domains align with DMS' population health condition priorities. All programs emphasize empowering individuals to improve their health and engage in their health care. We employ a person-centered approach that addresses medical and non-medical drivers of health while reducing inappropriate utilization and costs.

Within the seven domains, our approach considers behavioral, socioeconomic, physical environment and health care factors as well as the care delivery systems and Enrollee care experience. Each one provides the clinical expertise to evaluate our populations and develop programs to meet the needs of our membership. Our strategic efforts focus on both the delivery of health care and improving and maintaining wellness. The ultimate goal is to improve outcomes and reduce costs over the long term.

Through **data analytics**, we identify opportunities to create and implement evidence-based, best practice initiatives that deliver cost-effective care that is both innovative and high quality. Our population health strategy involves establishing a manageable set of clinical priority areas, and creating a consistent, WellCare-wide care management and coordination model. With this strategy, we aim to improve the health of the population, ensure positive care experiences for Enrollees, and engage all stakeholders in an integrated delivery system working toward the same objectives. A key element of our population health strategy is **aligning clinical outcomes and performance metrics for each domain**. Through our population health domains, we align all parts of the organization to manage the health of all of our Enrollees. This alignment creates a synergy of effort across the organization in working to achieve Enrollee-centric objectives and exceeding regulatory contract requirements.

We have experience implementing population health programs, including but not limited to:

- Breath of Life Asthma
- Obesity
- Tobacco Cessation
- Cancer
- Low Birth Weight and Preterm Birth
- Pregnancy Intendedness
- Diabetes
- Heart Disease (Coronary Artery Disease, Congestive Heart Failure, Hypertension)
- Early Childhood Intervention
- Mental Health and Substance Use Disorder

We incorporate **industry-leading metrics** to measure the overall health of our population against national outcomes and competitive benchmarks in each state. We develop prevention and disease management programs to address priority conditions and populations within each clinical focus area. Our Chief Medical Officer, Howard Shaps, MD, MBA, WellCare of Kentucky, and our in-house clinical management team direct these programs, supported by our national advisory groups and framework, to deliver improved outcomes at a lower cost.

Results: We measure the success of our population health management programs by assessing outcomes related to:

- Improved Enrollee perception of health at discharge from care coordination as evidenced by an increased score on the short-form health survey (SF-12/SF-10)
- Positive Enrollee satisfaction results
- HEDIS care gap reduction
- Impatient admission rate reduction
- Inpatient readmission rate reduction
- Medication adherence
- Increase in lower-cost primary care services and a reduction in high-cost Emergency Department utilization

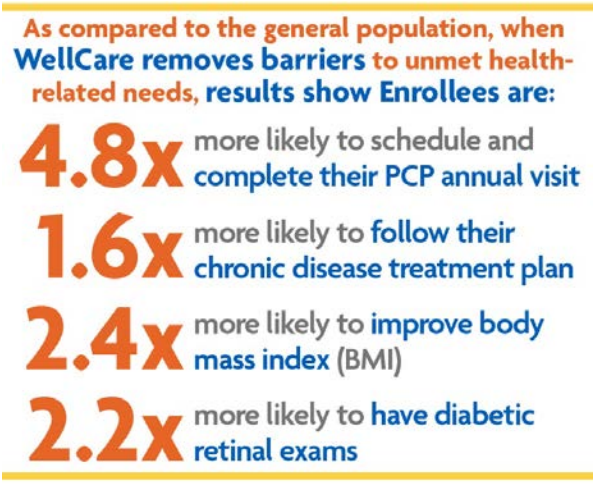
WellCare of Kentucky has a strong commitment to transparency, flexibility, and innovation in care and service delivery. In Kentucky, we are a market leader and innovator when designing and implementing population health management programs to improve Enrollee health outcomes, control costs, and bringing advanced technology to the Medicaid program. WellCare of Kentucky has seen a **64% reduction in Admissions for Children with Asthma and a 51.8% reduction in Admission for Adults with Asthma.** Further evidence of our population health program success in Kentucky is our Comprehensive Diabetic Care, **with 87% of Enrollees receiving HbA1c testing (4% above the national average) and 92% receiving appropriate kidney monitoring. Nearly 60% of Enrollees had an annual diabetic eye exam – a 22.2% increase between 2016 and 2018.**

WellCare of Kentucky is also a leader among MCOs in addressing healthy weight management. We rank first for HEDIS measures related to adult BMI and nutrition and physical activity counseling. **Our rank for the HEDIS Child BMI measure improved by almost 49 percentage**

points between 2013 and 2018, reflecting significant success getting body mass index (BMI) scores to trigger engagement in the Healthy Weight Management program. We attribute these successes to our Healthy Weigh Management program interventions, particularly provider education.

HOW WE ADDRESS THE SOCIAL DETERMINANTS OF HEALTH

Since 2011, WellCare of Kentucky has worked with the Commonwealth to broaden our MCO role beyond administering health care in the lives of Kentucky's most vulnerable citizens. This approach meant developing community partnerships statewide and becoming a driving force behind stabilizing and enhancing the capabilities of the network of social services in the Kentucky communities we serve, helping to address hunger, homelessness, job training, education, and other social determinants that have an impact on an individual's health and well-being. We designed our Community Connections program in Kentucky with the intention of partnering with community resources and helping Enrollees navigate the local social support network to receive the care and services they need. A program priority includes identifying community-based solutions to fill gaps in the network of social services.



Addressing Enrollees' social needs is integral to providing truly comprehensive care on our Kentucky Medicaid program. Because of this, our Kentucky staff includes Elizabeth Starr, Enrollee Services Manager within our leadership structure. Ms. Starr has unmatched experience as a LCSW advocating for individuals with high needs to get necessary care and social services. Ms. Starr oversees a statewide team of community engagement partners and supervisors who live and work in the Kentucky communities they serve.

Nationally since 2008, WellCare has maintained a leading role in addressing the social determinants of health. We were among the first Medicaid managed care plans to fully incorporate social resource needs into every element of our integrated care model and operations. From those early days, we have continued to invest in new technology, training, and operations to enhance our ability to identify and address social needs, as evidenced by the development of our Community Connections program in collaboration with the Commonwealth.

Our proprietary, industry-leading Community Connections program links our Enrollees and families to social services, such as food banks or meal delivery, housing assistance, financial assistance, transportation, education support, legal assistance, and employment services. Rather than just focusing on Enrollees with complex health conditions, our Community Connections program considers the social and economic factors of all Enrollees and their

families or guardians. This program integrates social resource needs into every element of case management and care coordination through the following features:

- An up-to-date registry of community resources available across more than 70 domains used by WellCare staff and providers to link Enrollees directly to needed services. **This database encompasses more than 335,000 resources, including community-based public assistance organizations, services, and health-related activities and events.**
- The Community Connections Hotline (CCHL) provides telephonic social service coordination support through peer coaches and liaisons to help screen for eligibility for service, identify additional needs, connect callers to appropriate services and follow up.
- WellCare of Kentucky places our community engagement partner staff in every region of the Commonwealth to identify emerging needs of the communities in which they live to solve for social service gaps and support care management activities.
- Use of closed-loop referrals to social services, whereby our staff tracks the outcomes of referrals that are made through the Community Connections program and provides Enrollees with additional help, as needed. We recently redesigned our Community Connections platform to enhance community data-sharing capabilities.
- To advance community health outcomes through our Community Connections program, WellCare's strategic plan includes investing in existing community resources and implementing new Community Health Investment Programs. This proprietary contracting and investment model supports social service resource organizations by sharing data and targeting investments that have proven efficacy for the Medicaid populations we serve.

Points of Light, the world's largest organization dedicated to volunteer service, has named WellCare Health Plans, Inc. one of the 50 Most Community-Minded Companies in America for 2019. This is the third consecutive year WellCare made the coveted list, which is based on The Civic 50 annual survey. Among WellCare's philanthropic contributions, we invested more than $1 million in the communities we serve through our Community Connections program, providing grants to sustain community-based organizations that foster and promote health, well-being, and quality of life.

Care Managers, Care Coordinators, and other WellCare of Kentucky staff refer Enrollees and families, as needed or requested, to our Community Connections Hotline team for assistance connecting to social services. Our Enrollee-facing staff have the training and capability to access and search the Community Connections database of community-based organizations, including organizations like SNAP, WIC, and Head Start. They refer Enrollees and families/guardians to community-based resources. This aligns with the goal to help improve health outcomes for our Enrollees and lower the overall cost of health care.

Through our Community Connections program, if a Care Manager identifies an Enrollee with an urgent need for a social resource need like food, shelter, or help with utilities, the Care Manager may make a referral to a community-based organization prior to engaging that

Enrollee in care management activities. For example, a woman dealing with domestic violence may need to find support for that situation before agreeing to let a Care Manager come to the home to support a child with a special health care need.

WellCare of Kentucky engages in partnerships and actively helps Enrollees connect to community resources that the Medicaid program does not cover. We meet with community-based leadership teams to understand the services they offer, learn about where their gaps are, and then collaborate to find ways to close those gaps. We forge community partnerships to improve health care by 1) improving case management and care coordination, access, and service delivery 2) strengthening the community and safety-net infrastructure, and 3) preventing illness and reducing disparities. Our experience shows even the best interventions may be ineffective at helping Enrollees with complex health problems unless we first address their basic and social needs. Some of our Kentucky Enrollees have a history of homelessness, food insecurity, childhood instability and trauma, early loss of parents or other caregivers, histories of sexual or physical abuse, and early substance abuse. We recognize the ways these needs influence Enrollee and family interactions with the health care delivery system and how these factors can become barriers to accessing care. **The Robert Wood Johnson Foundation and the University of South Florida evaluated our Community Connections program and concluded that Enrollees receiving referred services are 4.8 times more likely to complete their annual Primary Care Provider visit, while also reducing the total cost of care.**

Integrating Social Service Referrals into the Delivery of Care

Our Community Connections program enhances our WellCare at Home field-based care management approach. We know that quite often what affects an Enrollee getting the care they need is tied to social aspects of their lives. If a family wakes up and their electricity has been cut off, they will not prioritize getting their child to a well-child checkup that day. Data indicates Enrollees who experience homelessness are at greater risk of using the Emergency Department and that some diabetes-related hospital admissions can be attributed to food insecurity. Our care management program focuses on connecting Enrollees to community resources, enabling them to address barriers to allow them to take full advantage of covered benefits and services and to promote healthy behaviors and self-care. By connecting Enrollees to community resources, we can remove barriers so that an Enrollee's health care needs become a realistic focus. **Since launching the Community Connections Program in Kentucky, we have connected more than 31,000 people to over 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program, including a 26% reduction in Emergency Department visits and a 53% decrease in inpatient spending (Robert Wood Johnson study of our Community Connections program, 2016).**

All Enrollee-facing staff, including Care Managers, Care Coordinators, field outreach coordinators, Enrollee Services representatives, and CCHL staff, complete training modules on how to assist Enrollees and families or guardians with removing barriers to social needs and how to refer Enrollees to community resources. In addition to completing WellCare of Kentucky's required new-hire training, as part of care management and care coordination

training, our staff completes **Health Services Referral Tracker 2.0** to learn how to empower our Enrollees to reach optimal social health and independence. Our staff gains insight into the Community Connections program and learns how it provides Enrollees with access to resources that successfully remove their social barriers. In this module, care management and care coordination staff learn the basics of Community Connections platform use, including:

- Searching for social service organizations
- Searching for community activities
- Referring Enrollees to services
- Follow up
- Gaps in services

In addition to completing WellCare of Kentucky's required new-hire training, our CCHL staff complete an 11-day comprehensive training that includes but is not limited to the following modules:

- Community Connections Helpline
- Navigating the Community Connections Command Center
- Connecting with our Enrollees
- Building Enrollee Connections
- Cultural Competency
- Disability Awareness
- Behavioral Health Overview
- Communications Skills
- Effective Listening

In-person training for CCHL staff includes spending time in the Community Connections Hotline office for on-the-job training with department peer trainers/coaches.

Care Managers, Care Coordinators, Field Outreach Coordinators, Enrollee Services Representatives, and CCHL staff offer telephonic referral to and coordination of social service resources, as needed. Our staff uses evidence-based motivational interviewing to establish trusting relationships with Enrollees. We connect with Enrollees at their own pace and often resolve their most pressing needs before trying to complete a full assessment and coordinating other services. Social services are often essential to achieving an Enrollee's health care goals. We educate providers and community-based organizations about our CCHL and encourage them to refer our Enrollees and families to the hotline.

Our CCHL is available five days a week and uses our comprehensive registry of community social supports to link Enrollees to community-based services. As needed, CCHL staff and our Field Outreach Coordinators refer Enrollees to telephonic or local Care Managers to address medical or behavioral health needs in addition to social resource needs.

Care Managers who identify an Enrollee with social needs connect them to services directly using through our Community Connections program database or by referring Enrollees or families to the CCHL to identify resources. Our Kentucky Care Managers assist Enrollees with filling out and submitting applications for food and nutrition services like Women, Infants, and Children (WIC), SNAP, Head Start, Temporary Assistance for Needy Families, Child Care Subsidy, and Low Income Energy Assistance, as needed. The following Enrollee success story demonstrates how assistance with whole person needs leads to improved health outcomes.

Enrollee Success Story Assisting with Medical and Social Needs

In January 2017, our care manager received a referral from our field outreach coordinator (FOC) after an outbound outreach call. The grandmother of our Enrollee who is six years old with Cerebral Palsy told the FOC that her family needed utility assistance and follow-up on durable medical equipment (DME) needed to improve her granddaughter's mobility at home and in school. During a face-to-face visit in the child's home, the care manager completed a care needs assessment with the child, with father and grandmother present. During the assessment, the child's father mentioned there was a woman named Pam who talked to them about getting crutches, wheelchair, and replacing the wheels on a walker. The child's father stated he did not know who Pam was or if/how she was going to help, so he gave the care manager Pam's phone number to see what she could find out. The child's father shared that the reason they needed help with their utility bill was because they had received a cut-off notice and were concerned about keeping the heat on for the child. They owed the utility company over $400. The care manager searched our community resource database and gave the father contact information for the Low Income Home Energy Assistance Program (LIHEAP) for assistance with utilities. She also contacted Pam and found out that she worked with a DME company and was assisting the family in providing all equipment needed, including the walker wheels, a wheelchair, and crutches. The care manager called the child's father, informing him that Pam worked for the Patient Aid Medical Equipment Company, which was going to provide the DME. Utility assistance from LIHEAP resulted in the family only having to pay $25 of the $400 bill, and they avoided disconnection of utilities. The care manager's follow up and monitoring showed that the utility assistance intervention improved our Enrollee and family's quality of life and everyday care of the child. Coordination of DME medical equipment improved the child's activities of daily living (ADLs). Timely interventions reduced the father's stress and ultimately improved our Enrollee's health outcomes.

Follow up on Referrals and Tracking Social Referrals to Closure

Care Managers and Care Coordinators follow up on Enrollee referrals; adjust referrals as necessary; measure an Enrollee's health outcomes, including those related to social service referrals; and track Enrollee social referrals to closure. The CCHL team conducts follow-up calls regarding social service referrals for Enrollees who are not participating in care management.

Addressing Social Resources in Each of Kentucky's Medicaid Regions

Our evidence-based Community Connections program is built on community-based organizations, which we support through targeted grants and program funding; data sharing contracts that allow us to share HIPAA-compliant Enrollee referrals and service feedback; program effectiveness evaluation through our interconnected data platform to aid in program expansion, refinement; and additional grant funding.

Research, hot spotting, and relationship building helps us integrate social resources. To retain an understanding of Commonwealth, regional and local needs, we maintain an electronic library of information from internal and external sources to perform community-based assessments of health disparities sorted by ethnicity, race, gender and geography. This system includes data based on input from our local community engagement partners, community-based organizations, providers and associations, Commonwealth agency partners, and State Health Improvement Plans. Our community engagement partners have a deep understanding of local communities and work directly with care coordinators and the CCHL team to solve specific Enrollee access issues and identify referral resources to address social needs. We augment this information with population health data drawn from external sources, including CMS.

Figure B.1-3. In April 2019, WellCare of Kentucky sponsored the Prevent Child Abuse Kentucky 2019 Community Awards with $10,000 to further community support statewide.

We conduct field-based provider summits and regional sessions with key providers, which help us focus on in-person relationship and trust building activities. This helps us understand local organizational capacity and needs and identify the key social programs that fill social resource needs.

Table B.1-1 presents key social service partnerships we have established in Kentucky by region.

Table B.1-1 Key Social Service Partnerships in Kentucky

List of Key Kentucky Social Service Partnerships
Region 1
• Pennyrile Allied Community Services (PACS) • Marshall County School System • Paducah Cooperative Ministries • Provider Enrichment Services

• The Gentry House
Region 2
• Crossroads, Inc. • The Help Office • Owensboro Regional Suicide Prevention Coalition • Aaron McNeil House • Audubon Area Community Services - Owensboro Regional Recovery
Region 3
• Eastern Area Community Ministries • Coalition for the Homeless • Continuum of Care KY Balance of State • Orphan Care Alliance • Volunteers of America
Region 4
• HOTEL INC • Phoenix Wellness • Community Farmers Market • BRIGHT Coalition • Adair County WATCH
Region 5
• Kentucky Coalition Against Domestic Violence • Kentucky Faith Based Coalition • God's Pantry Food Bank • Bluegrass Community Action Partnership • Prevent Child Abuse Kentucky (**Figure B.1-3**)
Region 6
• Brighton Center • Welcome House • Safety Net Alliance • Northern Kentucky Community Action Commission • Care Mission
Region 7
• Hope Central • Clean Start • CAReS – Community Assistance and Referral Services, Inc.

• Safe Harbor of Northeast Kentucky • Hillcrest-Bruce Mission
Region 8
• Kentucky Homeplace – University of Kentucky Center for Excellence in Rural Health • Housing Development Alliance • Come-Unity Cooperative Care • Operation UNITE • Shaping Our Appalachian Region

ii. Three (3) examples of initiatives the Vendor has implemented for Medicaid managed care programs that have supported improved outcomes. Describe whether such initiatives were cost effective and resulted in sustained change.

THREE INITIATIVES WE IMPLEMENTED TO SUPPORT IMPROVED ENROLLEE HEALTH OUTCOMES

Our WellCare of Kentucky Medicaid team comprises thought leaders who have piloted and subsequently implemented many of WellCare's most innovative programs and initiatives designed to improve health outcomes. We have shared and implemented these initiatives, which became best practices, with our other Medicaid programs. These initiatives consistently deliver improved health outcomes and have the added benefit of being cost effective and resulting in sustained change. In this section, we describe three initiatives that we launched in Kentucky and implemented across the organization to improve Enrollee health outcomes.

Initiative #1: WellCare at Home

Home-based care is a critical component of WellCare of Kentucky's integrated, person-centered, community-based case management and care coordination model. WellCare at Home originated in Kentucky and expanded to all WellCare Medicaid health plans after a successful a successful pilot and expansion in Kentucky. WellCare at Home is grounded in WellCare's organizational mission to help Enrollees live better, more independent lives in the community, supporting our Medicaid customers' goal of high-quality delivery of care, improved health outcomes, cost-effectiveness, and Enrollee and provider satisfaction. This fully integrated care model considers an Enrollee's physical health, behavioral health, pharmacy, long-term services and supports, and unmet health-related social resource needs under a single fully insourced infrastructure with a single line of accountability, single integrated technology system, and fully integrated local and national staff. WellCare at Home includes a broad array of care coordination services, including prevention and population Health management, complex local case management, condition-specific care coordination (e.g., high-risk obstetrics, NICU, etc.), discharge planning and care transitions, health coaching, and telephonic field outreach coordination programs. We employ Care Managers who are nurses and social workers. They build a trusted relationship with Enrollees, assess their situation and conditions, and convene a multidisciplinary team to help address unmet needs.

WellCare of Kentucky provides and oversees localized case management and care coordination, which includes local, in-person coordination and support, supplemented by other WellCare resources. Our WellCare at Home team comprises registered nurses, licensed clinical social workers, field outreach coordinators, and care coordinators. WellCare of Kentucky has three Enrollee outreach coordinators in Region 8 to help locate and engage Enrollees we identify as high risk and who can benefit from care coordination. Our staff lives and works in the communities they serve, reaching Enrollees in remote, rural areas, and in urban centers. WellCare at Home, supported by our advanced CareCentral case management/care coordination system, ensures the administration of a seamless continuum of case management and care coordination from initial screening through follow-up and monitoring at a point of care closest to the Enrollee.

The in-person focus facilitates monitoring for our most medically complex and high-needs Enrollees in ways that telephonic outreach does not. The WellCare at Home model is especially beneficial in communities that are rural or experience challenges due to geography.

Results: Our approach to meeting the Commonwealth's expectations and requirements for the population health management and case management/care coordination continuum is informed through our understanding of how to best find, identify, stratify, and engage Enrollees in our integrated, person-centered case management/care coordination program. After implementing our high-touch, in-person WellCare at Home model across WellCare health plan affiliates, **from 2015-2017, our field-based care model reduced preventable admissions by 26% and preventable Emergency Department visits by 8% while increasing use of less expensive outpatient services and increasing Enrollee compliance with medication adherence.**

To enhance our WellCare at Home model, WellCare repeats a data-driven clinical review process monthly as part of a continuous quality improvement effort. Results inform program enhancements and long-term strategic planning to achieve the next level of performance. For example, **nationally, we recently added 200 additional local care coordinators to our programs and as a result experienced a 20% decrease in inpatient admissions, a 13% decrease in readmission, and a 13% decrease in Emergency Department utilization.**

Initiative #2: Leveraging our Community Connections Program to Improve Health Outcomes by Addressing Social Service Needs

We leverage our Community Connections program to improve health outcomes by addressing social service needs. The following examples are just a few of the initiatives we support to achieve improved health outcomes. These initiatives also decrease costs resulting from a reduction in Enrollee inappropriate utilization of high-cost Emergency Department services and in-patient services.

Team Ultra in Marshall County, Kentucky, is an example of how we apply the features of our Community Connections program to a specific community initiative by supporting a community-based organization to achieve improved health outcomes.

Figure B.1-4: Team Ultra

Marshall County is a rural area in Kentucky and the opportunities for after-school activities, outside of organized team sports, are limited. The Marshall County Health Department created Team Ultra in response to a request from the Kentucky Department of Public Health to increase physical activity in school-aged children, see **Figure B.1-4**. The mission of Team Ultra is to teach students about physical activity, good nutrition, and upstanding character traits. We collaborated with Team Ultra and provided grants to fill the funding gap to ensure all students in the county who wanted to participate could. The program began with one elementary school and has grown into all six of the county's elementary and middle schools.

Between September 1, 2016 and January 6, 2019, 136 students received 2,441 total services from Team Ultra. Among the WellCare of Kentucky Enrollees who participated, the average age was 11.5; 53.2% were boys and 46.8% were girls.

One-year post intervention, we observed the following reduction in health care utilization/costs and improvement in health outcomes:

- 21.5% reduction in Emergency Department visit costs
- 35.9% reduction in Emergency Department visits
- 32.5% reduction in non-emergent Emergency Department visits
- 98.3% increase in routine child health exams (from 28% to 56%)
- 81% reduction in visits related to acute lower respiratory infections

Kentucky Homeplace: From December 2016 to June 2017, WellCare of Kentucky partnered with community-based partner, Kentucky Homeplace, to support their mission of helping rural people of Kentucky remove barriers to accessing appropriate health services. Developed by the University of Kentucky Center for Excellence and now serving 30 counties, it focuses on health literacy, with community health workers providing health coaching and emphasizing preventive care and education through programs like the Stanford model for Chronic Disease Self-Management (CDSMP) and Diabetes Self-Management (DSMP). These six-week classes were offered in all counties and the pilot resulted in a sizable reduction in health care utilization. **Outcomes included a 62% reduction in avoidable Emergency Department visits, a 72% reduction in avoidable inpatient admissions, and a 70% reduction in inpatient days.**

Workforce sustainability: WellCare of Kentucky makes data-informed decisions about where and when we focus our efforts to provide assistance with social resource needs. For example, unemployment rates fell in 94 Kentucky counties between March 2018 and March 2019, but rose in 19 counties, and stayed the same in seven counties, according to the Kentucky Center for Statistics (KYSTATS), an agency of the Kentucky Education and Workforce Development Cabinet. Magoffin County recorded the Commonwealth's highest unemployment rate at 12.3 percent, followed by Lewis County, 9.1 percent; Carter County, 8.3 percent; Menifee County, 8 percent; Elliott and Wolfe counties, 7.6 percent each; Breathitt and Harlan counties, 7.4 percent each; Martin County, 7.3 percent; and Lawrence and Owsley counties, 7.2 percent each. This information told us where to provide Enrollees with extra assistance for training and employment needs.

WellCare contracts nationally with 573 employment and education, community action, and transportation programs to facilitate Enrollee access to workforce sustainability. We identify community-based organizations as community partners to assist with multi-level community improvement. Core pathways identified to drive change include access for adults to education and training to obtain and keep a living wage job; access to transportation; access to safe and affordable housing; and access to affordable and healthy foods. **Our national data shows that Enrollees we assisted in finding training and employment through our Community Connections' WellCare Works program had 19.7% fewer Emergency Department visits.**

Tobacco cessation experience through a collaboration with the Smoke Free Adair County Coalition: WellCare of Kentucky supports smoke-free initiatives across the Commonwealth by working with community partners to improve the well-being of our Enrollees and their communities. Partnering with key stakeholders in Adair County, we worked with the University of Kentucky's Center for Smoke-free Policy to assist the county with their goal of implementing a smoke-free town policy. Following the recommendations of the Center, Adair County formed a youth coalition focusing on promoting the new policy, which was supported by WellCare of Kentucky with a $5,000 financial sponsorship. As a result, the newly formed Smoke-Free Adair County Coalition purchased local advertising and marketing materials to raise awareness of the smoke-free ordinance. **In the spring of 2017, WellCare provided $20,000 in Hyper-Local Resources Grants to support projects that reduce smoking across Kentucky to 15 separate non-profit organizations.**

Results: Since launching the Community Connections Program nationally, we connected 125,710 people to 589,762 social services across the country, including more than 35,000 people to over 165,000 services across the Commonwealth. We have seen a direct impact in utilization of high-cost services for Enrollees referred to services through the program; for example we saw **a 26% reduction in Emergency Department visits, a 53% decrease in inpatient spending (Robert Wood Johnson study of our Community Connections Model, 2016).**

Outcomes

Initiative #3: Opioid Prevention and Treatment

Like other states, Kentucky is experiencing the opioid crisis first hand. In 2017, the CDC ranked Kentucky fifth in the nation for the highest rates of death due to drug overdose with 37.2 deaths per 100,000 residents. In Kentucky, the rate of babies born addicted to drugs and alcohol is climbing. In 2016, Kentucky's Department of Health recorded 1,257 cases of neonatal abstinence syndrome (NAS), representing more than 100 cases per month. More than half of those babies required pharmacological treatment. Many Kentucky children and teens enter foster care when their family is going through an opioid crisis. WellCare of Kentucky implemented a successful pilot to develop an enhanced pharmacy lock-in program that expanded traditional inputs.

To address this challenge affecting the communities we serve, WellCare of Kentucky continues to lead our efforts to develop an evidence-based, comprehensive opioid prevention and treatment program. This initiative supports Enrollees by promoting:

- Safer prescribing of opioids through provider profiling and reporting, overdose prevention with naloxone distribution and smaller dosing except for specific disease categories
- Management of chronic pain with opioid-sparing pharmacologic and non-pharmacologic modalities
- Early detection of opioid misuse and intervention, Screening, Brief Intervention, and Referral to Treatment (SBIRT)
- Increased access to substance use disorder and opioid use disorder (SUD/OUD) treatment options

Our suite of pharmacy-related clinical components for Enrollees experiencing SUD/OUD includes programs for polypharmacy, management of antipsychotic medications for children, medication adherence and reconciliation, medication therapy management, and our One Provider-One Pharmacy program.

One Provider-One Pharmacy Program: As part of WellCare's new, national ACT for Opioids Program, we identify Enrollees with relevant behavior patterns by analyzing high numbers of controlled substance claims; multiple prescribers of controlled substances; prescriptions filled at multiple pharmacies; excessive utilization; emergency department utilization; and the geographic distribution of controlled substance prescribers and pharmacies. In 2018, we expanded our identification for applicability of this program to include frequent Emergency Department use for certain diagnoses, which improved overall program effectiveness. Once we identify an at-risk Enrollee who meets lock-in criteria, we enroll them in the One Provider-One Pharmacy program, also known as the Lock-In Program, where Enrollees are locked-in to one prescriber and one pharmacy for controlled substances categorized as opiates or benzodiazepines.

Medication Reconciliation: Our WellCare of Kentucky pharmacists contact Enrollees post-discharge telephonically or through support of their local integrated care coordinator. Our pharmacists work with the Enrollee's Primary Care Provider as they perform medication reconciliation to ensure appropriate medication adherence and eliminate dangerous or unnecessary prescriptions.

Managing Antipsychotic Medications for Children: Our Pediatric Antipsychotic Utilization program identifies potential drug therapy issues, including excessive dose and multiple medication therapies for children ten and under in the Medicaid population. When this staff identify drug therapy issues, they suggest recommendations to the provider via outreach. The program goal is to identify antipsychotic use in Enrollees less than 10 years old and identify potential drug therapy problems. Communication is directed at the provider level to inform prescribers for Enrollees with potential therapeutic opportunities. **In 2019, we performed targeted medication reviews for 860 Medicaid Enrollees under 10 years old,** through this program.

Lower back pain management: Care Coordinator/Care Manager conduct outreach for selected Enrollees with low back pain who have been prescribed opiates. Nationally, low back pain is the most common reason behind opioid prescriptions, and our analysis shows that approximately 67% of our Enrollees with low defense for acute low back pain, which generally resolves in six to eight weeks with appropriate treatment, we developed a specialized low back pain care

management program. The program integrates access to non-pharmaceutical methods and, when opioids are necessary, works with providers on best practices and with Enrollees to monitor use, safe storage, and disposal of unused medications.

Predictive analytics: We conduct Care Coordination/Care Manager outreach upon proactive identification of Enrollees who are prescribed opioids and who are at risk of opioid misuse or abuse. We use a similar approach to provider profiling to identify potential risk of over-prescribing and provide education to the practice.

Point of sale pharmacy edits: This is a best practice to assist with controlling over utilization of opioid drugs at the point of sale. Combined with quantity limits and prior authorization criteria, point of sale pharmacy edits help us ensure safe opioid prescribing for Enrollees. We adhere to the CDC seven-day limit guideline, unless state-specific requirements are more stringent. We follow state and federal guidelines to ensure Enrollees have the best access to providers who prescribe buprenorphine. Our Medicaid formulary is structured to reduce the use of long-acting opioids that have potential for misuse, including OxyContin.

Medication-assisted treatment (MAT): We take steps to improve access to MAT for Enrollees diagnosed with OUD and who need timely access to treatment. Our Pharmacy Benefit relations team communicates with Enrollees about the availability of MAT and Naloxone (also known as Narcan), a medication designed to rapidly reverse an opioid overdose.

Results: Three examples of WellCare's national experience with opioid use and the interventions, impact, and outcomes we achieved when addressing opioid misuse at our health plans across the country includes: Kentucky Enhanced Pharmacy Lock-in Program, Illinois Initiation and Engagement in Treatment (IET) for Alcohol and Other Drug Dependence (IET) Incentive Program and Arizona Embedded Behavioral Health Provider:

- *Kentucky Enhanced Pharmacy Lock-in Program*: As mentioned above, WellCare of Kentucky implemented a pilot to develop an enhanced pharmacy lock-in program that expanded traditional inputs. By widening the scope of Enrollee activity, **the pilot program drove a 55% drop in opioid prescribing and an average medical savings of $150 PMPM. In addition, the program showed a 35% reduction in cyclobenzaprine prescriptions and a 30% reduction in benzodiazepine prescriptions**. By tracking their progress, we received a larger set of clinical outcomes data showing that opioid claims dropped 16% while MAT prescribing increased 6%. In addition, we donated $35,000 to support addiction recovery programs, including to Addiction Recovery Care (ARC), and donated 1,000 nasal atomizers to pharmacies.
- *Illinois Initiation and Engagement in Treatment (IET) for Alcohol and Other Drug Dependence (IET) Incentive Program:* At our Illinois health plan, WellCare offers providers and Enrollees a financial incentive to participate in the IET program. The program promotes timely completion of behavioral health services by offering a bonus for Enrollees successfully referred to and engaged in SUD treatment following a new episode of substance dependence. Providers receive a $50 referral fee for referring and linking Enrollees to an initial appointment following a new diagnosis and receive additional incentives based on follow-up care attendance. **As a result, we saw an 11.3% increase in initiation and a 34% increase in engagement over the course of 2017.**

- *Arizona Embedded Behavioral Health Provider:* In Arizona, WellCare partners with an integrated pain management clinic and a BH provider to help those suffering from chronic pain who are at a higher risk for opioid use. An embedded behavioral health practitioner in the pain management office provides Enrollee care. We provide enhanced support through integrated data sharing, care management services, and helping Enrollees meet their unmet social needs, such as homelessness, unemployment, and transportation. Previous studies of similar programs have shown significant improvement in care compliance, a decrease in prescription opiate use, better management of behavioral health, a decrease in Emergency Department utilization and admissions, and an increase in Enrollee and provider satisfaction. Currently underway, the program is tracking Emergency Department use, inpatient hospital days, and total cost of care for Enrollees.

We will monitor the Illinois and Arizona programs to identify sustainable results; and, if successful, we will present these programs to DMS for implementation in Kentucky.

WellCare will continue to strengthen the components of our overall opioid prevention and treatment program as we analyze the effectiveness of the program and take action on our findings and keep current with industry best practices. Our comprehensive opioid programs and supporting initiatives are currently **helping over 2,800 People of Kentucky with results from 2018 that include a 27% drop in opioid utilization, a 47% increase in Medication-Assisted Therapy (MAT), a 25% increase in maintenance medications, and a 33% decrease in Emergency Department utilization.**

iii. A summary of lessons learned from the Vendor's experience providing similar services to similar populations.

LESSONS LEARNED FROM OUR EXPERIENCE PROVIDING SIMILAR SERVICES TO SIMILAR POPULATIONS

WellCare has nationwide Medicaid experience inclusive of Kentucky Medicaid experience providing similar services to similar populations. WellCare has a proven record of successful operations for Medicaid population and subpopulations served, both in Kentucky and nationally. While every state is unique, we have learned through experience that some lessons learned can be applied universally to develop an effective strategy for managing the foster care population. As noted earlier, WellCare of Kentucky has been a market leader and innovator in developing innovative solutions and sharing them as best practices across WellCare's other Medicaid programs. We tailor our operations and programs to fit the priorities and delivery systems within each state and effectively address specific challenges. The continued application of lessons learned reinforces our commitment to help our Kentucky Medicaid Enrollees live better, healthier lives.

Table B.1-2 presents lessons learned from our experience providing similar services to populations similar to those who will be enrolled in Kentucky SKY.

Table B.1-2 Lessons Learned

Lessons Learned
Transparency in data sharing with providers allows for continuous feedback from all key stakeholders and fosters integrated, whole-person care.
Our experience in Kentucky and nationwide tells us mental health conditions and substance use disorders are prevalent in our Kentucky and nationwide Medicaid populations. Enrollees often experience co-occurring and co-morbid conditions. They have significant social service needs, which can be obstacles to health, well-being, and positive outcomes if unaddressed. Since 2011 in Kentucky, we have always used a fully integrated approach that in-sourced behavioral health management and created a single system of care that includes physical, behavioral, pharmacy, and social needs in Kentucky. Further, and unlike most other Medicaid plans, we do not outsource the management of pharmacy prior authorizations of the preferred drug list. This approach continues to deliver significant benefits across the care continuum as evidenced by our industry-leading quality outcomes, our strong clinical results, our success in providing for social needs, and the cost savings that result. Our fully integrated model of care leverages one integrated care team covering all care needs. This team is supported by one single technology system, CareCentral, which is purpose-built to specifically serve Medicaid programs. The benefit is put all relevant clinical and quality information in the hands of our diverse, integrated Enrollee, clinical and provider support teams who can use this information to support our Enrollees and providers at the every interaction using best available information. This tool also gives DMS' staff a clear and transparent view into the clinical approach we deliver and for which WellCare is accountable. For providers, the approach and tools we use deliver a comprehensive set of Enrollee data through a single on-line provider portal platform that providers can use to access and maintain a complete health record for the Enrollees they serve. This allows providers to better meet and coordinate their needs, concentrating on care rather than administration. **Nationally, this has resulted in WellCare being the number one or two plan in over 80% of WellCare's Medicaid state programs for NCQA Quality Ratings.** WellCare provides and oversees localized case management and care coordination through our WellCare at Home model, which includes local, in-person case management/care coordination resources. Our case management/care coordination leadership team focuses on accountability, collaboration, excellence, innovation, and a long-term commitment to delivering on the goals of the communities we serve. We closely monitor metrics to determine success of our case management/ care coordination approach, including metrics like direct Enrollee feedback, HEDIS, CAHPS, cost, and utilization. WellCare repeats a data-driven clinical review process monthly as part of continuous quality improvement efforts. Results inform program enhancements and long-term strategic planning to achieve the next level of performance. **For example, nationally, we recently added 200 additional local case management/care coordinators to our Medicaid programs and as a result experienced a 20% decrease in inpatient admissions per thousand Enrollees, a 13% decrease in**

Lessons Learned
readmission per 1,000 Enrollees, and a 13% decrease in Emergency Department utilization.
We need to understand and address regional needs and priorities for Medicaid populations in urban and rural areas.
We have learned that outreach must begin early, be extensive, and involve all stakeholders. Through our efforts in every WellCare market to become knowledgeable of the people and regions we serve, we have developed a thorough and comprehensive view of regional nuances, needs, and priorities that have informed virtually all aspects of Medicaid solutions. Our Medicaid Enrollees in urban and rural areas have different concerns - with access to care a potential issue in rural and remote areas of a state. We appreciate the value of local knowledge and hire local staff from within the state and local communities, collocate staff in state agency offices, collaborate with stakeholders, hold focus groups with Enrollees prior to contract go-live, and hold provider summits to discuss important topics like regional needs and priorities as well as continuity of care. We build cultural and regional understanding into our training program for all of our Enrollee-facing staff and for providers. For example, the majority of our Kentucky Medicaid Enrollees (27%) live in Region 8, with 18% of Enrollees in Region 5, and 10% of Enrollees in Region 7, demonstrating the presences of WellCare of Kentucky in Kentucky's eastern rural counties. We deploy resources through our six regional hubs and beyond, including field-based Care Managers, quality practice advisers, provider relations representatives, patient care advocates, and Community Connections staff to provide face-to-face support to our Enrollees and providers as needed. We learned that geography and urban versus rural populations affect hospital readmission rates. Due to our long-standing experience in Kentucky since 2011, we recognize that health disparities among Enrollees rural areas contribute to a higher readmission rate compared to Enrollees in other Regions. We observe higher admission rates for Enrollees living in the eastern part of Kentucky, particularly in Regions 7 and 8. In eastern Kentucky, we serve the largest number of Medicaid Enrollees with complex conditions, compared to other Kentucky health plans. And we built our population health and other programs with these Enrollees in mind. Worth noting, we have always had the highest number to Medicaid Enrollees in Region 7 and Region 8. We are in eastern Kentucky to help DMS improve outcomes, and this is why we deploy a special unable-to-contact program with locally based community health workers, provide support for community programs, and implement value-based programs for providers like Appalachian Regional Healthcare. Our focus on addressing issues in rural Kentucky includes the importance of behavioral health in integrated care; an emphasis on continuing relationships and contacts with CMHCs and FQHCs; and maintaining contracts with all Critical Access Hospitals and FQHCs, which are an important part of the Medicaid delivery system. We are particularly proud of our collaboration with DMS to expand the Medicaid program to include CMHCs and behavioral health benefits. WellCare has successfully implemented telehealth solutions in other states. We are working with network providers to leverage the Kentucky's new law to improve access to care in rural areas and to support access to hard-to-find specialists, such as psychiatry and dermatology.

Lessons Learned
Delivering fully integrated care and improved health outcomes means addressing social determinants of health.
Our Community Connections team partners with community-based organizations, outreaches to Enrollees to educate the community about availability of social services, and educates Enrollees and families how to call our CCHL line to access social resources. Our Community Connections program links Enrollees to social services, such as food banks or meal delivery, housing assistance, financial assistance, transportation, education support, legal assistance, and employment services. We designed the Community Connections program to partner with community resources and help individuals navigate the local social support network to receive the care and services they need. A program priority is to identify local, community-based solutions to fill gaps in the network of social services. Care Coordinators and other WellCare of Kentucky staff refer Enrollees and families, as needed or requested, to the CCHL team for assistance connecting to social services. We train Care Managers and Care Coordinators and give them the capability to access and search the Community Connections database of community-based organizations, which includes organizations like SNAP, WIC, and Head Start. They refer Enrollees and families/guardians to community-based resources and follow up to measure the impact of these services on our Enrollees' health outcomes as part of our closed-loop referral process. When we connect Enrollees to the social services they need, they are five times more likely to schedule and go to their annual PCP visit, resulting in vital preventive care and screenings. **As validated by Robert Wood Johnson Foundation's Center for Public Health Systems and Services Research at University of Kentucky in 2015, there is $450 savings in health care costs per social service accessed.** This aligns with the Commonwealth's goal to help improve health outcomes for our Kentucky Enrollees and lower the overall cost of health care
We have learned the value of provider education and support.
We have learned that the more we support providers, the better they can help our Enrollees, which in turn improves health outcomes. This is why we invest heavily in provider-facing staff and prioritize inclusion of providers on MDTs. We support providers with a team of 15 PR representatives supported by Operations Account Reps (OARs), 16 Quality Practice Advisors (QPAs), four hospitals services specialists, and three provider relations managers, serving our provider network out of six regional offices. When a provider joins our network, a PR Representative contacts the provider and conducts an orientation, explains their role as a primary point of contact and advocate for the provider, and discusses with them how they can best support the provider on an ongoing basis. The PR Representative educates providers about the covered and value-added services we offer. Our PR Representatives are fully accountable to their provider relationships, are the key owner of the relationship and the provider's advocate to ensure they receive the support they need when they need it. **In 2019, WellCare of Kentucky PR Representatives made over 6,600 visits to provider offices to educate providers and their staff. In an independent provider satisfaction survey in 2019, Kentucky Medicaid providers rated our PR representatives highest in the state in their ability to answer provider questions and resolve problems.**

Lessons Learned

PR Representatives work in partnership with our QPAs to help engage practices to improve quality measures and provide more cost-efficient care. QPAs are trained nurses who review HEDIS measures, clinical practice guides, and provide toolkits that support ongoing quality improvement activities. Like our PR Representatives, QPAs live and work in the regions they serve. They are assigned to specific practices and are aligned with the provider relations team. They frequently make joint meetings with providers to assure they receive the best possible services in person (in their offices), in the most efficient manner. They help with scheduling transportation to bring Enrollees to the practice, and help with Enrollee reminders to avoid no-shows. They educate providers about special program services, the value-added services we offer, the importance of the EPSDT program and closing care needs, and provide targeted training on relevant topics like trauma-informed care. They also connect providers to Care Managers and patient care advocates (PCAs) as needed.

In 2019 alone, WellCare of Kentucky's QPAs made over 6,000 visits to provider offices to advance the Commonwealth's quality measures.

We train QPAs on DMS' priority measures and collaborate with providers to ensure they understand their quality progress reports. On a monthly basis, the Provider Relations, Network Management, Care Management, and QPA teams hold a "P360" huddle meeting reviewing our top providers' performance in quality and cost measures by region. These meetings focus on a 360 degree view of the practices, including all aspects of quality and cost, and include interdisciplinary teams such as pharmacy and clinical teams. Through P360 huddle meetings, the team reviews the practice panel clinical performance, including a heat map of care gaps. They then use that information to focus on certain practices or develop condition/service specific campaigns. The team collaborates to develop a targeted plan for each provider to enhance practice quality and outcomes.

Patient care advocates provide local support of our quality improvement program. PCAs are WellCare of Kentucky employees who are physically located in select network provider offices and focus on connecting Enrollees to care, including accessing detailed Enrollee and provider reports and scheduling appointments for targeted Enrollees with identified gaps in care like immunizations, ADHD follow-up, asthma medication adherence, and EPSDT well child visits. Through our HEDIS and care gap discussions with providers, we found many were engaged and eager to address gaps in care but lacked resources needed to conduct Enrollee outreach and follow up. PCAs address this need. Our PCA program is a service enhancement for providers and a best practice.

We learned that when Care Managers include providers on multidisciplinary teams, we improve communication among those involved in an Enrollee's care and our Enrollees experience better health outcomes. Enrollees trust their providers, so they are often the first to know our Enrollees have social resource needs. We educate providers about our Community Connections program, how community-based resources remove barriers to health and have a positive effect on an Enrollee's health, and the process for referring Enrollees to these resources.

By meeting providers where they are with value-based contracting, we support them by maximizing their income as they bring higher quality care to the People of Kentucky.

We learned that training is not a once and done process. For example, during preparation for the anticipated Kentucky HEALTH Waiver transition (with was subsequently cancelled), we learned we

Lessons Learned

needed to strengthen provider training to include longer-term refresher training via webinar in addition to short-term, focused training sessions.

We learned that collaboration is more than just bringing stakeholders together.

Communication and collaboration is key. We learned the value and benefits of shared decision-making, giving all stakeholders (including Enrollees, parents/guardians, and providers) a strong voice and a real opportunity to contribute during care and service planning. We collocate WellCare of Kentucky staff in state agency offices throughout the Commonwealth. Further, WellCare of Kentucky's Provider Engagement Model is a direct reflection of the lessons we have learned around provider support. Provider engagement combines “high touch” with “high tech” through the most extensive physical presence of any Kentucky Medicaid health plan along with 24/7 provider support available through multiple channels. Having six regional WellCare of Kentucky throughout the Commonwealth increases collaboration, timely response to issues or concerns, and increased knowledge and insight into the Kentucky Medicaid population and subpopulations we serve.

We learned that Enrollee empowerment, engagement, and satisfaction improve when we offer multimodality outreach methods and reach out to Enrollees in the way(s) they prefer.

We must use multiple outreach methods to reach Enrollees for early health risk assessments and needs assessments. We have a full complement of staff throughout each state and in every region to maximize our local engagement. We customize our methods of outreach (in-person, telephonic, social media, chat, text messaging, Enrollee portal) to connect with Enrollees in the way most effective for them. In an Enrollee's record, we can log Enrollee preferences, including how they like us to contact them. We encourage participation by promoting multiple modes for gathering information from our Enrollees. For example, in most markets Enrollees can complete the initial HRA screening in a variety of ways. Our flexibility is key to increasing Enrollee empowerment, engagement rates, satisfaction, and to our ability to support Enrollees in closing care gaps. **Compared to other Kentucky Medicaid MCOs, we have the highest Enrollee satisfaction as measured by the CAHPS survey in 2019.**

We learned that Enrollee health outcomes improve when we offer provider incentive programs and value-based contracting.

We learned that incenting providers to participate in our quality programs is an effective way to coordinate with them in improving Enrollee health outcomes. We offer the following incentives for providers:

Partnership for Quality (P4Q) program: Providers receive bonus payments for closing care needs on key HEDIS performance measures and timely completion of appointment agendas, which allow our Physician partners to understand, in a single report, everything that they need to address for each Enrollee during an appointment. In 2018, providers closed 118,316 care needs as part of WellCare of Kentucky's P4Q

100% of Kentucky Medicaid Enrollees are assigned to PCPs participating in our P4Q program, and more than 50% of all VBP payments are LAN Level 3

Lessons Learned

program. WellCare of Kentucky introduced a Behavioral Health P4Q program in 2019 to better align with DMS' goal of improving behavioral health-related health outcomes among the Medicaid Enrollees. In only five months, 738 care needs closed at the participating CMHCs and more than $30,000 in bonus payments were paid out to providers in June 2020 as a result of the new behavioral health P4Q program.

Value-Based Purchasing (VBP) program: We offer value-based payment arrangements across the spectrum of Health Care Payment (HCP) Learning & Action Network (LAN) categories including shared savings/shared risk and full risk for providers who have the infrastructure and capabilities to become effective at improving overall health outcomes and managing cost. Our P4Q program supports providers in preparing for advanced VBP programs by serving as a LAN Level 2 structure.

Peak Performance program: We developed this program in 2017 to reward high volume paneled Kentucky Medicare providers for high performance in HEDIS measures with a focus on certain measures in need off more dramatic year end improvement. Our data exchange and drill-down capabilities include a quality team to assist in EMR interchange. The quality team provides reports that are configurable and have drill-down capability by Enrollee, zip code, Primary Care Provider, group, diagnosis, family, and procedure code. Providers have access to real-time Enrollee care gaps, updated every week. Providers have ability to enter non-standard data linked to a chart. Using the provider portal, providers can also view appointment agendas, which allow Physicians to understand, in a single report, everything that they need to address for each Enrollee during an appointment including all known diagnoses and associated care needs derived from evidence-based guidelines. As a result of the Peak Performance program, **79% of participating Kentucky providers, representing nearly 7,000 Enrollees, improved their quality scores from 2017 to 2018**. Due to program success, we are developing a process to implement this program in our Medicaid programs to enhance our suite of Medicaid provider supports to achieve high quality health outcomes.

We learned we had to address the growing Opioid problem in Kentucky and in other Medicaid markets.

As part of WellCare's new, national ACT for Opioids Program, we identify Enrollees with relevant behavior patterns by analyzing high numbers of controlled substance claims; multiple prescribers of controlled substances; prescriptions filled at multiple pharmacies; excessive utilization; emergency department utilization; and the geographic distribution of controlled substance prescribers and pharmacies. Once we identify an at-risk Enrollee, we enroll them in the One Provider-One Pharmacy program, where they are "locked-in" to one prescriber and one pharmacy for controlled substances categorized as opiates or benzodiazepines.

We learned the value of expanding the reach of our Lock-In Program to address overutilization of high-cost Emergency Department services and to improve health outcomes. WellCare of Kentucky's Lock-In Program supports adult Enrollees (18 years old and older) who need help managing their health care needs. It limits overuse of medical and pharmacy benefits by making sure an Enrollee receives these benefits at an appropriate frequency and by ensuring care and services are medically necessary. Locking-in Enrollees to a specific provider and one pharmacy helps us closely monitor the services an Enrollee receives. Data pulled in April for 2019 Q1 shows 1,112 WellCare of Kentucky

Lessons Learned
Enrollees were active participants in the Lock-In Program. **The program drove a 55% drop in opioid prescribing and an average medical savings of $150 PMPM.**

iv. How the Vendor will apply such lessons learned to the Kentucky Medicaid managed care program.

APPLYING OUR EIGHT YEARS OF EXPERIENCE AND LESSONS LEARNED IN KENTUCKY

We have numerous examples of strategies we implemented on the Kentucky Medicaid program through an initiative or pilot program that delivered sustainable positive health outcomes. Many of them have been implemented as best practices across WellCare's other state Medicaid health plans, such as:

- Integrated, field-based case management and care coordination program, WellCare at Home
- Community Connections social resource program
- Pharmacy Lock-In Program
- Reach unable-to-contact program using community health workers
- Healthy Rewards Enrollee incentive program reloadable debit cards or gift cards for stores to purchase needed personal, home, baby, and family-related items that promote good health behaviors for practicing healthy behaviors

We continually apply lessons learned and expand or build on programs that are already delivering successful results in Kentucky or our other Medicaid programs, including:

- Enhance Kentucky Medicaid telehealth capabilities
- Evolve, enhance, or expand population health management programs to address newly identified trends in diseases or chronic conditions, embrace the digital era to make boost progress in health outcomes, involve all stakeholders involved in an Enrollee's care, and promote health and wellness strategies for Enrollees during all stages of life, not simply when they become sick
- Continue to empower and engage Enrollees by meeting them where they are physically, culturally and through technology and other modalities that support their engagement
- Continue to enhance our advanced data analytics and decision support capabilities and capability to share data pertinent to all factors that influence a person's health with stakeholders
- Continue building on our WellCare at Home program by expanding case management and care coordination services like our opioid program and our NICU graduates program
- Continue enhancing our partnership with providers to help them be successful by streamlining the administrative burden of working with MCOs and empowering providers with data and other supports to deliver the highest quality care to Enrollees
- Expand use of provider incentive programs to drive quality and improved health outcomes

- Leverage our established Reach unable-to-contact program to educate Enrollees on the value and importance of colorectal cancer screenings to prevent colon cancer

We continually learn from our experiences and those of our affiliate health plans across the country. We will continue to apply this knowledge and experience to the Kentucky Medicaid managed care program, to provide our Enrollees with the most innovative, best in class solutions that improve outcomes, quality, and satisfaction. WellCare of Kentucky actively supports DMS' goal to develop collaborative efforts and initiatives with the contracted MCOs and state agency partners to implement targeted approaches to improve the health of Enrollees in a cost efficient and effective manner. Working together, we can have a stronger impact on behavioral health issues like mental health and substance abuse and social resource needs, which are prevalent and serve as barriers to improved health outcomes in the Kentucky Medicaid population.

2. Corporate Information

B.2. CORPORATE INFORMATION

a. **Provide required 42 CFR 455.100-107 disclosures:**

i. (1)The name and address of any person (individual or corporation) with an ownership or control interest in the disclosing entity, fiscal agent, or managed care entity. The address for corporate entities must include as applicable primary business address, every business location, and P.O. Box address.

(2) Date of birth and Social Security Number (in the case of an individual).

(3) Other tax identification number (in the case of a corporation) with an ownership or control interest in the disclosing entity (or fiscal agent or managed care entity) or in any subcontractor in which the disclosing entity (or fiscal agent or managed care entity) has a 5 percent or more interest.

ii. Whether the person (individual or corporation) with an ownership or control interest in the disclosing entity (or fiscal agent or managed care entity) is related to another person with ownership or control interest in the disclosing entity as a spouse, parent, child, or sibling; or whether the person (individual or corporation) with an ownership or control interest in any subcontractor in which the disclosing entity (or fiscal agent or managed care entity) has a 5 percent or more interest is related to another person with ownership or control interest in the disclosing entity as a spouse, parent, child, or sibling.

iii. The name of any other disclosing entity (or fiscal agent or managed care entity) in which an owner of the disclosing entity (or fiscal agent or managed care entity) has an ownership or control interest.

iv. The name, address, date of birth, and Social Security Number of any managing employee of the disclosing entity (or fiscal agent or managed care entity)."

b. **Indicate the Vendor's form of business (e.g., corporation, nonprofit corporation, partnership, etc.) and provide the Indicate following information:**

i. Names and contact information for all officers, directors, and partners.

ii. Relationship to parent, affiliated and/or related business entities and copies of management agreements with parent organizations.

iii. Provide copies of the Vendor's articles of incorporation, bylaws, partnership agreements, or similar business entity documents, including any legal entity having an ownership interest of five percent (5%) or more.

iv. Provide the Vendor's Uniform Certificate of Authority or application for the Uniform Certificate of Authority, as well as copies of reports filed with the Kentucky Department of Insurance during the prior twelve (12) months, if applicable.

c. **Demonstrate financial viability for the Vendor and each Subcontractor, as evidenced by sustained bottom line profitability and no current areas of significant financial risk for the past three (3) calendar years or the Vendor or Subcontractor's fiscal years. For the Vendor and each Subcontractor, provide copies of financial statements from the most recently completed and audited year.**

d. Provide a statement of whether there is any pending or recent (within the last ten (10) years) litigation against the Vendor or sanctions, including but not limited to the following:

i. Litigation involving the Vendor's failure to provide timely, adequate, or quality Covered Services. If any litigation listed, include damages sought or awarded or the extent to which adverse judgment is/would be covered by insurance or reserves set aside for this purpose. Include an opinion of counsel as to the degree of risk presented by any pending litigation and whether the pending or recent litigation will impair your organization's performance in a Kentucky Medicaid Managed Care Contract.

ii. Sanctions for deficiencies in performance of contractual requirements related to an agreement with any federal or state regulatory entity. Include monetary sanctions the Vendor has incurred pursuant to contract enforcement from any state, federal, or private entity, including the date, amount of sanction, and a brief description of such enforcement, corrective action, and resolution.

iii. Any Securities Exchange Commission (SEC) filings discussing any pending or recent litigation. Include information for Parent Company, affiliates, and subsidiaries. The Vendor may exclude workers' compensation cases.

Include information for the Parent Company, affiliates, and subsidiaries. The Vendor may exclude workers' compensation cases.

e. For the Vendor, Parent Company, subsidiaries and all Subcontractors list and describe any Protected Health Information (PHI) breaches (within the past five years) that have occurred and the response. Do not include items excluded per 45 CFR 164.402.

f. Has the Vendor ever had its accreditation status (e.g., National Committee on Quality Assurance (NCQA), Utilization Review Accreditation Commission (URAC), or Accreditation Association for Ambulatory Health Care (AAAHC)) in any state for any product line adjusted down, suspended, or revoked (within the past five years)? If so, identify the state and product line and provide an explanation. Include information for the Vendor's Parent Company and subsidiaries.

g. Provide a listing of Medicaid managed care contracts held in the past ten (10) years for which the Vendor, Vendor's Parent Company, and subsidiaries has:

i. Voluntarily terminated all or part of the contract under which it provided health care services as the licensed entity.

ii. Had such a contract partially or fully terminated before the contract end date (with or without cause).

iii. Had a contract not renewed.

iv. Withdrawn from a contracted service are.

v. Had a reduction of enrollment levels imposed?

B.2. CORPORATE INFORMATION

a. Provide required 42 CFR 455.100-107 disclosures:

i. (1) The name and address of any person (individual or corporation) with an ownership or control interest in the disclosing entity, fiscal agent, or managed care entity. The address for corporate entities must include as applicable primary business address, every business location, and P.O. Box address.

WellCare of Kentucky is an indirect wholly owned subsidiary of Centene Corporation, Inc. (Centene). The ownership follows, along with their primary business addresses,

All other WellCare business addresses and P.O. Box addresses are included in **Table B.2.a.i.1-2 WCG Health Management Business Locations** and **Table B.2.a.i.1-3 WCG Health Management Business P.O. Boxes.** Centene's business addresses and P.O. boxes are include as **Attachment B.2.a.i.1 Centene Business locations and P.O. Boxes.**

The stock of CNC is publicly traded on the New York Stock Exchange under the symbol "CNC." Information regarding beneficial owners of 5% or more of Centene's publicly traded stock is available on Schedules 13G filed by such beneficial owners with the SEC with respect to Centene's stock, and currently ownership of 5% or more of stock is detailed in **Table B.2.a.i.1-1 Centene Stock Ownership > 5%.**

Please note that a person is only eligible to file a Schedule 13G with respect to an issuer's securities if such person has acquired the securities in the ordinary course of business and not for the purpose nor with the effect of changing or influencing the control of the issuer. Provided below are the names of companies who owned 5% or more of the voting shares of CNC as of the dates noted herein:

Table B.2.a.i.1-1 Centene Stock Ownership > 5%

Business or Last Name	FEIN	Ownership Percentage
The Vanguard Group, Inc., et al. PO Box 2600; V26 Valley Forge, PA 19482-2600	52-0556948	7.65% (as of February 1, 2020)
BlackRock, Inc., et al. 55 East 52nd Street New York, NY 10055	32-0174431	5.51% (as February 1, 2020)
T Rowe Price Associates Inc. 100 East Pratt St Baltimore, MD 21202	52-0556948	5.19 % (as February 1, 2020)
Capital Group Companies, Inc. 333 South Hope Street, 55th Floor Los Angeles, CA 90071	95-1411037	7.9% (as of February 1, 2020)

Table B.2.a.i.1-2 WCG Health Management Business Locations includes a complete list of the business locations of WCG Health Management, Inc. and its affiliates. Please note we have omitted a couple of locations currently under lease which are vacant and for which sublessors are being sought.

A complete list of the business locations of Centene and its other affiliates is included as **Attachment B.2.a.i.1 Centene Business locations and PO Boxes**.

(2) Date of birth and Social Security Number (in the case of an individual).

No individual holds an ownership or control interest in the disclosing entity. Please see Section B.2.a.iv. for a list of managing employees.

(3) Other tax identification number (in the case of a corporation) with an ownership or control interest in the disclosing entity (or fiscal agent or managed care entity) or in any subcontractor in which the disclosing entity (or fiscal agent or managed care entity) has a 5 percent or more interest.

For administrative services, WellCare of Kentucky contracts with an affiliate entity, Comprehensive Health Management, Inc. (CHMI), 8735 Henderson Road, Tampa, Florida 33634. FEIN: 59-3547616. Like WellCare of Kentucky, CHMI is a wholly-owned subsidiary of The WellCare Management Group, Inc. The tax identification numbers of entities with an ownership and control interest in the disclosing entity and Comprehensive Health Management, Inc. are as follows:

ii. Whether the person (individual or corporation) with an ownership or control interest in the disclosing entity (or fiscal agent or managed care entity) is related to another person with ownership or control interest in the disclosing entity as a spouse, parent, child, or sibling; or whether the person (individual or corporation) with an ownership or control interest in any subcontractor in which the disclosing entity (or fiscal agent or managed care entity) has a 5 percent or more interest is related to another person with ownership or control interest in the disclosing entity as a spouse, parent, child, or sibling.

No person (individual or corporation) with an ownership or control interest in the disclosing entity (or fiscal agent or managed care entity) is related to another person with ownership or control interest in the disclosing entity as a spouse, parent, child, or sibling or control interest in any subcontractor in which the disclosing entity (or fiscal agent or managed care entity) has a 5 percent or more interest is related to another person with ownership or control interest in the disclosing entity as a spouse, parent, child, or sibling.

iii. The name of any other disclosing entity (or fiscal agent or managed care entity) in which an owner of the disclosing entity (or fiscal agent or managed care entity) has an ownership or control interest.

The owners of WellCare of Kentucky own other companies that offer Medicare and/or Medicaid health plans. The name and address of the other companies offering health plans are set forth below in **Table B.2.a.iii-1 Other WellCare Disclosing Entities.** Except where indicated, these companies are owned by The WellCare Management Group, Inc. **Table B.2.a.iii-2 Centene Disclosing Entities** includes the disclosing entities that are owned by Centene.

Please note the owners of WellCare of Kentucky also have ownership interests in a specialty pharmacy and in certain accountable care organizations ("ACOs"). We do not believe these ACOs are disclosing entities and therefore have not included them below. However, such information is available upon request.

ii. Relationship to parent, affiliated and/or related business entities and copies of management agreements with parent organizations.

WellCare of Kentucky is an indirect wholly owned subsidiary of Centene Corporation, Inc. ("CNC").The ownership path is as follows:

WELLCARE HEALTH INSURANCE COMPANY OF KENTUCKY (WHICKY) AND COMPREHENSIVE HEALTH MANAGEMENT, INC. (CHMI) MANAGEMENT SERVICES AGREEMENT

In order to maximize efficiency and cost effectiveness, WellCare centralizes operations in CHMI, its third party administrator. On behalf of The WellCare Group of Companies, CHMI performs all

administrative and management functions for health plan subsidiaries including those services specifically outlined below. These services are provided to the health plan subsidiaries through Management Services Agreements, which for any given health plan are reviewed and approved for use by the appropriate state regulatory agency that oversees plan operations.

Please see **Attachment 60.7.B.2.b.ii-1 Org Chart.**

Please see **Attachment 60.7.B.2.b.ii-2 WHICKY-CHMI Management Services Agreement**. (provided electronically)

Please see **Attachment 60.7.B.2.b.ii-3 Amended Management Service Agreement**.

CHMI generally supervises and manages the day-to-day operations of the health plans, including but not limited to:

- The provision of accounting and financial services
- Management of information and computer systems, including maintenance and upgrading of all such equipment
- Data processing
- Design and administration of benefits
- Adjudication and processing of claims
- Provision of customer service
- Provision of provider network credentialing services
- Coordination of communications to members and providers
- Provider network contracting and management
- Product marketing services
- Other services that are customarily associated with the provision of the foregoing and the operation of a health plan

INCOME TAX ALLOCATION AGREEMENT

The purpose of the Income Tax Allocation Agreement is for Centene and its subsidiaries to establish a method for allocating the consolidated federal income tax liability of the Centene group of companies (and, when applicable, certain consolidated or combined state income or franchise tax liabilities among the companies joining in those consolidated or combined state income tax returns) in an agreed fashion and to compensate any company for use of its net operating and net capital losses, and tax credits utilized in computing consolidated federal taxable income, (and, when applicable, consolidated or combined state taxable income or franchise tax base) and to provide for the allocation and payment of any refund arising from a carryback of net operating or capital losses, or tax credits generated in subsequent taxable years. Subject to all applicable laws, regulatory requirements and any other restrictions, WHICKY and each other subsidiary agrees to pay Centene for all years or portions of years that

such subsidiary is included in the consolidated federal income tax return, the portions of the consolidated federal income tax liability attributable to such subsidiary.

Please see **Attachment 60.7.B.2.b.ii-4 Income Tax Allocation Agreement**

Please see **Attachment 60.7.B.2.b.ii-5 Joint Enterprise Agreement** (provided electronically)

iii. Provide copies of the Vendor's articles of incorporation, bylaws, partnership agreements, or similar business entity documents, including any legal entity having an ownership interest of five percent (5%) or more.

- Please refer to **Attachment B.2.b.iv-14 Q2 2018 Supplemental Report**

c. Demonstrate financial viability for the Vendor and each Subcontractor, as evidenced by sustained bottom line profitability and no current areas of significant financial risk for the past three (3) calendar years or the Vendor or Subcontractor's fiscal years. For the Vendor and each Subcontractor, provide copies of financial statements from the most recently completed and audited year.

WellCare of Kentucky's net income the past three years has been:

- 2018 - $126.7M
- 2017 - $80.2M
- 2016 - $42.2M

We believe this information is evidence of sustained bottom line profitability. In addition, we are submitting the complete financial statement for 2018 as **Attachment B.2.c-1 WellCare of Kentucky, Inc. - Financial Stmt.** (provided electronically)

Attachment B.2.c-2 WellCare of Kentucky Internal Control Letter is another document to demonstrate we have no areas of financial risk.

Subcontractors of WellCare of Kentucky have submitted financial viability documents; they are provided in **Attachment B.2.c Subcontractor Financial Statements.** (provided electronically)

d. Provide a statement of whether there is any pending or recent (within the last ten (10) years) litigation against the Vendor or sanctions, including but not limited to the following:

i. Litigation involving the Vendor's failure to provide timely, adequate, or quality Covered Services. If any litigation listed, include damages sought or awarded or the extent to which adverse judgment is/would be covered by insurance or reserves set aside for this purpose. Include an opinion of counsel as to the degree of risk presented by any pending litigation and whether the pending or recent litigation will impair your organization's performance in a Kentucky Medicaid Managed Care Contract.

Based upon a review of available records, we have created **Table B.2.d.i-1 WellCare Litigation**, which represents our best efforts to include a responsive list of litigation involving the Vendor and its affiliates, and subsidiaries. Additionally, litigation involving two of our subcontractors, CVS and Avesis, immediately follows Table B.2.d.i-1.

The litigation involving our parent company, Centene Corporation, is included as **Attachment B.2.d.i Centene Litigation.**

The disclosed matters arose in the ordinary course of our business and none were, or are, material, financially or otherwise. To summarize, over 85 percent of the responsive matters resolved without any settlement value, and less than 10 percent involved settlement values greater than $500,000. Additionally, over 20 percent of the cases listed involve Medicaid Fair Hearings. To the best of our knowledge and belief, no pending litigation will impair our organization's performance under a managed care contract in Kentucky.

Note that we interpret the requirement to provide information relating to “litigation involving the Vendor’s failure to provide timely, adequate, or quality Covered Services” as excluding litigation involving employment matters and other actions not related to the provision of benefits to enrollees.

An opinion of counsel as to the degree of risk presented by any pending litigation and whether the pending or recent litigation will impair WellCare's performance in a Kentucky Medicaid Managed Care Contract is presented below.

Tamara L. Meyer
Vice President, Assistant General Counsel,
Litigation, Regulatory & Health Plan Operations

January 29, 2020

Re: Item 60.7 B.2.d.i (Statement of Litigation/Opinion of Counsel);
RFP 758 2000000202

To Who It May Concern:

The Vendor and its parent company, affiliates, and subsidiaries maintain sufficient insurance coverage and reserves that cover any actual or potential adverse judgment relating to the attached litigation disclosures. It is my opinion that the degree of risk presented by any pending litigation is not material. More specifically, to the best of my knowledge and belief, any pending or recent litigation will not impair our organization's performance in a Kentucky Medicaid Managed Care Contract

Sincerely,

Tamara L. Meyer
Vice President, Assistant General Counsel,
Litigation, Regulatory & Health Plan Operations

Office: 8735 Henderson Road | Renaissance 1 | Tampa, Florida 33634
Mail: Post Office Box 31386 | Tampa, FL 33634

Table B.2.d.i-1 WellCare Litigation

Table B.2.d.ii-2 WellCare Sanctions

iii. Any Securities Exchange Commission (SEC) filings discussing any pending or recent litigation. Include information for Parent Company, affiliates, and subsidiaries. The Vendor may exclude workers' compensation cases.

Below are the SEC filings discussing any pending or recent litigation for all WellCare affiliates and subsidiaries. SEC filings discussing any pending or recent litigations for our Parent company, Centene Corporation, can be found in **Attachment B.2.d.iii Centene SEC Filings**.

FROM THE WELLCARE HEALTH PLANS 2018 10 K:

Item 3. Legal Proceedings.

We are involved in legal actions in the normal course of our business, including, without limitation, protests and appeals related to Medicaid procurements, wage and hour claims and other employment claims, claims for indemnification under purchase agreements, vendor disputes and provider disputes regarding payment of claims. Some of these actions seek monetary damages, including claims for liquidated or punitive damages, which are not covered by insurance. We accrue for contingent liabilities related to these matters if a loss is deemed probable and is estimable. The actual outcome of these matters may differ materially from our current estimates and therefore could have a material adverse effect on our results of operations, financial position, and cash flows.

FROM THE WELLCARE HEALTH PLANS 2016 10 K:

Item 3. Legal Proceedings.

United States Department of Health and Human Services

In April 2011, we entered into a Corporate Integrity Agreement (the "Corporate Integrity Agreement") with the Office of Inspector General of Health and Human Services ("OIG-HHS"). On January 27, 2017, we received notification from OIG-HHS that the Corporate Integrity Agreement had terminated.

Other Lawsuits and Claims

Separate and apart from the legal matter described above, we are also involved in other legal actions in the normal course of our business, including, without limitation, protests related to

Medicaid procurements, wage and hour claims and other employment claims, vendor disputes and provider disputes regarding payment of claims. In addition, we are involved in litigation related to our pending acquisition of Universal American Corp. Some of these actions seek monetary damages, including claims for liquidated or punitive damages, which are not covered by insurance. We accrue for contingent liabilities related to these matters if a loss is deemed probable and is estimable. The actual outcome of these matters may differ materially from our current estimates and therefore could have a material adverse effect on our results of operations, financial position, and cash flows.

Item 3. Legal Proceedings.

United States Department of Health and Human Services

In April 2011, we entered into a Corporate Integrity Agreement (the "Corporate Integrity Agreement") with the Office of Inspector General of Health and Human Services ("OIG-HHS"). The Corporate Integrity Agreement has a term of five years. The Corporate Integrity Agreement requires various ethics and compliance programs designed to help ensure our ongoing compliance with federal health care program requirements. The terms of the Corporate Integrity Agreement include certain organizational structure requirements, internal monitoring requirements, compliance training, screening processes for new employees, reporting requirements to OIG-HHS, and the engagement of an independent review organization to review and prepare written reports regarding, among other things, our reporting practices, and bid submissions to federal health care programs.

If we fail to comply with the terms of the Corporate Integrity Agreement, we may be required to pay certain monetary penalties. Furthermore, if we commit a material breach of the Corporate Integrity Agreement, OIG-HHS may exclude us from participating in federal health care programs. Any such exclusion would result in the revocation or termination of contracts and/or licenses and have a material adverse effect on our results of operations.

Other Lawsuits and Claims

Separate and apart from the legal matter described above, we are also involved in other legal actions in the normal course of our business, including, without limitation, protests related to Medicaid procurements, wage and hour claims and other employment claims, vendor disputes and provider disputes regarding payment of claims. Some of these actions seek monetary damages, including claims for liquidated or punitive damages, which are not covered by insurance. We accrue for contingent liabilities related to these matters if a loss is deemed probable and is estimable. The actual outcome of these matters may differ materially from our current estimates and therefore could have a material adverse effect on our results of operations, financial position, and cash flows.

Government Investigations

Deferred Prosecution Agreement. As previously disclosed, in May 2009, we entered into a Deferred Prosecution Agreement (the "DPA") with the United States Attorney's Office for the Middle District of Florida (the "USAO") and the Florida Attorney General's Office, resolving investigations by those offices.

Under the one count criminal information (the "Information") filed with the United States District Court for the Middle District of Florida (the "Federal Court") by the USAO pursuant to the DPA, we were charged with one count of conspiracy to commit health care fraud against the Florida Medicaid Program in connection with reporting of expenditures under certain community behavioral health contracts, and against the Florida Healthy Kids programs, under certain contracts, in violation of 18 U.S.C. Section 1349. The USAO recommended to the Federal Court that the prosecution be deferred for the duration of the DPA, which has a term of thirty-six months.

The DPA expires by its terms on May 5, 2012. Within five days of the expiration of the DPA the USAO will seek dismissal with prejudice of the Information, provided we have complied with the DPA.

The DPA does not, nor should it be construed to, operate as a settlement or release of any civil or administrative claims for monetary, injunctive or other relief against us, whether under federal, state or local statutes, regulations or common law. Furthermore, the DPA does not operate, nor should it be construed, as a concession that we are entitled to any limitation of our potential federal, state, or local civil or administrative liability. Pursuant to the terms of the DPA, we have paid the USAO a total of $80.0 million over the course of 2008 and 2009.

Civil Division of the United States Department of Justice. In October 2008, the Civil Division of the United States Department of Justice (the "Civil Division") informed us that as part of its pending civil inquiry, it was investigating four qui tam complaints filed by relators against us under the whistleblower provisions of the False Claims Act, 31 U.S.C. sections 3729-3733. As previously disclosed, we also learned from a docket search that a former employee filed a qui tam action on October 25, 2007 in state court for Leon County, Florida against several defendants, including us and one of our subsidiaries (the "Leon County qui tam Action").

In June 2010, (i) the United States government filed its Notice of Election to Intervene in three of the qui tam matters (the "Florida Federal qui tam Actions"), and (ii) we announced that we reached a preliminary agreement with the Civil Division, the Civil Division of the USAO, and the Civil Division of the United States Attorney's Office for the District of Connecticut (the "USAO Connecticut") to settle their pending inquiries. In April 2011, we entered into certain settlement agreements, described below, which will resolve the pending inquiries of the Civil Division, the USAO and the USAO Connecticut. These settlement agreements are related to the Florida Federal qui tam Actions as well as another federal qui tam action that had been filed in the District of Connecticut (the "Connecticut Federal qui tam Action") and the Leon County qui tam Action.

The settlement agreements are with (a) the United States, with signatories from the Civil Division, the Office of Inspector General of the Department of Health and Human Services ("OIG-HHS") and the Civil Divisions of the USAO and the USAO Connecticut (the "Federal Settlement Agreement") and (b) the following states (collectively, the "Settling States"): Connecticut, Florida, Georgia, Hawaii, Illinois, Indiana, Missouri, New York and Ohio (collectively, the "State Settlement Agreements"). The material terms of the Federal Settlement Agreement and the State Settlement Agreements are, collectively, substantively the same as the terms of the previously disclosed preliminary settlement with the Civil Division, the USAO and the USAO Connecticut. We have agreed, among other things, to pay the Civil Division $137.5 million (the “Settlement Amount”), which is to be paid in installments over a period of up to 36 months after the effective date of the Federal Settlement Agreement (the “Payment Period”) plus interest accrued from December 2010 at the rate of 3.125% per year. The settlement includes an acceleration clause that would require immediate payment of the remaining balance of the Settlement Amount in the event that we are acquired or otherwise experience a change in control during the Payment Period. In addition, the settlement provides for a contingent payment of an additional $35 million in the event that we are acquired or otherwise experience a change in control within three years of the effective date of the Federal Settlement Agreement and provided that the change in control transaction exceeds certain minimum transaction value thresholds as specified in the Federal Settlement Agreement.

In exchange for the payment of the Settlement Amount, the United States and the Settling States agreed to release us from any civil or administrative monetary claim under the False Claims Act and certain other legal theories for certain conduct that was at issue in their inquiries and the qui tam complaints. Likewise, in consideration of the obligations in the Federal Settlement Agreement and the Corporate Integrity Agreement (as described below under United States Department of Health and Human Services), OIG-HHS agreed to release and refrain from instituting, directing or maintaining any administrative action seeking to exclude us from Medicare, Medicaid and other federal health care programs.

The Federal Settlement Agreement has not been executed by one of the relators. This relator has objected to the Federal Settlement Agreement. Because of the objection, the Federal Court is required to conduct a hearing (a “Fairness Hearing”) to determine whether the proposed settlement is fair, adequate, and reasonable under all the circumstances. The Federal Settlement Agreement and the State Settlement Agreements will not be effective until the earlier of (a) the execution of the Federal Settlement Agreement by the objecting relator or (b) entry by the Federal Court of a final order determining that the settlement is fair, adequate, and reasonable under all the circumstances.

We can make no assurances that the objecting relator will execute the Federal Settlement Agreement or that the Federal Court will approve the settlement at a Fairness Hearing and the actual outcome of these matters may differ materially from the terms of the settlement.

United States Department of Health and Human Services. In April 2011, we entered into a Corporate Integrity Agreement (the “Corporate Integrity Agreement") with OIG-HHS. The Corporate Integrity Agreement has a term of five years and concludes the previously disclosed matters relating to the Company under review by OIG-HHS. The Corporate Integrity Agreement

requires various ethics and compliance programs designed to help ensure our ongoing compliance with federal health care program requirements. The terms of the Corporate Integrity Agreement include certain organizational structure requirements, internal monitoring requirements, compliance training, screening processes for new employees, reporting requirements to OIG-HHS, and the engagement of an independent review organization to review and prepare written reports regarding, among other things, our reporting practices, and bid submissions to federal health care programs.

If we fail to comply with the terms of the Corporate Integrity Agreement we may be required to pay certain monetary penalties. Furthermore, if we commit a material breach of the Corporate Integrity Agreement, OIG-HHS may exclude us from participating in federal health care programs. Any such exclusion would result in the revocation or termination of contracts and/or licenses and potentially have a material adverse effect on our results of operations.

Other Lawsuits and Claims

Separate and apart from the legal matters described above, we are also involved in other legal actions in the normal course of our business, including, without limitation, wage and hour claims, and provider disputes regarding payment of claims. Some of these actions seek monetary damages, including claims for liquidated or punitive damages, which are not covered by insurance. We accrue for contingent liabilities related to these matters if a loss is deemed probable and is estimable. The actual outcome of these matters may differ materially from our current estimates and therefore could have a material adverse effect on our results of operations, financial position, and cash flows.

FROM WELLCARE HEALTH PLANS 2010 10 K:

Item 3. Legal Proceedings.

Government Investigations

Deferred Prosecution Agreement. As previously disclosed, in May 2009, we entered into a Deferred Prosecution Agreement (the “DPA”) with the United States Attorney’s Office for the Middle District of Florida (the “USAO”) and the Florida Attorney General’s Office, resolving previously disclosed investigations by those offices.

Under the one-count criminal information (the “Information”) filed with the United States District Court for the Middle District of Florida (the “Federal Court”) by the USAO pursuant to the DPA, we were charged with one count of conspiracy to commit health care fraud against the Florida Medicaid Program in connection with reporting of expenditures under certain community behavioral health contracts, and against the Florida Healthy Kids programs, under certain contracts, in violation of 18 U.S.C. Section 1349. The USAO recommended to the Court that the prosecution be deferred for the duration of the DPA. Within five days of the expiration of the DPA the USAO will seek dismissal with prejudice of the Information, provided we have complied with the DPA.

The term of the DPA is thirty-six months, but such term may be reduced by the USAO to twenty-four months upon consideration of certain factors set forth in the DPA, including our

continued remedial actions and compliance with all federal and state health care laws and regulations.

In accordance with the DPA, the USAO has filed, with the Federal Court, a statement of facts relating to this matter. As a part of the DPA, we retained an independent monitor (the "Monitor") for a period of 18 months from August 19, 2009 to February 18, 2011. The Monitor was selected by the USAO after consultation with us and is retained at our expense. In addition, we agreed to continue undertaking remedial measures to ensure full compliance with all federal and state health care laws. Among other things, the Monitor reviewed and evaluated our compliance with the DPA and all applicable federal and state health care laws, regulations and programs. The Monitor also has reviewed, evaluated, and, as necessary, made written recommendations concerning certain of our policies and procedures. Consistent with the DPA, the Monitor has undertaken to avoid the disruption of our ordinary business operations or the imposition of unnecessary costs or expenses.

The DPA does not, nor should it be construed to, operate as a settlement or release of any civil or administrative claims for monetary, injunctive or other relief against us, whether under federal, state or local statutes, regulations or common law. Furthermore, the DPA does not operate, nor should it be construed, as a concession that we are entitled to any limitation of our potential federal, state, or local civil or administrative liability. Pursuant to the terms of the DPA, we have paid the USAO a total of $80.0 million

Civil Division of the United States Department of Justice. In October 2008, the Civil Division of the United States Department of Justice (the "Civil Division") informed us that as part of the pending civil inquiry, it was investigating four qui tam complaints filed by relators against us under the whistleblower provisions of the False Claims Act, 31 U.S.C. sections 3729-3733. The seal in those cases was partially lifted for the purpose of authorizing the Civil Division to disclose to us the existence of the qui tam complaints. In May 2010, as part of the ongoing resolution discussions with the Civil Division, we were provided with a copy of the qui tam complaints, in response to our request, which otherwise remained under seal as required by 31 U.S.C. section 3730(b)(3).

As previously disclosed, we also learned from a docket search that a former employee filed a qui tam action on October 25, 2007 in state court for Leon County, Florida against several defendants, including us and one of our subsidiaries (the "Leon County qui tam suit"). As part of our discussions to resolve pending qui tam and related civil investigations discussed above, we were informed that the Leon County qui tam suit was filed by one of the federal qui tam relators and contains allegations similar to those alleged in one of the recently unsealed qui tam complaints.

On June 24, 2010, (i) the United States government filed its Notice of Election to Intervene in three of the qui tam matters, and (ii) we announced that we reached a preliminary agreement (the "Preliminary Settlement") with the Civil Division, the Civil Division of the USAO, and the Civil Division of the United States Attorney's Office for the District of Connecticut to settle their pending inquiries. On June 25, 2010, the Federal Court lifted the seal in the three qui tam complaints in which the government had intervened. Those complaints are now publicly

available. A temporary stay of discovery has been granted in the three qui tam matters until May 2, 2011.

The Preliminary Settlement is subject to completion and approval of an executed written settlement agreement and other government approvals. Following execution and government approvals, if any party objects to the settlement, the Federal Court will conduct a hearing to determine whether the proposed settlement is fair, adequate, and reasonable under all the circumstances. Under the Preliminary Settlement, we would, among other things, agree to pay the Civil Division a total of $137.5 million (the "Settlement Amount"), for which the first installment will be due after a written settlement agreement has been executed and three subsequent installments will be paid over a period of up to 36 months after the date of that executed written settlement agreement (the "Payment Period") plus interest at the rate of 3.125% per year. The Preliminary Settlement includes an acceleration clause that would require immediate payment of the remaining balance of the Settlement Amount in the event that we were acquired or otherwise experienced a change in control during the Payment Period. In addition, the Preliminary Settlement provides for a contingent payment of an additional $35.0 million in the event that we are acquired or otherwise experience a change in control within three years of the execution of the settlement agreement and provided that the change in control transaction exceeds certain minimum transaction value thresholds to be specified in the settlement agreement. We expect that the final settlement agreement will provide that the Settlement Amount will account for approximately $22.9 million owed to the Florida Agency for Health Care Administration ("AHCA") as a result of overpayments received by us from AHCA during the three month period of August 2005 through October 2005. These overpayments were the result of a change implemented by AHCA in the payment methodology relating to medical benefits for newborns.

There can be no assurance that the Preliminary Settlement will be finalized and approved and the actual outcome of these matters may differ materially from the terms of the Preliminary Settlement.

United States Department of Health and Human Services. As previously disclosed, we remain engaged in resolution discussions as to matters under review with the United States Department of Health and Human Services' Office of Inspector General (the "OIG"). Those discussions are ongoing and no final resolution has been reached.

Class Action Complaints

Putative class action complaints were filed in October 2007 and in November 2007. These putative class actions, entitled Eastwood Enterprises, L.L.C. v. Farha, et al. and Hutton v. WellCare Health Plans, Inc. et al., respectively, were filed in Federal Court against us, Todd Farha, our former chairman and chief executive officer, and Paul Behrens, our former senior vice president and chief financial officer. Messrs. Farha and Behrens were also officers of various subsidiaries of ours. The Eastwood Enterprises complaint alleged that the defendants materially misstated our reported financial condition by, among other things, purportedly overstating revenue and understating expenses in amounts unspecified in the pleading in violation of the Securities Exchange Act of 1934, as amended ("Exchange Act"). The Hutton complaint alleged that various public statements supposedly issued by the defendants were

materially misleading because they failed to disclose that we were purportedly operating our business in a potentially illegal and improper manner in violation of applicable federal guidelines and regulations. The complaint asserted claims under the Exchange Act. Both complaints sought, among other things, certification as a class action and damages. The two actions were consolidated, and various parties and law firms filed motions seeking to be designated as Lead Plaintiff and Lead Counsel. In an Order issued in March 2008, the Federal Court appointed a group of five public pension funds from New Mexico, Louisiana, and Chicago (the "Public Pension Fund Group") as Lead Plaintiffs. In October 2008, an amended consolidated complaint was filed in this class action asserting claims against us, Messrs. Farha and Behrens, and adding Thaddeus Bereday, our former senior vice president and general counsel, as a defendant.

In January 2009, we and certain other defendants filed a joint motion to dismiss the amended consolidated complaint, arguing, among other things, that the complaint failed to allege a material misstatement by defendants with respect to our compliance with marketing and other health care regulations and failed to plead facts raising a strong inference of scienter with respect to all aspects of the purported fraud claim. The Federal Court denied the motion in September 2009 and we and the other defendants filed our answer to the amended consolidated complaint in November 2009. In April 2010, the Lead Plaintiffs filed their motion for class certification. On June 18, 2010, the USAO filed motions seeking to intervene and for a temporary stay of discovery of this matter. Discovery has been stayed through March 17, 2011.

In August 2010, we reached agreement with the Lead Plaintiffs on the material terms of a settlement to resolve these matters. In December 2010, the terms of the settlement were documented in a formal settlement agreement that is subject to approval by the Federal Court following notice to all class members. On February 9, 2011, the Federal Court entered an order preliminarily approving the settlement and scheduled the final Settlement hearing for May 4, 2011. The settlement provides that we will make cash payments to the class of $52.5 million within thirty business days following the Federal Court's preliminary approval of the settlement and $35.0 million by July 31, 2011. The settlement also provides that we will issue to the class tradable unsecured subordinated bonds having an aggregate face value of $112.5 million, with a fixed coupon of 6% and a maturity date of December 31, 2016. The bonds shall also provide that, if we incur debt obligations in excess of $425.0 million that are senior to the bonds, the holders of the bonds have the right to accelerate payment of the bonds. We will have the right to redeem the bonds at 102% of face value during the first year and at 100% of face value thereafter. The settlement has two further contingencies. First, it provides that if, within three years following the date of the settlement agreement, the Company is acquired or otherwise experiences a change in control at a share price of $30.00 or more, we will pay to the class an additional $25.0 million. Second, the settlement provides that we will pay to the class 25% of any sums we recover from Messrs. Farha, Behrens, and/or Bereday as a result of claims arising from the same facts and circumstances that gave rise to this matter. We may terminate the settlement if a certain number or percentage of the class opt out of the settlement class. The settlement agreement also provides that the settlement does not constitute an admission of liability by any party and such other terms as are customarily contained in settlement agreements of similar matters.

There can be no assurance that the settlement will be approved by the Federal Court and the actual outcome of this matter may differ materially from the terms of the settlement

Derivative Lawsuits

As previously disclosed, in connection with our government investigations, five putative stockholder derivative actions were filed between October and November 2007. Four of these actions were asserted against directors Kevin Hickey and Christian Michalik, our current directors who were directors prior to 2007, and against former directors Regina Herzlinger, Alif Hourani, Ruben King-Shaw and Neal Moszkowski, and former director and officer Todd Farha. These actions also named us as a nominal defendant. Two of these actions were filed in the Federal Court and two actions were filed in the Circuit Court for Hillsborough County, Florida (the “State Court”). The fifth action, filed in the Federal Court, asserts claims against directors Robert Graham, Kevin Hickey and Christian Michalik, our current directors who were directors at the time the action was filed, and against former directors Regina Herzlinger, Alif Hourani, Ruben King-Shaw and Neal Moszkowski, former director and officer Todd Farha, and former officers Paul Behrens and Thaddeus Bereday. A sixth derivative action was filed in January 2008 in the Federal Court and asserted claims against all of these defendants except Robert Graham. All six of these actions contended, among other things, that the defendants allegedly allowed or caused us to misrepresent our reported financial results, in amounts unspecified in the pleadings, and seek damages and equitable relief for, among other things, the defendants’ supposed breach of fiduciary duty, waste and unjust enrichment. In April 2009, upon the recommendation of the Nominating and Corporate Governance Committee of the Board, the Board formed a Special Litigation Committee, comprised of a newly-appointed independent director, to investigate the facts and circumstances underlying the claims asserted in the derivative cases and to take such action with respect to these claims as the Special Litigation Committee determines to be in our best interests. In November 2009, the Special Litigation Committee filed a report with the Federal Court determining, among other things, that we should pursue an action against three of our former officers. In December 2009, the Special Litigation Committee filed a motion to dismiss the claims against the director defendants and to realign us as a plaintiff for purposes of pursuing claims against former officers Messrs. Farha, Behrens, and Bereday.

In March 2010, a Stipulation of Partial Settlement (“Stipulation I”) was filed in the Federal Court. Under the terms of Stipulation I, the plaintiffs in the federal action agreed that the Special Litigation Committee's motion to dismiss the director defendants and to realign us as a plaintiff should be granted in its entirety. The plaintiffs in the consolidated federal putative stockholder derivative action also agreed to dismiss their claims against Messrs. Farha, Behrens, and Bereday. In turn, we paid to plaintiffs' counsel in the federal action attorneys' fees in the amount of $1.7 million. In April 2010, the Federal Court entered an order preliminarily approving Stipulation I and directing us to provide notice to our stockholders. The Federal Court also approved Stipulation I and granted our motion to dismiss the director defendants and realigned us as the plaintiff in this action in July 2010. The case is now styled WellCare v. Farha, et al. The Federal Court stayed discovery through March 17, 2011. In August 2010, Messrs. Farha, Behrens and Bereday filed a notice of appeal in the United States Court of Appeals for the Eleventh Circuit (the "Court of Appeals"), which is pending.

In April 2010, a second Stipulation of Partial Settlement ("Stipulation II") was filed in the State Court. Under the terms of Stipulation II, the plaintiffs in the state action agreed that the Special Litigation Committee's motion to dismiss the director defendants and to realign us as a plaintiff should be granted in its entirety. In turn, we paid to plaintiffs' counsel in the state action attorneys' fees in the amount of $0.6 million. The State Court approved Stipulation II and granted our motion to dismiss the director defendants and realigned us as the plaintiff in this action in June 2010. In July 2010, Mr. Farha filed a notice of appeal in this matter, which remains pending.

In October 2010, we filed a motion for leave to file an amended complaint against Mr. Farha in the State Court action and a new lawsuit in Federal Court against Messrs. Behrens and Bereday, stating claims for breach of contract and breach of their fiduciary duties.

Other Lawsuits and Claims

Separate and apart from the legal matters described above, we are also involved in other legal actions that are in the normal course of our business, including, without limitation, provider disputes regarding payment of claims and disputes relating to the performance of contractual obligations with state agencies, some of which seek monetary damages, including claims for punitive damages, which are not covered by insurance. We currently believe that none of these actions, when finally concluded and determined, will have a material adverse effect on our financial position, results of operations or cash flows.

Other Lawsuits and Claims

Separate and apart from the legal matters described above, we are also involved in other legal actions that are in the normal course of our business, some of which seek monetary damages, including claims for punitive damages, which are not covered by insurance. We currently believe that none of these actions, when finally concluded and determined, will have a material adverse effect on our financial position, results of operations or cash flows.

e. For the Vendor, Parent Company, subsidiaries and all Subcontractors list and describe any Protected Health Information (PHI) breaches (within the past five years) that have occurred and the response. Do not include items excluded per 45 CFR 164.402.

Per the Question and Answers included in Addenda 2 page 91, **Table B.2.d.ii WellCare of Kentucky PHI Breaches** includes any Protected Health Information (PHI) breaches within the past five years for the Vendor, WellCare of Kentucky. Please note, no PHI breaches occurred for WellCare of Kentucky in the years 2017, 2018, and 2019. Reportable events for 2015 and 2016 are as follows.

Breach Occurred	Number of Impacted Individuals	Type of Breach	Description of Breach	PHI Involved in Breach	Remediation
10/16/2015	19	Unauthorized Access/Disclosure	A computer coding issues caused member addresses to be incorrectly matched with member names during a mail merge and	Address/Zip Code Name Other Identifier	Provided individuals with free credit monitoring Took steps to mitigate harm

Breach Occurred	Number of Impacted Individuals	Type of Breach	Description of Breach	PHI Involved in Breach	Remediation
			were mailed to incorrect members.		Trained or retrained workforce members
03/21/2016	1	Theft	The business associate's employee had a home visit to a member, the employee is no longer working at the business associate and not all of the paperwork that the employee had was returned to the business associate.	Address/Zip Code Date of Birth Name SSN	Provided individuals with free credit monitoring Took steps to mitigate harm
08/08/2016	0	Ransomware (possible theft)	A subcontractor's servers had been compromised by ransomware. The subcontractor had no evidence that PHI was infiltrated by the threat, but that possibility could not be ruled out	Name Address/Zip Date of Birth Member ID, Group number, Diagnosis Provider name Treatment location Social Security Numbers.	Provided individuals with free credit monitoring Took steps to mitigate harm

f. Has the Vendor ever had its accreditation status (e.g., National Committee on Quality Assurance (NCQA), Utilization Review Accreditation Commission (URAC), or Accreditation Association for Ambulatory Health Care (AAAHC)) in any state for any product line adjusted down, suspended, or revoked (within the past five years)? If so, identify the state and product line and provide an explanation. Include information for the Vendor's Parent Company and subsidiaries.

WellCare of Kentucky confirms adherence to the Department's (DMS) expectations and requirements outlined in Section 19.1 National Committee for Quality Assurance (NCQA) Accreditation as well as 42 C.F.R. 438.332. WellCare of Kentucky is committed to continuous quality improvement, as evidenced by our Commendable NCQA® accreditation status in 2017 and 2018. NCQA awards a status of Commendable to organizations with well-established programs for service and clinical quality that meet rigorous requirements for consumer protection and quality improvement.

The following details adjustment activity for WellCare of Kentucky, our parent companies, and subsidiaries:

WellCare of Kentucky

WellCare of Kentucky's Medicaid accreditation was initially "Commendable" from 9/2/2014 – 9/2/2017. During re-calibration in 2015, we were downgraded to "Accredited" on 8/31/2015. **In 2016 we were upgraded to "Commendable" in 2016 -2019**.

WellCare (parent/affiliates)

WellCare's Florida Medicare accreditation was adjusted down from "Commendable" to "Accredited" in October of 2018 through February of 2019.

Centene (parent/affiliates)

- Centene's Florida Medicaid accreditation was "Commendable" in 2015, then downgraded to "Accredited" from 2016-2018, and then upgraded to "Commendable" in 2019. Downgrading was due to HEDIS/CAHPS scoring.
- Centene's Louisiana Medicaid was capped at "Accredited" in 2015, then received "Accredited" in 2016, then was upgraded to "Commendable" for 2017-2018, and downgraded to "Accredited" in 2019. Downgrading was due to HEDIS/CAHPS scoring.
- Centene's Mississippi Medicaid was capped at "Accredited" in 2015, then upgraded to "Commendable" in 2016, and then downgraded to "Accredited" in 2017-2019. Downgrading was due to HEDIS/CAHPS scoring.
- Centene's New Hampshire Medicaid was "Commendable" in 2015 then downgraded to "Accredited" in 2016, and the upgraded to "Commendable" in 2016-2019. Downgrading was due to HEDIS/CAHPS scoring.
- Centene's Ohio Medicaid was "Accredited" in 2015-2016, then upgraded to "Commendable" in 2017, and then downgraded to "Accredited" in 2018-2019. Downgrading was due to HEDIS/CAHPS scoring.
- Centene's Washington Medicaid was capped at "Accredited" in 2015, then received "Accredited" in 2016, then upgraded to "Commendable" in 2017, and then downgraded to "Accredited" in 2018-2019. Downgrading was due to HEDIS/CAHPS scoring.
- Centene's Wisconsin Medicaid was "Commendable" for 2015-2018 and then downgraded to "Accredited" in 2019. Downgrading was due to HEDIS/CAHPS scoring.

g. Provide a listing of Medicaid managed care contracts held in the past ten (10) years for which the Vendor, Vendor's Parent Company, and subsidiaries has:

i. Voluntarily terminated all or part of the contract under which it provided health care services as the licensed entity.

ii. Had such a contract partially or fully terminated before the contract end date (with or without cause).

iii. Had a contract not renewed.

iv. Withdrawn from a contracted service are.

v. Had a reduction of enrollment levels imposed?

WELLCARE CONTRACT TERMINATIONS AND NONRENEWALS

- WellCare of New York, Inc. ("WCNY") was party to a contract with the New York State Department of Health ("NY DOH") and the Centers for Medicare & Medicaid Services (CMS) pursuant to which WCNY operated a Fully Integrated Duals Advantage (FIDA) Plan under a CMS demonstration program. WCNY voluntarily terminated the FIDA contract as of December 31, 2016, for business reasons. The contract would otherwise have expired at the end of the demonstration.
- WCNY was party to Contract C029910 with NY DOH pursuant to which WCNY operated Qualified Health Plan on New York's Health Benefit Exchange. WCNY voluntarily terminated this contract as of December 31, 2016, for business reasons. The contract would otherwise have expired on December 31, 2018.
- In 2015 the Iowa Department of Human Services ("IA DHS") issued Iowa Department of Human Services - Request for Proposal - Iowa High Quality Healthcare Initiative - RFP MED-16-009 (the "Iowa RFP"). On August 17, 2015, IA DHS issued a Notice of Intent to Award contracts arising out of the Iowa RFP to four entities including WellCare of Iowa, Inc. ("WCIA"). Three unsuccessful bidders filed bid protests and subsequently appealed in court challenging the intended contract awards. During those proceedings, the winning bidders, including WCIA, entered into contracts with IA DHS. The proceedings concluded in December 2015, when the Iowa Department of Administrative Services Director issued a Final Order reversing the Notice of Intent to Award to WCIA and terminating WCIA's contract with IA DHS. WCIA subsequently appealed the Final Order unsuccessfully. While WellCare is not pursuing this matter further, WellCare continues to dispute the facts and law as set forth in the Final Order. WCIA has since been dissolved.
- The Centers for Medicare & Medicaid Services ("CMS") terminates Medicare Advantage plans whose enrollment falls below a certain threshold. CMS terminated a special needs plan for dual-eligibles ("DSNP") operated by WCNY due to low enrollment as of December 31, 2013. As a result, the associated Medicaid Advantage Plus contract between the New York State Department of Health and WCNY, which governed the Medicaid portion of the benefits for the members of the DSNP, automatically terminated as of the same date.
- Two subsidiaries of were each party to a Contract 2010-22-005 effective as of January 1, 2010 with the Illinois Department of Healthcare and Family Services ("Illinois DHFS"). The subsidiaries were Harmony Health Plan, Inc. ("Harmony") and WellCare Rx. These contracts were related to Illinois' state prescription insurance program ("SPAP") and were due to expire December 31, 2012. However, the Illinois General Assembly did not appropriate funds for the Illinois SPAP program for the state's 2013 fiscal year, which began July 1, 2012. As a result of the General Assembly's decision not to appropriate funds for the SPAP program, Illinois DHFS terminated all of its contracts with SPAP service providers as of July 1, 2012, including its contracts with Harmony and WellCare Rx.
- WellCare Rx was party to Contract #90009208 dated January 13, 2010, with the North Carolina Department of Health and Human Services, Office of Rural Health and Community Care ("North Carolina DHHS"). This contract related to North Carolina's SPAP and was due

to expire December 31, 2012. From 2007 to 2011, North Carolina funded its SPAP program through the North Carolina Health and Wellness Trust Fund (the "HWTF"); an entity created by the North Carolina General Assembly to administer funds received through a settlement between the state and tobacco manufacturers. The HWTF ceased funding the SPAP program as of June 30, 2011. With no funds with which to operate the SPAP program, North Carolina DHHS terminated all of its contracts with SPAP service providers as of June 30, 2011, including its contract with WellCare Rx.

- WellCare Rx was party to a Contract dated as of January 1, 2010, with the South Carolina Department of Health and Human Services ("South Carolina DHHS"). This contract related to South Carolina's SPAP and was due to expire December 31, 2010. However, South Carolina suspended funding for its SPAP program and South Carolina DHHS terminated all of its contracts with SPAP service providers as of June 30, 2010, including its contract with WellCare Rx.
- Meridian Health Plan of Iowa, Inc., received a without-cause termination notice from Iowa effective 12/31/2015, six months ahead of schedule, to facilitate transition from a voluntary to a mandatory competitive program.
- Anticipating significant growth in other markets, Meridian Health Plan of New Hampshire, Inc. d/b/a Granite Care sought and obtained a mutual, without-cause termination of its New Hampshire contract effective July 2014. Meridian worked amicably with the New Hampshire Department of Health and Human Services to complete all outstanding operational needs and ease member transition to the remaining managed care plans in the state.
- In 2016, the Medicaid Managed Care contract between the Michigan Department of Health and Human Services and Meridian Health Plan of Michigan, Inc. was replaced with re-procured contract effective 1/1/2016. There was no interruption in service.
- The Illinois Department of Healthcare and Family Services re-procured its entire managed care program in 2017. Meridian Health Plan of Illinois, Inc. was awarded a contract under the new program and its previous contracts for the Integrated Care Program, FHP/ACA population, and Managed Long-Term Services and Supports were retired.
- Meridian Health Plan of Illinois, Inc. additionally absorbed the membership and operations of Harmony Health Plan, Inc. (Harmony), following the acquisition of Meridian's parent entity by WellCare Health Plans, Inc. Harmony's HealthChoice contract was terminated effective December 31, 2018 when membership migrated to the Meridian platform. Harmony's previous managed care contracts retired into the HealthChoice contract following the 2017 reprocurement described above.
- The Centers for Medicare & Medicaid Services terminates Medicare Advantage plans whose enrollment falls below a certain threshold. CMS terminated a special needs plan for dual-eligibles ("DSNP") operated by WellCare of New York due to low enrollment as of December 31, 2013. As a result, the associated Medicaid Advantage Plus contract between the New York State Department of Health and WCNY, which governed the Medicaid portion of the benefits for the members of the DSNP, automatically terminated as of the same date.

- Windsor Health Plan, Inc., CMS, and WellCare of South Carolina, Inc. executed a novation, effective 1/1/16, transferring all rights and obligations under the existing Dual Eligible Special Needs Plan (DSNP) contract from Windsor Health Plan, Inc. to WellCare of South Carolina, Inc. upon the acquisition of Windsor by WellCare.
- WellCare of Florida, Inc. exited the Florida Nursing Home Diversion Program on August 31, 2013 due to a mutual non-renewal of its contract with the Department of Elder Affairs (DOEA). After discussions with the state, WellCare exercised the non-renewal option in its contract when the program was moved out of DOEA and into another state agency, the Agency for Health Care Administration (AHCA) under the newly organized MLTC Long-Term Care Program. This was not performance-based, and was a mutually discussed and agreed-upon non-renewal. DOEA sent a letter confirming this to WellCare of Florida, specifically noting that the non-renewal was not viewed as a termination.

CENTENE CORPORATION CONTRACT TERMINATIONS AND NONRENEWALS

Within the past ten years Centene Corporation's Medicaid managed care subsidiaries have not had a contract partially or fully terminated before the contract end date, have not had a contract not renewed, have not withdrawn from a contracted service area, or had a reduction of enrollment levels imposed. The following contract information pertains to voluntary termination.

- Kentucky Spirit Health Plan, Inc. (KSHP). In October 2012, KSHP, a Centene subsidiary, notified the Commonwealth of Kentucky (the Commonwealth) that KSHP would exercise a contractual right that it in good faith believed allowed for termination of its Medicaid managed care contract with the Commonwealth effective July 5, 2013. The Commonwealth disputed KSHP’s legal position and litigation ensued. On November 3, 2016, all parties entered into a settlement agreement with respect total pending litigation under which Kentucky Spirit received an immaterial cash payment from the Commonwealth's actuarial firm and each party dismissed all claims related to the litigation with prejudice. In addition, the Commonwealth and Kentucky Spirit agreed that neither party acted in bad faith; that the parties took reasonable positions in light of the applicable contractual language; and that the parties acted in good faith in attempting to address a difficult situation.

FIRST AMENDMENT TO
AMENDED AND RESTATED
MANAGEMENT SERVICES AGREEMENT BETWEEN
COMPREHENSIVE HEALTH MANAGEMENT, INC.
AND
WELLCARE HEALTH INSURANCE COMPANY OF KENTUCKY, INC.

This **FIRST AMENDMENT TO THE AMENDED AND RESTATED MANAGEMENT SERVICES AGREEMENT** (the **"Amendment"**) is entered into and made effective January 1, 2019 (the **"Amendment Effective Date"**) by and between Comprehensive Health Management, Inc., a Florida for profit corporation (**"CHMI"**) and WellCare Health Insurance Company of Kentucky, Inc., a Kentucky for profit corporation (**"WellCare"**). CHMI and WellCare may be referred to hereinafter collectively as the "Parties," and individually, each a "Party."

WHEREAS, CHMI and WellCare are parties to that certain Amended and Restated Management Services Agreement effective January 1, 2018 (the "**Agreement**") for the provision of certain administrative and management services to WellCare;

WHEREAS, the Kentucky Department of Insurance approved the Agreement on August 27, 2018; and

WHEREAS, CHMI and WellCare wish to amend, modify, and supplement certain terms of the Agreement as stated herein.

NOW, THEREFORE, the Parties agree as follows:

1. Capitalized terms not otherwise defined herein shall have the meaning set forth in the Agreement. In the event of a conflict between this Amendment and the Agreement, this Amendment shall govern and control.

2. The Management Fee Services paragraph referred to in Exhibit A of the Agreement is deleted in its entirety and replaced with the following:

MANAGEMENT FEE SERVICES

Medicare Indirect Cost Rate:
The Indirect Cost Rate under this Agreement is 7.7% (seven and seven-tenths percent) of annual gross Medicare Advantage premium revenue.

Medicaid Indirect Cost Rate:
The Indirect Cost Rate under this Agreement is 8.0% (eight percent) of annual gross Medicaid premium revenue.

Medicare Prescription Drug Program Part D Indirect Cost Rate:
The Indirect Cost Rate under this Agreement is 8.5% (eight and five-tenths percent) of annual gross Medicare Prescription Drug Program Part D premium revenue.

3. Exhibit B entitled "Medicare Government Payor Provisions", is replaced in its entirety with the attached amended Exhibit B, "Medicare Advantage Program Requirements".

4. Except as amended and modified herein, all other terms and conditions of the Agreement shall remain unchanged and are in full force and effect.

5. This Amendment may be executed in any number of counterparts, each of which shall be an original, but all of which, together, shall constitute one agreement.

IN WITNESS WHEREOF, the undersigned authorized representatives of the Parties have executed this Amendment to be effective on the Amendment Effective Date.

RE: Form D filing received on July 25, 2019- First Amendment to Amended and Restated Management Agreement Services Agreement.

Dear Mrs. Jagnarain:

We have received the above referenced Form D filing requesting approval for an amended and restated Management Service Agreement between WellCare Health Insurance Company of Kentucky, Inc/Comprehensive Health Management Services Agreement. Pursuant to KRS 304.37-030, the Kentucky Department of Insurance approved this Form D filing. Please file the executed copies of the agreement with the Department when available.

Please feel free to contact me if you have any questions.

Sincerely,

Ms. Sandra Batts
Director
Financial Standards and Examination Division

TAX SHARING AGREEMENT

AGREEMENT dated December 31, 2002, by and among Centene Corporation ("Parent") and each of its undersigned subsidiaries.

WITNESSETH

WHEREAS, the parties hereto are members of an affiliated group ("Affiliated Group") as defined in section 1504 (a) of the Internal Revenue Code of 1986, as amended (the "Code");

WHEREAS, (i) such Affiliated Group files a U.S. consolidated income tax return as permitted by section 1501 of the Code, and (ii) certain members of the Affiliated Group tax file tax returns with respect to certain state or local taxing jurisdictions on a consolidated, combined or unitary basis (collectively, "State Tax Returns");

WHEREAS, it is the intent and desire of the parties hereto that a method be established for allocating the consolidated tax liability ("Consolidated Tax") and the liabilities relating to the State Tax Returns ("State Tax") of the Affiliated Group among its members, for reimbursing Parent for payment of such tax liability, for compensating any party for use of its loses or tax credits and to provide for the allocation and payment of any refund arising from carryback of losses or tax credits from subsequent tax years.

AGREEMENTS

NOW THEREFORE, in consideration of the mutual covenants and promises contained herein, the parties hereto agree as follows:

ARTICLE 1
Determination & Allocation of Consolidated Tax

1. A U.S. consolidated income tax return shall be filed by Parent for the tax year ended December 31, 2003 and for each subsequent taxable period in respect of which this agreement is in effect and for which the Affiliated Group is required or permitted to file a consolidated return. Each subsidiary shall execute and file such consent, elections and other documents that may be required or appropriate for the proper filing of such returns.

2. Parent and each subsidiary agree that the consolidated tax liability for each year, determined in accordance with Treasury Regulation section 1.1502-2, shall be apportioned among them in accordance with the provisions of Treasury Regulation section 1.1502-32(b)(3)(iv)(D). For purposes if this agreement, the consolidated tax liability shall not include any liability for alternative minimum tax, nor shall it be reduced by any alternative minimum tax credit. In applying that regulation, the tax liability shall be allocated to each member based on the member's contribution to consolidated taxable income. This method, called the "percentage method" allocates a tax asset (i.e., an inter-company receivable) for any benefit derived by the consolidated group for the member's losses or credits that offset consolidated taxable income. This method allocates tax liability based upon the absorption of tax attributes, without taking into account the ability of any member to subsequently absorb its own tax attributes. Under this method (also known as the "immediate payment method"), the full actual tax liability of the group is first allocated under Code section 1552(a)(1) and Treas. Reg. section 1.1552-1(a)(1)(ii).

Then, if a member's separate return tax liability exceeds the amount so allocated, an additional amount is allocated equal to a fixed percentage (not to exceed 100%) of the excess. The effect is that each profit member increases its tax liability by the entire amount of the tax saved by use of the deductions or credits of other members (Treas. Reg. section l.l502-33(d)(3)(i)). Likewise, each member whose tax attributes were absorbed, is allocated a tax benefit to reflect the absorption of such tax attributes.

3. The separate return liability of each member shall be computed in a manner consistent with the provisions of Treas. Reg. section 1.1552-1(a)(2)(ii), provided that the carryover of any tax attribute from a prior year that is not available in determining the consolidated tax liability of the group for such taxable period shall be disregarded.

4. If part or all of an unused consolidated net operating loss or tax credit is allocated to a member of the Affiliated Group pursuant to Treas. Reg. section 1.1502-79, and it is carried back or forward to a year in which such member filed a separate income tax return or a consolidated federal income tax return with another affiliated group, any refund or reduction in tax liability arising from the carryback or carryover shall be retained by such member (if such refund or reduction goes to some entity other than the member, then such entity shall pay over such amount to the member). Notwithstanding the aforementioned, the Parent shall determine whether an election shall be made not to carryback any consolidated net operating loss arising in a consolidated return year (including any portion allocated to a member under Treas. Reg. section 1.1502-79) in accordance with section 172(b)(3)(C) of the Code.

5. If the consolidated tax liability includes a liability for alternative minimum tax, the parent will be responsible for the payment of such tax. The AMT credit resulting from the payment of the alternative minimum tax shall be retained by the Parent. Any tax benefit resulting from the use of the AMT credit, shall inure to the parent and, as stated in paragraph 2 of this Article, the consolidated tax liability allocated to each member shall not be reduced by the AMT credit. In the event the AMT credit was generated by a member prior to joining the consolidated group, the tax benefit will be allocated to that member when the AMT credit is utilized in the consolidated return. If a member leaves the consolidated group, the member will reimburse the Parent for any credit allocable to the member which has been previously paid by the Parent.

ARTICLE II
Determination of State Tax Liability

1. Combined State Tax shall mean, with respect to each state or local taxing jurisdiction, any income, franchise or similar tax payable to such state or local taxing jurisdiction in which a member of the Affiliated Group files tax returns with another member and/or Parent, in a consolidated, combined or unitary basis for purposes of such income or franchise tax.

2. Combined State Tax Liability shall mean, with respect to any taxable year and any jurisdiction, an amount of Combined State Tax determined in accordance with the principles set forth in Article I, section 2; provided, however, that (i) the total amount of Combined State Tax shall also include any actual income, franchise or similar state or local tax liability (a "State Liability") owed in a jurisdiction (a "Combined Jurisdiction") in which a member of the Affiliated Group files a tax return with another member of the Affiliated Group and/or Parent, on a consolidated, combined or unitary basis, to the extent such liability exceeds the liability that would have been owed had no member of the Affiliated Group been included in such returns; and (ii) the total amount of Combined State Tax shall be reduced to the extent that, in any Combined Jurisdiction, the State Liability of the Affiliated Group and any member of the Affiliated Group, is less than

the liability that would have been owed had no member of the Affiliated Group been included in the returns of such Combined Jurisdiction.

3. If a separate tax return is required to be filed for any state or local jurisdiction by any member of the Affiliated Group, such member shall bear the responsibility for the filing of such return.

ARTICLE III
Tax Sharing

1. General. For each taxable year of the Affiliated Group during which income, loss or credit of the undersigned subsidiaries (hereinafter, the "Members") are includible in the consolidated Federal tax return of the Affiliated Group, such Members shall pay to Parent an amount equal to their respective Consolidated Tax, as set forth in Article I. Similarly, for each taxable year of the Affiliated group during which income, loss or credit of the Members are includible in any State Tax Returns, such Members shall pay to Parent an amount equal to their respective State Tax, as set forth in Article II.

2. Estimated Payments. Parent shall determine the amount of estimated tax installments of the Consolidated Tax liability, as determined under the principles of Article I of this agreement. The Members shall each, within five (5) days of receipt of such determination (but in no event earlier than five (5) days prior to the date of Parent's corresponding estimated tax payment) pay to Parent the amount so determined for the respective group. Parent shall determine under provisions of applicable law the amount of the estimated tax installment of the respective State Tax installment as determined under the principles of Article II of this agreement. The applicable Members shall each, within five (5) days of receipt of such determination (but in no event earlier than five (5) days prior to the date of Parent's corresponding estimated tax payment), pay to Parent the amount so determined.

3. Payment of Taxes at Year-End.

(i) On or before the due date (including all applicable and valid extensions) for Parent's consolidated Federal tax return, Parent shall make available to the Members of the Affiliated Group the relevant pro forma Federal tax return of the Affiliated Group, reflecting the Consolidated Tax. On or before the due date (including all applicable and valid extensions) for each of the State Tax Returns, Parent shall make available to the Members the relevant pro forma State Tax Returns (together with the Federal pro forma return, the "Pro Forma Returns") of the Affiliated Group. The Pro Forma Returns shall be prepared in good faith in a manner generally consistent with past practice.

(ii) Within 90 days of the date Parent files its consolidated Federal tax return for any year for which payments are to be made under this agreement, the Members shall each pay to Parent, or Parent shall pay to the Members, as appropriate, an amount equal to the difference, if any, between the Consolidated Tax reflected on the pro forma Federal tax return of the Affiliated Group for such year and the aggregate amount of the estimated installments of the respective Consolidated Tax for such year made pursuant to Article III, section 2. Within 90 days of the date Parent files each of the State Tax Returns for any year for which payments are to be made under this agreement, the Members shall each pay to Parent, or Parent shall pay to the Members, as appropriate, an amount equal to the difference, if any, between the State Tax reflected on the pro forma State Tax Returns of the Affiliated Group for such year and the aggregate amount of the estimated installments of the respective State Tax for such year made pursuant to Article III, section 2.

(iii) If a Pro Forma Return reflects a Tax Asset[1] that may under applicable law be used to reduce a Consolidated Tax or State Tax liability of any Member of the Affiliated Group for any taxable period, Parent shall pay to the Members, as appropriate, an amount equal to the actual tax saving (which would include refunds actually received) produced by such Tax Asset within 90 days of the time such tax saving is realized and the future Pro Forma Returns of the Affiliated Group shall be adjusted to reflect such use. The amount of any such tax saving for any taxable period shall be the amount of the reduction in taxes payable to a taxing authority with respect to such tax period as compared to the taxes that would have been payable to a taxing authority with respect to such tax period in the absence of such Tax Asset.

(iv) In the event that Parent makes a cash deposit with a taxing authority in order to stop the running of interest or makes a payment of tax and correspondingly takes action to recoup such payment (such as suing for a refund), the Members shall each pay to Parent an amount equal to the Members' respective share of the amount so deposited or paid (calculated in a manner consistent with the determinations provided in Articles I and II). Upon receipt by Parent of a refund of any amounts paid by it in respect of which the Members shall have advanced an amount hereunder, Parent shall pay to the Members the amount of such refund. If and to the extent that any claim for refund or contest based thereupon shall be unsuccessful, the payment by the Members under this section 3(iv) shall be credited toward the Members' respective obligations under this section 3(iv) and any other payment obligations of the Members under Article Ill, section 4 below.

4. Treatment of Adjustments. If any adjustment is made in a Federal return of the Affiliated Group or in a return relating to State Tax, after the filing thereof, in which income or loss of the Members is included, then within 90 days of the time of a Final Determination[2] of the adjustment, the Members shall each pay to Parent or Parent shall pay to the Members, as the case may be, the difference between all payments actually made under Article III with respect to the taxable period covered by such tax return and all payments that would have been made under Article III taking such adjustment into account, together with any penalties actually paid and interest for each day until the date of the Final Determination, calculated at the rate determined, in the case of a payment by the Members, under section 6621(a)(2) of the Code, and in the case of a payment by Parent, under section 6621(a)(l) of the Code.

5. Preparation of Returns and Contests. So long as (i) the Affiliated Group elects to file consolidated Federal tax returns as permitted by section 1501 of the Code or (ii) any State Tax Returns are filed, Parent shall prepare and file such returns and any other returns, documents or statements required to be filed with the Internal Revenue Service with respect to the determination of the Consolidated Tax of the Affiliated Group and with the appropriate taxing authorities with respect to the determination of State Tax liability. With respect to such return preparation, Parent shall act in good faith with regard to all members included in an applicable

[1] Tax Asset means any net operating loss, net capital loss, investment tax credit, foreign tax credit charitable deduction or any other deduction, credit or tax attribute which could reduce taxes (including, without limitation, deductions and credits related to alternative minimum taxes).

[2] Final Determination shall mean (i) with respect to Consolidated Tax, a "determination" as defined in section 1313(a) of the Code or execution of an Internal Revenue Service Form 870AD, and with respect to taxes other than Consolidated Tax, any final determination of liability in respect of a tax that, under applicable law, is not subject to further appeal, review or modification through proceedings or otherwise, (ii) any final disposition of a tax issue by reason of the expiration of a statute of limitations or (iii) the payment of tax by Parent with respect to any item disallowed or adjusted by any taxing authority where Parent determines in good faith that no action should be taken to recoup such payment.

return. Parent shall have right with respect any consolidated Federal tax returns or returns relating to State Tax that it has filed or will file to determine in good faith (i) the manner in which such returns, documents or statements shall be prepared and filed, including, without limitation, the manner in which any item of income, gain, loss, deduction, or credit shall be reported, (ii) whether any extensions should be requested, and (iii) the elections that will be made by any Member of the Affiliated Group. In addition, Parent shall have the right, in good faith, to (i) contest, compromise, or settle any adjustment of deficiency proposed, asserted or assessed as a result of any audit of any Federal tax return or return relating to State Tax, (ii) file, prosecute, compromise or settle any claim for refund, and (iii) determine whether any refunds shall be received by way of refund or credited against tax liabilities. In addition, Parent shall, to the extent such information is available, advise the Members of any significant applicable Member tax issue being contested by the Federal, state, local or other relevant taxing authorities, and shall keep the Members informed with respect to any contest, compromise or settlement thereof.

6. Reimbursement for Certain Services. Parent shall be responsible for services in connection with this agreement, including but not limited to, (i) those services relating to the preparation of returns (including Pro Forma Returns) described in Article III, sections 2, 3 and 5 and (ii) services relating to other activities described in Article III, section 5. The Parent will receive reimbursement for the expenses associated with performance of these services by each of the member corporations. The amount and terms of the reimbursements will be governed by the general services agreement between entities.

7. Additional Services. Parent will provide the tax services described in this Article III with respect to all of the separate state, local and foreign taxes of any of the Members that do not relate to Consolidated Tax or State Tax. Parent will provide these services in a manner consistent with the principles contained in Article III and be compensated in the same manner as described in section 6.

ARTICLE IV
Post-Deconsolidation

1. Additional Rights and Liabilities Post-Deconsolidation

(i) Deconsolidation means any event pursuant to which a Member of the Affiliated Group ceases to be a subsidiary corporation includible in a consolidated tax return of the Affiliated Group for Consolidated Tax purposes.

(ii) The Members consent that on or after a Deconsolidation they will not, nor will cause or permit any Member of the Affiliated Group to make or change any tax election, change any accounting method, amend any tax return or take any tax position on any tax return, take any other action, omit to take any action or enter into any transaction that results in any increased tax liability or reduction of any Tax Asset of the Affiliated Group or any Member thereof (immediately after the Deconsolidation) in respect of any Post-Deconsolidation Tax Period,[3] without first obtaining the written consent of any authorized representative of Parent.

(iii) In the event of a Deconsolidation, Parent may, at its option, elect and the Members shall join Parent in electing (if necessary), to ratably allocate items of the respective Members in

[3] Post-Deconsolidation Tax Period means (i) any tax period beginning and ending after the date of Deconsolidation and (ii) with respect to a tax period that begins before and ends after the date of Deconsolidation, such portion of the tax period that commences on the day after the date of Deconsolidation.

accordance with the relevant provisions of Treasury Regulation section 1.1502-76.

(iv) Parent agrees to pay to the Members, as applicable, the actual benefit received by the Affiliated Group from the use in any Pre-Deconsolidation Tax Period of a carryback of any Tax Asset of a respective Member from a Post Deconsolidation Tax Period. Such benefit shall be considered equal to the excess of (i) the amount of Consolidated Tax or State Tax, as the case may be, that would have been payable by the Affiliated Group in the absence of such carryback over (ii) the amount of Consolidated Tax or State Tax, as the case may be, actually payable by the Affiliated Group. Payment of the amount of such benefit shall be made within ninety (90) days of the filing of the applicable tax return for the taxable year in which the Tax Asset is utilized. If, subsequent to the payment by Parent to the Members of any such amount, there shall be (A) a Final Determination which results in a disallowance or a reduction of the Tax Asset so carried back or (B) a reduction in the amount of the benefit realized by the Affiliated Group as a result of any other Tax Asset that arises in a Post-Deconsolidation Tax Period, the Members shall respectively repay to Parent, within ninety (90) days of such event described in (A) or (B) (an "Event" or collectively, the "Events") any amount which would not have been payable to the Members pursuant to this section had the amount of the benefit been determined in light of the Events. The Members shall each hold Parent harmless for any penalty or interest payable by any Member of the Affiliated Group, as a result of any Event. Any such amount shall be paid separately by the Members to Parent within ninety (90) days of the payment by Parent or any member of the Affiliated Group of any such interest or penalty. Nothing in this section l(iv) shall require Parent to file a claim, amended return or refund of Consolidated Tax or State Tax which Parent, in its sole discretion, determines lacks substantial authority, as defined in the Code and the regulations thereunder. Parent agrees to file an amended Affiliated Group Consolidated Tax return or State Tax return, that does not lack substantial authority, to assist the Members obtain a tax benefit related to an Affiliated Group year.

ARTICLE V
Miscellaneous

1. Additional Members. If during a consolidated return period Parent or any Member acquires or organizes another corporation that is required to be included in the consolidated return, then such corporation shall join in and be bound by this agreement.

2. Timing. This agreement shall apply to the tax year ending December 31, 2003, and all subsequent taxable periods unless Parent and the Members agree to terminate the agreement. Notwithstanding such termination, this agreement shall continue in effect with respect to any payments or refunds due for all taxable periods prior to termination.

3. Successors. This agreement shall be binding upon and inure to the benefit of any successor, whether by statutory merger, acquisition of assets, or otherwise, to any of the parties hereto, to the same extent as if the successor had been an original party to the agreement.

4. Amendments. To the extent Internal Revenue Code sections or Treasury Regulations are adopted, amended, revised or clarified, and such adoptions, amendments, revisions, or clarifications impact the allocation of tax payments or refunds pursuant to this agreement, this agreement will be amended within ninety (90) days of the date such adoptions, amendments, revisions, or clarifications are published in the Federal Register.

IN WITNESS WHEREOF, each of the undersigned parties has caused this Tax Sharing Agreement to be executed by a duly authorized officer as of the 30th day of January, 2020, effective January 23, 2020.

SECOND AMENDED AND RESTATED
ARTICLES OF INCORPORATION AND REDOMESTICATION

OF

WELLCARE HEALTH INSURANCE OF ILLINOIS, INC.

d/b/a WellCare of Kentucky, Inc.

The undersigned files with the Secretary of State of the Commonwealth of Kentucky these Articles of Incorporation in accordance with Sections 14A and 271B of the Kentucky Business Corporation Act, as amended to date (the "Act") and Section 304.24-500 of the Kentucky Insurance Code.

ARTICLE I: The name of this corporation is **WellCare Health Insurance Company of Kentucky, Inc.** hereinafter referred to as the "Corporation."

ARTICLE II: The mailing address of the Corporation's corporate office is Attention: Legal and External Affairs, WellCare Health Plans, Inc., 8735 Henderson Road, Tampa, Florida 33634.

The mailing address of the Corporation's principal office in the Commonwealth of Kentucky is 13551 Triton Park Boulevard, Suite 1800, Louisville, Kentucky 40223.

ARTICLE III: The purposes for which the Corporation is formed are: (i) to engage in any and all lawful activities, businesses and enterprises for which stock life and health insurance corporations may be organized and which the Board of Directors of the Corporation may deem beneficial, profitable and in the best interest of the Corporation; (ii) to engage in the business of life and health insurance and the business incidental thereto, including without limitation, the creation, promotion, sale and servicing of health insurance products and annuity products, together with all activities incidental thereto; and (iii) to create, own, operate and manage subsidiaries as determined by the Board of Directors of the Corporation and as permitted by the Kentucky statutes. The Corporation shall be authorized to transact the following kinds of insurance, as presently defined at KRS Chapter 304.5.010 et seq. or as hereafter authorized and defined under the laws of the Commonwealth of Kentucky: "life", "health", and "annuities".

ARTICLE IV: The aggregate number, class and par value of the shares which the Corporation shall have the authority to issue is three million (3,000,000) shares of Common Stock, all of which shall have a par value of $1.00 per share. These shares shall constitute one single class with no preferences, special rights or qualifications. All preemptive rights of shareholders are hereby denied.

ARTICLE V: Participation in or conduct of any meeting of the Shareholder or Board of Directors may be in person, by proxy or by means of remote or electronic communication, including but not limited to telephone or other form of wire or wireless communication that allows for all parties to simultaneously hear each other.

ARTICLE VI: The Board of Directors shall be elected by a plurality of the votes cast by the shareholder in the manner indicated in the Bylaws. Cumulative voting is prohibited.

ARTICLE VII: The Shareholder shall have the exclusive power to alter, amend or repeal the Bylaws or adopt new Bylaws by majority vote of the Shareholder.

ARTICLE VIII: A quorum of the Board of Directors may consist of less than a majority, but shall be no fewer than one-third (⅓) of the prescribed number of Directors as determined under the Bylaws.

ARTICLE IX: No director shall be personally liable to the Corporation or its shareholders for monetary damages for breach of fiduciary duty as a director, except for (a) any breach of the director's duty of loyalty to the Corporation or its shareholders, (b) acts or omissions not in subjective good faith which involve intentional misconduct or a knowing violation of law, (c) pursuant to Section 271B.8-510(4) of the Act, as amended from time to time, or (d) any transaction from which the director derived an improper personal benefit.

ARTICLE X: The Corporation may indemnify officers, directors, employees and agents to the fullest extent permitted by law.

ARTICLE XI: The street address of the registered office of the Corporation is 306 W. Main Street, Suite 512, Frankfort Kentucky 40601 and the Registered Agent of record is CT Corporation System:

I, CT Corporation System, consent to serve as the registered agent on behalf of the Corporation.

CERTIFICATE OF MERGER
OF
WELLCARE HEALTH PLANS, INC.
WITH AND INTO
WELLINGTON MERGER SUB II, INC.

Pursuant to Section 251 of the General
Corporation Law of the State of Delaware

Wellington Merger Sub II, Inc., a Delaware corporation, does hereby certify:

FIRST: The names and states of incorporation of the constituent corporations to this merger (the "Merger") are as follows:

WellCare Health Plans, Inc.	Delaware
Wellington Merger Sub II, Inc.	Delaware

SECOND: An Agreement and Plan of Merger, which was entered into on March 26, 2019, by and among Centene Corporation, Wellington Merger Sub I, Inc., Wellington Merger Sub II, Inc. and WellCare Health Plans, Inc. (the "Merger Agreement"), has been approved, adopted, executed and acknowledged by each of the constituent corporations in accordance with Section 251 of the General Corporation Law of the State of Delaware.

THIRD: The name of the corporation surviving the Merger is Wellington Merger Sub II, Inc., except that, at the time of the Merger, such name shall be changed to WellCare Health Plans, Inc. (the "Surviving Corporation").

FOURTH: The Certificate of Incorporation of Wellington Merger Sub II, Inc. as in effect immediately prior to the Merger shall be amended and restated to read in its entirety as set forth in Exhibit A attached hereto and, as so amended, shall be the certificate of incorporation of the Surviving Corporation.

FIFTH: The executed Merger Agreement is on file at an office of the Surviving Corporation, 7700 Forsyth Boulevard, St. Louis, Missouri 63105. A copy will be provided, upon request and without cost, to any stockholder of either constituent corporation.

[SIGNATURE PAGE FOLLOWS]

IN WITNESS WHEREOF, Wellington Merger Sub II, Inc. has caused this Certificate of Merger to be executed in its corporate name this 23rd day of January, 2020.

WELLINGTON MERGER SUB II, INC.

By: _____
Name: Jeffrey Schwaneke
Title: Treasurer

[SIGNATURE PAGE TO CERTIFICATE OF MERGER – SECOND MERGER]

EXHIBIT A

AMENDED AND RESTATED
CERTIFICATE OF INCORPORATION

OF

WELLCARE HEALTH PLANS, INC.

FIRST: The name of the Corporation is WellCare Health Plans, Inc. (hereinafter the "Corporation").

SECOND: The address of the registered office of the Corporation in the State of Delaware is 1209 Orange Street, Wilmington, County of New Castle, 19801. The name of its registered agent at that address is The Corporation Trust Company.

THIRD: The purpose of the Corporation is to engage in any lawful act or activity for which a corporation may be organized under the General Corporation Law of the State of Delaware as set forth in Title 8 of the Delaware Code (the "GCL").

FOURTH: The total number of shares of stock which the Corporation shall have authority to issue is one thousand (1,000) shares of Common Stock, each having a par value of $0.01.

FIFTH: The name and mailing address of the Sole Incorporator is as follows:

Name	Address
Deborah M. Reusch	P.O. Box 636 Wilmington, DE 19899

SIXTH: The following provisions are inserted for the management of the business and the conduct of the affairs of the Corporation, and for further definition, limitation and regulation of the powers of the Corporation and of its directors and stockholders:

(1) The business and affairs of the Corporation shall be managed by or under the direction of the Board of Directors.

(2) The directors shall have concurrent power with the stockholders to make, alter, amend, change, add to or repeal the By-Laws of the Corporation.

(3) The number of directors of the Corporation shall be as from time to time fixed by, or in the manner provided in, the By-Laws of the Corporation. Election of directors need not be by written ballot unless the By-Laws so provide.

(4) No director shall be personally liable to the Corporation or any of its stockholders for monetary damages for breach of fiduciary duty as a director, except for liability (i) for any breach of the director's duty of loyalty to the Corporation or its stockholders, (ii) for acts or omissions not in good faith or which involve intentional misconduct or a knowing violation of law, (iii) pursuant to Section 174 of the GCL or (iv) for any transaction from which the director derived an improper personal benefit. Any repeal or modification of this Article SIXTH by the stockholders of the Corporation shall not adversely affect any right or protection of a director of the Corporation existing at the time of such repeal or modification with respect to acts or omissions occurring prior to such repeal or modification.

(5) In addition to the powers and authority hereinbefore or by statute expressly conferred upon them, the directors are hereby empowered to exercise all such powers and do all such acts and things as may be exercised or done by the Corporation, subject, nevertheless, to the provisions of the GCL, this Certificate of Incorporation, and any By-Laws adopted by the stockholders; provided, however, that no By-Laws hereafter adopted by the stockholders shall invalidate any prior act of the directors which would have been valid if such By-Laws had not been adopted.

SEVENTH: Meetings of stockholders may be held within or without the State of Delaware, as the By-Laws may provide. The books of the Corporation may be kept (subject to any provision contained in the GCL) outside the State of Delaware at such place or places as may be designated from time to time by the Board of Directors or in the By-Laws of the Corporation.

EIGHTH: Each person who was or is made a party or is threatened to be made a party to or is involved (including, without limitation, as a witness) in any actual or threatened action, suit or proceeding, whether civil, criminal, administrative or investigative (hereinafter a "proceeding"), by reason of the fact that he is or was a director or officer of the Corporation or is or was serving at the request of the Corporation as a director or officer of another corporation or of a partnership, limited liability company, joint venture, trust or other entity, including service with respect to an employee benefit plan (hereinafter an "Indemnitee"), whether the basis of such proceeding is alleged action in an official capacity as a director or officer or in any other capacity while so serving, shall be indemnified and held harmless by the Corporation to the full extent authorized by the GCL, as the same exists or may hereafter be amended (but, in the case of any such amendment, only to the extent that such amendment permits

the Corporation to provide broader indemnification rights than said law permitted the Corporation to provide prior to such amendment), or by other applicable law as then in effect, against all costs, expenses, liabilities and losses (including attorneys' fees and related costs, judgments, fines, excise taxes or penalties under the Employee Retirement Income Security Act of 1974, as amended from time to time ("ERISA"), penalties and amounts paid or to be paid in settlement) actually and reasonably incurred or suffered by such Indemnitee in connection therewith, and such indemnification shall continue as to a person who has ceased to be a director, officer, partner, member or trustee and shall inure to the benefit of his or her heirs, executors and administrators. Each person who is or was serving as a director or officer of a subsidiary of the Corporation shall be deemed to be serving, or have served, at the request of the Corporation.

(1) Procedure. Any indemnification (but not advancement of expenses) under this Article EIGHTH (unless ordered by a court) shall be made by the Corporation only as authorized in the specific case upon a determination that indemnification of the director or officer is proper in the circumstances because he has met the applicable standard of conduct set forth in the GCL, as the same exists or hereafter may be amended (but, in the case of any such amendment, only to the extent that such amendment permits the Corporation to provide broader indemnification rights than said law permitted the Corporation to provide prior to such amendment). Such determination shall be made with respect to a person who is a director or officer at the time of such determination (i) by a majority vote of the directors who were not parties to such proceeding (the "Disinterested Directors"), even though less than a quorum, (ii) by a committee of Disinterested Directors designated by a majority vote of Disinterested Directors, even though less than a quorum, (iii) if there are no such Disinterested Directors, or if such Disinterested Directors so direct, by independent legal counsel in a written opinion, or (iv) by the stockholders.

(2) Advances for Expenses. Expenses (including attorneys' fees, costs and charges) incurred by a director or officer of the Corporation in defending a proceeding shall be paid by the Corporation in advance of the final disposition of such proceeding upon receipt of an undertaking by or on behalf of the director or officer to repay all amounts so advanced in the event that it shall ultimately be determined that such director or officer is not entitled to be indemnified by the Corporation as authorized in this Article EIGHTH. The majority of the Disinterested Directors may, in the manner set forth above, and upon approval of such director or officer of the Corporation, authorize the Corporation's counsel to represent such person, in any proceeding, whether or not the Corporation is a party to such proceeding.

(3) Procedure for Indemnification. Any indemnification or advance of expenses (including attorney's fees, costs and charges) under this Article

EIGHTH shall be made promptly, and in any event within 60 days upon the written request of the director or officer (and, in the case of advance of expenses, receipt of a written undertaking by or on behalf of Indemnitee to repay such amount if it shall ultimately be determined that Indemnitee is not entitled to be indemnified therefor pursuant to the terms of this Article EIGHTH). The right to indemnification or advances as granted by this Article EIGHTH shall be enforceable by the director or officer in any court of competent jurisdiction, if the Corporation denies such request, in whole or in part, or if no disposition thereof is made within 60 days. Such person's costs and expenses incurred in connection with successfully establishing his/her right to indemnification, in whole or in part, in any such action shall also be indemnified by the Corporation. It shall be a defense to any such action (other than an action brought to enforce a claim for the advance of expenses (including attorney's fees, costs and charges) under this Article EIGHTH where the required undertaking, if any, has been received by the Corporation) that the claimant has not met the standard of conduct set forth in the GCL, as the same exists or hereafter may be amended (but, in the case of any such amendment, only to the extent that such amendment permits the Corporation to provide broader indemnification rights than said law permitted the Corporation to provide prior to such amendment), but the burden of proving such defense shall be on the Corporation. Neither the failure of the Corporation (including its Board of Directors, its independent legal counsel and its stockholders) to have made a determination prior to the commencement of such action that indemnification of the claimant is proper in the circumstances because he/she has met the applicable standard of conduct set forth in the GCL, as the same exists or hereafter may be amended (but, in the case of any such amendment, only to the extent that such amendment permits the Corporation to provide broader indemnification rights than said law permitted the Corporation to provide prior to such amendment), nor the fact that there has been an actual determination by the Corporation (including its Board of Directors, its independent legal counsel and its stockholders) that the claimant has not met such applicable standard of conduct, shall be a defense to the action or create a presumption that the claimant has not met the applicable standard of conduct.

(4) Other Rights; Continuation of Right to Indemnification. The indemnification and advancement of expenses provided by this Article EIGHTH shall not be deemed exclusive of any other rights to which a person seeking indemnification or advancement of expenses may be entitled under any law (common or statutory), bylaw, agreement, vote of stockholders or disinterested directors or otherwise, both as to action in his/her official capacity and as to action in another capacity while holding office or while employed by or acting as agent for the Corporation, and shall continue as to a person who has ceased to be a director or officer,

and shall inure to the benefit of the estate, heirs, executors and administers of such person. All rights to indemnification under this Article EIGHTH shall be deemed to be a contract between the Corporation and each director or officer of the Corporation who serves or served in such capacity at any time while this Article EIGHTH is in effect. Any repeal or modification of this Article EIGHTH or any repeal or modification of relevant provisions of the GCL or any other applicable laws shall not in any way diminish any rights to indemnification of such director or officer or the obligations of the Corporation arising hereunder with respect to any proceeding arising out of, or relating to, any actions, transactions or facts occurring prior to the final adoption of such modification or repeal. For the purposes of this Article EIGHTH, references to "the Corporation" include all constituent corporations absorbed in a consolidation or merger as well as the resulting or surviving corporation, so that any person who, following such consolidation or merger, is a director or officer of such a constituent corporation or is serving at the request of such constituent corporation as a director or officer of another corporation, partnership, joint venture, trust or other entity shall stand in the same position under the provisions of this Article EIGHTH, with respect to the resulting or surviving corporation during the period following such consolidation or merger, as he would if he/she had served the resulting or surviving corporation in the same capacity.

(5) Insurance. The Corporation shall have power to purchase and maintain insurance on behalf of any person who is or was or has agreed to become a director or officer of the Corporation, or is or was serving at the request of the Corporation as a director or officer of another corporation, partnership, joint venture, trust or other entity, against any liability asserted against him and incurred by him or on his behalf in any such capacity, or arising out of his status as such, whether or not the Corporation would have the power to indemnify him against such liability under the provisions of this Article EIGHTH; provided, however, that such insurance is available on acceptable terms, which determination shall be made by a vote of a majority of the Board of Directors.

(6) Savings Clause. If this Article EIGHTH or any portion hereof shall be invalidated on any ground by any court of competent jurisdiction, then the Corporation shall nevertheless indemnify each person entitled to indemnification under the first paragraph of this Article EIGHTH as to all costs, expenses, liabilities and losses (including attorneys' fees and related costs, judgments, fines, ERISA excise taxes and penalties, penalties and amounts paid or to be paid in settlement) actually and reasonably incurred or suffered by such person and for which indemnification is available to such person pursuant to this Article EIGHTH to the full extent permitted by any applicable portion of this Article EIGHTH that shall not have been invalidated and to the full extent

permitted by applicable law.

NINTH: The Corporation reserves the right to amend, alter, change or repeal any provision contained in this Certificate of Incorporation, in the manner now or hereafter prescribed by statute, and all rights conferred upon stockholders herein are granted subject to this reservation.

CERTIFICATE OF INCORPORATION

OF

WELLCARE ACQUISITION COMPANY

ARTICLE ONE

The name of the corporation is WellCare Acquisition Company (hereinafter called the "Corporation").

ARTICLE TWO

The address of the Corporation's registered office in the state of Delaware is 2711 Centreville Road, Suite 400, Wilmington, New Castle County, Delaware 19808. The name of its registered agent at such address is Corporation Service Company.

ARTICLE THREE

The purpose of the Corporation is to engage in any lawful act or activity for which corporations may be organized under the General Corporation Law of Delaware.

ARTICLE FOUR

The total number of shares which the Corporation shall have the authority to issue is One Hundred (100) shares, all of which shall be shares of Common Stock, with a par value of $0.01 (One Cent) per share.

ARTICLE FIVE

The name and mailing address of the incorporator is as follows:

Name	Address
Cindy Rashed Reilly	Kirkland & Ellis 153 East 53rd Street, 39th Fl. New York, NY 10022

ARTICLE SIX

The directors shall have the power to adopt, amend or repeal By-Laws, except as may be otherwise be provided in the By-Laws.

ARTICLE SEVEN

The Corporation expressly elects not to be governed by Section 203 of the General Corporation Law of the State of Delaware.

I:\Soros\wellcare\reilly\wellcareacqu.doc

ARTICLE EIGHT

To the fullest extent permitted by the General Corporation Law of the State of Delaware as the same exists or may hereafter be amended, a director of this Corporation shall not be liable to the Corporation or its stockholders for monetary damages for a breach of fiduciary duty as a director. Any repeal or modification of this ARTICLE EIGHT shall not adversely affect any right or protection of a director of the Corporation existing at the time of such repeal or modification.

ARTICLE NINE

The Corporation reserves the right to amend or repeal any provisions contained in this Certificate of Incorporation from time to time and at any time in the manner now or hereafter prescribed by the laws of the State of Delaware, and all rights conferred upon stockholders and directors are granted subject to such reservation.

* * * *

I, the undersigned, being the sole incorporator hereinbefore named, for the purpose of forming a corporation in pursuance of the General Corporation Law of the State of Delaware, do make and file this Certificate, hereby declaring and certifying that the facts herein stated are true, and accordingly have hereunto set my hand this 13th day of May 2002.

RESTATED CERTIFICATE OF INCORPORATION

OF

THE WELLCARE MANAGEMENT GROUP, INC.

Under Section 807 of the Business Corporation Law

We, the undersigned, Todd S. Farha and David Smith, being the President and Secretary, respectively, of The WellCare Management Group, Inc., do hereby certify:

FIRST: The name of the corporation is The WellCare Management Group, Inc. (the "Corporation").

SECOND: The certificate of incorporation of the Corporation was filed with the Department of State of New York on August 25, 1983 under the original name of Ullmann and Castellon, Inc.

THIRD: The certificate of incorporation of the Corporation is hereby amended or changed to effect one or more of the amendments or changes authorized by the Business Corporation Law, as follows:

1. To change the stated purposes of the Corporation.

2. To change the location of the office of the Corporation.

3. To decrease the aggregate number of shares of all classes of capital stock of which the Corporation shall have the authority to issue (i) from an aggregate of 76,313,555 shares consisting of 75,000,000 shares of Common Stock, par value $.01 per share, of which 100 shares are currently issued and outstanding, 313,555 shares of Class A Common Stock, par value $.01 per share, of which no shares are currently issued and outstanding, and 1,000,000 shares of Preferred Stock, par value $.01 per share, of which no shares are currently issued and outstanding (ii) to an aggregate of 100 shares of Common Stock, par value $.01 per share, of which 100 shares are currently issued and outstanding.

4. To change the address to which the Secretary of State shall mail copies of any process served against the Corporation.

5. To delete a provision denying preemptive rights to the shareholders of the Corporation.

6. To delete a provision specifying the number of directors and the timing of elections and providing that directors may be removed only with cause either by action of the Board of Directors or by vote of the shareholders and to

add a provision providing that the Board of Directors is authorized to make, alter or repeal the by-laws of the Corporation.

7. To delete the provision limiting directors' and officers' liability.

8. To amend and restate the provision indemnifying directors and officers of the Corporation and to delete the provision indemnifying employees and agents of the Corporation.

FOURTH: To accomplish the foregoing amendments, Articles SECOND, THIRD, FOURTH and FIFTH of the certificate of incorporation of the Corporation, relating to (i) the purposes of the Corporation, (ii) the location of the office of the Corporation, (iii) the aggregate number of shares which the Corporation is authorized to issue, the par value thereof and the classes into which the shares are divided and (iv) the address to which copies of service of process is to be mailed, respectively, are hereby amended to read as set forth in the same numbered articles of the certificate of incorporation of the Corporation as hereinafter restated; Articles SIXTH and EIGHTH, relating to preemptive rights and limitation of directors' and officers' liability, respectively, are eliminated without substituting or adding any provisions in lieu thereof; and Articles SEVENTH and NINTH, relating to the Board of Directors and indemnification, respectively, are hereby amended and renumbered as Articles SIXTH and SEVENTH as set forth in the certificate of incorporation as hereinafter restated.

FIFTH: The restatement of the certificate of incorporation of the Corporation herein provided was approved by the Board of Directors followed by authorization by the vote of the holders of at least a majority of all of the outstanding shares of the Corporation entitled to vote thereon.

SIXTH: The text of the certificate of incorporation of the Corporation is hereby restated as further amended or changed herein to read as follows:

"FIRST: The name of the Corporation is The WellCare Management Group, Inc. (the "Corporation").

SECOND: The Corporation is formed for the following purpose or purposes:

This corporation is formed to engage in any lawful act or activity for which a corporation may be organized under the Business Corporation Law, provided that it is not formed to engage in any act or activity requiring the consent or approval of any state official, department, board, agency or other body.

THIRD: The office of the Corporation is to be located in the County of New York, State of New York.

FOURTH: The aggregate number of shares which the Corporation shall have the authority to issue is 100 shares, par value $.01 per share, all of which are to be designated as Common Stock.

2

FIFTH: The Secretary of State is designated as the agent of the Corporation upon whom process against the Corporation may be served. The post office address within the State of New York to which the Secretary of State shall mail a copy of any process against the Corporation served upon him is: c/o Corporation Service Company, 80 State Street, Albany, New York 12207-2543.

SIXTH: The Board of Directors is expressly authorized to make, alter or repeal the by-laws of the Corporation.

SEVENTH: The Corporation shall have the power to indemnify its officers and directors to the maximum extent permitted by law."

IN WITNESS WHEREOF, we have subscribed this Restated Certificate of Incorporation this 31st day of July 2002, and do hereby affirm, under the penalties of perjury, that the statements contained therein have been examined by them and are true, complete and correct.

Todd S. Farha, President

David Smith, Assistant Secretary

3

State of New York }
Department of State } ss:

I hereby certify that the annexed copy has been compared with the original document filed by the Department of State and that the same is a true copy of said original.

DOS-200 (Rev. 03/02)

EX-3.1 2 d358762dex31.htm CERTIFICATE OF AMENDMENT TO THE AMENDED & RESTATED CERT. OF INCORPORATION OF BLK

Exhibit 3.1

CERTIFICATE OF AMENDMENT
TO THE
AMENDED AND RESTATED CERTIFICATE OF INCORPORATION
OF
BLACKROCK, INC.

Pursuant to Section 242 of the General
Corporation Law of the State of Delaware

BlackRock, Inc., a Delaware corporation (hereinafter called the "**Corporation**"), does hereby certify as follows:

FIRST: The third and fourth paragraphs of Article SIXTH of the Corporation's Amended and Restated Certificate of Incorporation are hereby amended to read in their entirety as set forth below:

C. **Election and Term.** A director shall be elected to hold office until the expiration of the term for which such person is elected, and until such person's successor shall be duly elected and qualified. Commencing at the annual meeting of stockholders that is held in calendar year 2013 (the "2013 Annual Meeting"), the directors of the Corporation shall be elected annually for terms of one year, except that any director in office at the 2013 Annual Meeting whose term expires at the annual meeting of stockholders in calendar year 2014 or calendar year 2015 (a "Continuing Classified Director") shall continue to hold office until the end of the term for which such director was elected and until such director's successor shall have been elected and qualified. Accordingly, at each annual meeting of stockholders after the terms of all Continuing Classified Directors have expired, all directors shall be elected for terms expiring at the next annual meeting of stockholders and until such directors' successors shall have been elected and qualified. Any vacancies created in the Board of Directors through and increase in the number of directors or otherwise may be filled in accordance with the By-Laws of the Corporation and the applicable laws of the State of Delaware.

D. **Removal of Directors.** Except as may be provided in a resolution or resolutions providing for any class or series of Preferred Stock with respect to any directors elected by the holders of such class or series, any director, or the entire Board of Directors, may be removed, with or without cause, by the holders of a majority of the votes of capital stock then entitled to vote in the election of directors at a meeting of stockholders called for that purpose, except that Continuing Classified Directors and any director appointed to fill a vacancy of any Continuing Classified Director may be removed only for cause.

SECOND: This amendment to the Corporation's Amended and Restated Certificate of Incorporation, was duly adopted in accordance with Section 242 of the General Corporation Law of the State of Delaware.

IN WITNESS WHEREOF, the Corporation has caused this Certificate to be duly executed in its corporate name this 24th day of May, 2012.

BlackRock, Inc.

The Audit Committee and Management of
WellCare Health Insurance Company of Kentucky, Inc.
8725 Henderson Road
Renaissance One
Tampa, FL 33634

Dear Members of the Audit Committee and Management:

In planning and performing our audit of the statutory-basis financial statements of WellCare Health Insurance Company of Kentucky, Inc. (the "Company") as of and for the year ended December 31, 2018 (on which we have issued our report dated May 8, 2019), in accordance with auditing standards generally accepted in the United States of America, we considered the Company's internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we do not express an opinion on the effectiveness of the Company's internal control over financial reporting.

Our consideration of internal control over financial reporting was for the limited purpose described in the first paragraph and was not designed to identify all deficiencies in internal control over financial reporting that might be material weaknesses and therefore, material weaknesses may exist that were not identified. We did not identify any deficiencies in internal control over financial reporting that we consider to be material weaknesses as of December 31, 2018.

The definitions of a deficiency and a material weakness are set forth in the attached Appendix I.

A description of the responsibility of management for establishing and maintaining internal control over financial reporting and of the objectives of and inherent limitations of internal control over financial reporting is set forth in the attached Appendix II and should be read in conjunction with this report.

This report is intended solely for the information and use of the audit committee, management, others within the organization, and state insurance departments to whose jurisdiction the Company is subject and is not intended to be, and should not be, used by anyone other than these specified parties.

Yours truly,

Deloitte & Touche LLP

APPENDIX I

DEFINITIONS

The definitions of a deficiency and a material weakness are as follows:

A *deficiency* in internal control over financial reporting exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct misstatements on a timely basis. A deficiency in design exists when (a) a control necessary to meet the control objective is missing or (b) an existing control is not properly designed so that, even if the control operates as designed, the control objective would not be met. A deficiency in operation exists when (a) a properly designed control does not operate as designed, or (b) the person performing the control does not possess the necessary authority or competence to perform the control effectively.

A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis.

APPENDIX II

MANAGEMENT'S RESPONSIBILITY FOR, AND THE OBJECTIVES AND LIMITATIONS OF, INTERNAL CONTROL OVER FINANCIAL REPORTING

The following comments concerning management's responsibility for internal control over financial reporting and the objectives and inherent limitations of internal control over financial reporting are adapted from auditing standards generally accepted in the United States of America.

MANAGEMENT'S RESPONSIBILITY

The Company's management is responsible for the overall accuracy of the statutory-basis financial statements and their conformity with accounting practices prescribed or permitted by the Kentucky Department of Insurance. In this regard, management is also responsible for establishing and maintaining effective internal control over financial reporting.

OBJECTIVES OF INTERNAL CONTROL OVER FINANCIAL REPORTING

Internal control over financial reporting is a process effected by those charged with governance, management, and other personnel and designed to provide reasonable assurance about the achievement of the entity's objectives with regard to reliability of financial reporting, effectiveness and efficiency of operations, and compliance with applicable laws and regulations. Internal control over the safeguarding of assets against unauthorized acquisition, use, or disposition may include controls related to financial reporting and operations objectives. Generally, controls that are relevant to an audit of financial statements are those that pertain to the entity's objective of reliable financial reporting (i.e., the preparation of reliable statutory-basis financial statements that are fairly presented in conformity with accounting practices prescribed or permitted by the Kentucky Department of Insurance.

INHERENT LIMITATIONS OF INTERNAL CONTROL OVER FINANCIAL REPORTING

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented, or detected and corrected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

3. Staffing

B.3. STAFFING

a. Describe the Vendor's proposed approach to staffing this Contract, including the following information at a minimum

i. Description of how the organizational structure provides innovative solutions for meeting programmatic goals specific to Kentucky's Medicaid program and Enrollees and supports stakeholder groups (e.g., Enrollees, providers, partners, among others).

ii. Description of how the organizational structure will support whole-person integrated care, population health and overall improvement in health outcomes in a cost-effective manner.

iii. Description of the governing body, how members are selected, and envisioned role specific to the Vendor's support of the Kentucky Medicaid managed care program.

iv. A listing of Key Personnel identified in Section 9.2 of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," and as otherwise defined by the Vendor, including:

   a. Individual names, titles, brief job descriptions, qualifications and fulltime equivalents (FTEs) dedicated to this Contract, as well as their office locations for this Contract. An FTE is defined as the ratio of the total number of paid hours divided by the total number of working hours in the period. Annually, an FTE is considered to be two thousand eighty (2,080) hours.

   b. Whether each Key Personnel position will be filled by a Vendor's employee or a Subcontractor.

   c. Resumes, including information such as degrees, credentials, clinical licensure as applicable, years and type of experience. Include as an Appendix or Attachment to the Proposal.

v. Summary of recruitment timelines and activities for Key Personnel positions for which individuals have not been identified at the time of the proposal. Describe contingency plans should those positions continue to remain open after Contract Award.

vi. Overview of the Vendor's proposed training of staff to fulfill all requirements and responsibilities of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," for all operational areas.

vii. Overview of Vendor's approach to monitoring Subcontractors' progress in recruiting and training of staff to meet all requirements of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

viii. Retention approach for key personnel.

b. Provide a detailed description of the Vendor's organizational structure for this Contract, including an organizational chart that clearly displays the following:

i. Management structure, lines of responsibility, and authority for all operational areas of this Contract.

ii. How the RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices" fits into the overall organizational structure of the Parent Company.

iii. Where subcontractors will be incorporated.

iv. A summary of how each Subcontractor will be integrated into the Offeror's proposal performance of their obligations under RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," to ensure a streamlined experience for the Members, providers and the Department.

v. Number of proposed FTEs dedicated to RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," by position type and operational area and how the Vendor determined the appropriateness of these ratios.

B.3. STAFFING

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 9.2 Administration/Staffing of the Draft Medicaid Managed Care Contract (MMC) and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. WellCare of Kentucky is already fully staffed to support the Kentucky MMC program and we will submit a detailed staffing plan within the timeframes defined by DMS.

WellCare of Kentucky, Inc. ("WellCare of Kentucky") is a wholly owned subsidiary of WellCare Health Plans, Inc. (WellCare). On January 23, 2020 WellCare was acquired by Centene Corporation (Centene). WellCare is now a wholly owned subsidiary of Centene. **WellCare of Kentucky's leadership, staff, branding, and model for delivering services to the Commonwealth is not changing and we remain committed to partnering with DMS to ensure Kentucky's Enrollees, communities, providers and other stakeholders receive the integrated, whole-person care and services necessary to address all of their physical, behavioral, and social needs.** With the acquisition, WellCare of Kentucky is now also able to leverage the combined experience and best practices of our Centene affiliate health plans, which is now managing the care of more than 12.9 million Medicaid Enrollees across 30 states.

a. Describe the Vendor's proposed approach to staffing this Contract, including the following information at a minimum

PROPOSED APPROACH TO STAFFING THIS CONTRACT

As an experienced managed care partner with over three decades serving Medicaid beneficiaries across more than a dozen states, we share DMS' view and vision for how managed care can be a mechanism for change and transformation in the lives of Medicaid Enrollees. As described below, our approach, which has been built and refined through our exclusive focus on government sponsored health programs, is grounded on putting the Enrollee first, providing whole-person, fully integrated care, delivering services locally, positively impacting unmet social needs, and ensuring access through and aligning with our provider partners. This focus and approach has resulted in WellCare growing to become the largest Medicaid health plan in half of our 12 states. Further, we have garnered the trust and support of our state customers as evidenced by the fact that in the last 5 years, WellCare is the only national Medicaid managed care plan to be re-awarded 100% of rebid contracts and, in multiple states, have been awarded contracts to serve additional populations and geographies, many being new to managed care.

WellCare of Kentucky is first and foremost a local company. In 2011, when developing our initial staffing plan for the Kentucky Medicaid Managed Care (MMC) program, we understood the

criticality of offering a locally staff plan in Kentucky, employing a local workforce that lives and operates within the Commonwealth. As such, we developed a face-to-face, high-touch staffing model where our local Executive Team and associates are out in the field, engaging with our Enrollees, providers, community partners, and DMS to ensure their needs are being met. **Since that time, WellCare of Kentucky has become the most hands-on Managed Care Organization (MCO) within the Commonwealth and we have the most experienced and stable leadership team out of any MCO operating Kentucky's MMC program.**

Led by our Chief Executive Officer, Bill Jones, and Chief Operating Officer, Ben Orris, WellCare of Kentucky currently has in place a stable, skilled group of health plan executives that serve as our Executive Team and are responsible for oversight of all WellCare of Kentucky operations. This Executive Team has over eight years of experience operating Kentucky's MMC program and a combined tenure of more than 75 years serving Kentucky. Every member of WellCare of Kentucky's Executive Team is located in Kentucky and is dedicated full-time to this Contract. All Executive Team members are available to meet at DMS' requested location within 24 hours' notice from DMS. Each has a deep understanding of the challenges specific to the Commonwealth's health care landscape as well as institutional knowledge of our collaborative programs, network providers, and community partners in all eight regions across the Commonwealth.

Along with our executive leaders, WellCare of Kentucky employs more than 300 associates, all of which are dedicated to serving people in Kentucky and receive best-in-class training, which allows them to better support the MMC program and serve our Enrollees. Of these associates, 55 have been with WellCare of Kentucky since 2011, which shows the passion our associates have for serving our Enrollees as well as the stability of our organization supporting the MMC program. This approach to staffing this Contract is critical to our success as these locally-based employees perform a variety of key functions including, but not limited to, population health, utilization management, grievances and appeals, quality improvement, provider service (including provider relations, network development, and enrollment), pharmacy enrollee services, compliance, finance, and enrollee and provider complaints.

Additionally, a stable and established workforce of more than 800 associates working at our corporate headquarters in Tampa, support our associates within the Commonwealth. All told, WellCare has over 1,100 associates supporting the Kentucky MMC program.

i. Description of how the organizational structure provides innovative solutions for meeting programmatic goals specific to Kentucky's Medicaid program and Enrollees and supports stakeholder groups (e.g., Enrollees, providers, partners, among others).

AN ORGANIZATIONAL STRUCTURE THAT PROVIDES INNOVATIVE SOLUTIONS

WellCare of Kentucky is a thought leader within the Commonwealth and our drive for developing and providing innovative solutions permeates all aspects of our organization from executive leadership to every WellCare associate. WellCare of Kentucky is the only MCO in the state with a completely integrated team and service capabilities. Under the umbrella of our health plan leadership, and

leveraging the support and resources of WellCare Health Plans, Inc., our operational structure and processes fully support the integrated delivery of services, including WellCare staff, contractors, systems, and call centers. Building on WellCare of Kentucky's achievements and experience operating within the Commonwealth, we support DMS' goal of enhancing its current Medicaid managed care system with a focus on quality goals and improving health outcomes.

WellCare at Home Care Management Team – Supporting our Enrollees through a Whole-Person Approach

Our clinical organization structure has always supported the programmatic goals of ensuring high-needs Enrollees get access to the services and supports they need. WellCare of Kentucky has utilized a local high-touch, high-engagement care management model since we began providing services within the Commonwealth in 2011. WellCare of Kentucky believes in leveraging one integrated care team covering all care needs including physical, behavioral, pharmacy and unmet social needs. Within this model, we have built on our innovative organizational structure in which WellCare provides and oversees local care management, which includes local, in-person, care coordination resources from WellCare and from our partners. These staff live and work in the communities they serve, reaching Enrollees in remote, rural areas, and in urban centers.

Shannon Maggard, our Population Health Management Director leads WellCare of Kentucky's Care Management Team. Shannon grew up in Eastern Kentucky and began her career in 1996 at McDowell ARH after graduating from nursing school. During this time, she gained experience while working in several areas including ICU/CCU and home health nurse. She then transferred to Hazard ARH in 2000 and worked as a care a manger in the outcomes management department, supervising teams at both the Medical and Psychiatric unit. Shannon's extensive experience as a Registered Nurse with over 22 years of managed care experience including an extensive background in case management programs and utilization management allows her to guide our Care Management Team. Our Care Management Team is comprised of more than 95 associates including over 33 Field Care Managers, 16 Field Outreach Coordinators, 20 Behavioral Health Care Managers, 11 Inpatient Care Nurses, 10 Clinical Social Workers, 3 Enrollee Outreach Coordinators, and a Behavioral Health Advocate.

WellCare at Home, supported by our advanced CareCentral care management system, ensures the administration of a seamless continuum of care management from initial screening through follow-up and monitoring at a point of care closest to the Enrollee. WellCare at Home delivers all aspects of our care model right in the communities and offer in-person and telephonic outreach to Enrollee with assessment and screenings to identify Enrollee need; care planning; interventions and engagement; monitoring etc. **After moving to this high-touch, in-person model, those Enrollees engaged experienced a 26% reduction in inpatient admission and an 8% decline in preventable ED visits.**

Unable to Contact 'REACH' Program Team - Engaging Our Most Hard-to-Reach Enrollees

WellCare of Kentucky developed an Unable to Contact program, REACH, in order to address the ongoing problem of locating and engaging high-risk Enrollees in care coordination. This program

is staffed by Member Outreach Coordinators whose focus is to research, locate, and build stronger connections with our most hard-to-reach Enrollees. Our REACH program focuses on developing innovative ways to reach and engage with our Enrollees. **In a 3-month timespan, our REACH team successfully connected with nearly 6,000 UTC Enrollees**, providing important services such as education, coordinating Enrollees with primary care providers, bridging Enrollees to our community connections resources, and helping complete the health risk assessment to better identify Enrollee needs. We deployed our REACH program Eastern Region of Kentucky and it resulted in a **19.6% reduction in Emergency Department care and a 21.4% reduction in overall medical expenses** for engaged Kentucky Enrollees.

Hazard Care center - Helping our Enrollees Take a More Active Role in their Health

Understanding the importance of helping our Enrollees engage and take a more active role in their health, we have created our Kentucky CARE Center. The CARE Center conducts telephonic outreach to Enrollees who are experiencing difficulties with eligibility or accessing the care they need for covered services or community services. We took a proactive customer service approach and developed a Kentucky CARE Center that would perform outbound calls to Enrollees at risk of a suspension for failure to meet one of the many requirements, or were potentially eligible for an exemption that would allow them to maintain their benefits. We worked collaboratively with the Economic Development Cabinet, Kentucky Community and Technical College System, One Kentucky East, the Hazard/Perry County Chamber of Commerce and the Hazard Community and Technical College (HCTC) in selecting our final location of Hazard, Kentucky. Our decision was in part due to the significantly higher unemployment rate in Perry County compared to the statewide average, as well as the expansive workforce catchment area that spanned to 13 neighboring counties. In a test of the labor market performed in conjunction with HCTC, we received over 200 interested candidates. We have since learned that Hazard and neighboring communities offer a rich and motivated work force as evidenced by the 4% turnover of the new associates that were hired in August of 2018; one associate out of 23 new hires in that location over the last 16 months. That is very atypical in an industry that typically has a 30% to 50% annual turnover rate.

Despite the cancellation of the Kentucky HEALTH program, we have maintained our workforce development commitments made to the Hazard area and repurposed the functions of that team. Half of the team supports our quality team by making outbound calls to address care gaps and assisting Enrollees that may lose eligibility in the coming months. The other half supports our Community Connections Help Line (CCHL) (described below) and it has become WellCare‘s fastest growing CCHL site in the country in continuation of our efforts to impact social determinants of health. As a result of these successes and recognition of the expansive and talented workforce, we have recently completed the expanded our Hazard facility through the lease and build-out of the adjoining 3,200 square feet to facilitate future operations from this location.

Community Connections Team – Supporting our Enrollees by Addressing Their Unmet Social Needs

We began Community Connections as a pilot in the Commonwealth in 2011 as we realized how impactful unmet social needs could be on health and wellness outcomes. As a key part of our organizational structure, WellCare has made a significant investment in a team wholly dedicated to helping Enrollees address social determinants of health and helping our communities meet the diverse social service resource needs of their residents. **Since launching the Community Connections Program in Kentucky, we have connected more than 35,000 people to over 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program including a 26% reduction in Emergency Department visits, a 53% decrease in inpatient spending (Robert Wood Johnson study of our Community Connections Model (formerly CommUnity Impact), 2016).**

Elizabeth Starr, our Enrollee Services Manager, has been with WellCare since 2013 and she leads our Community Connections Team. James Baker our Manager, Community Help Line, who oversees our Community Connections Help Line and a team of Peer Coaches, supports Elizabeth. Elizabeth also oversees our Community Engagement Team comprised of Community Engagement Partners, Community Relations Specialists, and Member Engagement and Outreach Specialists. We designed our Community Connections Model to increase Enrollee access to health care by removing social barriers, driving health care cost savings by aligning social service support with health care delivery, and reinvesting the resulting savings into community supports to improve the overall system.

Our Community Connections Model features a Community Connections Help Line (CCHL) linking Enrollees and others to a comprehensive database of community social supports through peer-supported social service case management. The Community Connections Help Line (CCHL) is a resource and referral source for all callers with social service needs. Not only does CCHL assist WellCare Enrollees, they are also open to the family members and caregivers and anyone in the community who has social service needs. CCHL refers Enrollees to organizations and partners in the community who can provide housing, healthy food, utility assistance, employment and training, legal help, peer support services, and non-benefitted transportation options, as well as resources for social development.

James Baker, Manager, Community Help Line, oversees our CCHL. The CCHL is staffed by a team of Peer Coaches hired through our workforce innovation program. This team provides individuals in need with support from empathetic listeners with first-hand experience in navigating social services. Our Peer Coaches assess the needs of an individual, collect information to better understand their situation and eligibility, and connect them to local resources. Follow-up calls are completed to ensure needs are met, and connect the individual with any additional resources needed.

Dedicated Provider Engagement Team – Supporting Provider Satisfaction

WellCare of Kentucky is focused on creating the highest level of provider satisfaction with our health plan and eliminating problems for providers who serve our Enrollees. As such, in 2016,

we evolved our innovative provider engagement organizational structure to include a dedicated Commonwealth-based provider engagement team, employing local representatives who live and work in the communities they support and are better equipped to assist our providers in moving along the value-based continuum.

Anthony Piagentini, WellCare of Kentucky's Provider Services Manager, leads our provider engagement team. Anthony has been with WellCare since 2015 and is responsible for managing our provider relations team for WellCare of Kentucky including all institutional, professional, and behavioral health providers. Our Provider Engagement Team also includes Patricia Russell, our Director, Provider Operations, who has been with WellCare of Kentucky since 2011 and provides additional stability to the team. Currently, WellCare of Kentucky has the largest and most active field-based provider relations team amongst our competitors, comprised of over 30 associates to conduct provider relations and engagement in full support of DMS' goals.

With this dedicated provider engagement team, WellCare of Kentucky is able to provide the highest frequency of face-to-face and overall interactions from provider support staff among our competitors. **WellCare of Kentucky averages 736 contacts with providers each month from the Provider Relations Team. Of these interactions, on average that includes 476 face-to-face meetings in provider's offices per month.** This is supported by four Hospital Specialists calling on institutions, and 15 Provider Relations Representatives who call on primary care and behavioral health providers across the state. These interactions focus on multiple objectives including resolving existing issues, educating providers on current programs like pay-for-quality, and executing Joint Operating Committee meetings with a variety of participants including quality and pharmacy as an example.

Dedicated Quality Improvement Team – Improving the Quality of Care and Health care Outcomes for MMC Enrollees

During the last eight years serving the Commonwealth, we have developed a comprehensive Quality Management program, executed by a dedicated Quality Improvement Team. **WellCare of Kentucky leads the Commonwealth in 24 HEDIS® measures for 2019** (including all three Well-Child Visit measures, Medical Assistance with Smoking and Tobacco Use Cessation, Breast and Cervical Exams and Annual Dental Visits), has maintained a two-year commendable NCQA accreditation status, and **has the highest member satisfaction as measured by the CAHPS® survey**. This best-in-class Quality Management program is a result of our matrixed Quality Infrastructure and local, hands-on approach. WellCare of Kentucky's Quality infrastructure is connected across all departments and functional areas of the organization including, Pharmacy, Behavioral Health, Population Health and Network Management to ensure we provide the highest quality of care for our Enrollees. By having our Quality infrastructure touch every aspect of our organization, we are able to quickly address trends in a multi-disciplinary way. Our Quality department is structured to provide a comprehensive and holistic approach to meeting DMS' goals of improving health outcomes and reducing and eliminating health disparities with the Commonwealth while empowering MMC Enrollees to improve their health and engage in their health care.

Our dedicated Quality Improvement Team's top priority is to coordinate with providers to improve health outcomes for Kentucky Medicaid Enrollees. This team consists of local experts, from leaders to support staff, who live and work in the communities they serve. Since 2015, we have added over 33 associates to our Quality Improvement Team. Our Quality leadership includes Medical Director, Dr. Howard Shaps, and Quality Improvement Director, Laura Betten. Reporting to Laura are a Senior QI manager and six QI managers with a combined 81 years of experience as Quality Practice Advisors (QPAs), Behavioral Health (BH) specialists and HEDIS experts. These managers lead dedicated QI teams consisting of more than 50 clinical experts, some of whom hold advanced degrees in epidemiology, health care administration, and social work. These experts includes QI project managers, QI specialists, QI coordinators, Health Coaches, Care Needs Coordinators, Quality Practice Advisors, Patient Care Advocate Supervisor, Patient Care Advocates, and Business Technical Analysts.

Quality Practice Advisors

As the needs of the Commonwealth have evolved, so has our dedicated Quality Improvement Team. In 2014, after meeting extensively with our providers, we realized the need to assist our providers in closing care gap needs as well as educating them on HEDIS and HPR measures, the importance of completing Appointment Agendas and capturing all chronic conditions a patient has annually. As such, we added regionally based Quality Practice Advisor (QPA) Teams to our Quality Improvement Structure. These QPAs are also responsible for coordinating with care managers and assisting provider groups in practice transformation in order to develop coordination of care for patients. In addition, QPAs are responsible for EPSDT and AMRR audits, reviewing results with providers directly and developing corrective action plans as needed.

Health Coaches

Currently, our Quality Improvement team includes Health Coaches that conduct telephonic outreach to Enrollees and have outreached to nearly 5,000 Enrollees with more than 2,000 being successfully education on recommended critical screenings and preventive services, helping to transform Enrollee lives. We will expand our program to include two additional Health Coach Teams comprised of local experts responsible for supporting DMS in improving health outcomes and addressing disparities surrounding the topics of smoking cessation, obesity and prediabetes/diabetes. These teams will strive to develop relationships with Enrollees through focused outreach, education, and support to enrollees including resources and programs relevant to each individual's needs to improve health outcomes.

Practice Transformation Specialist

We view our active participation in the KHIE community as an opportunity to significantly improve our existing strategies and to form collaborative efforts with Department. As a part of our collaboration strategy, we are creating a new position within our organization, Practice Transformation Specialist, to assist providers in adoption to EHR and connecting to KHIE. They will work in conjunction with our Quality team, monitoring the provider adoption to EHR and working with them in developing corrective action plans as needed.

ii. Description of how the organizational structure will support whole-person integrated care, population health and overall improvement in health outcomes in a cost-effective manner.

Since 2011, WellCare of Kentucky has provided an organizational structure that improves the quality of life and health outcomes for the Kentucky MMC Program Enrollees by meeting their complex physical, social, pharmacy, and behavioral health needs in a cost effective manner.

'ONE TEAM' APPROACH

WellCare of Kentucky's infrastructure provides integrated accountability with behavioral, social, pharmacy and physical health staff aligned through our clinical, administrative, and operational structure. This ensures that integration of services begins at the top of WellCare of Kentucky's management structure and flows down into our regional and local service delivery at the Enrollee level. Our governance and decision making model ensures that these local leaders engage in daily, weekly, and monthly interactions with our local staff to address Kentucky specific issues, to ensure challenges are being addressed, to ensure adherence to escalation protocols, and to guarantee our associates are making timely, accurate, and proactive decisions. Examples of these interactions include weekly meetings with leadership, weekly interdepartmental meetings, weekly and monthly report reviews, and monthly town halls.

Figure B.3-1 Integrated Care Team

WellCare of Kentucky's organizational structure and practices support integrated delivery of services across our staff, systems, call centers, and all available resources to provide a unified, streamlined managed care experience for our Enrollees, physicians, and DMS. WellCare does not subcontract behavioral health and our integrated clinical, behavioral, pharmacy and social work teams are co-located to optimize teamwork and collaboration to the benefit of the Enrollee. We believe in leveraging one integrated care team, illustrated in **Figure B.3-1**, covering all care needs including physical, behavioral, pharmacy and unmet social needs. With this organizational structure, our Enrollees have one point of contact, one card to carry, one phone number to call, which simplifies their understanding, access and coordination of all available services. For DMS, this provides a clear and transparent view into the clinical approach that WellCare delivers and for which WellCare is singularly accountable. In addition, for our provider and care management partners, it serves to deliver a comprehensive set of Enrollee data through a single on-line platform that the provider can use to access and maintain a complete health record for the people they serve, allowing providers to better meet and coordinate their needs.

Our approach to integrated service delivery begins with our 'One Team' philosophy—which has been the cornerstone of our organizational culture and the culmination of WellCare's 30 years' experience building toward a fully integrated, holistic approach to Enrollee care. One Team

means that our philosophy applies to every aspect of our organization, from the executive leadership staff led by our CEO, William Jones, to the fully integrated care management team, and across all entities that support our Enrollees, including our local subcontractors and the Enrollee call center staff trained to support the Commonwealth through the Enrollee Call Center, Nurse Advice Line (NAL), and our Behavioral Health Crisis Line.

Because of our streamlined operational structure, processes, and staff, our health plan can focus on providing comprehensive, holistic care management that focuses on proactively leveraging services that treat the whole-person. As a fully integrated health plan, we implement person-centered goal setting and care planning, address social determinants of health (SDOH), and ensure that Enrollees have reliable access to services that treat more than a specific diagnosis or condition, such as physical health, behavioral health, and pharmacy. Our whole-person care approach includes guidance assisting Enrollees with access to carved-out services when necessary, or to our suite of valued-added services that address non-medical needs and serve to improve health outcomes.

Organizational Structure Focused on Providing Whole-Person Integrated Care

Our eight years of experience in providing Medicaid services in Kentucky has taught us that the best way to ensure whole-person integrated care is to employ culturally diverse individuals who live in the communities we serve, have a deep understanding of challenges specific to the Kentucky health care landscape, and who have real life experience that reflects the experience of the Enrollees we serve. We are proud to have an Executive Team in place with expertise in the Kentucky MMC program and experience providing whole-person integrated care.

WellCare of Kentucky's CEO, Bill Jones, is fully accountable for overseeing all operations, strategic direction and administration of our Kentucky MMC Program plan. Working closely with our CEO is our Commonwealth-based Executive Team, comprised of key leaders, each of whom are responsible for overseeing specific functional areas within WellCare of Kentucky's organization. Together, our Commonwealth-level leadership team and support staff anchor each regional staff team located in one of our six regional offices. Our dynamic team of local leaders are responsible for making decisions for WellCare of Kentucky. This decision-making responsibility extends downward to the teams deployed throughout the Commonwealth to ensure that associates closest to our Enrollees, providers and stakeholders are empowered to make decisions with support and feedback from our Commonwealth leadership team. For example, the scope of decision-making authority of our local team in Kentucky includes, but is not limited to, how staff and resources are deployed throughout the local market to support our Enrollees and providers, the authority to administer the execution and management of our provider network, the ability to make decisions about Value-Based Purchasing with our providers, and the capability to make local decisions regarding claims adjudication and prior authorization issues.

An Organizational Structure Focused on Population Health and Improving Health Outcomes

Population health permeates every aspect of our organization and every single associate employed by WellCare of Kentucky is focused on improving the health of our Enrollees. Our population health strategy is grounded in an eight-year history in Kentucky, collaborating with

providers, community partners, and DMS. Our programs promote wellness and prevention, improve chronic condition management and self-management, and partnering with communities to improve population health through intervention channels at the Enrollee, provider, and system levels to deliver the highest impact to our most vulnerable populations.

Our Medical Director, Dr. Howard Shaps, and our in-house clinical management team direct our Population Health Management programs, supported by our national advisory groups and framework, to deliver improved outcomes at a lower cost. A key element of our population health strategy is **aligning clinical outcomes and performance metrics for each domain.** Through our population health domains, we align all parts of the organization to manage the health of all of our Enrollees. This alignment creates a synergy of effort across the organization in working to achieve Enrollee-centric objectives and exceeding regulatory contract requirements.

Because of our Population Health Management (PHM) Program, WellCare of Kentucky has seen a **64% reduction in Admissions for Children with Asthma and a 51.8% reduction in Admission for Adults with Asthma from 2016 to 2018**. Further evidence of our PHM Program success in Kentucky is our Comprehensive Diabetic Care, with **87% of Enrollees receiving HbA1c testing (4% above the national average)** and 92% receiving appropriate kidney monitoring. **Nearly 60% had an annual diabetic eye exam – a 22.2% increase between 2016 and 2018**.

iii. Description of the governing body, how members are selected, and envisioned role specific to the Vendor's support of the Kentucky Medicaid managed care program.

GOVERNING BODY

As shown in **Figure B.3-2**, WellCare of Kentucky, Inc. is an indirect wholly owned subsidiary of WellCare Health Plans, Inc. WellCare of Kentucky has its own Board of Directors (the "Board"), which is fully responsible for the operations and oversight of WellCare of Kentucky.

The Board has adopted bylaws and a Code of Conduct and Business Ethics Program ("Code of Conduct"), all of which are reviewed and approved by WellCare of Kentucky's Board. Authority is delegated through the management hierarchy, the Governance Overview structure, the Code of Conduct structure, and the Quality Improvement Program Descriptions of WellCare of Kentucky. In addition, the organizational charts (including those in section B.03.b) and job descriptions (including those in section B.03.iv.a) define the WellCare organizational structures and functional relationships. Associates report to management staff, who in turn report to senior management and officers, who in turn report to their respective company's Board. The Quality Improvement Program Description, which is reviewed annually and approved by WellCare of Kentucky's Board, defines individual and committee roles for each of the licensed health plans.

WellCare of Kentucky has established organizational policies and procedures to ensure all aspects of the business are conducted in an orderly manner to meet mission requirements and performance standards, such as the UMAC and the QIC, which work in conjunction with the Code of Conduct. The goal of the Code of Conduct is to establish a culture of integrity and trust within the organization and to promote the prevention, detection, and resolution of conduct that does not conform to applicable federal or state laws or the organization's high standards of

business ethics. The Code of Conduct provides guidance and oversight and helps ensure that work is performed in an ethical and legal manner. The Code of Conduct applies to WellCare of Kentucky's Board, its associates and, as applicable, its business partners.

Additional information regarding our governing body is located in section B.2 Corporate Information of our response.

HOW BOARD MEMBERS ARE SELECTED

The sole stockholder of WellCare of Kentucky, The WellCare Management Group, Inc., appoints the members of the Board. Each board director is an employee of Comprehensive Health Management, Inc., part of the WellCare Group of Companies. The members of the Board of Directors of WellCare of Kentucky, Inc. are Bill Jones, Andrew L. Asher, and Michael Troy Meyer. The Board of Directors of WellCare of Kentucky, Inc. has ultimate supervisory authority over the activities of WellCare of Kentucky. The Board meets quarterly to review the operations of WellCare of Kentucky and as needed.

Figure B.3-2 Governing Body and Ownership Structure

William Jones

William Jones is a senior leader with over 25 years of experience in health care. He is an accomplished executive with experience in working with Boards of Directors, State and Federal Legislators, and Regulators in order to deliver results. Bill is a high-energy, organizational leader with demonstrated success in developing sound strategies that are balanced between financial performance, quality, stakeholder satisfaction, and growth. He is a team player that conveys a value proposition and gains buy-in from cross-functional groups for the development and execution of strategies and the implementation of process improvements utilizing Six Sigma, Lean, and other process improvement methodologies. Bill is a change agent that brings a sense of urgency to drive positive organizational change, with experience in building, turning around/optimizing a company's fundamental infrastructure, technologies, processes, and measurement systems to increase profitability and performance.

Drew Asher

Mr. Asher serves as WellCare's executive vice president and chief financial officer. He leads WellCare's financial activities, including financial and performance management, capital strategy and planning, actuarial, medical economics, internal controls, investment management, corporate development and investor relations. Mr. Asher is also is also a member of the Audit Committee of the Company. He joined WellCare in August 2014 as senior vice president. Prior to joining WellCare, Mr. Asher was the CFO of Aetna's local and regional

businesses, a position he held since May 2013 when his former employer, Coventry Health Care, was acquired by Aetna. Mr. Asher was with Coventry for 15 years, most recently as senior vice president, corporate finance. During his tenure with Coventry, he had responsibility for financial planning and analysis, investor relations, mergers and acquisitions, capital markets, treasury, real estate and procurement. He started his career with Deloitte & Touche LLP where he spent five years as an auditor and accountant serving clients including managed care. Mr. Asher holds a bachelor's degree in accounting from the University of Florida and a master's in taxation from the University of Central Florida.

Troy Meyer

Mr. Meyer serves as WellCare's Chief Accounting Officer. He oversees WellCare's accounting operations; SEC, statutory and regulatory reporting functions; financial systems; merger and acquisition projects; revenue reconciliation functions; cash applications; and tax department. Mr. Meyer is also a member of the Audit Committee of the Company. He joined WellCare as Vice President of Financial Reporting and Analysis in May 2015. Prior to joining WellCare, Mr. Meyer dedicated 15 years of his managed care experience to Aetna, Inc. and Coventry Health Care, Inc. as their Executive Director of Regulatory and Financial Reporting, Senior Director of Financial Reporting and Analysis, and Director of Corporate Accounting and Internal Control. Mr. Meyer holds a Bachelor of Science in Business and Management from Purdue University.

ROLE SPECIFIC TO THE VENDOR'S SUPPORT OF THE KENTUCKY MMC PROGRAM

As mentioned above, the Board of Directors of WellCare Health Insurance Company of Kentucky, Inc. has ultimate supervisory authority over the activities of WellCare of Kentucky. Annually, the governing body authorizes, empowers, and directs the officers of the WellCare Group to implement all actions necessary and appropriate to enable WellCare of Kentucky to attain their mission, goals and objectives.

The Governance Overview structure (see **Figure B.3-3** Governance Overview Structure) provides a diagram of the structure of committees reporting up to the WellCare Board, as well as the downward flow of information from the WellCare Board, whereby the WellCare Board's directives may be performed and enacted at the WellCare of Kentucky plan level. Additional committees are formed to meet specific functional and regulatory needs, as defined by the Quality Improvement Program Descriptions of the licensed health plans. Typically, committees are multi-disciplinary and cross-functional, serving a variety of purposes including, but not limited to, quality improvement, credentialing, pharmacy, behavioral health, delegation, etc.

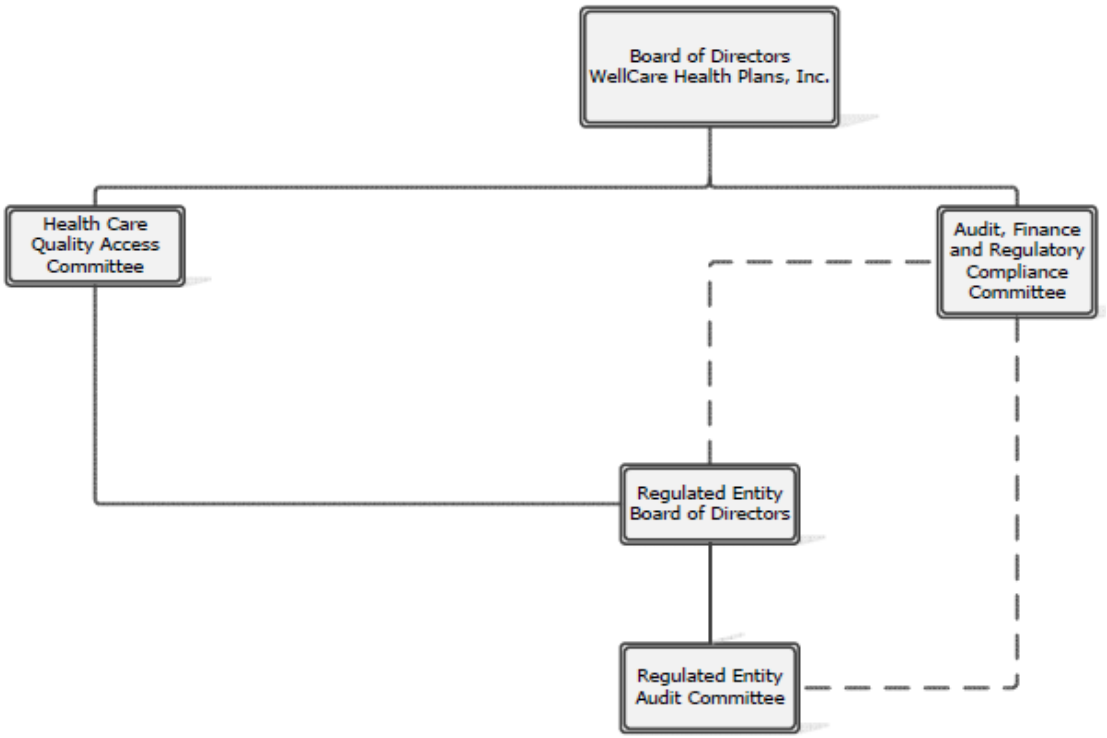

Figure B.3-3 Governance Overview Structure

iv. A listing of Key Personnel identified in Section 9.2 of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," and as otherwise defined by the Vendor, including:

a. Individual names, titles, brief job descriptions, qualifications and fulltime equivalents (FTEs) dedicated to this Contract, as well as their office locations for this Contract. An FTE is defined as the ratio of the total number of paid hours divided by the total number of working hours in the period. Annually, an FTE is considered to be two thousand eighty (2,080) hours.

WELLCARE OF KENTUCKY KEY PERSONNEL

We are pleased and fortunate to have a team of executive leaders in place with expertise in the Kentucky MMC Program, our providers, our community partners, and the unique health care aspects of the Commonwealth. All told, WellCare of Kentucky's Executive Team has over 75 years of service with WellCare. These leaders have a depth of experience providing services and supports in a variety of settings including community based settings, nursing facilities, behavioral health treatment facilities, and acute care settings. This experience has informed our evidence-based, innovative care delivery models to positively affect Kentucky's MMC Program. **Table B.3-1** below includes the names, titles, office locations, and fulltime equivalents (FTEs) dedicated to this Contract.

WELLCARE OF KENTUCKY'S INCOMING MEDICAL DIRECTOR - PENDING LEADERSHIP CHANGE

WellCare of Kentucky recently hired Thomas James III, M.D. who will begin serving as our Medical Director in February of 2020. Dr. James has extensive leadership experience with government programs, population health, health policy, and quality measurement. Dr. James also has over 25 years of experience in Kentucky within the managed care industry as well as extensive direct patient care specifically in the areas of internal medicine and pediatrics. Prior to joining WellCare of Kentucky, Dr. James held the position of Senior Medical Director, Medical Management, and Quality with Highmark, Inc. Within this role, Dr. James was responsible for clinical oversight of quality, clinical quality in care transition of Highmark members from UPMC, and provided support for wellness and preventive services initiatives. Dr. James has also served as Chief Medical Officer with Baptist Health. Within this role, Dr. James was responsible for Population Health for Baptist Health, an integrated delivery network (IDN) in Kentucky. He coordinated the analytics units of Baptist Health, Evolent Health, and other partners while achieving NCQA interim accreditation for the first time for this health plan. In addition to his time spent with Highmark and Baptist Health, Dr. James has held Medical Director positions with other various MCOs including, AmeriHealth Caritas, Humana, and Anthem Health Plans of Kentucky. Dr. James has an active medical license in the state of Kentucky as well as certifications from the American Board of Internal Medicine, the American Board of Pediatrics, and the American Board of Medical Management.

WELLCARE OF KENTUCKY KEY PERSONNEL JOB DESCRIPTIONS AND QUALIFICATIONS

WellCare of Kentucky will submit job descriptions and required qualifications, and a description of the qualifications of each individual with key management responsibility for any mandatory

function to DMS for approval within 30 days of signing the Contract, annually, prior to material revisions and upon request by DMS.

Job descriptions and qualifications for the key personnel and qualified staff identified in **Table B.3-1** and **Table B.3-2** begin on the following page.

b. Whether each Key Personnel position will be filled by a Vendor's employee or a Subcontractor.

As denoted in **Table B.3-1** and **Table B.3-2**, all of WellCare of Kentucky key personnel and qualified staff positions are filled by a WellCare of Kentucky employee except our Dental Director, which is filled by a subcontractor.

c. Resumes, including information such as degrees, credentials, clinical licensure as applicable, years and type of experience. Include as an Appendix or Attachment to the Proposal.

Please refer to **Attachment B.03.a.iv Key Personnel Resumes** for resumes including information such as degrees, credentials, clinical licensure as applicable, years of experience and type of experience for each of the key personnel and qualified staff listed in **Table B.3-1** and **Table B.3-2**.

CHIEF EXECUTIVE OFFICER (CEO)

WellCare of Kentucky's CEO has ultimate accountability for the general administration and implementation of the requirements detailed within the Model contract. Responsible for the overall operations of the Kentucky MMC Program plan, including strategic direction, administration for all existing programs, and the development of new programs to ensure we meet or exceed the goals and objectives of the program. Leads and directs overall operations including: provider contracting and relations, sales and marketing, medical management, regulatory compliance, government relations and finance, as well as interfacing with corporate office operations. Has clear authority to make operational decisions quickly and locally over the general administration and day-to-day business activities of this Contract.

Primary Responsibilities:

- Provides leadership to ensure the organization's strategic plan is translated into tactical goals and objectives that guarantee performance objectives are met or exceeded
- Directs and manages the organization's financial performance. Takes appropriate actions to increase revenue, leverage resources, manages and/or minimizes expenses and ensure compliance with all business and administrative regulations.
- Assist and leads where appropriate, with aspects of state and federal government relationships, including dealing with regulators, as necessary, to establish and continue effective working relationships. Ensures that all state and federal regulations are met
- Ensures WellCare of Kentucky compliance with the terms of the Contract, including securing and coordinating resources necessary for such compliance
- Receiving and responding to all inquiries and requests made by Department related to the Agreement, in the time frames and formats specified by Department
- Attending and participating in regular meetings or conference calls with Department
- Making best efforts to promptly resolve any issues identified either by the WellCare of New Kentucky or DMS that may arise and are related to the Agreement
- Meeting with Department at the time and place requested by Department, if Department determines that WellCare of New Kentucky is not in compliance with the requirements of the Contract

Education:

- A Bachelor's Degree in Business Administration, Finance or a related field is required
- A Master's Degree in a related field is preferred

Work Experience:

- 10+ years of experience in overall Managed Care, Network Management and/or Business Operations
- 5+ years of experience in Senior management with P&L accountability for an MCO
- Successful track record in: Provider Relations, ownership of top and bottom line P&L responsibility with a successful HMO (government program experience preferred), growing membership and revenue, and improving the MLR)
- Extensive experience in Provider Contracting
- Broad knowledge of the Managed Care industry and proven experience leading governmental programs

CHIEF FINANCIAL OFFICER (CFO)

WellCare of Kentucky's Chief Financial Officer is responsible for overseeing the budget and accounting systems implemented by WellCare of Kentucky. Directs, coordinates, and administers all financial aspects of the Kentucky MMC Program plan. Drives the development and implementation of long-range plans, goals, and objectives that align with DMS. Directs and coordinates a broad range of activities and functions to ensure effective operations and the achievement of organizational objectives. As a key member of the Executive Team, helps to define corporate strategy and is a key representative of the Contractor with outside organizations including the Department Plans, provides resources and directs activities for Provider financial analysis. Provides analytics for strategic and operating decisions. Manages and leads in the development of complex adhoc reports to enable process and trend analysis. Provides recommendations on the implementation of new/revised operational and/or reporting processes.

Primary Responsibilities:

- Builds, develops and directs management staff capable of carrying out company initiatives
- Manages all health plan financial functions including general accounting, internal reporting and controls, planning, budgeting, forecasting, variance analysis, actuarial determinations and investor relations
- Directs the preparation of annual operating and capital budgets and cash flow projections
- Monitors and analyzes the organization's financial condition and performance
- Manages the financial analysis of medical cost
- Leads the contract modeling process
- Manages companywide capitation calculation and payment
- Plans, conducts and directs work on complex projects/programs necessitating the origination and application of new and unique approaches
- Develops strategies and ensures maximum efficiencies in the utilization of human and financial resources
- Prepares and distributes financial reports to management, investors, and the Advisory Board. Makes financial presentations at quarterly meetings of the Board of Advisors
- Manages relations with the company's outside auditors, bankers, and financial advisors
- Reviews and implements financial information systems
- Establishes reporting systems and controls to ensure compliance with company requirements

Education:

- A Bachelor's Degree in a financial discipline is required
- A Master's Degree in a related field is preferred

Work Experience:

- 15+ years of experience in a broad range of functional areas, including Financial Planning and Analysis, Forecasting, Modeling and Budgeting, Financial Reporting, Accounting and Controls, Capital Management and Risk Management

Licenses and Certifications:

- Certified Public Accountant (CPA) is preferred

CHIEF COMPLIANCE OFFICER

WellCare of Kentucky's Chief Compliance Officer is responsible for maintaining current knowledge of Federal and State legislation, legislative initiatives, and regulations relating to WellCare of Kentucky, and oversee WellCare of Kentucky's compliance with the laws and requirements of DMS. The Compliance Director serves as the primary contact for and facilitate communications between WellCare of Kentucky leadership and DMS relating to WellCare of Kentucky compliance issues. The Compliance Director also oversees WellCare of Kentucky's implementation of and evaluates any actions required to correct a deficiency or address noncompliance with Contract requirements as identified by DMS. Implements policies, procedures, and practices designed to ensure compliance with applicable federal and Kentucky MMC Program contracts, laws, regulations, health care program requirements, and fraud, waste, and abuse monitoring and prevention. Responsible for developing and implementing policies, procedures, and practices designed to ensure compliance with the requirements of the Contract.

Primary Responsibilities:

- Overseeing all activities required by State and Federal rules and regulations related to the monitoring and enforcement of FWA and erroneous payment compliance program
- Developing/overseeing methods to prevent and detect potential FWA and erroneous payments. Developing policies and procedures, investigating unusual incidents, and designing/implementing any corrective action plans
- Reviewing records and referring suspected Enrollee FWA to DMS and other duly authorized enforcement agencies
- Establish and lead the Market Compliance Committee. Manages WellCare of Kentucky Program plan's SIU to communicate with WellCare of Kentucky's Fraud Control Unit.
- Complete Market Compliance Assessment – Quarterly Performance Report Work plan and compile Quarterly Performance Report
- Partner with WellCare's Internal Audit Department on Market-based assessments.
- Guide the escalation path within New Hampshire for compliance related and ethical issues and involve the appropriate resources and support from Corporate Compliance as needed.
- Conduct and track on-site compliance trainings
- Serve as Commonwealth subject matter expert for HIPAA, assess compliance with HIPAA requirements, perform periodic HIPAA audits of office location, and guide remediation plans.

Education:

- A Bachelor's Degree in a related field or 5 years of relevant work experience is required
- A Master's Degree in Business Administration, Public Health, or Healthcare Administration is preferred

Work Experience:

- 5+ years of experience in a business setting
- Experience in health care and/or risk management
- Experience in Corporate Compliance, Regulatory Affairs or State Government preferred

MEDICAL DIRECTOR

WellCare of Kentucky's Medical Director is responsible for overseeing all clinical functions. The medical director is actively involved in all major WellCare of Kentucky health programs. All clinical directors, including those employed by Subcontractors, report to the Medical Director for all responsibilities of this Contract. The Medical Director is also responsible for treatment policies, protocols, Quality Improvement activities, Population Health Management activities, and Utilization Management decisions and devote sufficient time to ensuring timely medical decisions. The Medical Director is also available for after-hours consultation, if needed. Functions as medical leadership for effective care integration of WellCare pharmacy operations, utilization / service coordination / disease management activities, quality improvement activities, and Provider relations functions. Will meet with DMS and the DBHDID no less than quarterly to discuss the State Mental Health Authority and Single State Agency protocols, rules and regulations.

Primary Responsibilities:

- Manages day-to-day quality improvement and medical management activities of the Kentucky MMC Program plan
- Oversees and is responsible for all clinical activities, including but not limited to the proper provision of Covered Services to Enrollees, developing clinical practice standards and clinical policies and procedures. Substantial involvement in QAPI Program activities.
- Oversight of all utilization review techniques and methods and their administration and implementation.
- Collaborates with the organization's senior leadership to ensure medical compliance with all customer, regulatory, and accreditation requirements for clinical services
- Establishes professional working relationships with providers and provider organizations to support the development of the highest possible Provider partnerships
- Works with other Kentucky MMC Program Medical Directors/clinical services staff to maintain compliance with customer, accreditation and regulatory requirements
- Provides clinical expertise needed to effectively and efficiency resolve complex, controversial and/or unique administrative circumstances
- Provides medical leadership for development and attainment of the organization's goals.

Education:

- A Doctor in Medicine (MD) or D.O. from an accredited school of medicine recognized by national medical regulatory bodies in the United States

Work Experience:

- 5 years of experience in government programs (e.g. Medicaid, Medicare, and Public Health).
- 5+ years of experience in Direct Patient Care
- Substantial experience/expertise in the development of medical policies, procedures and programs
- Demonstrated success implementing Utilization and Quality Improvement strategies / techniques and experience with physician behavior modification

Licenses and Certifications:

- The Medical Director must be a physician licensed to practice in Kentucky

PHARMACY DIRECTOR

Provides clinical pharmacy direction for the Kentucky MMC Program including, but not limited to Medical Economics, Disease Management, Pharmacy, Utilization, and Quality Management. Assists in development of goals and objectives for the clinical pharmacy programs within the Kentucky MMC Program plan. Implements the requirements of the Agreement as it pertains to prescribed drug services and other pharmacy related items for the Medicaid line of business. Assists with the development, presentation, and implementation of policies and procedures consistent with the regulatory requirements of the contract.

Primary Responsibilities:

- Oversees pharmacy utilization and produces informative reports to the Kentucky MMC Program plan market
- Works directly with the respective Medical Director of the Kentucky MMC Program plan with the Medical Economics department to ensure cost effective management of both medical and pharmacy utilization as part of the Network Improvement Program (NIP)
- Assists in educating clinical pharmacist managers for the Kentucky MMC Program plan providing information on clinical and trend issues. Provides drug utilization review
- Implements and maintains the NIP program specific to pharmacy utilization
- Reviews prescribing practices on high utilizing physicians and intervenes as needed providing drug information on pharmacy expenses
- Collaborates with pharmacy clinical programs department to support and represent WellCare quality initiatives to providers with the market / region
- Recommends changes in prescribing practices to improve quality and lower costs.
- Provides detailed claim analysis for over and under utilization
- Reviews pharmacy data to look for savings opportunities
- Provides clinical pharmacy support for Pharmacy, Disease Management programs, Quality and Utilization Management with an emphasis on Diabetes and asthma
- Provides in service education to staff

Education:

- A Bachelor's Degree in Pharmacy is required
- A Doctor of Pharmacy (PharmD) is preferred

Work Experience:

- 7+ years of experience in a licensed Pharmacist role
- 5+ years of pharmacy experience as a practicing pharmacist.
- 3+ years of management experience
- Experience in Managed Care

Licenses and Certifications:

- Pharmacist licensed by the KY Board of Pharmacy

DENTAL DIRECTOR

WellCare of Kentucky's Dental Director is actively involved in all WellCare of Kentucky oral health programs and devotes sufficient time to ensuring timely oral health decisions. Our Dental Director works in conjunction with the dental vendor to identify provider network needs and develops strategies to fill identified gaps and ensure an appropriate training process is in place for all providers. The Dental Director has responsibility for the coordination and monitoring of dental continuous quality improvement activities. The Dental Director is responsible for the administration and delivery of all dental services provided by the health plan, including the development, implementation, and interpretation of dental policies and procedures to guide and support the provision of dental care. The Dental Director monitors vendor performance and provides direction to the dental vendor to ensure that decisions are made in a clinically appropriate and timely manner. Dental Director is also be available for after-hours consultation, if needed.

Primary Responsibilities:

- Works in conjunction with the dental vendor to identify provider network needs and develop strategies to fill identified gaps
- Shared oversight with the dental vendor for dental provider orientation, education, and in-service training
- Continuous assessment and improvement of the quality of dental care provided to Enrollees
- Serves as a liaison with the local market regulatory agencies and dental community
- Collaborates with the organization's senior leadership to provide current dental expertise and direction for the dental program
- Provides dental advice to health committees and attends required meetings or functions
- Chairs the dental advisory committee
- Ensures that dental vendor utilization review activities conform to company protocols, customer requirements, and professional standards
- Provides dental clinical expertise needed to effectively and efficiently resolve complex and/or unique administrative circumstances
- Provides expert dental education and consultation for the clinical staff as needed
- Works with care management and quality management to identify trends in dental utilization by interpreting various data sources
- Works with the dental vendor as needed to review provider and Enrollee complaints, assist in resolution, and make recommendations

Education:

- DDS or DMD from an accredited School of Dentistry

Work Experience:

- 5+ years of experience in dentistry
- 3+ years of experience in NCQA accreditation
- 3+ years of experience in government sponsored health care programs

Licenses and Certifications:

- Must be licensed to practice dentistry, without restrictions, in Kentucky.

BEHAVIORAL HEALTH DIRECTOR

WellCare of Kentucky's Behavioral Health Director is actively involved in all programs or initiatives relating to behavioral health. The Behavioral Health Director coordinates efforts to provide Behavioral Health Services by WellCare of Kentucky and any behavioral health Subcontractors. Oversees the day-to-day operations of behavioral health service coordination as it relates to the psychosocial, socioeconomic needs and services of select Enrollee populations across the continuum of care.

Primary Responsibilities:

- Works directly with staff and Enrollees to assess, plan, implement, coordinate, monitor, and evaluate services and outcomes to maximize the health of the Enrollee. Implements utilization and/or case management workflows, and policies and procedures for integrated behavioral health programs. Proactively monitors appropriate metrics to drive efficiency
- Provides leadership and support to front-line staff and supervisors of behavioral health services in Kentucky. Function as SME for BH processes, mental health services and psychosocial programs
- Serves as an instrumental partner in monitoring and tracking key performance indicators to include identification of over/under utilization and/or case management patterns and/or deviation from expected results for Kentucky
- Assists with development of clinically-focused training associated with behavioral health assessment, care plan development and behavioral health services in Kentucky
- Performs audits of assessments, case plans and service notes to verify cases are properly established and that coordination activates are occurring/appropriately documented
- Provides training and guidance to new and current behavioral health associates regarding policy and procedure, systemic tools, workload and care plan development
- Ensures regulatory requirements / accreditation standards are applied to all activity / reporting. Ensures compliance with all state and federal regulations as well as corporate guidelines in day-to-day activities.

Education:

- A Master's Degree in Social Work, Psychology, Counseling, Rehabilitation, or other relevant field that provides a foundation to receive a license as required of the position

Work Experience:

- 5+ years of experience in BH management and/or acute behavioral health care setting focusing on outpatient/inpatient utilization, case management and discharge planning
- 3+ years of experience in a managed care environment
- Experience working with the needs of vulnerable populations who have chronic or complex bio-psychosocial needs

Licenses and Certifications:

- Behavioral health practitioner licensed in Kentucky
- One of the following is required: Licensed Clinical Social Worker, Licensed Clinical Mental Health Counselor, Licensed Clinical Marriage & Family Therapist, Licensed Clinical Professional Counselor, Licensed Clinical Psychologist

PROVIDER NETWORK DIRECTOR

WellCare of Kentucky's Provider Network Director is responsible for oversight of Provider Services and Provider Network Development. The Provider Network Director provides oversight of required coordination with DMS' contracted Credentialing Verification Organization(s) (CVOs). The Provider Network Director also coordinates workforce development initiatives conducted by WellCare of Kentucky and collaboratively with DMS and other contracted MCOs. The Provider Network Director directs a team in managing physician contracting, network development, and Provider operations for the Kentucky MMC program. Develops, executes and maintains a Provider network strategy and is responsible for development and maintenance of our Participating Provider network. Manages tools and reports related to the performance of WellCare's networks. Oversees the strategy and implementation of the Provider Master Data Management software. Provides data and subject matter expertise to specified capital projects such as the Enrollee Identification and Stratification program. Identifies and cultivates strategic alliances and builds new network models with significant Provider organizations.

Primary Responsibilities:

- Constructs and operationalizes the implementation of network contracting and expansion strategies (including HCBS and LTC) specific to New Hampshire. Identifies and cultivates strategic alliances and builds new network models with significant Provider organizations to ensure that the health care needs of the Kentucky MMC Program Enrollees are met
- Work with the IDNs to coordinate any network contracting and engagement activities
- Achieves company targets through aggressive IPA primary care, specialty and ancillary Provider contracting as well as risk contract management
- Leads a team of managers in developing and executing strategic departmental initiatives.
- Manages required Hospital Contracting as appropriate
- Leads the development and operation of the local plan's value based purchasing strategies. Partners with market leadership to improve the efficiency and quality of the cost structure through innovative value based purchasing strategies, restructuring of Provider contracts and care management approaches
- Monitors primary care and specialty risk arrangements for Medicaid product lines
- Identifies areas to improve Provider service levels. Educates/enhances relationships within the Provider community

Education:

- A Bachelor's Degree in Business, Health Care or related field or equivalent work experience with directly related Hospital and/or Network Contracting experience beyond the 5-7 years is required
- A Master's Degree in a related field is preferred

Work Experience:

- 7+ years of experience in Health Care sector (preferably at HMO or PPO)
- 5+ years of experience in HMO Provider/Hospital/Ancillary Contracting and Network Development
- 4+ years of management experience

QUALITY IMPROVEMENT DIRECTOR

WellCare's Quality Improvement Director is responsible for the operation of the WellCare of Kentucky's Quality Improvement Program. Our Quality Improvement Director provides leadership necessary to achieve national best practice performance levels in quality improvement while implementing evidence based medicine / practices. Ensures that the quality of health care services rendered meets or exceeds professionally recognized community standards. Interfaces with a diverse range of clinical and administrative professionals, resolves sometimes-complex policy and service issues within the group, and directs data analytic and reporting activities that are prescribed by customers and regulators in a complex environment. Ensures compliance with state, federal and accreditation requirements. Shall participate in regular Quality Improvement meetings with DMS and the other MCOs to review quality related initiatives and how those initiatives can be coordinated across the MCOs.

Primary Responsibilities:

- Develops and implements our Kentucky MMC Program's quality improvement plan in accordance with the mission and strategic goals of the organization, federal and state laws and regulations, and accreditation standards. Ensures systemic and individual quality of care.
- Identifies / implements process improvements. Integrates quality throughout the organization. Ensures a network of credentialed providers
- Establishes professional relationships with Kentucky, stakeholders and community agencies to facilitate quality process internally and externally
- Develops / implements systems, policies, and procedures for identification, collection, and analysis of performance measurement data
- Assists in strategizing and facilitating various committee structures and functions to best address the QI process and oversees Quality Committees. Serves as a member of the our QAPI Committee and Enrollee/ad hoc Enrollee of other quality related committees
- Oversight/interface internally/externally with pay for performance programs and initiatives

Education:

- A Bachelor's Degree in Health Care, Nursing, Public Health, Health Administration or directly related field or equivalent work experience is required
- A Master's Degree in a related field is preferred

Work Experience:

- 7+ years of experience in Directly related Quality Improvement job functions
- 5+ years of experience in Managed Care and 4+ years of management experience
- Excellent knowledge of JCAHO, URAC, AAAHC, and NCQA standards
- Relevant experience in quality management for physical and/or behavioral health care

Licenses and Certifications:

- State License as a Registered Nurse (RN), physician, or physician's assistant
- Certified Professional in Healthcare Quality (CPHQ), Certified by the National Association for Health Care Quality, or Certified in Health Care Quality and Management (CHCQM) by the American Board of Quality Assurance and Utilization Review providers is preferred.

POPULATION HEALTH MANAGEMENT DIRECTOR

WellCare of Kentucky's Population Health Management Director is responsible for coordination and oversight of the Population Health Management (PHM) Program and services. Responsible for all aspects of the planning, delivery and monitoring of strategic programs within PHS organization. Manages initiatives through advanced skills in project management and strong organizational relationships. Provides leadership and direction to matrixed teams to ensure the successful completion of complex enterprise programs.

Primary Responsibilities:

- Independently oversees the creation and implementation for programs relevant to the organization's strategic initiatives involving PHS clinical, administrative, and operational input.
- Responsible for creating comprehensive project timelines including sign-off from all work streams. Ensures the project teams create and maintain appropriate deliverables while following WellCare standards and best practices.
- Serves as the first escalation point for project issues and risks. Works directly with the project teams to resolve issues and create risk mitigation plans. Responsible for escalating well-formulated issues and risks to leadership.
- Drives program-level reporting to increase visibility and proactive monitoring of the program performance. Responsible for reporting program progress to senior leaders
- Responsible for proactive management in areas such as risks, budget/forecast, dependencies, etc. Prepares strategic analysis of potential business and/or operational opportunities as needed.
- Responsible for leading cross-functional teams, internal and external, through all phases of the project lifecycle to achieve project objectives. Encourages collaboration and ensures that all viewpoints are represented and explored.
- Oversee and collaborate on and various projects as assigned that are cross-functional in nature.
- Oversee the activities of one or more project managers, analysts, and/or administrator. Coaches other team members on the project management process and best practices.

- Provides leadership and support to front-line staff, supervisors and managers
- Leads talent management activities to develop and cultivate future leaders
- Promotes and improves environment of Provider and Health Plan partnership
- Ensures monitoring and tracking tools are in place to adequately link and assess production and quality driven work products and outcomes to individual performers
- Serves as the subject matter expert for inpatient and prior authorization management for future expansion and growth efforts
- Develops formal policies, procedures and workflows that effectively guide work activity
- Develops formal department-specific new employee orientation and training programs

Education:

- A Bachelor's Degree in Nursing (BSN), Health Administration, Nutrition or business related field is required
- A Master's Degree in Business, Public Health or Healthcare administration is preferred

Work Experience:

- 7+ years of experience in acute clinical/surgical experience and/or behavioral health clinical setting is required.
- 3+ years of management experience in a managed health care setting is required
- Current experience in utilization management to include pre-authorization, utilization review, concurrent review, discharge planning, and/or skilled nursing facility reviews is required

Licenses and Certifications:

- Licensed Registered Nurse (RN) is required
- Utilization review/management certification, or equivalent professional certification is preferred

EARLY AND PERIODIC SCREENING, DIAGNOSTIC, AND TREATMENT (EPSDT) COORDINATOR

WellCare of Kentucky's Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) Coordinator is responsible for coordinating and arranging for the provision of EPSDT services and EPSDT special services for Enrollees. Ensures the case management process of assessing, planning, implementation, coordination, monitoring, and evaluating services and outcomes is pursued to maximize the health of the Enrollee. Designs programs to ensure that all Enrollees who are children receive necessary EPSDT services. Oversees the socio economic needs and services of selected Enrollee populations across the continuum of illness

Primary Responsibilities:

- Promotes appropriate health care initiatives including family planning and preventative care health strategies.
- Proactively monitors appropriate metrics to drive up efficiency.
- Providing advice when necessary of complex, and identifying and coordinating assistance for identified Enrollee needs, specific to maternal/child health and EPSDT.
- Establish, maintain, and foster professional working relationships with all providers and community stakeholders.
- Partners and collaborates with other departments cross functionally regarding care and case management and/or Health Service initiatives.
- Manages and resolves e-mails and escalated phone issues in response to provider, staff, and other department requests.
- Directs work assignments, measures results and initiates personnel actions as required.
- Participates in continuous quality improvement projects that involve case and social service components.
- Ensure timely and complete delivery of required regulatory reports.

Education:

- A Bachelor's Degree in Health Services, public health, or health care administration

Work Experience:

- 10+ years of experience in Current case management
- 5+ years of management experience
- 5+ years of experience in Managed care

Licenses and Certifications:

- State Licensed Registered Nurse (RN), Physician, or Physician's Assistant is required
- Certified Professional in Health Care Quality (CPHQ), certified by the National Association for Health Care Quality, or certified in Health Care Quality and Management (CHCQM) by the American Board of Quality Assurance and Utilization Review providers is preferred
- Certified Case Manager (CCM) is preferred

GUARDIANSHIP LIAISON

WellCare of Kentucky's Guardianship Liaison serves as our primary liaison for meeting the needs of Enrollees who are adult guardianship clients.

Primary Responsibilities:

- Performs outreach to the adult guardian's state worker to obtain service plan in order to identify Enrollee needs.
- Acts as a liaison and advocate between the adult guardian, physician, and facilities/agencies.
- Partners with providers, community resources, Enrollee and Department of Aged and Independent Living to ensure that elements of the care plan are executed.
- Track, analyze, and report data back to the state to show care plans are being met and identify continued opportunities for support.
- Completes assessment and creates a plan of care focused on identifying needs of the Enrollee.
- Engages the individual care team to meet, review, and adjust Enrollee's care plan goals and objectives.
- Assists in obtaining benefits for Enrollees through community resources when benefits are exhausted or not available.

Education:

- A Bachelor's Degree in Social Work (BSW), Psychology, Counseling, Rehabilitation, or other relevant field or equivalent work experience in managed care directly related to assisting Enrollees to change behaviors and to locate and gain access to needed social, community, medical and behavioral health services is required

Work Experience:

- 4+ years of experience in a health care environment with client care coordination responsibilities via assisting clients to change behaviors and to locate and gain access to needed social, community, medical and behavioral health services
- 2+ years of experience in a managed care environment

Licenses and Certifications:

- State Licensed Registered Nurse (RN), Physician, or Physician's Assistant
- Certified Professional in Health Care Quality (CPHQ), certified by the National Association for Health Care Quality, or certified in Health Care Quality and Management (CHCQM) by the American Board of Quality Assurance and Utilization Review Providers.
- Certified Case Manager (CCM)

PROGRAM INTEGRITY COORDINATOR

WellCare of Kentucky's Program Integrity Coordinator serves as the single point of contact with DMS whose job duties are dedicated exclusively to the coordination, management, and oversight of the WellCare of Kentucky's Program Integrity unit to reduce Fraud, Waste and Abuse of Medicaid services within Kentucky. Responsible for facilitating timely response to Department requests for information. Implements policies, procedures, and practices designed to ensure compliance with applicable federal and Kentucky MMC contracts, laws, regulations, health care program requirements, and fraud, waste, and abuse monitoring and prevention. Functions as the local contact for the Corporate Compliance Department's functional units and serve as a Kentucky resource for identifying, tracking, mitigating and reporting on operational compliance risks.

Primary Responsibilities:

- Overseeing all activities required by State and Federal rules and regulations related to the monitoring and enforcement of the fraud, waste, abuse, (FWA) and erroneous payment compliance program
- Developing/overseeing methods to prevent and detect potential FWA and erroneous payments. Developing policies and procedures, investigating unusual incidents, and designing/implementing any corrective action plans
- Reviewing records and referring suspected Enrollee FWA to DMS and other duly authorized enforcement agencies
- Establish and lead the Market Compliance Committee. Manages the Kentucky MMC Program plan's Special Investigations Unit to communicate with Kentucky's Medicaid Fraud Control Unit.
- Complete Market Compliance Assessment – Quarterly Performance Report Work plan and compile Quarterly Performance Report for submission to Market leader and Chief Compliance Officer
- Partner with WellCare's Internal Audit Department on Market-based assessments.
- Guide the escalation path within Kentucky for compliance related and ethical issues and involve the appropriate resources and support from Corporate Compliance as needed.
- Conduct and track on-site compliance trainings
- Serve as Kentucky subject matter expert for HIPAA, assess compliance with HIPAA requirements, perform periodic HIPAA audits of office locations, and guide remediation plans.

Education:

- A Bachelor's Degree in a related field or 5 years of relevant work experience is required
- A Master's Degree in Business Administration, Public Health, or Healthcare Administration is preferred

Work Experience:

- 5+ years of experience in a business setting
- Experience in health care and/or risk management
- Experience in Corporate Compliance, Regulatory Affairs or State Government preferred

v. Summary of recruitment timelines and activities for Key Personnel positions for which individuals have not been identified at the time of the proposal. Describe contingency plans should those positions continue to remain open after Contract Award.

RECRUITMENT TIMELINES AND ACTIVITIES

Although WellCare of Kentucky currently has a well-established Executive Team in place, we have a multi-faceted recruiting strategy that is planned and executed by our Talent Acquisition Team. Our Talent Acquisition Team, comprised of specialized recruiters well positioned to leverage our ongoing pipelines, is responsible for executing our staffing plan. **Our Talent Acquisition Team includes 11 Talent Acquisition leaders at varying levels, one College Recruiting Program Manager, 56 recruiters (five specialized executive recruiters, 26 FTEs, 25 temporary positions), six Sourcing Specialists, and 12 Staffing Assistants.** This team continuously and proactively recruits top-level candidates for WellCare of Kentucky's executive management positions to develop bench strength in the event of an expected or unexpected position vacancy. This continuous recruitment ensures we are always developing a best-in-class team to serve our Enrollees, providers and DMS. We have consistently demonstrated a strong commitment to offering a locally staffed plan within the Commonwealth. During our time serving people in Kentucky we have shown a unique ability to recruit local, high-performing executive leaders that understand the diverse needs and cultural nuances of our Enrollees.

WellCare of Kentucky carefully selects associates through written application, personal interview, reference checks, and skills testing. Both the recruiting team and the hiring manager utilize behavioral based interview guides that assess candidates in a fair and unbiased manner. Recruiters have access to HireVue video interviewing technology for live, recorded, or panel interviews. Applicants complete a predictive index survey upon applying to WellCare that identifies a candidate's behaviors and personality traits relative to their desired role. Prior to award, we will screen all potential candidates to ensure they have the required licensure and experience to fulfill the role for which they are applying. Criminal and general employment background checks and drug screens are required following a conditional offer of employment. Our screening protocol also ensures these have not been excluded from participation in Federal health care programs. Within 14 days of award, we will be prepared to interview and extend offers to key personnel should any of the current filled positions become open. Once hired, we will onboard the new associate utilizing our newly developed key personnel onboarding program.

In the event of an expected or unexpected vacancy of a key position, our Chief Executive Officer will work with Commonwealth leadership to appoint a qualified interim leader within 30 calendar days of departure. Drawing from our leadership at the national, state and market level we will quickly identify the necessary key leader and transition them into the role as expeditiously as possible. This key individual will remain in this position until we find a permanent replacement. This individual immediately begins shadowing the departing key leader to get a better understanding of their day-to-day responsibilities and to ensure a seamless transition. The interim associate is responsible for familiarizing himself or herself with this document to understand what they are accountable for within this role. Once we identify a long-term associate, it is the responsibility of the interim associate to bring them up to speed.

WellCare of Kentucky's Chief Compliance Officer, Rebecca Randall, will notify DMS and FAC in writing of any change in our Executive Management key personnel, department managers, and point of contact for this Contract within three Business Days of WellCare of Kentucky learning of a change, including a change in duties or time commitments, resignation, or of WellCare of Kentucky notifying an individual of planned changes for the key position (e.g., promotion, termination). Simultaneously, our Chief Executive Officer will engage with our Talent Acquisitions team to identify both external and internal candidates for the vacated position using a combination of internal and external sourcing strategies. Our Talent Acquisition Team will prioritize the recruiting of the vacated position in order to fill the role within 30 calendar days of departure, unless a different timeframe is approved by the Commonwealth.

CONTINGENCY PLANS

We will not have any key personnel positions opened after Contract Award as we already have a well-established Executive Team in place. Even so, WellCare of Kentucky is always prepared to serve our Enrollees and be responsive to Department regardless of any turnover in executive staff. We are always prepared for the unexpected, and we will have associates in place to assume abruptly vacated roles as needed as outlined below.

To ensure we continue to provide an optimized level of care to our Enrollees, we have a pipeline of internal candidates within the Commonwealth who have expertise in serving Enrollees within the Kentucky MMC program. Our organizational and talent development team continuously works with our Commonwealth leaders to craft thorough and actionable succession plans for key positions within WellCare of Kentucky to ensure we have a "bench" of key leaders that we can deploy at any time. These succession plans include a proactive internal 'candidate search' for positions instrumental to the successful operation of WellCare of Kentucky. WellCare's Executive Leadership Team, including Ken Burdick, WellCare's CEO, the Board of Directors, and WellCare of Kentucky leaders regularly reviews our succession plans.

Coupled with WellCare of Kentucky's internal succession planning strategy is a Training and Development component which aligns our key and developing leaders with a suite of carefully developed curricula targeted at closing development gaps and grooming a team of 'ready now' key leaders. We have a series of sequential learning roadmaps that are tailored for each level of management that ensures that we are continuously developing a body of outstanding leaders. WellCare of Kentucky has an internal training organization that continually and proactively provides best-in-class learning and development to existing staff in core areas. Our philosophy around continuous learning fosters an environment where all associates are provided with the training they need to effectively perform not only their current roles, but also growth roles. We are committed to providing all associates with effective learning in the necessary business and development skills to expand the skills and knowledge essential to their roles and ensure we have a stable of associates that are prepared to assume vacated roles should the need arise.

Leveraging Associates from Corporate and Other Markets

WellCare of Kentucky has associates at the executive level in our corporate functions as well as locally in our affiliate markets that can be leveraged in the event of an unexpected staffing gap. As needs arise, WellCare of Kentucky affiliates are prepared to re-allocate targeted individuals

and functional groups from other state offices or from our corporate office in Florida to support critical functions. We draw on a corporate workforce of more than 13,000 associates that we are able to readily leverage in the event of an unexpected vacancy, minimizing abrasion to Enrollees, DMS, and providers.

vi. Overview of the Vendor's proposed training of staff to fulfill all requirements and responsibilities of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," for all operational areas.

WellCare of Kentucky has over eight years of experience in providing training to our Kentucky MMC associates. To ensure we are meeting DMS' expectations regarding training, we have designed training programs that are aligned with the requirements of the updated Contract. Through a rigorous training and oversight program, WellCare of Kentucky ensures that all staff, providers, and Subcontractors have appropriate training, education, credentials, experience, liability coverage, and orientation to fulfill the requirements of their positions. All persons assigned to perform work under this Contract shall have the necessary credentials to perform the work herein. We ensure that all personnel involved in activities that involve clinical or medical decision making have a valid, active, and unrestricted license to practice in the Commonwealth of Kentucky. On at least an annual basis, WellCare of Kentucky and our Subcontractors will verify that applicable staff have all necessary current licenses that are in good standing and will provide a list to DMS of licensed staff and current licensure status. Additionally, WellCare of Kentucky will submit to DMS an educational and training plan within 120 Calendar Days of the Contract Execution Date. We shall update training materials annually, at a minimum, and more often if a change in law or policy alters the content of the training materials.

DESIGNING MARKET SPECIFIC TRAINING FOR STAFF WITH VARYING BACKGROUNDS AND EDUCATIONAL LEVELS

WellCare's Learning and Development department, made up of more than 40 full-time training professionals, is responsible for developing, facilitating, and evaluating our training curriculum. Led by Anne Read, M.A., Senior Director of Enterprise Learning and Development, in 2019, we have provided more than 900 hours of market-specific training year-to-date to our associates within the Commonwealth. Since WellCare of Kentucky's focus is to develop a workforce reflective of our diverse membership, our staff represent different backgrounds and educational levels. Accordingly, we have a depth of experience in designing Commonwealth-specific training for our diverse staff to successfully acquire the knowledge and skills to be successful within the Commonwealth and further their professional careers.

Our training development methodology follows the time-tested **ADDIE** principles, an instructional design development program developed in the 1970s for the U.S. Army. These principles are the gold standard for training course development and have five components:

Analysis – We have conducted a thorough analysis of the Contract to align training with the Commonwealth's needs.

- *Contract Review:* Our learning and development team and regulatory affairs leaders conduct a line-by-line analysis of the MMC Contract identifying training needs based on

requirements, policies, and procedures. Content development is parsed out by functional areas such as Enrollee services, provider relations, care management, and claims/encounters to subject matter experts. For example, training content for care management would include the care needs screening requirements, such as sharing the screening results with the Enrollee's assigned PCPs within seven calendar days. For changes to the MMC program, we follow the same process ensuring ongoing compliance with the Contract.

- *Enrollees:* Our analysis identifies any changes in eligibility categories and populations included in Kentucky's MMC Program, demographic attributes, geographic distribution within the Commonwealth, health morbidities, health disparities, as well as any circumstances affecting Enrollees.
- *Providers:* We generate training content for our provider-facing staff by assessing the provider environment in terms of the number of Medicaid providers who are independent practices, large groups, FQHC penetration, health systems, payment models, and familiarity with managed care. Given the wide range of managed care knowledge and experience among the Kentucky MMC providers, our Commonwealth-specific training would prepare our provider-facing staff to assist providers regardless of their size or sophistication whether that means an in-service on the provider portal or a strategic meeting to discuss payment models.

Design and delivery of the curriculum for staff of all educational levels – Our training methodology consists of a blend of instructor-led and web-based learning through WellCare University, which meets the diverse learning styles of our staff. We tailor training to include operational scenarios for roles requiring less formal education yet more operational experience and supplement further with additional modules, reading, practice guidelines, and critical thinking scenarios for roles requiring more formal education. Regardless of our staff's educational levels or role, our Commonwealth-specific training program design helps them complete the training and be successful in their roles.

Development of training materials for staff of varying backgrounds – Just as we practice cultural competency when interacting with our Enrollees, we abide by the same principles with the staff we train. We honor their individualities, we seek to understand their perspective, respect their religious and cultural beliefs, sexual orientation, and other means of self-identification. We accommodate our staff's language needs and provide American Sign Language (ASL) interpreters if requested, provide materials in large print, include captioning on training videos, and ensure adequate space in our training rooms for wheelchair users to maneuver. Depictions of people in our videos and written materials reflect diversity in race, ethnicity, gender, and disability. Our training model leverages the diversity of our staff to contribute their lived experiences to the success of the market-specific training. We engage our associates to draw from their own culture and heritage and contribute to group discussions about cultural beliefs and health care. Some of our staff were former Medicaid beneficiaries who are now transforming their lives through a career. We tap into their experience and have them provide a first-hand perspective to better understand, engage, and serve our Enrollees.

Implementation of the training – Includes tracking associate enrollment through WellCare University, periodic knowledge assessments, completion of the training curriculum, and any

additional end-of-training knowledge assessments. The system documents all scored assessments, tabulates, and generates a training report. For required training, our system tracks status and completion sending reminder notices to the associate and successive escalation notices to their manager(s) if the training is coming due. Through online training, our field employees can access remotely at a time amenable to their work demands allowing them to continue learning while they integrate into communities in Kentucky.

Evaluation of the training in meeting its objectives. Staff are provided with course evaluations to rate the content, the delivery, materials, assessments, and other components of the training program. Our Learning and Development team reviews the results and recommend changes to the training program as needed. For example, as part of that review, we have begun to add additional formats and features to our training with positive feedback such as video, avatars, animation, and gamification. The end result of this evaluation loop is that market specific training tailored to Kentucky evolves based on feedback from local associates who best know the Commonwealth, Enrollees, and providers.

PROVIDING KENTUCKY MMC TRAINING TO OUR STAFF FOR ALL OPERATIONAL AREAS

WellCare's Enterprise Learning and Development department offers a comprehensive onboarding and ongoing training program for Commonwealth associates and contractors. Tonya Farris, our Commonwealth-based Learning and Development Specialist, is responsible for executing our Commonwealth training program. Initial training is delivered in a three phase approach including:

- WellCare New Hire
- Market Specific Training
- Role Specific Training

Our WellCare new hire curriculum orients associates to the company and programs; the Commonwealth-specific curriculum enables staff and contractors to become subject matter experts regarding Kentucky's MMC program; and the role-specific training focuses on the job-specific skillsets needed to be successful. Following the **ADDIE** process described above, we develop the curriculum to the Commonwealth's specifications. Training delivery is a combination of instructor-led training, both in the classroom and by WebEx, and computer-based training through WellCare University. Training materials consists of written materials, such as PowerPoint slides, multi-media, such as videos, and written or online assessments. Associates enroll in WellCare University which tracks completion of the training and successful performance on the assessments. We will submit to DMS the training program and evaluation within 15 days of Contract award and begin training within five days of approval. We will train our staff within seven days of their start date and can provide completion reports for DMS if requested.

The training outlined in **Table B.3-3** below provides a breakdown of the training phases, course topics, and training frequency. The top sections list the New Hire and Market-Specific courses required for all staff followed by the role-specific courses for each individual training group. Our role-specific training takes four to eight weeks to complete. Instructor-led training is made available through location of training staff within the Commonwealth as needed.

Table B.3-3 Training Phases, Learning Topics and Frequency

Training Phase	Learning Topics	Frequency
New Hire All Associates	▪ Overview of WellCare Health Plans ▪ WellCare's purpose, vision, mission and core values; ▪ WellCare Policies/Procedures ▪ WellCare systems ▪ Mandatory Compliance Training ▪ Sexual Harassment Awareness Training ▪ Emergency Preparedness ▪ Code of Conduct and Business Ethics ▪ Cultural Competency and Cultural Sensitivity ▪ Economic Disadvantage ▪ HIPAA Privacy and Information Security Awareness ▪ Insider Trading ▪ Fraud, Waste, and Abuse ▪ First Aid (all non-clinical Enrollee-facing associates)	▪ Within 7 days of hire ▪ Annual mandatory compliance training ▪ Updated policies and procedures as needed
Kentucky Specific-Contract Requirements All WellCare of Kentucky Associates	▪ Overview of Kentucky MMC (partial list) ▪ Contract requirements ▪ Program eligibility, benefits, covered services, utilization management, cost sharing, transitioning Enrollees, EPSDT ▪ Commonwealth partners including DMS ▪ Unique populations served under Kentucky MMC ▪ Fee for Service programs ▪ Provider Networks ▪ Sensitivity training on age, low income, disability, language, culture, reading comprehension and literacy ▪ Understanding unmet health-related resource needs ▪ First Aid (all non-clinical Enrollee-facing associates) ▪ WellCare Works ▪ SUD Waiver Training	▪ Within 7 days of hire ▪ Updated policies and procedures as needed
Role Specific Care Management Associates	▪ Role of the CM ▪ Cultural Competency for the general population ▪ HIPAA Privacy and Security and Information Governance Training ▪ Disease Management ▪ Execution of Comprehensive Assessments of Enrollees ▪ EPSDT ▪ Motivational interviewing, including understanding	▪ 4-8 week curriculum depending on role ▪ Updated policies and procedures as needed ▪ Upskill

Training Phase	Learning Topics	Frequency
	literacy, and cultural awareness. ▪ Self-management to evidenced based care; medication adherence strategies ▪ Person-centered screening, needs assessments, and all elements of care planning ▪ Understanding and addressing unmet health-related resource needs; using available social supports ▪ Transitional care management including medication reconciliation ▪ BH crisis response (for CMs with assigned Enrollees with BH needs) ▪ Understanding and addressing ACEs, trauma, and trauma-Informed care	training annually

vii. Overview of Vendor's approach to monitoring Subcontractors' progress in recruiting and training of staff to meet all requirements of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

SUBCONTRACT STAFF RECRUITING

Prior to delegating any functions to a third party, we perform due diligence including a comprehensive assessment to prospectively evaluate the Subcontractor's ability to perform the activities to be delegated. The comprehensive vetting and due diligence process is a requirement in our delegated subcontracts, and compliance must be demonstrated prior to a delegated Subcontractor becoming active with WellCare of Kentucky. We perform oversight and monitoring of the delegation activities through scorecards, data analysis, focused reviews, and annual audits. We develop and maintain a system for regular and periodic monitoring of each Subcontractor's compliance with the terms of its agreement and the Contract. All pre-delegation audits for new Subcontractors are based on the National Committee for Quality Assurance (NCQA), and state and federal requirements.

We will not delegate to an entity unless it achieves a successful passing score on its pre-delegation audit. Our pre-delegation audit process confirms the Subcontractor has the structural elements, i.e. policies, procedures, staff, licensure, etc., in place to comply with all of the contractual requirements for the functions assigned to them. The pre-delegation audit includes a review of the Subcontractor's recruitment policies so that standard adherence to WellCare policies and procedures are applied during the recruitment of staff. Additionally, for all new requests for delegation, one of the first steps we take is to screen them against the state and federal exclusion lists. On a monthly basis, Delegation Oversight confirms the screening of our subcontractors against the Department of Health and Human Services Office of

Inspector General's List of Excluded Individuals/Entities and the General Service Administration's System for Award Management exclusion lists and similar state exclusion lists. WellCare will not knowingly hire, retain or otherwise conduct business with subcontractors that:

- Have been excluded, debarred or suspended from participating in state and federal programs; or
- Have been convicted of a criminal offense within the scope of exclusion laws, but has not yet been excluded, debarred, suspended, or otherwise declared ineligible by a governmental authority.

Subcontractors have to comply with the expectations of the company on an ongoing basis. After delegation, the team continues to monitor performance. In addition to the confirmation, we require the submission of supporting documentation to demonstrate compliance. Examples of documentation may include codes of conduct, compliance policies, copies of training materials, training rosters, etc. WellCare's extensive oversight of Subcontractor performance reflects our commitment to deliver high quality services and our understanding that Subcontractors' performance is a reflection of WellCare's focus on quality.

SUBCONTRACTOR STAFF TRAINING

WellCare places the highest value on the importance of effective associate and Subcontractor onboarding and training. While associate and subcontractor satisfaction and retention are important byproducts, the most important results of our training investment are reflected in the service received by our Enrollees and Providers.

WellCare's corporate training team is skilled at building and delivering specialized training content. For Kentucky, WellCare developed training modules, which provide staff and subcontractors an in-depth understanding of the populations, service coordination needs and regulatory requirements specific to our membership in Kentucky. All WellCare associates and Subcontractors who will bear responsibility in the execution of commitments made in this Contract will be required to complete a detailed training program specific to Kentucky Medicaid. Content for the training modules will be developed in accordance with the regulations, eligible populations, and characteristics of Kentucky Medicaid. All training content is stored, deployed, assessed, and tracked through our Learning Management Platform. This includes aligning all market specific training to the appropriate associate by role or function. **Table B.3-4** includes examples of some of the curriculum WellCare of Kentucky subcontractors are required to complete.

Table B.3-4 Subcontractor Training Curriculum

Training Curriculum	
▪ Overview of WellCare Health Plans	▪ Enrollee Privacy and Data Protection
▪ WellCare's purpose, vision, mission and core values	▪ Disaster, Emergency Events, and Service Disruptions

Training Curriculum	
▪ WellCare Policies/Procedures	▪ Critical and adverse incident reporting
▪ WellCare systems	▪ Emergent or High Priority Concerns
▪ Plan/Program Overview	▪ Oversight and Reporting
▪ Contract Overview	▪ Subcontractor Arrangements
▪ Understanding of delegated functions and expectations of subcontractors	▪ Specific training for depending on subcontractor function
▪ Understanding WellCare of Kentucky's membership, eligibility and benefits	▪ Protecting against, Identifying, and reporting suspected or confirmed fraud, waste, and abuse
▪ Continuity of Care Requirements	▪ Code of Conduct and Business Ethics

Subcontractors must re-administer all trainings:

- As necessary to ensure staff compliance
- At least annually
- Upon a significant change in training materials as directed by WellCare of Kentucky

Additionally, WellCare expects delegated entities to provide training reports and attestations that demonstrate their staff have been trained to meet the standards of WellCare and our state partners.

viii. Retention approach for key personnel.

WellCare of Kentucky is the employer of choice within the health care industry in Kentucky and we spend considerable effort recruiting and retaining best-in-class employees. With our extensive experience, we have built an organization that has become an attractive place to work for experienced health care executives, people leaders, and individual contributors. Since our inception in 2011, WellCare of Kentucky has established the most experienced and stable leadership team out of any MCO operating Kentucky's MMC program. **For the last two years, WellCare of Kentucky has made the list of Best Places to Work in Kentucky. We placed 10th in the Large Company category in 2018 and 8th in the Large Company category in 2019.** The Society of Human Resource Management and the Kentucky Chamber of Commerce sponsor best Places to Work in Kentucky and the rankings are based on an Employer Benefits and Policies Questionnaire (25% weighting) and an Employee Engagement and Satisfaction Survey (75% weighting).

In 2019, WellCare reflected a significantly better reputation than our competitors do (**see Figure B.3-4**) as an employer of choice within the managed care industry based on reviews from Glassdoor, which is one of the fastest growing jobs and recruiting sites, and holds a growing database of millions of company reviews. We attract and retain top level talent through our comprehensive benefits package, promoting work life balance with flexible schedules, opportunities for working remotely (15% of our workforce work from home full time and a large percentage telecommute anywhere between 1 to 4 days per week), and tuition reimbursement. Additional benefits include:

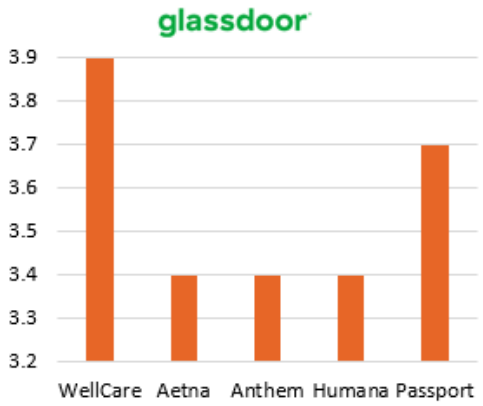

Figure B.3-4 2019 Glassdoor Rating

- Competitive compensation
- Paid time off
- Health/dental/vision insurance
- Telemedicine
- Employee assistance plans
- 401(k) retirement plan
- Company-paid life and disability insurance
- Flexible spending accounts
- Casual Dress Code
- Tuition Reimbursement
- Volunteer Time Off Program

In addition, we are committed to diversity and inclusion, and create an environment in which associates bring their authentic selves to the work place. In addition to the benefits listed above, we use a variety of strategies for retaining key personnel and associates to ensure we always have talented team Enrollees in place to perform the functions of the Contract. Strategies include leadership goals and training, measures and action plans, career development to engage and empower associates, and targeted retention programs. **In 2018, WellCare of Kentucky's overall undesirable turnover was 8.4%, well below the health care industry average.**

RETAINING KEY PERSONNEL THROUGH MEASURES AND ACTION PLANS

The WellCare of Kentucky leadership team is committed to ensuring that we have a highly motivated and engaged team of associates in our regional offices, on-site at hospitals, and remotely to provide exceptional support to our Enrollees and providers. We measure the satisfaction and engagement of our associates by soliciting feedback from all employees through a confidential annual Associate Opinion Survey (AOS) and a New Hire Experience Survey (NHES). **In our most recent AOS conducted in 2018, WellCare of Kentucky's average**

score for 14 of the 15 AOS categories in the survey was 11% to 31% higher than the U.S. high performing norm comparator, which includes Fortune 100 companies. WellCare of Kentucky has led the organization in AOS engagement scores for the last two years. In addition, Kentucky had a 100% employee participation rate on the 2018 survey. WellCare's NHES goes out 90 days after a new associate starts. In 2018, WellCare surveyed 2,160 associates with an 87% favorable result. WellCare of Kentucky surveyed 31 associates in 2018 with a 93% favorable result. We review AOS and NHES results with each functional area and partner, creating action plans to address areas of opportunity identified by the surveys and capitalize on successes, leveraging best practices and ensuring strong future results. We hold executives accountable for achieving successful outcomes and addressing opportunities these surveys identify.

RETAINING KEY PERSONNEL THROUGH CAREER DEVELOPMENT

One of our most important strategies for enhancing retention and minimizing staff turnover is to create an environment that supports professional achievement by providing all associates with the tools and resources they need to ensure success. WellCare of Kentucky is committed to providing all associates with effective learning in the necessary business and professional development skills to ensure their success. In 2018, 82% of WellCare of Kentucky's associates said that they receive the training they need to perform their current job effectively and that they are given a real opportunity to improve their skills (based on WellCare of Kentucky's 2018 AOS Survey Results). We support all of our employees in their development and individual growth at the company and are proud of our ability to recruit and promote employees from within the organization. **In 2018, 15 of WellCare of Kentucky's associates received promotions and WellCare filled more than 33% of open positions with internal associates.**

LinkedIn Learning

As our industry and our business grow more complex, our associates must adapt and innovate, faster and better than ever before. WellCare is excited to provide all associates with access to LinkedIn Learning – an award-winning, industry leader in online training – with a digital library of over 11,000+ micro-learning courses covering a wide range of technical, business, software and creative topics. Launching LinkedIn Learning is a strong commitment to providing professional development opportunities for our associates, allowing them to take charge of their learning and planning for their career growth.

RETAINING KEY PERSONNEL THROUGH TARGETED RETENTION PROGRAMS

Each functional area leader partners with their respective human resources business partner to create retention programs that address retention risks. This ensures we retain our top talent and that our associates are engaged and developed to serve our Enrollees and providers. For example, if we identify an attrition opportunity among a particular functional role, we implement a series of proactive measures to address it. Examples of retention plan action items include 'stay' and 'skip' level interviews with high performing associates, stretch assignments, mentoring, and engagement programs and activities. **These targeted retention programs have proved to be very successful. In 2019, WellCare of Kentucky's overall undesirable turnover was 8.4%, well below the health care industry average.**

b. Provide a detailed description of the Vendor's organizational structure for this Contract, including an organizational chart that clearly displays the following:

WellCare of Kentucky will submit a current organizational chart depicting all functions including mandatory functions, number of employees in each functional department and key managers responsible for the functions to DMS for approval within 30 days of signing the Contract, annually, prior to material revisions and upon request by DMS.

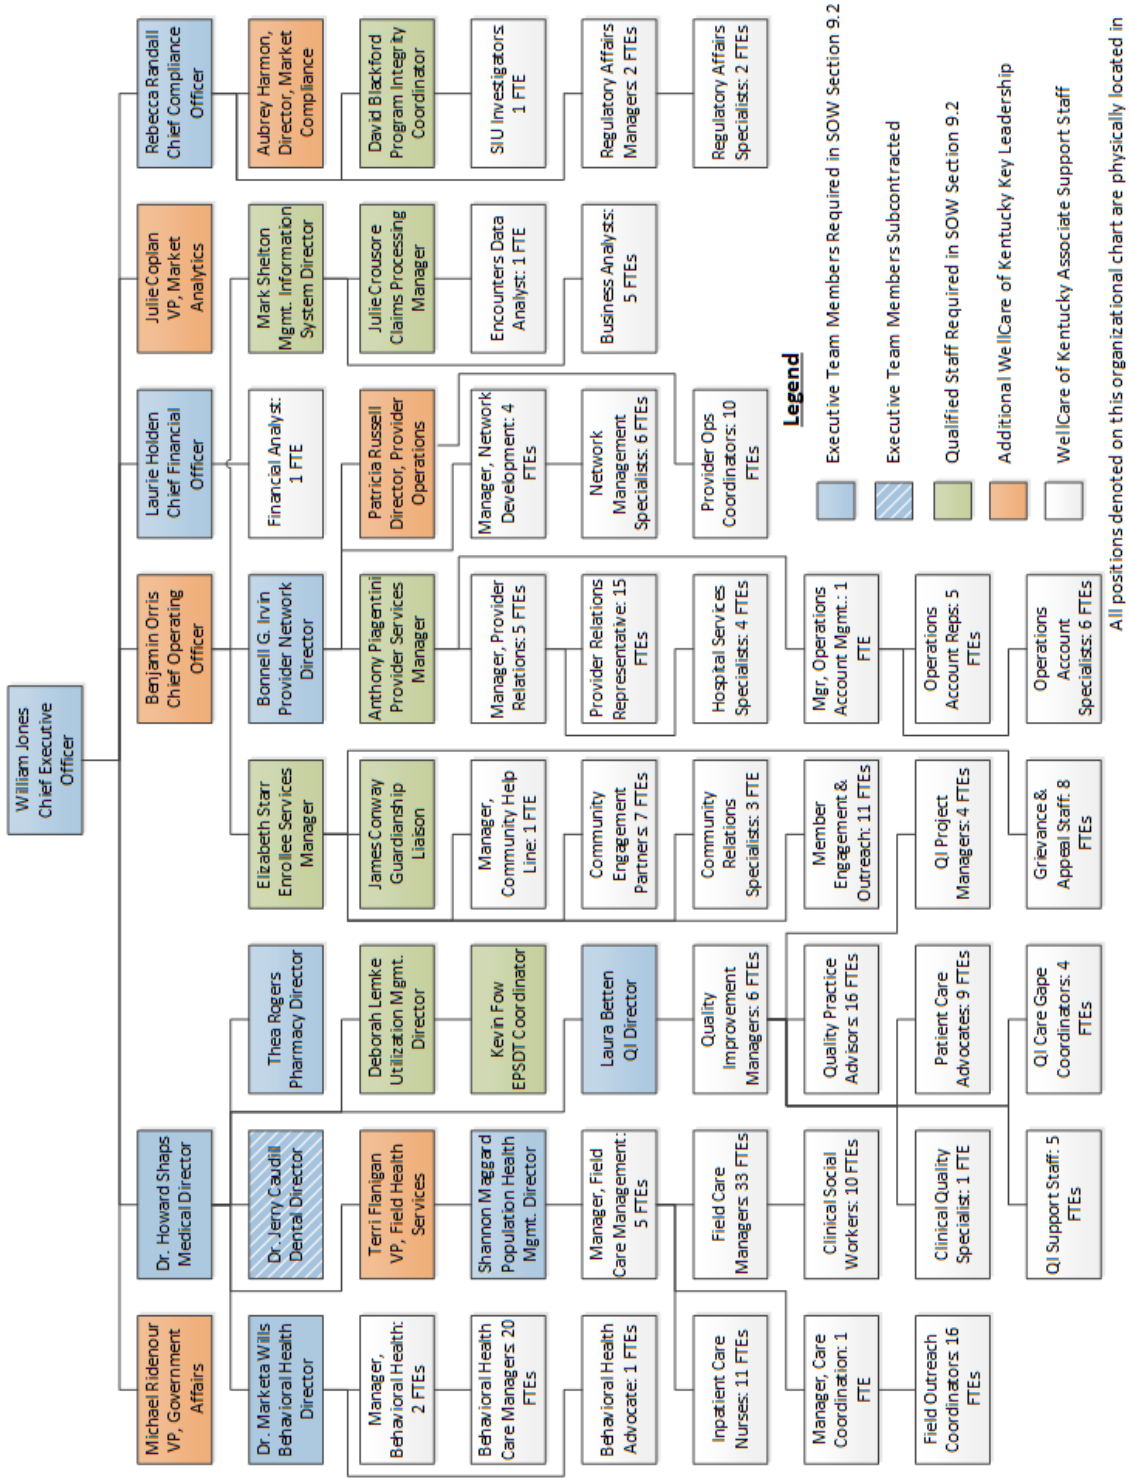
i. Management structure, lines of responsibility, and authority for all operational areas of this Contract.

WellCare of Kentucky's Chief Executive Officer, Bill Jones, has full accountability for overseeing all operations, strategic direction and administration of our Kentucky MMC Program plan. Working closely with our CEO is our Kentucky-based Executive Team, comprised of key leaders, each of whom are responsible for overseeing specific functional areas within WellCare of Kentucky's organization. Together, our Commonwealth-level leadership team and support staff will anchor each regional staff team located in one of our six regional offices. Our dynamic team of local leaders are responsible for making decisions for WellCare of Kentucky. This decision-making responsibility extends downward to the teams deployed throughout the Commonwealth to ensure that associates closest to our Enrollees, providers and stakeholders are empowered to make decisions with support and feedback from our Commonwealth leadership team. For example, the scope of decision-making authority of our local team in Kentucky includes, but is not limited to, how staff and resources are deployed throughout the local market to support our Enrollees and providers, the authority to administer the execution and management of our Provider network, the ability to make decisions about Value-Based Purchasing with our providers, and the capability to make local decisions regarding claims adjudication and prior authorization issues.

WellCare of Kentucky's infrastructure provides integrated accountability with behavioral, social, pharmacy and physical health staff aligned through our clinical, administrative, and operational structure. This ensures that integration of services begins at the top of our management structure and flows down into our regional and local service delivery at the Enrollee level. Our governance and decision making model ensures that these local leaders engage in daily, weekly, and monthly interactions with our local staff to address Kentucky specific issues, to ensure challenges are being addressed, to ensure adherence to escalation protocols, and to guarantee our associates are making timely, accurate, and proactive decisions.

The organizational chart below, **Chart B.3-1** WellCare of Kentucky Organizational Structure, shows the management structure, lines of responsibility, and authority for all operational areas of WellCare of Kentucky for this Contract.

CHART B.3-1: WELLCARE OF KENTUCKY ORGANIZATIONAL STRUCTURE



ii. How the RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices" fits into the overall organizational structure of the Parent Company.

WellCare of Kentucky is an indirect wholly owned subsidiary of Centene Corporation, Inc. (Centene).

CENTENE

Centene Corporation (Centene), which includes WellCare Health Plans, provides managed care services to more than 12.9 million Medicaid Enrollees across 30 states. Centene's focus and expertise is in serving beneficiaries through government-subsidized programs, including Temporary Assistance for Needy Families (TANF), Modified Adjusted Gross Income (MAGI), the Children's Health Insurance Program (CHIP), Supplemental Security Income (SSI)/Aged, Blind and Disabled (collectively ABD), Foster Care, Medicaid Expansion Populations, LTSS, and Medicare-Medicaid Plans (MMPs). Centene serves 1 million Medicare members across 28 states.

WELLCARE HEALTH PLANS

WellCare Health Plans, Inc. ("WellCare") provided managed care to over 4.1 million Medicaid Enrollees in 12 states (as of yearend 2019) including serving Aged, Blind and Disabled (ABD), Children's Health Insurance Plan (CHIP), Dual-Eligible Populations (Medicare & Medicaid), Intellectual Developmental Disabilities (IDD), Managed Long-Term Services and Supports (MLTSS), Supplemental Security Income (SSI), and Temporary Assistance for Needy Families (TANF) populations. WellCare also offers Medicare Advantage plans in 21 states serving 506,000 Enrollees including approximately 125,000 dual-eligibles. WellCare also offers Medicare Part D prescription drug plans in all 50 states with approximately 1.05 million Enrollees. WellCare does not split time or our infrastructure in commercial insurance or other types of health coverage, which allows us to ensure that we tailor everything we do for Medicaid and Medicare Enrollees. As of January 23, 2020, WellCare is a wholly owned subsidiary of Centene.

WELLCARE OF KENTUCKY, INC.

WellCare of Kentucky, Inc. ("WellCare of Kentucky") is a wholly owned subsidiary of WellCare Health Plans, Inc., and an indirect wholly owned subsidiary of Centene. WellCare of Kentucky currently serves more than 430,000 Medicaid Enrollees across the Commonwealth, which includes (as of Q3 of 2019) approximately 229,000 Temporary Assistance for Needy Families (TANF)/Kentucky Children's Health Insurance Program (KCHIP), 141,000 Medicaid Expansion, 43,000 Supplemental Security Income (SSI), 24,000 Dual Eligible, and 8,100 foster care, juvenile justice system, adoption assistance, and former foster care Enrollees. Additionally, WellCare of Kentucky services approximately 47,000 Medicare Enrollees across Kentucky, including 14,000 Medicare Advantage Enrollees and 33,000 Medicare PDP Enrollees. We currently employ over 300 people throughout the Commonwealth serving our Medicaid and Medicare Enrollees. Our experience teaches us that a local presence is the key to both successful implementation and ongoing operations. More importantly, local service to our Enrollees and providers has a positive impact on quality and availability of Enrollee care.

The ownership path is as follows:

The organizational chart below, **Chart B.3-2** Management Structure Organizational Chart, shows how Attachment C “Draft Medicaid Managed Care Contract and Appendices” fits into the overall organizational structure of the WellCare of Kentucky's Parent Company and ultimate parent company (Centene). Parts 12 through 17 provide the specific details of WellCare of Kentucky and our affiliates and direct parent (WellCare).

iii. Where subcontractors will be incorporated.

INCORPORATION OF SUBCONTRACTORS

We choose highly qualified subcontractors to complement and enhance the services we provide to our Enrollees and providers. We thoughtfully integrated these subcontractors into WellCare of Kentucky's organizational structure to ensure a streamlined experience for our Enrollees, providers and DMS. Reporting to our Chief Executive Officer, our Chief Operating Officer, Ben Orris, is responsible for overseeing the day-to-day functions and services supplied by operational subcontractors. Several additional key personnel are responsible for overseeing services performed by our subcontractors.

- Ben Orris, Chief Operating Officer – Responsible for overseeing subcontractors providing Operations Support services
- Dr. Howard Shaps, Medical Director – Responsible for overseeing subcontractors providing Clinical services
- Deborah Lemke, RN, BSN, MHA, CCM, Utilization Management Director – Responsible for overseeing subcontractors providing Utilization Management services.
- Thea Rogers, Pharm.D., Pharmacy Director – Responsible for overseeing subcontractors providing Pharmacy Benefits Management services
- Bonnell Irvin, MPA, Provider Network Director – Responsible for overseeing subcontractors providing Provider Network services
- Julie Crousore, Claims Processing Manager – Responsible for overseeing subcontractors providing Claims Processing services
- Elizabeth Starr, Enrollee Services Manager – Responsible for overseeing subcontractors providing Enrollee Services

Table B.3-5 below shows the Subcontractors WellCare of Kentucky utilizes to support our Kentucky MMC Program plan.

Table B.3-5 Subcontractors, Functions, and Reporting Structure

Subcontractor	Function
Enrollee Services – Elizabeth Starr	
All Asian Group	Translation services
C3/CustomercontactChannels Inc.	Call Center
CareerArc	Career service & employment and training support for our Enrollees
Cobalt Therapeutics, LLC	Behavioral health website training for Enrollees

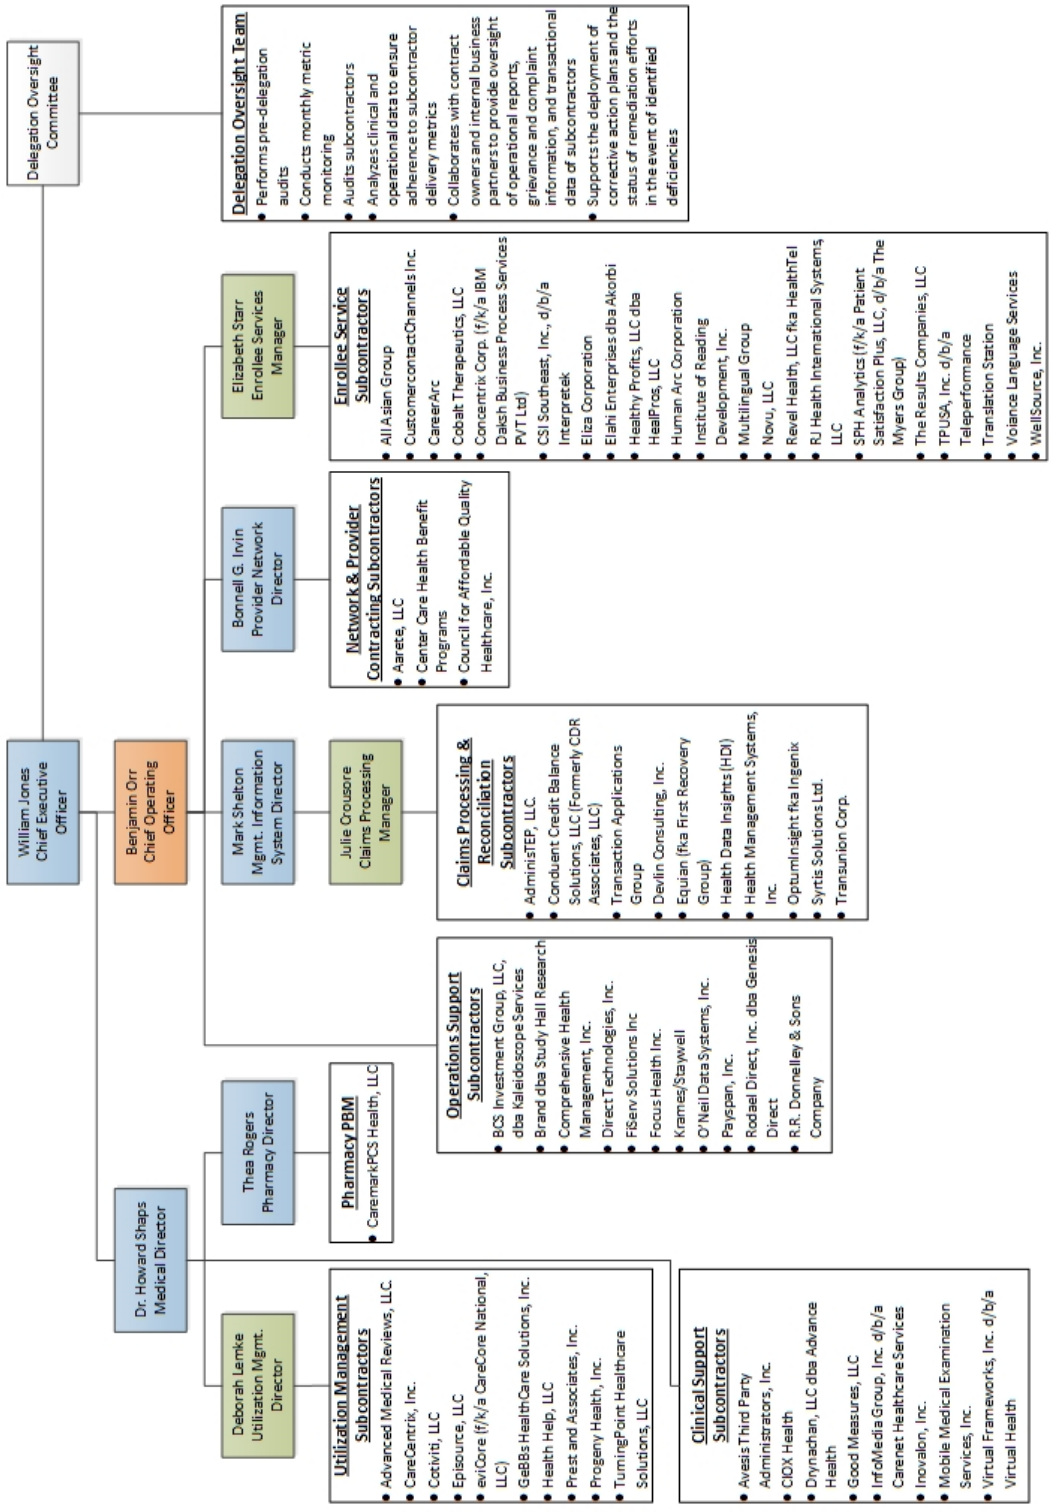
FiServ Solutions Inc.	Print Fulfillment
Focus Health Inc.	Behavioral health utilization management
Krames/Staywell	Print fulfillment
O'Neil Data Systems, Inc.	Print services
Payspan, Inc.	File Processing, Electronic Funds Transfer (EFT), Electronic Remittance Advice (ERA), Online Archive, Print Services
Rodael Direct, Inc. dba Genesis Direct	Creative services, print and production, fulfillment and shipping services
R.R. Donnelley & Sons Company	Print services
Pharmacy PBM – Thea Rogers	
CaremarkPCS Health, LLC (CVS)	Pharmacy benefit manager (PBM)

The organizational chart below, **Chart B.3-3** Subcontractor Management Structure, shows where subcontractors will be incorporated into WellCare of Kentucky's organizational structure.

CHART B.3-3: SUBCONTRACTOR MANAGEMENT STRUCTURE



iv. A summary of how each Subcontractor will be integrated into the Offeror's proposal performance of their obligations under RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," to ensure a streamlined experience for the Members, providers and the Department.

INTEGRATING SUBCONTRACTORS AT THE LOCAL LEVEL

All of WellCare of Kentucky's subcontractors are expected to meet the specific obligations and performance standards under RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices in order to ensure a streamlined experience for Enrollees, providers, and DMS. Chief Operating Officer, Ben Orris, is responsible for overseeing the day-to-day functions and services supplied by operational subcontractors. Supporting Ben in these efforts is our Commonwealth-based Regulatory Affairs and Compliance teams, which includes our Chief Compliance Officer, Rebecca Randall. In conjunction with our local Regulatory Affairs and Compliance teams, our team of local leaders responsible for quickly and directly addressing any issues that arise with our Enrollee and provider facing subcontractors. These local leaders include Dr. Howard Shaps, Medical Director, Deborah Lemke, Utilization Management Director, Thea Rogers, Pharmacy Director, Bonnell Irvin, Provider Network Director, Anthony Piagentini, Provider Services Manager, Julie Crousore, Claims Processing Manager, and Elizabeth Starr, Enrollee Services Manager.

WellCare of Kentucky has multiple mechanisms for becoming aware of emerging subcontractor performance issues, including metric/scorecard monitoring, complaints and grievances (including those from DMS), regularly scheduled subcontractor audits, Enrollee feedback from our Consumer Advisory Boards, Provider Advisory Panels, Joint Operating Committee (JOC) meetings with our subcontractors, and our WellCare of Kentucky Quality and Compliance governance meetings. To ensure we are constantly engaging with our subcontractors, our Regulatory Affairs and Compliance Teams hold regular JOC meetings with our subcontractors to monitor performance level reports and scorecards, identify and address service and quality issues, and design and execute quality improvement initiatives. These meetings include discussions of any performance issues, including outstanding corrective action plans and the status of remediation efforts. We typically hold these meetings monthly, but for subcontractors with broader Enrollee impact, such as Dental and Transportation, we hold them bi-weekly (and even more frequently if needed, such as during Contract implementation).

Delegation Oversight Team

Supporting WellCare of Kentucky in our monitoring and oversight efforts is our Delegation Oversight Team, led by WellCare's Chief Compliance Officer, Lori-Don Gregory, Deputy Compliance Officer, and Chris Price, Vice President Compliance Oversight, our Delegation Oversight Team. This team oversees compliance of services provided by subcontractors to ensure they comply with federal and state regulations, contractual obligations, accreditation standards and company policies and procedures. This team is comprised of subject matter experts for each of the delegated functions. The team leverages audit tools and expertise, our C360 compliance management system, and national best practices to execute a comprehensive subcontractor oversight process. To further illustrate the breadth of experience of our

Delegation Oversight Team, it includes clinical and non-clinical auditors with industry expertise spanning utilization review, complex case management, claims, customer service, and pharmacy, as well as an in-depth understanding of the requirements for a WellCare of Kentucky subcontractor.

Our Delegation Oversight Team works in conjunction with the governance framework of our Delegation Oversight Committee (DOC). Our DOC provides oversight for all delegated subcontractors and continuous guidance and advisory services to our Delegation Oversight program. Our DOC is governed by our Compliance Program and reports to our Corporate Compliance Committee (CCC), and ultimately to the Audit, Finance, and Regulatory Compliance Committee of WellCare's Board of Directors.

MONITORING SERVICE LEVEL AGREEMENTS

We ensure subcontractor compliance through the rigorous monitoring of service level agreements to ensure a streamlined experience for Enrollees, providers, and DMS. Our approach to establishing and monitoring service level agreements is based on our thorough contracting process, rigorous upfront screening process, and comprehensive ongoing review process. Service level agreements are established to ensure compliance with DMS' contractual requirements for covered services, as well as alignment with DMSs key goals for the Kentucky MMC Program.

Monitoring Kentucky MMC service level agreements begins with ensuring they are clearly documented in our contract with our subcontractor. As part of their negotiating and contracting processes, our National Network Performance Team ensures all required state contract standards are included in our subcontracts, and aligns these standards with monetary performance incentives and penalties. Our Senior Manager of Vendor Management and Senior Manager of Regulatory Affairs, who are subject matter experts on the MMC Contract and who provide guidance on any interpretation questions, support them in this effort.

Our pre-delegation audit process validates that the subcontractor has the required elements in place to comply with all of the contractual requirements for the functions delegated to them. Items evaluated as part of the pre-delegation audit include eligibility for government health care programs, policies, procedures, licensures, and staffing levels. The results of the pre-delegation audit are summarized and presented to our Delegation Oversight Committee. If during the initial delegation audit, an item or process is deficient or not compliant with WellCare of Kentucky's expectations, the subcontractor is placed on a corrective action plan (CAP) which must be remediated. Any exceptions must be presented to and approved by our Delegation Oversight Committee.

Once delegated services have commenced, WellCare of Kentucky continues to monitor service level agreements. The primary forum to discuss these metrics is our reoccurring Joint Operating Committee (JOC) meetings with our subcontractors. Key areas of focus for our JOCs are monitoring performance level reports and Delegation Oversight scorecards, identifying and addressing service and quality issues, complaints, and grievances, and designing and executing quality improvement initiatives. All subcontractors delegated for network management have service level agreements to meet or exceed DMSs' network adequacy requirements.

Our ongoing service level monitoring through our JOC structure is supplemented by the compliance monitoring of our Delegation Oversight Team. As part of our governance process, our Delegation Oversight Team reports directly through our Compliance Organization and Chief Compliance Officer, making their review and assessment independent from WellCare of Kentucky's day-to-day operational team. Delegation Oversight uses a risk-based approach to determine the level and frequency of review, and every subcontractor has an annual review. Our reviews include metric-based scorecards (of service levels that are aligned with Kentucky MMC standards), targeted / focused audits, and annual functional audits. Delegation Oversight imposes corrective action plans for subcontractor service level misses as necessary and monitors their completion. In the case of an explicit failure to meet Department standards, the "Improvement Plan" due to WellCare of Kentucky and DMS will mirror the corrective action plan. If a subcontractor fails to remediate the deficiency underlying the corrective action plan, WellCare of Kentucky imposes disciplinary action and fines up to and including de-delegation. Delegation Oversight's activities are managed through our compliance management system, Compliance 360 (C360), which enables accurate tracking and reporting.

A depiction of how each Subcontractor will be integrated into the WellCare of Kentucky's proposal performance of their obligations under RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices is shown above in **Chart B.3-3 Subcontractor Management Structure.**

v. Number of proposed FTEs dedicated to RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices," by position type and operational area and how the Vendor determined the appropriateness of these ratios.

DETERMINING THE APPROPRIATENESS OF FTE RATIOS

Over the years, WellCare has had significant experience launching new programs, integrating acquired programs and expanding with new populations, geographies, and services with positive results, allowing us to become one of the largest Medicaid managed care providers in the country. As a company with over 30 years of experience developing staffing plans for our Medicaid programs and over eight years of experience providing Medicaid services within the Commonwealth, we have a tested process in place for ensuring the appropriate level of FTEs to continue successful operations of the MMC program. To ensure we have updated our staffing plan to fulfill the requirements of the updated Contract, we have conducted a detailed and thorough information gathering process to ensure that the necessitated staffing levels for the Kentucky MMC Program have been accurately captured and planned for over time. We achieve this through a series of structured review sessions with functional area leaders that span all functions of the organization to ensure a clear understanding of the contract requirements, deliverables, and the strategy in place to effectively achieve and execute those deliverables. Following these review sessions, each functional area is responsible for providing a detailed staffing plan that includes the number and type of FTEs as well as the anticipated dates of hire, over time, including the time leading up to contract implementation. Senior level leadership reviews, revises (if needed), and approves the plan to ensure strategic direction is achieved and the inputs are appropriate to meet the established requirements.

NUMBER OF PROPOSED FTES BY POSITION TYPE AND OPERATIONAL AREA

Table B.3-6 below describes the projected WellCare of Kentucky staff broken down by functional area, position, and FTE count. All positions denoted on this in the table below are physically located in Kentucky and 100% dedicated to the Kentucky Medicaid program.

Table B.3-6 Proposed Full-Time Equivalent Positions in KY

Functional Area and Position	# of FTEs
Key Leadership	
Chief Executive Officer	1 FTE
Chief Financial Officer	1 FTE
Chief Compliance Officer	1 FTE
Medical Director	1 FTE
Pharmacy Director	1 FTE
Dental Director	.25 FTE
Behavioral Health Director	1 FTE

WILLIAM JONES – CHIEF EXECUTIVE OFFICER (CEO)

William Jones is a senior leader with over 25 years of experience in Healthcare. An accomplished executive with experience in working with Boards of Directors, State and Federal Legislators, and Regulators in order to deliver results. A High-Energy, Organizational Leader with demonstrated success in developing sound strategies that are balanced between financial performance, quality, stakeholder satisfaction, and growth. A Team Player that conveys a value proposition and gains buy-in from cross-functional groups for the development and execution of strategies and the implementation of process improvements utilizing Six Sigma, Lean, and other process improvement methodologies. A Change Agent that brings a sense of urgency to drive positive organizational change, with experience in building, turning around/optimizing a company's fundamental infrastructure, technologies, processes and measurement systems to increase profitability and performance. Currently sits on the Board of Directors of Big Brothers Big Sisters of Kentuckiana, American Heart Association, and National Kidney Foundation.

RELEVANT EXPERIENCE AND QUALIFICATIONS

WELLCARE OF KENTUCKY – LOUISVILLE, KY

Division President – North Division (NY, NJ, KY, NC) (Aug. 2016 – Present)

- Lead a group of 1,300+ associates with P &L responsibility for a $5.5 billion book of business that includes Medicaid, Managed Long Term Care and Medicare. The North Division serves over 650,000 Medicaid members and 120,000 Medicare members.
- Implemented a regional structure for Quality and Analytics that has produced improvements in both Medicare STARs and Medicaid HPR within the first 6 months.
- Began a turnaround for our Medicare product in NY that has been losing NI for the last 4 years. Turned a positive NI the last two months in a row since after launching the improvement plan 4 months ago.
- Set an aggressive growth plan for the division to grow membership by 20% over the next year.

WELLCARE OF KENTUCKY – LOUISVILLE - KY

State President (Aug. 2016 – Present)

- Led a group of 250+ associates with P &L responsibility for a $2.6 billion book of business that included Medicaid and Medicare.
- Achieved the highest Associate Engagement (Satisfaction) score in the company at 90% for 2017.
- Improved quality and reached the #1 ranking in the State of KY for Medicaid quality while maintaining and improving from a 2.5 to a 3.5 STAR score in Medicare in two years.
- Grew Medicare business from 8,300 members to 14,000 in less than two years and achieved profitability for the first time in plan history in 2017.
- Achieved the highest score in the company on the provider net promoter score (satisfaction) at 87.8%.
- Achieved the highest member satisfaction in Medicaid in KY based on the CAHPS survey 2 years in a row.

HIGHMARK, INC. – PITTSBURGH, PA

Vice President, Payment Integrity and Government Business Operations (Jan. 2016 – Aug. 2016)

- Led a group of 600+ associates with responsibility for Enrollment, Billing, Claims, Service, STARS, etc. for our Medicare Advantage, Exchange Product, and Medigap product lines as well as Payment Integrity functions such as front end editing and medical policy development and application, subrogation, COB, etc.
- Led the Payment Integrity function for the Enterprise, delivering over $50 million in value to the bottom line each year.
- Implemented an organizational re-design that has resulted in $2.6 million in administrative savings.
- Led an Executive team charged with addressing Account Receivable Issues for Highmark Health's hospital system, Allegheny Health Network. Group was able to clean up over $30 million in AR in two months.
- Executive sponsor and ownership of several multi-million dollar programs to include Enterprise Enrollment and Billing, Pre-Payment editing and others.

INDEPENDENT CONSULTANT – JACKSONVILLE, FL

Independent Consultant (Oct. 2015 – Dec. 2015)

- Interim executive services and consulting, providing services to align Finance, Operations and System with Client Company's objective and goals. Develop and execute business plans and provide mentoring to key leaders.
- Provided interim leadership and led a post migration project that primarily focused on claims payment issues. Reduced claims inventory by over 50% in 2 months.
- Delivered a program structure for the outsourcing of Operational and Finance functions to include operational process design, technology migration and retirement, etc.

CALOPTIMA – ORANGE, CA

Chief Operating Officer (Aug. 2013 – Oct. 2015)

- Led a group of 600+ associates with responsibility for Information Systems, Claims Operations, Customer Service, Facilities, Pharmacy Operations, Enrollment, PACE Operations and Program and Project Management.
- Developed and presented strategies and results to the Board of Directors related to risk management, internal operations, State and Federal legislative priorities, etc.
- Led a Board of Directors ad-hoc Committee in developing strategies and tactics that resulted in a reduction of CMS audit conditions from 57 in an audit conducted 2 months after hire, to 6 conditions in a re-audit approximately 1 year later.
- Successfully scaled the business to accommodate a growth rate of over 35% in one year.
- Engineered a 3 year IT strategic plan that includes upgrading or replacing core systems in year 1, supporting systems in year 2 and peripheral systems in year 3 while reducing the overall maintenance expense for our core systems by $700,000.
- Implemented improvements that resulted in increasing our state ranking in overall customer satisfaction to 4th of out of all CA Health Plans in Medicaid, a number 1 NCQA ranking for Medicaid Health Plans in CA and a 4 STAR Medicare rating overall in 2015.

- Re-engineered the Compliance Department including organizational design, training, policies and procedures and processes, including Fraud, Waste and Abuse and Compliance Issue Management and Resolution.
- Improved Pharmacy Operations by building a Pharmacy Authorization process that resulted in over 25 baseline audit issues being resolved and performance levels being achieved consistently for both quality and timeliness.
- Grew our Program of All Inclusive Care for the Elderly (PACE) center from the opening to approximately 80 members in year with 98% retention while improving operating margin ahead of target and being the highest ranked PACE center in CA in overall member satisfaction.

AMERIGROUP CORPORATION – VIRGINIA BEACH, VA

Vice President, Health Plan Services (April 2008 – Aug. 2013)

- Led a group of 180 associates across 13 states that support pricing/benefit configuration, architecture, provider set-up and maintenance for the Medicaid, Long Term Care and Medicare books of business.
- Functional responsibility for the pricing infrastructure of Facets, our core claims processing system.
- Administered configuration best practices and followed the software development lifecycle for configuration changes.
- Led the implementation of several medical expense reduction initiatives including the configuration of code editing software, saving the company $15 million dollars in one year.
- Improved several processes including fee schedule loading, prospective payment system updates and contract/amendment processing that enabled the company to scale rapidly for growth and reduce turnaround times by 50%.
- Implemented compliance programs related to pricing and benefit configuration in support of our Medicare line of business and our state Medicaid customers.
- Structured improvements in the loading and maintenance of provider data that led to increases in enrollment and member/provider selection.
- Implemented a provider relationship management strategy that included provider data reviews, claims testing and feedback loops to ensure the highest levels of satisfaction.
- Worked with State and Federal Regulators to understand and operationalize requirements to ensure compliance and effectiveness.

WELLMARK BLUECROSS BLUESHIELD – DES MOINES, IA

Group Leader, Business Intelligence (Feb. 2006 – April 2008)

- Led a project/portfolio management area responsible for over $20 million in corporate projects.
- Led a team of over 120 associates that included technical, professional and analytic staff.
- Oversaw the overall design, planning and implementation of an integrated data warehouse, healthcare analytic and consulting platform.
- Implemented SAS analytic platform that enabled the development of provider performance scorecards used for incentive programs.
- Implemented a Business Objects Business Intelligence tool that provided a reporting suite to the organization and its clients.

- Integrated Disease and Case Management, Lifestyle and Claims data to build a case for program effectiveness.

MARKETA WILLS, MD, MBA – BEHAVIORAL HEALTH DIRECTOR

Dr. Wills is a physician executive with over 5 years of managed care experience all of which have been spent focusing on Medicaid and public programs. Dr. Wills joined WellCare as Corporate Medical Director, Behavioral Health in 2015 and has been given increasing responsibility and expanded scope during her time. She has demonstrated success by focusing squarely on the clinical needs of the Member and has a deep understanding of the delicate psychosocial needs of Medicaid populations. A Board-certified psychiatrist, she has been continuously licensed to practice medicine for nearly twenty years.

RELEVANT EXPERIENCE AND QUALIFICATIONS

WELLCARE HEALTH PLANS, INC.

Corporate Medical Director, Behavioral Health (2015 – Present)

- Conduct utilization reviews and appeals with Providers on behalf of Medicare and Medicaid Members, focusing on Member-centered, evidenced-based, quality care with positive clinical outcomes. Promote integrated medical-behavioral strategies to ensure holistic approach to improving health outcomes.
- Provides overall clinical leadership in behavioral health for the enterprise. This person is responsible for overseeing all clinical aspects of behavioral health.
- Supports the integration of behavioral health into other aspects of clinical services (pharmacy and medical) through effective collaboration with key internal business partners
- Works closely with the clinical leadership team to assure clinical compliance with all company, customer and regulatory requirements for behavioral services.
- Helps establish policy and procedures for behavioral health, including its integration with medical care and pharmacy. This person will be the thought leader for behavioral health, and will provide teaching, training, coaching, and supervision of internal staff.

UNITEDHEALTHCARE – HOUSTON, TX

Associate Medical Director, OptumHealth (2012 – 2015)

- Dedicated medical director to key commercial account with 450K lives. Led team in development of clinical policies and workflows for both utilization management and care coordination functions. Interfaced with customer and account management on key clinical updates and to resolve any escalated issues (claims, billing, coding, emerging technologies, etc.). Liaised with physical health colleagues to ensure seamless medical-behavioral integration of care experience.
- Conducted utilization reviews with Providers for Medicare, Medicaid and commercial Members in facility based setting, focusing on quality and collaborative relationships. Performed quality of care reviews to address any clinical variances or sentinel events that arose. Partnered with facilities to ensure quality health outcomes for our Members.

UNIVERSITY OF TEXAS HEALTH SCIENCES CENTER AT HOUSTON – HOUSTON, TX

Medical Director, Women's Behavioral Program at St. Joseph Medical Center (2011 – 2012)

- Developed strategic plan for development of boutique psychiatric program in academic setting. Accountable for pro-forma development, budget creation and financial management of inpatient service.
- Drove business development by establishing trust-based relationships with community, practitioner, payor, facility, corporate and other potential referral sources. Created and

executed against multi-faceted marketing plan in conjunction with media relationships and PR specialists.
- Designed superior clinical program focusing on delivering evidenced-based medicine with measurable success outcomes. Led multi-disciplinary clinical teams for the quality, efficient, service-driven care of women in crisis.
- Refined operational processes, policies and procedures from intake through discharge planning with a focus on efficiency and service.

MEMORIAL HERMAN HOSPITAL--TEXAS MEDICAL CENTER CAMPUS – HOUSTON, TX
Director of Physician Affairs (2009 – 2010)
- Identified areas of inefficiency in operations of Medical Staff Services department and streamlined processes. Reduced the average turnaround time of physician credentialing process from 65 to 49 days. Overhauled the team configuration resulting in greater processing efficiency and enhanced employee engagement. Implemented performance management system via goal setting, weekly team huddle and visual performance management aids. Coached front-line employees on use of Microsoft programs and written communication. Developed budgets for specified cost centers and met and/or exceeded departmental financial expectations.
- Provided strategic and operational leadership to hospitalist service line issues. Ensured adherence to contractual obligations for hospitalist physicians.
- Established positive relationships with physician leaders throughout the system. Analyzed survey results for annual physician satisfaction survey. Developed campus wide action plan in conjunction with senior executive team at the facility.
- Designed new on-boarding process for house staff. Developed clinical cases covering key quality and safety topics for house staff orientation. Supervised development of new interactive, experiential medical staff orientation. Integrated house staff and medical staff with nursing leadership upon their arrival to campus.

MCKINSEY & COMPANY
Internal Communications Secondment (2008 – 2009)
- Led the planning and execution of selected internal professional development activities for all McKinsey Partners and Directors. Managed team to execute the operational details to support the logistics, social and production elements of Firm-wide Partner conferences.
- Performed operational analyses and implemented/executed accordingly. Selected and managed external vendors and suppliers (e.g., production companies, destination management companies, hotels) who provided services and materials. Set and maintained budgets for each conference. Succeeded in designing and rolling out an initiative to decrease fixed cost structures by $100,000 USD.

MCKINSEY & COMPANY
Associate Consultant (2006 – 2008)
- Served the Ministry of Health in the Province of Ontario for the operational transformation of Emergency and General Inpatient Medicine Departments at Toronto General Hospital, Canada's largest and most prestigious academic medical center. Taught "Toyota lean" techniques to clinical staff and applied to strategies to identify bottlenecks, thereby streamlining admissions and discharges so that patients could receive the appropriate level of

care at the right times. Reduced average 22-hour wait time for GIM admissions down to 8 hours.

- Performed sales channel analysis for a leading corn seed manufacturer with the goal of increasing market share by 10% over the next 3 years. Conducted in-depth agency assessments with field sales-force and assisted Account Managers and Area Sales Managers in developing Territory Plans. Oversaw preparation, problem-solving and analysis of financial data for over 100 territories. Managed Access database for collection and analysis of Territory Planning data.
- Served the Chief Medical Officer of a small hospital network by defining care model focused on superior patient experience. Designed conjoint analysis-driven marketing study to uncover and unleash elements of delivery model most important to patients and their families. Coached CMO on presentation of analysis to senior team. Work is ongoing at the hospital system.

DAY-MONT BEHAVIORAL HEALTHCARE, INC.
Independent contractor: Outpatient Clinic Coverage (2011 – 2011)

- Delivered care to under-served psychiatric patients in an outpatient community setting. Performed initial psychiatric evaluations and provided ongoing psychopharmacologic treatment. Led patient care team composed of nurses, therapists, case managers and other ancillary staff.

ST. VINCENT CHARITY HOSPITAL
Independent contractor: Psychiatric Emergency Room Coverage (2006 – 2009)

- Staffed free-standing Psychiatric Emergency Room of a non-profit community teaching hospital in the inner-city Cleveland Metropolitan area. Delivered patient-centered care including: risk assessment; triage/milieu management; acute management of psychiatric emergencies; community disposition planning; assessment for inpatient hospitalization; substance abuse treatment referrals. Taught students and residents.

NORTH PHILADELPHIA HEALTH SYSTEM
Independent Contractor: Inpatient Coverage (2004 – 2006)

- Served as weekend and evening in-house psychiatrist-on-call for a non-profit, multi-unit hospital system in inner-city Philadelphia. Cross-covered for 2 acute adult inpatient units; 1 gero-psych unit; 1 sub-acute unit; 2 substance abuse step-down units; and emergent consult-liaison services for affiliated general medical hospital. Responded to all psychiatric emergencies.

MASSACHUSETTS GENERAL HOSPITAL/MCLEAN HOSPITAL
Chief Resident, Clinical Fellow in Psychiatry, Harvard Medical School (2003 – 2004)
Resident, Clinical Fellow in Psychiatry, Harvard Medical School (2001 – 2003)

- Awarded the American Medical Association Foundation Leadership Award in recognition of value-added to the field of psychiatry.
- Led interdisciplinary teams in providing high-quality acute psychiatric care in both emergency and inpatient hospital settings. Facilitated daily team rounds to coordinate patient care. Taught junior residents and medical students necessary clinical skills to deliver care.

- Founded the MGH Organization of Minority Residents and Fellows (OMRF). Facilitated the advancement, retention and academic development of physician-trainees by leading workshops and creating networking/mentoring opportunities. Presented with Partners in Excellence Award by CEO for contribution to academic and professional development of physicians of color.
- Elected by peers as SAMHSA Fellows Representative to the Board of Trustees for the American Psychiatric Association (APA). Crafted recommendations and presented to Board of Trustees. Assisted in rolling out several of the recommendations that were approved by the Board.

NEWTON-WELLESLEY HOSPITAL

Transitional Year Intern (2000 – 2001)

- Received the Intern of the Year Award recipient for superior clinical performance in the field of Emergency Medicine.
- Mastered patho-physiologic basis of disease by rotating through medical, surgical, emergency room and intensive care units. Executed and oversaw minute-to-minute care plans for critically ill patients in a fast-paced environment. Provided teaching, education and support to patients and their families.

RELEVANT EDUCATION AND PROFESSIONAL CERTIFICATIONS:

- MBA, Health Care Management & Finance – The Wharton School, Philadelphia, PA
  - Received the Joseph Wharton Award for academic achievement and professional accomplishments.
- M.D. – University of Pennsylvania School of Medicine, Philadelphia, PA
- AB, Sociology – Brown University, Providence, RI

- Board Certified Diplomat in Psychiatry by the American Board of Psychiatry and Neurology
- Board Member of National Alliance on Mental Illness for Hillsborough County
- Received 2016 NAMI Hillsborough President's Award

BONNEL GUSTAFSON IRVIN, MPA – PROVIDER NETWORK DIRECTOR

Bonnie Irvin is a senior healthcare executive whose 20 years of leadership in both provider and payor organizations drives ability to deftly balance competing forces as organizations navigate the era of reform. Offers deep understanding of the complexities of the inner workings of the health insurance industry. Consistently tapped to direct mission-critical initiatives, with a record of executing new programs on time and within budget. Financially fluent consensus builder who leads through influence and motivates cross-functional teams.

RELEVANT EXPERIENCE AND QUALIFICATIONS

WELLCARE OF KENTUCKY – LOUISVILLE, KY

Vice President, Field Network Management (June 2017 – Present)

- Newly created market position to focus on building successful relationships with providers by directing the functions of Network Development, Provider Relations and Provider Operations – 47 team members. Manage over 120 hospital contracts and over 25,000 professional and ancillary contracts.
- Created a provider satisfaction program that resulted in the 2nd highest Net Promoter Score across the WellCare enterprise.
- Worked with corporate shared services to create a primary care physician value-based contract that aligns quality and cost by resetting both on an annual basis.
- Led re-contracting efforts with two large healthcare system which resulted in minor rate increases.
- Created value-based agreements and associated methodology for acute care and behavioral health hospitals.

ALLEGHENY HEALTH NETWORK – PITTSBURGH, PA

Vice President, Patient Experience (2014 – Jan. 2017)

- Tapped for newly created position to set and execute strategies to elevate patient experience in era of healthcare reform with its emphasis on value-based purchasing through CMS. Lead design and implementation of AHN's Patient Experience Program and coordinated Press Ganey and HCAHPS scores for the network.
- Designed and implemented Patient Experience Program in collaboration with representatives from the Ritz Carlton, an organization known for its world-class customer service. Coordinated staff and physician training on key elements of patient experience—such as appropriate communication skills and service recovery techniques—to ensure consistency across departments and service lines.
- Led 25 employees from seven hospitals to collaborate on the design of a patient-centered culture. Created system credo, motto, steps of service and values that became part of the playbook now used system-wide for employee training and new hire orientation.
- Created, launched and managed RAVE (Recognize and Acknowledge Valued Employees) program to honor top performers at all AHN entities on a monthly basis and present 12 Service Ambassador awards annually and one "Service Excellence" award to employees across network.
- Implemented Advisory Board iRound product at seven inpatient facilities within five months. Defined questions to be used, coordinated roll out schedule and assisted with training.

- Piloted forum to share ideas and develop patient experience initiatives across network, including bedside shift reporting, purposeful hourly rounding and communication boards. Leveraged influence with facility CNOs and Patient Experience staff to implement new approach that helped to drive a 10% percentile rank increase for HCAPHS domain communication with nurses and a 30% percentile rank increase for HCAHPS domain responsiveness of hospital staff–all achieved with a nurse staffing ratio in the 10th percentile.

ALLEGHENY HEALTH NETWORK – PITTSBURGH, PA
Vice President, Medical Mall Operations (2011 – 2014)

- Recruited by former UPMC senior executive to develop a new component of AHN's integrated delivery system—an outpatient facility that focuses on health/wellness and provides unique amenities that improve patient experience. Translated clinical needs of 15 subject matter experts and regulatory requirements into clear and concise plan for architects, engineers and construction managers.
- Project managed the on-time, under-budget opening of the $150 million+, 172,000-square-foot Wexford Health+ Wellness Pavilion in Wexford, Pennsylvania that delivers $50 million in annual net patient revenue. Invested a year to design world-class facility to accommodate clinical programs and amenities, including demonstration kitchen, child care drop-off center, café and courtyard.
- Coordinated collaboration between clinical and architectural staff to design and build $13.2 million, 24,000-square-foot ambulatory surgery facility in Monroeville, Pennsylvania in 2013. Facility performs 7,000 surgeries/procedures per year.

HIGHMARK BLUE CROSS BLUE SHIELD – PITTSBURGH, PA
Vice President, Provider Contracts & Relations (2009 – 2011)

- Managed 900+ facility provider contracts and 17,000 professional providers in western Pennsylvania, with $5 billion annual spend. Negotiated contracts with hospitals, skilled nursing facilities and ambulatory surgery centers. Led 40 professional, ancillary and facility provider relations staff in 29 counties, ensuring that provider issues were addressed and resolved in timely manner.
- Standardized language across 40 hospital contracts, allowing Highmark to easily administer and amend contracts.
- Converted 95% of professional providers to payment via electronic funds transfer.

HIGHMARK BLUE CROSS BLUE SHIELD – PITTSBURGH, PA
Vice President, Provider Contracting & Reimbursement (2007 – 2009)
Vice President, Provider Reimbursement (2003 – 2007)

- Managed $5 billion in facility and ancillary provider reimbursement, including determining payment rates and methodologies. Oversaw provider audit function and medical policy, as well as associated payment policy. Added provider contracting responsibilities in 2007. Managed four directors, with oversight for 48 business and policy analysts, contracting specialists and reimbursement staff.
- Piloted Highmark's efforts to create a specialist and primary care physician pay-for-performance program, which provided additional reimbursement to those physicians who improved quality of care delivered to members.

- Eliminated capitation as a reimbursement methodology for primary care physicians (PCPs) for both commercial and Medicare Advantage products. Created analysis to determine reimbursement rates for CPT visit codes that kept PCPs relatively whole. Developed talking points for conversion that enabled process to proceed smoothly, resulting in Highmark's retaining all of its PCPs.

Referred providers guilty of aberrant billing practices to Department of Defense for corrective action

RELEVANT EDUCATION AND PROFESSIONAL CERTIFICATIONS

- Bachelor' of Justice Administration at the University of Louisville

C.

Technical Approach

1. Subcontracts

C.1. SUBCONTRACTS

a. **Describe the Vendor's approach to subcontracting services for this Contract, and how the Vendor will ensure ongoing collaboration with Subcontractors for a streamlined and coordinated approach to serving Enrollees and Providers.**

b. **Describe how the Vendor will ensure responsiveness of its Subcontractors to all requests from DMS for reporting, data and information specific to operation of the Medicaid managed care program. How will Subcontractors be held accountable for a delay in or lack of response?**

c. **Provide a listing, including roles and locations, of known Subcontractors that will support the Contract resulting from this RFP.**

d. **Describe the relevant experience of each Subcontractor. Indicate whether the Vendor has subcontracted with the entity for prior contracts of similar size and scope.**

C.1. SUBCONTRACTS

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Sections 4.3 Delegations of Authority and 6.0 Subcontracts of the Draft Medicaid Managed Care Contract and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

a. Describe the Vendor's approach to subcontracting services for this Contract, and how the Vendor will ensure ongoing collaboration with Subcontractors for a streamlined and coordinated approach to serving Enrollees and Providers.

WellCare of Kentucky selects highly qualified Subcontractors to complement and enhance the services we provide to our Enrollees and Providers. Our approach to Subcontractor oversight and to establishing and maintaining compliance with regulations is based on our thorough contracting process, rigorous upfront screening process and comprehensive ongoing review process.

Our organization structure has always supported the goals of ensuring high-needs Enrollees get access to the services and supports they need. WellCare of Kentucky began providing services within the Commonwealth in 2011 and has always believed in the power of one collaborative team covering all care needs and only selects high quality Subcontractors with which to work on these important goals. Within this model, we have developed a structure in which WellCare of Kentucky arranges for and oversees Subcontractor services.

WellCare of Kentucky acknowledges the enhanced contract requirements pertaining to Subcontractors and fully supports these changes. We have required each of our Subcontractors to agree to meet all contract requirements as well as provide full transparency on financials. During the development of this proposal we have informed them of these new requirements; nearly every Subcontractor has complied. Upon award, if we do not have compliance with any Subcontractor, WellCare of Kentucky will seek an alternate vendor and will submit such vendor for DMS approval in advance.

Prior to delegating any functions to a third party, we perform due diligence including a comprehensive assessment to prospectively evaluate the Subcontractor's ability to perform the activities to be delegated. The comprehensive vetting and due diligence process is a

requirement in our delegated subcontracts, and compliance must be demonstrated prior to a delegated Subcontractor becoming active with WellCare of Kentucky. We perform oversight and monitoring of the delegation activities through scorecards, data analysis, focused reviews, and annual audits. We develop and maintain a system for regular and periodic monitoring of each Subcontractor's compliance with the terms of its agreement and the Contract. All pre-delegation audits for new Subcontractors are based on the National Committee for Quality Assurance (NCQA), and state and federal requirements.

We will not delegate to an entity unless it achieves a successful passing score on its pre-delegation audit. Our pre-delegation audit process confirms the Subcontractor has the structural elements, i.e. policies, procedures, staff, licensure, etc., in place to comply with all of the contractual requirements for the functions assigned to them.

Additionally, Subcontractors have to comply with the expectations of the company on an ongoing basis. After delegation, the team continues to monitor performance. In addition to the confirmation, we require the submission of supporting documentation to demonstrate compliance. Examples of documentation may include codes of conduct, compliance policies, copies of training materials, training rosters, etc. WellCare of Kentucky's extensive oversight of Subcontractor performance reflects our commitment to deliver high quality services and our understanding that Subcontractors' performance is a reflection of WellCare of Kentucky's focus on quality. Weekly operations oversight consists of meetings with our vendors to review key performance indicators, perform joint root cause analysis, and discuss opportunities to improve processes. The Quarterly Joint Operating Committee (JOC) meetings are used as a higher-level status check and to set strategy for subsequent efforts.

TECHNOLOGY SUPPORT VIA C360

Our approach to addressing subcontractor performance via a progressive escalation process is supported by our compliance management system, C360. C360 manages all elements of the audit and oversight process, including communications, documentation and evidence, and the automatic assignment of corrective action plans (CAPs) for non-compliant elements. It also provides transparency to all management levels involved in the oversight of subcontractors and enables accurate tracking and reporting. Standard reporting includes monitoring and auditing activities performed, status of audits and monitoring plans, metrics on outstanding CAPs, and trending of subcontractor performance through scorecards.

b. Describe how the Vendor will ensure responsiveness of its Subcontractors to all requests from DMS for reporting, data and information specific to operation of the Medicaid managed care program. How will Subcontractors be held accountable for a delay in or lack of response?

ENSURING RESPONSIVENESS

Our Subcontractor Oversight Team led by Rebecca Randall is supported by multiple subject matter experts across our company. As part of their negotiating and contracting processes, our National Network Performance Team ensures all required state contract standards are included in our subcontracts, and they also align these standards with monetary performance incentives and penalties. This ensures our subcontractors are held accountable for state requirements and

timeliness standards for reporting of data. In addition, our Network Performance Team handles initial subcontractor onboarding, including orientation to our processes and expectations, completion of pre-delegation documentation, and coordination of pre-delegation audits. This ensures that our subcontractors have adequate knowledge of WellCare of Kentucky processes and have been given clear and concise expectations. Finally, our Team uses their national purchasing experience to identify best practices from other markets so that they can be incorporated to improve our operations and quality of care. They also periodically re-procure our subcontracts to ensure we are partnering with the strongest organizations and obtaining the best value for the subcontracted services.

ACCOUNTABILITY

WellCare of Kentucky selects highly-qualified Subcontractors to complement and enhance the services we provide to our enrollees and providers. Our approach to establishing and monitoring service level agreements is based on our thorough contracting process, rigorous upfront screening process, and comprehensive ongoing review process. Service level agreements are established to ensure compliance with the Commonwealth of Kentucky and DMS' contractual requirements for covered services, as well as alignment with the key goals for the Program (e.g. Quality Performance Measures).

WellCare of Kentucky takes steps to insure our Subcontractors are responsive to all requests from DMS by including a schedule of regulatory reports in their contract with which they have to comply; this schedule contains deadlines for DMS reporting and data requirements. As part of the contract, we assign penalties including financial damages for non-compliance.

WellCare of Kentucky manages complete and timely data including encounter data from our subcontractors using several methods. Our contracts have specific language detailing the requirement for data submissions. Encounter transactions must meet standard rules set by the SNIP edits as well as comply with all state and federal validation guidelines. Any encounter that does not meet these requirements is reviewed, adjusted, and resubmitted by the subcontractor within thirty days of the initial notification of rejection. Our subcontractor submits 100% of all encounters to us within 90 days from date of service, with an overall acceptance rate of no less than 95% or as superseded by specific state or CMS Service Level Agreement. This scoring will be monitored monthly and aggregated annually using the Encounter Scorecard Monthly reports.

Monitoring SMMC service level agreements begins with ensuring they are clearly documented in our contract with our subcontractor. Our Subcontractors are held as accountable as our internal business partners. As previously discussed, our Network Performance Team includes these requirements in our contract as part of the negotiation process. These contract agreements also include giving Subcontractors a schedule on regulatory reports that they have to comply with, which contain deadlines for DMS reporting and data requirements. As part of the contract, penalties, including financial damages for non-compliance, are defined. An example of this was a recent situation in which our Transportation provider in our Florida market did not show for a scheduled trip causing our Enrollee to miss the medical appointment. As this is ultimately Staywell’s responsibility (our Florida health plan), we received a Liquidated Damage from the Agency. However, per our Subcontractor Oversight process, we “passed through” the Liquidated Damage to our subcontractor. More importantly, we required them to

implement a remediation plan that identified alternate transportation providers for this Enrollee, while reducing overall reliance on the provider who failed to show. Staywell also opened an IAP to track it to completion.

WellCare of Kentucky's Regulatory Affairs and Compliance Team imposes corrective action plans on delegated subcontractors as necessary and monitors their completion. If a subcontractor fails to remediate the deficiency underlying the corrective action plan, we impose disciplinary actions up to and including termination of subcontractor. WellCare of Kentucky's Regulatory Affairs and Compliance Team's activities are managed through the company's governance tool, Compliance 360 (C360), which enables accurate tracking and reporting.

c. *Provide a listing, including roles and locations, of known Subcontractors that will support the Contract resulting from this RFP.*

WellCare of Kentucky's subcontractors for the January 2021 contract **have complied with all proposed contract and RFP requirements**; current subcontractors who did not comply have been removed from our proposed January 2021 list.

The table below is a list of subcontractors for WellCare of Kentucky.

Table C.1-1 WellCare of Kentucky Subcontractors

As a language service provider, All Asian Group provides document translations and desktop publishing services into all Asian and Oriental languages.
Prior Contracts	Yes

Avesis Third Party Administrators, Inc.	
Relevant Experience	Avēsis began managing government dental and eye care benefits in 2006. Now, as a member of the Guardian family, they are responsible for overseeing services on contracts that are more than 25 years old with the State of California's Denti-Cal program. Avēsis and their parent company, Guardian, administer vision and dental benefits for nearly 16 million enrollees across the United States. Most of these enrollees, 66% or 10 million, have employer-sponsored vision or dental plans administered by Guardian. Nearly six million of their covered dental and eye care lives are through government health programs managed by Avēsis. This includes the delivery of services through 43 active contracts with two state governments and 13 national and regional health plans. They currently operate in 20 states and the District of Columbia. A majority of their government program enrollees, 95%, are Medicaid enrollees, while a much smaller percentage are Medicare Advantage/MMP enrollees.

Avesis Third Party Administrators, Inc.	
Prior Contracts	Yes

BCS Investment Group dba Kaleidoscope Services	
Relevant Experience	Kaleidoscope Services is a full service print shop, mail-house, and fulfillment center for purpose driven mail. For over 15 years, we have been a leading provider of HIPAA compliant, purpose driven mail to companies in the healthcare, insurance and financial industries
Prior Contracts	Yes

Brand dba Study Hall Research	
Relevant Experience	Study Hall Research will conduct focus groups to explore and better understand the current state for WellCare of Kentucky Medicaid Enrollees in Kentucky. Learning and insights from the groups will be used to finalize, improve, modify, and optimize WellCare of Kentucky's service practices, products, offerings or other Enrollee-facing initiatives across Kentucky. Research will be conducted in one market in each of the five Kentucky Medicaid regions (as designated by CMS) which are Paducah, Louisville, Bowling Green, Lexington, and Pikeville. Recruiting will be from randomly generated lists of Medicaid Enrollees provided by WellCare of Kentucky. The research is fully HIPAA-compliant and has all necessary WellCare of Kentucky certifications, training and authorizations to interact with such data. Sample questions used by the focus groups are available in the Decision Guide attached to this submission.

InfoMedia Group, Inc. d/b/a Carenet Healthcare Services	
Relevant Experience	WellCare has partnered with Carenet since 2011 and together, they help over 3 million enrollees in 22 states stay healthy and happy. Specifically, in Kentucky, Carenet started providing 24/7 Nurse Advice Line services for 460,000 Medicaid and Medicare enrollees in 2011. For 30+ years, Carenet has provided solutions that help healthcare consumers make better decisions while improving the quality and cost of care. The company was established in 1988 as a patient-management operation within a large Texas-based hospital system. Recognizing Carenet's untapped potential and the growing need for more accessible, affordable care management solutions, a group of private investors purchased the company in 2004. Today, by combining a deep clinical history and consumer engagement expertise, Carenet helps over 100 healthcare organizations maximize performance while educating, empowering and motivating more than 50 million consumers across the United States, the District of Columbia and Puerto Rico.

2. Collaboration

C.2. COLLABORATION

a. **Provide a recommended approach for conducting monthly meetings that the Vendor must attend with the Department, other agencies, and other contracted MCOs. In your response, provide the following, at a minimum:**

   i. Meeting formats the Vendor proposes that will result in successful collaboration.

   ii. Examples of issues, ideas, and innovations that the Vendor thinks should be addressed during the initial three (3) to six (6) meetings, the rationale for each, and whether collaboration for each will require implementation of short-term and/or long-term solutions.

b. **Describe lessons learned from similar collaborations that the Vendor has experienced, and how those could be applied in moving forward with monthly meetings.**

C.2. COLLABORATION

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 9.0 Organization and Collaboration of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

As the largest Medicaid plan serving the Commonwealth for nearly a decade, WellCare of Kentucky has been proud to collaborate with DMS, other agencies, and other managed care organizations (MCOs) to advance DMS' goals of a healthier Kentucky through consistent leadership on issues that matter DMS. We know that the only reason we have been successful in Kentucky is through the effective collaboration we have had with our partners DMS and the Cabinet for Health and Family Services (CHFS). We understand that for WellCare to help improve health care for Kentuckians, we desire to build the trust necessary to innovate and transform the system to best serve Enrollees and to meet DMS' goals. In the early years of the program, WellCare established a broad footprint across the Commonwealth with six regional offices and we stood with DMS as the only MCO to maintain a network in Region 8 and to welcome nearly 100,000 Enrollees displaced by a departing MCO. And it is that collaboration and trust that will continue to propel our programs forward as we go into the next contract term, whether it is through the implementation of the new substance use disorder (SUD) Waiver to help Enrollees find a path to recovery, efforts to promote DMS' goals, or initiatives that ease provider administrative burden through shared credentialing activities. Throughout our 8 years in Kentucky, our leaders and locally placed staff have been present with DMS, connecting directly to agency leaders and other MCOs to solve shared operational challenges and lead innovations in clinical and quality outcomes across populations.

With much of our team still in place since the very beginning of launching managed care in Kentucky, we bring a wealth of experience and expertise to collaboration efforts. Under the executive leadership of WellCare of Kentucky CEO Bill Jones, COO Ben Orris, and our Chief Compliance Officer, Rebecca Randall, WellCare's commitment to collaboration starts at the top and integrates through every member of our staff. Our commitment to collaboration is demonstrated in several ways, including but limited to the following examples:

- *Local.* Our staff lives and works in the communities they serve and consistently connects with partners in every region to collaborate on issues unique to those regions.
- *Engaged.* Bill, Ben, Rebecca, and the integrated leadership team today participate regularly with DMS, other agencies, and other MCOs through meetings, forums, ad-hoc discussions, and stakeholder engagements.
- *Responsive.* We have a long history of responding quickly and effectively to the issues raised by DMS. By dedicating Rebecca as the point of contact for DMS and her direct line of accountability to Ben and Bill, we have built an operational structure that facilitates rapid decision-making and the implementation of new solutions.
- *Innovative.* Time and time again, WellCare of Kentucky has been a leading voice during collaborations on key issues. Whether it is helping to expand services for sex offenders or design, build, and implement a solution to help Enrollees re-enter the workforce, WellCare of Kentucky is the go-to plan to lead transformation and change through our collaborative efforts with DMS, other agencies, and the other MCOs.

This experience and expertise has informed the recommendations for ongoing collaborations and meetings, which we have detailed below.

a. Provide a recommended approach for conducting monthly meetings that the Vendor must attend with the Department, other agencies, and other contracted MCOs. In your response, provide the following, at a minimum:

WellCare of Kentucky leadership, including our departmental directors for compliance, behavioral health, population health, quality improvement, pharmacy, and others have regularly participated in ongoing meetings with DMS and other state agencies, such as the Department for Behavioral Health, Developmental, and Intellectual Disabilities (DBHDID), the Department for Community Based Services (DCBS), and the Department of Public Health (DPH). While some of these formal workgroups have occasionally been placed on hold, we have always made it a priority to collaborate and inform DMS on key issues, initiatives, and results for our Enrollees in the Commonwealth.

Our leadership team and dedicated staff look forward to continuing that process through the formal meeting structure of the collaborative workgroups. **Figure C.2-1** describes the WellCare of Kentucky leadership team and the various Kentucky-based agencies and meetings we collaborate with to improve healthcare services and processes for all major stakeholders, community partners, and Enrollees.

LEADERSHIP & COLLABORATION

WELLCARE LEADERSHIP TEAM	COLLABORATIVE PARTNERS IN THE COMMONWEALTH
Benjamin Orris, Chief Operating Officer (COO)	The Department for Medicaid Services (DMS)
Howard Shaps, MD, MBA - Medical Director	The Kentucky Cabinet for Health and Family Services (CHFS)
Thea Rogers, PharmD - Pharmacy Director	The Department for Behavioral Health, Developmental, and Intellectual Disabilities (DBHDID)
Jerry Caudill, MD - Dental Director	The Department for Community Based Services (DCBS)
Rebecca Randall, MPA - Chief Compliance Officer	Managed Care Organization (MCO) Colleagues
Marketa Wills, MD - Behavioral Health Medical Director	The Department for Public Health
Lori Gordon - Senior Behavioral Health Director	Advisory Council for Medical Assistance (MAC)
Laura Betten, RN - Quality Improvement Director	Technical Advisory Committee (TAC)
Shannon Maggard - Population Health Director	Monthly Medical Director Meeting

Figure C.2-1 WellCare of Kentucky Leadership and Collaboration

i. Meeting formats the Vendor proposes that will result in successful collaboration.

To ensure successful collaboration with DMS moving forward WellCare of Kentucky's directors and executive leadership team recommends the following meeting formats:

In-Person Meeting Structure. An in-person meeting structure to be hosted at the DMS' office in Frankfort on a monthly basis or as the schedule dictates. With nearly a decade of experience in Kentucky, WellCare of Kentucky knows that taking the time to meet face-to-face with our colleagues, DMS, and other stakeholders provides the best opportunity to collectively come together and discuss the most significant issues and initiatives regarding the Medicaid population.

The following WellCare of Kentucky leadership has participated in ongoing collaborative meetings in the past, with some, such as the Pharmacy Director Workgroup still meeting on a regular basis.

- Ben Orris – Chief Operating Officer (COO)
- Howard Shaps, MD, MBA – Medical Director
- Thea Rogers, PharmD – Pharmacy Director
- Jerry Caudill, DMD – Dental Director
- Rebecca Randall, MPA – Chief Compliance Director
- Marketa Wills, MD, MBA – Behavioral Health Director
- Lori Gordon, LCSW, MBA – SKY Executive Director
- Laura Betten, RN, MBA – Quality Improvement Director
- Shannon Maggard, RN – Population Health Management Director

Targeted, Focused Meeting Groups. We recommend hosting smaller collaborative meetings based on subject matter with a targeted area of focus. This could include quality improvement initiatives, pharmacy solutions for antimicrobial stewardship and the better management of antipsychotics for children, and behavioral health-specific issues such as those pertaining to substance abuse and the ongoing implementation of DMS' SUD Waiver.

In both past and current collaborations with DMS such as the Pharmacy Director Workgroup, we have found that smaller, targeted subject-based meetings allow us to concentrate exclusively on more relatable technical aspects of each subject. A larger combined meeting, consisting of directors across all areas of care, may not adequately allow for enough time or detail for critical matters to be discussed.

With the implementation of this more streamlined structure (which resembles both past and current meeting formats but at a larger scale), we recommend that each workgroup reports their agendas and action steps up to the DMS' Operations Meeting.

This meeting format would allow us to work quickly and efficiently with the smaller, more subject-focused teams on policy development and new initiatives, while also maintaining open communication and sharing MCO updates with the Deputy Commissioner, the Director of Quality Outcomes and Oversight, as well as other Departmental staff. The Operations Meeting, as it does today, would also address high-level issues that require further discussion and escalation for resolution or to formulate next steps.

Regular Department Updates and Timelines for New Policies. At WellCare of Kentucky, our organizational structure promotes autonomy and independent decision-making. This facilitates our ability to maintain a flexible and nimble state of operational readiness that allows us to adapt and prepare for new policies. This process includes ensuring that the proper staffing, infrastructure, and approved processes are in place well before a new project or program begins provided sufficient lead time. Through a better understanding of the DMS' strategy and vision, we can align new program and policy implementations to meet DMS' need and established timelines.

Adhering to Contract Requirements. WellCare of Kentucky representatives attending monthly Operational meetings with DMS will include our Pharmacy Director, Medical Director, Quality Improvement Director, Population Health Management Director, Utilization Management Director, Dental Director, Behavioral Health Director, Compliance Director, or their designees and other appointed staff members, as needed. As a strategic partner to the Commonwealth since 2011, we have years' of experience collaborating with DMS, other Cabinet agencies, and our MCO counterparts and will continue to contribute our experience, staff, and processes to ensure the success of the workgroups, as well as our lessons learned regarding operational best practices.

Our dedicated team, including the aforementioned directors, will be prepared to present best practices for topics identified through collaboration with DMS and other MCOs, as requested. All meetings will be conducted in compliance with applicable federal antitrust laws. We acknowledge that DMS will establish the schedule for the meetings and may increase, cancel, or reduce the meetings, as needed.

EXAMPLES OF SUCCESSFUL COLLABORATIONS WITH THE COMMONWEALTH

The following examples represent some of the successful collaborations between WellCare of Kentucky and DMS.

DMS Operations Meeting. We participate in the monthly Operations Meeting hosted by DMS to discuss pressing issues, new initiatives, reporting, and policy changes. Our leadership team meets regularly to discuss ongoing operational, quality, population health, and utilization metrics, as well as brainstorm ideas regarding administrative, clinical, and process issues that affect WellCare of Kentucky, DMS, other MCOs, and local stakeholders. Our discussions in these meetings have led to several successful collaborations. For example, we recently provided in-depth data analysis that alerted DMS of potential issues with eligibility flags that were driving incorrect cost-sharing information to be published, and opportunities to improve the incarceration periods. Through our collaboration with DMS and their IT partners, we were able to assist with identifying the errors, making the necessary corrections to the state's enrollment system, and ensuring the issues were resolved. This improved the accuracy of the information we received on eligibility files for all Kentucky MCOs, not only WellCare of Kentucky's, which resulted in better service to all the providers and Medicaid Enrollees in the Commonwealth.

Additionally, we recently began presenting our quarterly and annual care coordination metrics and outcomes to DMS at the Operations Meeting; with emphasis on specific programs and initiatives we are implementing to achieve various programmatic outcomes. This presentation covers topics that include a utilization management operational overview for both physical and behavioral health; the top diagnoses, delivering facilities, and admitting facilities for WellCare of Kentucky Enrollees; emergency department utilization, costs, claims, and determent strategies; Enrollee and provider appeals; medication utilization; care and disease management metrics, including top conditions of Enrollees; and updates on all quality initiatives.

Monthly Medical Director Meeting. WellCare of Kentucky attends the monthly Medical Director Meeting to collaborate directly with the clinical leads from DMS and learn about new directives for the Medicaid program.

This meeting includes the following members:

- WellCare of Kentucky Medical Director
- WellCare of Kentucky Behavioral Health Director
- Other MCO Medical Directors
- DBHDID Medical Director
- DCBS Medical Director
- DPH Medical Director

Through our discussions and the project improvement plans (PIP) initiated at these meetings, we have contributed as a thought leader to bring innovative ideas to the table while collaborating with our colleagues to improve the health of all Kentucky Medicaid Enrollees. We cover topics that address significant areas of clinical importance, such as reducing Neonatal Intensive Care Unit (NICU) admissions, pharmacy initiatives, behavioral health issues and whole-person integration, opioid use disorder (OUD), and emergency department utilization, to

name a few. On occasion, we travel as a group to different community hospitals, medical facilities, and universities both in the Commonwealth and out-of-state to engage in clinical summits and to meet with local medical teams. The following examples describe a few of the successful collaborative PIPs initiated by the Medical Director Meeting:

- *Antipsychotic Medication Use in Children and Adolescents.* Running from 2014-2017, the PIP goals aimed to decrease the use of multiple antipsychotics in children and adolescents, decrease the use of higher than recommended dosages, and increase first-line psychosocial care, metabolic monitoring, and follow-up visits.
- *Prenatal Smoking.* Beginning in 2016, the prenatal smoking PIP is still in process, and aims to increase prenatal tobacco screenings and smoking cessation interventions, decrease the number of pregnant women who smoke, and establish and improve the prenatal smoking abstinence rate, as well as the number of prenatal smokers with follow-up care to monitor the success of the cessation interventions.
- *Reducing Potentially Preventable Hospitalizations and ED Visits for Ambulatory Care Sensitive Conditions (ACSC).* Initiated in 2019, the PIP includes ongoing collaborative meetings with DMS, IPRO, and representatives from each of the MCOs. The PIP goals include reducing the percentage of Enrollees (representing all age ranges) with hospitalization or emergency department visits for asthma, COPD, short-term complications of diabetes, and heart failure.
- *Management of Physical Health Risks in the Seriously Mental Ill Population.* We worked with the other MCOs to identify solutions to provide better management of physical health issues (e.g., hypertension, diabetes, asthma) for the serious mental illness (SMI) population. Through increased outreach and integrated care coordination for this population, and the recruitment of new providers throughout the Commonwealth, we saw a significant increase in the application of assessments, screenings, and interventions for physical health conditions.

Participation in MAC/TAC Meetings. WellCare of Kentucky and our leadership team regularly attends and participates in the Kentucky Medicaid Advisory Council (MAC) and the Technical Advisory Committee (TAC) meetings to offer our input, expertise, and recommendations. Consisting of 19 members from associations across the Commonwealth representing the entire continuum of care—dental, pharmacy, nursing, optometry, to name a few—the MAC provides a forum where we not only share valuable lessons, recommendations, and successes but also learn from the expertise and input from the council members and other local stakeholders.

In May of 2019, our Chief Operating Officer, Ben Orris, presented at the MAC on various topics to assist our stakeholders and state agencies with better understanding the value of managed care. The information presented included our care coordination and quality programs, improving health outcomes and access to care, community connections addressing social determinants of health (SDOH), pay-for-quality (P4Q) initiatives, provider partnerships and satisfaction survey results, funding of local programs and initiatives, progress on the integration of physical and behavioral health, and Enrollee service enhancements. Following the formal presentation, Ben fielded several questions from committee members.

On a similar note, we ensure our dedicated market subject matter experts (SME) regularly attend TAC meetings, which focus on more specific topics of interest such as dental, pharmacy, primary care, foster care, and behavioral health to provide focused support, based on years of local expertise and experience, to the various committees.

MCOs Working Together on Shared Project Improvement Plans (PIP)

WellCare of Kentucky has collaborated with the local MCO leadership teams on collaborative PIPs for several issues, including:

- Management of Physical Health Risks in the Seriously Mentally Ill Population
- Antipsychotic Medication Use in Children and Adolescents

Behavioral Health Operations Meeting. Our Behavioral Health Director for Foster Care Dr. Timothy Houchin and Executive Director for Foster Care Lori Gordon, have participated in the former behavioral health operations meetings and continue to provide recommendations to DMS on shared issues. For example, we recently provided an approach for using provider type and specialty fields to distinguish and identify behavioral health services and substance abuse services from non-behavioral health services. Throughout our participation in the operations meetings, we regularly presented on the topics of network adequacy, performance improvement plans (PIP), community advocacy, behavioral health and substance abuse expenditures, and utilization and payment measures. Working collaboratively with the other local MCOs in the Commonwealth, we developed the following tools and resources:

- *Managing Physical Health Risks in the SMI Population.* Together, we developed a behavioral health reference and resource toolkit for primary care providers (PCP) with recommended monitoring and screening; a provider assessment form for communication between providers; revised clinical practice guidelines (CPG) for SMI; and educational material for Enrollees with SMI and their friends and families.
- *Managing Antipsychotic Medication Use in Children and Adolescents.* Together, we developed a CPG for atypical antipsychotics in children and adolescents; a provider assessment, screening, and monitoring tool; educational mailings on assessment, treatment, and follow-up care to families with Enrollees newly prescribed an antipsychotic medication; and educational mailings to providers.

Leadership in Foster Care. Led by the future SKY Provider Relations Liaison Leann Magre, WellCare of Kentucky currently serves the single largest concentration of Foster Care and Adoption children across the Commonwealth. **With approximately 8,000 children under our care and guidance, we often know these children and their personal histories, goals, and barriers better than anyone else.** LeAnn has personally championed on behalf of our foster care children and their caregivers, and along with our dedicated team of professionals has worked closely with the Department of Community Based Services (DCBS) and other state agencies, such as the Child Review Program (CRP), on shared goals and program recommendations for nearly a decade. Under her direction, WellCare of Kentucky provides program recommendations to DCBS upon request and has developed formalized training for DCBS guardians and families to facilitate their understanding and access to all MCO resources.

Leadership in Pharmacy Initiatives. The currently active Pharmacy Director Workgroup has proven to be one of our most successful collaborative efforts with DMS to date. Our Pharmacy Director, Thea Rogers, PharmD, participates in monthly meetings focused on identifying and resolving some of the most pressing pharmacy-related issues affecting both DMS and the MCOs in the Commonwealth. Through this collaboration, we have worked on many successful initiatives, including developing uniform prior authorization criteria for buprenorphine and Hepatitis C, the creation of standardized pharmacy management dashboard for shared metrics and trending, and a streamlined policy communication process for informing local pharmacists. Most recently, we have initiated discussions with DMS regarding specific pharmacy cost outliers and identifying less costly medication alternatives to decrease wasteful spending.

ii. Examples of issues, ideas, and innovations that the Vendor thinks should be addressed during the initial three (3) to six (6) meetings, the rationale for each, and whether collaboration for each will require implementation of short-term and/or long-term solutions

The following section includes the issues, ideas, and innovations proposed by the WellCare of Kentucky leadership team as topics to be addressed during the initial three to six collaborative meetings with DMS. We acknowledge that meetings will be used to consider issues such as opportunities to improve health outcomes of Enrollees, addressing SDOH, and efforts for population health management.

Our leadership team chose to have our clinical and administrative thought leaders focus on four in-depth issues that significantly affect MCOs, our government partners, local stakeholders, and Medicaid Enrollees in the Commonwealth. The topics include both our ideas regarding the subject matter and innovations that are either currently available or that we believe are needed to address the issue. As requested, each example includes our rationale and addresses whether or not the collaboration requires the implementation of short-term or long-term solutions.

#1: ADDRESSING SUD AND THE OPIOID EPIDEMIC

Rationale

Substance abuse, particularly the diversion and abuse of prescription drugs, along with heroin and fentanyl, remains one of the most critical public health and safety issues facing the Commonwealth today. Over the past decade, the number of drug-related overdoses has been steadily on the rise in Kentucky—devastating families and communities, stretching social services resources, and negatively impacting economic growth. As part of DMS' SUD Waiver, WellCare of Kentucky is contracting with the 22 methadone clinics across the Commonwealth to increase access to medication-assisted treatment (MAT).

In addition, one of the many tragic results of the opioid epidemic is the ongoing impact of its effect on parents and their ability to safely care for their children. Unfortunately, this has caused a significant increase in the rise of children in the foster care system nationwide. From 2012 through 2015, the Commonwealth experienced a 13% increase in parental substance use as the primary reason for removing children from their homes and their families—the single largest reason for children removed from their homes and the largest percentage increase.

Children in foster care have an increased risk for SUD given their family history and the trauma experienced from watching their parents use drugs.

Implementation of Short-Term and Long-Term Solutions

Short and Long-Term Solutions

- Contract with the 22 methadone clinics across the Commonwealth as part of the implementation of the new SUD Waiver
- Collaborate with DMS and the other MCOs on the successful transition of new provider type categories developed for the SUD Waiver. This process includes discussing initiatives for provider education and identifying new providers through proactive outreach that can contribute services that support the SUD Waiver
- Collaborate with DMS, the University of Kentucky (UK), the CHFS, opioid use disorder (OUD) providers, and other MCOs in the Commonwealth on new initiatives
- Leverage our support, resources, and continued funding for treatment programs across the Commonwealth to contribute to the Commonwealth's goal of reducing overdose deaths by 40% over three years across the 16 counties from the Helping End Addiction Long-Term (HEAL) study
- Leverage our ACT for Opioids Program—a comprehensive suite of opioid misuse prevention and treatment program components, including expanded access to MAT treatment, evidence-based pharmacy point of sale (POS) edits for prescribing opioids, a low back pain management program, and predictive analytics to identify Enrollees at high risk for opioid misuse
- Continue developing our partnership with the Court Appointed Special Advocate (CASA) network to identify potential interventions to address opioid issues within the foster care system. By April 11, 2019, three focus groups will have completed with CASA in northern Kentucky, Louisville, and Lexington

Strategic Partners and Key Stakeholders

- CHFS
- University of Kentucky
- University of Louisville
- Justice and Public Safety Cabinet
- Other MCOs
- BHSO/Newly Covered Methadone Clinics

MCO Subject Matter Experts

- Behavioral Health Director
- Behavioral Health Director
- Medical Director

Goals and Outcomes

Goals:

- Align with the shared vision of the university and the Commonwealth of implementing SUD/OUD policies and treatment to reduce opioid-related overdose deaths by 40% over three years across the 16 counties involved in the HEAL study
- Implement value-based solutions through provider partnerships to treat individuals suffering from OUD with a comprehensive, holistic approach to whole-person care, including medical, psychological, and psychosocial interventions

Outcomes:

- Decrease and prevent opioid-related overdose deaths throughout the Commonwealth
- Through effective OUD treatment, reduce new cases of Hepatitis C, infectious endocarditis, and other complications of IV drug use. This includes the expansion of additional Syringe Exchange Programs (SEP) throughout the Commonwealth
- Increase access rates and the number of available providers providing MAT and other treatment services
- Through educational prevention programs, drive down the misuse of opioids by children in the foster care system, as well as prevent children from having to enter the system due to parents using opioids

#2: ENROLLEE DATA ACCURACY/FILE SHARING COMPONENTS (834)

Rationale

WellCare of Kentucky recognizes the importance of collaborating with the other health plans and DMS to reduce the complexity and improve the accuracy of the data exchanges between the stakeholders responsible for Enrollee care. Various organizations, such as the Department of Corrections (DOC), and the local health plans, often document and have access to updated Enrollee demographic data not reflected in the 834 file's data elements. Developing data exchanges to connect these "sources of truth" would improve the accuracy and timeliness of information used for Enrollee on-boarding, communications, care coordination, and claims processing.

In 2017, DMS placed more than 8% of our population in a warning or suspended enrollment status for having inaccurate address information, however, no process was ever created for using corrected address information attained by the MCOs to improve the accuracy of the 834 files. Additionally, the current 834 file includes historical data elements for every Enrollee that are not required for current adds, changes, or terminations in enrollment. This excess data causes processing times found to be 800% higher than other WellCare Medicaid health plan markets across the country. By including excess historical data, as well as other limitations on the 834 file, the system becomes at risk for data accuracy issues due to not having enough space to contain a comprehensive, accurate historical record for some Enrollees.

Most recently, DMS has emphasized identifying incarcerated Enrollees. However, as most of this information is self-reported, a notice of incarceration is typically not received until eight to ten months following the beginning of the incarceration (on average). We have identified

alternative approaches for ensuring that data is validated against official records. We have also developed proprietary methods for ensuring awareness of incarceration upon receipt of services to prevent situations where we are not informed until a much later date.

Lastly, other Medicaid markets provide significant data elements, including detailed termination reasons and a notification identifying the previous MCO. These data elements would help us evaluate process improvements that would increase Enrollee satisfaction and provide opportunities for better care coordination.

Implementation of Short-Term and Long-Term Solutions

Short-Term Solutions:

- Limiting the 834 files to current adds, changes, and terminations
- Adding additional dis-enrollment reason codes on the 834 file
- Alerting the current MCO to the identity of previous MCOs directly on the 834 file

Long-Term Solutions:

- Establishing an electronic feed between various CHFS departments to maintain accurate Enrollee data
- Developing a process for accepting and validating Enrollee data from the MCO. Example: As DMS updates third-party insurance information received from an MCO through their data monitoring process, we could develop a similar process whereby an MCO can attest to and validate pertinent information, such as corrected addresses, phone numbers, and email addresses

Strategic Partners and Key Stakeholders

- DMS
- DOC
- DCBS
- Office of Administrative and Technological Services
- Other MCOs

MCO Subject Matter Experts

- Enrollment Manager
- Operations and Enrollment Project Manager
- Application Development Director
- Application Development Manager
- Strategic Market Analysis Director

Goals and Outcomes

Goal:

Reduce Kentucky's inaccuracy of Enrollee data records to less than the current estimated 15% through electronic data exchanges from state departments and health plans

Outcomes:

- Improve delivery of written communications from the use of current and alternate addresses
- Improve ability to initiate on-boarding communications and care coordination outreach telephonically with current phone numbers
- Expedite identification of incarceration and increased accuracy, resulting in reduced payment of ineligible dates of service and decreased provider abrasion due to inaccurate identification

Goal:

Revise the content of the 834 file to include only the information necessary to process changes or terminations

Outcomes:

- Reduce the current processing time to levels comparable with other markets
- Reduce the potential error rate of isolating the most current Enrollee data elements, or from missing historical data that has been omitted due to lack of space
- Obtain better explanation codes for enrollments and dis-enrollments to coordinate transitions of care and understand Enrollee choices
- Reduce the size of the electronic records to be stored, maintained and protected

#3: INCREASED ACCESS TO TRANSPORTATION SERVICES

Rationale

Feedback from our local Community Impact Councils (CIC) held throughout the Commonwealth has consistently identified increased access to transportation services as a critical need in several counties, and the number one need in eight counties, including Caldwell, Hopkins, Knox, Laurel, Mercer, Muhlenberg, Perry, and Whitely. Transportation plays a significant impact on helping Enrollees address their comprehensive, whole-person needs through regularly attending medical appointments for their physical and behavioral health co-morbidities and chronic conditions.

As evidence of this need, WellCare of Kentucky has provided more than 48,000 transportation-related service referrals to Enrollees who require assistance traveling to medical appointments, the grocery store, employment, food pantries, and community agencies that provide resources to address SDOH. Before we connect an Enrollee to a local, non-profit community partner for transportation services, we assist the Enrollee with the process for qualifying for a transportation request with DMS and the entity directing the non-emergency medical transportation (NEMT) program. As many Enrollees do not qualify for transportation services (e.g., car title but the vehicle is not operational, a family member needs vehicle for work), we then assist by leveraging our community partners. To date, we have provided more than 23,000 non-billable medical transportation services for cases such as these.

In addition, the CIC hosted in Muhlenberg County resulted in a medical voucher program (MVP) in partnership with Pennyrile Allied Community Services, Inc. (PACS) for individuals with limited

income to use for transport that addresses their whole person needs (e.g., dental, vision, hearing, pharmacy, and behavioral health). We then expanded the voucher program to other counties, including Hopkins and Caldwell and the remaining seven PACS service areas. Before the program was established, PACS personnel would spend valuable time attempting to identify available resources to meet the transportation needs of their clients. Now they can instantly schedule a ride anywhere in the region—**between July 2017 and March 2019, 1,614 WellCare of Kentucky Enrollees received 36,969 total services.**

To show the impact that transportation has in these regions, we found that on average, Enrollees accessing PACS transportation services have 3.5 chronic conditions, including 66.2% with hypertension; 34.1% with asthma; 35.9% with diabetes; and 31.4% with obesity. In addition, we found Enrollees to have 1.5 behavioral health conditions, including 42.8% with depression; 53.4% with a mental illness; 18.0% with severe mental illness; 12.4% with bipolar disorder; and 16.2% with substance use issues.

Upon one year of increased transportation services in the region for Enrollees with diabetes, we found a 17.4% reduction in emergency visit costs; 12.6% reduction in emergency visits; 41.4% reduction in non-emergent emergency visits; 38.9% reduction in inpatient admissions; and 36.3% reduction in hospital stay days. For Enrollees with asthma, we observed a 43.2% reduction in inpatient admissions, 63.9% reduction in hospital days, and 72% reduction in visits related to asthma exacerbations.

Implementation of Short-Term and Long-Term Solutions

Short Term Solutions:

- Expanded services to support community partners providing transportation
  - Example: Similar to the PACS MVP program, we implemented another program in the Knox, Laurel, and Whitley counties. Through a partnership with Rural Transit Enterprise Coordinated, Inc. (RTEC), a “Healthy Stop Program” was established to provide transportation that focused on healthy food access, education assistance, and employment assistance

Long Term Solutions:

- Continue to improve the current system with innovative supports to increase utilization for individuals in need
- Increase access to community resources by expanding destinations that are billable
- Decrease barriers to transportation access:
  - Example: Individuals who have a car in their name but have not actually owned the vehicle/had tags in the system for X amount of time to remove barriers that exist for service utilization of the current program
  - With new legislation for both community paramedicine and telemedicine, we can leverage the resources of WellCare Health Plans, Inc. (WellCare) to implement new initiatives at their health plans in other states that help alleviate the transportation burden

Strategic Partners and Key Stakeholders

Our past CICs included input from the following organizations based on their local knowledge of the

needs in the community. WellCare of Kentucky will leverage their local knowledge and support in future transportation initiatives that will build upon the services we already provide.

- *Mercer County:* Bluegrass Community Action Partnership, Mercer County Health Department, Goodwill Industries, Mercer County Elementary, Mercer County Community Endowment, Salvation Army, Mercer County Extension Office, Southern KY AHEC, Bluegrass.org, Haggin Hospital, Saint Barnabas church, Harrodsburg Health and Rehab, Heritage Hospice, Mercer County Board of Health, Passport Health Plan, Caresource, United Way of the Bluegrass, Ampersand Sexual Violence Resource Center, SkillsU Mercer County, Mercer County Public Library, Bluegrass Community and Technical College, and Mercer County Intermediate School
- *Knox County*: Barbourville ARH, PACT, Knox County Health Department, Lay Family Resource Center, Berea College PFE, PACT/KRHIT, KCEOC, St Joseph London, Bluegrass Care Nav, American Cancer Society, and Rural Transit Enterprise Coordinated, Inc.
- *Laurel County:* PACT Program, DCBS, UK TAP, St Joseph's London, South Laurel High School Youth Service Center, Laurel Health Department, Laurel County Life Center, Mollie Harris, and ASAP
- *Whitley County:* Senior Citizens Center, Whitley County Health Department, Office for the Blind, Bell-Whitley Community Action Agency, Baptist Health Corbin, DaySpring, SNAP-ED, Cumberland River Victims Services, and Home Health
- *Muhlenberg County:* Felix Martin Foundation; Hope2All; Chamber of Commerce; UK Extension; Muhlenberg County Health Department; Sanctuary; Bremen FRYSC; Community Health Clinic; Pennyroyal; and Muhlenberg County Baptist Association
- *Hopkins County:* Elizabeth's House; Hopkins County Health Department; Pennyroyal; Saint Vincent DePaul; Madisonville Housing Authority; and Pennyrile Allied Community Services
- *Caldwell County:* UK Extension; Caldwell County FRYSC; PACS; Housing Authority of Princeton, Living Hope Ministries; Caldwell County FRYSC; Princeton City Council; and the Mayor of Princeton

MCO Subject Matter Experts

- Community Engagement Partners—for ongoing development of the PACS program and as a thought leader for developing similar programs in different regions of the Commonwealth
- Community Engagement Senior Manager
- Operations Director

Goals and Outcomes

Goals:

- Increase access to PCP
- Increase access to other medical care providers
- Increase access to pharmacy services
- Increase access to social resource organizations

Outcomes:

- Reduce non-emergent ED visits
- Reduce inpatient admissions

- Reduce hospital days
- Reduce overall costs of healthcare utilization
- Remove barriers to receiving services (medical and non-medical)
- Increase compliance with medications and healthy behaviors
- Increase access to social resources (healthy food, financial assistance, etc.)

#4: HEPATITIS C PREVENTION

Rationale

Incidence and prevalence rates in the Commonwealth indicate that significant improvement for the management and prevention of Hepatitis C has become a critical need. The leading cause of liver transplants in the country, Hepatitis C-related complications cause an estimated 19,000 deaths each year.

While Hepatitis C can be cured, the cost of treatment is expensive. Nationwide, individuals with Hepatitis C account for 2.8 million hospital stays at the cost of more than $15 billion annually, with publicly insured individuals and non-whites bearing a disproportionate burden. According to CHFS, Kentucky's Medicaid program spent $69.7 million on pharmacy claims to treat 833 beneficiaries ($83,735/individual) in the last fiscal year.

With no vaccine to prevent Hepatitis C, the best method to help the people of Kentucky and decrease Medicaid spending is through prevention, which includes decreasing unhealthy behaviors that spread the disease, such as drug injections. Today, we see increased intravenous drug use by individuals sharing syringes to inject heroin and other substances as the current opioid epidemic continues to drive new Hepatitis C infections across the Commonwealth. According to the Centers for Disease Control and Prevention (CDC), Kentucky reported 1,089 new cases of Hepatitis C—the most per capita in the entire country and more than twice the national rate.

Hepatitis C is caused by the sharing of needles typically used by individuals using drugs, who subsequently have a high incidence of contracting the virus. As one of the states hit hardest by the national opioid epidemic, the people of Kentucky struggle with high rates of addiction, overdose deaths, and Hepatitis C. The CDC analyzed measures that include overdose deaths, per capita income, unemployment, and sales of painkillers to determine which counties in the nation were at the highest risk for a disease outbreak. **Of the 220 most vulnerable counties in the nation, 54 are in Kentucky—with the majority located in the southern and eastern regions of the Commonwealth.**

Recent studies show the success of implementing syringe exchange programs (SEP) to reduce the spread of Hepatitis C, which allow individuals using drugs to trade dirty needles for clean needles. Given the number of individuals affected by the opioid epidemic, these programs can help those with addiction issues prevent the spread of disease to others. Unfortunately, many of the counties at risk for a disease outbreak have not approved a SEP for their region.

Currently, WellCare of Kentucky serves over 430,000 Enrollees. Within that population, we are tracking and monitoring the following data:

- 7,542 (1.68%) have a Hepatitis C diagnosis

- 215 (2.89%) utilize treatment through Medicaid
- Total Cost = $3,186,908 for May 2019 (PMPM $7.17)
- 475,544 prescriptions for opioids in 2018 = $19,116,540 in costs

Implementation of Short-Term and Long-Term Solutions

Short-Term Solutions:

- Assist the four local health departments (LHD) approved for SEPs with the implementation of the SEP program and operational start-up logistics. This includes Hopkins, Taylor, Scott, and Bath counties that we support through the WellCare of Kentucky LHD liaison responsible for coordinating face-to-face meetings and ongoing communication with the LHD. ***We provided a $1,500 grant to the Barren River District Health Department to support their Hard Reduction Needle Exchange program.*** This program provides needle exchange, education, and referral services for the Barren, Butler, Edmonson, Hart, Metcalfe, Simpson, and Warren counties.
- Increase use of the HCV screening across the Commonwealth, specifically the University of Kentucky (UK) hospital's universal screening for use in emergency departments across the Commonwealth.
- Enhance efforts that raise awareness, including education, literature, media, and events focusing on Hepatitis C prevention for the public, WellCare of Kentucky Enrollees, healthcare providers, social service partners, and elected officials. Our local community engagement partner in eastern Kentucky attend regional Help End Addiction for Life (HEAL) meetings in Perry, Letcher, Harlan, and Owsley counties to discuss Hepatitis C prevention and treatment. HEAL meetings bring together thought leaders and local support staff that includes the UNITE Coalition, ASAP Board, LHD staff, community health workers, and FQHCs, as well as physicians and clinic and hospital administrators

Long-Term Solutions:

- Support the 59 remaining LHDs for the approval of the SEP, with the focus on the most vulnerable counties (Bell, Leslie, Clinton, Knot, and Estill) through our LHD liaison to coordinate face-to-face meetings and communication
- Expand the number of healthcare providers trained and qualified to care for individuals infected with HCV, especially in rural Appalachian regions. These activities include collaboration with specialists, universities, and hospitals to develop “pop-up” HCV Clinics in the underserved counties of eastern Kentucky for screening and treatment assistance
- Explore the implementation of telehealth as an option to connect Enrollees in rural areas with specialists located in urban areas of the Commonwealth
- Collaborative outreach to Enrollees with chronic Hepatitis C infections for treatment assistance and referrals for additional services. These activities include community resources, related therapies, drug treatment, and MAT

Strategic Partners and Key Stakeholders

- CHFS and LHDs
- DMS

- Other MCOs
- Healthcare Providers: family practitioners, internists, pediatricians, hepatologists, substance use providers, etc.
- Public Universities: University of Louisville and University of Kentucky
- Substance use counselors
- HepConnect/Harm Reduction Coalition
- Sobriety Treatment and Recovery Teams (START)
- Drug Court
- Kinship Families Coalition of Kentucky
- Local churches and other organizations

MCO Subject Matter Experts

- Behavioral Health Senior Director
- Behavioral Health Director
- Medical Director
- Quality Improvement Director
- Community Engagement Senior Manager
- Care Coordination Senior Director
- Pharmacy Director

Goals and Outcomes

Goal:

Increase the number of SEPs in Kentucky and raise awareness through education, media, literature, events, and expanded access to providers capable of treating Hepatitis C

Outcomes:

- Increase the treatment utilization of Hepatitis C prescriptions to reduce Hepatitis C co-morbidities (e.g., liver disease, cirrhosis, and liver transplants)
- Decrease hospitalizations with Hepatitis C as an underlying diagnosis
- Decrease the number of opioid prescriptions

b. Describe lessons learned from similar collaborations that the Vendor has experienced, and how those could be applied in moving forward with monthly meetings.

As described below, the lessons learned throughout our tenure as the leading MCO in Kentucky have proven invaluable to the development of new initiatives driven by collaboration with DMS and other state agencies.

LESSON LEARNED #1: ONGOING COLLABORATION AND INTEGRATED MEETINGS LEAD TO POSITIVE RESULTS, AND THE RESOLUTION OF COMMON ISSUES AND PRIORITIES.

In our experience, the current Pharmacy Director Workgroup has been one of the most successful ongoing collaborations between DMS and the MCOs in the Commonwealth. Our Pharmacy Director, Thea Rogers, has participated in these ongoing monthly meetings and seen

firsthand the importance of working collectively to identify common issues and develop collaborative solutions that benefit the Medicaid Enrollees throughout Kentucky.

With the focus on helping our Enrollees receive better care and access resources that improve their quality of life, we have learned that regular contact with our peers sustains the ongoing critical discussion that helps us identify serious issues and develop solutions based on the input and expertise of every committed stakeholder involved in the process. The following examples describe the successes of this collaboration experienced by Dr. Rogers and her peers:

- *Uniform Prior Authorization Criteria.* The workgroup collaborated on developing uniform prior authorization criteria for buprenorphine and Hepatitis C products to streamline the process and approach for managing these particular therapies. The project began when Dr. Rogers communicated with the state medical director, who had concerns about Enrollee access to these medications. We identified a region of the Commonwealth that had little to no access to specialists required for prescribing based on our Hepatitis C criteria. Although we later found there were several local providers who received additional education and training to obtain the necessary certifications, this information was not readily available using the standard National Provider Identifier (NPI) credential search. Dr. Rogers worked with the medical director and our prior authorization review team to develop a solution that would facilitate access to these medications for our Enrollees. As a result, prescribers now provide attestation for their training and receive prior authorization approval for prescribing these medications.
- *Pharmacy Management Dashboard.* The workgroup collaborated on the development of a pharmacy management dashboard that contains a set of consistent metrics used to compare trends across the pharmacy program.
- *Streamlined Policy Communications.* Understanding that it can sometimes be difficult for local pharmacists to understand and implement new policies, the workgroup met to develop a standardized communication approach to educate pharmacists about the new cost share requirements. This issue was brought to our attention by a WellCare of Kentucky Enrollee who needed their medication but did not have the ability to meet the costs of the associated co-payment. As a result, the communication letter that we used to address this issue with our pharmacy network was brought to DMS and approved for use by all MCOs regarding filling medications for Medicaid beneficiaries at or below the Federal Poverty Level (FPL).

Applying Experience to Future Meetings. As our Kentucky leadership team meets regularly to discuss the success of such workgroups, we realize that several clinical areas have not received as much attention or have suffered from a lack of consistency through no fault of the MCOs, DMS, or other stakeholders. Moving forward, we are eager to model our approach to ongoing meetings to meet the renewed expectations of the contract and dedicate our health plan directors and their teams to attend consistent meetings with DMS and our MCO peers. Through these meetings, we believe that enhanced, bi-directional communication with DMS will help our health plan tailor our strategic pursuits, innovations, and solutions to the goals and priorities of DMS.

In addition, we also recommend the implementation or expansion of smaller workgroups, such as the Uniform Policy Workgroup to include other clinical disciplines that can address broader issues. By creating cross-functional, integrated teams or workgroups, we would engage behavioral health, medical, and quality directors, as well as the provider community, to develop solutions that address whole-person care and take into consideration all aspects of health. Lastly, we would use this experience to implement dedicated timelines and establish accountability at each meeting to ensure that our collective initiatives move forward toward their ultimate goals.

Most recently, we have contacted DMS to begin working on an issue regarding cost outliers. Certain cost outliers identified through pharmacy reporting may be impacting pharmacy cost trends for the Fee-For-Service (FFS) program and the MCOs in the Commonwealth. Discussion includes evaluating less costly alternative medications to use instead of expensive pharmacy products that may be contributing to wasteful spending practices for the Medicaid benefit.

LESSONS LEARNED #2: THE IMPORTANCE OF TAKING THE INITIATIVE TO IDENTIFY INNOVATIVE SOLUTIONS TO COMPLEX PROBLEMS.

As WellCare of Kentucky and our MCO counterparts in the Commonwealth understand, serving the most vulnerable populations means continually building creative solutions to fix complex problems that are often made more difficult by a lack of resources or funding. Through our experience collaborating with DMS, we have learned that new ideas are always encouraged and although some may fail, the process of innovation allows us to keep striving toward the development of better programs to improve the quality of life and sustain healthy outcomes for our Enrollees. Many of the programs developed by WellCare of Kentucky, and collaborated on with DMS, have evolved into national initiatives, which WellCare implemented at our affiliate Medicaid health plans across the country.

For example, following the success of the Kentucky One Provider-One Pharmacy program (formerly known as the lock-in program), We began implementing lock-in through enhanced care coordination services and increased access to MAT across all the Commonwealth's health plans. **In 2018, WellCare of Kentucky saw a 27% drop in opioid utilization, with a 47% increase in MAT services, a 25% increase in maintenance medications, and a 33% decrease in emergency department utilization.**

Today, the One Provider-One Pharmacy program has evolved into WellCare's national ACT for Opioids Program, which is responsible for an entirely new, comprehensive suite of integrated services that help us prevent and treat opioid conditions for our Enrollees. Moving forward, WellCare of Kentucky has plans in place for implementing components of this program in Kentucky, including alternative pain management solutions, expanded access to the One Provider-One Pharmacy Program with referral to care coordination, specialized care management for low back pain, and earlier identification of Enrollees at-risk for opioid use or dependency through predictive analytics.

Knowing that the status quo is never enough, our Kentucky leadership team continuously discusses and brainstorms new ideas to help our most vulnerable Enrollees. For example, our team, led by Provider Relations Liaison for Foster Care, LeAnn Magre, realized that we needed to develop enhanced support processes and community linkages for children in the foster care system with autism. Often, children in foster care with complex medical conditions experience difficulty finding a reliable support system and living arrangements. To address this, we approached DMS with an idea to help these children find a reliable and sustaining living arrangement where they could receive comprehensive support for all their needs. As a result of DMS' valuable feedback and eventual approval for the new pilot program, we developed services along with Key Assets Kentucky, a behavioral health and child caring company, which helped find a place for children with autism in the foster care system a reliable place to live. Most often, these children could not leave facility level care and transition back into the community. The following describes some of the key highlights of the initiative:

Key Assets Kentucky Collaboration

Beginning in 2013, WellCare of Kentucky partnered with Key Assets to help find sustainable living arrangements for Enrollees with autism in the foster care system. As a result of what came to be known as the James Project, the success of the program has led the Department to implement these services across all MCOs in the Commonwealth.

- *Process Development.* Our team established clinical components of the program, identified best practices, determined the services descriptions and corresponding CPT codes, developed an appropriate reimbursement process, and addressed Enrollee-specific needs.
- *Program Implementation.* We educated DMS and our state partners on the expectations and goals of the program. In 2014, the first Enrollee successfully transitioned from a facility level of care into a foster home. From that day on, the program became known as The James Project.
- *Program Outcomes.* Together, WellCare of Kentucky, DCBS, and Key Assets presented our project outcomes at a national conference called The Family Focused Treatment Association (FFTA). In total, we covered benefits for ten Enrollees until 2018, when DMS took over responsibility for treatment costs. Today, eight WellCare of Kentucky enrollees remain in the program.
- *Program Expansion.* Upon taking over the responsibility of the treatment costs, DMS had an opportunity to learn in depth about the services provided and the ongoing costs involved. Realizing not only the success but the importance of the James Project, DMS is standardizing the services and transitioning responsibility back to the MCOs in the Commonwealth. To prepare for the transition, we have initiated meetings with Key Assets to proactively identify the applicable services, service codes, and the utilization management process for service approval, discharge planning, and quality reviews.

Applying Experience to Future Meetings. Moving forward, we will leverage our workgroup meetings with DMS and our peers as a forum to bring new ideas and initiatives to the table for discussion. Through ongoing collaboration and enhanced bi-directional communication with DMS, we hope to learn about the major goals and pain points that DMS would like to address in the near and long-term future.

LESSON LEARNED #3: LEARNING TO LEVERAGE EXISTING TECHNOLOGIES AT WELLCARE HEALTH PLANS TO ASSIST THE DEPARTMENT AND OTHER MCOS IN THE COMMONWEALTH.

We promote the importance and use of data analytics and regulatory reporting across our entire operations to access already established and proven resources from other WellCare health plans. During our time in Kentucky, we have provided leadership and guidance to enhance reporting capabilities through the ongoing assessment and adjustment of standard reporting features used by DMS. For example, WellCare of Kentucky has provided leadership and expertise in the realm of behavioral health reporting by working hand-in-hand with DMS and DHBDID to share our advice and recommendations. Through this collaboration, we have emphasized the significant role of reporting across managed care plans, which when done well, provides valuable insight on all areas of health services and supports, including successes, gaps in care, and areas for improvement.

To streamline this process, we realized that DMS could benefit from the guidance of a reporting subject matter expert to assist them with complex reporting processes. To help, we leveraged an IT reporting specialist from the corporate office to assist DMS with accomplishing their reporting goals. We also assessed the reporting process across other WellCare Medicaid managed care plans similar to our Kentucky health plan in both size and scope. From there, we pulled together a standardized regulatory reporting package and presented it to DMS for evaluation and possible implementation at the state level. DMS was able to streamline the reports required by the MCOs, relieving administrative burden and making the current reporting package more impactful.

Applying Experience to Future Meetings. Although we have made great progress toward an enhanced and standardized approach to reporting in the Commonwealth, we would like to apply this experience and continue to work collaboratively with DMS and other MCOs to develop a uniform reporting process. The goal would be to improve operational reporting structures for utilization management, claims, call centers, and other functional areas and ensure that MCOs are providing data in a consistent and comparable format. In adherence to Section 37.0 Contractor Reporting Requirements, we support DMS' initiative and request of the MCOs to leverage existing technologies and reporting capabilities to develop a comprehensive reporting package through the collaborative process. For more information, we have described our proposed reports, templates, and MCO-collaboration process to ensure consistent and comparable reporting in Section C.27 Contractor Reporting Requirements for the comprehensive, DMS-accepted reporting package.

3. Capitation Payments

4. Financial Security Obligations

WellCare®
Beyond Healthcare. A Better You.

C.4. FINANCIAL SECURITY OBLIGATIONS

a. Describe how the Vendor will comply with net worth, solvency, and surplus requirements.

b. Provide documentation of lines of credit that are available, including maximum credit amounts and available credit amount.

c. Describe any risk arrangements the Vendor proposes to have with providers for contracted services and describe oversight of such arrangements.

C.4. FINANCIAL SECURITY OBLIGATIONS

OVERSIGHT

Through our Kentucky-based **Provider Engagement Model (PEM)**, our Provider Relations Representatives (PR Reps) manage the provider relationships, making in-person visits to review care needs in collaboration with Quality Practice Advisors (QPAs) and engaging providers and practice managers in Joint Operating Committee (JOC) meetings. Our QPAs collaborate with physicians and office staff through in-person visits in closing care needs, which in turn help our providers succeed in their PIP arrangements. Our Patient Care Advocates (PCAs) are co-located in select high-volume provider offices and assist in scheduling appointments for targeted Enrollees with identified care needs. As care needs are closed, providers become more successful under their PIP arrangements. Our Care Managers support Enrollees following discharges from the hospital to prevent readmissions, which would adversely impact a provider's performance under a shared savings contract.

As part of our PEM, we assign a **Practice Transformation Specialist (PTS)** to supply providers with enhanced tools and information, such as our AccuReports and our Enterprise Provider Dashboard (EPD) described in detail below. This information helps providers understand their earnings opportunities relative to care needs and allows providers to focus on delivering better care to Enrollees. The PTS further assists providers in achieving high quality practice status through support of care coordination and enhance data analytics that help providers migrate to higher levels across our continuum of risk arrangements available to them. The PTS performs root cause analysis to understand both positive and negative outcomes against goals and benchmarks, taking into consideration PIP opportunities, provider participation rates, Enrollee/PCP engagement, provider feedback, quality measurements such as HEDIS, reductions in potentially preventable events and total cost of care, adjusting the individual PIP program accordingly. The PTS also continuously performs reassessments, using our formal PIP assessment tool described below.

Providing Data and Reporting Tools to Help Drive Behavior Change

At the core of our PIP is a dedicated DataMart platform integrated with our production environment that captures medical claims, pharmacy claims, vendor encounters, enrollment, accounts payable system and provider data. Provider groups under a PIP arrangement can securely access a front end interface that displays detailed data feeds or aggregate reporting to monitor performance. With the goal of improving Enrollee health and assuring that services are occurring at the right time, in the correct location, and for the appropriate duration, it is critical that providers have access to data and information to help them succeed. WellCare developed a suite of reports to help support providers in PIP arrangements. Examples of these reports include:

AccuReports: Our proprietary AccuReports system was specifically designed for providers who have entered into a value-based purchasing shared savings / shared risk arrangement with quality incentive payments. It gives providers insight into performance and patient data. AccuReports is available to providers via a secure site provided by WellCare. It provides information on Enrollees who have been readmitted within less than 30 days, Enrollees incurring high costs, and Enrollee pharmacy utilization.

P4Q Portal Reports: Our P4Q portal reports including web portal and drill down capabilities, which QPAs and PR Reps provide to WellCare of Kentucky providers monthly, provide a snapshot of the care needs for their Enrollees tied to performance payments, allowing them to prioritize those measures that will result in the most improved Enrollee health outcomes.

Performance Scorecards: Custom monthly scorecards monitor provider performance and calculate performance-based payments based on a specific set of quality measures tailored to the provider.

Members without PCP Visits for 16 Months: Included with the respective Enrollee PCP information, this is a detailed list of WellCare of Kentucky Enrollees who have not had a PCP visit with the last 16 months. It is the PCP that is the driver or the hub for the Enrollee's preventive and primary care initiatives. Routine PCP visits contribute to healthier Enrollees, and conversely lower cost. This report is distributed monthly via in-person PR Rep visits, email and/or secure FTP.

ER High Utilizer Report: For the last 12 rolling months, this report reflects the Enrollees who are assigned to the respective provider group and/or IPA who have utilized the Emergency Room (ER); how many visits they have had; which hospital they have utilized; when the last ER visit was; what their most frequent diagnosis was during all of their visits; and how much WellCare of Kentucky has paid for the Enrollee's ER utilization during the respective number of ER visits. This report helps the PCP to address any non-emergent conditions the Enrollee may have, educating the Enrollee on the cost benefits of coming to the PCP office for non-emergent conditions. This helps the PCP develop a long term care plan to help improve the Enrollee's health. This report is distributed monthly via in-person PR Rep visits, email and/or secure FTP.

30-Day Readmission Report: This report reflects Enrollees who have been readmitted to the hospital as inpatient within the last 30-days. It reflects detailed information regarding both admission and re-admission including the facilities of both admissions, diagnoses, DRGs, and respective amounts paid. This report gives the PCP insight into any unresolved health issues that may contribute to poorer quality outcomes and higher costs. This report is distributed monthly via in-person PR Rep visits, email and/or secure FTP.

High Cost Member Report: This report reflects Enrollees who have claims over $50,000 (catastrophic claims) for the last 12 months. It includes any claim with the amount paid over $50,000—inpatient hospital, outpatient/ER hospital, physician office, or pharmacy. This report allows the provider group/IPA to see which Enrollees are the more expensive (and, conversely have a greater impact on their Value-Base Contractual arrangement), and how better can the Enrollee's care be tailored to help improve quality outcomes while helping to mitigate cost. This report is distributed monthly via in-person PR Rep visits, email and/or secure FTP.

Care Needs Reports: The Care Needs Report shows which outstanding Care Needs exists on which specific Enrollee, allowing the provider to address the outstanding Care Needs to help improve quality outcomes. This report is distributed monthly via in-person QPA visits.

Pharmacy Utilization Reports: These reports reflect a provider's generic dispensing rate (which helps mitigate cost), 90-day fills (also helps mitigate cost and improves Enrollee compliance) and breaks down the provider group's/IPAs individual prescriber profiles, which helps address

any therapeutic equivalent recommendations and ensure the Enrollee receives exactly the same care but at a much less cost. These reports are distributed to providers through monthly meetings with our pharmacy leadership and via secure email and FTP sites.

Enterprise Provider Dashboard (EPD): The EPD provides a single place for providers to access cost effectiveness, quality scorecards/care needs, utilization, Enrollee demographics (risk score), and other population health data for managing total cost of care and outcomes. EPD is a living dashboard that updates on a weekly basis as new information is available.

OPUS Specialty Provider Dashboard: WellCare of Kentucky leverages episodic grouper logic to assess the cost efficiency of specialists in Orthopedics, Cardiology, Neurology, Podiatry, Pulmonology, and OB/GYN using the OPUS Specialty Provider Dashboard. By comparing actual costs against expected costs for a specific episode, WellCare of Kentucky is able to identify efficient specialists and can share that insight with PCPs with the goal of reducing the overall cost of care. In addition, it allows WellCare of Kentucky to compare specialists against their peers within the same specialty by grouping treatment and services into risk-adjusted medical condition-based episodes. This level of analytics, in combination with traditional utilization metrics (ER/1000, IP/1000, MWOV), helps create a complete and holistic picture of healthcare costs for the PCP and in turn, allows us to create efficiencies that benefit our Enrollees. New claims data is provided quarterly through this system.

Example of a Full Risk Arrangement and Supporting Oversight

JenCare is an advanced partner in other states that was recruited to come to Kentucky to serve our Medicare and Dual Eligible Enrollees. We entered into a full-risk arrangement with JenCare, adopting best practices they had implemented with their successful Medicare VBP arrangements, and sharing these with our Medicaid practices.

Oversight

JenCare had a large amount of Enrollees for whom we did not have updated contact information, creating a challenge in completing recommended preventive care visits and keeping accurate medical records. This was adversely affecting providers' ability to close care needs and improve quality. To address this, and to ensure JenCare's success, **WellCare PR Relations staff and QPAs** have worked closely with the practices to review their quality metrics and make suggestion for improvement. We created a welcome letter for JenCare to introduce new Enrollees to the practice and to encourage them to make an appointment with a JenCare physicians. In addition, we used our new **Unable to Contact (UTC) Reach program** to locate Enrollees for whom we did not have updated contact information. **WellCare Health Coaches** also outreach to Enrollees who have been unable to contact to assist them with making appointments. WellCare developed the **suite of reports** mentioned in section a. above to address JenCare's need for clinical, utilization and financial data.

Measurable outcomes

As a result of the efforts listed above, JenCare has achieved an MBR of 78.7% while still improving overall quality.

Lessons learned

By working with JenCare, we learned that access to data is key. This is why we share the suite of reports, discussed above, with all of our large Medicaid practices and IPAs that are participating in a shared savings VBP. We also learned the importance of assisting providers in locating Enrollees that have been unable to contact in order to successfully engage with and provide care to these Enrollees. This includes monitoring claims activities to validate if an Enrollee has engaged in care with another PCP and should therefore be reassigned to another practice.

C.4 Financial Security Obligations

- Attachment C.04.b Centene Lines of Credit Agreement (Provided Electronically)

5. Third Party Resources

C.5. THIRD PARTY RESOURCES

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 14 Third Party Resources of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

As an experienced managed care partner with a strong TPL process established in 11 other Medicaid states, our approach to meeting DMS' expectations and requirements starts with taking full responsibility for identifying and pursuing Third-Party Liability (TPL) for our Medicaid Membership. We make every reasonable effort to identify and coordinate both cost avoidance and recovery with all third parties with whom Members may have a claim for payment or reimbursement for services. Third parties may include Medicare, any other group health insurance, any coverage under governmental programs, and any coverage required to be provided for by state law. In cases of accident-related subrogation, WellCare also pays and chases casualty and liability insurance carriers. We perform cost avoidance and TPL identification activities under our well-defined, highly audited policy, TPL Avoidance and Recovery WHP CR20R006-PR-011 and procedure WHP C6PI-006-PR-001 that conform to all federal and state requirements. This policy is available for review and approval by DMS.

THIRD-PARTY LIABILITY AND COORDINATION OF BENEFITS

In 2019, the WellCare COB team cost avoided over **$241 million** for the Kentucky market. The 2019 KY TPL Avoidance goal was $220 million.

Properly coordinating benefits and Third-Party Liability (TPL) is a critical step in ensuring there are no erroneous, wasteful, and duplicate payments. WellCare recognizes that Medicaid is the "payer of last resort" and has built detailed processes for ensuring TPL payment information is captured and used appropriately. Our coordination of benefits (COB) process begins with identifying sources of TPL by various means. We collect other health insurance information through a variety of sources including:

- State eligibility files (834 HIPAA transactions)
- State TPL files
- Provider claims with an explanation of payment (EOP) attachment
- The Member himself/herself as part of initial enrollment activities
- Member involvement in routine follow-up questions by telephone

We validate all other sources of TPL information via 270 electronic eligibility inquiry transactions or outbound phone call to the other insurance carrier. This validation allows us to verify the information we received as well as collect additional information such as effective and term date of policy, policy number, policyholder's name, group policy number, group policy name, Member relationship to policyholder, and whether the policyholder is the non-custodial parent.

If a provider or member disagrees with our TPL information they have an opportunity to request a validation via our customer service department. TPL tickets are created by the

Customer Service team and routed to the TPL team for validation Tickets are logged in our tracking system. The TPL team validates coverage within 48 hours for urgent requests and within three business days for routine/non-urgent requests. When the validation is complete, an email is auto sent to the member or provider advising them of our findings.

Using Industry-Leading Resources for TPL Identification

In addition to internal leads related to other insurance coverage, WellCare of Kentucky partners with industry-leading TPL identification partners, for other insurance leads. WellCare of Kentucky sends daily/weekly/monthly HIPAA-compliant claims and eligibility data feeds to our TPL identification partners to evaluate and determine if any Members have other coverage through a governmental or commercial source. To identify Medicaid Members with other coverage, WellCare of Kentucky partners with the following organizations:

Health Management Systems (HMS): a national vendor that specializes in coordination of benefits and TPL collections for Medicaid and other government-sponsored health plans. Through its data sharing agreements with commercial insurers, HMS helps to identify Medicaid Members with other coverage.

Council for Affordable Quality Healthcare (CAQH): to identify other commercial and Medicare coverage across the United States. CAQH offers a TPL identification product referred to as "COB Smart". Commercial and Medicare Health Plans across the United States directly contribute to a registry of coverage information that helps all participating health plans and providers correctly identify which Members have benefits that should be coordinated in order for corresponding claims to be processed correctly the first time. Each week, participating health plans supply coverage information to the CAQH COB Smart registry, where it is compared with information from other participating health plans to identify Enrollees with more than one form of coverage. Standard primacy rules are then applied to determine the correct order of benefits and the information is returned to the applicable health plans.

Syrtis Solutions: assists with identifying enrollees with other pharmacy coverage. We send daily HIPAA-compliant claims data feeds from all of our WellCare programs to Syrtis who then sends batch files to an e-prescribing vendor who houses real-time eligibility information for almost all pharmacy benefit managers and carriers within the U.S. to search for enrollees that have other primary pharmacy coverage. Syrtis will also take the pharmacy other coverage information and make an outbound call to the primary pharmacy carrier to inquire about any corresponding medical coverage for the Enrollee.

Our TPL identification partners return a data feed containing other insurance information in a date-sensitive and HIPAA compliant format used to update the Member's COB history tables in the WellCare of Kentucky Claim System.

Machine Learning Capabilities

WellCare of Kentucky has also recently begun expanding their use of Machine Learning capabilities to use care manager case notes as an opportunity to identify TPL information earlier and/or find additional potential opportunities to research other coverage opportunities.

By training a machine learning model that reviews care manager notes, our machine learning model is able to determine whether the case note is likely to be indicative of other coverage. This information is used by our recovery team to research these indicators and take the appropriate follow up action.

COORDINATION OF BENEFITS AND COST AVOIDANCE

All other insurance segments are added to the Member's record in the WellCare of Kentucky claims system. Other insurance information is accessible for claims processing and viewable by care management, Member, and provider services associates and to providers on our portal.

We avoided over $1 billion in claim payments and recovered over $43 million in overpayments for our entire Medicaid membership, due to the existence of third party coverage. The overall 2019 TPL Avoidance goal was $987 million.

When WellCare of Kentucky is not the primary insurer, our claims system evaluates the claim for COB. If the other carriers' explanation of payment is attached to the claim, WellCare coordinates and processes the Medicaid secondary payment. If the primary carrier's payment information is not attached, WellCare denies the claim and notifies the provider of other coverage that exists for our Member. Cost avoidance amounts, including denials, are reported through our encounter process.

Recovering Overpayments Due to Third-Party Liability

If other primary insurance information is loaded into the claim system after claim payment, then we review previously paid claims systematically for overpayments. We uses two methods for recouping erroneous overpaid claims: Direct Provider Recovery and Carrier Billing.

Direct Provider Recovery

For members whose primary coverage is under Medicare, we utilize direct provider recovery for identified overpaid medical claim(s) that have a date of service within the last 10 months. Ten months allows providers enough time to bill the other carrier without the administrative burden of an upfront timely filing denial. Internal recovery efforts begin with a letter to the provider advising them that Medicare was responsible for the claim payment and that a refund or recoupment is necessary to satisfy the overpayment. The letter provides the necessary other insurance information required for the provider to re-bill the claim to Medicare.

Carrier Billing

WellCare of Kentucky uses an outside vendor to submit bills to health insurance carriers when commercial is primary to WellCare. The WellCare subcontracted recovery vendor, HMS, receives monthly HIPAA-compliant claim data feeds to evaluate for overpayment recovery. HMS adheres to the billing requirements of each commercial insurance carrier and exercises reasonable efforts to provide medical records to the other carrier within thirty (30) calendar days of becoming aware records are needed for payment. On a monthly basis, primary carriers refund recoveries to WellCare of Kentucky and add them to the Member's claim history.

Subrogation

WellCare of Kentucky recognizes there are situations where our Members are involved in incidents where a third party is liable for all or part of expenses related to the accident. WellCare of Kentucky uses a subrogation vendor, Equian, to identify claims with accident related diagnoses for the purpose of investigating potential TPL and making retrospective post payment recoveries. Typical accident-related treatments are sprains, fractures, head and back injuries. Additionally, Equian attempts to identify treatment for incidents such as car accidents, injuries on someone else's property, injuries while working, dog bites, and other accidents. Additionally, WellCare of Kentucky also sends referrals to Equian when we believe the Member may have been involved in an accident. This includes the analysis of the State motor vehicle accident report file and a third-party liability accident information report form from the Member's attorney.

Tracking the Process

WellCare's Third Party Liability module (refer to **Figure C.5-1** and **Figure C.5-2**) is utilized to track the identification of each individual claim (separately or as part of a group), track the process of recovery from initiation through recovery from the other carriers, and maintains an audit trail tracking and follow-up capability for post payment recovery actions (including those that apply to health insurance, casualty insurance, and all other types of recoveries). When recovery is completed, paid claims are adjusted to properly reflect the payment status and financial responsibility under the Medicaid contract.

6. Management Information System

WellCare®
Beyond Healthcare. A Better You.

C.6. MANAGEMENT INFORMATION SYSTEM

a. Provide a detailed description, diagrams and flowcharts of the Management Information System (MIS) the Vendor will use to support all aspects of Kentucky's Medicaid managed care program including the following subsystems:

   i. Enrollee Subsystem
   ii. Third Party Liability (TPL)
   iii. Provider Subsystem
   iv. Reference Subsystem
   v. Claims Referencing Subsystem (to include Encounter Data)
   vi. Financial Subsystem
   vii. Utilization Data/Quality Improvement
   viii. Surveillance Utilization Review Subsystem

As part of the response, include information about the following:

   i. Required interfaces, how the system will share and receive information with the Department, how the Vendor's system will use files provided by the Department, Subcontractors, providers, and other supporting entities.

   ii. Capability to store and use large amounts of data, to support data analyses, and to create standard and ad hoc reports.

   iii. Extent to which these systems are currently implemented and integrated with other systems, internal and external, and the Vendor's approach for assuring systems that are not fully implemented and integrated will be ready to begin operations on required timeframes.

Diagrams and flowcharts should show each component of the MIS and the interfacing support systems used to ensure compliance with Contract requirements.

b. Provide a description for and list of potential risks and mitigation strategies for implementing new information systems and changes to existing systems to support the Kentucky Medicaid managed care program.

c. Describe the Vendor's current and planned use and support of new and existing technology in health information exchange (HIE), electronic health records (EHR), and personal health records (PHR).

d. Describe the Vendor's approach to assessing integrity, accuracy, and completeness of data submitted by providers and Subcontractors.

e. Provide a description of the Vendor's data security approach and how the Vendor will comply with Health Insurance Portability and Accountability Act (HIPAA) standards including the protection of data in motion and at rest, staff training and security audits.

f. Describe any proposed system changes or enhancements that the Vendor is contemplating making during the anticipated Contract Term, including subcontracting all or part of the system. Describe how the Vendor will ensure operations are not disrupted.

C.6. MANAGEMENT INFORMATION SYSTEM

a. Provide a detailed description, diagrams and flowcharts of the Management Information System (MIS) the Vendor will use to support all aspects of Kentucky's Medicaid managed care program including the following subsystems:

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 17 Management Information System and Appendix G Management Information System Requirements and confirmed by each requirement in Attachment X Contract Compliance Matrix, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

WellCare of Kentucky recognizes the value that our single integrated management information system (IMIS) brings to ensuring visibility into an Enrollee's complete clinical picture. We leverage ours and our affiliates' more than 30 years of experience serving Medicaid populations across the country to develop, maintain and deploy our MIS, which aligns with our organizational focus on enhancing Enrollee outcomes and quality of life. Through our experience, we have gained a strong understanding of the needs of our state partners and recognize that if our systems do not function properly we risk our Enrollees not receiving needed care and our providers not getting paid timely and accurately. **This is evident from our recent increase in the systems availability metrics from 99.98% in 2017 to 99.99% in 2018.**

Our corporate commitment to government sponsored health programs is reflected in our use of industry leading solutions, our active participation in government healthcare IT initiatives, and in particular, directly in the design, development, and implementation of our custom IT systems. Examples of how this focus drives our IT solutions include:

- Actively participating in CMS-lead Interoperability initiatives, including being the first (only) Healthcare Payer to have become a Medicaid Information Technology Architecture (MITA) board member
- Implementing a new, mobile, and highly functional case management solution (CareCentral) to enhance care manager's ability to comprehensively address complex care plan scenarios when the market did not appear to have viable, functional solutions
- Developing Community Connections, our Social Services Provider Resource and Referral management platform that supports our aggressive activities in addressing social determinants of health, including during the care management process in support of innovative methods to improve Enrollee outcomes
- Developing Robotics, Artificial Intelligence (AI) and Machine Learning to enhance Enrollee outcomes and reduce overall cost. Examples include:
    - Developing and deploying Bots that automate complex claims adjudication scenarios with the results of improved accuracy, reduced costs, and enhance disaster failover capabilities
    - Developing a Machine Learning model to recognize sources of other Primary Coverage (TPL) in care nurse notes not found in enrollment or claims data. For 2018, the TPL determination model identified $4,912,480 in cases that were predicted as related to

Motor Vehicle Accidents, **including a single actual recovery of $81,013 that traditional TPL methods did not identify.**

- Using AI and Machine Learning techniques and non-clinical data to improve Risk, Identification, and Stratification of Enrollees into care management programs they will participate in and respond to most effectively
- Implementing a natural-language, benefit lookup solution that allows for searches and explanations in common, easy to understand language

DETAILED DESCRIPTION OF OUR MANAGEMENT INFORMATION SYSTEM (MIS)

Our IMIS is built to support all functions of our operational processes. We are certified as compliant with Health Information Trust Alliance (HITRUST) security standards, which are more restrictive than Health Insurance Portability and Accountability Act (HIPAA). It has been designed to interface with other data feeds and to serve as an interoperable platform. Our MIS has applications and processes that:

- Execute core functions efficiently and effectively, including Enrollee, Third Party Liability, provider, reference, Encounter/Claims processing, financial, utilization data/ Quality Improvement and Surveillance Utilization Review Subsystem.
- Ensure prompt payment of all provider claims and minimize provider claim denials.
- Complies with 42 C.F.R. 438.242. and supports confidentiality of medical information at all times through security protocols including:
  - least-privilege role based access templates
  - encryption at rest through the use or disc-level encryption
  - encryption in motion through the use of https: and secure FTP sites for external data exchanges
- Support a seamless Enterprise Information Management (EIM) solution that captures all clinical and transactional data, assembles necessary data and provide it in formats and files that are consistent with DMS' functional subsystems
- Place the Enrollee at the center of every application and process to promote and improve Enrollee health outcomes and satisfaction in everything we do.

The key features of our IMIS include scalability, integration, reliability, and security. From the ground up, we have invested in our single integrated MIS to specifically support government-sponsored healthcare programs and to address our enrollees' full spectrum of needs – physical health, behavioral health, pharmacy and social services supports. All WellCare of Kentucky applications are developed within the context of our overall technical architecture as well as our Architectural Principles, Guidelines, and Standards. The result is that all applications leverage best practices in Security & Privacy, as supported by a stable and robust infrastructure, and use common interaction functions to fully integrate with each other.

The MIS is an integrated delivery of three key technology and four major application components, as seen in **Figure C.6-1 MIS Overview.**

Security and Privacy Services: This broad set of technologies is interwoven into the design of our entire operating environment, including functions such as encryption, end point security on

physical and mobile devices, role-based security models, two-factor authentication, firewalls, intrusion detection services, data loss prevention services and automated remote wiping capabilities. We supplement these technologies, which directly support HIPAA privacy and security requirements, through internal policies and ongoing training and education for all our staff. Our security and privacy capabilities are further demonstrated by our 2018 HITrust certification.

Infrastructure and Operations: Engineered to ensure that they meet or exceed expectations, WellCare's Data Center Services, Network and Telecom Engineering (including our cloud-based Interactive Voice Response and automated call routing solutions), Servers, Storage, Database Administration, and end-user devices are all selected and implemented to ensure scalability and reliability. Our Architecture Review Board ensures all technology selections meet our specifications and are continuously monitored by our 24/7 Enterprise Service Operations Center. Our tested and validated Data Center and Business Continuity plans use redundancy and fail-over locations to ensure our operational viability (systems, Customer Service centers, and other operations) at all times, especially in scenarios where our enrollees and providers need us most.

Interoperability and Electronic Data Interchange (EDI) Integration: WellCare of Kentucky's applications are developed with a target architecture based on an Event-Driven, Publish and Subscribe, Service-Oriented Architecture, including clear separation between the User Interface, Business Logic and Data Access Layers. These services and EDI Integration tools support those goals through the provision of common services, direct support for industry standard EDI data exchanges (including HIPAA-compliant formats such as ANSI, clinical data formats including HL7 and FHIR, as well proprietary formats when required) and are consistent with the CMS Interoperability initiatives.

Figure C.6-1 MIS Overview

APPLICATION SUBSYSTEMS

Our subsystems satisfy the requirements of Section 15 Management Information System and is compliant with the subsystem concept. Our systems have the capacity to capture necessary data and provide it in formats and files that are consistent with DMS' functional subsystems.

i. Enrollee/Member Subsystem

WellCare of Kentucky's Membership subsystem supports the Inputs, Processing Requirements, Reports, On-Line Inquiry screens, and interfaces identified in Appendix G, Membership items a. through e.

WellCare is successfully processing enrollment and disenrollment transactions from daily and monthly 834 files from Medicaid programs across the nation. WellCare of Kentucky securely processed approximately 22 million enrollment transactions for Kentucky Medicaid in 2018. Our Member subsystem is explicitly designed to recognize DMS as the authoritative source of Enrollee data and eligibility by accurately processing and reconciling to Department-supplied 834 files. However, the application also maintains our Enrollee-first focus, ensuring that Enrollee preferences and provider selections are fully enabled to provide the most effective enrollee experience.

Our Member subsystem supports multiple edits and validation on the incoming 834 data during the processing stages including comparisons to existing records using names, Medicaid or other IDs, and date of birth to prevent loading duplicate records. Because the subsystem performs all validations (including potential duplicates), tracks each enrollee separately, and requires manual confirmations prior to loading, WellCare of Kentucky is not only able to ensure accurate system updates but also support notification and interaction with DMS for duplicate or other potential enrollee data issues.

Key functional attributes of this application include:

- Automated receipt and validation of DMS-supplied 834 files through secure FTP sites
- Processing rules for daily transactional and monthly verification eligibility files
- Validating data and executing required updates to WellCare of Kentucky's eligibility files
- Automated triggering of critical enrollees materials such as handbooks and ID Cards to the Correspondence and Communications Module
- Automated distribution of enrollment and eligibility updates to our PBM, dental, vision, transportation and other delegated partners
- Complete audit and verification of all received transactions and updates
- PCP auto-assignment in the absence of Enrollee choice
- Ongoing support for Enrollee updates to addresses, communication preferences, and provider choices through multiple channels
- Independent reconciliation functions to provide additional controls, specifically including a function dedicated to reconciling Department Capitation payments (received via 820 transactions) to membership to ensure payment integrity

WellCare of Kentucky's Member subsystem (refer **to Figure C.6-2**) becomes the source of truth for Enrollee demographics, eligibility, primary care provider (PCP) selection and assignment, third party coverages, and all subsequent processes including Enrollee services, utilization management, claims processing, tracking EPSDT preventative services, inclusion in HEDIS measure calculations, and all other functions requiring membership data.

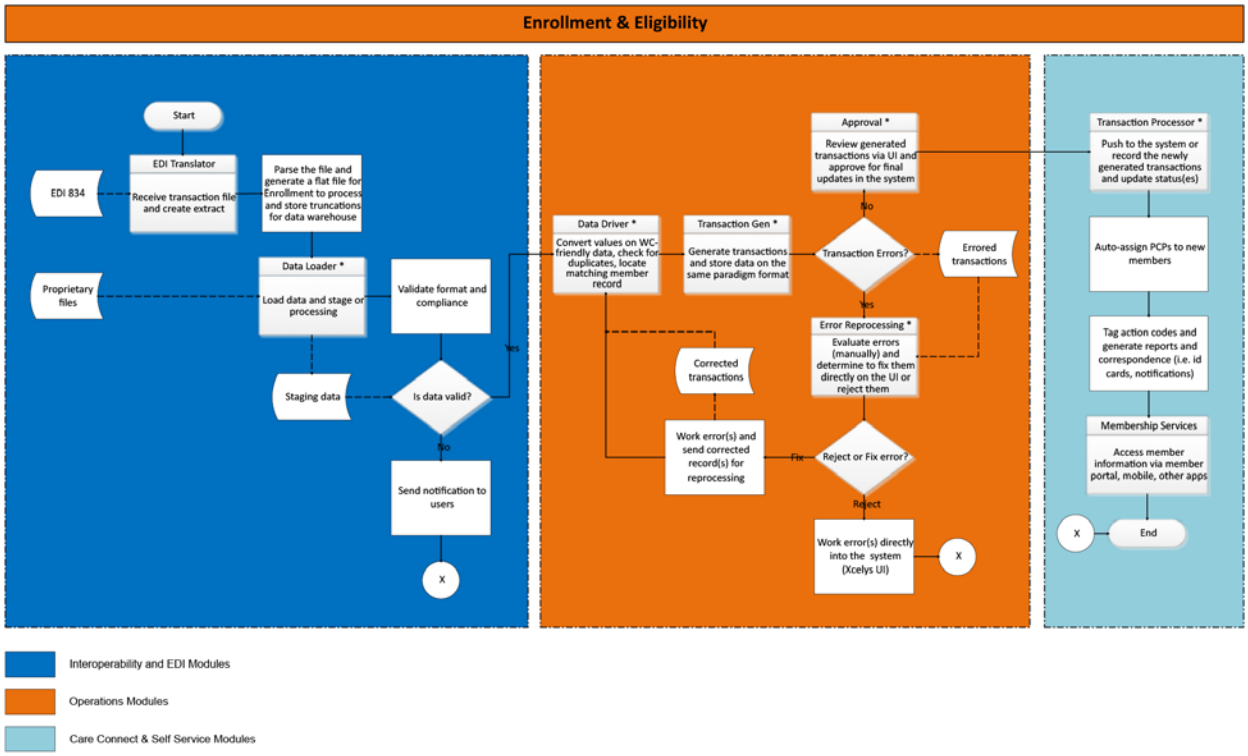

Figure C.6-2 Enrollment Eligibility System

ii. Third Party Liability (TPL)

WellCare's Membership and Claims Processing (including the Third Party Liability module) subsystems support the Third Party Liability Inputs, Processing Requirements, Reports and Online Inquiry requirements identified in Appendix G, Third Party Liability, items a. through d.

To ensure that federal third party liability requirements are met and to maximize savings from available Third Party Resources, identification and recovery of new Third Party Resources, WellCare of Kentucky will ensure that a joint effort is implemented between DMS and our Recovery team.

WellCare of Kentucky's Membership subsystem supports Third Party liability (TPL) by associating and tracking other coverage information received from all sources including DMS' supplied information (including Medicare effective dates) and other third-party resources available to enrollees. WellCare contracts with HMS to obtain additional sources of third party liability information (including commercial carries, Medicare, Workers Comp, Auto and other potential coverages) and updates the Membership subsystem with this information to ensure that Medicaid is the payer of last resort. The membership system is able to track each occurrence of other coverage individually, with unique effective date ranges, to ensure all applicable coverages are tracked and applied in a time-sensitive manner.

Our coordination of benefits (COB) process begins by identifying sources of TPL through various means. Other health insurance information is collected through a variety of sources including:

- State eligibility files (834 HIPAA transactions)
- State TPL files
- Provider claims with an explanation of payment (EOP) attachment
- The Enrollee himself/herself as part of initial enrollment activities
- Enrollee involvement in routine follow-up questions by telephone

All other sources of TPL information mentioned above are validated via 270 electronic eligibility inquiry transactions or outbound phone call to the other insurance carrier. This validation allows us to verify the information we received as well as collect additional information such as effective and term date of policy, policy number, policyholder's name, group policy number, group policy name, Enrollee relationship to policy holder and whether the policy holder is the non-custodial parent.

WellCare of Kentucky's Claims Processing subsystem will utilize data received on the claim (including diagnosis, procedures, and provider-submitted TPL indicators) and other coverage information in the Membership subsystem (including Medicare, Commercial, Accident and other sources) during the adjudication process to ensure that other coverages which are in effect have been utilized first. In addition to this cost-avoidance practice post-adjudication WellCare of Kentucky also searches for and identifies post-payment recovery processes when it is determined later that other coverages may have been in effect.

USING INDUSTRY-LEADING RESOURCES FOR TPL IDENTIFICATION

In addition to internal leads related to other insurance coverage, WellCare also partners with industry leading TPL identification partners, for other insurance leads. WellCare of Kentucky sends daily/weekly/monthly HIPAA-compliant claims and eligibility data feeds to our TPL identification partners to evaluate and determine if any enrollees have other coverage through a governmental or commercial source. To identify Medicaid Enrollees with other coverage, WellCare of Kentucky partners with the following organizations:

- Health Management Systems (HMS) is a national vendor that specializes in coordination of benefits and TPL collections for Medicaid and other government-sponsored health plans. Through its data sharing agreements with commercial insurers, HMS helps to identify Medicaid Enrollees with other coverage.
- Council for Affordable Quality Healthcare (CAQH) to identify other commercial and Medicare coverage across the United States. CAQH offers a TPL identification product referred to as "COB Smart". Commercial and Medicare health plans across the United States directly contribute to a registry of coverage information that helps all participating health plans and providers correctly identify which Enrollees have benefits that should be coordinated in order for corresponding claims to be processed correctly the first time. Each week, participating health plans supply coverage information to the CAQH COB Smart registry, where it is compared with information from other participating health plans to identify Enrollees with more than one form of coverage. Standard primacy rules are then applied to determine the correct order of benefits and the information is returned to the applicable health plans.

- Syrtis Solutions assists with identifying Enrollees with other pharmacy coverage. We send daily HIPAA-compliant claims data feeds from all of our WellCare programs to Syrtis who then sends batch files to an e-prescribing vendor who houses real-time eligibility information for almost all pharmacy benefit managers (PBMs) and carriers within the United States to search for Enrollees that have other primary pharmacy coverage. Syrtis will also take the pharmacy other coverage information and make an outbound call to the primary pharmacy carrier to inquire about any corresponding medical coverage for the Enrollee.

Our TPL identification partners return a data feed containing other insurance information in a date-sensitive and HIPAA-compliant format used to update the Enrollee's COB history tables in the WellCare of Kentucky claim system.

WellCare's Third Party Liability module (refer to **Figure C.6-3 and Figure C.6-4**) is utilized to track the identification of each individual claim (separately or as part of a group), track the process of recovery from initiation through recovery from the other carriers, and maintains an audit trail tracking and follow-up capability for post payment recovery actions (including those that apply to health insurance, casualty insurance, and all other types of recoveries). When recovery is completed, paid claims are adjusted to properly reflect the payment status and financial responsibility under the Medicaid contract.

WellCare of Kentucky has also recently begun expanding their use of Machine Learning capabilities to use care manager case notes as an opportunity to identify TPL information earlier and/or find additional potential opportunities to research other coverage opportunities. By training a machine learning model that reviews care manager notes, our machine learning model is able to determine whether the case note is likely to be indicative of other coverage. This information is used by our recovery team to research these indicators and take the appropriate follow up action.

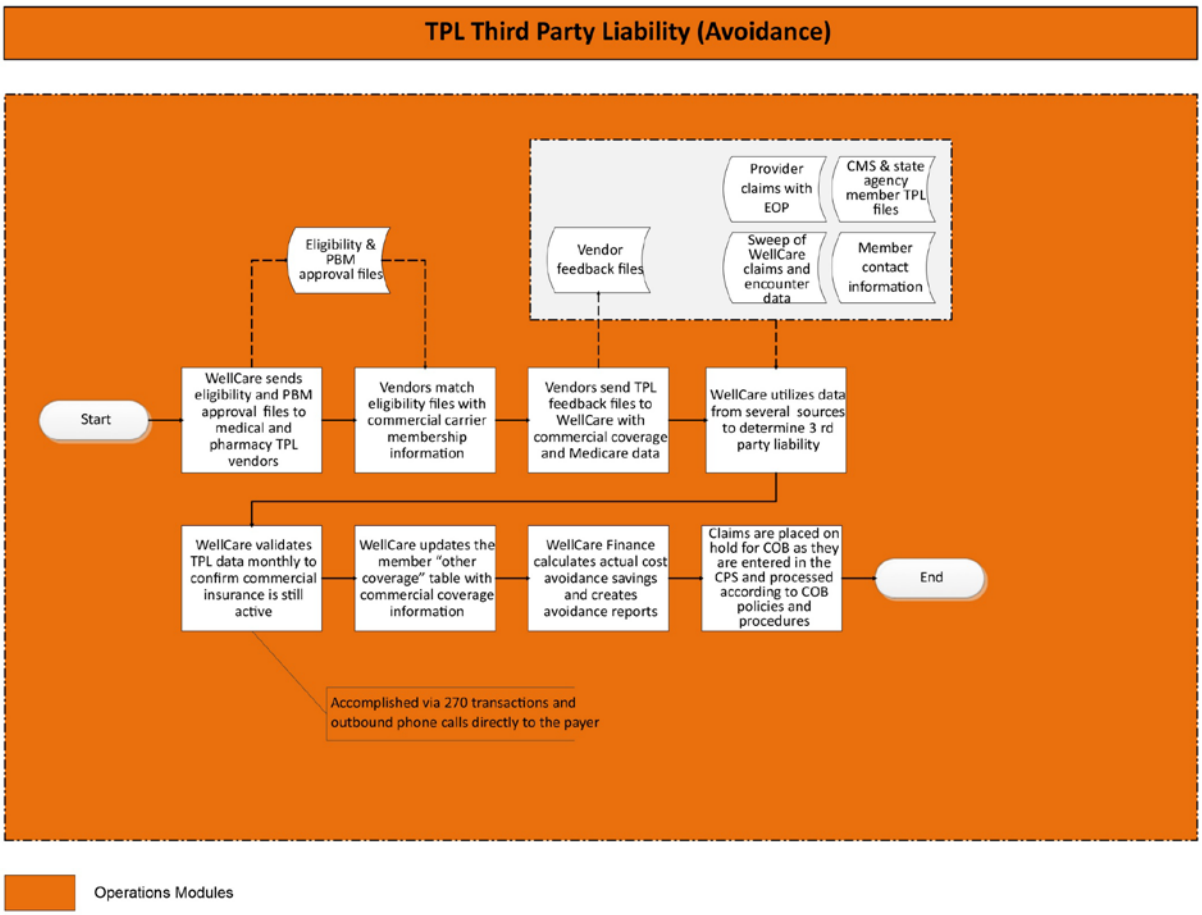

Figure C.6-3 TPL Avoidance

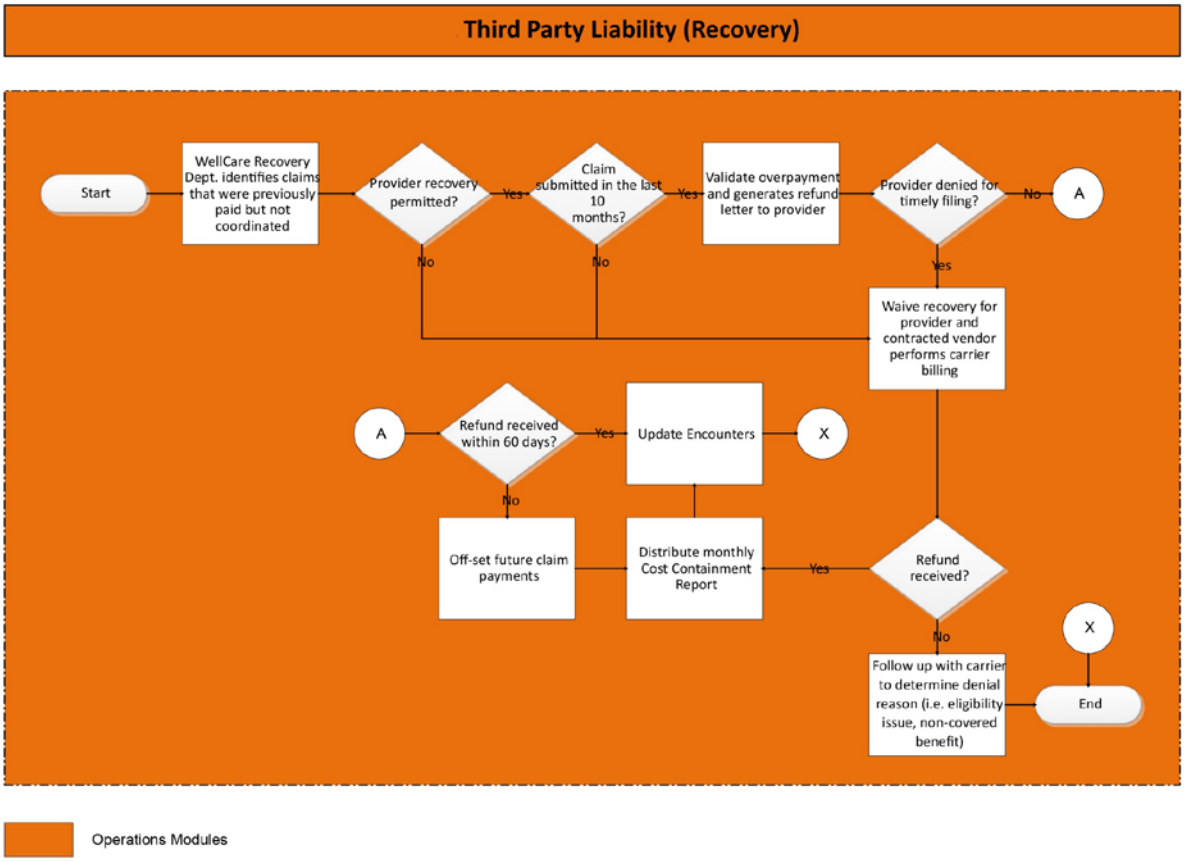

Figure C.6-4 TPL Recovery

iii. Provider Subsystem

WellCare of Kentucky's Provider Management subsystem accepts and maintains comprehensive, current and historical information about providers eligible to participate in the our network and is used to support the Inputs, Processing, Online Inquiry, and Interface requirements identified in Appendix G, items a. through d., including the requirement to electronically transmit provider enrollment information to DMS on a monthly basis, by the first Friday of the month following the month reported.

WellCare is successfully maintaining a provider network consisting of over 315,000 active contracted providers and hospitals over 100,000 delegated specialty providers (Dental, Vision, Pharmacy, Transportation, etc.), and more than 160,000 community providers to support the physical, behavioral, and social services needs of our Enrollees.

The primary aim of this solution is to ensure that a consistent, validated, comprehensive provider directory is available at all users at all times. Direct integration with the CareConnect and Self-Service applications, Claims and Encounter Processing, and Quality and CareCentral, our clinical applications ensure that Enrollees, providers, and our staff have access to the same validated information on an adequate, quality provider network.

The validation of provider data, oversight of provider performance, and maintenance of productive relationships with the provider community is an ongoing need that is reflected in the continuous processes and validations performed by this module.

Key functional attributes of this application include:

- Recruiting of providers to meet current and future network needs
  - Acceptance of applications and referrals from multiple channels
  - Targeted identification based on specialty, geography, and predictive gaps
- Contracting of providers of all types leveraging electronic contract management capabilities where possible to facilitate rapid negotiations and data validation
- Continuous Network Validation to ensure Enrollee access to needed services
  - Geo Access processes to confirm WellCare of Kentucky is meeting DMS' network adequacy and capacity requirements
  - Continuous execution cycles to identify predictive gaps in advance of Enrollee demands
- Ongoing Provider Verification to ensure that only qualified providers are accepted include in our network
  - All new providers are credentialed before joining the network
  - Utilization of a broad array of sources to identify providers that may be excluded from providing services. Includes validating non-participating providers before paying claims or authorizing services
  - Integration with Fraud, Waste, and Abuse in the validation process
- Relationship Oversight functions facilitate ongoing interactions with our entire provider network
  - Ongoing training and education is provided by customer service representatives for issues such as care needs and quality scores to improve Enrollee health outcomes
  - Audits and site visits of contracted and delegated providers to ensure accurate and comprehensive data is being provided
  - Profiling of provider performance to provide feedback and collaborate on opportunities to improve Enrollee health outcomes
- Data Maintenance capabilities focus efforts on maintaining accurate information on providers of all types. Update capabilities are provided through multiple channels, and changes in data are automatically reviewed and updated for impacts on network adequacy, provider verification, and provider directory updates. Each change in provider participation, contractual relationship, reimbursement rates and methods, and specialty, among other data elements, is maintained in a date-effective historical record.

WellCare of Kentucky also utilizes a variety of external data sources including the NPPES registry, Death Master File, List of Exclude Individuals and Entities, CMS SAM system and other sources to ensure that not only accurate data is maintained but that no excluded providers are able to participate in our network or be paid for services. Our provider subsystem is able track

and maintain a history of a variety of provider identifiers including NPI/Taxonomy, SSN, FEIN, and CLIA numbers.

Our Financial Subsystem utilized data from the claims, capitation, and other payment systems, combined with the appropriate data from the Provider Subsytem to calculate, maintain and produce accurate 1099 forms (including associated payment data by FEIN number for providers with changes of ownership, based upon effective dates).

iv. Reference subsystem

WellCare of Kentucky's Operations Management application, including the Provider Management, Membership, Claims and Encounters, Financial and Issues Management subsystems maintain current and comprehensive Reference data needed to support the Inputs, Processing, Online Inquiry, and Interface requirements identified in Appendix G, items a. through d.

Each type of reference data is captured and managed by one application and is utilized consistently as the source of truth for that type of information across all modules and functions, including Claims and encounter processing, TPL processing and utilization/quality reporting functions.

Claims, encounter, and authorization reference data maintained includes pricing files for procedures and drugs, general reference information such as diagnoses, edit/audit criteria, edit dispositions and reimbursement parameters/modifiers. This scope includes maintenance of procedure codes (NDC, HCPCS, CPT4, and Revenue codes), ICD-10 diagnosis codes, modifier codes (multiples are allowed on a claim), ADA codes and identification of pricing files, maintenance of edit and audit criteria. Each reference data set includes the ability to track the code set information by effective and termination dates. The complete history of reference data is maintained, exceeding the required 36 months of history.

The Third Party Liability (TPL) module supports the maintenance of reference data for Indication of TPL actions, such as Cost Avoidance, Benefit Recovery or Pay, by procedure code and other information such as accident-related indicators for possible TPL, federal cost-sharing indicators, Medicare coverage and allowed amounts.

The maintenance of this reference data affords WellCare of Kentucky the ability to accommodate multiple reimbursement methodologies, including but not limited to fee-for-service, capitation and carve-outs from capitated or other "all inclusive" rate systems, and DRG reimbursement for inpatient hospital care.

While many of these code sets are maintained through interfaces by obtaining the reference data from the affiliated governing body, On-line Inquiry Screens are available for all reference data showing the code, the description, effective and termination dates, and any other relevant data and information for that code.

v. Claims Referencing Subsystem (to include Encounter Data)

WellCare's Claims and Encounter subsystem are utilized to support the Claims Control and Entry, Edit/Audit Processing, Claims Pricing, and Claims Operations Management requirements outlined in Appendix G. This includes meeting the requirement that all claims are captured at the earliest possible time and in an accurate manner, and that they are adjudicated within the parameters of Prompt Pay standards set by CMS and the American Recovery and Reinvestment Act (ARRA).

The primary function of the claims component of this application is the timely and accurate adjudication of Fee-for-Service (FFS) claims submitted by providers. The FFS functions apply benefits, clinical edits, provider contract and pricing, data validations and service code verifications (including NCCI edits), and authorization rules to claims in a real-time processing environment. This capability allows WellCare of Kentucky to meet or exceed the timeliness and accuracy standards identified in the RFP.

Encounter submissions, including claims (medical, pharmacy and ancillary) from delegated vendors are all processed through the Encounter Processing System (EPS) which ensures completeness through validation against Cash Disbursement Journals, as well as compliance with state companion guides for encounter submissions, and management and resubmission of any submission rejections. Our experience and focus in government programs has led WellCare to understand that DMS' definition of an acceptable encounter submission is the entry-level set of quality edits that must be applied to all submissions to WellCare of Kentucky. As a result of this philosophy, we successfully transmit encounter data in 13 versions of Encounter formats (837I/P/D, NCPDP, PACDR, APAC, etc.) for 22 lines of business. All services, regardless of the method or provider remuneration are submitted as encounters to DMS.

Key functional attributes of this application include:

- Acceptance Edits ensure that WellCare of Kentucky only accepts valid submissions from all sources as inputs :
    - Strategic National Implementation Process (SNIP) edits Level 1 and 2 as defined be the Workgroup for Electronic Data Interchange (WEDI) are applied to ensure a submission meets minimum formatting requirements
    - Data Quality Validation edits to identify data submission and quality issues earlier in the process and expedite rejection and return to providers
    - Capturing and validating the use of standard codes (e.g. HCPCS, ICD9-CM/ICD-10 CM/PCS diagnosis and procedure code, Revenue Codes, ADA Dental Codes and NDCs)
    - SNIP Level 3 – 7 edits, based on DMS' submission edits, are applied to ensure that any data quality issues are identified prior to acceptance
    - The basic editing necessary to pass the claims onto subsequent processing as identified in Appendix G (Basic Edits 1 through 21)
    - Tracking, monitoring, and ensuring compliance with response timelines
- Enrollee and provider edits ensure that both the enrollee and provider information on the claim or encounter are properly identified. Primary functional components include:

  - Automated matching of Enrollee information to Enrollment and Eligibility System information
  - Automated matching of provider information to Provider Network system information
  - Manual workflow to support identification of Enrollees and providers in an effort to reduce system-wide administrative expense from resubmissions
  - Validation of excluded entities including Enrollee and provider to avoid payments to unauthorized individuals
  - Tracking, monitoring, and ensuring compliance with response timelines

- Adjudication of Fee-for-Service claim submissions to ensure correct coding and clinical protocols were applied. Key components include:
  - Coding edits, including but not limited to National Correct Coding Initiative edits, are applied to validate the accurate reporting of services provided
  - Clinical edits are applied to ensure appropriate treatment and prior authorization expectations have been met
  - Pricing of services according to provider contracts or other payment methodologies which take into account contractual allowed amounts, TPL payments, Medicare payments, Enrollee age, prior authorized amounts, and any co-payment requirements
  - Workflow functions are directly integrated into the adjudication functions to effectively manage claims processing workload
  - Automated re-adjudication functions for items such as retroactive Enrollee eligibility changes in an effort to reduce system-wide administrative expense from resubmissions
  - Tracking, monitoring, and ensuring compliance with response timelines
- Provider Notification processes are implemented to ensure prompt and timely awareness to submitters about the status of transaction. Key features include:
  - Notification of acceptance of a claim or encounter submission
  - Early notification of any rejection of a submission for any of the validation edit processes
  - Support for standard notification and status transactions such as the 277U format to improve automation and reduce system-wide administrative expense
  - Tracking, monitoring, and ensuring compliance with response timelines
- Submission Edits are applied to all service transactions to ensure quality encounter submissions to DMS. Key characteristics include:
  - Validation of encounter data against DMS' submission guidelines and edits
  - Validation of completeness based on the Cash Disbursements journals of the adjudicator of the services, whether WellCare, a vendor partner, or a delegated entity
  - Tracking, monitoring, and ensuring compliance with response timelines
- Encounter submission to DMS utilizing WellCare of Kentucky's standard EDI services ensure consistency and validation of acceptance. Key features include:
  - Leverages standard EDI toolsets and formats to automate application of submission edits based on DMS' submission guidelines

  - Workflow functions to track the submission and acceptance or rejection of any encounter submission, including the resolution and resubmission of any rejected encounter
  - Tracking, monitoring, and ensuring compliance with response timelines

- Integration with WellCare's Customer Service and Self-Service functions assist the provider community in supporting timely and accurate encounter submissions. Key features include:
  - The ability to check the status and outcome of Fee-for-Service claims, regardless of the method of submission (paper or EDI)
  - Support for small practices and other providers without automated systems by enabling direct data entry of FFS claims or encounters. Manual entry is directly integrated with the edit validations in a real-time fashion to eliminate downstream rejections and resubmissions
  - The ability to correct on-line an FFS claim or encounter submission which is directly integrated with the edit validations in a real-time fashion to eliminate downstream rejections and resubmissions

WellCare of Kentucky's Claims and Encounters processing module maintains complete audit trails, including Claim history at the level of service line detail, adjudication history, payment history, and a complete audit record of all data submitted or created (such as paid amounts) throughout the entire lifecycle of the service record.

Our Claims and Encounter Module, coupled with the use or our Enterprise Information Management (EIM) solution enables robust inventory tracking and reporting and visibility at all times. Ongoing monitoring of claims operations, depicted in **Figure C.6-5**, enabled through innovative technical solutions and dashboard reporting ensure continuous oversight of open inventory, rapid identification and resolution of operational issues, and strict accountability for and adherence to processing SLAs.

In addition, these solutions provide the reporting capabilities necessary to support a wide variety of applications, including the ability to product the following reports on the claims processing function 15 days after the end of each month:

- Number of claims received, paid, denied, and suspended for the previous month by provider type with a reason for the denied or suspended claim.
- Number and type of services that are prior-authorized (PA) for the previous month (approved and denied).
- Amount paid to providers for the previous month by provider type.
- Number of claims by provider type for the previous month, which exceed processing timelines standards defined by DMS.
- Claim Prompt Pay reports as defined by ARRA

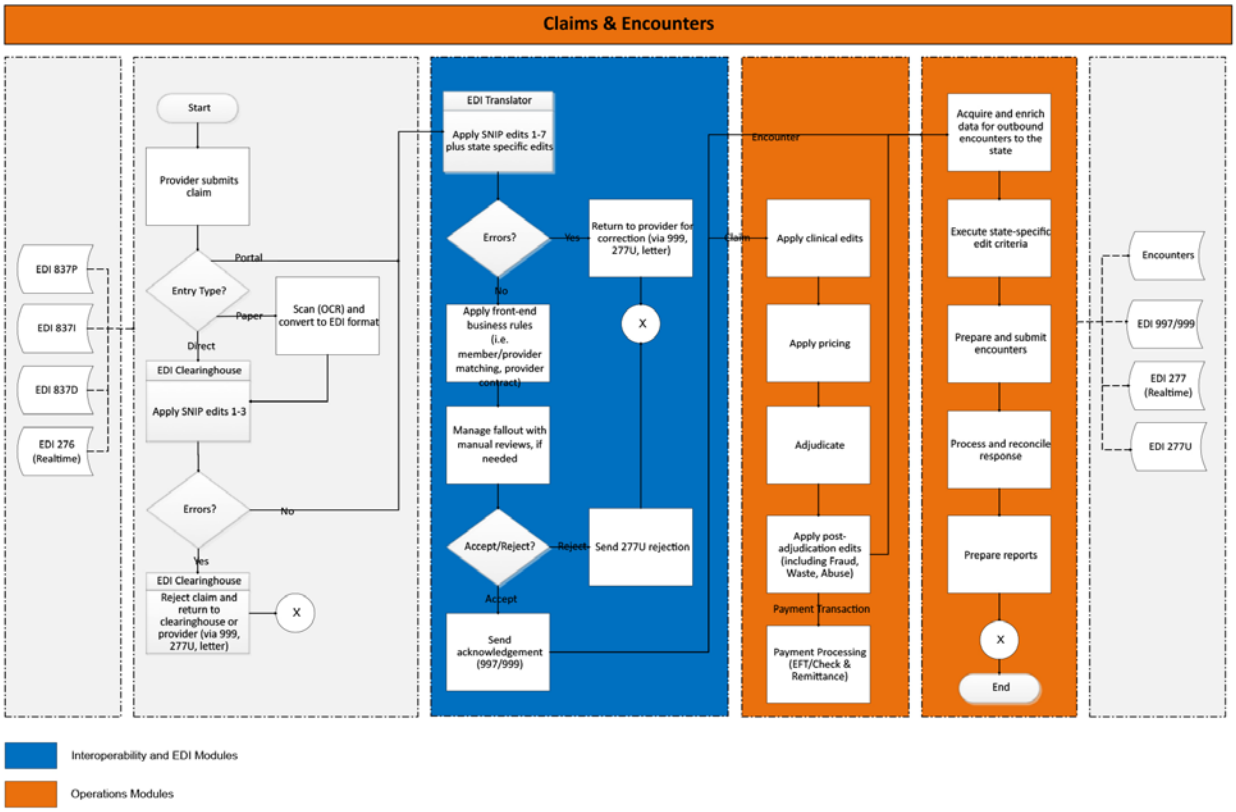

Figure C.6-5 Claims and Encounters Process

vi. Financial subsystem

WellCare of Kentucky's Financial subsystem supports claim payment processing, adjustment processing, accounts receivable processing, and all other financial transaction processing is used to support the Inputs, Processing Requirements, Payment Processing, Adjustment Processing, Other Financial Processing, and Report requirements identified in Appendix G, items a. through f., including the requirement to electronically transmit provider enrollment information to DMS on a monthly basis, by the first Friday of the month following the month reported.

WellCare of Kentucky's suite of financially oriented applications provide solutions for calculating payments to providers for optional payment methodologies (those not based on Fee-For-Service claims payments) including value-based arrangement, traditional Enrollee and provider incentive programs based on participation and activities, standard financial functions, secure execution of payments and incentives, and a separate reconciliation with DMS data sources to ensure accounting integrity. These financial systems are deliberately designed to support the auditability, separation of duties, and additional compliance requirements that are consistent with industry best practices.

The key applications and functions of Financial Payment and Reconciliation include:

- Enrollee incentives are defined in accordance with Department's guidelines and are integrated with our focus on health outcomes. Primary functions include:
  - Based on program design, identifying enrollees that are eligible for the incentives and notifying them of the opportunities for awards
  - Integration with the CareConnect & Self-Service applications and the Corporate Correspondence Module to support increased notification
  - Tracking of enrollee activities associated with award programs
  - Determining and making available award information for integration with the Payment Execution module
- Value-based payments are based on provider contracts that are separate from fee-for-service claim payments and are designed to promote health outcomes and improved efficiency in the health care system. This module tracks multiple payment methodology components and includes as key features:
  - The calculation of Enrollee-based payment methodologies such as age/gender based capitation payments to providers and delegated entities
  - The calculation of 'Revenue' and fund amounts for risk-based arrangements, to be used in the settlement process
  - Tracking of service amounts and other health outcomes and activities to be offset against fund amounts as part of contractual settlements
  - Determining and making available value-based payments and award information for integration with the Payment Execution module
- Provider Incentives are separate programs intended to influence provider activities that support health outcomes and improved efficiency in the health care system. This module tracks multiple payment methodology components and includes as key features:
  - Based on program design, identifying providers that are eligible for the incentives and notifying them of the opportunities for awards. These include standard Pay-4-Performance and Pay-4-Quality initiatives as well as targeted provider behaviors
  - Integration with the Customer Service & Self-Service, Provider Network Management, and Corporate Correspondence modules to support increased notification and awareness
  - Tracking of provider activities associated with award programs
  - Determining and making available award information for integration with the Payment Execution module
- Payment Execution is completed through separate and distinct solutions to ensure separation of duties in accounting functions and to support increased compliance requirements. Key features include
  - PCI-compliant provider payment modules supporting electronic payment and remittances for all payment types (Capitation, FFS Claims, incentives) - includes support for voids, reissues, recoupment and manual adjustments
  - Support for secure paper-based transactions (payments, remittances) for providers that lack the capability to utilize electronic transactions

- Support for Enrollee Award programs through separate applications allowing for enrollee redemption of awards in compliance with DMS' standard
- Integration with the Enrollee incentive, provider incentive, and value-based payment modules to ensure payment completion
- Maintains a complete audit trail and history of payments, adjustments, overpayments and recoupment activities with the ability to trace each payment at a claim level

- Financial Accounting modules support the basic internal and corporate finance activities. Key capabilities include:
  - Accounts Payable processing, including operational and internal-operations functions (such as purchase orders and vendor payments) and the interface into general ledger activities
  - Accounts Receivable processing based on DMS' payments to WellCare of Kentucky, including the interface into general ledger activities
  - General Ledger capabilities, with inputs and interfaces to multiple systems, to compile and generate WellCare financial statements in accordance with GAAP and applicable State and Federal guidelines

WellCare of Kentucky's Financial Subsystem utilized data from the Claims, Capitation, and other payment systems, combined with the appropriate data from the Provider Subsytem to calculate, maintain and produce accurate 1099 forms (including associated payment data by FEIN number for providers with changes of ownership, based upon effective dates).

vii. Utilization Management/Quality Improvement

WellCare of Kentucky's **Quality systems (referred to collectively as CareCentral)** leverages the breadth of data and comprehensive reporting solutions of our Enterprise Information Management (EIM) solution combines data from other subsystems and external systems, to provide the capability to produce reports for analysis which focus on the review and assessment of access, availability and continuity of services, quality of care given, detection of over and underutilization of services, and the development of user-defined reporting criteria and standards.

Examples of the capabilities supported include (and depicted in **Figure C.6-6**):

- *The Assessment subsystem* allows for the rapid development and deployment of Enrollee health assessments
- *The Utilization Management (UM) subsystem* supports the request, evaluation and monitoring of referral activities, including in-patient and outpatient care, emergency room use, outpatient drug therapy, and out-of-area services. Pharmacy UM services include support for electronic Prior Authorization (ePA) processing
- *The Care Planning subsystem* uses best practices and patient-specific modifications to ensure comprehensive care plan are developed for each individual. This mobile, digital application supports field-based care managers and supports tracking an individual Enrollee and its family's health status, participation and adherence to care plans and medication schedules and the ability to compare individual experience to population norms

- Enrollee 360 views combine administrative data and transaction, clinical data and transactions, and social determinants information to provide comprehensive, holistic views to consider the whole patient and provide the most effective individual-specific outcome management capabilities
- Social Determinants and Services are tracked for each Enrollee and provide both access and referrals to Community providers that can help Enrollees meet these needs
- *The Measures subsystem* provides the generation and ongoing publication of HEDIS results as a primary means of effectiveness (based on currently published, standard measure definitions)
- Our proprietary risk identification and stratification uses data from all sources (administrative, clinical, and social) and incorporates AI and Machine learning in addition to traditional methodologies to most efficiently identify Enrollee needs and the most effective means of engaging them in their health
- Tracking care needs, publishing to Enrollees, providers, care givers and care managers to assist in completing these vital preventative health activities including EPSDT
- Generation and communication of provider profiles to identify opportunities to collaborate with and educate providers on opportunities to improve Enrollee health outcomes
- Monitoring service delivery of critical services through Electronic Visit Verification (EVV) technologies, when applicable

WellCare's ability to utilize standard functions of modules such as the EDI & Interoperability module and our EIM solution allows CareCentral to support and directly incorporate our Clinical Data repository into all aspects of operations and care management. Key features and capabilities of the Clinical Data Repository include:

- Receipt (batch and real-time) of ADT transactions, including real time notification to care managers and affiliated providers
- Ability to receive clinical data from all participants (including providers, hospitals, and HIEs) in both standard formats (CCD-A, FHIR, lab ORU and other HL7) as well as support non-standard clinical information capture
- Establishment and management of EMR connections and data interchanges interchange
- Capture of Transition and Historical service information from DMS or other MCOs and directly incorporating this data into ID/Stratification and care management functions
- Integration of clinical data and transactions into care manager 360 views as well as provider quality dashboards with the primary focus of improving provider quality performance and the associated Enrollee health outcome improvements

WellCare’s **Issue Management subsystem** includes support for the requirements related to occurrence reporting, including adverse incidents and complications, monitoring and evaluation studies, as well as enrollees and providers aggregate Grievances and Appeals. Key functions of this tracked and supported by this module include:

- Identification and proper classification of Issues, Complaints, and Grievances including the active monitoring of language and tone of customer service calls to initiate immediate action on satisfaction issues

- Receipt and acknowledgement of Issues, Complaints, and Grievances from all available communication channels including customer service agents and web portal submissions
- Monitoring of social media activity to identify potential issues, Complaints and Grievances and initiate cases based on this information
- Receipt and acknowledgement of provider disputes from providers and internal provider representatives
- Identification and classification of Critical Incidents
- Recording and communication of the decision to Enrollees and providers
- Tracking, monitoring, and ensuring compliance with response timelines

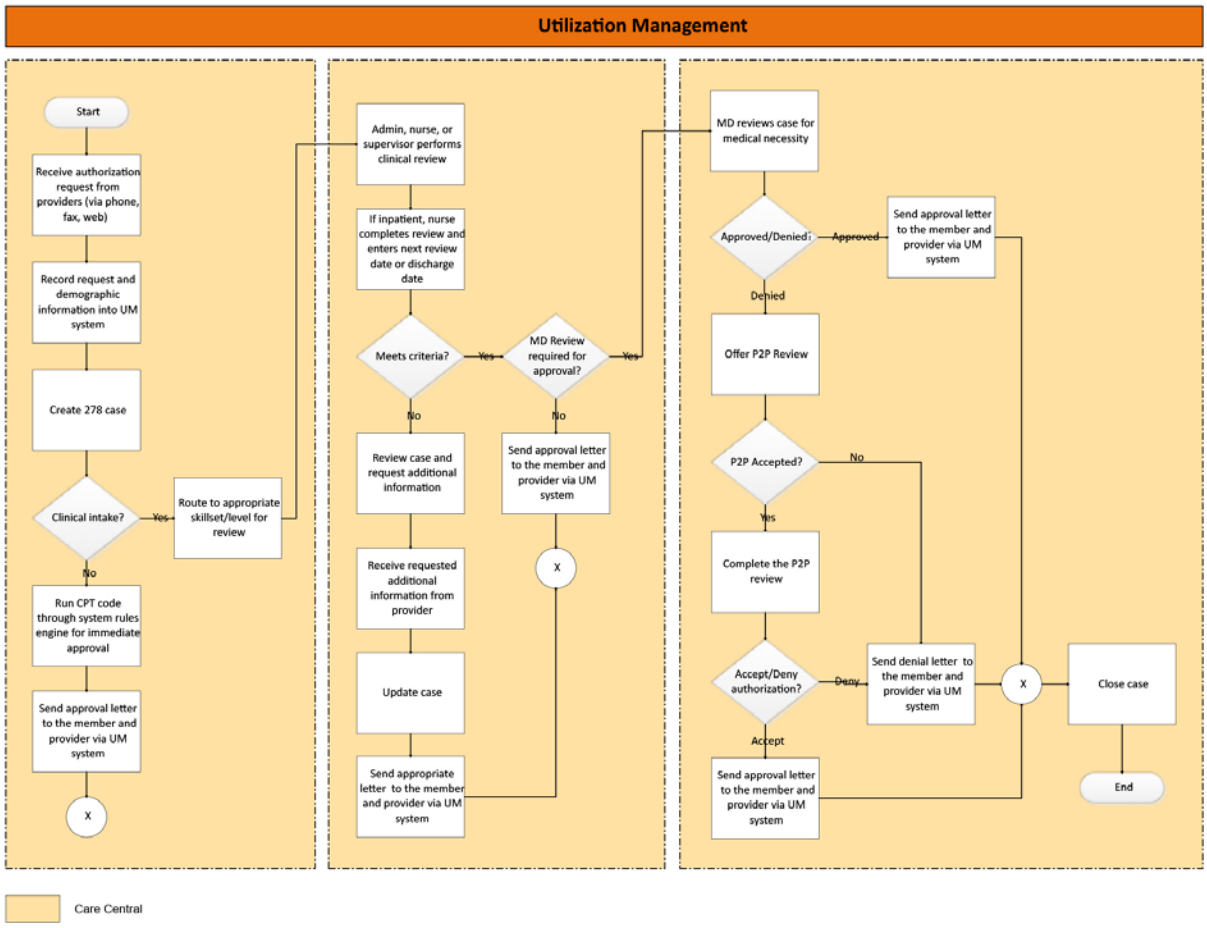

Figure C.6-6 Utilization Management Process

viii. Surveillance Utilization Review Subsystem (SURS)

Multiple WellCare of Kentucky subsystems, operating in a seamlessly-integrated fashion, provide the SURS functionality outlined in Appendix G.

WellCare of Kentucky's Claims and Encounter Processing subsystem includes modules such as Fraud/Waste/Abuse, Adjudication and Clinical Edits, and TPL support contain features and capabilities including the application of analytical algorithms to service data to identify and detect patterns of fraud, waste, or abuse by Enrollees and providers.

The Adjudication module of our Claims Application automatically applies Clinical Edits, pricing groupers, and Fraud/Waste/Abuse edits on a real time fashion. In addition, WellCare of Kentucky contracts with both Optum and Cotiviti to review claims for indications of abuse and abnormal utilization patterns in order to ensure multiple methods of utilization oversight are applied. All of these solutions, both pre-payment and post payment will identify and report on enrollee and provider fraud.

WellCare of Kentucky's Quality subsystem, leveraging the breadth of data and comprehensive reporting solutions of our EIM solution combines data from other subsystems and external systems, to provide the capability to produce reports for analysis which focus on the review and assessment of access, availability and continuity of services, quality of care given, detection of over and under-utilization of services, and the development of user-defined reporting criteria and standards. The subsystem provides information directly to the provider using dashboards and portals to inform them of outcome measurement performance using HEDIS and state specified quality indicator with ability to show areas of opportunity to improve outcome measures. The subsystem manages provider credential review processes to evaluate the credibility of the provider and any associated owners of the provider group.

WellCare of Kentucky's Issue Management subsystem includes support for the requirements related to occurrence reporting, including adverse incidents and complications, monitoring and evaluation studies, as well as enrollees and providers aggregate Grievances and Appeals. Key functions of this tracked and supported by this module include:

- Identification and proper classification of Issues, Complaints, and Grievances including the active monitoring of language and tone of customer service calls to initiate immediate action on satisfaction issues
- Receipt and acknowledgement of Issues, Complaints, and Grievances from all available communication channels including customer service agents and web portal submissions
- Monitoring of social media activity to identify potential issues, Complaints and Grievances and initiate cases based on this information
- Receipt and acknowledgement of provider disputes from providers and internal provider representatives
- Identification and classification of Critical Incidents
- Recording and communication of the decision to Enrollees and providers
- Tracking, monitoring, and ensuring compliance with response timelines

REPORTING

As a part of WellCare's Enterprise Architecture, we are constantly investing in the enhancement of our formal Enterprise Information Management (EIM) solution that supports all of our data needs, including application processing, regulatory reporting, and ad hoc reporting. This comprehensive EIM solution ensures that all data sources are captured and catalogued, fully integrated into and accessible by transactional processing systems, and enables robust reporting capabilities in support of regulatory, operational, and analytic capabilities.

WellCare of Kentucky's EIM solution ensures that data collected from external sources, generated from internal sources, and exported to external parties is captured and made

available in a useful manner. Some key examples of data sources that are incorporated in the EIM include:

- Raw data source receipts such as 834s and 837s received from the State and delegated vendors
- Systems of record including enrollee and provider data
- Transactional systems including claims, utilization and other medical record data
- Quality data including HEDIS® outcomes, EPSDT, vaccination and care need information
- Care management and utilization data, including authorizations
- Submissions to external entities such as encounters (including all pharmacy, dental and ancillary claim data)

All of the data that is pooled into our EIM is available for use in generating regulatory reports, fulfilling ad hoc requests, and meeting operational and analytics needs. Data is collected and incorporated into the Data Marts on a continuous basis.

WellCare of Kentucky employs a set of validation, cleansing and aggregation activities to make sure all data marts are populated with clean, accurate, and useful information. Data Marts include all data types and combine similar data sets from multiple source systems in order to meet the specific needs of the organization as efficiently as possible. Data Marts are typically constructed based on the intended use and can generally be classified as an Application Support, Reporting or Analytic Data Mart.

Application Data Marts are a key method of integrating data from all sources into our applications. Just as the application data stores (such as claims, enrollment and provider transactions themselves), these data marts are accessed by applications through the data services layers. Reporting and Analysis Data Marts often come from the same sources of data but are structured to be used by our Reporting tools (such as Cognos), Analytics tools (such as SAS), and Visualization tools (such as Tableau®). In turn, these tools make data readily available to our users. **Figure C.6-7** depicts our reporting and analytics sources and integration

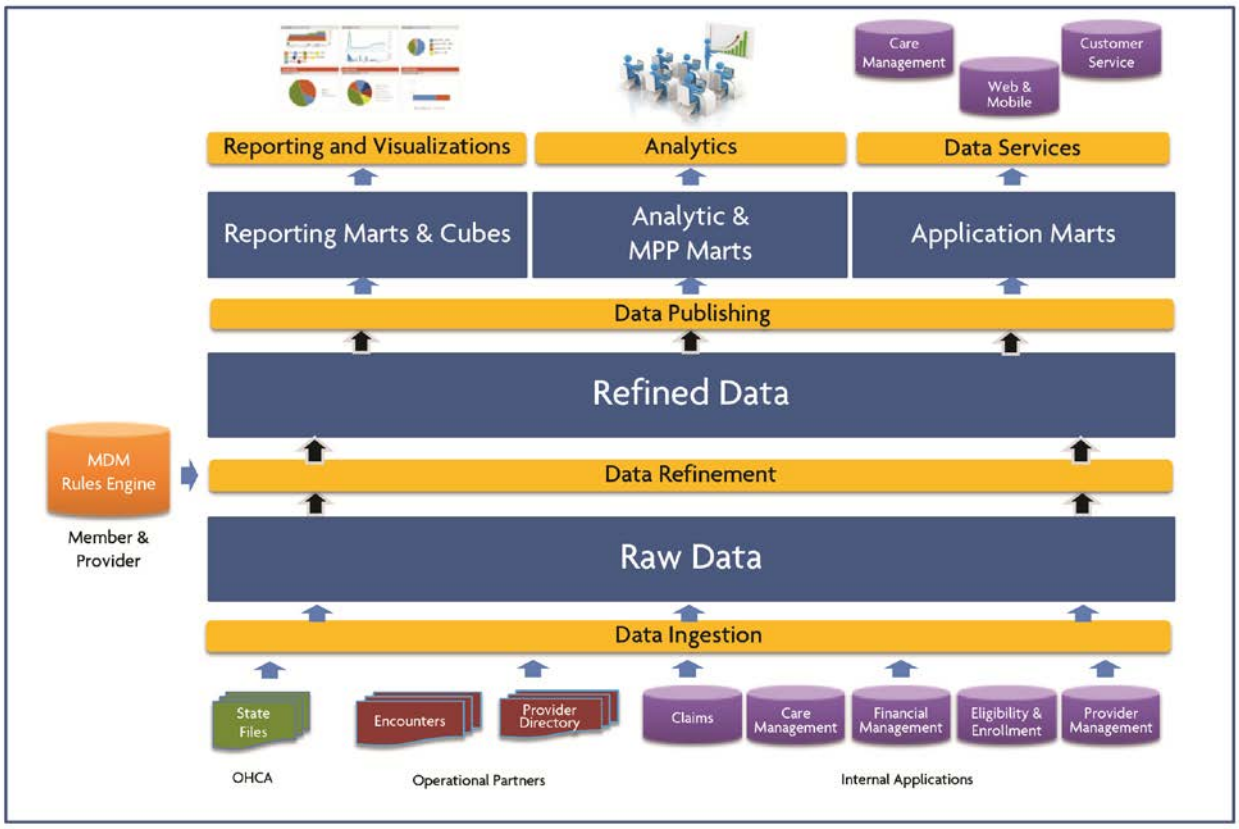

Figure C.6-7 EIM - Our reporting capabilities

TESTING

Testing is an embedded and engrained function in our software development and implementation project activities for both waterfall and agile software development models. Testing activities involve both system tests and user acceptance tests. System tests focuses on functional and non-functional tests, validates all business, functional and technical requirements are met by the system, and that the system functions per the business driven design specification. User Acceptance tests (UAT) are performed by business users and focuses on validating business requirements to confirm that system is fulfilling its intended business purpose.

During the development of reports and applications, performance testing is completed as development is occurring, and is validated independently during the QA process. In addition, we have established and is continually improving our Scalability Testing function, which utilizes a dedicated test environment and independent tests to measure and predict application and report performance in our production environment.

Quality assurance (QA) team has well-defined testing process to ensure that all functional areas are thoroughly tested for the defined functional requirements and meet necessary exit criteria. Specific to software tests for Provider configuration of benefits/pricing, Quality assurance team conducts following activities during testing phase.

- QA Team thoroughly reviews functional requirements specific to configuration updates impacting benefits / pricing and identifies the impacted claim scenarios to be tested. The test scenarios and corresponding test cases are written to validate the tests in line with requirements. Requirement traceability matrix (RTM) is established to ensure 100% test coverage.
- QA team identifies the specific Lines of Business (LOBs), Claim types, scenarios, provider types, enrollee types to be tested against. QA Test data management (TDM) team then prepares / identifies test data to be used for validating all identified business / test scenarios
- QA team then creates the claims to validate all impacted business rules and critical regression business rules / configurations to validate accuracy of test claims results for following aspects
    - Validation of key parameters such as copay, coinsurance, deductibles, Out-Of-Pocket (OOP) Maximum limits based on business rules against the benefit configuration rules.
    - In-network / out-network provider based claims processing
    - Price based validations
- QA team validates specific scenarios in provider portals to ensure provider configuration reflects accurately in provider view and other provider specific IT applications such as Enterprise provider directories
- QA team identifies and reports any discrepancies in Benefits calculations based on provider configuration and reports the discrepancies thereby assisting with accurate claims adjudication

WellCare has developed a Testing Center of Excellence (TCOE) to enable faster-time-to-market through streamlined and effective QA processes/functions. The processes are enabled by a strong automation approach and critical techno-functional skilled people. These areas of focus have **resulted in 99.9% system availability and stability for our enrollees and providers.**

The Quality Assurance (QA) team operating in a Center of Excellence model, is able to achieve business value while mastering speed, quality and productivity. The overview of the QA areas are outlined in **Figure C.6-8**. Over the past four years, QA has achieved the following key outcomes:

- *Governance and Operating Model*: Our strong leadership team drives strategic initiatives with a global network of resources providing 24/5 support coverage for speed to market delivery.
- *Process Discipline*: We have made rapid maturity advances across our Quality Assurance team. In 2018 the team reached the industry recognized Testing Maturity Model (TMMI) level 3.3. **This level was assessed by Gartner, a 3rd party independent assessor. The achieved maturity level translates into an improvement of 2.24 on a 5 point scale between 2015-2018.**
- *Automation:* Automation of test scripts is a key success factor as the TCOE focuses on repeatability and cost reduction. WellCare has consistently delivered UAT leakage to production at an industry beating rate of 1 – 2%.

- *Continuous Improvement:* The team executes proactive root cause analysis activities to review processes with a focus on increasing standards of quality. Metrics have shown identification of 95% of the defects in system testing before User Acceptance Test (UAT) every month.
- *Innovation:* WellCare has utilized various software tools and approaches to steadily increase its speed- to-market delivery of business requirements, technical environment and regulatory changes to production. **QA change order productivity has increased by 21% while cost per change order decreased by 12%.**

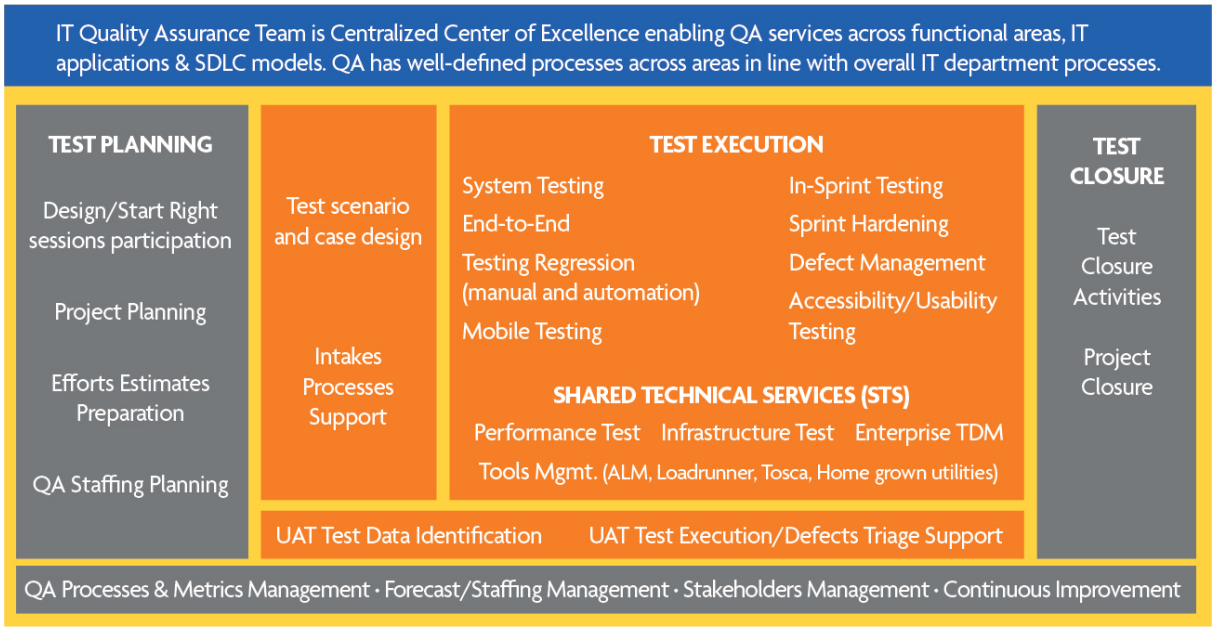

Figure C.6-8 Overview of QA areas

As part of the response, include information about the following:

i. Required interfaces, how the system will share and receive information with the Department, how the Vendor's system will use files provided by the Department, Subcontractors, providers, and other supporting entities.

WellCare of Kentucky's Interoperability and Integration Services is specifically designed to provide the means to interact and conduct electronic transactions with all health system participants, including DMS, subcontractors, providers, and other supporting entities. Specifically, these capabilities include support for incoming and outgoing data from other organizations, such as allowing us to maintain enrollee enrollment information and Enrollee-related information based on data exchanges. These functional and technical components highly leverage industry standards for EDI while directly incorporating MITA and CMS Interoperability concepts to maximize integration capabilities, reduce health system operating costs, ensure the inclusion of specific security and privacy measures in all data exchanges in adherence to HIPAA and other privacy provisions in order to ensure protection of sensitive Enrollee information, and advance government initiatives.

Data exchanges are completed utilizing pre-established secure File Transfer Protocol (sFTP) transfers that implement encryption and role-based security, ensure each incoming file is scanned for viruses, trojans, malware and other threats, catalogued and archived before being delivered to the appropriate processing application in another secure, application directory.

The primary method of data sharing currently in use in government sponsored programs remains the exchange of data files. WellCare of Kentucky's Interoperability and Integration services support the receipt of data files (using secure FTP and other encrypted transmission methods), validation of the structure of the data files to ensure compliance with defined data elements, formats, and file layouts (for example, 834 format and associated SNIP Edits), and delivery of the data files to the appropriate processing applications (such as our Enrollment module). Incoming data file FTP sites are monitored continuously, and after validation data files are delivered directly to the processing application. Outbound data files WellCare is required to generate are initiated through an automated scheduler. Automatic monitoring of job execution for both inbound and outbound file processing is built into the job applications and any failure automatically generates a service desk ticket and requires resolution. The failure queue is monitored 24 hours a day by our Enterprise Service Desk Operations.

Key functional attributes of this Enterprise technical component include:

- Receipt of all incoming transactions
    - Standard EDI trading partner management functions
    - Standard EDI file Strategic National Implementation Process (SNIP) edits and validations
- Support for receipt of batch Data File or real time transactions
- Delivery of transactions to operational systems through:
    - Flat file delivery to batch oriented applications such as enrollment processes
    - Event publishing of individual transactions to real-time applications such as claims intake (including when received in batch files)
    - Recording and Retention of all incoming transactions in raw receipt form
- Support of audits and independent verification of processing accuracy
- Support for transaction timeliness , completion, and reconciliation activities
- Support of record retention requirements that meet/exceed State and Federal retention requirements

A primary feature of WellCare of Kentucky’s Interoperability and EDI integration platform is support for industry standard transactions and formats. WellCare complies with the transaction standards rule 45 CFR Part 162 [CMS-0009-F] published on January 16, 2009. This rule mandates the use of the Accredited Standards Committee X12 (X12) version 5010 for health care, supporting the X12 version 5010 for health care transaction standards in the following **Table C.6-1**:

Table C.6-1 Healthcare Transaction Standards

Healthcare Transaction Standards	
Claims and Encounters 837P – Professional 837I – Institutional 837D – Dental NCPDP D.0 Pharmacy Claims	Claims Status 276 – Claims Status Inquiry 277 – Claims Status Response 277U – Unsolicited Claims Status

REQUIRED INTERFACES

Provider

The primary aim of the Provider module is to ensure that a consistent, validated, comprehensive provider directory is available at all users at all times. All WellCare of Kentucky applications are developed to integrate directly with the Provider module as the single source of truth. In compliance to the requirement outlined in Appendix G, Provider subsystem, our Provider function accommodates an external interface with:

- DMS; and
- Other governmental agencies to receive licensure information

WellCare Kentucky utilizes the functionality of our Interoperability and Integration Services to integrate external data transfers with our Provider and Credentialing applications, which leverages our Cactus Application suite to manage the provider credentialing life cycle. These applications support the integrations necessary to receive and utilize licensure information from a variety of sources. These interfaces are able to import these data sources in a variety of data format and utilize them to ensure that only licensed, non-excluded providers are included in our directors or paid for services and include interfaces such as CAQH, CMS SAM, Lexus-Nexus, List of Excluded Individuals and Entities, CMS Death Master, and State Roster Files.

State Roster files are also utilized to ensure that proper identifiers are submitted and available for the receipt of claims and the submission of encounters.

WellCare of Kentucky has pre-developed interfaces which utilize our Interoperability and Integration Services to extract provider data to create outbound extracts of data, in the required formats including active providers in the last six months in the format specified by Provider Master Extract File Layout for MCOs in Attachment C, as well as the CMS Machine readable format). These data files are delivered via secure FTP transfer sites

Enrollment

WellCare Kentucky utilizes the functionality of our Interoperability and Integration Services to integrate external data transfers with our Enrollment module, which is explicitly designed to recognize DMS' 834s as the authoritative source of Enrollee data and eligibility by accurately processing and reconciling to Department-supplied 834 files. In compliance to Appendix G – Member Subsystem WellCare of Kentucky accommodates an external electronic interface (HIPAA ASC X12 834, both 4010A1 and 5010 after January 1, 2012) with DMS.

WellCare of Kentucky's Member and Enrollment application currently supports DMS' specified 834 file specifications for daily and monthly eligibility files. The applications apply multiple edits and validation on the incoming 834 data during the processing stages including comparisons to existing records using names, Medicaid or other IDs, and date of birth to prevent loading duplicate records. Because the Enrollment module performs all validations (including potential duplicates), tracks each Enrollee separately, and requires manual confirmations prior to loading, WellCare of Kentucky is not only able to ensure accurate system updates but also support notification and interaction with the State for duplicate or other potential Enrollee data issues.

All WellCare of Kentucky applications are developed to integrate directly with the Provider module as the single source of truth.

Encounters

WellCare of Kentucky utilizes the functionality of our Interoperability and Integration Services, integrated with our Claims & Encounters application which specifically designed and developed to submit complete, accurate, and timely Encounter Data to DMS within 30 days of claim adjudication. This includes all paid and denied claims, corrected claims, adjusted claims, voided claims, and zero dollars ($0) paid claims processed by us or by our subcontractors.

WellCare of Kentucky's Encounter Submission processes currently supports DMS' specified, Health Insurance Portability and Accountability Act (HIPAA) Accredited Standards Committee (ASC) X12 version 4010A1 to ASC X12 version 5010 transaction 837 and National Council for Prescription Drug Programs (NCPDP) version 5.1 to NCPDP version 2.2. Example transactions include the following:

- 837I – Instructional Transactions
- 837P – Professional Transactions
- 837D – Dental Transactions
- 278 – Prior Authorization Transactions
- 835 – Remittance Advice
- 834 – Enrollment/Disenrollment
- 820 – Capitation
- 276/277 Claims Status Transactions
- 270/271 Eligibility Transactions
- 999 – Functional Acknowledgement
- NCPDP 2.2

All Encounter Data (paid, denied, voided, etc.) will be submitted to DMS according to the agreed upon schedule (as frequently as daily). Encounter submission to DMS utilizing WellCare Kentucky's standard EDI Services ensure consistency and validation of acceptance.

Key features include:

- Leveraging standard EDI toolsets and formats to automate application of submission edits based on Kentucky's submission guidelines
- Workflow and Work distribution functions to, track the submission and acceptance or rejection of any encounter submission, including the resolution and resubmission of any rejected encounter
- Tracking, monitoring, and ensuring compliance with response timelines

Capitation interface

WellCare of Kentucky utilizes the functionality of our Interoperability and Integration Services to integrate with the Enrollment and the Finance modules to generate the Report 230 and Report 250 data files, using the format specified in Appendix O, and submit this payment and roster information to DMS. The process validates the data and information generated to ensure compliance with the formatting requirements and deliver the data file to DMS securely using a secure FTP data transfer site

WellCare of Kentucky receives and validates, from a secure FTP data site, the inbound Reports, applies validation edits to the data received, and generates variance reports that will be utilized to fully reconcile all Capitation payments against our records. When appropriate, accounting adjustments will be made in the financial system to ensure accurate financial statements and records are kept.

HOW THE SYSTEM WILL SHARE AND RECEIVE INFORMATION WITH DMS

WellCare of Kentucky implements automated processes to facilitate the exchanges of data with our external partners, whether they are State agencies or our provider and delegated partners (such as CVS, our PBM) to exchange data. Our automated scheduler initiates the generation, execution, and delivery of this data through secure FTP (sFTP) services in the defined frequency without human intervention. Any job failure automatically initiates an alert which is delivered to our EDI Operations teams creating an intake ticket. All tickets are resolved and the queue is monitored by both EDI Operations staff and the management.

WellCare of Kentucky's sFTP sites for incoming data are constantly monitored for the arrival of new data files and all subsequent processing is initiated automatically. All data files are scanned for viruses, trojans, malware, and other threats, catalogued and archived before being delivered to internal, access-restricted (based on application or user role) directories for further processing. Incoming secure FTP sites will be monitored daily for any received but unprocessed files.

USING FILES PROVIDED BY DMS, SUBCONTRACTORS, PROVIDERS, AND OTHER SUPPORTING FUNCTIONS LIKE ENROLLMENT, PROVIDER, OTHERS

At WellCare of Kentucky, the utilization of files provided by DMS, subcontractors, providers and other supporting functions is determined based on the following criteria:

- Where specified by DMS (such as the Enrollment 834, Provider Data, and Reference Data as outlined in Appendix G), WellCare uses these data exchanges for the express purpose described by DMS (maintaining accurate enrollment files, maintaining accurate provider network data, and ensuring accurate reference data for use in other functions). This would extend to the receipt of files such as the 820 payment file, which is utilized for the reconciliation of payments and independently as a validation of the accuracy of our membership information
- Where industry standard specifications outline an intended use, the data exchanges are used according to the guidelines of that specifications. Examples include the receipt of 837 Claim files which are used specifically to accept the submission of claims from providers, 278 Authorization Request and Authorization Notification processes, and HL7 transaction such as the ADT records to maintain an accurate clinical record and provide notifications to care managers and providers of admissions, and other industry standard guidelines.
- Other proprietary data exchanges are supported and used for the reasons outlined in the agreement(s) that govern the exchange of data

In addition, as a general rule, WellCare will utilize all data sources available to support research, analytics, and analysis to gain unique insights into methods of improving operations or Enrollee health outcomes. Further, whenever available, WellCare will use all data exchanges as a means of identifying actionable events. As an example, either an ADT or a Hospital Admission claim are indicators to alert care managers to the fact that a enrollee was admitted and may be in need of discharge planning or other follow up activity.

Specific examples of how WellCare will utilize data exchanges with DMS, Subcontractors, providers, and other supporting functions like enrollment and provider include:

Data and Files from DMS

- Eligibility information is utilized to ensure accurate eligibility in our operational systems. This data is also utilized to identify third party liability opportunities as well as the Enrollee risk stratification process
- Payment files are utilized not only to validate payments but are reconciled to ensure that Enrollee eligibility information was properly processed and the category or eligibility codes are utilized to further enhance our risk stratification and care planning processes

Data and Files from Subcontractors

- Validated encounters and the subcontractor's cash disbursements journal are utilized to ensure complete and accurate submission of encounter data
- Lab test results, in addition to lab claims, are received and the lab results are integrated into our Clinical Data repository. This data is then used to identify Enrollee health conditions to address in service plans and support HEDIS and other quality measure evaluations and included in the care manager's Enrollee 360 view

Data and Files from Providers

- Chart data (including CPT-II codes) is incorporated into the Clinical Data repository and utilized to enhance the risk and stratification process, support HEDIS and Care Gap calculations, and is incorporated into the care manager's Enrollee 360 view
- ADT information received is utilized to alert Care Managers to the fact that an Enrollee was admitted and may be in need of discharge planning or other follow up activity. Notification can also be made to the Enrollee's PCP

Data from supporting Functions

All WellCare application modules as directly integrated with each other and able to share information.

- Care needs identified during the HEDIS quality calculations are accessible by and displayed on the Enrollee portal, the Enrollee mobile applications, to PCPs on the provider portal (for their assigned Enrollees), to care managers in care planning, and alerts to customer service agents
- Enrollee data updates from both DMS and other operational activities are automatically acted upon. As an example, an Enrollee's change in PCP selection can be used to notify DMS, KHIE, care managers and physicians (both the prior and new PCP) of the enrollees change in election
- Encounter data is automatically integrated into our Fraud, Waste, and Abuse edits for claims processing to help ensure comprehensive programs to identify Enrollee and provider fraud

Data from other sources

- WellCare has interacted with HIEs, EHRs, and other clearinghouses to collect ADT and Clinical Data (even if only available through Direct Secure Messaging) on Enrollees and incorporates this data into HEDIS measure calculations and care managers leverage this data in the care planning process
- Externally validated Clinical Guideline data is obtained and directly integrated into our Utilization Management applications to assist UM staff in ensuring that authorization requests are validated against industry best practices in treatment plans
- Clinical guidelines are also obtained and directly integrated into our claims adjudication process to identify services for which reduced payments or payment denials should be applied

WellCare's Operations and Care Management systems, leveraging our EDI & Interoperability and Enterprise Information Management technical solutions, as capable of supporting all interface needs, including the Required Interfaces identified by DMS.

ii. Capability to store and use large amounts of data, to support data analyses, and to create standard and ad hoc reports.

WellCare of Kentucky views having the ability to process and support large amounts of data, analytics and reporting as a foundational element of a top-performing health plan. To excel in

this area, our Enterprise Information Management (EIM) strategy and approach are based on both maximizing the capture of timely, accurate, and complete data, as well as converting that data into value-added information and insights that can be used to diagnose areas of opportunity and design and execute initiatives and programs to better serve our Enrollees and providers.

As described in (testing section above) WellCare of Kentucky also implements multiple levels of independent test verifications into our processes to ensure the ability to scale. During the development of reports and applications, performance testing is completed as development is occurring, and is validated independently during the QA process. In addition, we have established and is continually improving our Scalability Testing function, which utilizes a dedicated test environment and independent tests to measure and predict application and report performance in our production environment.

To that effect, we designed our EIM which is the central repository of all our data which facilitates data integrity and self-service analytics. Developed using industry leading solutions such as Oracle, Hadoop, and Greenplum our technology stack is built on foundational technologies capable of scaling to volumes in excess of the demands required to meet our obligations to DMS.

Our EIM solution begins with the implementation process that describes cataloging and collecting any and all available data for use in subsequent processes. This ensures that data collected from external sources, generated from internal sources, and exported to external parties is captured and made available in a useful manner. Some key examples of data sources that are incorporated in the EIM include:

- Raw data source receipts such as 834s and 837s received from the State and delegated vendors
- Systems of record including Enrollee and provider data
- Transactional systems including claims, utilization and other medical record data
- Quality data including HEDIS® outcomes, EPSDT, vaccination and care gap information
- Care management and utilization data, including authorizations
- Submissions to external entities such as encounters (including all pharmacy, dental and ancillary claim data)

All of the data that is pooled into our EIM is available for use in generating regulatory reports, fulfilling ad hoc requests, and meeting operational and analytics needs. Data is collected and incorporated into the Data Marts on a continuous basis. EIM leverages innovative solutions and technologies for storage and processing, high performing data exchange and integration tools, data visualization tools for reporting and analytics in conjunction with predictive modelling capabilities to process, analyze and report on very large amounts of data rapidly. The EIM is also directly integrated to support application functions such as the quality management reports, Part C&D reports, Risk adjustment process submissions, FWA reports, providing service coordinators with Enrollee 360 views, and as the source of stratification and provider profiling outcomes. The EIM also supports ongoing initiatives to onboard clinical data in industry format from providers for effective population health management and reduce gaps in care.

SUPPORTING DATA ANALYSIS

With the capability of EIM (as discussed above), we have the full capability to support data analysis. Using data from our transactional and EIM applications, and leveraging tools such as Tableau, Cognos, and SAS, WellCare has both the technical tools and the experience needed to support analytic functions.

WellCare of Kentucky's support for analytics extends from support for casual business users, to experienced experts, and now includes data scientists utilizing machine learning techniques.

In addition to basic tools such as Excel or Access, WellCare of Kentucky has developed a series of drill down dashboards that are accessible to casual business users. These intuitive, Tableau-bases, self-navigating dashboards are accessed through a main landing page and incorporate standard data elements in views. User are able to utilize these dashboards to refine the information in the view through clickable drop down selections, enabling them to gain new and useful insights. A sample dashboard is depicted in **Figure C.6-9**.

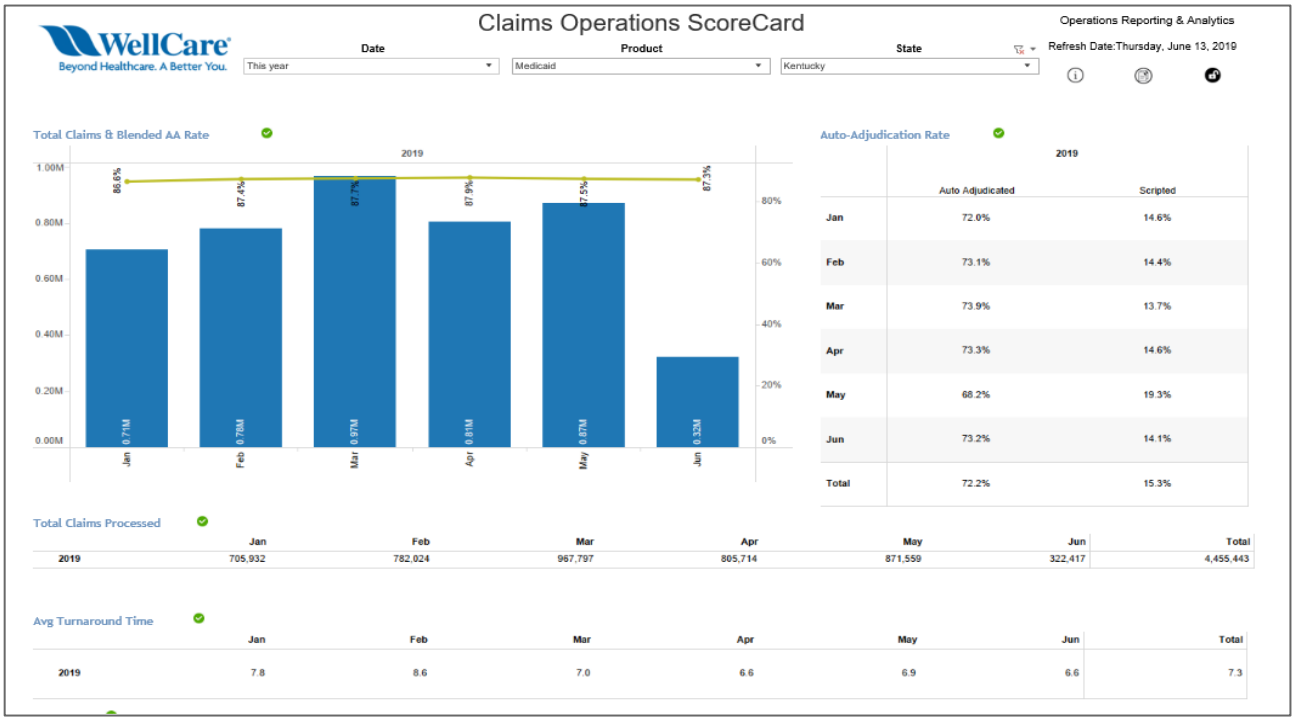

Figure C.6-9 Sample Dashboard

For more experienced experts, the EIMs data warehouse and published data marts provide a wealth or pre-validated data in easily accessible format for use with more robust and capable tools such as SAS. Used in combination these tools allow our experienced users to include and combine data in any desired manner and run advanced analytics and statistical models on all data sets.

WellCare of Kentucky's dedicated team of experts AI and Machine Learning, in collaboration with the appropriate business partners, have been able to leverage highly advanced statistical techniques to approach analytics from new and productive perspectives. A key example of the

application of the tools, knowledge, and skill sets has been our set of Population Segmentation activities. **Population segmentation and modeling have proven useful for a variety of applications. Some of these include, but are not limited to: identifying populations for specialized/tailored health interventions, selecting different care and utilization management strategies, factors leading to disenrollment, and the effectiveness of enrollee retention practices.**

See **Figure C.6-10** and **Figure C.6-11** for Population Segmentation and Modeling Samples.

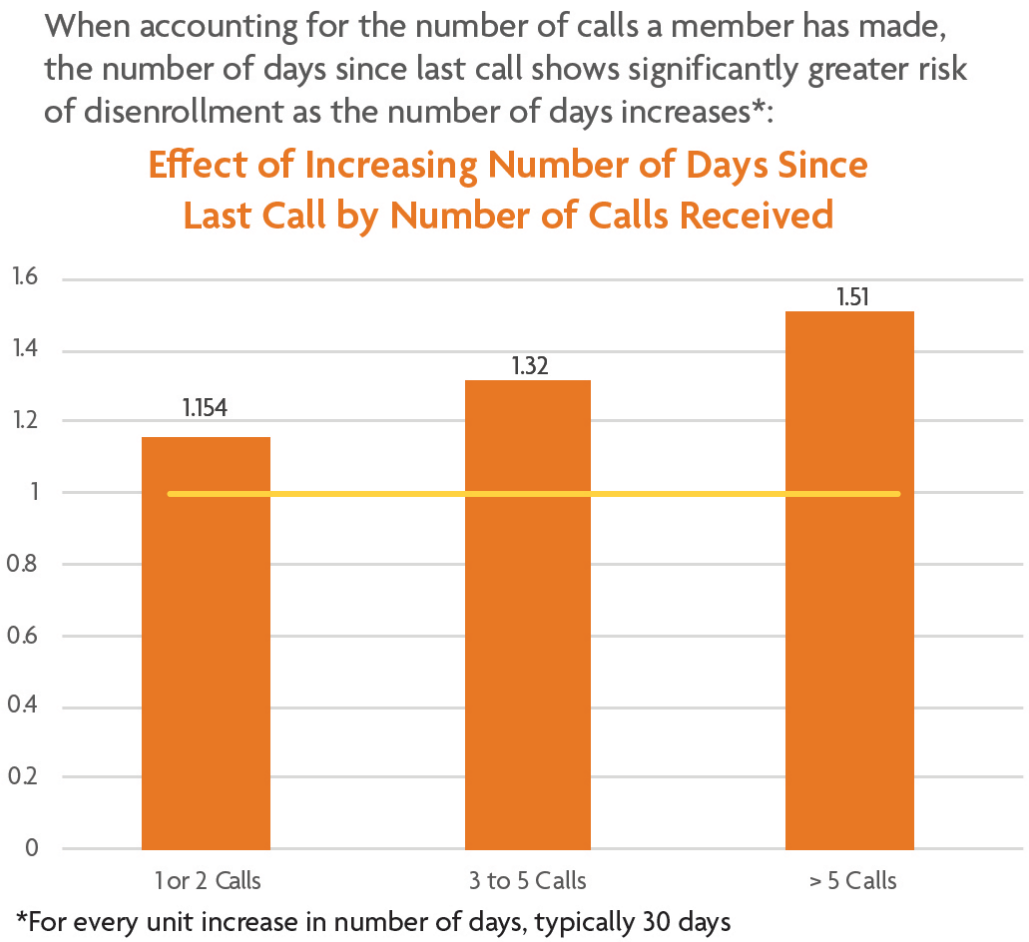

Figure C.6-10 Population Segmentation and Modeling

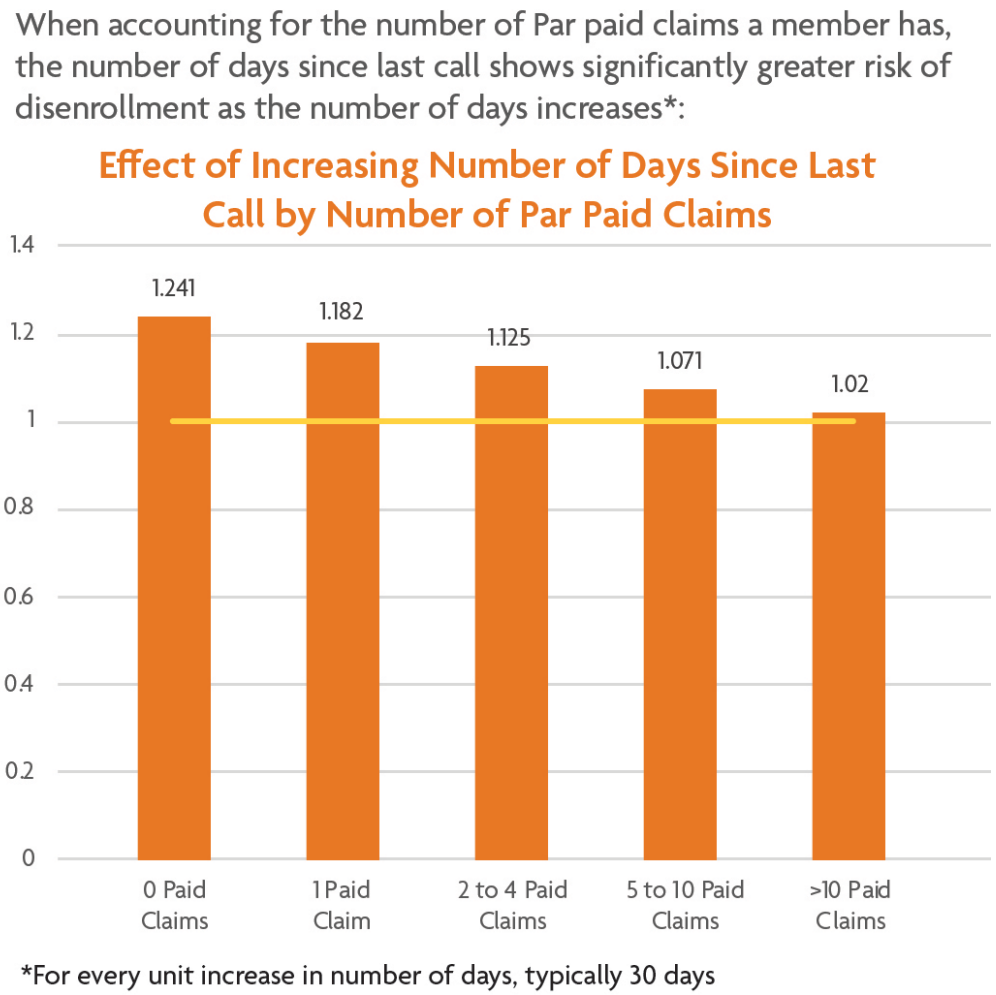

Figure C.6-11 Population Segmentation and Modeling

CREATE STANDARD AND AD HOC REPORTS

With the capability of EIM (as discussed above), we have a formal process to develop and revise regulatory reports, and ad hoc reports which is designed to support the development of accurate, timely and automated regulatory submissions.

Our Kentucky Regulatory Affairs team receives a variety of requests from DMS, and has a well-defined process for ensuring timely response to ad hoc requests. First, the team analyzes the request and the turnaround time immediately engaging the appropriate functional business owners. If the request requires an immediate response, in-market data analysts leverage self-service reporting tools (such as SAS, Cognos, and Tableau) to complete the report. If a longer turnaround time has been offered, or the reporting requirement needs to be ongoing, the Kentucky Regulatory Affairs brings in WellCare's IT Regulatory Affairs team to build and run the report in the same manner as described above. By leveraging our EIM solution, WellCare of Kentucky is able to ensure this team has access to comprehensive, validated data without regard to the type of service (physical, behavioral, pharmacy, dental, vision) or the source (WellCare, WellCare partners, WellCare subcontractors, government partners, former insurers

and health information exchanges). Additional data sets from our transactional systems and delegated partners are available to support these requests as well. Similar to the process described above, our team continues validating accuracy, tracking completion, analyzing for trends, storage of the completed report and final submission to DMS. Additionally, the Kentucky team sends a weekly validation report to DMS' account manager to ensure no reports or requests are missed.

In addition to the above, we **also offer a Government Partner Portal for our state partners to access their own reports with drill down capabilities, and we have it available for DMS.** Our portal is internet-accessible based on login credentials that are approved by Department Administrator(s). Consistent with our other portals, it is available 24/7 with the exception of pre-published and approved maintenance and enhancement windows. Our government partner portal is capable of providing multiple functions to DMS, including:

- Delivery of standard required reports
- Delivery of ad hoc report and data requests
- On-line access to dashboard reports using visual tools and providing drill-down capabilities
- On-line ability to submit service desk tickets for IT or portal issues
- Publishing of materials, manuals and documentation (including portal user guide)

However, to the extent that DMS identifies additional or different reporting requests, we are able to commit experienced personnel to new Dashboard development. In addition, in the event DMS wishes to receive our dashboards via a different mechanism than our government partner portal, we are able to accommodate that approach as well. For example, the reports we currently submit to DMS are primarily delivered via SFTP. We certify the accuracy of our regulatory reports.

iii. Extent to which these systems are currently implemented and integrated with other systems, internal and external, and the Vendor's approach for assuring systems that are not fully implemented and integrated will be ready to begin operations on required timeframes.

WellCare has successfully completed and passed 100% of all readiness reviews for the Medicaid new markets, expansions, and rebid awards

As an incumbent in Kentucky since 2011, we have been using in production a fully tested and operational deployment of our single integrated platform, which is deliberately built and constructed for the purpose of supporting programs such as DMS. WellCare of Kentucky develops, tests and deploys this platform as a comprehensive, fully-integrated solution, ensuring that all subsystems are pre-integrated and validated before. As a result, we have the significant advantage of being able to leverage our existing production deployment, including all the existing and functioning integrations with external systems, to enhance go-live readiness demonstrations.

One of the most critical aspects of our readiness process is the identification of new Information Systems functions and requirements. At the time of this submission, our Enterprise Architecture team has already completed a comprehensive analysis of the RFP, model contract,

and all attachments. Our Enterprise Architecture team members are experienced not only with DMS' program, but also with multiple state Medicaid program requirements across the country. Based on their experience with DMS (including our experience of being prepared to fully implement the Kentucky Waiver program, including Enrollee billing premium requirements)and with other similar populations, they were able to analyze the requirements, identify which needs could be fulfilled with current system capabilities, and determine needs for enhancements to our IT systems. WellCare of Kentucky also recognizes that while we do not need to build program components and systems functionality from scratch, either as a result of Department-specific requirements or our own ongoing improvement programs, we will be obligated to enhance our MIS platform to ensure compliance with DMS' requirements and expectations.

Highly Configurable System

Our copay configuration system allowed WellCare of Kentucky to implement copay requirements based on enrollee demographics, place of service, and at the code level with minimal turn-around time. For the 1/1/2019 implementation of copays we made enrollee-based copay changes that were required by DMS 20 days before the implementation. WellCare of Kentucky also successfully modified its copay configuration multiple times since implementation based on modified DMS requirements.

WellCare's Kentucky-based staff will be aided by WellCare's corporate Enterprise Project Management Office (ePMO) to ensure both local and corporate operations have been adapted to the requirements of the new contract. Our team is also well-versed in standard Software Development Lifecycles (SDLC) such as Waterfall and Agile methodologies. Our PMP-certified, professional project managers leverage ePMO-developed, best-practice "playbooks" that reflect years of industry experience and aggregate lessons learned across numerous contract implementations. The ePMO works hand-in-hand with the state market leaders, government partners, other corporate business functions and subject matter experts, corporate IT, and ancillary vendors to ensure a compliant, operationally-sound Medicaid implementation that seamlessly transitions new enrollees and providers into our health plan. The individuals assisting the Kentucky staff in Kentucky are subject matter experts who have been successful in the implementation of multiple programs in these states: Nebraska, Kentucky, Georgia, Florida, Missouri and New York.

Diagrams and flowcharts should show each component of the MIS and the interfacing support systems used to ensure compliance with Contract requirements.

In addition to the above diagrams, **Figure C.6-12** provides a high level view of our Care Management flowchart and **Figure C.6-13** shows our Identification and Assessment process.

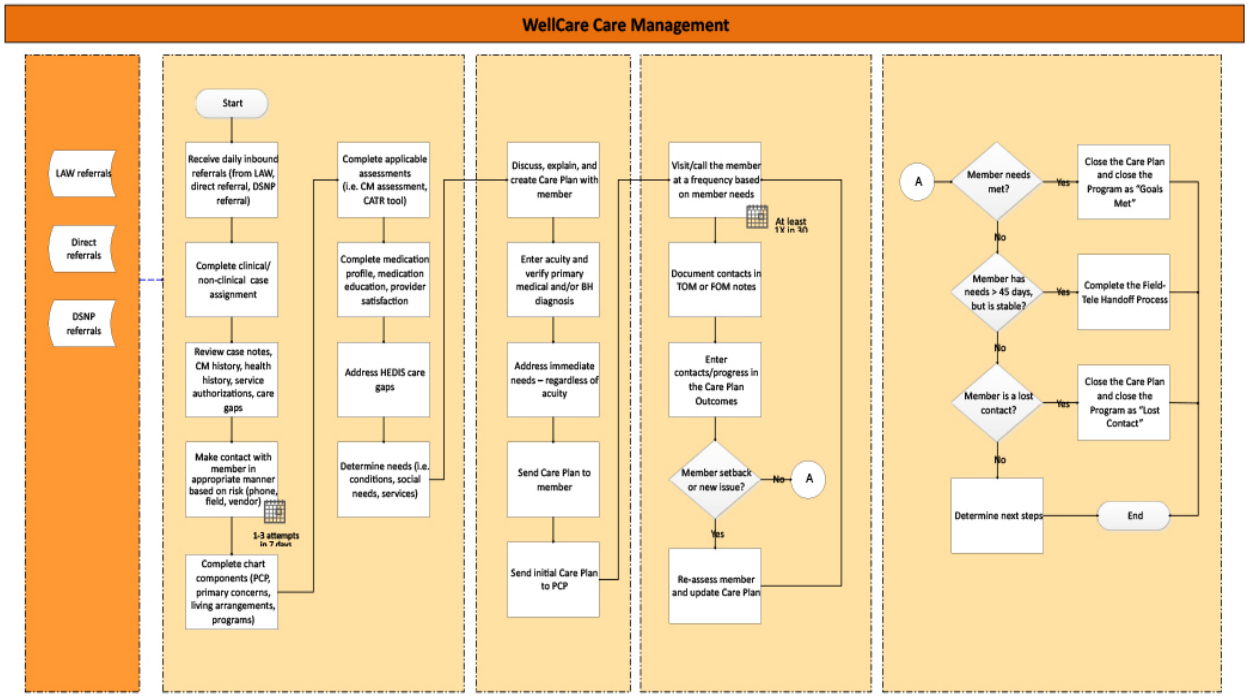

Figure C.6-12 Care Management Flowchart

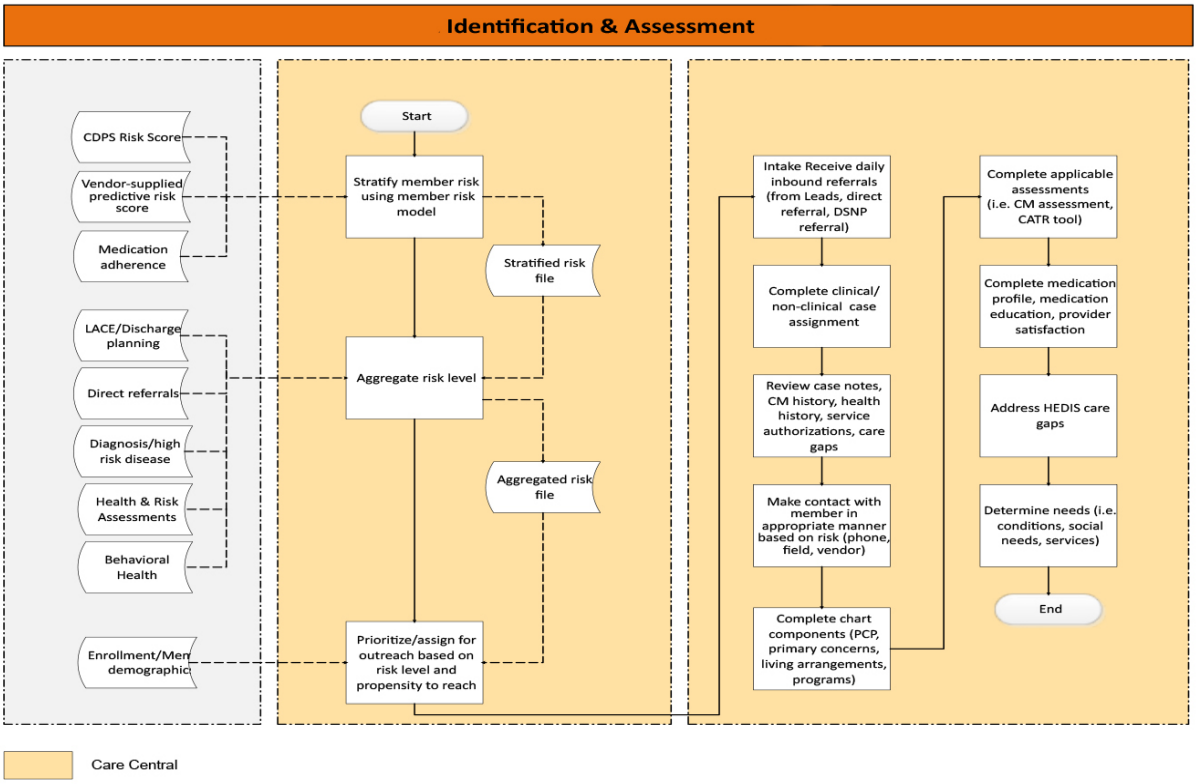

Figure C.6-13 Identification and Assessment process

b. Provide a description for and list of potential risks and mitigation strategies for implementing new information systems and changes to existing systems to support the Kentucky Medicaid managed care program.

Effective Risk Management and Mitigation is a primary focus of our enterprise Project Management Office (ePMO) and is built directly into our project management lifecycle. While WellCare of Kentucky has already implemented the systems and operations needed to effectively support Kentucky Medicaid, we aggressively view each new contract implementation as an opportunity to identify and manage risk. As part of our comprehensive project planning start-up, we have identified an initial set of potential risks and mitigation strategies depicted in **Table C.6-2**. As we move forward, we monitor and update these risks to ensure tracking and mitigation.

Table C.6-2 Potential Risk and Mitigation Strategies

Potential Risk	Mitigation Strategies
Implementation activities associated with a new information system	WellCare of Kentucky has an existing implementation that meets current requirements and will be leveraged for new contract
Bandwidth for new program adds and new enrollees	The Architecture team completed a review and impact assessment as part of our RFP response ePMO is accountable for the implementation. They create a list of commitments and requirements from the RFP and contract, an assessment of whether currently met or not, and ensures both Business and IT plans are in place and executed to meet obligations Our Scalability capability will be used to validate growth and expansion requirements, including investing in, implementing, and validating any infrastructure needs prior to go-live
Additional regulatory reporting requirements	Dedicated regulatory reporting process to ensure accurate submissions, including internal ownership and attestation of all report submissions by WellCare staff before delivery to DMS Ability to leverage our Enterprise Information Management (EIM) solution to meet requirements. EIM ensures that all data from all sources (internal systems and external sources) is available (and has quality validations) to ensure ability to support reporting requirements
Changes in Federal or State regulatory requirements (post go-live)	Local (Kentucky) and federal (corporate) regulatory departments continually monitor guidance and legislation for any new requirements Our single integrated solution allows leverage from all other books of business and ensures federal guidance changes and requirements are monitored and incorporated Ability to leverage Kentucky SUD Waiver and other changes as needed for additional enhancements
New or Additional Functional requirements and Interfaces	The Architecture team completed a review and impact assessment as part of our RFP response. Funding and approval for these changes will

Potential Risk	Mitigation Strategies
needed to support the new contract	be available immediately upon award Initial solution designs for any notable changes have been started and will be completed prior to award Our robust software development lifecycle ensures that accurate data are captured and used for test validation

c. Describe the Vendor's current and planned use and support of new and existing technology in health information exchange (HIE), electronic health records (EHR), and personal health records (PHR).

HEALTH INFORMATION EXCHANGE (HIE) - OUR CURRENT AND PLANNED USE

As part of our commitment to government sponsored health care initiatives, WellCare of Kentucky has been actively engaged in working with our State partners on a Healthcare Information Technology (HIT) strategy since 2012. WellCare continues to track the activities of all HIEs in states where we operate. We have attended and actively participated in the Strategic Health Information Exchange Collaborative (SHIEC) conferences since the initial meeting in 2015. WellCare was the first MCO to attend and the first to have its care managers attend and present on the value potential of HIE interactions to improve the care management process. WellCare has long believed that understanding the perspective of the HIE community is key to establishing effective HIE partnerships and gaining the greatest value for our enrollees.

WellCare actively participates with a large number of HIEs to facilitate the use and exchange of clinical data. Examples include:

- In Georgia, WellCare joined GaHIN in 2015 and has been an active partner. As part of the planning activities for implementing MCO-MCO transition of care, WellCare encouraged the use of the HIE as the facilitator of information transfer between MCOs and this approach was adopted and put into use.
- In Nebraska, WellCare formed a relationship with NEHII which predated the contract award in Nebraska. This approach allowed a smooth transition to WellCare membership upon contract award and has become WellCare's standard approach to new state business.
- In North Carolina, WellCare established an early relationship with the NCHIE long before contract award to ensure another smooth onboarding process. WellCare presented the MCO viewpoint in many meetings with NCHIEA and other stakeholders. WellCare's goal was and is to provide the best care to our Enrollees and access by MCOs to the HIE is a key component of this.
- Our care managers in Missouri have used CyberAccess for many years to review the state pharmacy database and view Enrollee's medical records and claim history during the care planning process.
- WellCare has multiple years of participation in the Florida, the FLHIE who provides ADT feeds to WellCare, which are subsequently utilized to notify care managers and providers to increase the coordination of care and improve discharge planning.

WellCare of Kentucky is not a primary source of clinical data in the traditional sense. However as a MCO, WellCare has data to offer including care plans, condition information, care needs (addressed and unaddressed) and prescription and claims history. Additionally, in discussions with other HIEs, we have found that our ability to provide Enrollee-PCP relationships can enable HIEs to serve as an additional method of distributing ADTs to providers when appropriate. As standards emerge for the sharing this information we will increasingly do so, but today the sharing is defined on a state-by-state basis. WellCare of Kentucky will participate in any data sharing required by Kentucky Medicaid, and encourages that it be done in a standard way. In addition, any clinical data that we receive is available for delivery to KHIE, should it be desirable to do so. Planning to implement a clinical Data Mart that will include information we are able to obtain from HIEs and also to submit to HIEs in accordance with HIE protocols. We have the ability to submit any received ADTs to the KHIE as required, regardless of the source of the ADT.

WellCare of Kentucky will continue to utilize interactions with HIEs whenever possible to facilitate the transition of care process between health plans, leverage the receipt of ADT transactions to improve care coordination and discharge planning functions (which is facilitated automatically through our CareCentral application), improve the information available to care managers during the care planning process, and incorporate clinical data into our risk stratification and other analytic processes.

EHR- OUR CURRENT AND PLANNED USE

We also recognize the need to use all opportunities to connect with our network providers who have EHR capability. In 2014, we piloted a program in Florida that allowed providers to submit EHR files containing clinical data, and our care coordinators used this data to close care gaps by outreaching Enrollees. The provider practices participating in the pilot demonstrated an increase in the results of the HEDIS measure, weight assessment and counseling for nutrition and exercise, through our use of the EHR data. Since this initial pilot project, we have continued to aggressively pursue direct data feeds from physician practice EHR systems as we develop efficiencies and improve effectiveness in our ability to consume clinical data. We prioritize data integration with EHR systems, state HIEs, and other clinical data aggregators and are developing a holistic view of the Enrollee to reduce gaps in care and improve Enrollee health outcomes. Where provider organizations and systems are limited in integration solutions, WellCare often works with the provider organization to gain direct access to their EHR to aid in clinical information capture and prior authorization processes. **In 2018, we captured 1,470,437 services for 132,615 unique Enrollees through CPT 2 or clinical data feeds.**

PHR: OUR CURRENT AND PLANNED USE

WellCare supports the efforts of CMS and the ONC to promote the delivery of health information to the patient. We agree that this approach will enhance the flow of information and improve care. Moving information to the patient provides them with a Personal Health Record that they control.

As an illustration of this support WellCare will implement the Blue Button 2.0 API this year to make benefit and claim information available to our Enrollees. This standards based API approach is central to WellCare's IT architecture strategy and we will expand API usage as new

standards are adopted. As a sign of our commitment, our mobile application will be adapted to use these APIs.

d. Describe the Vendor's approach to assessing integrity, accuracy, and completeness of data submitted by providers and Subcontractors.

WellCare of Kentucky's approach to ensuring the timeliness and validity of data from providers and subcontractors is based on our assumption of responsibility for all data associated with our contract with DMS, whether that data is internally generated or provided by providers or subcontractors. During our regulatory report submission attestation process, if data from subcontractors is included in the report, this fact is recorded and the appropriate internal subcontractor representative is attesting to the accuracy of the data.

WellCare of Kentucky also ensures that all data from subcontractors is submitted to the appropriate validation edits based on DMS' guidelines. As an example, for claims and encounters WellCare of Kentucky applies DMS' encounter SNIP edits and will reject submissions back to the subcontractor for resolution if the edits are not met. Our encounters team actively tracks the quality, timeliness, and volumes of subcontractor's submissions to ensure we are receiving timely, accurate encounter data for inclusion in our submission process.

WellCare implements completeness checks against data received from subcontractors in addition to standard edits, as part of every process. As an example, WellCare requires the submission of a Cash Disbursements journal in addition to Encounters from delegated adjudication entities. This allows us to ensure the subcontractor has provided all required encounter information.

In similar fashion, WellCare executes edits against clinical data submissions and cross reference the closure of care needs data with the clinical and administrative data to ensure data quality and accuracy.

In addition, all data received from subcontractors is included in our Enterprise Information Management (EIM) solution that supports all of our data needs, including application processing, regulatory reporting, and ad hoc reporting. This comprehensive EIM solution ensures that all data sources, including data from subcontractors, are captured and catalogued, fully integrated into and accessible by transactional processing systems, and enables robust reporting capabilities in support of regulatory, operational, and analytic capabilities.

WellCare of Kentucky employs a set of validation, cleansing and aggregation activities to make sure all Data Marts are populated with clean, accurate, and useful information. In cases where data is submitted to us by a subcontractor and it fails to meet the data quality and accuracy requirements or our EIM, the submission is rejected to the subcontractor for remediation and resubmission.

e. Provide a description of the Vendor's data security approach and how the Vendor will comply with Health Insurance Portability and Accountability Act (HIPAA) standards including the protection of data in motion and at rest, staff training and security audits.

Our Security and Privacy team recognizes the impact of identity theft and medical fraud on enrollees and works to protect them in practical and effective ways. These include training for associates, clear and descriptive policies, modern technical security solutions, and incorporating security and privacy into our daily operations versus adding it after the fact. Our approach to meeting DMS' expectations and requirements centers in our core design objective for our systems architecture which is grounded in Security and Privacy services. This high-level depiction of our enterprise architecture provides an overview of our MIS and specifically depicts how our Security and Privacy services encapsulates and protects our systems (as depicted the graphic beside) and builds these concepts into our solution at the foundational level. We employ multiple physical and electronic security technologies as part of our privacy and security services and infrastructure services into every layer of our operational environment. Our principle of maintaining and enforcing a set of information security policies and standards is reflected throughout the enterprise via adoption of the HITRUST Common Security Framework. These standards are overseen by our Information Security Group and implemented by our Infrastructure Security Group, with clear segregation of duties throughout the process. Our servers, workstations, and network are continuously monitored using industry-standard intrusion protection technologies, advanced persistent threat monitoring, and data loss protection.

The HITRUST Common Security Framework allows us to demonstrate compliance with DMS' requirements via a set of security and privacy controls in direct support of HIPAA, NIST 800-53, NIST Common Security Framework, PCI-DSS, and other industry frameworks. Our Chief Security and Privacy Officer is responsible for monitoring and auditing ongoing compliance including risk assessments based upon NIST 800-30, HITRUST compliance, application security testing, wireless testing, and penetration testing. WellCare leverages a 3rd party firm that specializes in information security to conduct a comprehensive penetration test once a year. The results of all these tests are reviewed by our IT infrastructure management and by the Information Security team, and enhancements are made accordingly. The test results and progress tracking on enhancements and resolution are also presented to WellCare's senior leadership and the Board of Directors' audit, finance, and regulatory compliance committee.

WellCare was assessed and successfully obtained HiTrust certification in 2018.

OUR DATA SECURITY APPROACH - ENROLLEE DATA PROTECTION

WellCare of KY invests heavily in the Information Security and Privacy programs in order to reduce risk of a data loss event. The HITRUST program and the implementation of the HITRUST Common Security Framework focuses on minimizing the risk of a breach while efficiently providing services to enrollees. We employ multiple physical and electronic security controls as part of our privacy and security services and infrastructure services into every layer of our operational environment. Our environment is continuously monitored by our 24/7 Enterprise Service Operations Center (ESOC). Examples of our existing comprehensive security features include:

- Encryption of hard drives, including all desktops and laptops
- Multifactor authentication for all remote access
- Monitoring of laptops, desktops, and the network through automated virus scanning solutions, data loss prevention, and advanced persistent threat technologies
- Blocking of ability to save data to portable (thumb drive), disc media (CDs), webmail, and cloud file sharing.
- Built in "Automated Wiping" for desktops and laptops in the event of loss or theft
- Encrypted storage solutions (including medical records)
- Secure decommissioning including full magnetic erasure of disc drives
- Email controls (e.g., scans for spam, malware, and viruses; user-elected and automated email encryption; Transport Layer Security (TLS) email exchanges)
- Role-based security features based on least-privilege (e.g., two-factor authentication, automated provisioning) with annual certification
- Implementation of a diverse set of Firewalls, Intrusion Detection Systems, virus scanning, data loss prevention, and advanced persistent threat prevention, monitoring and detection technologies
- Recurring vulnerability testing, web application testing, and penetration test and with remediation of any identified vulnerabilities and enhancement opportunities
- The use of encrypted file transfers with government partners and subcontractors primarily through the use of Secure File Transfer Protocol (SFTP) (which will include Department provided FTP site)
- Application designs and controls (e.g., detailed audit logs; access to display last change date, time, and user; inability to alter finalized transactions)
- Physical controls (e.g., restricted access building requiring appropriate credentials to enter; separate, highly restricted areas, like Data Center facilities)

WELLCARE'S SECURITY STRATEGIES FOR DATA INTEGRITY AND ACCESS

Access to any WellCare system requires a valid user ID and password, the sharing of which is strictly prohibited. The User ID process begins at the time of hire through our user provisioning process. Provisioning occurs via role based access associated with role and job title. The user access request includes a complete description of the access needed including network drives, applications, and templates. Requests for access to in-scope applications are approved based on the individual's need to view, add, change, or delete data. "Least Privilege" access is driven by the use of templates specific to the system functions and information that the unique user requires. Once a user receives his or her ID, access attempts are monitored. WellCare's Active Directory domain policy restricts unsuccessful login attempts and can be programmed to fit DMS-specific requirements.

WellCare desktops and laptops are protected at the host level by an Enterprise Anti-Virus and End-Point Firewall solution. Password complexity is established and enforced at the domain level and administrator user privileges are limited to support staff exclusively. A mature patch management process ensures that these devices receive scheduled vendor updates, and compliance is tracked via an enterprise distribution package. Laptops are further protected by the use of a full-disk encryption solution with full DOD level remote wipe capability.

As part of the data integrity program, WellCare maintains a formal Corporate Compliance program to manage and respond to external audit requests from state and federal agencies. The program leverages resources from WellCare's Corporate Compliance, Internal Audit, HS-Quality Improvement, and IT Compliance to respond to audit requests. We also maintain regularly audited preventive and detective controls to sustain system integrity and consistency. Controls are testing no less than annually. Scheduled reviews of user access are performed to detect inappropriate access at least quarterly.

In addition to the electronic and physical architecture components, our Information Security Group defines security policies and our IT security group defines practices and provides testing and manages an independent, 24/7 external Managed Security Services provider to ensure enterprise-wide compliance with policies. WellCare has developed a robust, flexible, and standards-based Interface Subsystem to provide integration across all internal functions and systems, and to support interfaces with external organizations including State MMIS systems, EQRO, security management functions, and other contractors. Our Interface Subsystem supports service-based interfaces across our applications with many services available to DMS, other contractors, and our subcontractors.

COMPLIANCE WITH HEALTH INSURANCE PORTABILITY AND ACCOUNTABILITY ACT (HIPAA)

Security and Privacy policies and procedures enterprise-wide are authored by the Information Security department, including for topics such as records retention. The purpose of this department is to manage privacy and security in accordance with the Health Insurance Portability and Accountability Act (HIPAA) as modified by the Health Information Technology for Economic and Clinical Health (HITECH) Act set forth by the United States Department of Health and Human Services (HHS). To provide additional oversight for this vital function of information security management, we have established an Information Security and Privacy Officer. Our ability to comply with the HIPAA Privacy rule is a primary function of the Security and Privacy module of our single integrated platform. This broad set of technologies is interwoven into the design of our entire operating environment including functions such as encryption, end point security on physical and mobile devices, role-based security models, two factor authentication, firewalls, intrusion detection services, data loss prevention services and automated remote wiping capabilities. These technologies, which directly support HIPAA privacy and security requirements, are supplemented by a focus on our people through policies and aggressive training and education. Our architecture department researches CMS Medicaid Information Technology Architecture (MITA), interoperability, and other relevant guidance and legislation. We maintain and enforce a set of information security policies and standards throughout the enterprise. These standards are overseen by our information security group and enforced by our infrastructure security group, with clear segregation of duties throughout the process. WellCare is investing in a multi-year program to further enhance our security processes and attain HITRUST certification by the end of 2018, well in advance of the implementation go live date.

Our Corporate Chief Compliance Officer oversees implementation and compliance with all current and future HIPAA standards. The COO manages the corporate compliance department, which is responsible for WellCare's privacy, information security, records management, and

information management programs. The COO reports to our Corporate CEO and independently reports to the Board of Directors' audit, finance, and regulatory compliance committee.

WellCare actively promotes compliance with the requirements of this section through multiple ongoing activities which include:

- Maintaining policies and procedures describing the types of information to be safeguarded and the proper release of protected health information (PHI). These policies, including HIPAA Privacy, HIPAA Transactions and Information Security Policies defined and document our commitment to understanding and enforcing these standards.
- All new hires are also required to complete this training within their first 30 days of hire. Our corporate training department independently executes the administration and completion compliance of this training.
- Requiring the completion of annual training on security, privacy, fraud waste and abuse, and HIPAA compliance by all associates as a condition of continued employment.
- Associates also attend general compliance training designed to instill our core values and ethics. We maintain corporate policies that address system access management and information accessibility at the corporate level. In addition to the aforementioned programs, our information security council meets regularly with key leaders to communicate and govern the information security risks throughout the organization.

We also adhere to Section 1104 of the Patient Protection and Affordable Care Act operating rules that complement the HIPAA mandated standards and health plan certification of compliance, federally required Council for Affordable Quality Healthcare's Committee on Operating Rules for Information Exchange (CAQH CORE) Operating Rule Sets, (including but not limited to 45 CFR Parts 160 and 162 of CMS–0032–IFC), Administrative Simplification Adoption of Operating Rules for Eligibility for a Health Plan and Health Care Claim Status Transactions and 45 CFR Parts 160 and 162 (CMS-0024-IFC), 45 CFR Part 164 Security and Privacy (including the ePHI standards, breach notification, and Individually Identifiable Information provision) Administrative Simplification: Adoption of Standards for Health Care Electronic Funds Transfers (EFTs) and Remittance Advice.

WellCare supports the specific intent and accessibility requirements. Our website meets the accessibility requirements defined in Section 508 Compliance. Additionally, through support of TDD/TTY capabilities, we make every attempt to accommodate our Enrollee and provider communication needs including use of our state-of-the-art video relay service.

STAFF TRAINING

Associates' vigilance and awareness play critical roles in protecting sensitive and confidential data requiring the entire organization's awareness of the role they play, ensuring the safety and privacy of our network and our Enrollees' PHI and medical record information. Continuous and current training is used to reinforce our corporate philosophy and our Employee Code of Ethics. Within 30 days of employment and annually thereafter, all our associates are required to satisfactorily complete 16 or more hours of mandatory training on subjects including Information Security, Information Governance, HIPAA Privacy and Security, Acceptable Use, Compliance Training, and Certification of Reports and Submissions to State and Federal

agencies. We also provide our employees trainings on social engineering, PCI compliance, and phishing. The satisfactory completion of appropriate training courses is considered a condition of employment and is continually tracked for compliance. Our associate and management staff receive ongoing reminders to complete trainings. Compliance with our commitment to integrity is included in all associates annual evaluations, and failure to adhere to training requirements can lead to individual discipline, including employment termination. Data Classification and the HIPAA handbook provide guidance to associates regarding treatment of data and individual responsibilities.

f. Describe any proposed system changes or enhancements that the Vendor is contemplating making during the anticipated Contract Term, including subcontracting all or part of the system. Describe how the Vendor will ensure operations are not disrupted.

Prior to implementation and go live of this contract, WellCare of Kentucky does not anticipate any changes to our existing use of subcontractors and will retain the primary sills and accountability for all of our applications, most of which are internally developed and supported. WellCare may consider an alternative Pharmacy Benefits Manager contract, though an open bid process, in 2021.

WellCare of Kentucky's thorough and detailed project management processes, application development lifecycle, and through Quality Assurance and testing processes (which include User Acceptance Testing) will aggressively ensure that new functionality is implemented accurately without disruption to existing processes.

Below, in **Table C.6-3**, are the known and anticipated changes associated with the proposed contract and Contract, as well as major initiatives related to Medicaid functionality that WellCare of Kentucky is anticipating.

Table C.6-3 Proposed System Changes or Enhancements

Features	Description
Appeals, Grievances, and Disputes	WellCare is in the process of enhancing and deploying a robust Issues management application (to include the scope or Appeals, Grievances, and Disputes) to streamline and more efficiently resolve Enrollee and provider concerns
Web	Government Partner Web Portal - the establishment of a Government Partner Portal specific to DMS for use in facilitating direct access to reports, data and documentation Mobile App and Portal suite - We are continually enhancing our mobile applications and portal suite to improve user experience, based on direct feedback and interaction with end users
Call Center	Call Center Scripts - Minor modifications to our CareConnect's call center scripts to address specific requirements are anticipated and included in our scope

Features	Description
Interfaces	Delegated Vendor Interfaces - Update existing standard interfaces with delegated vendors (such as our Pharmacy Benefits Manager [PBM] and dental contractors) to ensure they receive the appropriate membership information for Enrollees
Claims Processing	Artificial Intelligence (AI) and Robotics - Processing, ongoing exploration to enhance both our internal operations and our external Enrollees and providers
Provider Data	Configuration and Enhancements to collect data about provider participation in KHIE and HER capabilities
Care Management	Care Management Platform - Deployment and implementation of a new, more efficient care management platform, CareCentral to improve our ability to implement mobile person-centered care plans. This deployment is already planned for our existing Medicaid Contract and is in productive use in other Medicaid and Medicare markets
Correspondence	Anticipated minor changes and enhancements to our Enrollee and provider materials to align with new contractual requirements
Regulatory Reporting	In addition to planning for active participation in the pre-readiness review work group to collaborate on the development of a new Reporting Package, we are also planning for the likely changes and additions to comply with the outcome and newly-defined Reporting Package.

SYSTEM ENHANCEMENT FOR SKY CONTRACT

We identify the items in **Table C.6-4** as the known and anticipated changes associated with the proposed SKY Contract, as well as major initiatives related to Medicaid functionality that WellCare of Kentucky is anticipating.

Table C.6-4 Known and Anticipated Changes with SKY

Features	Description
Line of Business Setup	New line of business setup for the SKY Program. Includes branding of Enrollee application and Portals, line of business initialization.
Government Partner Web Portal	Government Partner Web Portal – specific to DMS for use in facilitating direct access to reports, data and documentation including any additional enhancements specific to the SKY Program
Agency Portal	Deploy Portal enhancements to allow specific agencies with access to relevant information, establishing a Caseworker Portal that the assigned DCBS/DJJ case worker can use to securely access information about the child.
Enrollee Portal	Enhancements to provide supporting materials and information for Foster Care or Juvenile Justice enrollee or their Enrollees and parents.
Provider Portal	Expected enhancements to consent gathering and tracking solution. Alerts and notification for Enrollees entering foster care and/or Juvenile Justice. Enhancements to provide Medical Passport functionality. Functionality to provide temper WellCare Card within 24 hours of SKY program enrollment. Enhancements to notifications and alerts for Enrollees that have experienced trauma.
Enrollment	Enhancements to Provider Alerting processes for Foster Care and Juvenile Justice Enrollees.
Correspondence	Anticipated minor changes and enhancements to our Enrollee and provider materials to align with new contractual requirements. Additional materials for foster care parents. Additional correspondence for the agencies involved in Enrollee foster care or Juvenile justice. Improved correlation between inbound and outbound letters supporting the foster care and Juvenile justice programs.
Enrollee Mobile App	Mobile App enhancements to better support Sky Enrollees (Clear Sky)
Call Center	Call Center Scripts - Minor modifications to our CAREConnect call center scripts to address specific requirements are anticipated and included in our scope
Regulatory Reporting	Reports for SKY program like the Assessment Timeliness Reports in addition to the reports called out in Appendix D “Reporting Requirements and Reporting Deliverables

ENSURING OUR OPERATIONS ARE NOT DISRUPTED

In order to ensure that these changes, or any changes to our systems and platforms, do not disrupt operations and specifically do not interrupt or adversely affect the delivery of care and services to our Enrollees, WellCare of Kentucky has developed formal processes to validate changes and ensure they are properly validated prior to any deployment. Our formal project management lifecycles, which are constantly refined to leverage our experiences but have been successfully utilized to implement and support DMS' programs, will be utilized to ensure impacts are identified and addressed early in the process. The project management lifecycle includes formal identification of risk and the mitigation strategy to ensure we avoid realization of those risks. Our processes also ensure that individuals and leadership at every level (including local market leadership up to Bill Jones, our Chief Executive Officer) have insight into the changes, the current status, and any risks that may exist in order to ensure our ability to escalate and remediate those risks. Our local leadership in conjunction with our Business experts will review and agree upon the requirements definition process to ensure we have a proper understanding of the business need and, as needed, are able to seek guidance and clarification from DMS. Our formal, well-established and independent Quality Assurance team will apply their validation practices to any change prior to deployments, including the User Acceptance testing from Market and Business experts.

In addition, with respect to these changes, WellCare of Kentucky will leverage the additional time available between RFP response submission, award date, and actual implementation to ensure we maximize our ability to mitigate risks. Consistent with that approach, the processes required to complete these changes have already started during the response process, and our Architecture department has completed a preliminary assessment of the solution, scope and design of modifications necessary to support these changes.

7. Encounter Data

C.7. ENCOUNTER DATA

a. **Provide a detailed description of the Vendor's processes for ensuring complete, accurate, and timely encounter data submissions to the Department, including procedures for working with providers and Subcontractors to correct errors.**

b. **Provide the Vendor's Encounter Data Processing policies and procedures.**

c. **Describe common challenges the Vendor has experienced in encounter data development and submission, and mitigation strategies and best practices the Vendor has implemented to ensure accurate and complete encounter data.**

d. **Describe educational approaches the Vendor will implement to support providers and Subcontractors that are identified as having ongoing challenges in submission of complete, accurate, and timely information.**

e. **Describe initiatives the Vendor proposes raising to the Encounter Technical Workgroup to enhance the data submission requirements and improve the accuracy, quality, and completeness of encounter submissions.**

C.7. ENCOUNTER DATA

a. Provide a detailed description of the Vendor's processes for ensuring complete, accurate, and timely encounter data submissions to the Department, including procedures for working with providers and Subcontractors to correct errors.

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 16 Encounter Data and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

WellCare of Kentucky has consistently demonstrated our ability to excel in our commitment to providing quality data to DMS. As an incumbent in the state of Kentucky since 2011 along with our combined experience and resources in other Medicaid programs across the country, we bring extensive knowledge and a proven commitment to continuous process improvement by working directly with DMS on enhancements, modifications, and data concerns. We also align encounters operations performance to state priorities. In accordance with the Contract requirements, our processes are designed to maximize compliance with submitting complete, accurate, and timely Encounter Data to DMS within 30 days of adjudication on a weekly basis. WellCare is poised for continued growth as **our current medical systems are capable of scaling to over 125 million encounters per year, or more than 10 million per month. WellCare of Kentucky currently submits to DMS about 1 million medical encounters per month (or 1.8 million total encounters) under our current Kentucky Medicaid contract.**

OUR ENCOUNTER DATA SUBMISSION PROCESS - ENSURING COMPLETE, ACCURATE, AND TIMELY ENCOUNTER DATA SUBMISSIONS

Medical Encounters

WellCare's record of submitting quality encounters data is the best among our peers in the state of Kentucky, with a 99.8% acceptance rate in 2019. Our success reflects a combination of experienced, highly disciplined, and dedicated staff, our leadership's close alignment and coordination with DMS, as well as our matured systems and processes. We are confident that our approach to continuous process improvement and system enhancement will enable us to remain a top performer in Kentucky for years to come.

Our established Kentucky Encounters Operations Team (EOT) has a total cumulative experience of over 40 years in encounters processing. This wealth of knowledge and experience has enabled a deep understanding of Kentucky-specific data; established a spirit of collaboration with our state partners; and provided continuity of excellence in service and data quality. WellCare has also developed a strong local market leadership who has been dedicated to improving processes and have delivered significant positive results in coordination with our Tampa data/systems experts over the past several years.

- Kentucky's Collaborative Encounters Team includes:
- Vice President of Encounters and Operations Strategy, Kiran Gadde
- Sr. Director of Encounters and Operations Strategy, Sean Fletcher
- Encounters Manager, Patrick Poland
- Kentucky Director of Strategic Market Analysis, Robin Rhea
- Sr. Project Manager, Johnie Akers
- Sr. Encounters Data Analyst, Fran Meadows
- Business Technical Analyst, James Richards

Robin Rhea, in particular, has been instrumental in assisting providers, resolving RHC/FQHC issues, and enrollment process issues attributed to the newly implemented Kentucky Benefind system.

Processing Medical Encounters

Our well-established encounters process can be broken out into multiple steps as shown in **Figure C.7-1**:

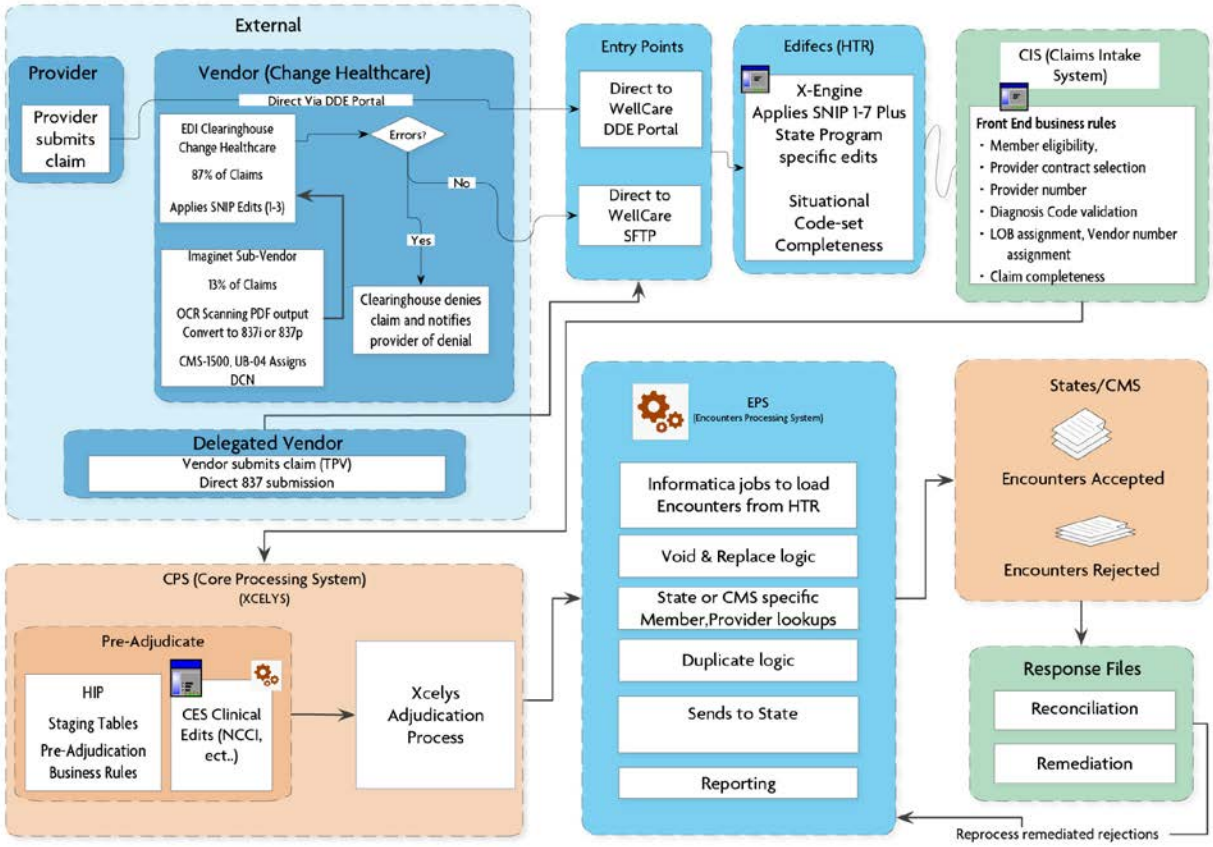

Figure C.7-1: Claims/Encounters Workflow

Intake - WellCare receives claims and encounters in both electronic and paper formats from a variety of submission avenues. We receive them directly from providers through our provider web portal, from clearinghouses, and directly from our subcontracted and atypical providers. We scan and convert paper claims immediately to an electronic format that can be loaded and processed quickly. For purposes of explaining our processes, "claims" refer to claims received from providers that have not yet been adjudicated, while "encounters" refer to adjudicated claims or capitated encounters.

- *Inbound Validation and Inbound Reconciliation:* Each claim or encounter is taken through a series of validations. Strategic National Implementation Process (SNIP) edits are applied to claims and encounters to identify issues related to the industry standard submission file layout, balanced field totals, record or segment counts, financial balancing of claims or remittance advice, balancing of summary fields, validating for numeric values in numeric data elements and presence of required fields based on type of service. Encounters not passing quality edits are immediately rejected and sent back to the submitter via an industry standard response file. The response file supplies information on rejections including descriptions to assist providers with resubmitting corrected data.
- *Claims Intake System (CIS):* WellCare's CIS is where pre-adjudication business rules are enforced to ensure key fields are populated and contain valid data. Kentucky provider validation and enrollee eligibility validation is performed, along with Kentucky-specific

business rules. Claims that fail CIS edits generate an automated letter with sufficient detail to assist providers with resubmitting corrected claims.

Core Processing System (CPS) - Claims that pass front end validations are sent to our Core Processing System which include the following processes:

- *Clinical Editing System (CES):* Prior to adjudication, the claim is sent through coding validation logic to ensure the procedures and diagnoses are appropriate for the age and gender of the enrollee. At this stage, a clean claim check is also performed to ensure all required fields are populated including: claim type, place of service, revenue code, diagnosis codes, and procedure code.
- *Adjudication System:* Xcelys is WellCare's claims adjudication system. Xcelys runs through benefit edits, determines FFS pricing based on contractual agreements and configuration, and performs the final adjudication and paid amount for each claim. The date appended for final adjudication is used for the 30-day timeliness contractual obligation to DMS. Claims are passed through final validations, including duplicate logic. Once determined to be complete, accurate, and valid, eligible claims are paid.

Encounters Processing Systems (EPS) - Adjudicated claims are seamlessly passed to the EPS, including paid, denied, and adjusted/voided claims. The EPS uses the extracted data from our claims adjudication system and extracted data from our subcontractor's encounter data to execute final validations and prepare encounters for submission.

- *Encounter Processing System (EPS) -* The EPS performs data quality validations to ensure the encounter meets the State requirements for submission, including but not limited to the addition of required Kentucky specific information. Adjusted encounters are submitted to update DMS' records with the correct version of an accepted encounter. Voided encounters are submitted to remove an accepted encounter from DMS'. Finally, EPS reconciles response files from DMS for remediation and reporting purposes.
- *Preparation and Batching -* Prior to submission of encounter data to DMS, WellCare validates that all data complies with our internal quality controls and corporate compliance procedures. We also apply Department-specific SNIP edits and batching rules as a final validation to ensure each encounter complies with DMS' companion guides. The batching process prepares the files and submits per Department's requirements.

PHARMACY ENCOUNTER DATA FROM THE PBM

WellCare's pharmacy encounters operations team includes experts in Kentucky Medicaid pharmacy data submissions. Our Pharmacy Encounters Operations Manager, Hardik Patel, provides oversight and management of results while our dedicated Encounters Data Analyst; Rashidat Majekodunmi, has close to four years' experience working with Kentucky data quality analysis and improvement efforts. Our Pharmacy Encounters Operations team works closely with the Pharmacy Department and our PBM to ensure timely, accurate, and complete submissions. Results speak for themselves with a pharmacy encounters acceptance rate of 99.99%.

Pharmacy Encounters Process

Our PBM adjudicates pharmacy claims at the point-of-sale (POS) per Kentucky state requirements and generates the NCPDP 2.2 files on a weekly basis. The PBM forwards the NCPDP files to WellCare via SFTP where WellCare has implemented a fully automated pass-thru process, which submits the files directly to the state. Upon receipt of response files, our automated pass-thru process forwards these files directly to the PBM for reconciliation and remediation. Our PBM generates a standard reporting package for WellCare, which includes reject details, reject summary, SLA reports, and accuracy measures. Bi-weekly meetings are held with WellCare's Pharmacy Encounters Operations Team, the Pharmacy, and our PBM to review results, coordinate remediation efforts, and identify any preventable root causes to initiate system or process improvements.

Drug Rebates

Pharmacists submit Medicaid claims with a clarification code to identify eligible rebateable drugs, or 340B claims. Our PBM provides guidance and education to pharmacies on how to properly submit 340B claims per Kentucky companion guide requirements, which are enforced through front end validations. Utilizing industry standard NCPDP requirements, our PBM identifies qualifying rebate transactions at the point of sale. As these encounters are processed through the end-to-end system, they are trackable to ensure timely submission. This process is followed for covered entities enrolled in the drug rebate program and placed in the Health Resources and Services Administration (HRSA) Medicaid Exclusion File where claims billed by the covered entity are 340B eligible. We have quality controls in place prior to submission to DMS, which includes a certification process requiring approvals from the Encounters, Claims, and Pharmacy departments.

Timeliness, Accuracy, and Completeness

Timeliness is determined by ensuring that the Encounter was transmitted to DMS within 30 calendar days after adjudication, although DMS tracks other timeliness measures as well. WellCare tracks the timeliness of each version of a claim using an SLA table which time-stamps the adjudication and submission date, as well as the date of any Department rejects and resubmission, enabling us to accurately monitor the percent of encounters submitted within the 30-day requirement. This SLA table and reporting will be modified to include voided and zero dollar paid claims, which is an additional requirement for the new contract. These new claim types will be closely monitored and outliers will be aggressively pursued to identify any system or process concerns that can be improved upon to ensure achievement of the 30-day requirement.

Accuracy is determined by evaluating whether or not the values in each field of the Encounter accurately represent the service that was provided, while completeness is determined by assessing whether the Encounter data transmitted includes each service that was provided. We follow DMS' requirement to submit an attestation showing that full file rejects were resubmitted in a timely manner, which has only occurred once within the past twelve months. Additionally, DMS has added a new comparison report to measure reported financials with encounters data. WellCare has experience with similar reporting requirements in other

Medicaid programs across the country and will work closely with DMS to design reporting to accurately reflect these requirements for monitoring and further identification of improvement opportunities.

DMS tracks multiple accuracy, timeliness and completeness measures and our success in achieving or exceeding requirements is reflected in the below **Table C.7-1**.

Table C.7-1: Accuracy, Timeliness and Completeness Results

Encounter Submission Results (Twelve Months Ending December 2019)				
Measure	**Requirement**	**Submitted**	**Met Requirement**	**Accuracy rate**
Accuracy	Each file submitted meets internal accuracy requirement	3,378 files	3,232	95.68%
Accuracy	Files submitted in appropriate format required by DMS	3,378 files	3,377	99.97%
Accuracy	New encounters are not duplicate of another encounter in MMIS	24,988,434 encounters	24,983,711	99.98%
Completeness	Resubmission and attestation of full file rejections	1 rejected file in time period requiring an attestation		
Timeliness	Submit encounter file within 5 days of scheduled submission dates	52 weeks	52	100.00%
Timeliness	Submit new encounters within 30 days of adjudication date	24,988,434 encounters	24,988,434	100.00%
Timeliness	Timely Resubmission of Erred Encounters within 60 days	53,629 encounters	53,562	99.88%

WellCare's success transcends Kentucky as we consistently perform well in other markets as well, as demonstrated below in **Figure C.7-2**

Accuracy	
State	Performance
New Jersey	99.29% for Medical and Pharmacy data combined
Missouri	99.40% for Medical and Pharmacy data combined
South Carolina	99.20% for Medical and Pharmacy data combined
Nebraska	98.00% for Medical and Pharmacy data combined

Completeness	
State	Performance
Georgia	99.69% for Medical and Pharmacy data combined
Medicare	99.61%for Medical
Nebraska	99.40% for Medical and Pharmacy data combined

Timeliness	
State	Performance
Florida	99.30% for Medical and Pharmacy data combined
New Jersey	99.80% for Medical and Pharmacy data combined
Georgia	99.90% for Medical and Pharmacy data combined
South Carolina	99.42% for Medical and Pharmacy data combined

Figure C.7-2: WellCare's Performance in Other States

PROCEDURES FOR WORKING WITH PROVIDERS AND SUBCONTRACTORS TO CORRECT ERRORS

To ensure seamless quality of care, we collaborate with our providers and subcontractors through our training and educational programs, offering a series of training modules through our provider portal and during scheduled monthly trainings. Through experience, we know that some providers may have technical challenges or a lack of understanding of required X12 format, which results in providers not submitting clean claims. To remediate, we have in-person and online trainings to educate providers on state requirements. These trainings consist of various topics including general encounter information and more specific topics presented by subject matter experts to answer provider questions or address concerns. We partner with providers and subcontractors, emphasizing communication, education, and collaboration. After trainings are completed, the materials remain online for providers to reference at their convenience. We also deploy a team of certified coding professionals each year to ensure accurate coding. Internal analytics target providers which direct coding professionals who work directly with providers to improve documentation and produce more accurate coding.

WellCare has extensive experience transitioning providers from FFS to managed care processes in Kentucky and Georgia with specific emphasis on electronic encounter submission. Our dedicated Encounters team include Robin, along with Johnie Akers, have conducted one-on-one training sessions, hosted webinars, and uploaded online training material accessible from the provider portal. **In 2018 alone, we conducted over 5,700 face-to-face meetings with providers and 30-40 of our Provider Representatives conducted webinars. These training efforts helped educate and ensure the accuracy, timeliness, and completeness of more than 20.9 million encounter submitted in Kentucky.**

Along with these trainings, our locally-based staff of Operations Account Representatives (OARs) provide “high-touch” service to providers. They conduct billing education, provide submission support, and are empowered to efficiently resolve issues, including on-site claims adjustments at provider offices. OARs monitor claim utilization, denial rates, encounter performance, and provide one-on-one training when issues are identified. They serve as a direct contact for the providers into the central operations team and ensure that we are aligned with Department's expectations while supporting provider and enrollee initiatives as necessary.

In February of 2018, all of the Rite-Aid pharmacies in Kentucky were acquired by Walgreens. In order to avoid disruption during the transition, the Department requested that the Rite-Aid pharmacies continue to use their previous NPI values until the provider roster could be updated. Several of the pharmacies began using their new NPI values, which resulted in the rejection of nearly 35,000 claims or $1.25 million in reimbursements due to invalid pharmacy NPI. WellCare presented the issue to the Department leadership team immediately, and they agreed to allow the pharmacies to continue submitting the new NPI ahead of roster changes. This resulted in a large scale manual effort on the part of both WellCare and our partners at CVS to ensure all of the encounters reflected the correct NPI. WellCare resubmitted the rejected encounters, resulting in 99.95% acceptance rate with no financial penalties incurred. Through guidance and partnership with the State, and collaboration with our pharmacy vendor, we were able to address the issue with minimal impact to the providers.

To resolve provider related rejections, our encounter associates gather data to offer assistance with provider registrations. We have designed an effective, streamlined process for new and existing providers to obtain a Kentucky Medicaid ID number. We make every effort to ensure that all of our contracted providers are registered in MMIS. Our team also works to minimize provider abrasion, working in collaboration with our vendors and the state to address rejections caused by routine changes to systems or requirements.

b. Provide the Vendor's Encounter Data Processing policies and procedures.

Please refer to **Attachment C.7.b Encounter Data Processing Policies and Procedures.**

c. Describe common challenges the Vendor has experienced in encounter data development and submission, and mitigation strategies and best practices the Vendor has implemented to ensure accurate and complete encounter data.

Having solid experience working with DMS and the providers in the state of Kentucky, as well as programs in other states, WellCare has experienced challenges in some areas of encounter data development and submission. **We were able to mitigate these challenges and improve our encounters acceptance rates to 99.8% in 2019 utilizing the methods described below.**

Incorrect submission by providers - The most common encounters challenge faced by WellCare of Kentucky is providers frequently submitting encounters in a manner that is not consistent with DMS' guidelines. Provider errors come in a variety of forms. They might use a clinically appropriate taxonomy, but not their Department registered taxonomy. They may use an NPI that is still registered with NPPES but has been terminated with DMS, or utilize a claim form that is not permitted by the MMIS submission guidelines. The variety of ways that providers deviate from Department submission guidelines is a constant challenge and requires continuous oversight with hands-on attention to quickly identify data issues and work with providers on solutions.

Our strategy for solving provider submission errors involve a 3-part remediation process that has been fully operational since 2016:

1. *Direct monitoring and analysis of rejected encounters* - No automated process can fully capture the potential issues providers will experience. We have weekly encounters sessions with our encounters team and market leadership to identify any new errors, their root causes, and potential solutions.
2. *Creation of new automated edits* - Our direct monitoring efforts help direct us to areas where our automated encounters edits can be strengthened and we continually re-evaluating and adding/modifying edits to address issues as they are discovered.
3. *Continuous provider education* - When new error trends are identified in encounter submissions, our analytical teams provide detailed, claim level error reports for our provider representatives to educate the affected providers. These error reports include, claim by claim, the nature of the error, an analysis of DMS' provider roster that supports our findings, and a solution which will allow the provider to begin billing correctly again. The solution may be to instruct the provider on DMS' requirements, but we have also frequently uncovered a need for the provider to address their licensing and registration issues with DMS.

Retroactive changes to encounter data elements - One particular aspect of encounters submission that is fairly unique to Kentucky is the frequency with which provider and enrollee eligibility will be changed in a retroactive manner. It is not uncommon for provider enrollment, enrollee eligibility, or even Medicare status to be altered retroactively on the enrollee eligibility or provider roster as much as several years in arrears. Because of these retroactive changes, situations frequently arise wherein a claim that was adjudicated and paid appropriately based on data available on the date of adjudication is no longer valid by the time the encounter is submitted.

In order to reduce state rejects caused by retroactive changes, WellCare has instituted a triple validation for provider and enrollee information.

1. Enrollment eligibility is validated upon receipt. In 2017, we also implemented front-end provider validation logic which has made a significant positive impact on state rejects by preventing ineligible providers' claims from being accepted into our system for processing.
2. During the adjudication process, the claims system performs a secondary validation on enrollee and provider eligibility.
3. Finally, before submission to the state, one final validation is performed. For our enrollees, we pay particular attention to retroactive changes in eligibility as a result of a recent incarceration or suspension, which might affect the validity of the claim. Encounters that fail this third validation are routed back to the claims team for potential recoupment.

This triple level of validation allows us every opportunity to identify those encounters failing validation before submission and begin an appropriate education, remediation, or recoupment processes, depending on the nature of the retroactive change. Provider validation is performed for every billing, rendering, ordering, attending, and referring provider, on every claim, in both our front-end and back-end processes.

Technical difficulties in the encounter submission process - Because the encounter submission and validation process is a complex technical process and we need to adjust quickly to changes in DMS' requirements, there will always be the need for ongoing collaboration with DMS to ensure that WellCare of Kentucky's submissions are perfectly aligned with both the policy intent and technical requirements. Over the years, our EOT has formed a close, collaborative working relationship with both DMS' policy makers that drive encounter submission policy and the Office of Administrative and Technology Services (OATS) staff that ensure those policy decisions are translated into technical submission requirements we can operationalize.

Our working relationship with DMS and the OATS staff includes not only the quarterly encounters one-on-one meetings and bi-weekly IT calls, but we frequently have email exchanges multiple times per week to seek clarification on technical issues. These interactions provide a constant feedback loop that help align our edits with DMS' expectations. Despite whatever specific encounter submission challenges arise in the coming years, it is this close working relationship with DMS that is going to ensure that we are able to adjust to Kentucky's changing environment and continue submitting encounters that meet or exceed DMS' expectations.

BEST PRACTICES TO ENSURE ACCURATE, TIMELY AND COMPLETE ENCOUNTER DATA SUBMISSION

The success of our encounters performance in Kentucky is driven by our matured process, configurable system, and 'one team' approach, where our management team and associates work in tandem to support end-to-end encounters processes in partnership with our providers. We implemented several best practices throughout the organization to support our encounter performance levels:

- *Partnership:* Functional encounters ownership is led by our Kentucky EOT with accountabilities across the organization including IT, Claims, Operations, Provider Relations, ePMO, Regulatory Affairs, driving cross-functional support and shared performance goals. This 'One-Team' approach ensures successful execution of the encounter process. We collaborate with our state partners to develop meaningful encounter submission requirements continually improving the process and quality of data. This manifests in our transparent process, comprehensive data sharing, and ready engagement.
- *We built several algorithms and data scrubbers* to screen, validate, and scrub encounters data to meet or exceed state specific quality requirements. Our fundamental goal is to provide DMS with the most accurate data on the first instance to reduce the remediation and reprocessing burden.
- *System Configurability:* Our EPS is built on a configuration model, which includes a rule based methodology, allowing us to modify processing rules throughout the lifecycle of the encounter customized by line of business. This configurable model adds flexibility and prompt turn-around in responding to certain changes designed to improve data quality.
- *Focus on Provider Education First:* WellCare focuses on provider impact before implementing changes that will impact provider. Upon receipt of incomplete data, our system allows for soft or hard front end rejects. Hard rejects are promptly communicated back to providers in the form of 999, 277U, 277CA response files, and/or automated letters

with detailed direction on how to resolve the root cause and resubmit. Soft rejects send a message to the provider but allows the claim to continue to process in our system. They are often used as a predecessor to implementing a new hard reject, allowing our Provider Representatives (PR) the opportunity to target providers requiring additional education on how to submit clean claims/encounters, minimizing provider impact upon implementing hard rejects. Additionally, our EPS validations enable reporting to PR for outreach/education as well, which improves the quality of the data sent to our state Medicaid partners.

- *Oversight:* We have developed a comprehensive suite of reports designed to track performance to Department requirements, providing a holistic accounting of encounters we receive, process, submit, and reconcile. Primary reports utilized include:
  - *SLA Performance Dashboard:* A table-driven report tracking every contractual SLA. It is produced monthly and is closely monitored by encounters management, market leadership and WellCare's executive leadership team (ELT).
  - *Inventory Aging Report:* Our end-to-end inventory monitoring and compliance oversight process provides transparency and early detection of encounter issues allowing timely remediation and submission to the Department. This process includes automatic alerts based on inventory thresholds set to each state's SLAs, with defined ownership for each fallout point.
  - *Standardized Work Plan Remediation:* We use a standardized remediation process including a standard work plan which is the primary driver for encounter remediation. The work plan provides a holistic view of open items, issues, and challenges for DMS enabling the encounters team to remediate quickly. Work plans are refreshed weekly and are reported to management and leadership teams. With this capability, we can track all Erred Encounter Records and provide a report detailing transmission reconciliation of each failed transaction or file within 30 Days of the transaction or file error. Federally Qualified Health Centers (FQHC) and Rural Health Clinics (RHC) pose a unique challenge because a portion of their revenue is dependent upon accurate encounters submission and their providers records are subject to issues not faced by other providers. Their ability to receive supplemental payments can be terminated without their enrollment actually being end-dated. For these reasons, we pay particular attention to all encounters rejections encountered by these provider types and specifically address them individually in all of our encounters remediation sessions. We keep open lines of communication with the providers themselves and manually create provider-specific solutions where necessary.
  - *Encounter Completeness Reporting:* Our encounters team and cost reporting team collaborate with states to develop reconciliation reports of encounters to financials. The report provides visibility to any gaps existing between finance actuals and the representative encounters submitted to the state to ensure overall completeness. As our new contract in Kentucky includes a new comparison report, we will be working with DMS and our Finance team to develop reporting and processes for monitoring.
  - *Cross-functional Focus Groups:* When a data issue is identified that requires a deep dive data/system/process analysis and cross-functional solution, our Kentucky Encounters

Operations Team initiates a focus group. Focus groups bring together subject matter experts from multiple departments to analyze data, identify root cause(s), strategize on innovative solutions and execute on improvements needed. Each meeting includes at least one SME from Encounters Operations, Development, EDI Operations, and QA. For example, from September 2016 through February 2017, a focus group was established to deep dive into encounters failing Kentucky validation in EPS. This team identified over 17 opportunities for system/process improvements and laid the groundwork for at least a dozen future improvement initiatives. We continuously seek opportunities to improve on our processes through these types of collaborative efforts.

- The collaboration and education activities with our provider community is critical to driving data quality improvements within encounter submissions. A critical component of our encounters functional model is our local-based staff of Operations Account Representatives (OAR) s who work closely with Provider Representatives (PR) s and Quality Practice Advisors (QPA) s to implement our multilevel outreach and education processes engaging our providers to ensure quality, timeliness and complete data. Our process also includes the necessary feedback loops to enable providers to engage with us as needed. We also deploy a team of certified coding professionals to ensure accurate coding. Internal analytics target providers, which direct coding professionals who work directly with providers to improve documentation and produce more accurate coding.
- *Front End validation*: Along with educating providers, WellCare's success in driving quality data is significantly impacted by our well-established early detection process. We apply strong front end validations to prevent invalid data from even entering our system and work closely with providers to submit clean data. With every change in DMS' requirements, we continuously re-evaluate these edits seeking opportunities for prevention and provider education.

d. Describe educational approaches the Vendor will implement to support providers and Subcontractors that are identified as having ongoing challenges in submission of complete, accurate, and timely information.

As an incumbent in the state of Kentucky for almost eight years, we have developed trainings and educational programs to support our providers and subcontractors with their ongoing challenges in submission of complete, accurate, and timely information. Under the leadership of our Kentucky Encounters Director of Strategic Market Analysis, Robin Rhea; and Sr. Project Manager, Johnie Akers, our team includes over 30 Provider Representatives working closely with Kentucky providers and conducting webinars and trainings. **Our commitment to provider education is evident by the 6,000 face-to-face meetings conducted in 2018 with providers. These training efforts helped educate and ensure the accuracy, timeliness, and completeness of the 20.9 million encounters submitted in Kentucky.** We offer training modules and communications for our providers through our provider portal and during scheduled monthly trainings. Training material remains online for providers to reference at their convenience. Monthly trainings consist of various topics to include general encounter information, details on populating required/key fields on submission file (including how subcontractors are to populate the paid amount), and more specific topics presented by SMEs who can answer provider questions or address concerns.

In 2017, CMS required all state Medicaid entities to institute provider edits for ordering, attending, referring, and prescribing providers. These new edits affected a large number of our Medicaid providers. To ease the transition, WellCare of Kentucky embarked upon an extended period of testing and education prior to implementation. In early 2017, we tested historical encounters against the new standards to identify providers who were currently deficient on the new guidelines. Our OARs performed individual outreach to those providers and coached them on proper submission requirements. A technical presentation on the new submission requirements was included during our statewide series of provider summits. Since implementation, we have continued to educate our providers and help them conform to DMS' billing requirements. The chart below **Figure C.7-3** demonstrates that our total **rejects have decreased 51% year over year,** largely attributed to provider education and front end edits.

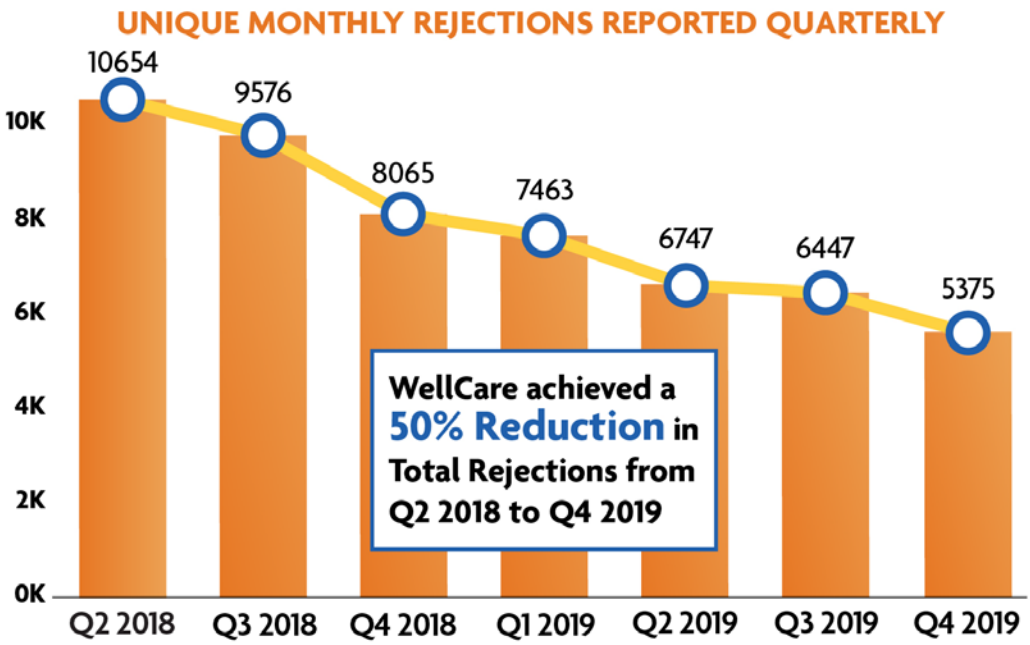

Figure C.7-3: Reduction in Rejection Rates

Processes/Tools used to support providers and subcontractors: Our EOT utilizes the tools/initiatives below to ensure timely resolution and resubmission of errors:

- Provider Scorecard: The Provider Scorecard tracks submission frequency and volume, compliance and accuracy of provider submissions. It reports the number of encounters submitted by the contractor by month, the number passing our front-end quality edits, and the number accepted by the Medicaid agency. These reports are used by us to manage contractor activity and to target visits and education.
- Contractor Education: Upon creation and dissemination of the provider scorecards, we schedule targeted education sessions. The goal is to ensure quality submissions and educate contractors on how to correct errors with their encounter data. We handle education telephonically, as well as in periodic training sessions provided by market provider representatives as needed.

- Vendor Management and National Ancillary associates meet with subcontractors regularly to review their timeliness and accuracy, ensure they are correcting and resubmitting rejected encounters, and providing additional education as needed to help them fix their data and demonstrate how to submit correctly the first time.
- If a provider is not identified on the most current provider roster file, a letter is issued to the provider that the encounter will likely reject once submitted to DMS. On an adhoc basis, we have the capability to produce a monthly report of rejections and warnings which require remediation.

e. Describe initiatives the Vendor proposes raising to the Encounter Technical Workgroup to enhance the data submission requirements and improve the accuracy, quality, and completeness of encounter submissions.

WellCare of Kentucky is committed to continuously reassessing current business processes and data quality concerns to identify opportunities for improvement. The Encounter Technical Workgroup enables collaboration with DMS on innovative strategies to improve data quality, align validation logic, and ultimately increase performance metrics utilizing the "one-team" approach, which is so deeply imbedded in the WellCare culture. Participants in the Encounter Technical Workgroup have included subject matter experts (SMEs) from our Encounters Operations Team, Enrollment, and the Market who bring knowledge, background, and experience with Kentucky-specific requirements and concerns. WellCare has the advantage of having established SMEs in all key areas who have been working with Kentucky data, people and processes for several years. Having SMEs with that history provides the continuity and in-depth understanding of Kentucky specific requirements, processes, and known challenges, which is invaluable to the process of root cause analysis and problem-solving. Additionally, bringing Robin Rhea into our organization with his knowledge from both points of view in Kentucky has been extremely helpful in identifying opportunities for improvement.

An example where WellCare of Kentucky's expertise uncovered a systemic issue that can cause provider abrasion and how we facilitated resolution.

In early 2018, one of our larger providers alerted WellCare of Kentucky that their supplemental wrap payments had abruptly stopped without explanation. Our EOT performed a detailed analysis. After ruling out claims processing/payment, state acceptance concerns, and confirming provider eligibility on the roster, we reached out to the state for coordinated root cause analysis. WellCare worked with the Encounters Technical Workgroup for resolution. We provided the Department with multiple examples of inconsistencies in encounter submissions results and supplemental payments. After much exchange of information, the Department discovered a hidden field that was not included in the provider roster file sent to MCOs, which indicated whether the FQHC license was active. Therefore, we did not have visibility into whether the FQHC's license had expired, which was the case for this provider. We notified the provider and connected them with the Department's staff who could help update their information. We also worked with the department to re-process their encounters, enabling the provider to receive $474,339 in retroactive supplemental payments. The Department also discovered this was an issue that could impact other providers and is now aware of this situation to simplify identification of this issue going forward.

To facilitate the collaborative approach with DMS, WellCare initiated JAD sessions with DMS' technical people back in 2013, have coordinated deep dive sessions with DMS' policy people, and have generally built a solid rapport and avenue for open discussion, information sharing and problem-solving. WellCare's commitment to conducting the research, asking questions, and developing ideas to offer solutions in coordination with DMS has helped more improvements be identified and resolved in a timely and coordinated manner. Our Market leadership has also initiated weekly internal focus groups to prepare for the Encounter Technical Workgroup meetings with DMS.

Initiatives that WellCare proposes for the Encounter Technical Workgroup to address are centered on reducing state rejects caused by data issues outside of WellCare's control, which are causing considerable impacts to providers. With the tightening of requirements and significant increases in penalties defined in the new contract, it is imperative that we collaborate on solutions in a timely manner.

1. CONFLICTS BETWEEN CMS AND KENTUCKY MEDICAID REQUIREMENTS :

- *Taxonomy:* Medicare does not require taxonomy and we have concluded that the CMS intermediary is dropping taxonomy upon submitting the crossover claim to WellCare. Missing data results in rejects and outreach to providers indicate the data is being provided upon submission to CMS. Lack of taxonomy information is preventing DMS from understanding Medicare claims history for Dual enrollees and is interrupting payment for impacted FQHC and RHC providers. WellCare's research concluded that providers registering one NPI with multiple Medicaid IDs are impacted.
- *Claim/provider type:* In certain circumstances, Medicare requires providers to bill services as institutional where DMS requires it to be submitted as professional. The opposite also occurs. This conflict requires additional manual processes to be completed by providers when claims are received in the wrong file type.

2. RETRO-ACTIVE DATA CHANGES

- *Retroactive enrollee/provider data:* WellCare adjudicates claims based on the enrollee and provider data available on the date the claim is processed. Because enrollee and provider eligibility dates are sometimes changed retroactively, our encounters are occasionally rejected based on information that was not available upon adjudication. As this situation is outside of our control, we would like to continue working on a solution with DMS that would both reduce retroactivity and exclude MCO's from being penalized for encounters that were adjudicated properly based upon information available at the time. MCO's should be afforded the opportunity to resolve errors caused by retro-active changes in data without penalty.

WellCare comes to the table with potential solutions to coordinate with DMS and improve processes and systems on both sides to support a successful Medicaid program in Kentucky. We look forward to continued engagement and collaboration in implementing the changes spelled out in our new contract.

C.7 Encounter Data

- Attachment C.7.b Encounter Data Processing Policies and Procedures

WellCare	Procedure
Manual Section: Corporate Policy and Procedures, Health Services Area, Encounters	**Procedure Name:** **Kentucky Submission Procedure**
Procedure Number: C7ENC-001-PR-015	**Original Issue Date:** 8/25/2014 — **Page:** 1 of 7
Prior Procedure Number(s): None	**Related Policy Number:** C7ENC-001

Applicable to:			**(Check One)**		
☒	Health Services	*Area*	**Created** (Date procedure was created)	☒	8/25/14
☒	All	*Department*	**Reviewed** (No changes to procedure)	☐	
☒	All	*All Associates*	**Revised** (Content changes made to procedure)	☒	6/13/19
☒	KY	*Lines of Business and Applicable State(s)*	**Repealed** (Procedure is no longer active)	☐	

State Agency Approval Date (Attach supporting evidence)	(State Abbreviation)	(Date)
Electronic Approvals are located in C360		

Procedure & State Specific Requirement

1 Background / Purpose

The Care Management Organization (CMO), WellCare Health Plans, of Kentucky, Inc. as part of its contracts with the Commonwealth of Kentucky Cabinet for Health and Family Services (CHFS), is accountable to ensure that the receipt and processing of encounter and claims data files is completed in a timely and accurate manner.

2 Kentucky Procedure

2.1 Kentucky Lines of Business

Line of Business	Services
KMD	Kentucky Medicaid
KAB	Kentucky Aged, Blind and Disabled
KHK	Kentucky Healthy Kids

2.2 Encounter Submission Types

- Institutional
- Professional
- Dental
- Pharmacy

2.3 Submissions Schedule

Submission	Submission Schedule	Submission Day	Encounters Submission SLA	State Response Schedule
Pharmacy – NCPDP 2.2	Weekly	Tuesday	30 days from Received (encounters) Date	999 – within 24 hours 277U – within 48 hours
Institutional – 5010 837I	Weekly	Tuesday	30 days from Paid (claims) Date	999 – within 24 hours 277U – within 48 hours
Professional – 5010 837P	Weekly	Tuesday	30 days from Paid (claims) /Received (encounters) Date	999 – within 24 hours 277U – within 48 hours
Dental – 5010 837D	Weekly	Tuesday	30 days from Received (encounters) Date	999 – within 24 hours 277U – within 48 hours

2.4 Inbound Information

All inbound claim/encounter data (IE. Institutional/Professional/Dental/Pharmacy) are received through WellCare's secure FTP and loaded to the appropriate systems for processing.

2.5 Submission Requirements

1. Time Frame:
   - Data submitted should be reflective of the current or previous year.

2. Frequency:
   - The weekly submission processing day for WellCare is Tuesday, 12:02 AM to 8:00 PM. However, Encounter files may be submitted 24 hours a day, 7 days a week.

3. Volume:
   - Per the Kentucky 837 I, P and D Companion Guides, there is no file size limit for the 837 I, P and D file types. WellCare IT generates production files with a 5,000 records limit.
   - Per the Kentucky NCPDP Companion Guide there is a limit of 25,000 detail records per file.

4. Submission Files:
   - 5010 837 X12 files are generated for Institutional, Professional and Dental claims.
   - NCPDP 2.2 files are generated for Pharmacy claims.

5. Liquidation Damages / Withholds:

   Timeliness - Max Penalty: 0.33% of CAP payment rate
   - MCO must submit at least one file within five (5) days of assigned submission date
     - Penalty: $500/day until submitted (Daily MCO Claim Count Report)
   - 100% original encounters (paid/denied) to be submitted within 30 days of paid date
     - Penalty: $1/encounter/day beyond thirty (30) days until submitted – (ENC-0750-M)
     - Penalty: $11/RHC/FQHC encounter/day beyond thirty (30) days until submitted – all Encounters (ENC-0755-M)
   - 100% state rejected encounters to be resubmitted within sixty (60) days
     - Penalty: $1/encounter/day over 30 days until submitted – (3A ENC-253M)
     - Penalty: $11/RHC/FQHC encounter/day beyond thirty (30) days until submitted – all Encounters (ENC-1253M)

   Accuracy - Max Penalty: 0.33% of CAP payment rate

- Threshold error percentage greater than five (5) percent (ENC-0450-M)
  - Penalty: $500/file
- File Not in Required Format (Daily MCO File Count Rejection Report)
  - Penalty: $50,000/file
- Exact Duplicates (ENC-650-M)
  - Penalty: $5/duplicate encounter

Completeness - Max Penalty: 0.33% of CAP payment rate

- Failure to Submit Required Attestation within sixty (60) days of notification (Daily MCO File Count Rejection Report)
  - Penalty: $10,000/per file
  - Penalty: $1,000/per file/per each day late beyond sixty (60) days.

6. SNIP Level Edits:
   For all inbound/outbound 837 claims/encounters, SNIP levels 1 through 7 are available for use at WellCare and implemented at the various levels based on state requirements. These edits and their settings are documented by EDI-Dev in a SNIP Master List.

2.6 Encounters Submission Process – 837

837 I, P and D extract and file generation jobs are executed using the CA UniCenter AutoSys Job Management tool located on the AutoSys server. The 837 processes are scheduled to execute on the first day of the month. Requests are sent to the ITOPS team via the ITSM ticket application to manually start the processes outside of the scheduled time.

The job names are as follows:

Encounter-PROD-OB-KY-I-Main-Box
Encounter-PROD-OB-KY-P-Main-Box
Encounter-PROD-OB-KY-D-Main-Box

The final output path (post XEngine) for the above processes is

\\naswin1\PROD\HTR\EDI\TradingPartner\Outbound\837Out\9900004318-KYMEDICAID

The files are moved by the Encounters Submissions Analyst to the staging folder \\NASWin\vol1\data\Kentucky\Prod\837. They are then zipped and moved by the MoveIT job, Kentucky_837_Prod_PUT, to the secured Kentucky VPN site EDI folder. This job also places a copy of the file in the \\NASWin\Vol1\data\Kentucky\Prod\837\archive folder. An email is sent by the MoveIT jobs to the Outlook distribution list #EncInformatics identifying the file names of all files moved and the destination folder/site. The files are sent in .zip format with one file per .zip file.

The file naming convention is as follows:
KYW(837P/I/D)_9900004318_(O/R/A/V/D)_CCYYMMDD_HHMMSS.zip

- O – Original (new claims)
- R – Resubmission (claims that have been billed before but did not process for some reason)
- A – Adjustment (adjustments to existing claims)
- V – Void
- D - Denied

The Commonwealth will process the Encounters in the following order of bill type, which is identified in the file name:

- Originals
- Resubmissions
- Adjustments

- Void
- Denied

2.7 Encounters Submission Process – NCPDP

The NCPDP extract and file generation process is performed by vendor CVS.). The files are passed to WellCare using SFTP protocols and are staged in the folder \\naswin\vol1\data\EDICoordinator\CVSCAREMARK\Encounters\KY to be picked up by the automated and scheduled FTP Put job CVS_Caremark_Prod_NCPDP_Encounter_KY_FTP_GETALL to process to transfer the files to the state FTP server. The files transferred are also copied to the below folders for future reference/analysis. The files are sent in .zip format with one file per .zip file.

\\naswin\wc2vol1\data\CVSCaremark\Prod\To_WellCare\Encounter Submission\KY\Archive

\\naswin\wc2vol1\data\CVSCaremark\Prod\To_WellCare\Encounter Submission\KY\ForAnalysis

The file naming convention is as follows:
KYWNCPDP_9900004318_(O/R/A/V/D)_CCYYMMDD_HHMMSS.zip

- O – Original (new claims)
- R – Resubmission (claims that have been billed before but did not process for some reason)
- A – Adjustment (adjustments to existing claims)
- V – Void
- D - Denied

The State will process the Encounters in the following order of bill type:

- Originals
- Resubmissions
- Adjustments
- Void
- Denied

2.8 Internal Certification Form (ICF)

All file submissions to KY Medicaid must be certified with the completion of the WellCare Internal Certification Form per WellCare's Regulatory Affairs mandate. The file submission information must be completed by the WellCare Encounter submissions analyst or submissions verifier. The form is then reviewed and signed by both the Encounters Informatics Submission Manager and Director or above. The signed form is then scanned and stored in an electronic format to the appropriate folder below. The hard copy is stored in the Encounters business area.

Encounter	Completed Form Location (Electronic)
Medical	\\Naswin\vol1\SHARED\KY_Encounters_Informatics\Reporting\ICFs
Pharmacy	https://wellcareportal.wellcare.com/IT/ITInformatics/Encounters/Encounter%20Pharmacy/Forms/AllItems.aspx?RootFolder=%2FIT%2FITInformatics%2FEncounters%2FEncounter%20Pharmacy%2FPharmacy%20ICF%2FKY&FolderCTID=0x012000A43CB696806E644CBB3D6CB94664D482&View=%7B4564FE39%2D53D4%2D489F%2D8860%2D7AF5940E43D3%7D&InitialTabId=Ribbon%2ERead&VisibilityContext=WSSTabPersistence

3 Response File Reconciliation

3.1 837 Response Files

The Commonwealth of KY sends a 999 Acknowledgment file for each 837 file submitted by WellCare with the claim and reject reason for each claim in the specified file that failed their syntax validation process. Claims that have processed successfully are not included in this file. If all claims pass successfully a file with only the non-claim related segments is returned. The files are sent in .zip format with one file per .zip file.

The MoveIT job, Kentucky_837_999_Prod_GET, moves the files from the Commonwealth of KY VPN site to folder \\NASWin\Vol1\data\Kentucky\Prod\999. It also sends a copy to the \\NASWin\Vol1\data\Kentucky\Prod\999\Archive folder.

The MoveIT job, Kentucky_837_999_Prod_Move, moves the files from the folder \\NASWin\Vol1\data\Kentucky\Prod\999 to \\naswin1\PROD\HTR\EDI\TradingPartner\AckIB folder for load to the HTR Encounter Response tables.

The scheduler job, Encounter-E2E5010-Informatica-State-Response-KY-Box, contains jobs that will read the HTR 999 data and populates the ER Response tables with the appropriate response information and update the claim status to either 'REJECTED_SYNTAX' if the claim number is found in the 999 file. Using information identifying the file being processed, all other claims associated with that specific file submission will be updated with a status of 'ACCEPTED_SYNTAX'.

The second response file, 277U, is sent after the file has been processed through the Commonwealth of KY's 'Claims Adjudication' process. This file will contain a record for each claim sent in the file that was successfully processed in the syntax validation process.

The MoveIT job, kentucky_837_277_Prod_Get, moves the files from the Commonwealth of KY VPN site to folder \\NASWin\Vol1\data\Kentucky\Prod\277. It also sends a copy to the \\NASWin\Vol1\data\Kentucky\Prod\277\Archive folder.

The MoveIT job, Kentucky_277_Adhoc_Prod_PUT, moves the files from the folder \\NASWin\Vol1\data\Kentucky\Prod\277 to \\naswin1\PROD\HTR\EDI\TradingPartner\AckIB folder for load to the HTR Encounter Response tables.

The scheduler job, Encounter-E2E5010-Informatica-State-Response-KY-Box, contains jobs that will read the HTR 277U data and populates the ER Response tables with the appropriate response information and update the claim status to either 'ACCEPTED' or 'REJECTED', depending on the response codes received.

The file naming convention for the 837 999 and 277U files are as follows:

- <*ackfileid1*>_<*fileid2*>_837*t*5010X12BATCH_<OrigFileNm>.<OrigFileExt>.*n*.999.zip
- KYD837277U_<TPID>_<seq>_<date stamp>_<time stamp>_origfile837x _mcoid_O_origdatestamp_origtimestamp.zip

3.2 NCPDP Response Files

The Commonwealth of KY sends an ACK Acknowledgment file for each NCPDP file submitted by

WellCare with the detail line for each claim in the specified file in the order they are sent. Each line is prefixed with a status code of 'A' if accepted and 'R' if rejected. If a claim is rejected the reject information will follow the status code. The files are sent in .zip format with one file per .zip file.

The MoveIT job, Kentucky_NCPDP_999_Prod_Get, moves the files from the Commonwealth of KY VPN site to folder \\NASWin\Vol1\data\Kentucky\Prod\999. It also sends a copy to the \\NASWin\Vol1\data\Kentucky\Prod\999\Archive folder.

The MoveIT job, Kentucky_NCPDP_999_Prod_Move, moves the files from the folder \\NASWin\Vol1\data\Kentucky\Prod\999 to \\fservops\X:\~Process\NCPDP_KY\ResponseLoad_KY\Data folder for load to the ODSPROD ACK Encounter Response tables.

The second response file, 277U, is sent after the file has been processed through the Commonwealth of KY's 'Claims Adjudication' process. This file will contain a record for each claim sent in the file that was successfully processed in the syntax validation process.

The MoveIT job, kentucky_NCPDP_277_Prod_Get, moves the files from the Commonwealth of KY VPN site to folder \\NASWin\Vol1\data\Kentucky\Prod\277. It also sends a copy to the \\NASWin\Vol1\data\Kentucky\Prod\277\Archive folder.

- <OrigFileExt>_<*fileid*>_ACK.ncp.zip
- KYDNCPDP277U_<TPID>_<seq>_<date stamp>_<time stamp>.zip

4 Encounter Remediation

4.1 Internal Withhold & State Reject Remediation:

Each week the submission and reporting teams will review all internal with-hold and state reject encounters for 837 file submissions. The teams will prioritize each category of unsubmitted data by volume and/or by dollars and focus on the top error buckets that need to be remediated. In order to remediate, the submission team will analyze each prioritized category and solve in one of the following ways:

In certain situations the only way to remediate internally with-held encounters or rejected claims is through a code change. If a code change is required for Medical claims the submission analyst will open a WellCare Dev ticket and send all pertinent details over to the Encounter project team. Once the code has been updated/deployed the encounters are reset and reprocessed with the audit update process. If a code change is required for Pharmacy claims, the analyst will create a ticket to CVS (PBM) Encounter team for a change which is reviewed and approved by Wellcare leadership team. Once approved, the WellCare encounter team will work with CVS counterparts to detail the requirements. Once requirements are approved by WellCare, the change ticket will go through standard SDLC process on CVS side including QA testing and UAT testing by both CVS and Wellcare encounters team. Once all approvals have been obtained, the package will be managed through defined steps by CVS Change Management team and deployed to the production environment. All the change tickets are tracked through weekly Operation log meeting between CVS and WellCare.

8. Kentucky Health Information Exchange (KHIE) and Electronic Health Records

C.8. KHIE AND ELECTRONIC HEALTH RECORDS

a. **Describe strategies and incentives the Vendor will implement to encourage provider adoption and use of electronic health records that result in improvements in the quality of care for Enrollees and cost of health care services.**

b. **Describe strategies for requiring participants to establish connectivity to the Kentucky Health Information Exchange (KHIE) for a minimum of:**

   i. **Providers:** applicable public health reporting

   ii. **Hospitals:** applicable public health reporting and Admit Discharge Transfer (ADT's).

c. **Provide a description of initiatives and incentives to encourage adoption of electronic health records and information exchange.**

C.8. KHIE AND ELECTRONIC HEALTH RECORDS

a. Describe strategies and incentives the Vendor will implement to encourage provider adoption and use of electronic health records that result in improvements in the quality of care for Enrollees and cost of health care services.

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 17 Office of Health Data and Analytics and Section 18 Electronic Health Records of the Draft Medicaid Managed Care Contract and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Electronic Health Records (EHR) is key in easing administrative burden for providers and improving health outcomes. WellCare has been an advocate of leveraging EHR across the continuum of care as this offers improved integration among providers. In addition to the traditional uses of EHR data, such as supporting HEDIS measure validation, we actively use EHR data to improve the quality of care for enrollees, sharing open and pending care opportunities, care management interactions, P4Q opportunities, prior authorizations, billing which also results in the reduction of the cost of health care services. Examples of our uses of EHR data include:

- Leveraging Admit, Discharge, and Transfer (ADT) transactions to notify care managers and PCPs of enrollee admissions, enabling the initiation of discharge planning and the expansion of enrollee's care plan prior to them leaving the hospital, preventing readmissions and ensuring effective follow up treatments
- Using EHR data in combination with claims, health assessment, pharmacy, lab, and other data to improve the accuracy of our risk stratification processes, resulting in more efficient and comprehensive care plans and leading to cost reduction opportunities through prevention and treatment
- Reviewing clinical EHR data and, using machine learning and artificial intelligence solutions, identifying potential missing diagnosis indications
- Implementing Blue Button 2.0 or similar compatible solutions that allow enrollees to use Blue Button 2.0 compatible solutions (including on smart phones) to access their clinical

data and bring it along with them on their office visits. Blue Button 2.0 is a standard web function, designed by the Federal Government and first made available on Medicare.gov to promote the delivery of this type of data directly to Patients.

OUR STRATEGIES TO ENCOURAGE PROVIDER ADOPTION AND USE EHRS

Our strategies to encourage provider adoption and use to EHRs is driven by the fact that barriers to adoption of EHR exists. Barriers to adoption of EHR fall into several categories: cost, insufficient infrastructure or resources to support the technology, fear of complex or risky implementations, long payback periods for return on investment and resistance to adoption of technology. Smaller practices particularly struggle with these barriers.

As a part of our provider collaboration strategy, we work with providers to help them overcome these barriers and adopt EHRs. WellCare of Kentucky capitalizes on our relationships with providers to inform them about the benefits of the HIE, the available products and services, and how they can use clinical information-sharing to improve patient care and efficiency. While we encourage providers to adopt EHRs and connect to HIE, if they are not ready, we help them understand the value they can gain. We have had KHIE representatives attend and participate in several of our bi-weekly provider webinars to educate providers on the benefits of using EHRs and give providers the opportunity to ask questions and discuss any challenges they may be experiencing. We are committed to continue educating providers on the benefits of EHRs and clinical information-sharing through KHIE and encourage adoption, we will:

- Host webinars and video-based training and information sessions.
- Educate providers on the resources available to them to support EHR adoption.
- Invite guest speakers in our provider forums to talk about the benefits of EHRs.
- Invite KHIE to present information at our four provider summits that in 2020.

Our Network Management, Quality Practice Advisors, Provider Relations, and Operations representatives are the frontline points of contact for our providers. We have a team within our Quality team who help providers connect to EHRs. WellCare of Kentucky also has a dedicated local resource, Shannon Johnston, Business Technical Analyst, who assists our providers with EHR Flat files, ESD submissions. He has made onsite visits to assist with technical questions. We will provide training on the benefits of EHR and KHIE adoption, including available online resources (i.e., FAQs, products/services, technical assistance available) to share with providers during engagement. In addition, all staff will have access to the same online provider materials to assist them in addressing provider questions related to KHIE. Our Network Management staff will collect information on providers regarding their EHR adoption and use, and KHIE participation. Ongoing encouragement for all new and established providers in adopting electronic health records will occur as part of provider education. Our Provider Relations workflow application will include designated fields for the purpose of capturing data regarding the provider's EHR selection and usage as well as KHIE participation. By tracking the provider's choices, we can focus on our primary goal to encourage providers to take advantage of full EHR integration if the provider is only using Direct Secure Messaging (DSM) or is not integrated with the KHIE.

INCENTIVES TO ENCOURAGE PROVIDER ADOPTION AND USE EHRS

Our EHR incentive program works to motivate providers to not just adopt an EHR but to actually use EHRs to drive value and results for enrollees and providers. Our incentive program is categorized under financial, P4Q and non-financial incentives as discussed below:

Financial Incentive: WellCare of Kentucky proposes to provide a grant of up to $1000 for our eligible independent providers who successfully implement EHRs for the first time.

Partnership for Quality (P4Q) Incentive Program: Providers receive bonus payments for closing care needs on key HEDIS performance measures and timely completion of appointment agendas. Appointment agendas allow our physician partners to understand, in a single report, everything that they need to address an enrollee's needs during an appointment. Providers who implement EHR and submit EHR Flat files not only receive financial incentives but they also benefit from faster and accurate HEDIS care need closure data submissions to WellCare of Kentucky. This translates into better health outcomes for our enrollees and increased P4Q payments for our providers.

In addition to the financial incentive, **we will facilitate peer-to-peer interaction**, organizing focus groups and connecting a provider with a peer to share EHR implementation best practices and benefits gained through EHR adoption. We will also work with the providers to identify EHR systems that have little to no cost and research successful implementations to help guide them in their EHR selection. We will also help determine the potential for smaller practices to share EHRs if the appropriate safeguards of patients' PHI can be achieved.

b. Describe strategies for requiring participants to establish connectivity to the Kentucky Health Information Exchange (KHIE) for a minimum of:

The Kentucky Health Information Exchange (KHIE) brings great value to the quality, safety, and efficiency of health care. WellCare of Kentucky supports DMS' vision on how provider adoption and use of electronic health records results in improvements in the quality of care for Enrollees and cost of health care services. We view our active participation in the HIE community as an opportunity to significantly improve our existing strategies and to form collaborative efforts with DMS. Several members of WellCare of Kentucky's staff attended KHIE's "Renovate to Innovate" eHealth summit in August 2019. WellCare of Kentucky welcomes the opportunity to continue to learn and understand more about the new KHIE platform as well as the business and technical strategy of KHIE. Our efforts include expanding our provider education offerings relative to the adoption of EHRs, promoting the secure exchange of electronic health information via KHIE, and encouraging the adoption and use of both.

Our Experience in HIE Community

We have actively participated in the Health Information Exchange (HIE) community since being the first MCO to attend the State Health Information Exchange Collaborative (SHIEC) Health Information Exchange Users Group (HUG) conference in 2015 and annually thereafter. We have innovated in leveraging our MITA-informed solutions and HIE participation to improve care management processes, health outcomes, and the transition of care between MCOs.

In Georgia, we actively encouraged the use of the GaHIN to serve as a mechanism for supporting enrollee transition from one MCO to another to standardize the process of ensuring member health outcomes were not adversely impacted.

i. Providers: applicable public health reporting

Accurate Reporting: We monitor provider compliance to provide accurate public health reporting through KHIE. If we find a provider not adhering to the reporting standards we send a notice of deficiency and a suggested remediation and, when appropriate, is subject to contract compliance discussions regarding ongoing network participation. We re-audit each practice that did not comply to determine the success of education efforts. Any provider that fails the re-audit is notified by letter. The results of monitoring activities are presented to our utilization management and quality improvement committees. Corrective action plans are developed based on non-compliance to public reporting.

Provider Education Webinars: To assist providers in gaining an understanding of the importance of participation in the KHIE, WellCare of Kentucky will conduct biweekly webinars targeted to provider organizations on the process of connecting to the HIE. This will include information on how to join the KHIE, assistance that we will be able to provide, how the information will be used to support public health reporting, and other advantages of joining the HIE.

In early 2019, we invited Andrew Bledsoe, Deputy Executive Director, Commonwealth of Kentucky CHFS Office of Health Data and Analytics to speak at two of our Provider Summits. He discussed the evolution of KHIE and plan for the future. This was a great way to introduce many of our smaller providers to KHIE and the many advantages of actively sharing health care data through an HIE. KHIE also had an exhibit table at the Provider Forums where they were able to interact with many of our providers and educate them on how to participate with KHIE.

Provider Web Site: Our provider portal is a no cost and low risk manner to engage providers on how to join the KHIE, assistance that we will be able to provide, how the information will be used to support public health reporting, and other advantages of joining the HIE. This will also include a link from our portal to the designated landing page of KHIE.

Provider Participation Tracking: Our provider visit checklist will be modified to include validating the provider's participation in the KHIE and capturing this participating information in our provider data files. This will include capturing whether providers are participating through the use of Direct Secure Messaging, data extracts, or EHR integration.

Provider Contracting: In compliance with the requirement outlined in Section 17.1 Kentucky Health Information Exchange, **all our network providers will be required to sign a Participation Agreement with the Kentucky Health Information Exchange (KHIE) within one month of contract signing**. We will track and report (as requested) on the provider's participation status. Working with KHIE, we will immediately begin to assess our network providers' participation in the HIE. This will allow us sufficient time to ensure we comply with this requirement.

ii. Hospitals: applicable public health reporting and Admit Discharge Transfer (ADT's).

Hospital Contracting: Based on our discussion with KHIE, we were informed that there are very few hospitals who do not participate in KHIE's ADT reporting. We will actively solicit and encourage all our hospitals to submit ADTs to KHIE. WellCare of Kentucky will invite KHIE staff to our Joint Operating Committee (JOC) meetings to meet with the hospitals who are not fully participating in KHIE to discuss the advantages of full participation. In compliance with the requirement, our providers who do not have an EHR will be required to sign a Participation Agreement with KHIE and sign up for Direct Secure Messaging services so that they can share clinical information with other providers in their community of care.

In both of these instances, WellCare of Kentucky will be collaborating with the KHIE to ensure that the information disseminated is accurate and, to the extent they are willing, offer to have them participate directly in the webinars. This will include ensuring their permission to reference them and to establish a link to their website.

c. Provide a description of initiatives and incentives to encourage adoption of electronic health records and information exchange.

In addition to the strategies discussed above, we have made significant initiatives to incent and encourage adoption of EHR and HIE's for the providers:

Collaboration with other MCO's - As a strategy, we plan to collaborate with other MCO's to create a program which would enable us to report to DMS the providers who has not adopted EHR or connected to HIE.

Provider Summits - At our provider summits in 2019, we invited KHIE to educate our providers regarding its benefits. Andrew Bledsoe, the Deputy Executive Director of the Office of Health Data and Analytics presented to all of our participants in the Lexington and Louisville Provider Summits related to the current and future state of KHIE. KHIE also staffed an exhibit table at the Provider Summits where they we able to interact with many of our providers individually. Following the summits, we sent follow-up emails to attendees with additional information on KHIE including an invitation to the upcoming KHIE summit.

Provider Surveys - Our Provider Reps conduct annual surveys to review the barriers to adoption of KHIE/EHR. Cost being one of the major barriers, we work with providers to help them find low cost no cost EHR options and assist them with creating a work plan to connect to EHR/HIE

Provider Identification - We will collaborate with KHIE to receive a list of providers who participates in KHIE. Once we have that list, we will work on a strategy to target providers who

do not participate in KHIE, engage with them either individually or in group settings to educate them on KHIE and press the value of participation.

Access to ADT: WellCare will work to ensure that providers have access to ADT notifications, either directly from KHIE or routed through WellCare, starting with PCP groups. WellCare believes that the availability of these notifications is the quickest path to value for KHIE and that the use of this data is a motivation for providers to share their own data.

Resources available: Our Practice Transformation Specialist will assist providers in adoption to EHR and connecting to HIE. They will work in conjunction with our Quality team and monitor the provider adoption to EHR and work with them in developing corrective action plans as needed.

Online Information and Resources: Providers and their office staff experience administrative burden, particularly with regard to ongoing medical records reviews and the intense amount of manual preparation time required prior to delivery to WellCare. Participation in the KHIE will ameliorate this burden. Therefore, we will encourage Providers to participate in the KHIE to allow us access to their enrollee's EHRs using the Direct Secure messaging (DSM) service. We will emphasize the benefits of DSM such as saving time, improving care, cost effectiveness and enhancing privacy. Timely and efficient transmittal of Member health information via KHIE supports not only the HEDIS review process but also the ability to identify care needs through the integration of claims and clinical data.

Public facing website: On the public-facing “What’s New!” page of our website, we will post a static quarterly Provider banner message to reflect KHIE information. The banner messages will include hyperlinks which will redirect Providers to the KHIE.org website. Additionally, we will include similar information in the Provider Manual posted on our website, which will describe how and where prospective and new Providers can access information about KHIE and the benefits of participation.

Additional places to connect through the web will be our Frequently Asked Questions (FAQs) page which educates Providers on EHRs, KHIE and the benefits of using each. Specific questions and answers will emphasize the alignment between EHR and HIE use.

Secure Provider Portal: We will also develop and publish self-service training materials on our secure Provider portal along with job aides to provide detailed explanations about EHR and KHIE use. We will post the same job aides to our public pages enabling easy access from any point of entry.

Through the expansion of incentives and development of new programs to encourage EHR and HIE use, we are convinced that our network providers will be strongly incentivized to implement these in their practices.

9. Quality Management and Health Outcomes

C.9. QUALITY MANAGEMENT AND HEALTH OUTCOMES

a. **Provide a detailed description of how the Vendor will support the Department in achieving its goals to transform the Medicaid program to empower individuals to improve their health and engage in their healthcare and to significantly improve quality of care and healthcare outcomes, and to reduce or eliminate health disparities. At a minimum, the Vendor's response should address:**

   i. How it will structure its organization to provide for a comprehensive and holistic approach to meet these goals, including coordination with Subcontractors and providers.

   ii. Strategic solutions the Vendor will use in quality management, measurement, and improvement.

   iii. Innovative strategies and enhanced services, if any, that the Vendor proposes to implement to enhance the health and well-being of Enrollees and to improve health outcomes, including examples of successes with similar Medicaid populations.

   iv. Internal tools and technology infrastructure the Vendor will use to support improvements in health outcomes and to identify, analyze, track, and improve quality and performance metrics as well as the quality of services provided by Network Providers at the regional and statewide levels.

   v. Methods to ensure a data-driven, outcomes-based continuous quality improvement process, including an overview of data that is shared with providers to support their understanding of progress in achieving improved outcomes.

b. **Indicate if the Vendor has received NCQA accreditation for the Kentucky Medicaid market, and if not, the proposed timeline for achieving accreditation.**

c. **Provide the Vendor's proposed use of the Quality Improvement Committee (QIC) to improve the Kentucky Medicaid managed care program.**

d. **Provide the Vendor's proposed use of the Quality and Member Access Committee (QMAC) to improve the Kentucky Medicaid managed care program, including the following information:**

   i. Proposed stakeholder representation.

   ii. Innovative strategies the Vendor will use to encourage Enrollee participation.

   iii. Examples of successful strategies the Vendor has implemented to obtain active participation in similar committees.

e. **Provide a comprehensive description of the Vendor's proposed Quality Assessment and Performance Improvement (QAPI) Program that meets all requirements of this Contract.**

f. **For each of the below quality measures, demonstrate how the Vendor will work to make improvements in Kentucky's Medicaid population. Include discussion of strategies and interventions specific to each measure, partners that will be necessary to achieve improvement, data analytics, and anticipated timeframes for success in achieving improvements. Describe potential challenges the Vendor anticipates, if any, and how**

those will be addressed. Provide examples of successes in other state Medicaid programs, and how that success will be leveraged in the Kentucky Medicaid market.

i. Medication Adherence for Diabetes Medications

ii. Tobacco Use and Help with Quitting Among Adolescents

iii. Colorectal Cancer Screening

g. Describe the Vendor's proposed approach to collaborating with the Department, other MCOs, and providers to ensure Performance Improvement Projects (PIPs) are effective in addressing identified focus areas and improving outcomes and quality of care for Enrollees, including the following:

i. Lessons learned, challenges, and successes the Vendor has experienced while conducting PIPs, and how the Vendor will consider those experiences in collaboration with the Department on identified PIPs.

ii. Recommended focus areas, including those for regional collaborative PIPs, for the first two years of the Contract resulting from this RFP and rationale for these focus areas.

iii. Methods for monitoring and ongoing evaluation of progress and effectiveness.

h. Provide a description of opportunities the Vendor has identified to collaborate with the Department for Public Health to support improvement in public health outcomes. Where does the Vendor anticipate that collaborating on initiatives would have the most impact in addressing quality care and outcomes for Medicaid Enrollees? Explain the Vendor's rationale.

i. Describe the Vendor's approach to monitoring and evaluating progress in improving the quality of health care and outcomes on an ongoing basis. Describe the following:

i. How the Vendor will use data to inform and prioritize initiatives to address Enrollee needs.

ii. Methods for measuring provider performance against practice guidelines and standards adopted by the QIC, and follow up activities to be conducted with providers based on ongoing review of findings.

iii. A summary of the Vendor's approach to annual evaluation of the overall effectiveness of the QAPI program and how the Vendor will use findings for continuous quality improvement efforts.

j. Provide a summary of how the Vendor will collaborate with the Department and other Vendors in developing and implementing a value-based payment (VBP) program. Include proposed approaches for the following at a minimum:

i. The Vendor's lessons learned in developing and implementing VBP models, examples of models that have been most effective in improving performance and outcomes.

ii. Recommended goals and focus areas in the first two years of implementation of the VBP program.

iii. Proposed approaches to collaborate with the Department and other MCOs to develop the VBP program and to implement a coordinated approach to achieve statewide improvement in outcomes.

iv. Potential challenges specific to Kentucky and the Vendor's proposed methods for addressing identified challenges.

v. Regardless of the model implemented, the Vendor's approaches to analyzing performance against targets, frequency of analyses, reporting results to DMS, and use of analyses to modify interventions that are not making progress towards achieving targets.

k. Will the Vendor and Subcontractors implement VBP arrangements with providers? If so, describe the following:

i. The types of VBP arrangements the Vendor and Subcontractors plan to use and why these models were selected. As part of your description, map your proposed VBP arrangement to the HCP-LAN APM Framework maturity level.

ii. How improvement in health outcomes will be addressed through the VBP arrangements implemented.

iii. Methods for evaluating the effectiveness of VBP, including tracking of costs and improvement in health outcomes.

l. Provide results of any provider satisfaction survey reflecting the Vendor's performance in Kentucky or any other state Medicaid program over the last three (3) years. Where results identified provider dissatisfaction, Describe strategies the Vendor has implemented to address improvement, and examples of how those strategies have been effective.

C.9. QUALITY MANAGEMENT & HEALTH OUTCOMES

a. Provide a detailed description of how the Vendor will support the Department in achieving its goals to transform the Medicaid program to empower individuals to improve their health and engage in their healthcare and to significantly improve quality of care and healthcare outcomes, and to reduce or eliminate health disparities. At a minimum, the Vendor's response should address:

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 19 Quality Management and Health Outcomes of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

WellCare of Kentucky has supported DMS' goal of improving health outcomes since we began serving the Commonwealth's most vulnerable and economically disadvantaged individuals in 2012. Our Kentucky-based integrated Quality, Population Health, Behavioral Health, Pharmacy and Provider Network teams, who live and work in the communities we serve, have been infusing quality throughout our operation since this time. As the MCO with the most Medicaid experience with the specific healthcare needs of Kentucky Enrollees, comprehensive data analytics capabilities, collaborative provider relationships and effective member engagement programs, our team has developed tailored programs for specific populations focused on empowering Enrollees to engage in their healthcare and aiding providers in helping Enrollees in this effort. Our success is

proven in the fact that **WellCare of Kentucky is the only MCO that has not seen any decline in our NCQA Health Plan Rating year over year from 2015/2016 to present.** We have developed a comprehensive suite of specialized programs, a leading analytics platform, tools and incentives to engage both providers and Enrollees, and a local, high-touch approach that centers on DMS' goals of 1) Empowering individuals to improve their healthcare, 2) Improving the quality of care and health outcomes, and 3) Reducing or eliminating health disparities. Our solutions have resulted in **WellCare of Kentucky achieving the highest NCQA quality rating in the State overall, AND the highest in the Behavioral Health measures.** Our relentless passion and focus on quality has led to a balanced strategy that includes programs and enhanced services, analytics and reporting, member and provider engagement, and customer satisfaction improvements that have made **WellCare of Kentucky one of only two Medicaid MCO's in Kentucky that have earned a Commendable Accreditation status for the last two years in a row and we improved our accreditation scores from 79.0 in 2015 to 85.73 in 2019.** We realize the importance of aligning with the State, the Providers, the Enrollees and our Communities to drive needed change throughout Kentucky and we have the proven track record of success to accomplish this goal.

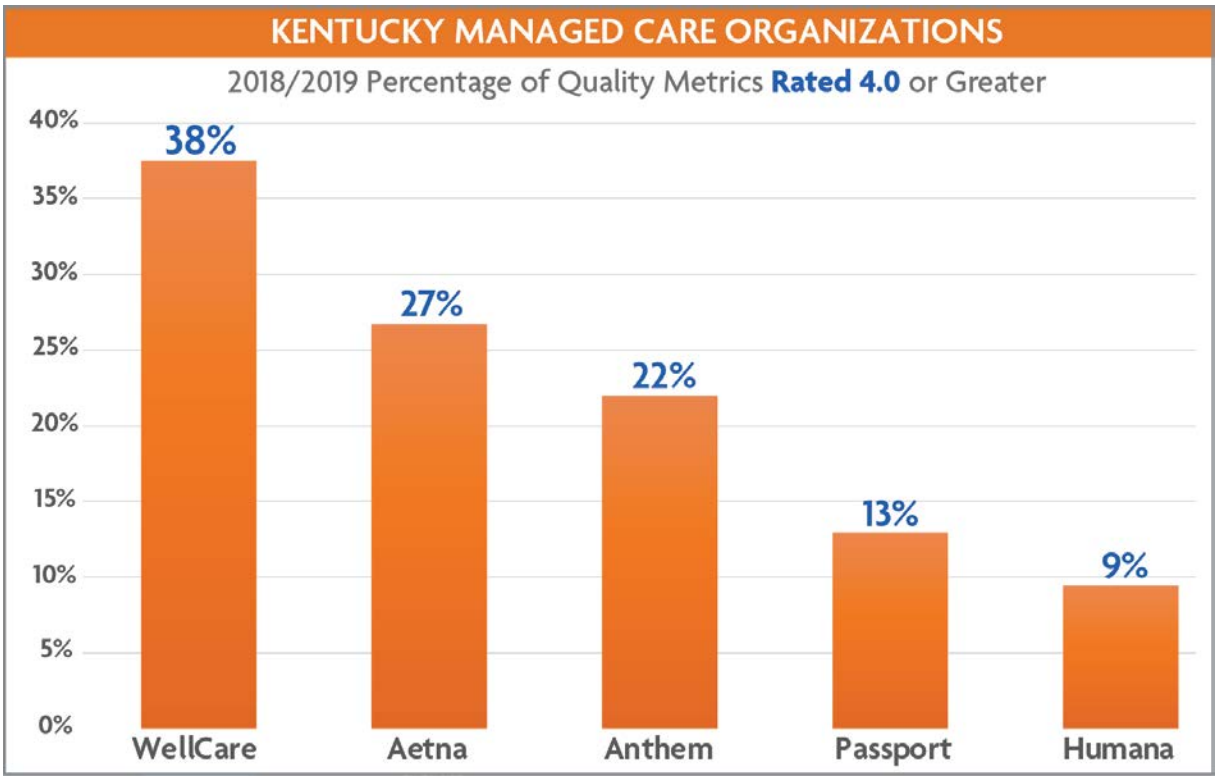

Figure C.9-1 Quality Metrics in Kentucky

In the following sections, we demonstrate that no one is more passionate and focused about improving the quality of care and outcomes in the Commonwealth than our local team. With the data to support this, 91% of our HEDIS measures have improved year-over-year from HEDIS 2013 to 2019, including all three Well-Child Visit measures: Medical Assistance with Smoking and Tobacco Use Cessation, Breast and Cervical Exams and Annual Dental Visits. Overall,

WellCare had the highest proportion of ratings of 4 or higher in 2019 among all Kentucky MCOs, see **Figure C.9-1** for an illustration of MCO quality metrics in the Commonwealth. Under the direction of Chief Executive Officer Bill Jones and Medical Director Dr. Howard Shaps, our integrated leadership team including Quality Improvement Director Laura Betten, Provider Network Director Bonnie Irvin, Pharmacy Director Thea Rogers, Behavioral Health Director Dr. Marketa Wills and Population Health Management Director Shannon Maggard leverages this experience as we continue to collaborate with DMS on advancing and transforming the Medicaid program.

i. How it will structure its organization to provide for a comprehensive and holistic approach to meet these goals, including coordination with Subcontractors and providers.

As an MCO that has integrated medical and behavioral health since we began serving Medicaid Enrollees in 2012, WellCare of Kentucky's structure provides a comprehensive and holistic approach to empower and engage Enrollees in improving their healthcare, support providers in helping Enrollees improve health outcomes and reduce or eliminate health disparities. Quality is woven into every element of our integrated organizational structure — from the oversight provided by the Board of Directors (the Board) and our quality committees, the day-to-day responsibilities of our Quality Department, to the cross-departmental collaboration and coordination with providers and subcontractors. These integrated organizational teams use our comprehensive data analytics capabilities and the Plan-Do-Study-Act (PDSA) model to ensure continuous quality improvement as they collaborate to improve health outcomes.

QUALITY OVERSIGHT

The Board has overall responsibility to provide strategic direction for the Quality Assurance and Performance Improvement (QAPI) program. The Board delegates to the Quality Improvement Committee (QIC), which establishes, evaluates and, as needed, revises the QAPI program with input from the Quality Member Advisory Committee (QMAC) and Utilization Management Advisory Committee (UMAC) including provider representatives, and the Quality Department.

QUALITY DEPARTMENT

WellCare of Kentucky's Quality Department consists of local experts, from leaders to support staff, who live and work in the communities they serve and are responsible for the day-to-day oversight and implementation of our Quality operations. These teams collaborate with our Population Health Management, Behavioral Health, Pharmacy and Field Network Management departments to provide comprehensive and holistic care for our Enrollees.

Our Quality leadership includes Medical Director Dr. Howard Shaps and Quality Improvement Director Laura Betten. Dr. Shaps has seven years' experience improving quality for managed care. Ms. Betten has an MBA in healthcare management and has eight years' experience in managed care. Reporting to Ms. Betten is a Senior QI manager and five QI managers with **a combined 81 years of experience** as Quality Practice Advisors (QPAs), Behavioral Health (BH) specialists and HEDIS experts. These managers lead **dedicated Kentucky-based QI teams** who empower and engage Enrollees, support providers and address larger systemic issues in Kentucky**. These teams include more than 50 quality experts**, some of whom hold advanced degrees in epidemiology, healthcare administration and social work and are supported by a

corporate Quality team of nearly 200 associates providing additional analytics, programmatic and operational support. Our integrated and focused regional team of Kentucky-based Associates engage our Enrollees, providers and stakeholders through many channels, including:

- *Health Coaches* conduct continuous telephonic outreach to our most vulnerable Enrollees and have made more than 13,000 successful coaching calls, educating them on recommended critical screenings and preventive services, helping to bring awareness to personal health needs and transform Enrollee lives since the program's inception in February 2019. In addition, we will expand our program to include two additional Health Coach teams comprising local experts focusing on smoking cessation, obesity and pre-diabetes/diabetes.
- *Care Needs Coordinators* continuously outreach to Enrollees telephonically to educate them on recommended care needs and help schedule appointments for those Enrollees not engaged in a PCA practice or a care management program.

Care Needs Coordinator Impact

An Enrollee, who was homeless, was identified as having a care need related to his medication adherence and recommended screenings and connected with a QI Care Needs Coordinator. Numbers to available resources were shared by our QI Care Needs Coordinator in addition to offers for a referral to Care Management. The Enrollee refused a referral to Care Management but he did have access to a telephone so our QI Care Needs Coordinator would call him periodically to check on him. Through the resource numbers provided, the Enrollee was able to find a stable place to live. On a subsequent call, the Care Needs Coordinator was able to help him get an appointment with his PCP, connect with Member Services to update his new address, and to obtain an insurance card. The Enrollee expressed that he felt he was now on a path to get his life on track.

- *Patient Care Advocate (PCA) team* co-located in provider offices assisting Enrollees with scheduling appointments through telephonic outreach and direct Enrollee engagement, educating on care needs and assisting in removing barriers to care.
- *Member Outreach Coordinators (MOC)* who work with our Unable to Contact (UTC) program, REACH, to locate Enrollees for whom we have incorrect or missing contact information. We currently focus our UTC outreach in region 8 due to the prevalence of clinical complexities and social determinants of health that increase the UTC rate in this rural area.
- *Kentucky Quality Practice Advisor (QPA) Teams:* Three teams of regionally located QPAs are responsible for assisting providers in closing care needs. They educate providers on HEDIS and HPR measures and the importance of completing appointment agendas. Appointment agendas enable our physician partners to identify, in a single report, Enrollee chronic conditions and care needs that need to be addressed during an appointment. QPAs assist provider groups in practice transformation to develop coordination of

In 2019, our QPAs conducted more than 6,000 visits to provider offices to educate providers and advance the Commonwealth's quality

care for Enrollees. In addition, QPAs are responsible for EPSDT and AMRR audits, reviewing results directly with providers and developing corrective action through identifying opportunities to increase efficient and effective use of EMR templates and care alerts, office workflows and coding to improve capture of quality services. In addition, QPAs assist with referrals to and coordination between care management as needed. In preparation of the new contract, we are implementing specialized QPAs to provide focused support to specialty providers, including Behavioral Health and OB/GYN. The Behavioral Health QPA will focus on care coordination between medical and behavioral health needs and the OB/GYN QPA will focus on women's health needs. Both will conduct visits with their respective specialty providers to educate them on performance management and our programs.

WellCare of Kentucky received more than 91% compliance in the last full EQRO audit

- *Our Kentucky NCQA/Audit Team* of QI project managers, QI specialists and QI coordinators are responsible for NCQA requirements and our two-year Commendable Accreditation status as well as HEDIS, EQRO and HRA audits. In addition, this team updates our program description, work plan and evaluation which contain information on our PIPs, HEDIS interventions, Annual Medical Record Review (AMRR) process and our QIC, QMAC and UMAC.

Bluegrass Community Health Center was having difficulty finding a Home Health Agency to provide services for a WellCare Enrollee. QPA Shelly Adams, who had stopped by the office for a visit, was able to garner the assistance of Paula Franklin, Care Manager, who was able to secure a home health agency. Within 30 minutes a home health agency was secured and the Enrollee started receiving services the next day.

- *Our Kentucky HEDIS Team* of QI project managers and care needs coordinators are responsible for HEDIS performance tracking, medical record review, measure intervention and implementations and Enrollee outreach. The team's focused attention has resulted in statistically significant increases in the rates of over 35 HEDIS measures from 2016-2019, including a 187% increase in "Adolescent Immunizations- Combo 2."
- *Our Kentucky Quality Analytic Team* uses our best-in-class software, including Tableau® and SQL Server Management Studio, to create detailed reports that help QPAs identify Enrollees with care needs and assist providers in improving quality and risk adjustment scores. For example, a provider requested a report to see if assigned Enrollees were receiving services from other providers. Using SQL Server Management Studio, the team compared Enrollees claims to identify the providers, if any, the Enrollees were visiting. This report allowed the QPA to review with the provider to address Enrollee outreach strategies, help direct the Enrollee to coordinated care and adjust provider panels appropriately. The team also developed an Enrollee outreach database in SQL Server to identify Enrollees at risk of becoming non-compliant and prioritize them for outbound calling by our Care Center. This system provides an all-encompassing view of the Enrollee including care needs, dates of PCP visits, ED utilization, and previous call history. The team also provides support to QI

managers, PR managers and care management for Enrollee and provider focused reports and oversight of team performance.

- *Clinical Data Capture Team:* This dedicated team includes data, systems and technical experts, such as quality analysts, providing individually tailored solutions for provider connectivity and the facilitation of electronic medical record data. This unique team of Quality and IT associates understands the data structure and the ability to map information from Electronic Medical Records, partnering with individual providers, practices and large health systems to create data exchanges for the purpose of seamless data integration.
- *Quality Statisticians:* This team includes experts in disparities and rural health providing statistical modeling and population profiles to gain insight on Enrollee trends and behaviors. The modeling includes innovative methods of detecting unique nuances of the complex populations and visualizations for accessible data for internal and external stakeholders. For example, this team recently looked at disparities among men and women as well as black, other and white races for a variety of measures for HEDIS Years 2016 and 2017 in Kentucky, as demonstrated in Question C.9.a.iv., below.

"Throughout the last several years I have worked with WellCare of Kentucky's team on a monthly basis, focusing together to achieve quality preventive care for our patients. Their focus on Quality outcomes and chronic condition education ensures that their Enrollees are getting the best possible care. They are a much needed support in meeting these initiatives."

– KATRINA BARKER, APRN, PRACTITIONER/OWNER, HOMETOWN HEALTH PLLC

COORDINATION WITH SUBCONTRACTORS

WellCare of Kentucky expects the same level of diligence and performance from our subcontractors as we do of ourselves. As part of our coordination with subcontractors, we incorporate their programs and processes into our continuous quality improvement activities. In addition, we regularly meet with subcontractors to review performance and collaborate on performance improvement opportunities as well as to innovate new programs. Examples of our coordination efforts with subcontractors include:

Avesis, our dental and vision contractor, like us, understands the importance of dental health on the overall health of our Enrollees. We also appreciate the need for vision services and their importance to our Enrollees, who have often struggled with accessing services and obtaining prescription glasses. To enhance our support for these issues, we have a quality outreach program that we have created with Avesis for our Kentucky Enrollees. We transmit a monthly list to Avesis of Enrollees who are non-compliant with the DRE (diabetic retinal eye) exams. Avesis will send out at a minimum of three letters and make at least five phone calls to the Enrollees to help educate them on the vision benefits offered by the plan and help them understand the importance of the annual diabetic eye exam.

Our **Nurse Advice Line (NAL)** is an integral part of our Enrollee supports. The NAL team takes part in our Quality Improvement Committee and Utilization Management Advisory Committee to discuss current trends and areas of need with WellCare of Kentucky leadership.

Our relationship our pharmacy benefits manager, **CVS**, is another example of the strong relationships we create with our subcontractors. CVS takes part in routine and ad-hoc conversations regarding pharmacy performance and helps strategize solutions with our Pharmacy Director and Pharmacy Quality Improvement team to create tailored solutions for Kentuckians. In 2019, as part of our 2018 QI Evaluation analysis, we determined that a focus area for our partnership with CVS and our pharmacy teams is to rebrand and refocus our attention on the pharmacy lock-in program to improve Enrollee and provider experience.

COORDINATION WITH PROVIDERS

WellCare of Kentucky recognizes the critical role that our providers play in improving quality. Our job is to wrap around our provider community with personal outreach, incentives and data sharing methods helping them to improve the quality of care they deliver to our Enrollees while reducing their administrative burden. **WellCare of Kentucky has developed a trusting relationship with our network providers by ensuring they have the support they need to provide the highest quality of care to the Enrollees they serve. As a result, we came in first for NCQA Customer Satisfaction in 2016-2019 among all Medicaid MCOs.**

Due to our responsiveness and quick action to provider concerns, our overall provider satisfaction rate increased by 22.2% from 2017 to 2019.

Coordination with Providers through Outreach

By working closely with our providers, we ensure Enrollees receive timely access to the services they need and that our providers are focused on closing Enrollee care needs.

Hands-on provider support: Provider 360 (P360) is a continuous quality improvement program aimed at service delivery, quality care, and satisfaction. Led by Provider Relations Representatives (PR Reps) and supported by QPAs, PCAs and Care Managers, P360 is based on PDSA methodology and includes in-person PR Rep and QPA meetings to review prior and forecasted quality performance against goals and other provider comparisons. The P360 team works to establish detailed work plans to improve quality including new programs, enrollee outreach, health fairs, new equipment/services, encounters/billing remediation, access to information and EMR interchange. Our PR Reps review care needs in collaboration with QPAs. Our PCAs are co-located in select high-volume provider offices and assist in scheduling appointments for targeted Enrollees with identified care needs. Our Care Managers support Enrollees following discharges from the hospital to prevent readmissions, which would adversely impact providers' quality scores.

In-person audits: In 2019, we improved our Onsite Annual Medical Record Review (AMRR) Audits process by taking a field outreach approach, where QPAs complete audits through face-to-face visits in the office, allowing them to provide immediate audit education post-audit, establish relationships/partnerships and expand the education to include care needs and HEDIS recommendations/requirements.

"WellCare has worked with us to close care needs and appointment agendas. This in turn has led to higher quality care for our patients. WellCare has assigned a dedicated Quality Practice Advisor Nurse as well as a Provider Representative to help support us here at Parkway Pediatrics. Monthly meetings keep us informed about upcoming changes and areas for improvement."
– INDIRA MOODUMANE, MD, PRESIDENT, PARKWAY PEDIATRICS

Joint Operating Committees (JOCs): For our large provider groups and hospitals, senior leadership, including our Medical Director, hold regularly occurring JOCs with formal agendas to review comprehensive performance metrics and mutually identify opportunities to improve overall success of the partnership and quality performance.

Provider Summits: WellCare of Kentucky was the first MCO to introduce quarterly provider summits throughout the Commonwealth. Summit agendas include general presentations from leadership that impact all providers (e.g., portal, case management, claims), a Q&A session with WellCare Health Plans, Inc. (WellCare) leadership, and breakout sessions on individual topics such as innovations in quality, regulatory changes, and plan highlights such as our work with Community Connections (SDOH), behavioral health and quality improvement**. In 2019, nearly 500 providers attended our regional summits,** which were held in Louisville, Bowling Green and Lexington.

Integration Meetings: We hold regular medical/BH integration meetings with network providers around the Commonwealth to facilitate progress toward the building of a holistic, person-centered model of care. Meetings include executive management, medical directors, network leadership and BH management. Our care plans and our integrated Care Central platform provide actionable insights related to quality gaps for our providers.

Coordination with Providers through Incentives

We believe that incenting providers to participate in our quality programs is an effective way to coordinate with them in improving Enrollee health outcomes. We offer the following incentives for providers:

Partnership for Quality (P4Q) program: Providers receive bonus payments for closing care needs on key HEDIS performance measures and timely completion of appointment agendas, which allow our physician partners to understand, in a single report, everything that they need to address for each Enrollee during an appointment. Our P4Q program resulted in a 249% increase in provider participation from 2018-2019. WellCare of Kentucky introduced the **Behavioral Health (BH) P4Q program** in 2019 in order to better align with DMS' goal of improving BH-related health outcomes among the people of Kentucky. In 2019, **7,039 care needs were closed at the participating CMHCs and more than $281,000 in bonus payments were paid out as a result of the new BH P4Q program**.

Value-Based Payment (VBP) program: We offer value-based payment arrangements across the spectrum of Health Care Payment (HCP) Learning & Action Network (LAN) categories, including shared savings/shared risk and full risk for providers who have the infrastructure and

capabilities to become effective at improving overall health outcomes and managing cost. Our P4Q program supports providers in preparing for advanced VBP programs by serving as a LAN Level 2 structure.

Peak Performance program: Developed in 2017, this program rewards high-volume paneled Kentucky Medicare providers for high-performance in HEDIS measures with a focus on certain measures in need of more dramatic year-end improvement. As a result of the program, **10% of participating providers representing more than 8,400 Enrollees improved their HEDIS scores from 2018 to 2019.** Due to its success, we are re-designing this program for Medicaid to enhance our provider supports for high-quality health outcomes.

Coordination with Providers through Tools and Data sharing

We connect our providers to the innovative tools they need to coordinate Enrollee care. We offer a variety of data sharing modalities, and have recently improved our data analytics capabilities to include more customized provider reports and tools with the ability to accomplish the following:

- Provide actionable data, including reason for non-compliance with A1c Control (e.g., measure is above nine or the test was not even completed or Enrollee hasn't been seen)
- Customize reporting based on specific measure sets or specific data elements by Enrollee, by provider or by zip code
- Prioritize Enrollees or families based on Quality Stratification Index which identifies Enrollees/families with multiple care gaps or individuals with difficult to address care needs that will guide CSR, CM and PCA inbound interactions
- Create a task at household, provider or Enrollee level to coordinate across the interdisciplinary care teams, quality and provider relations

P4Q Portal Reports: Our QPAs and Provider Relations Representatives (PR Reps) present to providers our P4Q portal reports (**Figure C.9-2**), which show a snapshot of their Enrollees' care needs, the status of their P4Q goals, and allow providers to prioritize Enrollee outreach based on those measures that will result in the most improved Enrollee health outcomes.

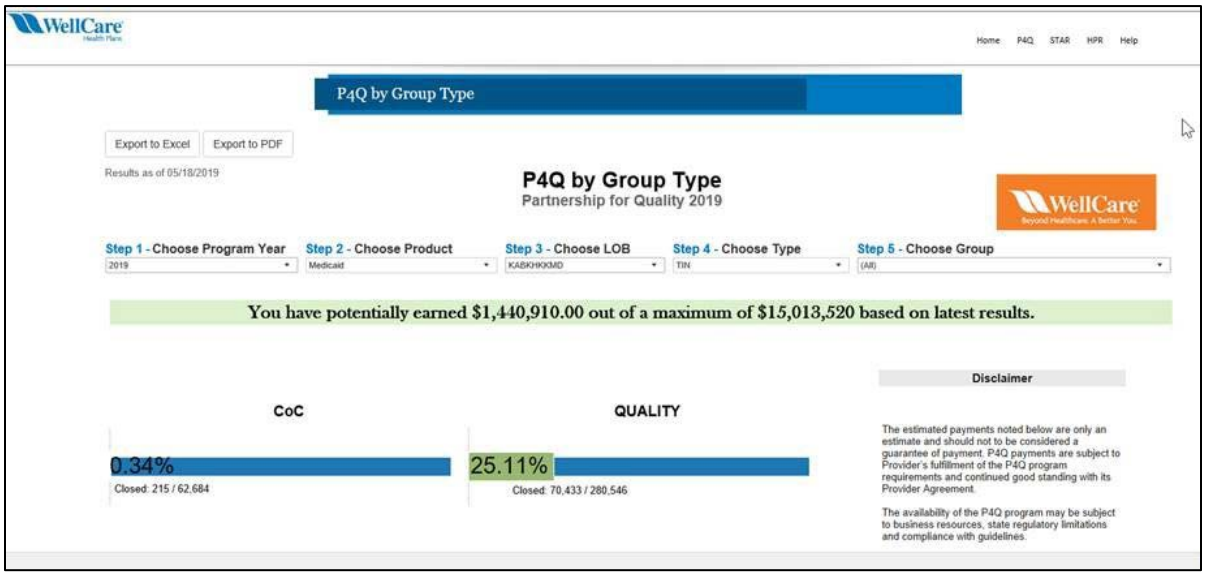

Figure C.9-2 P4Q Portal Report

Provider Portal: Our provider portal is connected to our integrated Care Management system, CareCentral, which enables us to share the outcomes of health screens, EPSDT information, social determinants of health obstacles, Enrollee assessments, care plans, and multi-disciplinary team contacts with providers. Providers can also view open and pending care needs through the portal and notify us when those care needs are closed through encounters, claims, eMR interchange or submission of supplement medical record information. They can also view appointment agendas, which allow our physician partners to understand, in a single report, everything they need to address for each Enrollee during an appointment including all known chronic diagnoses and associated care needs derived from evidence-based guidelines. We offer a wide variety of webinars through our provider portal and access to our provider newsletter, provider manual, claims, prior authorizations and clinical practice guidelines. As part of our collaborative effort to support providers, we hosted Quality-led focus groups with providers to discuss their needs for data analytics and the provider portal. As a result of these focus groups, we received feedback on a few common themes: faster data generation, expanded data capture tools, and more flexible reporting features. We incorporated this feedback to meet the needs of the provider community in our quality programs and provider portal.

Electronic Medical Records (eMR): Our eMR flat file transfer process enables medical and behavioral health providers to submit flat file information from their eMR to provide WellCare of Kentucky with up-to-date and complete Enrollee information that is not captured on claims and encounters. Our recently updated process includes providing an accessible setup guide; providing a dedicated Quality and eMR team to help set up connections; leveraging consultants to help configure systems for export; providing error reports that show appropriate use and configuration of the system interchange; and accepting appointment agendas in various formats for ease of transition.

ii. Strategic solutions the Vendor will use in quality management, measurement, and improvement.

WellCare of Kentucky has made significant investments in strategic solutions aimed at improving health outcomes through quality management, measurement and improvement. These investments are yielding positive improvements, as evidenced by our year-over-year HEDIS performance or based on the results of individual program performance. For example, **91% of our HEDIS scores have improved year-over-year from HEDIS 2013 to 2019**, and we currently **lead the Commonwealth in 24 HEDIS measures for 2019**, including all three Well-Child Visit measures, Medical Assistance with Smoking and Tobacco Use Cessation, Breast and Cervical Exams and Annual Dental Visits (through November 30, 2019). While our strategic solutions in quality management, measurement and improvement include standard quality framework such as Plan Do Study Act (PDSA) and rapid cycle Continuous Quality Improvement (CQI), what makes our strategies unique is how we apply this framework to our solutions with our comprehensive data analytics capabilities and integrated multi-disciplinary approach to improving the lives of our diverse, economically disadvantaged Enrollees. These strategic solutions, which leverage every Enrollee touchpoint to close care needs, are designed to empower Enrollees to improve their health and engage in their healthcare, improve health outcomes and reduce or eliminate health disparities through the following methods:

STRATEGIC SOLUTIONS IN QUALITY MANAGEMENT

Our approach to overall quality management centers around three strategies: 1) Discipline and Execution, 2) A Hands on, Data Driven Approach, and 3) Closed-loop Feedback from all Stakeholders to Continuously Improve.

Quality Management Discipline and Execution: Our Kentucky Leadership Team comprising the CEO, CMO, COO and Senior Director of Quality hosts weekly team meetings to evaluate our Quality Strategy and Plan, the effectiveness of our execution and the progress towards achieving our goals. In addition, this team meets with our largest provider groups on a quarterly basis to review their performance, discuss barriers to achieving goals, and to share our strategy to ensure continual alignment. The leadership team also engages in Quality discussions with DMS to ensure overall alignment with their objectives and goals. Our approach calls for measures at the atomistic, summary and objective levels that align with the HCP LAN "Big Dot" work. This aids in alignment and ensures that we are meeting outcomes and health objectives.

Hands on, Data Driven Approach: Our teams of Kentucky-based quality experts, described in detail in Question C.9.a.i. above, are responsible for day-to-day quality management oversight, and implementing programs that result in improved quality outcomes. These teams experience low turnover and have worked cohesively over the past eight years, enabling them to successfully manage the quality program through the following processes:

- Weekly and monthly executive quality meetings focused on overall quality strategy that enable quality leadership to determine where we are with quality, where we are going, and how we are going to get there
- Weekly QPA meetings to address providers barriers and concerns and to identify best practices that can be shared across all providers

- Weekly care needs coordinator and health coach meetings that help our teams identify trends and barriers to care.

Closed Loop Feedback from All Stakeholders: We believe in continually seeking feedback on the effectiveness of our strategy and programs from all Stakeholders including providers, community advocates, and customer-facing teams in order to improve our quality of care.

We connect with our local providers through the following methods to assist us with improving our overall quality strategy:

- Ongoing in-person provider visits through our P360 program (described in Question C.9.a.i.)
- Monthly JOC meetings as described in Question C.9.a.i.
- Quarterly provider summits as described in Question C.9.a.i.
- Quarterly provider advisory panel meetings that have recently been implemented in Kentucky. Our Provider Advisory Panel is comprised of providers from all eight regions, organized and facilitated by Providers Relations. We will use our Provider Advisory Panel to obtain input on a wide number of topics affecting our providers including quality initiatives.

We engage our Community partners to identify local nuances that may act as barriers to quality improvement, discuss additional programs that need development, provide supplemental resources and learn how to improve Enrollee and provider engagement. This critical feedback loop helps us address the reduction and elimination of health disparities in the Commonwealth.

We also engage our internal, Enrollee-facing teams to gather their feedback based on their experience with our Enrollees and providers in order to make meaningful improvements both operationally and programmatically.

STRATEGIC SOLUTIONS IN QUALITY MEASUREMENT

WellCare of Kentucky recognizes the importance of quality measurements grounded in transparency, measures that improve outcomes and a powerful analytics platform that provides meaningful, actionable information to our partners so that improvements can be made quickly. Our strategy for performance measurement is centered on three components: 1) Data provision and consumption, 2) Measure alignment with outcomes, 3) Comprehensive Data and Analytic platforms.

Data Provision and Consumption: We recognize the need for frequent and transparent data that provides the information required to drive and improve quality and the services provided by our network providers. We understand the need to design reports and provide information that is meaningful and actionable so that providers and other key stakeholders can quickly digest the information and take action. We have designed a set of reports for our providers (covered in detail in **Table C.9-1**) that drill down to the measure, provider and member level to quickly determine current quality performance, the gap to goal and the action steps necessary to meet the goal. At WellCare, we don't just send the reports to our providers and stakeholders, we meet with them face to face, review the reports, and allow the providers and stakeholders to ask questions. Our hands-on approach ensures that the data and information is consumed and acted upon.

Table C.9-1 Quality Reports for Providers

Report	Description and Use
Heat Maps	Identify regional, county, and zip code level variations in quality performance based on QI goals and measures. QPAs present these to providers during in-person visits to educate and help improve quality performance.
HEDIS Provider Performance Profiles	Generated at least monthly to show up-to-date individual practice level performance. Using profile reports, we can identify under-utilization of services for each Enrollee who has an outstanding care need. QPAs present these to providers during in-person visits to educate and help improve quality performance.
Care Needs Reports	These show all open care needs for Enrollees and are provided to all Enrollee and provider-facing staff in order to help close care needs. QPAs present these to providers during in-person visits to educate and help improve quality performance.
Behavioral Health Care Needs Reports	Unique to WellCare of Kentucky, these show all open BH-related care needs and are provided to CMHC's and five inpatient hospitals that are under the BH P4Q incentive program in order to help close BH-related care needs. BH QPAs present these to providers during in-person visits to educate and help improve quality performance.
P4Q Scorecard Reports	These interactive reports include web portal and drill down capabilities, affording providers' insight into actual and potential incentive earnings based on individual Enrollees and services. QPAs present these to providers during in-person visits to educate and help improve quality performance.
Appointment Agendas	These allow our physician partners to understand, in a single report, everything that they need to address for each Enrollee during an appointment. Our tools also suggest other diagnoses inferred from other data sources that have not yet been confirmed. For example, for an Enrollee with Diabetes, a physician will receive an appointment agenda indicating Diabetes and a list of open care needs that need to be addressed such as for a quarterly HbA1C, blood pressure control, eye exams and nephropathy screening. We provide these forms annually at the beginning of the year to guide annual physicals and EPSDT exams. In addition, when a provider performs an eligibility check on an Enrollee, we auto-generate an appointment agenda and deliver it directly to the provider via the provider portal, secure FTP, custom feed, or fax. With certain

Report	Description and Use
	connected providers, we have the capability to automatically generate and send an appointment agenda upon notification that an Enrollee is present in the office.
Emergency Room (ER) High Utilizer Reports	This monthly report details Enrollees who had any visit to the ER, including date of service, diagnosis and service codes related to the visit, method of arrival, and also indicates if there is an existing relationship with the Enrollee's PCP. The report also details the running 12 months of all visits to identify underlying trends and high utilization of multiple ER facilities. We also detail the relationship of each PCP to the rate of ER visits for PCPs assigned to them. These reports are delivered to providers by QPAs and PR Reps.
Enrollees Without Visits Reports	These weekly reports display adult Enrollees who have not been seen by a PCP within 12 months and are delivered to providers by QPAs and PR Reps.

Measure Alignment with Outcomes: We consistently examine our quality programs to ensure we align with quality measurements, address high-impact areas that safeguard public health, confirm outcomes-based programs remain patient-centered and meaningful to Enrollees and providers, demonstrate significant areas of improvement and align with programs defined by DMS or other MCOs in the Commonwealth. This approach focuses on measures where the highest opportunities exist while monitoring others at acceptable levels of performance.

Comprehensive Data and Analytic Platforms: Comprehensive data and information can only be produced if a platform and intelligence capability is built to provide it. WellCare of Kentucky has a team of local data analytics experts, some of whom hold advanced degrees in epidemiology, who collaborate with our corporate quality data analytics teams to perform quality measurement. This team builds data marts, reports and other tools that provide information to our quality teams and external partners (providers and other stakeholders) to analyze, trend and take actions to improve quality.

WellCare of Kentucky has built a Quality Performance Metrics Engine that incorporates clinical and administrative data including medical records, CAHPS, claims, complaints, appeals, grievances, encounters, authorizations, quality of care incidents, disease/care management documentation, pharmacy data, quality stratification values, unmet social needs data and other data from disparate sources that consolidate Enrollee-centric data into one platform. Our QPME displays this information through CareCentral in an Enrollee-centric, 360-degree view, known as Care Compass.

To supplement our quality data analytics efforts, our Information Systems team is building two Artificial Intelligence (AI) systems – one for clinicians and one for Enrollees – designed to analyze symptoms, demographics, medical histories and other data sources to suggest treatment plans and interventions. By feeding our data, which represents what happened with

the end-to-end (over time) treatment of our Enrollees' conditions, we can better assess patterns that rendered the highest healthcare outcome result and patterns that rendered the least amount of visits or lowest costs. Through smart learning, we can enhance predictive analytic capabilities and our targeted population health interventions to encourage more effective Enrollee and provider behavior — all aimed at improving health outcomes.

STRATEGIC SOLUTIONS IN QUALITY IMPROVEMENT

WellCare of Kentucky has been focused on quality improvement for the past eight years throughout the regions of the Commonwealth. We have achieved increases every year for the past four years in our overall HEDIS measures as a result. We continue to expand on that success through three primary strategies: 1. Member and Provider Engagement. 2. Focused Program/Resource Development 3. High Touch, Visible Partnerships.

Enrollee and Provider Engagement

In order to improve quality, Enrollees and providers must be engaged equally. Our Enrollee engagement strategies include aligned incentives, Enrollee and provider education and support and engaging family members and peer supports.

Enrollee Incentives: Our **Healthy Rewards Program** assists Enrollees in closing care needs. Through this program, Enrollees receive reloadable debit cards or gift cards for stores to purchase personal, home, baby, and family-related items that promote practicing healthy behaviors such as visiting their PCP. **In 2019, WellCare of Kentucky closed 43,738 care needs using our Healthy Rewards Program.** Through this program and others, WellCare of Kentucky has **increased the percentage of our Enrollees who have seen their PCP within 12 months by eight percent since 2015, with more than 70% of our Enrollees seeing their PCP at least once in 2018**.

Provider Incentives: Our overall approach to Value-Based Purchasing is based on a "win-win-win" philosophy that acknowledges the unique roles of the Enrollee, provider and health plan who must all come together for a quality outcome to be achieved. Our VBP arrangements – in conjunction with our broader investments related to Care Management, Quality Improvement, and other Network Performance Initiatives – are a key component of our strategy to improve quality outcomes and drive cost-efficient care. Our **Partnership for Quality (P4Q) program** enables providers to receive bonus payments for closing care needs on key HEDIS performance measures and timely completion of appointment agendas, which allow our physician partners to understand, in a single report, everything that they need to address for each Enrollee during an appointment. WellCare of Kentucky introduced the **Behavioral Health (BH) P4Q program** in 2019 to better align with DMS' goal of improving BH-related health outcomes among People of Kentucky. **In 2019, 7,039 care needs were closed at the participating CMHCs and more than $281,000 in bonus payments were paid as a result of the new BH P4Q program**. Our **Value-Based Payment (VBP) program** offers payment arrangements across the spectrum of Health Care Payment (HCP) Learning & Action Network (LAN) categories including shared savings/shared risk and full risk for providers who have the infrastructure and capabilities to become effective at improving overall health outcomes and managing cost. Our **Peak Performance program** was developed in 2017 to reward high-volume paneled Kentucky

Medicare providers for high performance in HEDIS measures with a focus on certain measures in need of more dramatic year-end improvement. As a result of the program, **10% of participating providers representing more than 8,400 Enrollees improved their HEDIS scores from 2018 to 2019.** Due to its success, we are re-designing this program for Medicaid to enhance our provider supports for high-quality health outcomes.

ENROLLEE EDUCATION AND SUPPORT

WellCare of Kentucky has developed the following suite of solutions that support and educate our Enrollees in the achievement of better health outcomes.

- *Enrollee Portal:* Our Enrollee Portal, accessible online or with a mobile device, contains a variety of resources and tools, including the Enrollee handbook and the find-a-provider tool. The portal also promotes health, wellness and services to our Enrollees. They can access information and check eligibility, authorization status, claim status, order status, update personal information, change providers and locate pharmacy information all on the portal. **In 2019, WellCare of Kentucky's public website homepage (Wellcare.com/kentucky) received 178,541 unique views.** Our **Mobile App** delivers focused, prioritized services to address open care needs in a way that Enrollees can understand. The Enrollee's PCP phone number is delivered with the care need so the Enrollee can call their PCP directly to schedule an appointment. If an Enrollee has already scheduled an appointment through our Enrollee Services team, we send a reminder through the mobile app. Due to our proactive approach and updated functionality, **in 2019 for Kentucky Medicaid Enrollees, WellCare experienced a year-over-year increase of 135.3% in downloads of the mobile app**. The top features used in 2019 were Find A Provider, Messages, and Enrollee ID card. We expect continued adoption by Enrollees in 2020.
  Preventive Service Outreach (PSO): This outbound Enrollee activation and calling program is informed by advanced analytics, based on open care needs and guided by behavioral analytics of how to best engage Enrollees. By engaging Enrollees across channels, we remove barriers to care by providing appropriate education and assistance with scheduling provider appointments, all while positively impacting the Enrollee experience and HEDIS outcomes. **In 2019, the PSO program contacted and educated nearly 67,000 People of Kentucky on important services including breast cancer screening, lead screenings, and well visits, scheduling more than 4,600 unique appointments.**
- *Enrollee Texting Program:* The program increases Enrollee engagement by conducting outreach through short message service (SMS) or text messaging. Enrollees and parents of Enrollees ages 3-20 receive messages reminding them to schedule services including well visits and medication reminders. Follow-up reminders are sent for Enrollees who need ongoing care needs addressed. Enrollees can contact us for assistance with scheduling appointments based on the texting outreach. To date, WellCare has launched nearly 1,000,000 text messages enterprise-wide since our texting campaign inception in February 2019.
- *Inbound Care Needs Program:* We are leveraging the Quality Stratification Value to prioritize care needs based on the clinical complexity and DMS' priorities in achieving better health outcomes.

- *Interactive IVR:* Our interactive IVR requires an Enrollee to verify HIPAA requirements in order to hear a targeted message regarding the care need that our analytics has identified as the most important for the Enrollee. After the Enrollee listens to the recording, they have an option to connect with a live agent to assist them with scheduling a provider appointment.
- *IVR Blast:* Our IVR blast is a one-way message recorded by WellCare's Chief Medical Officer, Dr. Leenay. The intent of the message is to be a "soft" touch for the Enrollee that we believe needs a gentle reminder to visit their provider.

Medication Adherence Program: We ensure medication adherence for conditions including diabetes, asthma and COPD through in-person Enrollee and provider education from WellCare of Kentucky staff and local community pharmacists, door-to-door medication delivery, packaging that helps with dosing, scheduling medications, and reminder mailings to providers and Enrollees.

Disease Management and Population Health Program: We offer comprehensive disease management and population health programs that help Enrollees control their chronic diseases including Asthma, Coronary Artery Disease (CAD), Congestive Heart Failure (CHF), Diabetes, Hypertension and Chronic Obstructive Pulmonary Disease (COPD) through Enrollee mailings, text messaging and telephonic outreach to Enrollees to remind them on how to manage their chronic illness.

Unable to Contact (UTC) Reach Program: Our newly redesigned UTC program, Reach, helps us locate Enrollees who have been hard to find due to missing contact information. Using a data warehouse that combines information from multiple sources including WellCare systems, State files, Community Connections Help Team data sources, and information from public records and external vendors, our dedicated associates outreach to Enrollees on the UTC list. Once engaged, Enrollees are connected with network providers and services in order to improve health outcomes and close care needs. In a three-month timespan, our Reach team successfully connected with nearly 6,000 UTC Enrollees, providing important services such as education, coordinating Enrollees with primary care providers, bridging Enrollees to our community connections resources, and helping complete the health risk assessment to better identify Enrollee needs.

ENGAGING FAMILY MEMBERS AND PEER SUPPORT

WellCare is currently developing Family and Peer Support programs for 2020. We recognize that an effective method for Enrollee engagement is to involve the family (as appropriate) and a peer support network that offers encouragement and fosters accountability. Currently, Quality and Clinical systems show care gaps for the entire family of an Enrollee so that our team can identify opportunities to engage the entire family in closing care gaps. Our strategy for the future focuses on engaging families in goal setting and creating a Family-Centered Care environment that encourages behavior change for the entire Family, not just one Enrollee at a time. In addition, we intend to build out a peer support program that enables our outbound staff, many of whom are former Medicaid Enrollees, to provide peer support for Enrollees who are anxious, confused or unmotivated to get the care they need. This program will be jointly designed by our providers and our community stakeholders to ensure its effectiveness.

Our model will center on the Person and Family Engagement Cycle of Sharing Preferences and Values, Co-Creating goals, Promoting Person and Family Engagement Best Practices, Encouragement and Self-Management and Promoting Informed Decision Making.

FOCUSED PROGRAM/RESOURCE DEVELOPMENT

LifeCare Virtual Hospitalization: In order to address a care need for adolescents who were not necessarily needing hospitalization but are challenging to manage at home, WellCare of Kentucky collaborated with LifeCare in March 2019 to bring virtual hospitalization to the state. Initial clinical outcomes indicate an increase in home stability and a decrease in inpatient admissions and polypharmacy.

Community Paramedicine: One innovative approach to enhancing the health and well-being of Enrollees and improving health outcomes is Community Paramedicine. Community Paramedicine extends access to care by expanding the role of Emergency Medical Service (EMS) personnel to fill gaps in primary care availability and mitigate transportation barriers by providing home-based care. Paramedicine providers can facilitate a number of services including assessments for vital signs, medication compliance and blood pressure readings; prevention services such as immunizations and in-home fall prevention; and primary treatment such as wound care and medication administration, as well as referral to medical and social services. With the recent passing of House Bill 106, WellCare is excited to support the expansion of Paramedicine programs that further extend access to care in underserved areas of Kentucky.

Healthy Food Assistance through FARMACY: From 2015 to 2017, WellCare of Kentucky partnered with the Community Farm Alliance (CFA) in Kentucky to sponsor farmer's markets across the state with the objective of providing low-income families access to healthy local produce. We support communities with a Double Dollars program that doubles the buying power of program participants. In Eastern Kentucky, 462 households received FARMACY incentives which included 543 qualified recipients with a recorded weight loss of a cumulative 280.54 pounds and an 84.45 point decrease in BMI. In 2017, 228 WellCare Enrollees used the FARMACY program and received 895 vouchers. Community Farm Alliance has written, "To say the least, WellCare has been a creative, out-of-the-box partner with Community Farm Alliance in addressing nutrition-related health issues."

Women's Health Project: In 2019, WellCare of Kentucky developed this outreach program designed to improve women's health outcomes related to breast cancer, cervical cancer, chlamydia and postpartum complications through regular screenings. Interventions include: dedicated QI nurse for women's health, dedicated care needs coordinators to make outreach calls to Enrollees post-delivery for postpartum visit education/reminders; outreach calls for breast cancer screening reminders/education; coordination with mobile mammography units where available; care needs reports to providers indicating those Enrollees with gaps in recommended preventive care such as cervical cancer screenings, mammography and chlamydia; QPA face-to-face visits with OB/GYN providers for information sharing and education; distribution of developed chlamydia educational flyer to providers.

Maternity Care Program: The WellCare Baby Steps program improves maternal health and birth outcomes through the delivery of services by multidisciplinary, integrated care coordination

and care management services team for all pregnant Enrollees, regardless of risk level, from conception and up to a minimum of 60-days postpartum. The program covers a variety of services to manage Enrollees who are pregnant and deliver positive birth outcomes for both the mother and the infant, including a reduction in preterm births, NICU admissions, NAS newborns, and Caesarian section (C-section) rates. Program interventions include Enrollee education and incentives, OB provider education and incentives through our value-based payment arrangements, BH integration, and partnerships with community organizations including WIC and Hands.

Progeny NICU Program: We have partnered with Progeny Health to improve the health outcomes of our NICU population in Kentucky to assist in maintaining exceptional quality for our tiniest Enrollees. Progeny assists in streamlining the care plan and service provision for NICU populations while also providing support through the first year of life. Our experience with our Progeny partnership has seen a positive trend in readmissions and reduction in average length of stay.

First Year of Life Program: Designed for all infants including those discharged from a Neonatal Intensive Care Unit or other Specialty Care Unit (collectively, "NICU") or a well-baby nursery, the First Year of Life program includes care giver education and support for the welfare of the child, promotion of the recommended schedule of provider visits, immunizations and screenings through 15-months of age (EPSDT, CHCUP, HEDIS), and care management of the infant with on-going medical and care management needs.

EPSDT Program and Resources: Our EPSDT program includes local, dedicated staff focused on ensuring children receive early and periodic screenings, diagnosis, and treatment. Interventions target children and their caregivers, providers, and community partners and include mailings and phone calls reminding Enrollees of upcoming screenings. Our EPSDT Screening Ratio has increased five percentage points from 2017-2019 and our Participant Ratio has increased four percentage points in the same timeframe. We have also developed a comprehensive provider resource as a result of a post-audit provider report card indicating a lack of knowledge with respect to EPSDT-related care. The EPSDT Provider Educational and Resource Packet is available on our website and includes a variety of EPSDT-related information including screening schedule, role of the provider, expanded services, visit reporting and recommendations for preventive pediatric healthcare periodicity schedule, Bright Futures Guidelines for Health Supervision of Infants, Children and Adolescents, exam forms, immunization recommendations, depression screening tools, additional risk assessment tools, medical record review tools, quick tips and coding, billing and screening flyers. This resource packet is also available to QPAs to print for targeted provider education.

Social Supports and Nutrition Counseling: WellCare of Kentucky partners with the Marshall County Health Department to provide Team Ultra programming for school-aged children in the western part of the state. Through Team Ultra, children have access to this social support along with nutrition counseling and physical activity.

Reducing Potentially Preventable Hospitalizations and ED Visits for Diabetes Project: This program was designed in 2019 to improve the rates for recommended screenings for diabetes to prevent potentially preventable hospitalizations and ED visits for short-term complications

related to diabetes. Interventions include a dedicated QI nurse for diabetes; dedicated care needs coordinator to make outreach calls for recommended screenings; outreach calls for education/reminders; care needs reports to providers for Enrollees with gaps in recommended preventive care such as HbA1c, nephropathy, eye exams and blood pressure; QPA face-to-face visits with providers for information sharing and education; distribution of developed diabetes and blood pressure education flyers to providers.

Good Measures Diabetes Program: Good Measures programs are designed to empower WellCare of Kentucky Enrollees to better manage their health through nutrition. We focus on bite-sized, highly personalized goals based on an Enrollee's preference, location, health status, lifestyle, budget, and access to food. We work closely with Enrollees to set realistic bite-sized goals that build confidence and self-reliance so that Enrollees can make lasting behavior changes that deliver results. As Enrollees begin to understand how food impacts their health and as they begin to feel better, sustainable behavior change occurs. This process results in improved health outcomes, Enrollee satisfaction and Enrollee empowerment. With a deep recognition of social determinants of health, our health coaches have fingertip access to local, client-based resources to enhance their support of each individual. From knowing the local grocery stores and popular fast food chains, to understanding health plan case management resources, our coaches become a centralized hub for Enrollee support. They often help participants find local food pantries, using resources such as WellCare's Community Care Help Line. Since Good Measures starts with food, our coaches are often able to engage with participants more deeply and more frequently than other clinicians. In many cases, they are the first people to learn about the struggles someone is having with transportation, prescription refills, or childcare. Coaches also help participants strategize on how to extend a grocery budget and avoid food waste.

ACT for Opioids Program: In order to address the opioid epidemic in Kentucky, we have partnered with the Cabinet for Health and Family Services to develop the ACT for Opioids Program. Our programs, including specialized care coordination initiatives, tailor to the needs of special populations, such as high-risk pregnant Enrollees at risk of Neonatal Abstinence Syndrome (NAS). New initiatives for 2019 include predictive analytics for the early identification of Enrollees at-risk of opioid use disorder (OUD) based on the industry standard 3-3-3+ED protocol; a Low Back Pain Management Program to support prevention and treatment protocols for the leading cause of opioid use; expanded One Provider-One Pharmacy Program referral to integrated care coordination; improved access to MAT providers; partnership with the Kentucky Court Appointed Special Advocates (CASA) Network to help children in foster care and their families; expanded use of the Screening, Brief, Intervention, and Referral to Treatment (SBIRT) model, which guides providers to rapidly assess the severity of OUD, engage in immediate feedback, and refer the Enrollee to a local treatment program; and the cCBT platform known as MyStrength, which provides Enrollees with interactive clinical programs and self-management tools empowering them to reduce the self-destructive cognitive and behavioral patterns caused by OUD.

Behavioral Health Resource Packet: Developed by WellCare of Kentucky to educate BH providers on HEDIS measures, this comprehensive resource is available on our website and includes a variety of Severe Mental Illness (SMI)-related information that providers can access

or QPAs can print for targeted provider education, including SMI principles of practice, physical disease and SMI, barriers to the recognition and management of physical diseases in adult Enrollees with SMI, risk factors and screening recommendations for SMI, monitoring adult Enrollees with SMI, metabolic and cardiovascular health issues, management issues in pregnancy and lactation, SMI and women of child-bearing age and infants.

High Touch, Visible Partnerships: The key to pulling all the pieces together is being visible with the providers, Enrollees and stakeholders, listening to their feedback, and developing a high-touch program that incorporates these improvements. Through our experience in Kentucky, we have grown to know the importance of relationships with our Enrollees, providers and stakeholders and we choose to administer our quality program in a relationship model, rather than simply pushing data and information out and expecting a material change. We start with our integrated field care management and supplement our approach with a provider relations team and a quality team that invest significant hours with Enrollees and providers educating, listening, and providing solutions that work.

Provider Relations Visits: Our local PR Reps make routine visits to our providers' offices to help them improve performance through VBP arrangements, which in turn improves Enrollees health outcomes.

Medical Director Visits: WellCare of Kentucky Medical Directors visit larger provider groups to discuss provider performance in shared savings/shared risk arrangements and improvement in topics including ED utilization and total cost of care that affect Enrollee health outcomes.

Quality Practice Advisor Visits: Our local QPAs accompany PR reps on their visits to discuss performance in P4Q arrangements, providing care needs reports and educating providers on HEDIS measures, the importance of closing care needs and completing appointment agendas, and proper coding and referral procedures. QPAs also track and trend quality improvement through multiple year comparisons as well as year-over-year comparisons, allowing providers to see how their efforts are improving Enrollee health outcomes.

Joint Operating Committees (JOCs): For our large provider groups and hospital, WellCare of Kentucky holds monthly JOCs with formal agendas to review comprehensive performance metrics and mutually identify opportunities to improve the overall success of the partnership, including performance under VBP arrangements.

Provider Summits: Each year WellCare of Kentucky hosts quarterly regional provider summits across the Commonwealth. Summit agendas include general presentations from leadership that impact all providers and breakout sessions on individual topics such as performance in VBP arrangements and how that affects Enrollee health outcomes**.**

Provider Advisory Panel: WellCare of Kentucky has created a Provider Advisory Panel comprising providers from all eight regions, organized and facilitated by Providers Relations and held quarterly. The Provider Advisory Panel serves as a consulting resource to WellCare of Kentucky in policy and operational matters, and further strengthens the bridge between WellCare of Kentucky and the provider community. We identify potential provider panel members from recommendations by the respective region's Provider Relations team. The panel members consist of PCPs and specialists who are independent providers not connected to hospitals. We

will use our Provider Advisory Panel to obtain input on a wide number of topics affecting our providers including administrative efficiencies, clinical policies, and operational issues. Examples of committee discussion items include health plan and provider experiences, coordination of care, quality initiatives, provider communication needs and educational opportunities, the integrated care model, operations, and access to care.

We perform panel audits using 24-month retrospective claims to ensure Enrollees are aligned to the providers from whom they are receiving healthcare services. This ensures accurate care needs reporting, appropriate P4Q payment and proper coordination of care. If a panel audit identifies issues with assignments, the panel can be adjusted through quarterly PCP reassignment based on the findings. We also perform pediatric panel audits to ensure Enrollees who have aged out have been reassigned to an appropriate PCP.

Provider Advisory Committee at Work

As a result of provider engagement on the Provider Advisory Committee, our affiliate health plan in Georgia implemented a partnership with the largest community mental health center on a new program to provide Omega 3 to patients with new onset psychosis due to the strong evidence this will improve outcomes and prolong the time to the next psychotic episode.

iii. Innovative strategies and enhanced services, if any, that the Vendor proposes to implement to enhance the health and well-being of Enrollees and to improve health outcomes, including examples of successes with similar Medicaid populations.

INNOVATIVE STRATEGIES AND ENHANCED SERVICES

WellCare of Kentucky has developed the following innovative strategies and enhanced services aimed at improving health outcomes for People of Kentucky:

Value-Added Enhanced Services: We offer value-added enhanced services to Enrollees including a GED program, sports physicals, Boy Scout and Girl Scout annual memberships, home delivered meals and free cell phones. Our **Healthy Rewards Program** is another value-added service that assists Enrollees in closing care needs. Through this program, Enrollees receive reloadable debit cards or gift cards for stores to purchase needed personal, home, baby, and family-related items that promote practicing healthy behaviors such as visiting their PCP. **In 2019, WellCare of Kentucky closed 43,738 care needs using our Healthy Rewards Program with $1,018,155 distributed to Enrollees in the form of gift cards**.

Social Determinants of Health Support: Our Community Connections model matches Enrollees to social safety net services, family caregiver support and other formal and informal supports, to help Enrollees address their unmet resource needs. We identify needs based on resources accessed through the model, proactively designing programs to close care needs. **In 2019, WellCare of Kentucky completed 1,409 community activities that reached more than 37,500 community stakeholders**. As part of our Community Connections program, we offer employment assistance through WellCare Works. **WellCare Works Employment Tools** are designed to help Enrollees jump-start their job search, secure their GED or fill a digital gap for

Enrollees who might not be able to use physical job sites. **WellCare Works Volunteer Opportunities** have been identified by our Local Community Engagement team. **This includes more than 500 unique activities and 81,000 volunteer opportunities available between June 2019 and June 2020**. **Local Community Engagement Partners** work directly with WellCare of Kentucky Enrollees every day and are our "feet on the street" for WellCare Works. **Since January 2019, 725 community partners have been trained and 13 partnerships across the Commonwealth have been built to help connect Enrollees to WellCare Works. In 2019, WellCare Works has been accessed by over 850 WellCare of Kentucky Enrollees across 109 Kentucky counties** To address everyday issues faced by homeless people in Kentucky and meet them where they are located**,** WellCare of Kentucky has been in partnership with **HOTEL Inc.** since 2016. HOTEL Inc.'s successful **Homeless Outreach Program** and the Street Medicine Program provide individuals with pathways to self-sufficiency such as stable housing, quality food, education and employment assistance, financial assistance, regular access to doctors, case management, and transportation for medical and non-medical needs. In 2017, HOTEL INC opened their first respite home program, with funding assistance from WellCare of Kentucky. The home is used for bridging the gap of hospital discharge, preventing readmissions and reducing ED visits. HOTEL INC is now a mentor to other organizations in Kentucky interested in implementing this successful model. **Between August 2016 and August 2019, HOTEL INC provided WellCare of Kentucky Enrollees with more than 16,800 services to address housing instability and other SDOH needs.** The top services received were homeless service, food pantry, free or reduced cost health care, housing, education and employment assistance and transportation assistance. In addition, the program resulted in a **10.5% reduction in avoidable ER visits and an 18.4% reduction in flu-related visits.**

Chronic Disease Prevention through Microclinics: Working with Microclinic International (MCI), WellCare of Kentucky sponsored a program with the objective of enabling local organizations, such as the Red Bird Clinic and the Barren River District Health Department (DHD) in Kentucky, with tools and resources to stop the spread of chronic diseases. With a strong presence in the state, MCI reports that 95% of participants improved at least one indicator of chronic disease when focusing on the methodology of the program, which includes sustainable lifestyle choices, such as cooking healthy meals and physical activity. Recruiting 16 participants for the program, many of whom were WellCare of Kentucky Enrollees, **Red Bird Clinic maintained a 93.75% retention rate**, and although working amidst several obstacles, including a natural disaster, **the Barren River DHD completed four distinct MCI program launches enrolling nearly 50 participants.** Through weekly online surveys, we believe participants were able to make lasting behavioral changes to stop the trend of chronic diseases.

INNOVATIVE STRATEGIES AND ENHANCED SERVICES IN OTHER WELLCARE STATES

In addition to the innovative strategies above, WellCare is developing the following strategies in other states and is considering implementing them in Kentucky:

Clean Out Your Pantry Diabetes Program: This program was developed to address the prevalence of pre-diabetes and diabetes throughout the U.S., and to encourage Enrollees to adopt a healthy diet, active lifestyle and weight management. Health Coaches contact Enrollees identified through claims (lab data), care management programs and provider referral

telephonically or through in-person visits, educating them on the program and explaining why they were selected. For interested Enrollees, an intake assessment is completed, followed by a follow-up in-person visit to the Enrollee's residence to assist the Enrollee in removing unhealthy groceries from the residence.

School-Based Screenings: Sponsorship/support for a part-time school nurse during the start of the school session to provide additional screenings and services to children plus a connection to the school's EHR in accordance with the expansion of nurse licensure and Medicaid billing capabilities.

EXAMPLES OF SUCCESSES WITH SIMILAR MEDICAID POPULATIONS

Pacify Telehealth Lactation and Nutritional Counseling Program: In 2017, our affiliate health plan in Arizona introduced Pacify for new moms, in response to feedback from new moms who expressed challenges following hospital discharge. The program uses a mobile application to connect new moms to a lactation consultant or dietician through video chat for real-time 24/7 assistance. At the end of each interaction, Enrollees are asked to provide feedback about their experience. **Overall satisfaction with the program is extremely high, 4.9 out of 5.** We will enhance the program for Kentucky, including a direct link to our 24/7 nurse line, HRA data capture capabilities, video capabilities with the BabySteps care team, maternity education provided via articles and video.

Mobile Preventive Care: Our affiliate health plan in Florida "brings the care to our Enrollees" with mobile dental, vision and mammography programs. Mobile partners visit PCP offices and Enrollee homes to administer these potentially life-saving examinations for Enrollees who may not otherwise receive them. As a result of these programs, 1,391 Enrollees received retinal eye exams, 625 Enrollees received mammograms and 113 Enrollees received dental screenings since the program's inception in 2016.

iv. Internal tools and technology infrastructure the Vendor will use to support improvements in health outcomes and to identify, analyze, track, and improve quality and performance metrics as well as the quality of services provided by Network Providers at the regional and statewide levels.

Our Analytics and Reporting Program is a rigorous organizational structure with sophisticated internal tools and a technology infrastructure that supports our QI program measurement and improvement activities. Our infrastructure and tools enable our leadership and staff to support improvements in health outcomes and to identify, analyze, track and improve quality and performance metrics as well as the quality of services provided by providers. Our data and infrastructure are designed to stratify and report quality measures at a regional level and across provider types and Enrollee populations. We have recently **improved our quality reporting** capabilities to include more customized provider reports (illustrated in **Figure C.9-3 and Figure C.9-4**) and tools with the ability to:

- Provide actionable data, including reason for non-compliance with A1c Control
- Customize reporting based on specific measure sets or specific data elements

- View Enrollees before they are officially counted in the measure population, such as new discharges for Mental health based on authorizations and new babies that need EPSDT, immunization and lead screenings
- View a holistic view of a dual Enrollee, including care needs, campaigns and activities across Medicare and Medicaid
- Create a task at household, provider or Enrollee level
- Act on future measures such as new discharges, immunizations and well-visits
- View a holistic view of an Enrollee based on unique person identification
- Maintain and view prior activities and campaigns when an Enrollee changes ids
- Assign an associate to an Enrollee and create on-going tasks
- Create and assign tasks based on data triggers.

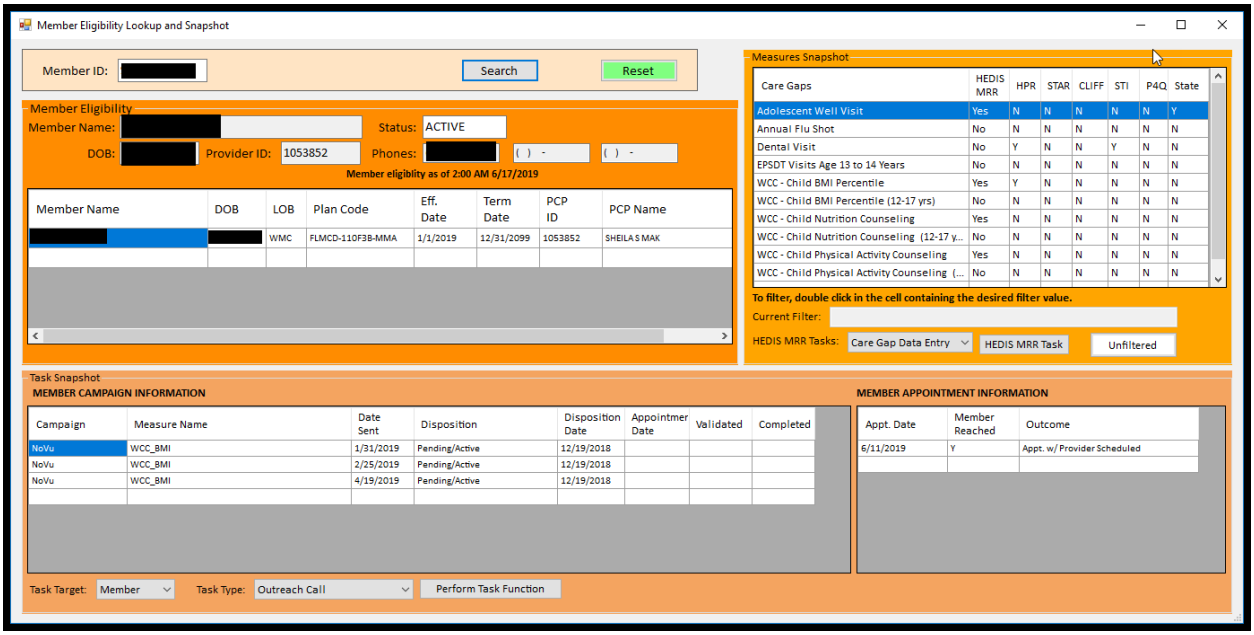

Figure C.9-3 Enrollee Eligibility Lookup and Snapshot

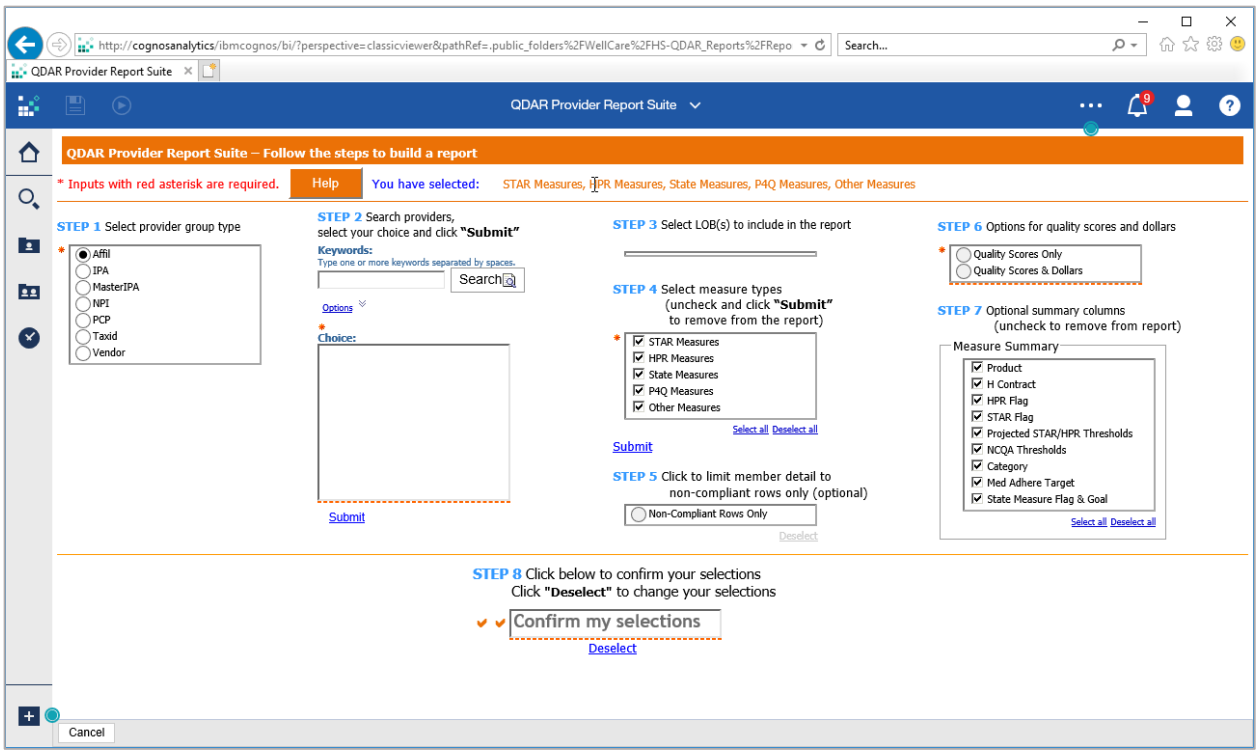

Figure C.9-4 Provider Report Suite Dashboard

In addition to these new capabilities, we use the following internal tools and technology infrastructure to support improvements in health outcomes and to identify, analyze, track, and improve quality and performance metrics:

Quality Performance Metrics Engine (QPME): Our QPME incorporates clinical and administrative data including medical records, CAHPS, claims, complaints, appeals, grievances, encounters, authorizations, quality of care incidents, disease/care management documentation, pharmacy data, quality stratification value, unmet social needs data from administrative, hybrid and supplemental sources. This consolidation of data from otherwise disparate data sources enhances our reporting and allows us to assess the quality and appropriateness of care quickly and easily. Benefits of our QPME include 1) reduced administrative burden on providers, 2) prioritization of Enrollee care needs for providers, 3) precise identification of Enrollees' medical and non-medical needs, and 4) ability to drill down into specific practice, provider or Enrollee results, and 5) the ability to forecast year-end results by provider, by measure or overall. **The QPME displays this Enrollee-specific information for Quality and Care Management staff in our integrated Care Management system CareCentral's single Enrollee-360 view, known as Care Compass. This information is also displayed through CAREpath for all Enrollee-facing staff including Enrollee Services and Community Connections Line representatives, allowing them to see the most critical care needs in order of importance.** For example, issues related to asthma or diabetes are prioritized over BMI.

As part of our QPME, our Business Technical Analyst (BTA) uses our **best in class software including Tableau, Cognos, and SAS**, which allow quick access to care needs, to produce a

variety of reports that our QPAs and PR Reps share with providers to assist them in improving health outcomes. These reports are listed in detail in Section 9.a.v. below.

Electronic Medical Records (eMR): Our eMR flat file transfer process detailed earlier, enables Kentucky providers to submit eMRs as a readily accessible format. Our teams will process the data to extract care needs information to close open care needs and update provider and Enrollee profiles. We have recently improved our eMR process to include a dedicated Quality and eMR team to help set up connections and we are now accepting appointment agendas in formats from other plans for ease of transition.

Clinical Data Capture Process: Our advanced analytic capabilities allow us to expand our eMR flat file process to include incorporating "as-is" files for select providers. This process enables us to expand the data capture and include providers who may lack the technical capabilities but are willing to collaborate in flexible solutions.

Geographic Care Needs Heat Maps: Heat Maps identify regional, county, and zip code level variations in Quality performance based on our goals and measures. Using our Heat Maps, our QI team analyzes the data to determine geographic hot spots of care needs while also tracking and trending geographic disparity data across the state, individual regions and zip codes by

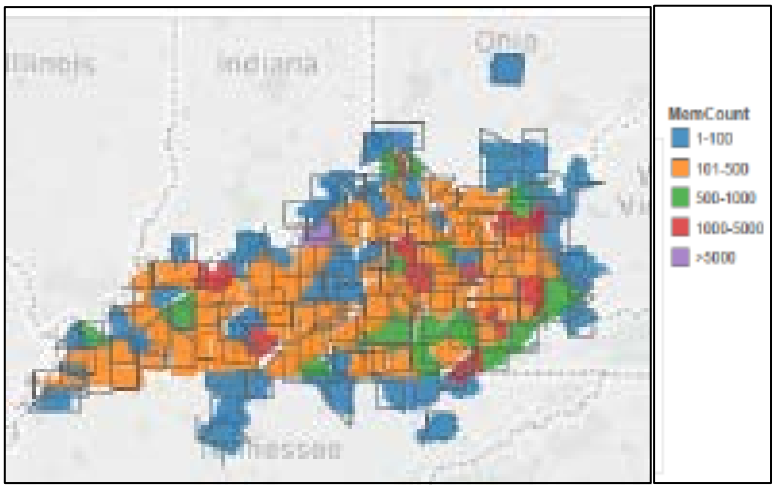

Figure C.9-5 Kentucky Geographic Care Needs Heat Map Report

provider. Additional analysis identifies if the geographic disparities are tied to population trends of race, ethnicity, gender, and language spoken which, in turn refines our PDSA cycles. Our team creates tailored strategies with our provider partners to address the needs of individual communities and populations while continuously monitoring for improvement as well as new areas of need. For example, in Kentucky we identified geographic regions in Jefferson County with a high number of Enrollees requiring mammography screenings. To address this, we partnered with the University of Louisville Kentucky Cancer Programs James Graham Brown Cancer Center to schedule appointments for Enrollees to attend their mobile mammogram screening events in 2017 and 2018. As a result, **nearly 14% of identified eligible Enrollees received mammograms through the program. Figure C.9-5** Kentucky Geographic Care Needs Heat Map displays the following information including providing meaningful insight into health disparities across the state and within regions:

- *Top 10 County Non-Complaint Member Count:* Details counties with the highest rate of open care needs which drives QPA and PCA assignments and focuses initiatives
- *Top PCP Non-Compliant Member County by County:* Details PCPs who have the highest rate of open care needs based on the membership ratio which provides refined focus for QPAs and PCAs in their partnership
- *Top 10 Zip Codes Non-Compliant Member Count:* Details which zip codes have the highest rate of open care needs driving targeted field outreach and quality initiatives
- *Top 10 PCP Non-Compliant Member Count by Zip Code:* Details a deeper dive into zip codes with high rates of open care needs by highlighting individual providers with the highest rate in a particular zip code.

Episode Provider Profiling Tool: This new tool shows adherence to clinical practice guidelines for specialists such as recommending physical therapy and cortisone shots prior to surgery for back pain and not over-testing for cardiology issues.

"Cliff" Measure Reporting: We include reporting for measures that we consider "cliff" measures, which means they have a definitive deadline based on age, diagnosis, or follow-up post-service in order to properly address the care need. An example includes our ability to include measures such as lead screening, immunizations, medication adherence, FUH, FUA, FUM in our provider profiling that are reported far in advance of the deadline for compliance with the care needs. This allows providers to have the most advanced notice and information to address the Enrollee needs.

Disparity Reporting: Using the power of our proprietary QPME and the statistical modeling performed by our team of staff statisticians, we analyze HEDIS measures by geography, race, ethnicity, and gender to precisely determine where to target our efforts and resources. We recently looked at disparities among men and women as well as black, other and white races for a variety of measures for HEDIS Years 2016 and 2017 in Kentucky, which revealed the following positive results based on targeted interventions implemented upon report findings in **Table C.9-2**:

Table C.9-2 Kentucky Disparity Reporting Results 2016-2017

Measure	Interventions	Results
Comprehensive Diabetes Care (HEDIS CDC) (HBA1C Testing)	• Enrollee outreach on healthy living with diabetes, disease management program • PCA outreach to Enrollees to educate and schedule appointments • PSO outreach • Text reminders • Targeted UTC outreach	• Increase of 1.48% for black group • Statistically significant increase from 2.15% for other group • Increase from .82% for white group

Measure	Interventions	Results
Diabetes Monitoring for People with Diabetes and Schizophrenia (HEDIS SMD)	• Promotion of SMI CPG to providers • Distribution of BH toolkits to providers • Distribution of Enrollee education materials geared toward breaking SMI stigma • Closed diabetes-related care needs	• Increase of 11.9% for men • Increase of 5.3% for women
Follow-Up After Hospitalization for Mental Illness (HEDIS FUH) (Both rates)	• New Enrollee incentives for follow-up • Targeted caregiver and parent education to combat stigma of BH treatment • Provider education on appointment availability • Enhanced provider incentives for documenting services	• 7-Day Follow-Up: • Increase of 5.49% for black group
Racial Disparities in Chlamydia Screening in Women (HEDIS CHL)	• Cultural education for providers through QPAs • Cultural education for Enrollees through PCAs	• Increase of 1.65% for black group • Increase of 1.88% for white group

CareCentral System: Our care management platform supports extensive reporting that displays open and pending care needs, information on social determinants of health, leading process indicators for utilization management that include the percentage of reviews nurses send to physicians, and core provider/hospital utilization statistics including ED use. CareCentral will eventually help care managers prioritize care needs or identify Enrollees with missing information.

Behavioral Analytics: With Decision Point software, our QDAR team uses behavioral analytics to identify the most appropriate method for engaging with Enrollees based on their past behavior and their responsiveness to targeted campaigns and care provided.

Medicaid Dashboard to Identify Targeted Improvements: Our Medicaid Dashboard provides individual measure-level performance detail, and year-to-date trended performance, peer comparison to industry performance, and forecasted final performance for future planning.

HEDIS Provider Performance Profiles: These reports are generated at least monthly with updated Quality performance data and show individual and practice level performance on each metrics, including Enrollee level detail, as well as peer comparisons to the overall performance in Kentucky, in addition to individual provider performance compared to their practice overall. Our reports detail specific care needs information including medication adherence, upcoming immunizations due, and detailed information for behavioral health coordination and chronic

condition QI. These reports are presented to providers and their staff by our QPAs. They provide detailed performance education from which detailed individualized action plans are built in conjunction with the provider and his or her staff. An example of this report is provided as **Figure C.9-6.**

Figure C.9-6 HEDIS Provider Performance Profile

v. Methods to ensure a data-driven, outcomes-based continuous quality improvement process, including an overview of data that is shared with providers to support their understanding of progress in achieving improved outcomes.

We ensure a data-driven, outcomes-based continuous quality improvement process through the Plan-Do-Study-Act (PDSA) cycle, illustrated in **Figure C.9-7** PDSA Model**.** Each quality or process improvement effort is measured on an interval unique to that focus and as a result have different timeframes for rapid cycles of improvement. For rapid cycle, the focus is on small-scale or pilots of systematic changes in order to allow for quick implementation and review of performance indicators to determine rapid improvement. Using the measurements and benchmarks we assess if the rapid cycle change has resulted in positive, negative, or neutral impact. At this point, we reevaluate our changes to determine if they need to be altered and what changes can be made quickly to ensure continual rapid cycle analysis. The four stages of the PDSA rapid-cycle quality improvement strategy include the following:

- *Plan:* Identify an opportunity to improve a change or test of how something works
- *Do:* Carry out the plan on a small number of Enrollees; the test period may be short for small PDSA cycles
- *Study:* Examine the results
- *Act:* Use the results to make a decision, incorporate changes, and establish future quality improvement plans.

Figure C.9-7 PDSA Model

AN OVERVIEW OF DATA THAT IS SHARED WITH PROVIDERS TO SUPPORT THEIR UNDERSTANDING OF PROGRESS IN ACHIEVING IMPROVED OUTCOMES

PDSA in Action

When Primary Care Centers of Eastern Kentucky was concerned about having to submit HbA1c results manually, we advised them to bill the CPT II code through their EHR. When we learned that their EHR dropped the CPT II code because there was no reimbursement for it, and that this was occurring with multiple providers, we established a reimbursement of one penny. Now Primary Care Centers and a host of other providers can now bill CPT II codes without expensive changes to their EHR.

As part of the PDSA cycle, our local Kentucky-based business technical analyst (BTA), in collaboration with our corporate quality data analytics and reporting teams, uses our proprietary QPME to create detailed reports that our Quality and Provider Relations associates share with providers to help them understand their progress in achieving quality outcomes. Because our BTA is local and accessible to our entire Kentucky team, we have the ability to provide customized ad-hoc reporting to providers as needed in addition to monthly and quarterly reports listed in **Table C.9-3** below (and provided as Table C.9-1). In addition to these reports, our Quality and Provider Relations teams share information on high risk Enrollees provided by our Care Management team using Care Compass to perform our **ID/Stratification process**. This information includes a compliance index of how adherent Enrollees are to pharmacy and other preventive treatments.

Table C.9-3 Quality Reports for Providers

Report	Description and Use
Heat Maps	Identify regional, county, and zip code level variations in quality performance based on QI goals and measures. QPAs present these to providers during in-person visits to educate and help improve quality performance.
HEDIS Provider Performance Profiles	Generated at least monthly to show up-to-date individual practice level performance. Using profile reports, we can identify under-utilization of services for each Enrollee who has an outstanding care need. QPAs present these to providers during in-person visits to educate and help improve quality performance.
Care Needs Reports	These show all open care needs for Enrollees and are provided to all Enrollee and provider-facing staff in order to help close care needs. QPAs present these to providers during in-person visits to educate and help improve quality performance.
Behavioral Health Care Needs Reports	Unique to WellCare of Kentucky, these show all open BH-related care needs and are provided to CMHC's and five inpatient hospitals that are under the BH P4Q incentive program in order to help close BH-related care needs. BH QPAs present these to providers during in-person visits to educate and help improve quality performance.
P4Q Scorecard Reports	These interactive reports include web portal and drill down capabilities, affording providers' insight into actual and potential incentive earnings based on individual Enrollees and services. QPAs present these to providers during in-person visits to educate and help improve quality performance.
Appointment Agendas	These allow our physician partners to understand, in a single report, everything that they need to address for each Enrollee during an appointment. Our tools also suggest other diagnoses inferred from other data sources that have not yet been confirmed. For example, for an Enrollee with Diabetes, a physician will receive an appointment agenda indicating Diabetes and a list of open care needs that need to be addressed such as for a quarterly HbA1C, blood pressure control, eye exams and nephropathy screening. We provide these forms annually at the beginning of the year to guide annual physicals and EPSDT exams. In addition, when a provider performs an eligibility check on an Enrollee, we auto-generate an appointment agenda and deliver it directly to the provider via the provider portal, secure FTP, custom feed, or fax. With certain

Report	Description and Use
	connected providers, we have the capability to automatically generate and send an appointment agenda upon notification that an Enrollee is present in the office.
Emergency Room (ER) High Utilizer Reports	This monthly report details Enrollees who had any visit to the ER, including date of service, diagnosis and service codes related to the visit, method of arrival, and also indicates if there is an existing relationship with the Enrollee's PCP. The report also details the running 12 months of all visits to identify underlying trends and high utilization of multiple ER facilities. We also detail the relationship of each PCP to the rate of ER visits for PCPs assigned to them. These reports are delivered to providers by QPAs and PR Reps.
Enrollees Without Visits Reports	These weekly reports display adult Enrollees who have not been seen by a PCP within 12 months and are delivered to providers by QPAs and PR Reps.

Improving Quality Through Provider Support

Lewis County Clinic has been working closely with QPA Ashley Miller to improve their Chlamydia screening process. The QPA identified during a quality meeting and discussing the Chlamydia care needs measure that the practices only screened via pap collection. Education was provided that urine testing is an available option to complete this service to the Enrollees. Although the clinic rate was high for completing this measure there was room for improvement as they were missing screening on females that were not having pap screenings completed. They are now working to complete these on the high risk population through a urine screen as well. In 2017 their rate was 63% and in 2018 it was up to 70%. We anticipate this will continue to go up as they continue to educate and implement the system we collaborated with them to implement. This need was addressed by meeting with the case managers for each location and continuing to schedule face to face meetings with the providers at each location.

b. Indicate if the Vendor has received NCQA accreditation for the Kentucky Medicaid market, and if not, the proposed timeline for achieving accreditation.

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 19.1 National Committee for Quality Assurance (NCQA) Accreditation of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Since WellCare of Kentucky became National Committee for Quality Assurance (NCQA) accredited in 2014, we **have improved our accreditation scores from 79.0 in 2015 to 85.7262 in 2018**, have maintained a **two-year Commendable NCQA accreditation status** and have the **highest NCQA quality ranking in the State Medicaid program at 3.5.** NCQA awards a status of

Commendable to organizations with well-established programs for service and clinical quality that meet rigorous requirements for consumer protection and quality improvement.

In order to achieve and maintain accreditation, WellCare's leadership has invested in national NCQA accreditation and Quality Assurance teams, both of which collaborate with the corporate organization and WellCare of Kentucky.

c. *Provide the Vendor's proposed use of the Quality Improvement Committee (QIC) to improve the Kentucky Medicaid managed care program.*

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 19.2 Quality Committees and Meetings of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in Attachment X Contract Compliance Matrix, provided electronically.

The Quality Improvement Committee (QIC) oversees the QAPI program and reports to the Board. Chaired by Kentucky Chief Medical Officer Dr. Howard Shaps, the QIC membership includes WellCare of Kentucky CEO William Jones as well as the following leaders: State Pharmacy Director, Field Health Services Director, Director, Quality Improvement, Quality Improvement Manager, Chief Operating Officer, Market Directors, Finance Director, Director of Network Development, Director of Regulatory Affairs, Manager of Regional Operations, Human Resources Manager, Director of Hospital Contracting, Manager of Foster Care, Adoption, and Guardianship, Appeals Supervisor, Provider Relations Manager, all QI staff and others as may be deemed appropriate by the QIC from time to time. WellCare Corporate Representation includes: Senior Director, Chief Medical Officer, Behavioral Health Clinical Operations and Practice Senior Director, Customer Service Director, Credentialing Director, Claims Director, Appeals and Grievances Senior Director, UM Director, UM Medical Director, Senior Director of Clinical Care Management, Complaints Manager, Disease Management Director, Enrollment Director, Quality Compliance and Accreditation Director, chairs of all QIC subcommittee and others as may be deemed appropriate by the QIC from time to time.

In order to improve the Kentucky Medicaid managed care program, the WellCare of Kentucky QIC provides oversight to the QAPI program and ensures issues that are a priority for the Commonwealth such as diabetes, opioids, tobacco cessation, colorectal cancer and behavioral health are incorporated into all aspects of our QAPI. The QIC meets quarterly, analyzing and evaluating the results of QM/QI activities, recommending policy decisions, ensuring that providers are involved in the QM/QI program, instituting needed action to address deficiencies, and ensuring that appropriate follow-up occurs. The QIC maintains records that document the QIC's activities, meeting minutes, findings, recommendations, actions, and results.

These records are sent to DMS in accordance with their schedule and are available for review upon DMS's request, are available during the EQRO review, and during the NCQA accreditation review, these documents are also reviewed for compliance.

For example, the new population health program information goes to QIC for review, feedback and approval. Feedback included population-specific recommendations to improve the program. Data and information is reviewed with trends and outliers identified and interventions initiated and/or revised as needed. This enables the Plan to continue to improve

services and meet the needs of Enrollees. The Plan regularly meets with DMS, sharing data and information, including recommendations from QIC, making suggestions for improving Kentucky's Medicaid managed care program. This collaborative exchange of information enables the program to continually improve the health status for Kentucky Medicaid Enrollees.

The QIC will continue to proactively address issues as they arise during QIC meetings, for example:

When the Quality team reported that Enrollees were refusing assistance with appointment scheduling, the QIC recommended they initiate weekly communication with the postpartum outreach vendor to receive agent feedback and discontinue outreach to hospitals in order to reduce Enrollee abrasion and increase contact rates. This resulted in 45 scheduled postpartum appointments in Q4 2017.

When the Quality team reported that agents were having difficulty addressing more than one care needs on an inbound care needs call because Enrollees were in a hurry, thought the questions were too personal or wanted to schedule their own appointments, the QIC recommended they review care needs training to stress the importance of offering care needs on every call as it affects HEDIS scores, partner with vendor to update care needs scripting, remove requirement for agents to use verbatim scripting, removed questions regarding OB/GYN, sexually transmitted diseases and CM transition for children under 17 years old. This resulted in 778 scheduled appointments in Q4 2017.

d. Provide the Vendor's proposed use of the Quality and Member Access Committee (QMAC) to improve the Kentucky Medicaid managed care program, including the following information:

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 19.2 Quality Committees and Meetings of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in Attachment X Contract Compliance Matrix, provided electronically.

The Quality and Member Access Committee (QMAC) is responsible for representing the interest of the Enrollee population to ensure adherence of the quality and safety of clinical care, quality of services, and access standards. The list of Enrollee participation is submitted to the Kentucky Department of Medicaid Services annually. Our experience in implementing recommendations from QMACs are evidenced in multiple markets with similar populations as well. Examples of changes put in place (by WellCare of Kentucky and our affiliates) as a result of a QMAC recommendation follow:

- WellCare of Kentucky: A WellCare of Kentucky Enrollee mentioned in a QMAC meeting that another Enrollee's provider stopped taking WellCare and that the Enrollee's only option became the emergency room. The Enrollee noted that there should be more communication on what emergency care is and what urgent care is. As a result, WellCare of Kentucky Provider Relations Representatives began presenting lists of Enrollees who frequent the emergency room to PCPs, discussing barriers and potentially referring

Enrollees to care management based on the findings. In addition, Care Managers began performing outreach to Enrollees frequenting the emergency room, connecting them with a PCP who can meet their needs.

- Illinois & New Jersey: The QMACs in both states completed a survey which focused on gaining specific feedback on what Enrollees liked and did not like about using the plans' websites. The feedback revealed areas of opportunity to improve navigation for participants on the website such as the design of the "Find a Provider" tool along with state identifiers. This feedback was incorporated during the redesign of the website which added multiple new features including a state identification process and a keyword search in the "Find a Provider" tool.
- Hawaii: Feedback from the QMAC revealed that cultural sensitivities and discomfort had made it difficult for many women to have their recommended screening mammograms. The committee participants' feedback was incorporated into the resulting "Mammo Me, Mammo You" program. Through culturally appropriate education and convenient access to screenings, the program proved successful and was introduced in other parts of the State. 'Ohana's HEDIS rate for Breast Cancer Screening subsequently increased by more than seven percentage points from year-to-year.

i. Proposed stakeholder representation

QMAC stakeholders include Enrollees/individuals from advocacy groups or the community who represent the interests of WellCare of Kentucky's Enrollee population from each of the regions of the state, with 51% Enrollee majority for voting members. Additional QMAC stakeholders include leadership from WellCare of Kentucky's Quality Improvement, Network Development, State Behavioral Health, Customer Service, Grievances and Appeals, Account Services and Community Advocacy departments.

Enrollees and Enrollee representatives are chosen to participate on the Kentucky QMAC through a nomination and selection process. Potential QMAC participants can be nominated by WellCare of Kentucky care managers, community advocates, Enrollee outreach personnel and community relations teams and providers. We provide education about the QMAC and encourage self-nomination. We communicate nomination information to our staff via our website, internal communications and community events.

QMAC applications can be obtained from our website, our Enrollee handbook, our Enrollee Services team, our care managers or community events and may submit it by mail, fax, and secure e-mail to a dedicated inbox for the QMAC. Applications will be reviewed by WellCare of Kentucky associates on the committee, and participants will be notified of selection by telephone or mail.

ii. Innovative strategies the Vendor will use to encourage Enrollee participation.

We value the bilateral communication that occurs when Enrollees are adequately represented on our QMAC, and because this is an opportunity for Enrollees to influence benefit and program design, we plan to implement the following innovative strategies to encourage Enrollee participation on the QMAC:

- Recruiting Enrollees who are completing their care needs to see what motivates them. This will help us develop best practices surrounding outreach to Enrollees with open care needs.
- Identifying Enrollees who have had two or more calls into Member Services in order to address the concerns such as lacking information about WellCare or their coverage.
- Developing a recruitment flyer in the new Enrollee Welcome Kit.
- Leveraging our Care Gap Coordinator program to encourage participation.
- Leveraging our Hazard Enrollee Call Center to encourage participation.
- Leveraging our newly developed Member Advisory Committee to encourage participation.
- Including articles in the Enrollee Newsletter regarding the benefits of QMAC participation.
- Leveraging our Community Connections partnerships in educating Enrollees on the QMAC and recruiting QMAC members.
- Providing a QMAC sign-up sheet at community events and distributing contact information for interested Enrollees to the Quality team for follow-up.
- Creating a text message alert to all heads of household for participation in the QMAC with a link to FAQs about the process along with a phone number to participate. This option could also be sent to a random selection of Enrollees within all regions to allow for diversity but also limiting from a very large number of participation.

In addition to these innovative strategies, we have implemented the following strategies in other states to encourage Enrollee participation on the QMAC. We will consider these strategies in Kentucky:

We consider experience and input from participants on their availability and preferred location when scheduling meetings. We invite Enrollees to our offices as well as locations in the community that are familiar and accessible, such as schools and or community centers. We find that holding meetings at locations in which Enrollees frequent, such as community centers or churches, is an effective method to gain participation and input. In addition, we occasionally meet informally with QMAC participants on an individual basis to listen and facilitate input. We also solicit assistance from Community Advocates in obtaining Enrollee participation in the QMAC. To address rural challenges such as geographic distance and physical limitations, we provide a toll-free line for Enrollees when possible to participate by teleconference, transportation and attendant care services for Enrollees. We provide interpretation and translation services and make accommodations for individuals with communication support needs. We are also considering providing free child care for future QMAC meetings and identifying community partners who can invite Enrollees to the meetings.

iii. Examples of successful strategies the Vendor has implemented to obtain active participation in similar committees.

Our affiliate health plans have implemented the following successful strategies to obtain active Enrollee participation on our member advisory committees, which we will implement in Kentucky:

- Our affiliate health plan in Florida has provided Enrollees a $50 gift card to compensate them for their time at the Consumer Advisory Board (CAB) meeting. Depending on the time of the meeting, we also provide either lunch or snacks, which we mention on our scheduling

calls. As a result of these efforts, **125 Enrollees participated in the CAB meetings from 2017 to 2019.**

- Our affiliate health plan in New Jersey provides lunch and private transportation to encourage attendance at Community Advisory Committee (CAC) meetings, and provides an upgraded lunch and ceremony at the last meeting of the year in December to recognize Enrollees who have committed to an entire year of CAC meetings. Through these efforts, **an average of two to five Enrollees have participated in each of the New Jersey CAC meetings.**

e. Provide a comprehensive description of the Vendor's proposed Quality Assessment and Performance Improvement (QAPI) Program that meets all requirements of this Contract.

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 19.3 Quality Assurance and Performance Improvement (QAPI) Program of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

WellCare of Kentucky's comprehensive Quality Assurance and Performance Improvement (QAPI) program focuses on health outcomes, health improvement and health-related social needs.

The purpose of the WellCare of Kentucky's QAPI is to improve the quality of care provided to Enrollees through the following methods:

- Objectively and systematically monitoring, evaluating and assessing the quality, appropriateness, accessibility, and availability of safe and equitable medical and behavioral health care and services
- Identifying and implementing strategies to improve the quality, appropriateness, and accessibility of Enrollee healthcare
- Facilitating organization-wide integration of quality management principles

Our QAPI integrates management activities such as Utilization Management, Risk Management, Enrollee Services, Grievances and Appeals, Population Health Management, Provider Credentialing, Ombudsman Services and Provider Services.

Our QAPI is guided by NCQA standards and guidelines, and reflects a continuous quality improvement (CQI) philosophy and mode of action. QI processes are analyzed and revised ensuring consistency across the Plan. This enables the processes to be efficient and effective. For process evaluation, the organization utilizes the CQI Plan-Do-Study-Act (PDSA) method. Under the PDSA approach, the Plan reviews, analyzes and compares multiple indicators of quality care and service against benchmarks of quality clinical care and service delivery. When variations are noted, root cause analysis, action plans and re-measurements occur to ensure progress toward established goals.

The QIC, QMAC and UMAC approve continuous quality improvement processes identified in the QI Program Description, Work Plan and Annual Evaluation, with interventions conducted to accomplish identified goals.

- **QI Program Description** describes the essential structure, resources and processes through which the QI Program is implemented; the QI Program scope as well as associated accountabilities and responsibilities. The program description also defines our quality objectives and guides how we continuously monitor and analyze key clinical, safety and service indicators
- **QI Work Plan** identifies specific Plan-wide activities and projects for the current year, and the performance measures used to evaluate their effectiveness throughout the year. Work Plan activities align with contractual, accreditation and/or regulatory requirements listing interventions and measurements to accomplish goals. The work plan is a living document that accompanies our QI program description and specifies QI activities, responsible parties, the timetable for implementation or completion, and quarterly activity summary and accomplishments
- **QI Evaluation** describes the level of success achieved in realizing set clinical and service performance goals and/or identifies opportunities for improvement, through quantitative and qualitative analysis. Prior years' findings are trended as appropriate. The annual evaluation describes the overall effectiveness of the QAPI program by including:
    - A description of ongoing and completed QI activities and projects
    - Trended clinical care and service performance measures, as well as, the desired outcomes and progress toward achieving goals
    - An analysis of accomplishments in the quality of clinical care and service
    - Current opportunities for and barriers to improvement, with recommendations for interventions

These documents also contain information on the following:

- Requirements set forth in DMS' Quality Strategy and in accordance with 42 C.F.R. 438.330, including:
    - Conducting and assessing PIPs
    - Collecting and submitting to DMS performance measurement data that enables DMS to calculate performance on required measures, including indication of progress on measures and related outcomes
    - Establishing mechanisms for detecting under-utilization and over-utilization of services'
    - Mechanisms to assess the quality and appropriateness of care furnished to Enrollees with special health care needs, as defined by the Commonwealth
- A QIC to provide oversight of QAPI functions
- Methods for seeking input from and working with stakeholders, such as DMS, Enrollees, Providers, Subcontractors, other contracted MCOs, other community resources and agencies, and advocates to actively improve the quality of care provided to Enrollees
- Methods for addressing Department mandated performance measures
- Integration of Behavioral Health indicators into the QAPI program and a systematic, ongoing process for monitoring, evaluating, and improving the quality and appropriateness of Behavioral Health Services provided to Enrollees

- Methods to collect data, and monitor and evaluate for improvements to physical health outcomes resulting from behavioral health integration into the Enrollee's overall care
- Use of a health information system to support collection, integration, tracking, analysis and reporting of data analytics specific to health care outcomes and performance metrics, including stratification of findings (e.g., by Region, provider type, Enrollee populations)
- Methods to evaluate data and findings reports to assess QAPI program activities, progress on objectives, identified areas for improvements and processes to implement changes, including methods for providing feedback or other information to Providers and Enrollees

f. For each of the below quality measures, demonstrate how the Vendor will work to make improvements in Kentucky's Medicaid population. Include discussion of strategies and interventions specific to each measure, partners that will be necessary to achieve improvement, data analytics, and anticipated timeframes for success in achieving improvements. Describe potential challenges the Vendor anticipates, if any, and how those will be addressed. Provide examples of successes in other state Medicaid programs, and how that success will be leveraged in the Kentucky Medicaid market.

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 19.4 Kentucky Healthcare Outcomes and Section 19.5 Reporting HEDIS® Performance Measures of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

We have extensive experience tracking and measuring HEDIS as well as non-HEDIS measures such as medication adherence for diabetes medications, tobacco cessation and colorectal cancer and are prepared to leverage this experience for the Kentucky Medicaid population. **Table C.9-4, Table C.9-5 and Table C.9-6** provides examples of our proposed strategies and interventions to achieve this for each of these measures:

i. Medication Adherence for Diabetes Medications

Table C.9-4 Medication Adherence for Diabetes Medications

MEDICATION ADHERENCE FOR DIABETES MEDICATIONS
With the prevalence of diabetes in Kentucky, and the more than 18,000 WellCare of Kentucky Enrollees currently prescribed diabetes medications, it is increasingly important to implement strategies aimed at improving diabetes-related health outcomes. Rates for this measure have increased from 71% in 2017 to 75% in 2018. Partners that will be necessary to achieve improvement include: CVS, EQUiPP, Good Measures. Data analytics required to achieve success for this measure include: Using our comprehensive QPME, we will include this measure in our standard data analytics reporting structure in order to align with the Commonwealth's priorities. As reflected below, our improvement plan includes near-term strategies we plan to implement in the early renewal periods as well as longer-term strategies, which are much more transformative but require longer-lead times for implementation given complexities, dependencies, and more.

Furthermore, our strategies and tactics are designed to be applied or customized to meet the needs and circumstances of providers, Enrollees, and regions in which we serve.

- Year 1 is the baseline year in which we determine the appropriate clinical and operational metrics to track for performance. Analyze disparity reports and develop interventions based on our findings. We anticipate a 5% improvement from the baseline in adherence to diabetes medications in the first year of the renewed contract.
- Year 2 we will begin to see results from the interventions with immediate impact as well as see the beginning of impact for short-term interventions and forecasting the long-term intervention impact with help of our Quality Statisticians. We anticipate a 7% improvement from the baseline in adherence to diabetes medications in the second ear of the renewed contract.
- Year 3 is our success year in which our programs come to full maturation and we are able to see the impact of all interventions. We anticipate a 10% improvement from the baseline in adherence to diabetes medications in the third year of the renewed contract.

Strategy: Enrollee education and outreach

In-person visits from care managers and local community pharmacists and **reminder mailings** assist with diabetes medication adherence.

Diabetes telephone outreach program in which Health Coaches make three calls to Enrollees identified as requiring diabetes medications to remind them to fill their prescriptions. We are introducing a Health Coach team comprised of local experts and peers responsible for supporting DMS in improving health outcomes and addressing disparities of diabetes and prediabetes. This team will provide focused outreach, education and support to Enrollees including resources and programs to each individual's needs.

Our **Community Connections** program offers Enrollees access to healthy food through food pantries as well as transportation resources to assist in getting to scheduled preventive care appointments related to diabetes.

Our **Preventive Service Outreach** outbound Enrollee activation and calling program engages Enrollees via telephone, text and IVR to remind Enrollees with diabetes of the importance of medication adherence to their overall health.

Medication Adherence Enrollee Outreach Calls: WellCare has partnered with the University of Florida College of Pharmacy Center for Quality Medication Management to perform targeted outreach to Enrollees in other Medicaid states around diabetes medication adherence, addressing barriers including cost and side effects, and providing clinical counseling from pharmacists as needed. We will implement this program in Kentucky in order to improve adherence to diabetes medications. **Enrollees contacted through this program are twice as likely to fill medications within 30 days of receiving the call.**

Good Measures Diabetes Prevention Program is designed to prevent diabetes, however it also helps diagnosed Enrollees improve the management of type 1 or type 2 diabetes through Health Coaches who help them better manage their condition(s), improve their food choices, and optimize their health. Using the Good Measures app, participants can track meals and snacks, physical activity, blood sugar, and medications to learn how different foods, medicines, insulin, and activity affect their blood sugar. The app also suggests the best meals and snacks to eat next. Notably, nutrition plays a key role in mitigating side effects and increasing efficacy. Our Health Coaches develop trusted

relationships with Enrollees to help them address medication adherence, reduce side effects, eat healthier, and feel better by building on the foods they like so they can better manage their diabetes and enjoy life.

Healthy Rewards: We understand that tying rewards to healthy decision-making can be motivating and sustainable. For that reason, we created value-added benefits that attach to preventive services/ screenings, including diabetes medication adherence and diabetic retinal eye exams. With our Healthy Rewards program, Enrollees receive reloadable debit cards or gift cards for stores to purchase needed personal, home, baby, and family-related items that promote good health behaviors for practicing healthy behaviors.

Chronic Disease Management through Microclinics: Working with Microclinic International (MCI), WellCare of Kentucky sponsored a program with the objective of enabling local organizations, such as the Red Bird Clinic and the Barren River District Health Department (DHD) in Kentucky, with tools and resources to stop the spread of chronic diseases. With a strong presence in the state, MCI reports that 95% of participants improved at least one indicator of chronic disease when focusing on the methodology of the program, which includes sustainable lifestyle choices, such as cooking healthy meals and physical activity. Recruiting 16 participants for the program, many of whom were WellCare of Kentucky Enrollees, **Red Bird Clinic maintained a 93.75% retention rate**, and although working amidst several obstacles, including a natural disaster, **the Barren River DHD completed four distinct MCI program launches enrolling nearly 50 participants.** Through weekly online surveys, we believe participants were able to make lasting behavioral changes.

Strategy: Provider education and outreach

Medication Adherence Provider Outreach Calls: We have partnered with the University of Florida College of Pharmacy Center for Quality Medication Management to perform targeted outreach to providers focused on closing care needs related to diabetes medication adherence.

WellCare of Kentucky offers **in-person education from QPAs and community pharmacists, pharmacy performance visits** and **reminder mailings** to support providers whose Enrollees require assistance with diabetes medication adherence.

Provider care needs reports will help providers identify Enrollees who need assistance maintaining medication adherence.

Our **P4Q program** offers providers bonus payments for closing care needs associated with diabetes.

Strategy: Pharmacy assistance

Our pharmacy benefit manager (PBM), CVS, offers assistance to Enrollees to ensure diabetes medication adherence including **packaging that helps with dosing, pill splitter, scheduling medications and door-to-door medication delivery.** In addition, the following pharmacy programs support diabetes medication adherence for diabetes medications:

- *CVS Health Tags:* We implemented health educational messaging to Enrollees with specific gaps in care when they fill/pick up their prescription at their local CVS Pharmacy. **In 2019, we sent over 32,000 health tags for diabetes related care needs and over 25,000 for colorectal cancer screening.** In expanding this program to our full Medicaid population, we will target

similar care needs. Our ability to adapt this program to the current needs and trends in Kentucky allows for rapid response.

- *PBM Provider Advisor Support (PAS) Program:* Pharmacy Advisor Support (PAS) program promotes medication adherence and closing care needs based on clinical quality measures. The PBM sends tailored messages via fax to our providers regarding key points in the therapy process for Enrollees with chronic conditions, such as diabetes, asthma, high blood pressure, depression, etc. Messages target Enrollees not adhering to their medication regimen (late-to-fill) or provide clinical considerations and recommendations that will help close a care need, such as adding a statin for Enrollees on anti-diabetic medication. **Through these outreach efforts, the PAS program sent nearly 17,000 messages for adherence to diabetes medication and more than 7,000 messages for care needs related to diabetes.**

Electronic Quality Improvement Platform for Plans and Pharmacies (EQuIPP): Pharmacy Quality Solutions (PQS) administers EQuIPP, a pharmacy benchmark system that provides performance data associated with quality measures to health plans and community pharmacy organizations. EQuIPP enables community pharmacist providers to identify non-adherent Enrollee opportunities, collaborate with provider practices to close care needs, and improve medication adherence. Currently, the EQuIPP network includes 95% of all pharmacies nationwide, with 90% of these pharmacies used by WellCare Medicaid Enrollees. Using EQuIPP, our network pharmacies can view Enrollee care needs specific to medication adherence. Because **95% of Kentucky pharmacies are on the EQuIPP platform**, the state has performed better in improving medication adherence for diabetes in our population as compared to the National benchmark. **For example, WellCare of Kentucky's Medication Adherence for Diabetes Medications measure improved by 3.7% from 2017 to 2018.**

Potential challenges and how these will be addressed

Social determinants of health: We will continue to address SDOH, including lack of transportation, through our pharmacy assistance programs listed previously, including scheduling door-to-door medication delivery and CVS health tags. We will continue to provide transportation assistance through our referral program to Non-Emergency Medical Transportation (NEMT) services, which is facilitated by the Kentucky Transportation Cabinet, Office of Transportation Delivery. For Enrollees who do not qualify for this service, we leverage our Community Connections team to connect them with external, non-profit community agencies that provide transportation to medical appointments. We also engage the Enrollees friends and family, if available, to find the best and most easily accessible option. **Today, we offer referrals to over 200 organizations providing NEMT, with almost more than 28,000 total referrals made to date.**

Health Literacy: Lack of education regarding the importance of taking diabetes medications poses a significant potential challenge to improving medication adherence for diabetes medications. For example, Enrollees often skip oral medications because of side effects or because they don't "feel bad." We will address this by continuing to educate Enrollees on the importance of taking diabetes medications through the strategies and interventions mentioned previously, including in-person care manager and pharmacist visits, diabetes telephonic outreach and the Good Measures diabetes program.

Unable to Contact (UTC) population: A potential challenge in achieving improvements in adherence to diabetes medication adherence includes locating and connecting with our Enrollees because we have incorrect or missing information. Our Enrollees may be dealing with unstable housing, a lack of

awareness of who their insurance carrier is, or a cultural or social level of mistrust for companies trying to engage. This poses a challenge to providers who are responsible for closing care needs for Enrollees with diabetes. In order to address this, we have implemented our Unable to Contact (UTC) Reach program, which provides important services such as education, coordinating Enrollees with primary care providers, bridging Enrollees to our community connections resources, and helping complete the health risk assessment to better identify Enrollee needs.

Access to Providers and Pharmacies: The rural nature of much of Kentucky poses access challenges to maintaining adherence to diabetes medications. To address this, we will offer door-to-door medication delivery as well as the following strategies to increase access:

- *Mobile screenings:* In addition, to address access challenges faced by many People of Kentucky we will provide rural screenings for diabetic retinal eye exams at localized mobile events as an alternative for Enrollees to complete well visits and engage in their healthcare. Our experience includes hosting health fairs, conducting rural mobile health clinics, and establishing pop-up clinics in remote locations.
- *Telehealth:* To address limited access to providers, we will support the Commonwealth's objective to expand the use of telehealth in conjunction with the passing of Senate Bill 112 that expands telehealth coverage and payment parity for telehealth services. WellCare of Kentucky has developed a multi-faceted strategy to expand the use of telehealth that builds on national research, as well as our experience in the Commonwealth, where we paid claims to providers for more than 6,800 telehealth services and more than 20 different types of services in 2018, and in our other markets. Through our national model for telehealth, we have made investments to educate Enrollees on telehealth opportunities and train providers on telehealth access and reimbursement policies. We will leverage that experience and work with DMS and our network partners to examine opportunities to promote the expansion of telehealth under the new regulations through direct education of our provider and Enrollee communities.
- We also partner with local *FQHCs and RHCs* to provide Enrollees living in rural areas with additional access to providers.

ii. Tobacco Use and Help with Quitting Among Adolescents

Table C.9-5 Tobacco Use and Help with Quitting Among Adolescents

TOBACCO USE AND HELP WITH QUITTING AMONG ADOLESCENTS
With more than 31,000 WellCare of Kentucky Medicaid Enrollees identified as "Positive Smokers", tobacco cessation in adolescents is a significant area of focus for improving population health for the Commonwealth. According to the most recent CAHPS survey, rates for tobacco cessation for Medicaid Enrollees increased by .25% for "Discussing cessation strategies" from 2017 to 2019. Partners that will be necessary to achieve improvement include: American Cancer Society, COBALT, and Kentucky Quit Line. Data analytics required to achieve success for this measure include: Using our comprehensive QPME, we will include this measure in our standard data analytics reporting structure in order to align with the Commonwealth's priorities.

As reflected below, our improvement plan includes near-term strategies that we plan to implement in the early renewal periods as well as longer-term strategies, which are much more transformative but require longer-lead times for implementation given complexities, dependencies, and more. Furthermore, our strategies and tactics are designed to be applied or customized to meet the needs and circumstances of providers, Enrollees, and regions in which we serve.

- Year 1 is the baseline year in which we determine the appropriate clinical and operational metrics to track for performance. We anticipate a 5% improvement from the baseline in tobacco cessation among adolescents in year 1 of the renewed contract.
- Year 2 we will begin to see results from the interventions with immediate impact as well as see the beginning of impact for short-term interventions and forecasting the long-term intervention impact with help of our Quality Statisticians. We anticipate a 7% improvement from the baseline in tobacco cessation among adolescents in year 2 of the renewed contract.
- Year 3 is our success year in which our programs come to full maturation and we are able to see the impact of all interventions. We anticipate a 10% improvement from the baseline in tobacco cessation among adolescents in year 3 of the renewed contract.

Strategy: Enrollee education and outreach

PCAs and QI Care Needs Coordinators provide outreach and education to Enrollees, including guidance on tobacco cessation and connection with resources to help. We are introducing a Health Coach team comprising local experts and peers responsible for supporting DMS in improving health outcomes and addressing disparities of tobacco cessation. This team will provide focused outreach, education and support to Enrollees including resources and programs to each individual's needs.

Healthy Rewards: Our Healthy Rewards program provides Enrollees with value-added benefits for completing preventive services including tobacco cessation. **In 2017, more than 1,500 WellCare of Kentucky Enrollees received more than $30,000 in Healthy Rewards incentives for participating in tobacco cessation programs.**

Tobacco Cessation Program: We offer the **Quit For Life Program**. Health coaches telephonically manage Enrollees by coaching and educating them to make lifestyle behavior modifications. During coaching sessions, Enrollees receive encouragement, problem-solving techniques, relapse prevention strategies, and a smoking cessation toolkit to reinforce training sessions and coaching calls. Enrollees receive tobacco cessation counseling and pharmacotherapy. As a result of our tobacco cessation program, which was implemented as part of our Management of Physical Health Risks of the Seriously Mentally Ill Population PIP **from 2015-2018, we saw a 12.25% increase in the rate for Tobacco Screening and Follow Up - Tobacco Cessation Intervention among Enrollees with schizophrenia or bipolar disease.**

Our new My Strength program offers free, confidential online behavioral therapy through the Web-based COBALT program for Enrollees with depression, anxiety, insomnia and substance abuse.

Our **Community Connections** program offers Enrollees transportation services to preventive care visits in which providers can educate them on the importance of tobacco cessation and connect them to resources to help them quit smoking.

Our **Preventive Service Outreach** outbound Enrollee activation and calling program engages Enrollees via telephone, text and IVR to remind Enrollees of the importance of tobacco cessation to their overall health.

Strategy: Provider education and outreach
Our **QPAs** identify Enrollees who require tobacco cessation based on care needs reports and share this information with providers during in-person performance visits. WellCare of Kentucky reviews **provider medical records** during the annual medical record review to ensure tobacco cessation strategies are being discussed. For providers who are not compliance with the guidelines, we implement interventions and educations to improve compliance. Our **P4Q program** offers providers bonus payments for closing care needs associated with tobacco cessation.
Potential challenges and how these will be addressed
Health Literacy: The primary potential challenge in improving tobacco cessation rates among adolescents is lack of education surrounding the potential health improvements and resources available to assist with quitting. We will continue to address this through the strategies and interventions targeted at educating Enrollees and providers listed previously, including our PSO outbound telephonic outreach, PCA and Care Needs Coordinator Outreach, QPA outreach, Quit for Life program and Healthy Rewards. **Social Determinants of Health:** SDOH pose additional potential challenges in improving tobacco cessation rates among adolescents. For example, lack of transportation creates a barrier to wellness visits in which providers can educate Enrollees on the benefits of quitting and resources available to help them quit. We will address this through our referral program to NEMT and Community Connections resources mentioned previously. **Unable to Contact (UTC) population:** Enrollees for whom we have missing contact information pose another potential challenge to improving tobacco cessation rates among adolescents. We will use our UTC Reach program described previously to locate Enrollees identified as smokers and educate them on the importance of tobacco cessation.

iii. Colorectal Cancer Screening

Table C.9-6 Colorectal Cancer Screening

COLORECTAL CANCER SCREENING
With more than 72,000 Enrollees over age 50, and nearly 600 Enrollees diagnosed with colon cancer, WellCare of Kentucky is committed to continuing to improve colorectal cancer screening rates over the next three years. Rates for this measure have increased from 52% in 2017 to 62% in 2018. Partners that will be necessary to achieve improvement include: Home Access, COBALT, and American Cancer Society. Data analytics required to achieve success for this measure include: Using our comprehensive QPME, we will include this measure in our standard data analytics reporting structure in order to align with the Commonwealth's priorities.

As reflected below, our improvement plan includes near-term strategies which we plan to implement in the early renewal periods as well as longer-term strategies, which are much more transformative but require longer-lead times for implementation given complexities, dependencies, and more. Furthermore, our strategies and tactics are designed to be applied or customized to meet the needs and circumstances of providers, Enrollees, and regions in which we serve.

- Year 1 is the baseline year in which we determine the appropriate clinical and operational metrics to track for performance. We anticipate a 5% improvement from the baseline in colorectal cancer screenings in year 1 of the renewed contract.
- Year 2 we will begin to see results from the interventions with immediate impact as well as see the beginning of impact for short-term interventions and forecasting the long-term intervention impact with help of our Quality Statisticians. We anticipate a 7% improvement from the baseline in colorectal cancer screenings in year 2 of the renewed contract.
- Year 3 is our success year in which our programs come to full maturation and we are able to see the impact of all interventions. We anticipate a 10% improvement from the baseline in colorectal cancer screenings in year 3 of the renewed contract.

Strategy: Enrollee education and outreach

PCAs and QI Care Needs Coordinators provide outreach and education to Enrollees including guidance on the colorectal cancer screening, education on the test and its recommendations as well as connection with appropriate means to complete the care needs screening.

Our current outreach for **Healthy Rewards** Enrollee incentives includes colorectal cancer screening for Medicare Enrollees. **In 2019, our Medicare program activated nearly 34% of the targeted population for Enrollee incentives on colorectal cancer screening** and we will leverage this experience to implement the incentive for Medicaid.

Colorectal Cancer Screening Kits: WellCare of Kentucky has partnered with Home Access to provide at-home **colorectal cancer screening kits** for select affiliate health plans. Targeted at Medicare Enrollees ages 50-74, Home Access provides: Enrollee and provider letters, reminder IVR and postcards, Enrollee and provider results letters. WellCare of Kentucky provides additional education and outreach to eligible Enrollees through periodicity letters, newsletters and the Enrollee portal. Enrollees receive the kits in the mail, collect their sample and submit to the Home Access lab for testing. Results are then provided to the Enrollee, provider and health plan. The program has resulted in a **19.23% year-over-year improvement in colorectal cancer screenings for Kentucky Medicare Enrollees for 2016-2018.** With our approach in supporting local People of Kentucky, we will enhance our Home Access program for colorectal cancer screenings to leverage the relationship between care management and the Enrollee. Our care management team will bring the testing kits to Enrollees under their care management supervision and provide direct education on colorectal cancer, the screening kits, and why it is important to complete them.

Our **Community Connections** program offers Enrollees transportation resources to assist them in getting to scheduled colorectal cancer screenings.

Our **Preventive Service Outreach** outbound Enrollee activation and calling program engages Enrollees via telephone, text and IVR to remind Enrollees of the importance of colorectal cancer screenings to their overall health.

Strategy: Provider education and outreach
We offer in-person education from **QPAs** on colorectal cancer screenings including care needs and resources during performance visits. WellCare of Kentucky **reviews provider medical records** through annual medical record reviews to ensure colorectal cancer screenings are being discussed. For providers who are not compliance with the guidelines, we implement interventions and educations to improve compliance. Our **P4Q program** includes a provider incentive for compliance with the colorectal care needs screening.
Potential challenges and how these will be addressed
Health Literacy: A potential challenge in improving colorectal cancer screening rates is lack of Enrollee education on the importance of such screenings in early detection and overall health. To address this, we will continue to educate Enrollees through our PSO outreach and Healthy Rewards programs mentioned previously. We will also offer health coach support to Medicaid Enrollees. **Social Determinants of Health:** Another potential challenge to improving colorectal cancer rates includes social determinants of health such as lack of transportation. We will address this by referring Enrollees to NEMT and Community Connections' transportation resources as well as by offering colorectal cancer screening kits mentioned previously. **Access to Providers:** The rural nature of much of Kentucky poses access challenges to Enrollees requiring colorectal cancer screenings. We will address this by offering colorectal cancer screening kits to Medicaid Enrollees and by partnering with FQHCs and RHCs. **Unable to Contact (UTC) population:** We will use our UTC Reach program described above to locate Enrollees who require colorectal cancer screenings and educate them on the importance of such screenings.

g. Describe the Vendor's proposed approach to collaborating with the Department, other MCOs, and providers to ensure Performance Improvement Projects (PIPs) are effective in addressing identified focus areas and improving outcomes and quality of care for Enrollees, including the following:

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 19.6 Performance Improvement Projects (PIPs) of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

WellCare of Kentucky has vast experience with clinical and non-clinical PIPs, performing 13 unique PIPs on subjects including Reducing Potentially Preventable Hospitalizations and Emergency Department (ED) Visits for Ambulatory Care Sensitive Care, Prenatal Smoking, Chronic Obstructive Pulmonary Disease (COPD), Childhood and Adolescent Immunizations, Postpartum Care, Antipsychotic Medication Use in Children and Adolescents, and Pediatric Oral Health since 2012. Throughout this time, we have collaborated with DMS to develop and implement PIPs through IPRO

training, data sharing and leadership meetings. We will use this experience and the lessons learned to continue to collaborate with DMS and other MCOs on determining which PIPs to implement in order to improve health outcomes in Kentucky.

i. Lessons learned, challenges, and successes the Vendor has experienced while conducting PIPs, and how the Vendor will consider those experiences in collaboration with the Department on identified PIPs.

The following lessons learned and challenges represent common trends within each of the PIPs:

LESSONS LEARNED

A collaborative effort between WellCare of Kentucky, DMS, IPRO, Enrollees, and internal and external partners is essential. Through our experience in implementing PIPs, we have learned that our Quality Improvement Department has a key role in bringing all parties together to ensure everyone has the information needed to participate in the performance improvement activities and to make changes to drive positive outcomes. Key to this collaboration is clear communication and input from all parties as it contributes to the identification of gaps in care, barriers and interventions for improvement that result in improved health outcomes for Enrollees. We have demonstrated our experience and collaborative effort through the Serious Mental Illness (SMI) PIP led by the Kentucky Department of Medicaid Services (KDMS) and all MCOs.

Narrowing the intended focus of a project helps to concentrate efforts and available resources toward accomplishing meaningful improvement. During implementation of our Postpartum Care PIP from 2014 to 2017, our efforts and resources were divided among the several objectives associated with PIP, which may have hindered the achievement of our desired goals. While the desire was to effect change in many areas related to postpartum care, the expanded focus of the PIP created a complicated project. This taught us the importance of focusing our efforts in order to improve health outcomes.

Active interventions are more effective than passive interventions. Our experience implementing PIPs over the past eight years has taught us that although passive interventions including targeted mailings can have positive effects, more active interventions such as increased face-to-face provider contacts via QPAs may be more effective at driving positive outcomes. We will continue to apply to future PIPs the interventions that have proven effective.

CHALLENGES

Provider knowledge challenges: While conducting our PIPs, we discovered that providers often lack knowledge regarding best practices including indications or contraindications to immunizations, providing and documenting recommended screenings, risk factors for postpartum depression, diagnosis of COPD and adoption of the use of dental sealants. This lack of knowledge poses a challenge in providing adequate care to Enrollees and adversely affects providers' HEDIS scores. To address this, we deployed QPAs and PR reps to provider offices to help close care needs through education on topics including dental care, COPD, SMI and post-partum depression and the distribution of HEDIS toolkits. We provided online education on these topics through our provider portal as well. In addition, we developed a comprehensive

Maternal Health Program to provide risk assessments to identify women at risk of preterm birth and other pregnancy-related complications and made the Edinburgh Postnatal Depression Scale available to providers on our provider portal. We also implemented a process between Utilization Management and Care Management to identify and refer Enrollees hospitalized with COPD.

Care coordination challenges: Another challenge we discovered while conducting our PIPs was lack of care coordination including discharge planning and coordination of care for Enrollees hospitalized for COPD, and coordination between BH providers and PCPs for Enrollees with schizophrenia or bipolar disorder. When an Enrollee's care needs are not appropriately communicated among his or her care team, Enrollee health outcomes and provider HEDIS scores are adversely affected. To address this, we implemented integration meetings with WellCare of Kentucky leadership including our medical and BH directors and provider leadership. We also developed new Clinical Practice Guidelines (CPGs), which are available on the provider portal, addressing discharge planning and care coordination at transitions and smoking cessation.

Access challenges: Limited transportation; access to services including tobacco cessation programs and prenatal care and screenings; and access to providers including BH and dental providers presented an additional challenge as we implemented our PIPs. If Enrollees are unable to receive the services and access needed for recommended preventive care, health outcomes are less likely to improve. To address limited transportation, we refer eligible Enrollees to NEMT services and our Community Connections team connects Enrollees with external, non-profit community agencies that provide transportation to medical appointments. To address access challenges, we partner with FQHCs and RHCs throughout rural areas. We also implemented Cobalt Therapeutics free web-based self-management BH program for Enrollees on our member portal. In addition, we collaborated with Avesis to recruit and contract additional dental providers who accept Medicaid/pediatrics in rural areas.

Improving Access for Enrollees

An Enrollee living in Grahn, Kentucky was having difficulty getting to medical appointments due to a damaged wheel chair ramp. In response, a WellCare of Kentucky Care Coordinator contacted The Holy Rollers Motorcycle Club, who repaired the ramp, allowing the Enrollee to easily leave his house for medical appointments.

Health literacy challenges: A significant challenge to our PIP implementations was lack of Enrollee health literacy, including knowledge of the proper use of urgent care centers and health departments versus PCPs for vaccines; risks associated with tobacco use for an unborn child; importance of postpartum and dental care; appropriate management of COPD; and available resources to assist with ongoing disease management. Without knowledge on how to properly manage their healthcare, Enrollees are unlikely to make informed decisions to improve their health. To address this, we developed and distributed Enrollee-specific informational material including targeted letters and newsletters for Enrollees to improve health literacy, screening and monitoring rates with regards to dental, postpartum, BH, and COPD care. Through telephonic outreach, care needs coordinators educated Enrollees regarding dental, postpartum, and COPD and care managers educated Enrollees with SMI. **We implemented a**

24/7 "BabyLine" with nurses available to offer support and answer questions through telephonic interactions with Enrollees. We also referred smoking Enrollees to KY Quit Line for assistance for access to additional/available resources. In addition, we initiated an Enrollee Healthy Rewards incentive for annual dental visits, well child visits and adolescent well care visits.

SUCCESSES

We have seen the following successes as a result of our PIPs:

Postpartum Care PIP (2014-2017): Postpartum Care increased by **5.53%** and Healthy Kentuckians Postpartum Depression Screening increased by **10.2%.**

Chronic Obstructive Pulmonary Disease (COPD) PIP (2013-2015): Enrollees age 40 and older who were dispensed a systemic corticosteroid within 14 days following acute inpatient discharge or an ED encounter for COPD exacerbation increased by **3.92%**; Enrollees age 40 and older who were dispensed a bronchodilator within 30 days following acute inpatient discharge or an ED encounter for COPD exacerbation increased by **3.91%**; and Use of Spirometry Testing in the Assessment of COPD increased by **7.22%.**

Management of Physical Health Risks of the Seriously Mentally Ill Population (2015-2018): Body Mass Index Screening for People with Schizophrenia or Bipolar Disorder increased by **2.92%**; Blood Pressure Assessment for People with Schizophrenia or Bipolar Disorder increased by **6.81%**; Tobacco Screening and Follow Up - Tobacco Screening increased by **42.09%**; Tobacco Screening a rate for Tobacco Screening and Follow Up - Tobacco Cessation Rx Prescribed increased by **12.25%**; and Diabetes Screening for People with Schizophrenia or Bipolar Disorder who are Using Antipsychotic Medications increased by **2.07%**.

Improving Pediatric Oral Health (2015-2018): Annual Dental All Members increased by **.09%**; Annual Dental Members age 2 to 3 increased by **.49%;** Annual Dental Members age 4 to 6 increased by **.36%**; Annual Dental Members age 7 to 10 increased by **1.13%**; and Annual Dental Members age 11 to 14 increased by .**67%.**

Childhood and Adolescent Immunizations (2016-2019): Childhood Immunization Status - Combo 10 increased by 16.66%; Immunizations for Adolescents - Combo 1 increased by 10.93**%;** and Immunizations for Adolescents - Combo 2 increased by 95.94**%**.

HOW WELLCARE OF KENTUCKY WILL CONSIDER THOSE EXPERIENCES IN COLLABORATION WITH DMS ON IDENTIFIED PIPS

Leveraging the lessons learned, challenges and results of previous PIPs, we will continue to collaborate with DMS as well as other MCOs on determining which PIPs to implement in order to improve health outcomes in Kentucky. WellCare of Kentucky would encourage and appreciate consistent interaction, partnership and engagement with the other MCOs. The combined knowledge, experience, and skills of the cumulative MCOs' associates will only enhance our ability to improve the health outcomes of Kentucky Enrollees. By applying like interventions to population health issues, the MCOs, along with DMS and the DPH, can influence providers, community partners and Medicaid Enrollees across the state. This type of extensive and all-consuming approach will

prove to influence Enrollees health behaviors through provider engagement and Enrollee awareness. In addition to collaborative PIPs, the MCOs should be jointly working on assisting providers with low quality scores/care, improving regional health literacy, increasing KHIE adoption and eMR implementation.

As such we will continue to collaborate with DMS, IPRO, Enrollees and internal and external partners on identified PIPs. As part of this effort, we will participate in a collaborative workgroup that will meet monthly with the purpose of collaborating with DMS, appropriate agencies, and other MCOs on issues including focus areas for PIPs. This workgroup will include WellCare of Kentucky's Medical Director Dr. Howard Shaps, Provider Network Director Bonnell Gustafson Irvin, Pharmacy Director Thea Rogers, Dental Director Dr. Jerry Caudill, Behavioral Health Director Dr. Marketa Wills, Quality Improvement Director Laura Betten, Population Health Management Director Shannon Maggard, and Chief Financial Officer Laurie Holden During these collaborative workgroup meetings, we will evaluate future PIPs to ensure they align with a specific focus for a project and consider available resources to have the greatest potential to effect positive change.

ii. Recommended focus areas, including those for regional collaborative PIPs, for the first two years of the Contract resulting from this RFP and rationale for these focus areas.

WellCare of Kentucky recommends the following focus areas for collaborative PIPs for the first two years of the Contract:

STATEWIDE RECOMMENDATIONS

Neonatal abstinence syndrome (NAS): As a substance use-related issue that is important to Kentucky's Governor, WellCare of Kentucky recommends reducing the incidence of NAS as a focus area for a future PIP. We have partnered with Addiction Recovery Center to provide a treatment program for pregnant women who are addicted, paying a bonus to providers for every infant that goes home with his or her mother and not to the NICU. We have also provided funding for a similar program with Volunteers of America.

Enrollees without PCP visits: In order to reduce the number of Enrollees who have not received annual physicals, EPSDT services and immunizations, and prioritizing those Enrollees using the ED inappropriately, we suggest a PIP focused on this subset of the larger population. To determine which Enrollees to target, we recommend conducting a 12 and 24 month claims review, which will allow us to identify those Enrollees with the greatest need for intervention.

Hepatitis C: As one of the states hit hardest by the national opioid epidemic, the people of Kentucky struggle with high rates of addiction, overdose deaths, and Hepatitis C. For this reason, we recommend **improving the Integration of Hepatitis C Prevention and Care for Kentucky's Medicaid Population** as a statewide PIP.

REGIONAL RECOMMENDATIONS

Breast cancer screenings: With a high prevalence of breast cancer in regions five and six, we recommend a breast cancer screening PIP for these regions.

Preterm Birth: Kentucky currently has an overall 11.1% preterm birth rate according to the March of Dimes. Two of the top six counties are located in Region 6: Kenton with a 12.2% rate

and Boone with 10.6% rate so we would begin to focus our efforts in these counties. The regional PIP would build off of our experience impacting birth outcomes through use of our Patient Care Advocate model exemplified in another program where the state rate of 11.5% and the national rate of 11.8%. The low birth weight (Under 5 ½ pounds or 2,500 grams) rate for WellCare of Kentucky Enrollees included in our collaborative program was 7.92%, which was significantly lower than the state rate of 8.4% and the national rate of 8.0%.

Substance Use: As one of the states hit hardest by the national opioid epidemic, the People of Kentucky struggle with high rates of addiction, overdose deaths, and Hepatitis C. Along with several other states, Kentucky experiences the third highest rate of deaths due to a drug overdose. The CDC analyzed measures that include overdose deaths, per capita income, unemployment, and sales of painkillers to determine which counties in the nation were at the highest risk for a disease outbreak. Of the 220 most vulnerable counties in the nation, 54 are in Kentucky—with the majority located in the southern and eastern regions of the Commonwealth. For this reason, we recommend the following areas of focus for regional PIPs: **Improving the Safe and Effective Management of Pain for Medicaid Enrollees in Kentucky; Reducing Chronic Opioid Use in Kentucky's Medicaid Population.**

iii. Methods for monitoring and ongoing evaluation of progress and effectiveness.

Using the PDSA model of measuring and re-measuring in order to continuously improve, we employ a variety of current and proposed methods for monitoring and evaluating the progress and effectiveness of our collaborative PIPs.

OUR CURRENT METHODS FOR MONITORING AND ONGOING EVALUATION OF PROGRESS AND EFFECTIVENESS OF COLLABORATIVE PIPS INCLUDE:

- Participating in collaborative meetings with DMS and other MCOs to discuss progress of PIP interventions, identifying areas for improvement and proposing additional or modified interventions
- Sharing data with other MCOs and DMS through in-person visits or electronically, including results of PDSA methodology such as Enrollee needs; hot spots of identified needs; segmentation data; and unmet health-related resource needs such as housing instability, food insecurity, and lack of health literacy. Also sharing data resulting from statistical modeling to identify statistically significant opportunities and trends
- Performing monthly data reviews of PIP intervention metrics utilizing fishbone diagrams, comparing against national Quality Compass data
- Presenting data quarterly to ALL MCOs calls
- Reporting quarterly to the QI Work plan
- Reporting annually PIP interventions to DMS, QMAC, QIC and UMAC
- Reviewing PIP performance against national research studies

OUR PROPOSED METHODS FOR ONGOING EVALUATION OF PROGRESS OF EFFECTIVENESS OF COLLABORATIVE PIPS INCLUDE:

- Collaborating with health departments to institute disease-specific education programs. For example, in our current collaborative Ambulatory Care Sensitive Conditions (ASCS) PIP we have an external collaboration with Barren River Health Department in implementing a

diabetic education program. The program, in which 100 Enrollees have been identified to begin in February 2020, will include monthly meetings with BRHD to review Enrollee engagement and Enrollee health outcomes. This collaborative initiative provides opportunities to reduce potentially preventable hospitalizations and ED visits for individuals with one or more ACSCs, thus improving the overall health of Kentucky's Medicaid Enrollees

- Comparing current results against national statistical data, such as American Diabetes Association, CDC. CMS with information shared during collaborative calls
- Tracking and trending Enrollee, provider, and plan barriers to receiving care through our Care Gap Coordinator database. The Care Gap Coordinator database contains Enrollee specific data obtained through our Enrollee outreach and engagement program. This program focuses on a three-way phone call with the Enrollee and provider for appointment scheduling assistance

h. Provide a description of opportunities the Vendor has identified to collaborate with the Department for Public Health to support improvement in public health outcomes. Where does the Vendor anticipate that collaborating on initiatives would have the most impact in addressing quality care and outcomes for Medicaid Enrollees? Explain the Vendor's rationale.

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 19.7 Department for Public Health Initiates of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

WellCare of Kentucky has been collaborating with the Department of Public Health (DPH) and other public health departments on improving health outcomes in the Commonwealth since we began serving the People of Kentucky in 2012. Our Community Relations Specialist and Public Health Liaison educate DPH and other public health departments on our Care Management and Health Coach programs to which WellCare of Kentucky Enrollees can be referred for support and services related to public health issues. In parallel, the Care Managers and Health Coaches work with the public health departments to refer Enrollees to health programs such as 5-2-1-0 Healthy Numbers for Kentucky Families and the Diabetes Prevention and Control Program. In addition, our Quality and Community Connections associates use public health data provided by DPH and other public health departments to analyze key population-based health trends by region, race, ethnicity and gender to identify public health areas of focus. We will leverage this experience to continue collaborating with DPH and other public health departments, focusing on the following DPH priorities in order to have the most impact on health outcomes in Kentucky:

- Substance Use Disorder
- Smoking
- Obesity
- Adverse Childhood Experiences
- Integration to Health Access

We are currently developing the following public health initiatives which are aligned with the DPH priorities:

Public Health Collaboration project: For public health departments, establishing partnerships with managed care organizations has not been a priority. However, many of WellCare of Kentucky's more than 430,000 Enrollees live in rural areas and receive their healthcare from their local health departments. Therefore, **we identified an opportunity** to forge a partnership with the local health departments in order to understand health outcomes and healthcare service utilization in the local communities. This collaboration project **has the potential for the most impact** because it focuses on improving health outcomes through preventive screenings and recommendations for **children and adolescents**, who comprise 43% of our Enrollees. WellCare of Kentucky leadership attended the Kentucky Public Health Association conference in April 2019 to begin discussions with all public health departments in all 120 Kentucky counties on the partnership. **Our rationale** for pursuing this partnership is to combine community services provided by public health departments with our understanding of the prevalence of disease conditions such as diabetes, COPD and heart disease in local Kentucky communities to improve health outcomes for rural People of Kentucky. Project interventions include a dedicated QI nurse working with health departments, dedicated care needs coordinator making calls to parents to remind them of immunization recommendations, telephonic outreach to health departments to promote best practices on sharing information, face-to-face visits with health department directors and staff to establish a collaborative partnership for exchange of information, working with compliance and privacy teams to develop care needs reports for information exchange with health departments and access to the Kentucky immunization registry.

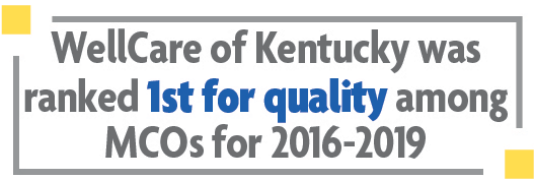
Diabetes prevention initiative – Barren River District Health Department (BRDHD): Because diabetes has been identified as a potentially preventable condition by the Agency for Healthcare Research and Quality (AHRQ) and the 2018 IPRO focused study on "Potentially Preventable Hospital Admissions and ED Visits due to Ambulatory Care Sensitive Conditions", **we identified an opportunity** to partner with BRDHD to develop the Diabetes prevention initiative. Aimed at improving the rates for recommended screenings for diabetes, this opportunity **has the potential for the most impact** because of the significant health outcome improvements and cost savings associated with preventing potentially preventable hospitalization(s) and ED visit(s) for diabetes short term complications. **Our rationale** for developing the pilot with BRDHD is to allow WellCare of Kentucky Enrollees who are at risk for diabetes to participate in the CDC's National Diabetes Prevention Program (DPP) program which has proven outcomes and is not currently covered by Medicaid. We plan to work with Barren River by funding the pilot through a grant and will refer approximately 250 WellCare of Kentucky Enrollees to BRDHD who are at risk for diabetes. The year-long DPP (Prevent T2) follows evidence-based CDC National Diabetes Prevention Program model, aligns with the CDC 6|18 public health initiative, and aims to help participants at risk for type 2 diabetes learn how to make lifestyle changes to prevent or delay the onset of diabetes. Groups meet weekly for 16 weeks, then 1-2 times per month to complete 12 months total. Barren River has in the past offered in-person sessions, but are currently also offering online sessions via Facebook Live. All

classes are conducted by Registered Dietitians that are trained Healthy Lifestyle Coaches. Outcomes collected include weight, A1C, and minutes of physical activity per week.

i. Describe the Vendor's approach to monitoring and evaluating progress in improving the quality of health care and outcomes on an ongoing basis. Describe the following:

WellCare of Kentucky will comply with the DMS' expectations and requirements as specified in Section 19.8 Quality Management and Performance Improvement Monitoring and Evaluation of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

i. How the Vendor will use data to inform and prioritize initiatives to address Enrollee needs.



WellCare of Kentucky takes a comprehensive and systematic approach to monitoring and evaluating progress in improving the quality of health care and outcomes. Our Quality leadership, medical directors, QIC and UMAC review data on a monthly, quarterly and annual basis, identifying trends and areas for improvement. Nationally, our Business Technical Analyst (BTA) and Quality Data Analytics and Reporting (QDAR) team use our Quality Performance Metrics Engine (QPME) powered by Tableau and SQL Server Management Studio, to produce reports that help us prioritize Enrollee care needs. In order to improve our abilities in this respect, we have recently developed enhanced data analytics capabilities that allow us to:

- Customize reporting based on specific measure sets or specific data elements by Enrollee, by provider or by zip code
- Prioritize Enrollees or families based on Quality Stratification Index which identifies Enrollees/families with multiple care gaps or individuals with difficult to address care needs that will guide CSR, CM and PCA inbound interactions
- View Enrollees before they are officially counted in the measure population, such as new discharges for mental health based on authorizations and new babies that need EPSDT, immunization and lead screenings
- View a holistic view of a dual Enrollee, including care needs, campaigns and activities across Medicare and Medicaid
- Create a task at household, provider or Enrollee level to coordinate across the interdisciplinary care teams, quality and provider relations
- Act on future measures such as new discharges, immunizations and well-visits
- View a holistic view of an Enrollee based on unique person identification

Monthly we review data including HEDIS results, effects of interventions on HEDIS results, adverse incidents, Enrollee and provider satisfaction, complaints, medication adherence and pharmacy data.

Quarterly we review under-and over-utilization, adverse incidents, HEDIS results, effects of interventions on HEDIS results, EPSDT results, appeals and grievances, complaints, medication adherence, pharmacy data and claims data.

Annually we review under-and over-utilization, adverse incidents, Enrollee and provider satisfaction survey results, medical record review findings, HEDIS results, effects of interventions on HEDIS results, EPSDT results, appeals and grievances, complaints, medication adherence, pharmacy data and claims data.

Using this information and our comprehensive QMPE, our quality teams monitor trends and build interventions that address 1) the quality and appropriateness of care for Enrollees with special healthcare needs 2) health disparities, 3) over-and under-utilization of services, including Enrollees without visits, and 4) critical incidents.

Using Data to Improve Enrollee Satisfaction

While reviewing our 2015 Enrollee satisfaction results, we noticed a decrease of 0.3 percentage points in Enrollee satisfaction for "Rating of Health Plan." We immediately responded by requiring Care Gap Coordinators to inquire about Enrollee satisfaction during each interaction. As a result, our Enrollee satisfaction increased by 2.10 percentage points in 2017.

ii. Methods for measuring provider performance against practice guidelines and standards adopted by the QIC, and follow up activities to be conducted with providers based on ongoing review of findings.

WellCare of Kentucky uses the following methods for measuring provider performance against practice guidelines and standards adopted by the QIC and follow up activities based on ongoing review of findings:

Annual Medical Record Review (AMRR) audit: The AMRR audit is a review of contract practitioner office medical records in accordance with federal and state regulations and assesses the adherence to general record keeping requirements, EPSDT requirements, continuity of care, adult preventive care, quality of care events, treatment for Enrollees with special health care needs, and compliance with regulatory reporting and coding practices. In 2019 we improved our process based on provider feedback by implementing a field outreach approach, where QPAs complete audits through face-to-face visits in the office, allowing them to provide immediate audit education post-audit, establish relationships/partnerships and expand the education to include care needs and HEDIS recommendations/requirements. Non-compliant AMRR results are issued corrective action plans with guidance on opportunities and possible consequences for repeat non-compliance. **According to our 2019 AMRR results, 96.67% of providers passed for Medicaid standards and 94.44% of providers passed for EPSDT standards.**

The office manager at East Bernstadt Medical Clinic which scored 56% in 2017 called and stated they were unfamiliar with the process and required additional support to understand the results and implement changes. Our field team provided guidance on the AMRR audit, including interpreting results and next steps on how to improve scores. Upon receiving a brief explanation of the AMRR audit on the phone, followed by more detailed education during a visit with QPA Shannon Sullivan, the provider scored a 91% 2018.

External Quality Review Organization (EQRO) audit: WellCare's corporate EQRO audit team annually conducts reviews of applicable documentation to measure provider adherence to EQRO standards. Non-compliant EQRO results are issued corrective action plans with guidance on opportunities and possible consequences for repeat non-compliance.

WellCare of Kentucky received more than 91% compliance in the last full EQRO audit

HEDIS Provider Profiles: Our comprehensive reporting suite provides detailed insight into individual provider performance according to NCQA guidelines which adopts nationally recognized clinical practice guidelines. Our QIC adopts these guidelines to provide consistency and validity in our approach to measuring quality.

EPSDT Provider Scorecard: Creates a quick-look tool to assess compliance with EPSDT visit requirements. The Scorecard includes applicable HEDIS measures and a facsimile of the CMS 416 Screening and Participation ratio.

Performance Improvement Projects (PIPs): By targeting specific health outcomes associated with targeted HEDIS measures, our PIPs allow us to measure provider performance over a three year period. For providers who have not met performance standards identified within the PIP, we conduct targeted outreach and education in order to provide an understanding of our goals for the PIP and the interventions available. For providers in need of additional assistance, we collaborate with them to design interventions rooted in their local practice to enhance our overall PIP's impact. Our goal in PIP design is to create meaningful interventions that work for all levels of practice.

Hands-on Provider Support: Our P360 continuous quality improvement program is aimed at service delivery, quality care, and satisfaction. Led by Provider Relations Representatives (PR Reps) and supported by QPAs, PCAs and Care Managers, P360 is based on PDSA methodology and includes in-person PR Rep and QPA meetings to review prior and forecasted quality performance against goals and other provider comparisons. The P360 team works to establish detailed work plans to improve quality including: New programs, Enrollee outreach, health fairs, new equipment/services, encounters/billing remediation and access to information and eMR interchange.

iii. A summary of the Vendor's approach to annual evaluation of the overall effectiveness of the QAPI program and how the Vendor will use findings for continuous quality improvement efforts.

Annually, Quality Improvement Director Laura Betten leads our formal evaluation process, engaging stakeholders throughout our organization to assess the success of our QI program and develop our QI evaluation, which is presented to the Quality Improvement Committee (QIC) for review and approval. Our QI evaluation describes the level of success achieved in realizing established clinical and service performance goals through quantitative and qualitative analysis. Our evaluations include prior measurement period trending and performance against goals or targets, as appropriate. The annual evaluation describes the overall effectiveness of our quality assessment and improvement program by:

- Describing ongoing and completed QI activities and projects
- Trending clinical care and service performance measures and the desired outcomes and progress toward achieving goals
- Analyzing accomplishments in the quality of clinical care and service
- Identifying opportunities for improvement with recommendations for interventions

Our annual evaluation informs the following years' program, indicating which PIPs and quality improvement programs should be implemented based on specific needs identified. For example, our 2014 annual evaluation indicated only 52.44% of women had a postpartum visit, and of those women, only 9.29% were screened for postpartum depression. In response, we developed the Postpartum PIP in 2014, in which we introduced QPAs to educate providers regarding Postpartum HEDIS measures, developed a comprehensive Maternal Health Program to identify women at risk of preterm birth, implemented the 24/7 "BabyLine" to provide RN support to pregnant Enrollees, conducted Enrollee outreach post-delivery, and provided targeted Enrollee information on postpartum care. As a result, **our postpartum depression screening rate increased by 54%** during the second year of the PIP.

As part of our 2018 WellCare of Kentucky QI Evaluation we identified several areas of focus, enhancement, or continued support in 2019 including the following:

- Create a platform to allow the care management teams to have complete access to Enrollee information, provide a status and notes for complete Enrollee visibility
- Establish a process and team to focus facilitation of telehealth services for psychiatry to increase Enrollee access to psychiatrists
- Establish a cross departmental team to address high-cost, high-risk Enrollees with a history of chronic hospital readmissions to provide focused interventions and supports with the goal of reducing preventable hospitalizations and ED visits, and help manage complex comorbidities. The team will consists of staff from UM, CM and the corporate WellCare Advocacy and Community Based Programs teams and meet on a re-occurring basis to address these identified Enrollees
- Expand the transitional care nurse program to increase number of Enrollees impacted, streamline referral process to get referrals early in admission and decrease number of

j. Provide a summary of how the Vendor will collaborate with the Department and other Vendors in developing and implementing a value-based payment (VBP) program. Include proposed approaches for the following at a minimum:

i. The Vendor's lessons learned in developing and implementing VBP models, examples of models that have been most effective in improving performance and outcomes.

ii. Recommended goals and focus areas in the first two years of implementation of the VBP Program

iii. Proposed approaches to collaborate with the Department and other MCOs to develop the VBP program and to implement a coordinated approach to achieve statewide improvement in outcomes.

iv. Potential challenges specific to Kentucky and the Vendor's proposed methods for addressing identified challenges.

v. Regardless of the model implemented, the Vendor's approaches to analyzing performance against targets, frequency of analyses, reporting results to DMS, and use of analyses to modify interventions that are not making progress towards achieving targets.

k. Will the Vendor and Subcontractors implement VBP arrangements with providers? If so, describe the following:

i. The types of VBP arrangements the Vendor and Subcontractors plan to use and why these models were selected. As part of your description, map your proposed VBP arrangement to the HCP-LAN APM Framework maturity level.

ii. How improvement in health outcomes will be addressed through the VBP arrangements

iii. Methods for evaluating the effectiveness of VBP, including tracking of costs and

l. Provide results of any provider satisfaction survey reflecting the Vendor's performance in Kentucky or any other state Medicaid program over the last three (3) years. Where results identified provider dissatisfaction, Describe strategies the Vendor has implemented to address improvement, and examples of how those strategies have been effective.

WellCare of Kentucky will comply with the DMS' expectations and requirements as specified in Section 19.10 Conduct of Surveys of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

91.6% of our Kentucky providers would recommend WellCare to other providers.

Gauging the satisfaction of our provider partners is a critical part of our continuous quality improvement efforts. We use a variety of different methods to capture provider feedback and satisfaction. These include post-call surveys, website surveys and our provider advisory committees. In addition, we administer a more formal annual provider satisfaction survey to measure provider satisfaction with our health plans. This survey is designed to support NCQA standards for health plan accreditation, as well as ensure our provider satisfaction program remains compliant with key reporting requirements. Our survey helps identify opportunities for improvement by asking providers for feedback on a variety of topics listed in **Table C.9-7** below. In an independent provider satisfaction survey in 2019, Kentucky Medicaid providers ranked WellCare of Kentucky with the highest overall satisfaction of all Medicaid MCOs in the state. In that survey, the highest performing composite score of the over 40 questions we asked providers was WellCare Provider Relations

WellCare of Kentucky earned #1 NCQA Customer Satisfaction from 2016-2019 among all Medicaid MCOs.

Representative's ability to answer questions and resolve problems. Through our efforts to continuously improve the way we support providers mentioned below, WellCare of Kentucky **earned #1 NCQA Customer Satisfaction from 2016-2019 among all Medicaid MCOs.**

PROVIDER SATISFACTION SURVEY RESULTS OVER THE LAST THREE YEARS

From 2017 to 2019, scores on 26 measures on our provider satisfaction survey improved.

Table C.9-7 WellCare of Kentucky Provider Satisfaction Survey Results 2017-2019

Composites	Attributes	2017	2018	2019
Overall Satisfaction	Would you recommend WellCare of Kentucky to other physician practices?	89.5%	93.4%	91.6%↑
Overall Satisfaction with All Other Plans	How would you rate WellCare of Kentucky compared to all other health plans you contract with?	89.9%	93.2%	91.1%↑
Overall Satisfaction with WellCare of Kentucky	How would you rate your overall satisfaction with WellCare of Kentucky?	70.6%	92.1%	90.7%↑
Provider Relations	Do you have a Provider Relations representative from this health plan assigned to your practice?	73.7%	75.3%	74.0%↑
	Provider Relations representative's ability to answer questions and resolve problems.	88.9%	94.0%	91.6%↑
	Quality of provider orientation process.	82.6%	90.7%	89.7%↑
	Quality of written communications, policy bulletins and manuals.	87.9%	93.6%	92.2%↑

Composites	Attributes	2017	2018	2019
Network/Coordination of Care	The number of specialists in this health plan's provider network.	81.8%	91.0%	94.5%↑
	The quality of specialists in this health plan's network.	89.1%	95.3%	97.9%↑
	The timeliness of feedback/reports from specialists in this health plan's provider network.	94.7%	94.3%	94.9%↑
Utilization and Quality Management	Access to knowledgeable UM staff.	89.4%	93.5%	93.1%↑
	Procedures for obtaining pre-certification/referral/authorization information.	83.3%	86.2%	86.8%↑
	Timeliness of obtaining pre-certification/referral/authorization information.	83.3%	87.4%	88.9%↑
	The health plan's facilitation/support of appropriate clinical care for patients.	87.1%	94.0%	94.1%↑
	Access to Case/Care Managers.	85.1%	93.6%	93.2%↑
	Degree to which the plan covers and encourages preventive care and wellness.	90.2%	94.8%	96.5%↑
Health Plan Call Center Service Staff	Ease of reaching health plan call center staff over phone.	88.9%	90.0%	89.0%↑
	Process of obtaining Enrollee information (eligibility, benefit coverage, co-pay amounts).	95.1%	95.5%	94.5%
	Helpfulness of health plan call center staff in obtaining referrals for patients in your care.	92.5%	94.6%	91.7%
	Overall satisfaction with health plan's call center service.	92.8%	94.3%	91.3%

Composites	Attributes	2017	2018	2019
Finance Issues	Consistency of reimbursement fees with your contract rates.	87.9%	91.1%	89.0%↑
	Accuracy of claims processing.	84.5%	88.9%	89.9%↑
	Timeliness of claims processing.	87.9%	94.5%	92.5%↑
	Resolution of claims payment problems and/or disputes.	79.4%	83.0%	83.5%↑
Pharmacy	Consistency of the formulary over time.	83.4%	93.5%	92.9%↑
	Extent to which formulary reflects current standards of care.	83.4%	93.8%	91.5%↑
	Variety of branded drugs on the formulary.	78.5%	86.3%	85.8%↑
	Ease of prescribing your preferred medications within formulary guidelines.	80.0%	87.0%	86.6%↑
	Availability of comparable drugs to substitute those not included in the formulary.	81.1%	86.3%	89.0%↑

AREAS FOR IMPROVEMENT, STRATEGIES TO ADDRESS IMPROVEMENT AND EXAMPLES OF WHERE THESE STRATEGIES HAVE BEEN EFFECTIVE

Although we deliver the highest level of provider satisfaction in Kentucky according to the past two provider satisfaction survey results, we have continued to make improvements aimed at reducing provider administrative burden. Our analysis of the results over the past three years revealed areas of improvement in claims processing and coordination of care between PCPs and specialists. In response, and in order to continue to improve upon our provider satisfaction, we implemented Provider Summits, Provider Focus Groups and created a Provider Advisory Panel as previously discussed. Based on provider feedback in these forums, we implemented a variety of strategies to improve provider satisfaction.

2018 overall provider satisfaction for WellCare of Kentucky was 92.1%, a 21.5% improvement over 2017

STRATEGIES TO ADDRESS IMPROVEMENT

Claims Processing Improvement

- Removed authorizations on 1,422 procedure codes
- Implemented dedicated Issue Resolution Team to perform root cause analysis on claims issues and improve systems to better serve our provider partners
- Improved our auto assignment algorithm and evaluated membership quarterly perfecting panel assignment to providers based on claims attribution

Coordination of Care Improvement

- Made 24/7 live reviews available for Behavioral Health providers
- Introduced AccuReports, Quality Scorecards, and other tools that increased our ability to share relevant performance data
- Implemented a "Gold Card" program for BH providers, which rewards inpatient facilities for their performance with key utilization metrics by only requiring prior approval of an admission with no concurrent review for medical necessity. Early results indicate increased provider satisfaction and decreased administrative burden for BH providers
- Deployed PCAs, QPA and OARs to support improved provider satisfaction

EXAMPLES OF WHERE THESE STRATEGIES HAVE BEEN EFFECTIVE

Applying the strategies listed above, WellCare of Kentucky was able to improve provider satisfaction with respect to call center/member services staff, claims processing and coordination of care from 2017 to 2019.

Claims Processing

- Timeliness of WellCare of Kentucky's claim processing increased by 5%
- WellCare of Kentucky's resolution of claims payment problems or disputes increased by 5.1%
- Accuracy of WellCare of Kentucky's claim processing increased by 5.2%
- Consistency of reimbursement fees with your contract rates increased by 1.2%

Coordination of Care

- Do you receive feedback/reports from specialists regarding Enrollees in your care increased by .2%
- Quality of specialists in WellCare of Kentucky's network increased by 9.8%

10. Utilization Management

C.10. UTILIZATION MANAGEMENT

a. Describe strategies the Vendor will implement to identify and reduce inappropriate utilization of services, including emergency departments. Address the following at a minimum:

i. Proposed approach to using data to inform the Vendor's efforts to improve appropriate use of service and cost efficiencies, as well as to identify potential Fraud and Abuse referrals.

ii. Overview of the Vendor's methods for monitoring appropriate health care utilization, including two examples of identified negative trends, initiatives undertaken to improve them, and the results of these initiatives.

iii. Frequency in which the Vendor proposes to re-evaluate its approaches to identify need for adjustments (e.g., re-evaluation of existing prior authorization requirement for appropriateness)?

b. Describe the Vendor's proposed Utilization Management (UM) Program, assuring that it addresses requirements of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices." In the description, include information about the following, at a minimum:

i. Approach to align the UM Program with the Department's required clinical coverage policies.

ii. Proposed evidence-based decision support tool(s).

iii. Innovations and automation the Vendor will implement, for example, to reduce provider administrative burden under the UM Program.

iv. Methods and approach to balance timely access to care for Enrollees with the administration of the UM Program

v. Approach to integrate medical and behavioral health services in the UM program.

vi. Approach to ensure UM Program is compliant with mental health parity.

vii. Approach to ensuring accountability for developing, implementing, and monitoring compliance with Utilization policies and procedures and consistent application of criteria by individual clinical reviewers.

viii. Processes and resources used to develop and regularly review Utilization Review (UR) criteria.

ix. Prior Authorization processes for Enrollees requiring services from non-participating providers or expedited Prior Authorization, including methods for assuring services are not arbitrarily or inappropriately denied or reduced in amount, duration, or scope.

x. How the Vendor will use its Utilization Management Committee to support Utilization Management activities.

C.10. UTILIZATION MANAGEMENT

a. Describe strategies the Vendor will implement to identify and reduce inappropriate utilization of services, including emergency departments. Address the following at a minimum:

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 20.0 Utilization Management of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix,** provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

STRATEGIES TO IDENTIFY, REDUCE INAPPROPRIATE UTILIZATION OF SERVICES: AN OVERVIEW

We understand the important role we play in the coordination of a care delivery system that assures Enrollees access to all appropriate and medically necessary services. And we also understand our role in assuring a sustainable program for the Commonwealth by having a utilization management program that is defined by national and community-standard evidence-based guidelines and includes the following core components:

- An integrated continuous monitoring process
- Active and informed high-quality providers
- Engaged and empowered Enrollees
- Innovative systemic solutions

From 2016 to 2018 WellCare of Kentucky has achieved a **12.9% reduction** in ED utilization

Continuous monitoring: Reducing inappropriate utilization of services requires us to first identify the misuse and to fully understand the drivers of that utilization pattern, as well as the interventions that will be most successful in addressing those drivers. Our UM monitoring program integrates into our organizational quality improvement program and leverages both data analytics and our deep knowledge and understanding of the Kentucky landscape over the past eight years. Continuous monitoring efforts, described in more detail to our answer to i. below, are overseen by our Quality and Affordability Initiatives (QAI) Team. This cross-functional team is led by Medical Director Dr. Howard Shaps and Chief Operating Officer Ben Orris and includes leaders from every segment of our integrated clinical, quality and network operations. With formal meetings at least twice a month combined with daily and weekly off-schedule reviews of utilization trends, this group uses our suite of advanced data reports (shown below) to identify over and under-utilization trends and put solutions in place at the provider, Enrollee and system levels to address those trends. Solutions are unique to the trend identified and can range from simple provider and Enrollee education (i.e. a mailing on appropriate ER use) to changing prior authorization requirements, such as implementing first-time Opioid prescription limits. Details of our monitoring strategies are provided in our responses to the questions below.

Once identified, our strategies to reduce inappropriate utilization are applied at the provider, Enrollee and system level.

Informed Providers: Managing appropriate utilization requires us to work closely with providers at every level of care, sharing data and Enrollee-specific information with them, to help them

coordinate the right care for our Enrollees at the right time. We start this effort with our intensely local provider engagement model (with staff placed across the state) and extends to how we educate and inform providers through electronic data sharing and with personal engagement by our provider relations representatives and Quality Practice Advisors. We give providers detailed reporting on care needs of individual Enrollees and equip them with tools to help close those gaps in preventive and chronic condition care. Through our quality and utilization monitoring oversight, we identify negative trends at the individual provider level and support interventions, including direct engagement from Dr. Shaps or another one of our clinical leaders to discuss challenges facing the provider in improving the quality of the care they are providing. We also leverage prior authorizations on certain higher levels of care or more costly services to help us stay engaged with the provider to ensure alignment with standards of care. Our authorization team ensures the Enrollee has the right services at discharge or step down from an acute care hospital to avoid future inappropriate or avoidable utilization. Finally, we leverage value-based payment methodologies to incent providers to better coordinate Enrollee care to ensure Enrollees are getting medically necessary services at the right place and right time. For example, our shared savings arrangements with certain high-volume primary care providers give those providers a share in savings generated for reducing inappropriate ER use, which incents them to extend hours or outreach to their patients for preventive care visits. **Table C.10-1** shows other provider-based strategies aimed at reducing unnecessary utilization.

Table C.10-1 Provider-Based Strategies for Reducing Unnecessary Utilization

Strategy	Description
Medical Necessity Criteria and Prior Authorization Process	Based on Inter-Qual national for evidence-based clinical guidelines, our medical necessity criteria for certain services helps guide providers in selecting the most clinically sound course of treatment for Enrollees and helps us work directly with providers during the prior authorization process (include doctor to doctor peer review process) to prevent unnecessary utilization. We educate providers on criteria and guidelines both at the time they contract with us and continually as criteria and requirements are updated.
Care Needs Data Sharing	We use multiple modalities to share care needs, including our "Appointment Agenda" which tells a physician in one view, everything the Enrollee needs during that visit to be compliant with evidence-based preventive and chronic care clinical guidelines.
ED High Utilizer Information	This information is given to providers monthly via in-person PR Rep visits, email and/or by secure FTP to providers to empower them with information about their patients so they can address any non-emergent conditions the enrollee may have, educating the enrollee on the cost benefits of coming to the PCP office for non-emergent conditions and developing a long term care plan to help improve the Enrollee's health.

Strategy	Description
On-Site Care Coordination Support	Through our care gap discussions with providers, we found many were engaged and eager to address gaps in care but lacked resources needed to conduct member outreach and follow-up. So, we placed WellCare employees in select network provider offices or group practices and focused on scheduling appointments for targeted members with identified gaps in care signifying underutilization of healthcare services (i.e. annual well visits, immunizations or other preventive services). We also provide in-person nurses in two of our largest high-volume hospitals to help those facilities with discharge planning directly. Our nurses engage directly Enrollees and the hospital staff and address post discharge needs to prevent avoidable hospital readmissions.
Provider Score Card Program	We complete quarterly and monthly provider scorecards, which uses claims and authorization data to track utilization trends at the provider level. WellCare's clinical and quality integrated leadership team conducts onsite quarterly visits with providers to review the data and help sort out unfavorable trends. They conduct follow-up in-person visits as necessary.
Integrated Provider Portal	The provider portal tells providers if a member has had an emergency room visit, what medications they are taking and what care gaps they have open. It also allows providers to close those care gaps by submitting data through the portal interface with WellCare so we can appropriately track open preventive and chronic care gaps and target interventions most effectively to members who have continuing health care needs.
PCP P4Q Program	Providers receive bonus payments for closing for closing key preventive and chronic care needs, which we know ultimately support more appropriate utilization of services.
Behavioral Health P4Q program	We introduced the BH P4Q program in 2019 in order to address the prevalence of BH conditions in Kentucky. Unique to WellCare of Kentucky, this program offers bonus payments to all 14 Kentucky CMHCs and BH hospitals including Bourbon Community, Sun Behavioral Health, The Ridge, Lourdes and Baptist Corbin for improving BH-related measures such as Antidepressant Medication Management, Medication Adherence to antipsychotics and Follow-up after BH Inpatient hospitalization. In only five months, nearly $30,000 in bonus payments have been paid to providers and 738 care needs have been closed as a result of the new BH P4Q program.

Engaged Enrollees: When Enrollees are engaged in their health care, they are more likely to make the right choices, including choosing primary care over an ER visit, for example. Our enrollee engagement efforts begin with our initial outreach to screen Enrollees to ensure they are getting the services they need and educational materials, like EPSDT periodicity letters, that empower Enrollees to engage in their healthcare by telling them about necessary preventive care and how to access services. We watch Enrollee behavior closely through data reporting and use predictive analytics to identify Enrollees at risk for over-utilizing certain services

unnecessarily. We intervene at the Enrollee level through intense outreach and education such as outreach calls to close open care needs and we contact our Enrollees who do not have a PCP visits within the past year to ensure they are getting proper preventive healthcare. And when we see trends across populations, like increases in NICU rates for babies with neonatal abstinence syndrome (NAS) we collaborate with our provider and community partners to bring about larger scale initiatives to address the underlying drivers of the trend. (One example related to NAS rate increases is the work we are doing with the introduction of our ACT for Opioid program that works to prevent Opioid misuse in the first place and we connect Enrollees to evidence-based SUD services, including medication assisted therapy, earlier in their addictions). Also critical to our engagement with Enrollees is our proprietary approach to addressing social determinants of health. Through our Community Connections program, we are able to help Enrollees who may use healthcare services inappropriately because of social barriers (i.e. using the ER to help get a warm place to stay) by leveraging our database of more than 300,000 social services and our peer supported social services through our Community Connections call line to connect Enrollees to services they need and track them to ensure they received the needed service.. **Table C.10-2** shows other enrollee-based strategies aimed at reducing unnecessary utilization.

Table C.10-2 Enrollee-Based Strategies for Reducing Unnecessary Utilization

Strategy	Description
Transitional Care Support and Outreach	We place nurses in high-volume hospitals to engage Enrollees before they discharge to support their discharge plan or in the ED in real time. The nurses collaborate with the hospital staff to improve the efficiency of efforts between the hospital and health plan team for all aspects of care management, service authorizations and discharge planning.
24-Hour Nurse Line/BH Crisis Line	Enrollees are provided a nurse advice line they can call when they are uncertain about a condition or whether the Enrollee should make a trip to the ED. The nurses triage the call and provide advice on the best course of action. They also provide follow-up information to our Population Health Management (PHM) staff as needed. We see an average of 83.1% of triage callers to the line are diverted to non-emergency resources. The Behavioral Health Crisis Line is a dedicated 24-hour call line that assists members in crisis due to behavioral health condition. We assisted more than 237 members through our Behavioral Health Crisis Line through the first quarter of 2019.
Care Management Interventions	For those who are frequent users of the ER, we provide another layer of intensive care coordination with our WellCare at Home, field-based care management program. This high-touch care management model uses RNs and licensed social workers and field outreach coordinators to meet Enrollees in-person and outreach telephonically on a frequent basis. With care managers in every region of the Commonwealth, they meet with Enrollees in their homes and communities to provide assessment, care planning and monitoring of interventions. In 2018, members enrolled in our Filed Based Care Management program experienced a 22% reduction in ED utilization 12 months

Strategy	Description
	following their enrollment compared to the 12 month period prior to their enrollment.
Ensuing PCP Visits	One of our most useful metrics to reduce ED utilization as well as avoidable hospital admissions is to ensure that our members are using their assigned PCPs as their medical home. To address this, we identify when our members have professional visits with other network PCPs to determine if they are utilizing another provider other than their assigned PCP. Each quarter we submit PCP changes to reassign the member to the provider they are frequently visiting for care. In the first quarter of 2019 WellCare has already reassigned the PCP for 8,658 members.
Efforts to Find Difficult to Reach Members	We employ varied approaches to finding difficult to reach Enrollees who may not be engaging in their preventive and chronic condition care, but may be admitted the hospital for an ambulatory sensitive condition or ED unnecessarily. We use data mining techniques to find updated contact information and "feet on the street" efforts to knock on doors directly. We to partner with community social service providers to help us find Enrollees and ask these social service providers to contact us when they do find our hard to reach member. We specifically hired three dedicated Member Outreach Coordinators in Region 8, which is particularly challenged with isolation and Enrollee engagement challenges, to find Enrollees. After implementing that program, we saw a **more than 16% reduction in utilization of high-cost services for those Enrollees served.**
Value-Added Services and Enrollee Incentives	We have designed a thoughtful expanded benefit package with the goal of improving quality and reducing unnecessary utilization. Within this package, we offer our Healthy Rewards program, designed to incent Enrollees toward healthy behaviors like seeing their PCP. Enrollees receive a gift card for accessing preventive health screenings, PCP visits, Well-Child visits, prenatal care visits, well-women visits (including mammography, cervical cancer and chlamydia screenings), diabetes HbA1c screenings and eye exams, and preventive dental care among others.
Support Finding Alternatives to the ED	Members can access the member portal and receive text messages on specific health topics including preventive care via our mobile app, empowering them to make more informed decisions on their healthcare and avoid unnecessary trips to the ED. They can also use it to map out the closest urgent care center as a preferred option if it is after hours or their PCP is not available.

Innovative Systemic Solutions: Sometimes, we find identified over- or under-utilization of services being driven by larger challenges within the care delivery system. When we see those trends, either through our data analysis, through our stakeholder engagement or through collaboration with DMS and other MCOs, we seek to implement broader solutions. These solutions can be such initiatives as offering a provider an alternative payment contract to

expand access to care through urgent care centers, increasing the number of available billable behavioral health outpatient services or tackling the systemic lack of transportation in certain underserved areas of the state. This is why our Community Connections program, for example, expands beyond our database and referral process to services and includes our Community Impact Councils (CICs) and Community Health Investment Program. We use our CICs, which include engagement with local community stakeholders such as public health departments and social service organizations, to identify a need in the community that is impacting quality health care outcomes and to help find shared solutions. It's also why we prioritize access to services and collaborate with providers regularly to expand access and availability to needed services, such as adding advanced telehealth services with the opening of Direct to Consumer telehealth options. This service can ultimately prevent overutilization of unnecessary services.

i. Proposed approach to using data to inform the Vendor's efforts to improve appropriate use of service and cost efficiencies, as well as to identify potential Fraud and Abuse referrals.

Addressing Utilization of Unnecesary Services in a Holistic Way: An Example

In 2016, WellCare of Kentucky developed the METS program, which is now WellCare's national model. Based on SAMHSA's 10 Fundamental Components of Recovery, this integrated, holistic recovery-oriented program is for Enrollees in care for an extended period with high utilization associated with their outpatient services who might be able to graduate to self-care with other supports We assign targeted Enrollees a dedicated, specially trained METS care manager who develops a current clinical picture, including medication history. After establishing a clear clinical profile, the care manager presents the Enrollee in a Treatment Team Review (TTR) meeting. The multidisciplinary TTR meeting identifies barriers, strengths, and other factors to develop the care manager's next steps to follow-up on the Enrollee's case and develop a tailored Roadmap to Recovery. Results for program participants include a 54.7% reduction in total visits, a 6.1% reduction in emergency department use, and an increase in pharmacy use – suggesting improved medication adherence. For these Enrollees, the total cost for professional behavioral health visits dropped by 35.7%. By ensuring Enrollees are in the right levels of outpatient care, we are able to free-up the system to manage new Enrollees or Enrollees immediately after crisis in the community.

USING DATA BEGINS WITH COMPREHENSIVE DATA ANALYTICS AND REPORTING

The QAI Team uses an array of data to inform our efforts to improve appropriate use of service and cost efficiencies. The data analytics we leverage also help us spot outlier trends that can identify potential fraud and abuse referrals. Our Enterprise Information Management System (described in our response to question C.27 Contractor Reporting Requirements), gathers data from a variety of sources (i.e. claims, authorizations, operational metrics, etc.) and serves as the backbone of our utilization data reporting and analytics infrastructure.

Based on specific data analytics pulled from multiple sources including medical and pharmacy claims and authorizations, we track trends to detect potentially preventable events, outlier facilities, PCPs and specialists with unusual trends, instance of fraud, waste and abuse, high-utilizing members and cohorts, condition specific outliers, as well as unexplained region-specific variances. We also look at data by membership type (ABD, TANF/CHIP and Expansion) to spot any unusual trends. As described in our example of a negative trend asked for below, this kind of analysis helped us see, the sudden and drastic uptick in ER utilization by newly insured Enrollees in the Expansion population and allowed us to implement solutions specific to that phenomenon.

The centerpiece of our approach to using data for healthcare transformation is our comprehensive suite of daily, weekly, and monthly operational reports. All of our reporting is driven by organizational needs and the specific functions we need to meet as a managed care organization. **TableC.10-3** Reports used in Utilization Management contains just a sample of the reports which are frequently review by our QAI leadership to identify trends, outliers or emerging issues and explanations of how the data is used to address over and under-utilization trends.

TableC.10-3 Reports used in Utilization Management

Data/Report	Description
ED Utilization	Examines ED utilization trends across several informative cohorts including facility (to examine spikes in frequency), procedure codes (to allow for coding review and ancillary service utilization), region, line of business and age grouping.
ED High Utilizer	For the last 12 rolling months, this report reflects the enrollees who are assigned to the respective provider group and/or IPA who have utilized the ED, how many visits they have had; which hospital they have utilized; when the last emergency room visit was; what their most frequent diagnosis was during all of their visits; and how much WellCare has paid for the enrollee's ER utilization during the respective number of ER visits. This report helps the PCP to address any non-emergent conditions the enrollee may have, educating the enrollee on the cost benefits of coming to the PCP office for non-emergent conditions. This helps the PCP develop a long term care plan to help improve the enrollee's health. This report is distributed monthly via in-person PR Rep visits, email and/or secure FTP.
Pharmacy Utilization Reports	Reflect a provider's generic dispensing rate (which helps mitigate cost), breaks down the provider groups/IPAs individual prescriber profiles, which helps address any therapeutic equivalent recommendations and ensures that the enrollee receives consistent care which reduces unnecessary medical costs.
Physician Profiling	With a focus on primary care providers, the report examines a PCP's specific member attribution experience using claims data. The report details expense and utilization across a wide array of service categories including inpatient, outpatient, ED, behavioral health, professional and pharmacy, with even

Data/Report	Description
	greater granularity under these cohorts. The metrics examined include utilization/1000, utilizing members, high cost specialist referrals and to whom, and performance against predefined targets.
Authorization review	Produced three times per week, this report trends inpatient, outpatient, post-acute care and behavioral health authorizations by specific lines of business including TANF, ABD, Expansion and Foster Care comparing to predefined targets and other similar state's performance. It details the volume of authorizations/1000 approved and authorizations/1000 requests not meeting evidence-based medical necessity criteria.
P4Q Portal Reports	Includes web portal and drill down capabilities, which QPAs and PR Reps provide to WellCare of Kentucky providers monthly, provides a snapshot of care gaps for their enrollees tied to performance payments, allowing them to prioritize those measures that will result in the most improved enrollee health outcomes.
Performance Scorecards	Contains measures tied to quality objectives, Total Cost of Care, and Key Performance Indicators such as ED utilization, IP utilization, and IP readmissions.
Behavioral Health Specialization Report:	Monthly report detailing services offered at professional BH practices, allowing for the sharing of areas of expertise not noted by provider type or licensure and streamlines the referral process.
Members Without PCP Visits for 16 Months:	Included with the respective identifying enrollee information, and respective Primary Care Provider information, this is a detailed list of WellCare Enrollees who have not had a PCP visit within the last 16 months.
30-Day Readmission Report	Reflects Enrollees who have been readmitted to the hospital as an inpatient within the last 30-days; detailed information regarding both admission and re-admission including the facilities of both admissions, diagnoses, and respective amounts paid.
High Cost Member Report (reflecting claims >$50K)	Report of Enrollees who have claims over $50,000 (catastrophic claims) for the last 12 months; includes claim category with the amount paid over $50,000—inpatient hospital, outpatient, emergency department, physician office, or pharmacy; distributed monthly via in-person PR Rep visits, email and/or secure FTP.
Top 10 Claims Denials Report	Top 10 claims denial reasons for the respective provider group/IPA for the preceding month; summary dashboard of the claims denial reasons; breaks down the claims denials by tax ID/practice; distributed monthly via in-person PR Rep visits, email and/or secure FTP.

Data/Report	Description
IPA Funding and Expense Report	Primary financial report utilized by provider groups/IPAs in VBP arrangements. The report shows the provider's Medical Loss Ratio (MLR) and is distributed monthly via in-person PR Rep visits, email and/or secure FTP.
PCP Peer Group Comparison (for non-value based contracted providers/IPAs):	For provider groups/IPAs not in a VBP arrangement, reflects the provider group/IPAs premium, MLR, risk, and breakdown of claims expense: inpatient, outpatient, ED, physician office, and pharmacy. The report benchmarks the respective provider group/IPA against all other PCPs in the state, and breaks down the provider group/IPAs individual providers by the respective report segments.
Care Needs Reports	The Care Needs Report shows the outstanding Care Needs, such as a mammogram or colon cancer screening, for specific Enrollees, allowing the provider to address the outstanding Care Needs to help improve quality outcomes; distributed monthly via in-person QPA visits.
Specialty Provider Report	We have the capability to evaluate our specialty providers, such as cardiologists and orthopedic surgeons. This is performed using medical episode grouper technology which accounts for member risk profiles and helps us determine which specialists deliver the most efficient care.

USING THE DATA TO INFORM PROGRAMS TO REDUCE UTILIZATION

Each report is used in varying ways to address unnecessary utilization. Our QAI team, for example, uses the ED High Utilizer data to identify Enrollees with the highest rates of ED use and to examine the data for trends beyond the individual Enrollee, such as shared providers, diagnoses, population type, previous engagement in our Population Health Management (PHM) program, etc. That data is then further used to support the next levels of interventions such as sharing the names of high utilizers with PHM staff to enroll them in care management and with their primary care providers to support PCP-level interventions. If trends show an outlier of ED admissions in a particular region or with a particular hospital, Community Connections staff may be engaged to identify what challenges that community faces that are driving individuals to the ED unnecessarily.

Other examples of how some of the data identified above is used include the following:

PCP Utilization Data: Our quality team staff use this data to conduct direct outreach to Enrollees who haven't seen their PCP to help them make an appointment and make sure they are getting necessary preventive care. We know, for example, that a woman who gets her cervical cancer screens timely can avoid more challenging and higher cost health conditions in the future.

Authorization Data: Reviewed at regular frequency, we use authorization data to spot trends early (without having to wait for claims to come in) and to identify any upticks in denials that may require us to review our authorization criteria or application. Using this data, we're able to work directly with providers to ensure they understand the evidence-based medical necessity

criteria and that it is being applied appropriately in more "real-time" than data just based on claims.

Care Needs Data: Showing up in several different reports, care needs are an essential component of our utilization management strategy. We use this data to trend needs at the individual Enrollee, provider and even regional level. We share open care needs, such as lacking immunization or other preventive care service, with providers so they can close those needs with their patients. We also share them with Enrollees through the secure Enrollee portal so they can see what services for which they are due, and finally, we map care needs regionally looking for trends across a community to bring in broader interventions like "WellCare Days" with a local provider where we target larger groups of Enrollees to set up appointments and close care needs all at one time.

USING DATA TO IDENTIFY FWA AND SUPPORT COST EFFICIENCIES

These varying data sets, along with advanced data sources used specifically by our Special Investigations Unit detailed in our response to question C.26 Program Integrity, also help us spot potential cases of Fraud, Waste and Abuse (FWA) in the system. By looking, for example, at utilization data by code type and provider type, we can identify unusual spikes in utilization of a specific service that tend to indicate at least some level of waste, if not outright fraud or abuse.

For example, during a Monthly Utilization Review meeting in the first quarter of 2016, we identified an emerging trend occurring during a review of our outpatient utilization report that is regularly examined. This drove further analysis of the spike and we quickly identified the provider type and specific procedure code responsible for the increase in utilization. Over the course of just two months, nearly all of the 14 Community Mental Health Centers (CMHC) began billing Therapeutic Rehab (TRP) under a procedure code H2019 as a result of a significant increase in reimbursement in that specific code, going from approximately $20 per hour to nearly $35 per 15 minute increment. Utilization for that particular code had not varied from baseline for the previous two years. Through a combination of education with the CMHCs and collaboration with DMS, we were able to address any misuse of the code with zero impact to Enrollee care.

ii. Overview of the Vendor's methods for monitoring appropriate health care utilization, including two examples of identified negative trends, initiatives undertaken to improve them, and the results of these initiatives.

METHODS FOR MONITORING APPROPRIATE HEALTH CARE UTILIZATION

In the previous section, we discussed the data, tools, and reporting capabilities that form the foundation of our strategy to monitor and reduce inappropriate utilization of services and support our fraud, waste and abuse activities. While analytical tools and reporting provide a solid foundation to identify problem areas, it is through monitoring and taking action on business intelligence that our analysis is transformed into interventions and improved outcomes for WellCare and DMS.

We employ a comprehensive, periodic, and thorough review of all regular information generated through the tools and reports listed in the previous section. Our analytics exist to inform our staff and drive improvements, and in order to ensure that process leads to continual improvement, we employ a regular cadence of review and analysis by our leadership and subject matter experts to review and react to our data.

Our QAI Team, led by Dr. Shaps and our integrated leadership team, meets bi-weekly at least to discuss trends in cost of care, quality and affordability and to conduct a financial review of our operations. During the Cost of Care meeting, we review several of the reports listed above to spot trends, both positive and negative medical expense trends. The team looks for opportunities to drill down into the data and develops remediation efforts when negative trends are identified. During Quality and Affordability meetings, we review not just cost trends, but also trends in specific utilization metrics (sometimes medical expense can go up even as utilization goes down due to increased service costs which is also a trend worth noting), as well as payment trends (i.e. spikes in claims denials, etc.)

This monitoring activity is further supported and bolstered by the broad experience of the larger WellCare organization, which provides additional monitoring of Kentucky trends, comparing to national standards and monitoring the local team's activity to ensure long term financial sustainability. WellCare conducts Quarterly Business Reviews for all of its Medicaid markets. Attended by the company's executive leadership team, these reviews help monitor trends on a quarterly basis and allow leaders the opportunity to drill down on trends that may be local to a particular state or emerging trends across Medicaid populations that require broader solutions. Another way our national expertise supports monitoring of utilization in Kentucky is with our FWA activities. We meet monthly with Program Integrity professionals who bring their broad experience across our affiliated health plans to help us identify unusual trends that could be identified as fraud or abuse and require further investigation and notification to DMS.

Review of trends or performance against national standards does not end with our formal series of regularly scheduled meetings. During our normal meeting cadence we use our standard reporting to identify areas for additional research and insight. WellCare takes the larger trends identified in the structured setting and creates new investigative reports, task forces, or ad hoc analytics to probe more thoughtfully into the major issues identified by our standard reporting.

From all of this monitoring activity, we develop remediation activities and the QAI team monitors those remediation efforts with subsequent reporting. This quick process of Continuous Quality Improvement (CQI) allows us to make changes in remediation in near real-time and to address new and emerging trends quickly. Below we show two examples of negative trends we identified through our monitoring efforts and the steps we took to address them, along with results.

Example #1: Avoidable Emergency Department (ED) Utilization

Identifying the Trend: Following the launch of the Expansion population in 2014, we began serving nearly 140,000 new Enrollees that were previously not covered under traditional

Medicaid. By about 2016, our regular monitoring as described above showed a nearly 5% spike in ED utilization that was not only unusual within the Kentucky program, but was a significant outlier among WellCare affiliates across the country. By looking at the data by population type and through our on-the-ground knowledge of the people we serve, we quickly identified the root cause was related to the Expansion population, many of whom were accustomed to receiving their primary care through the emergency room.

Implementing Solutions: In addition to pulling on the variety of ED Diversion strategies described in the response above, we initiated targeted interventions that included the following strategies:

- PHM Intervention: We broke the individual high utilizer report down further and identified those Enrollees who would be most likely to benefit from Chronic Condition Management or Complex Care Management interventions and referred those Enrollees to our PHM staff for outreach and enrollment into care management. We know that Enrollees engaged in care management have a dramatic and lasting reduction in avoidable ED utilization.
- Telephonic Follow-Up Outreach Campaign: We called Enrollees who had a non-emergency ED visit and educated them on the use of the PCP for non-emergent issues and helped them connect to their PCP.
- Provider Engagement: We increased our sharing of high-utilizing information with PCPs, specifically showing them non-emergent use. Our quality and provider relations staff collaborated with providers on outreaching to new Enrollees and helping them understand the role of the PCP. This was especially helpful for those providers who had a risk-arrangement with WellCare. When ED utilization decreased, WellCare was able to reward these providers with additional financial payments.
- Emergency Department Engagement: We shared with facilities information about how to refer Enrollees to care management, and we shared with them our Community Connections capabilities, so we could jointly help Enrollees who were being treated in the ED unnecessarily because of social service barrier.

Results: Between 2016 and 2018, we saw an overall decline in ED utilization of 12% attributable to the targeted and ongoing interventions we put in place to address unnecessary utilization.

Continuing Approach to Address Unnecessary ED Utilization

We continuously work to expand our network of urgent care providers available to our members. Statewide we have 168 contracted urgent care centers in our Kentucky network. WellCare has worked directly with First Care, and organization that has chosen to invest in Kentucky through expansion of Urgent Care clinics in rural areas of the Commonwealth. We have fueled their launch of new facilities over the last three years through contractual agreements that incentivize appropriate triage of members, treatment and discharge. The cost of an urgent care visit is nearly 75% less costly than the ED, and eliminates unnecessary risk to the Enrollee of being in an acute care hospital setting. Following the opening of the new urgent care center through our partnership with First care, we saw an immediate 15% reduction of ER visits at facilities within the geographic catchment area of the sites.

Example #2: Preventing Inpatient Hospital Readmissions

Identifying the trend: It is not unusual for Medicaid utilization trends to be hidden when reviewing information at a high level. WellCare regularly examines information beneath the surface to determine if there are unfavorable trends emerging by line of business, region, facility or age cohort to name a few. In 2018 we experienced a 3.3% year over year increase in our Aged, Blind and Disabled (ABD) inpatient readmission rate which went from 18.0% in 2017 to 18.6% in 2018. Identifying drivers of the adverse trend, we saw a need for ABD Enrollees to be more engaged in their discharge planning and after-care and a greater need for collaboration for discharge services.

Implementing Solutions: In addition to the Enrollee, provider and system level strategies to reduce inappropriate utilization, we implemented targeted initiatives to address this adverse readmission trend, including the following efforts:

- Enhanced Discharge Planning Collaboration: Our care management, UM and provider relations team began collaborating on clinical rounds for Enrollees identified through our predictive discharge algorithm, known as LACE+, as being at the most risk for a readmission. We run the predictive scoring algorithm at the time of admission and throughout the stay to identify risk. Our collaborative team works to identify discharge needs (including behavioral, physical, pharmacy and social needs). We worked closely with the hospitals, including placing care coordinators in certain high-volume hospitals, to collaborate on discharge plans ensuring that needed services such as DME or home health were in place when the Enrollee goes home.
- Care Management Integration: When it becomes clear through our discharge efforts that an Enrollee will need more intensive follow-up, our PHM staff is engaged for follow-up and referral to Chronic Condition Management or Complex Care Management.
- Medical Leadership Engagement: A key strategy for addressing inpatient readmissions includes intense local engagement with individual hospitals. Dr. Shaps worked extensively with hospitals systems throughout the state as we saw the spike and trend (and ongoing) to provide education and discuss methods to prevent avoidable inpatient hospital readmissions. Hospital systems across the state included, but were not limited to, the University of Kentucky, St. Elizabeth Healthcare, Norton Healthcare, KentuckyOne and Baptist Health. Meetings and collaboration with key stakeholders which included hospital or health system leadership, consisted of reviewing historic readmissions data, profiling high-risk patients, providing WellCare resources upon hospital discharge such as connecting discharging members with social gaps in care, and assisting with arranging post-acute care.
- Enhanced Data Exchange: We have used admission, discharge, and transfer data to stay better informed on Enrollee discharge status and to inform our providers when an Enrollee has a change in status so they can be empowered to help prevent an unnecessary readmission.

Results: With the greater awareness and focus on our ABD enrollees through the first 6 months of 2019, our ABD readmission rate has improved by 7% and currently running at 17.3%; the lowest readmission rate we have achieved for the ABD population since inception.

iii. Frequency in which the Vendor proposes to re-evaluate its approaches to identify need for adjustments (e.g., re-evaluation of existing prior authorization requirement for appropriateness)?

We update our CPT and HCPCS Codes annually in accordance with CMS guidance. Our Medical Director Dr.Shaps meets with the team on a regular basis (both through monthly and quarterly activities), to review the need to make adjustments through the variety of monitoring activities noted above.

To illustrate WellCare's commitment to process improvement, WellCare updated its outpatient authorization rules in 2018 to provide consistency across all outpatient places of service. This resulted in a reduction of authorization requirements by almost 10,000 codes, taking into account all sites of service. Additionally, WellCare will update authorization rules, either adding or removing the authorization requirement as needed after feedback is presented by both internal and external stakeholders. This is based on internal data, suggestions from providers, or to promote high quality care. As an example of our rapid ability to respond to changes in healthcare, WellCare recently removed the authorization requirement for Cologuard, a new technique that Enrollees can use at home to be screened for colorectal cancer.

Many other factors contribute to the frequency by which we adjust our approach to prior authorization requirements. WellCare realizes the importance of staying updated with new technologies and procedures. By staying up-to-date, we can make determinations as to which services may or may not need an authorization. Our network providers, comprised of both behavioral health and medical providers, who participate in our quarterly Utilization Management Advisory Committee make suggestions on our clinical coverage and practice guidelines that align with our authorization requirements. Finally, due to our national presence, we can look to other markets to scale best practices. The can occur on a scheduled basis, but often occurs ad hoc.

b. Describe the Vendor's proposed Utilization Management (UM) Program, assuring that it addresses requirements of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices." In the description, include information about the following, at a minimum:

WellCare of Kentucky has a well-documented, fully-integrated, Enrollee-centered utilization management program that serves over 430,000 Enrollees across all 120 counties. Our utilization management program connects with our with our fully integrated population health management program through CareCentral, our clinical IT platform that offers a single 360-degree view of every Enrollee which empowers staff and our providers to address Enrollee needs in real time. WellCare's utilization management program was built specifically for Medicaid and ensures that all services approved are in accordance with 42 CFR 440.230.

Nationally, WellCare performs more than one million authorization reviews for Medicaid Enrollees annually, including an average of 800,000 outpatient pre-service, 200,000 inpatient, and 200,000 retrospective, or post-service, reviews, as represented in below.

The program assesses the Enrollee's needs on a case-by-case basis to ensure every Enrollee has the opportunity to receive the most effective and appropriate services in the least restrictive setting of their choice and to reduce variations of care. Through our experience, we have built

our UM program around six guiding principles that are integrated within and reinforced throughout our systems, processes, policies and staffing.

- *Effective:* The criteria and processes by which we evaluate requests for services are based on current scientific, evidenced-based guidelines with proven results in improving outcomes.
- *Safe:* We manage and coordinate utilization of services with an aim of connecting Enrollees to care which is helpful and not harmful.
- *Timely:* We aim to prevent unintended delays, and we monitor our staff and processes to ensure accessibility and promptness consistent with our Enrollees' health needs.
- *Efficient:* We seek to reduce waste by creating value, monitoring health outcomes relative to cost, and minimizing errors. We also continually apply process improvement methodologies.
- *Equitable:* Our safeguards assure that our Enrollees, regardless of diagnosis, race, age, ethnicity, primary language or socioeconomic status, receive appropriate, high quality care.
- *Person-Centered:* We connect Enrollees with culturally, socially and linguistically-appropriate healthcare that empowers health care decision-making.

Our utilization management program features:

- A written Utilization Management Plan that aligns to items A-L described in Section 20.1 Utilization Management Program
- An organizational structure with clear lines of accountability for policies and individual determinations
- Aligned accountability and processes to facilitate the development and review of Enrollee-centered care and service plans
- Processes for determining medical necessity through highly-experienced, well-trained personnel with medical and UM expertise to address Enrollees' person-centered needs
- Defined processes and evidenced-based data sources to identify services subject to prior authorization
- Proven processes to develop and maintain review criteria for both physical and behavioral-based services as well as methods to ensure authorized services are delivered
- Flexible policies and process that provide for the authorization of services from out-of-network Providers as well as expedited reviews of requests for services when needed
- Comprehensive oversight and evaluation to ensure consistency of reviews
- Effective systems to allow for the easy recognition of initial and continued authorizations
- Defined processes for accurate, consistent assessment of medical necessity

i. Approach to align the UM Program with the Department's required clinical coverage policies.

CLINICAL COVERAGE POLICIES

Under the leadership of our CMO, Dr. Shaps, we tailor our UM program, specifically designed for government sponsored plans, to align with each unique Kentucky requirement. Our UM program is based on nationally-recognized, evidence-baseddecision support methodologies

adapted to and by Kentucky standards. This approach supports the evaluation of requestedservices and adoption of DMS's coverage guidelines upon request. WellCare works with our Regulatory leads to maintain compliance at all times. WellCare takes a hierarchical approach to the medical necessity and clinical criteria we use in reviewing requests for services. All policies and guidelines will be aligned to Kentucky's requirements and any state regulations. The Medical Policy Committee (MPC), Utilization Management Advisory Committee (UMAC) and Kentucky Quality Improvement Committee (QIC) are responsible for all published and utilized policies, procedures and guidelines. Kentucky-specific guidelines will be the top of the hierarchy. While clinical judgment may supersede the guidelines, in general these are evidence-based and aid Providers with their own medical necessity determinations. The guidelines utilized support quality and efficiency of care by establishing guidance to improve care for behavioral health, chronic disease, and preventive care. Guidelines are reviewed annually and revised as necessary. When there are differing opinions noted by national organizations, WellCare will default to the Enrollee's benefit structure as deemed by state contracts and Medicaid and Medicare regulations. If there is no specific language pertaining to the topic, WellCare will default to the following:

- CMS guiding criteria (NCDs/LCDS)
- Federal regulations
- National Committee for Quality Assurance (NCQA) requirements
- InterQual or other nationally recognized, evidence-based criteria
- WellCare Clinical Coverage Guidelines
- Behavioral Health Criteria such as: American Society for Addiction Medicine (ASAM) Criteria; Level of Care Utilization System (LOCUS); Child and Adolescent Utilization System (CALOCUS); Children and Adolescents Needs and Strengths (CANS); Early Childhood Services Intensity Instrument (ESCII)
- Hayes, Inc. Online™ (Medical Technology)

To validate existing guidelines or create proprietary new ones, Dr. Shaps and his team, meet with guideline methodologists annually or more frequently per state requirements. We conduct an extensive review of industry literature and apply clinical evidence, healthcare knowledge, and familiarity with our Member populations. We also incorporate the opinions of national organizations including CMS, the NCQA, the United states Preventive Services Task Force (USPSTF), National Quality Strategy (NQS), Agency for Healthcare Research and Quality (AHRQ), state Medicaid offices, and medical specialty societies; and meet NCQA requirements for Health Plan Accreditation. Along with WellCare's Clinical Coverage Guidelines, all other UM policy/procedure documents are aligned with Kentucky-specific requirements and all UM staff are trained in the use of these requirements during their initial on-boarding orientation, when updated or when needed.

ii. Proposed Evidence-Based Decision Support Tools(s)

WellCare uses commercially available, evidence-based guidelines for Utilization Review criteria where available. These criteria, such as InterQual Guidelines for inpatient severity of illness and intensity of service, are updated annually, are industry standard guidelines, and are based on well-established clinical practice guidelines and physician consensus panels. WellCare uses

Clinical Coverage Guidelines for UM review for procedures that do not have specific InterQual coverage. The purpose of WellCare's Clinical Coverage Guidelines (the "Guidelines") is to guide health care coverage determinations for the Enrollees. The Clinical Coverage Guidelines address selected clinical issues and medical services that are new or emerging. These medical services or procedures generally exhibit significant variation in utilization and practice pattern, and generally warrant additional sources of expertise. Some examples are procedures performed for cosmetic purposes, or that involve the treatment of a rare disease. The Guidelines are interpreted in conjunction with the Enrollee's specific benefit plan and in consultation with the treating physician. WellCare makes actual coverage decisions on a case-by-case basis and clinical judgment may supersede the Guidelines.

For behavioral health services, we also use ASAM criteria for medical necessity determination and have strong, clinically-sound CPGs for Medication Assisted Treatment and opioid-based treatment.

WellCare staff are supported by our industry leading guidelines and criteria for standard physical and behavioral health services to ensure decisions are fair, impartial, consistent and evidence-based. Standards and decision support tools are shown in **Table C.10-4**.

Table C.10-4: Evidence-Based Review Tools

Guideline Category	Summary
InterQual Review Manager	A nationally recognized decision tool for level of service, length of service, discharge planning readiness and level of care
ASAM	American Society of Addiction Medicine (ASAM)
Behavioral Health Guidelines	Level of Care Utilization System (LOCUS) & Child and Adolescent Level of Care Utilization System (CALOCUS) for adults & children, respectively; and Guidelines from leading organizations (i.e., the American Society of Addiction Medicine, Substance Abuse and Mental Health Services Administration) for behavioral health & substance use disorders
Children and Adolescents Guidelines	Child and Adolescent Service Intensity Instrument (CASII) or the Child and Adolescent Needs and Strengths Scale (CANS); for young children; Early Childhood Service Intensity Instrument (ECSII)
Clinical Coverage Guidelines	Appraisals and guidance for 200+ procedures and services Range of topics including DME, Disposable Incontinence Products, Food and Lodging Services, Oral Function Therapy for Feeding Disorders and other benefits

Guideline Category	Summary
Hayes, Inc. Online™ (Medical Technology)	Hayes is a subscription based tool utilized by the medical directors to solidify medical necessity as well as to research new procedures and technologies, subject to approval by DMS
eviCore Guidelines	Advanced radiology (i.e., MRI, CT), cardiology (i.e., advanced imaging), radiation therapy management, pain management, sleep management, PT/OT/Speech services, molecular and genetic lab testing
HealthHelp	Medical oncology and radiation guidelines to help providers optimize cancer treatment protocols
CMS Guidelines	Guidelines as defined in the contract National Coverage Determinations (NCD), Local Coverage Determinations(LCD) used in Durable Medical Equipment (DME) reviews

iii. Innovations and automation the Vendor will implement, for example, to reduce provider administrative burden under the Program.

We are proud of the partnerships we've forged with Kentucky providers over the past 8 years, and we respect their concerns related to administrative burdens. That's why we have continued to innovate with DMS and our provider partners on ways to ease the administrative burden within the UM process. Just some of the solutions we offer include the following:

"WellCare has been the easiest managed care organization to do business with. Claim issues, authorization problems, or quality questions are addressed quickly by making a call to our Provider Relations Representative or Quality Practice Advisor. They are one of the few companies that provide resources such as these to assist with questions and concerns."
– CONNIE CASTLE, PRACTICE MANAGER, QUANTUM HEALTHCARE ASSOCIATES, HAZARD, KY

Common Authorization Form: To help our providers with timely authorization, we prioritize use of the common authorization form and educate providers on its use. We limit the number of repeated contacts with requesting providers in our policies and procedures because managing utilization effectively through the provider community supports the most significant quality outcomes.

Automation for Select Authorizations: Even before Kentucky Senate Bill 54 was passed, WellCare was making changes to the prior authorization process, adding transparency for providers, automating where possible to reduce turnaround time, and reducing the administrative burden--all in an effort to help providers serve our Enrollees better. Our authorization alignment initiative was designed to enhance the consistency and timeliness of our service authorization processes and better coordinate care for our members. We

implemented change to our existing Prior Authorization code rules in an effort to alleviate administrative burden placed on providers. As a result of this change we developed a uniform outpatient Prior Authorization rule set, allowing us to remove variability between procedures and their relationship to place of service. The initiative had a direct effect in making it easier for a Provider to request a Prior Authorization and receive a consistent and faster determination. Improvements included:

- **Net reduction of individual codes requiring review: 1,422**
- **Added codes that go through auto approval once the request is data entered; the system generates auto approval, decreasing time**

Electronic Request Intake process: Providers can request authorizations electronically, through the WellCare portal or through a standard 278 file exchange. Additionally, we have begun accepting pharmacy requests through e-prescribing modules within providers' electronic medical record. So, when a provider enters a prescription into their EMR, it is automatically forwarded to us for authorization and approval if it requires Prior Authorization (PA). For example, our Georgia health plan accepts most PA requests electronically (into CareCentral) through a state hosted authorization platform.

24/7 Provider Portal: Our fully integrated Provider Portal allows providers to see all important and necessary information about their patients, including our Member 360 view reflecting all relevant clinical and utilization history (such as screenings, comprehensive assessments, admissions/readmissions, medications),eligibility verification, PCP assignment, authorization history, and status, claims status , service and benefit limits, care need reports, preferred drug list, important updates and notices, Multidisciplinary Team (MDT) team contacts, and population health training materials. This one-stop shop, with a single sign-on, allows provider offices to spend their time on what matters most, providing care and service to their patients, as opposed to spending time gathering information necessary to receive payment.

UM Call Center: Our UM Call Center is open seven days a week for authorization questions or concerns. Behavioral health UM staff, including a UM Supervisor and Medical Director is available 24-hours a day, and we facilitate pharmacy PA 24-hours a day. Additional medical professionals are also available after hours.

Authorization look-up tool: Our authorization look-up tool allows providers to quickly discern which services require authorization and the appropriate guidelines to help them provide the best information to make a medical necessity determination. We accept medical information in whatever form is easiest for the provider through web portal, fax, or other means.

Provider Training and Support: We offer web based training and FAQs that are available for providers to address any questions about the UM process. At a provider's request, we may also offer in-person or telephonic consultation to address gaps in knowledge. We also provide on-site provider education from a WellCare specialist for those providers who have higher than anticipated denial rates. We monitor our provider Net Promotor Score closely and have seen improvements as a result of changes in our authorization processes which also leads to improved Member satisfaction due to the streamlined process.

Gold Card: We have "gold carded" certain behavioral health providers, which allows those providers to manage utilization of their patients for certain services without having to request PAs through us if they show consistent decision making against national guidelines.

Authorization Streamlining: Based on provider feedback and other expert guidance, WellCare undertook an initiative to review the application of prior authorization (PA) requirements and medical necessity criteria on more than 10,000 individual codes across 22 different specific outpatient places of services. Through this detailed initiative, we streamlined our PA protocols down to 3,500 codes with the most clinical variation, and eliminated the requirement for providers to indicate specific outpatient places of services. Each of these code reductions have dramatically improved the speed of services for Members, and enable our providers to spend more time thinking about care and less time thinking about system functions.

iv. Methods and approach to balance timely access to care for Enrollees with the administration of the UM Program.

The administration of our UM program requires the appropriate clinical information be provided at the time of the request. To balance timely access to care Enrollees, we have provided education to our providers so they know up front what is necessary, prior to submitting an authorization for services. Our associates and medical directors review all aspects of an Enrollee's clinical profile housed in CareCentral as well as the clinical circumstances to inform the decision-making process to reduce the number of provider contactsWe are consistent in providing timely authorizations to ensure that enrollees are able to get the right care at the right time. If after review of the Enrollee's record, additional information is needed, prior authorization nurses outreach to providers and field care managers to obtain the needed clinical information. As needed, our provider relations team can help. Finally, our providers have the liberty to discuss cases with Dr. Shaps as well as WellCare's medical directors who review service authorization requexts by following a well-defined process.

Our policies ensure covered services are furnished in an amount, duration and scope that align with an Enrollee's person-centered needs and care planning goals. We do not arbitrarily deny or reduce benefits in amount, scope or duration solely because of an Enrollee's diagnosis, type of illness or condition.

We will meet the requirement for timeliness standards for Kentucky as outlined below:

- Standard Authorization Request: Two business days upon receipt of request, with an extension up to 14 days, upon request – Today, **99% of prior authorization requests are processed within 24 hours**
- Expedited Authorization Request: If determined to be an expedited request, we will turn the request around within 24 hours
- Substance Use Disorder (SUD) Request: Is considered an Expedited Authorization Request which we will turn around within 24 hours
- Post-Services (Retrospective) Review: Completed within 14 days with an extension up to 14 days, upon request

- Written Confirmation: In accordance with Enrollee rights and responsibilities, and upon request, written confirmation of our decision is provided within three days, if initial decision was not in writing
- Peer to Peer Outreach: We make our doctors available for peer-to-peer outreach with our network providers to discuss individual cases and move quickly on authorizations. This process allows our communicty based clinicians to discuss member needs and collaborate on an evidence-based plan of care.
- Dedicated Expedited Team: Our dedicated team helps expedite authorizations for services requiring that level of expedition. This team allows for quick decision making and appeal if necessary.

v. Approach to integrate medical and behavioral health services in the UM program.

INTEGRATION OF MEDICAL AND BEHAVIORAL HEALTH SERVICES IN THE UM PROGRAM

WellCare has built a fully integrated, person-centered model of care – the hallmarks of which are that all services are managed within our one entity, using one comprehensive approach, leveraging one integrated team, supported by one single system, CareCentral, built specifically to serve Medicaid (and other government) programs. In our UM program, we manage all domains with WellCare associates including medical, behavioral and pharmacy. This integration is critical as it helps us better manage Member holistic care based on individual need. Often, when a company carves out BH, UM decisions are determined strictly by mixed-services protocols leading to denials based on siloes of care (i.e. the need being labeled as a "physical health" need or a "behavioral health" need.) This fragmentation can leave the provider to work between multiple entities and the Enrollee lacking needed care.

At WellCare, we do things differently. Our UM nurses and social workers look at Enrollee needs holistically. If a provider is requesting inpatient psychiatric care, we train and alert our social workers to evaluate for co-morbid physical conditions that may be triggering the Enrollee's psychiatric condition. They are able to see this because medical management platform shows a single integrated view of the Enrollee regardless of primary condition. They are then able to confer with our multi-disciplinary team of nurses, psychiatrists and other medical professionals to help the provider determine the best course of treatment and ensure the Enrollee gets clinically-guided care to match their specific co-morbidities. And upon discharge, the integrated discharge team can create a discharge plan that address both medical and behavioral needs. Because of our single integrated platform and integrated staff, we are able to establish medical necessity and facilitate Enrollee transitions without further burdening the providers or Enrollee in the process. Some key features of our integrated approach to UM include the following:

Single, centralized UM Platform: We developed CareCentral, our clinical and care management platform, to house all BH and physical health UM and authorizations into a single Enrollee view. Fully integrated with our single claims systems, it provides a complete view of each individual's health record, medication history, unmet health-related resource needs, claims history, authorizations, and care plans. All clinicians and service providers have access to this complete picture of individual Member needs across the entire spectrum of care when considering authorization decisions and utilization trends.

Integrated Clinical Leadership and Staff: Local clinical leadership represents physical, BH, pharmacy, , and social services expertise, and is integral in designing and implementing cohesive population health strategies and programs to improve health outcomes and enhance care coordination and Member satisfaction. Dr. Shaps and our local BH medical director integrate into local clinical leadership to conduct joint rounds and consult on cases with multiple comorbidities. We conduct multidisciplinary rounds to collaborate on the coordination of care for our Inpatient Enrollees. This approach provides an opportunity for a team review of the clinical reasons for the Member's admission to determine the appropriate path to discharge and remove any barriers that exist to effective transitions. Through this approach we review outpatient service requests and consider the Member's entire history in the context of a requested service. We devote significant attention to investigating the nuances of integrated service delivery, soliciting perspectives from an array of providers and community advocates.
Integrated Guidelines: One hundred percent of our CPGs emphasize integration of physical and behavioral health across health domains.

vi. Approach to ensure UM Program is compliant with mental health parity.

MENTAL HEALTH PARITY

WellCare was an early adopter of utilization management policies in support of mental health parity rules in consultation with our state partners. **Attachment C.10.b.vi WellCare Parity Submission Form** shows our compliance with mental health parity requirements and regulations. Because our services are provided in house, we were able to review the service requests, perform complex parity analysis on Enrollee access by type, category and location of service. We are responsible for all UM activities. In addition, policy and criteria changes were implemented by a single team inside a single system without the need of negotiating with an outside vendor. This single team gets feeback from both our internal BH and medical directors and receives feedback from our UMAC members. These UMAC members have both a BH and medical backgrond.

We continually support compliance with mental health parity by:

- Making sure our utilization grids comply with mental health parity
- Providing ongoing expert consultation and recommendations regarding compliance with MHPAEA as specified in the benefit plan
- Verifying medical management techniques applied to mental health or SUD benefits are comparable to and applied no more stringently than the medical management techniques that are applied to medical and surgical benefits
- Ensuring the criteria for medical necessity determinations for mental health or SUD benefits are available to Enrollees, potential Enrollees, and network providers by making our level of care and coverage determination guidelines available online
- Ensuring plan benefits include a clear description of the behavioral levels of care and covered services
- Maintaining a clear and easily accessible process for filing appeals and complaints, which complies with regulatory requirements
- Offering robust provider network and monitoring the availability of providers

- Providing a clear reason to Enrollees and providers for any denial of reimbursement or payment with respect to mental health or SUD benefits

Our UM Program complies with federal laws and regulations on mental health parity, including the Mental Health Parity and Addiction Equity Act (MHPAEA), and federal regulations. We do not require referral for behavioral health services, and we ensure that Enrollees have access to a mental health or substance dependence assessment without requiring prior authorization. Specialty services like psychological testing require authorization, which similar to authorization for medical specialty providers. To ensure ongoing compliance with parity requirements, we established and maintain a cross-functional task force with executive leadership support that audits, monitors compliance, and collaborates to ensure behavioral health and substance use disorder services remain in parity compliance with physical health services. The task force conducts a thorough review of the impact of MHPAEA to all key functions covering our benefits, clinical management processes, and network contracting.

In 2017, WellCare developed a template analysis document, using the CMS Parity Compliance Toolkit, published in January 2017 as a guide. The document is the basis for assessing our compliance with the MHPAEA. Within it, there are five sections, each addressing a specific parity component. Those are: Benefit Classification; Analysis of Financial Requirements, Quantitative Treatment Limitations (FRL), and Aggregate Lifetime and Annual Dollar Limits; Non-Quantitative Treatment Limits (NQTL); and a Compliance Monitoring Plan. **Our internal audits have shown we are consistently within parity along each domain.** We will leverage this experience continuously monitoring our compliance to annually submit a completed standardized parity analysis workbook, developed by DMS, to demonstrate compliance. To ensure ongoing parity, we have accountable leaders in our Product team and our PHS team responsible to review parity status, along with Kentucky behavioral health leaders including our Behavioral Health Medical Director Dr. Timothy Houchin and Lori Gordon, our Director of Behavioral Health when we have changes with benefits or UM authorization requirements. Our template analysis document was submitted to the Commonwealth for their submission to CMS for compliance.

vii. Approach to ensuring accountability for developing, implementing, and monitoring compliance with Utilization policies and procedures and consistent application of criteria by individual clinical reviewers.

ENSURING ACCOUNTABILITY FOR DEVELOPING, IMPLEMENTING, AND MONITORING COMPLIANCE WITH UM POLICIES AND PROCEDURES

To ensure accountability for the development, implementation and monitoring compliance with UM Policies and Procedures, WellCare of Kentucky has two primary teams dedicated to support these activities: the UMAC and the QIC. A formal process of tracking is used for each activity with senior leadership accountable for each area.

Development of Policies and Procedures

Our Chief Medical Director for Medical Management oversees a dedicated team that is responsible for development and updating of all UM medical and behavioral P&Ps. The team consists of research writers and analyst working directly with Medical Directors and UM

operation leaders to develop P&Ps that align with DMS' contract requirements. All P&Ps are tracked and submitted for a two-level approval process in our internal C360 (Compliance) system. All P&Ps are reviewed and updated annually and more frequently as we are notified of updated state requirements. With notification of updates or changes in DMS' policy, the appropriate P&P is pulled for update with specific state addendums to memorialize the change. Additional tracking and approval is then performed by the assigned physician reviewer/approver.

To prepare for implementation of the P&Ps, a dedicated team of documentation writers prepare step by step document tools (Step Action Tool - SAT) to assist in the training of our UM staff. These SATs are role based documents that provide support to the process outlined in the P&Ps. Our Vice President of UM Operations has accountability for the UM leadership to review and sign off on the SATs that will be the basis of our initial implementation training and ongoing up-training.

Implementation of Policies And Procedures

Our Vice President of UM Operation and National Chief Medical Director are accountable for the accurate implementation of the UM P&Ps. Supporting both leaders is our Enterprise Learning and Development team. To prepare our associates for implementation of the Kentucky P&Ps, a robust training program is developed by a dedicated team of trainers. The training team consists of Trainers and Designers who have knowledge of the UM SATs/P&Ps and system workflows. Using these tools, they create a curriculum that is role based and provides training on operational process application, clinical criteria application and system documentation application.

Upon hire, all clinical services staff responsible for medical necessity reviews complete a two-week orientation followed by four weeks of classroom-based, instructor-led training. All training is tracked in WellCare University, our platform that provides education to our associates.

Following training, newly hired associates are subject to routine compliance assessments to ensure appropriate review completion, including timeliness, case notes, evaluation criteria, use of prior authorization tool, and notifications. Additionally, we perform ongoing audits of clinical documentation and review decisions of all staff throughout the year to ensure accurate and consistent application of criteria. As training and education are ongoing processes, WellCare provides its clinical reviewers with scheduled case studies to review and complete throughout the year. These reviews reinforce our commitment to inter-rater reliability (IRR) to proactively track and monitor decision-making so it is both consistent and evidence-based.

Monitoring Compliance with Policies and Procedures

Our commitment to ensuring consistent application of criteria is further demonstrated through our investment in our Dedicated Performance Monitoring Team. In partnership with the UM departmental leadership, clinical (licensed) associates within UM-medical and behavioral, and appeals are identified and participate in monthly performance review with audit tools approved by UM leaders. The UM Performance Monitoring Team comprises 10 licensed auditors, completes three reviews per assigned associate monthly to measure adherence to UM

performance requirements. Monthly audits of random, targeted samples, measure adherence to department processes and quality process measures. Audits are used to ensure WellCare is meeting contractual requirements such as turnaround times, Enrollee experience and outcomes. We evaluate important elements of needs assessment, discharge planning, Enrollee engagement, care coordination, follow-up for goal achievement, and Enrollee needs in medical necessity reviews. UM teams who are responsible for identifying opportunities for improvement and taking action receive summary reports, including staff training and coaching. The team also compiles and analyzes data to identify trends related to associate, team and departmental performance. This data report is made available in SharePoint and reviewed monthly in business meetings with UM leaders. We formally track and review Performance Monitoring results in our monthly Business Performance Governance meeting.

Our KY UM leaders are accountable to address areas that need improvement and take the appropriate action including team up-training and individual coaching. For associates with compliant review performance scores, UM leaders meet with individual associates. Each leader completes coaching sessions for associates within 30 days of a completed audit and is included in Associates annual performance review.

Inter-Rater Reliability Testing (IRR)

WellCare also conducts online IRR testing using a commercially-available IRR product for all clinical review staff involved in assessments, service plan development, and utilization decisions. We use nurse and team/plan-specific effectiveness reports to include work load/productivity and approval rates that help us identify needs for process, system, criteria updates or other training. At least annually, our staff completes the interactive assessment through a variety of case scenarios for their respective areas of focus (e.g., behavioral health, durable medical equipment) and must assess if the services are to be approved or denied. All associates tested must achieve at least 85% on their IRR assessment. Those scoring less than 85% undergo training, coaching, and additional oversight until they achieve desired performance expectations. Continued poor performance results in additional disciplinary action including termination of employment.

Out of 123 associates 80% passed on the first try. Of those who didn't 96% passed on the second attempt.

viii. Processes and resources used to develop and regularly review Utilization Review (UR) criteria.

WellCare is continuously enhancing our proprietary coverage to meet the needs of those we serve. We have 126 proprietary physical health, behavioral health and pharmacy guidelines in our library. These guidelines reflect evidence-based practices from leading specialty associations, colleges and societies (i.e., American Psychiatric Association, American Geriatrics Society, American Diabetes Association) as well as peer-reviewed literature and studies.

Our guidelines address the quality of clinical care and non-clinical services, including availability, accessibility, coordination and continuity of care. Our clinical leadership team and guideline methodologists review thousands of articles each year to validate specialty society and society guidelines or to create proprietary guidelines when those do not exist. They then apply the

clinical evidence and their knowledge of health care and the populations we serve to create our evidence-based guidelines.

MEDICAL POLICY COMMITTEE (MPC)

The MPC, our dedicated guidelines and fully integrated oversight committee, oversees the development and maintenance of guidelines. MPC is comprised of all corporate and market physical and behavioral health medical directors. Beyond implementation of existing guidelines, the MPC monitors the need for new guidelines, called Clinical Coverage Guidelines and oversees their development and maintenance. Clinical Coverage Guidelines are reviewed annually and approved by the Medical Policy Committee prior to being sent to the UMAC committee. MPC uses a variety of inputs to determine need including utilization management and clinical data, variance in care data, information regarding new treatments and technology as well as feedback from providers, Enrollees, staff and others. Our in-house pharmacy team promotes adherence to AHCA guidelines. Medical policy recommendations and decisions are then reviewed by our Utilization Medical Advisory Committee (UMAC) as described below.

To ensure alignment with Medicaid benefits and policy, we evaluate our universe of existing guidelines, against the Commonwealth of Kentucky's requirements and other sources to identify if additional guidelines are needed, as may be the case for some select home and community-based services (HCBS). If new guidelines are needed, we systematically review and develop the guidelines with input from providers, Enrollees, staff and others as necessary.

In addition to evaluating the need for new guidelines, we evaluate our existing guidelines for needed revisions for the Kentucky Medicaid membership. Guidelines are created internally, per our standard procedures, and submitted to Kentucky as part of our readiness review. As with new guideline development, revisions are analyzed against evidence-based practices from leading specialty associations, colleges and societies as well as peer-reviewed literature and research studies for rigor and clinical relevance. We assure that all nationally-recognized quality measures, are incorporated. We engage with local providers for additional input, where appropriate.

UTILIZATION MANAGEMENT ADVISORY COMMITTEE (UMAC)

Included in our development process is consultation with contracted health professionals to maximize the practicality and utility of final guidelines. This assures critical evaluation and modification against local standards and resources. We apply this practice in Kentucky where guidelines are reviewed by our UMAC.

Our UMAC represents a clinically integrated membership. We have participation from primary care physicians, nurse practitioners, psychiatrists as well as pediatricians and other specialists. Membership is geographically diverse with providers joining us from counties across the Commonwealth: 2 from Paducah, McCracken County; 1 from Jackson, Breathitt County; 1 from Louisville, Jefferson County; 1 from Glasgow, Barren County; 1 from Richmond, Madison County; 1 from Corbin, located in both Whitley and Knox counties.

The UMAC committee meetings are a great opportunity for the local providers to give input into policies and guidelines at the same time they take part in the approval process.

Attendance from Kentucky's medical and behavioral health medical directors and pharmacy director, clinical leadership and staff from various units including: Provider Relations, Risk Management, Appeals & Grievances and Quality add a comprehensive and interdisciplinary focus as we review guidelines and discuss educational and preventive initiatives for the Kentucky population. These reviews allow for a wide range of medical knowledge, including local community-based experience related to caring for our Enrollees. Upon UMAC approval, guidelines are submitted to the state for review. We apply proven strategies to integrate evidence-based guidelines into decision making for our Enrollees which is evaluated and shared with the UMAC, including:

- *Align accountability:* We align accountability for guidelines and clinical decision making under singular leadership within our clinical organization.
- *Use guidelines to develop care and service plans:* Our care managers use guidelines to develop person-centered care and service plans that describe condition-specific measurable health outcomes, guide care planning and development of individualized health outcome goals, offer guidance to build self-management skills, recommend condition-specific educational resources and supports, and provide pharmacology information.
- *Incorporate guidelines into medical necessity review criteria:* Our clinical coverage guidelines are incorporated into the clinical management platform, as we do for our other Medicaid and Medicare programs. Staff systematically engages with the guideline recommendations as they complete medical necessity reviews.
- *Apply evidence-based guidelines into development of discharge plans:* Concurrent review staff uses guidelines to prepare discharge plans for Enrollees with an inpatient admission.
- *Factor evidence-based guidelines into decisions about Enrollees education and covered services:* We assess Enrollees and provider education materials, covered services and more against guidelines to ensure alignment with recommendations and standards of care.

ix. Prior Authorization processes for Members requiring services from non-participating providers or expedited Prior Authorization, including methods for assuring services are not arbitrarily or inappropriately denied or reduced in amount, duration, or scope.

PRIOR AUTHORIZATION FOR NON-PARTICIPATING PROVIDERS

Our UM Prior Authorization team has processes implemented to address non-par provider requests. This includes understanding need for Continuity of Care and Transition of Care and other provider exceptions, such as second opinions. First, our team determines if there is a need for the Enrollee to remain with the non-participating provider, such as when the service is not provided by an in-network provider. In general, our process is to redirect our members to a participating provider. By following the standard UM process WellCare ensures that a consistent, repeatable process is followed for each request. If unable to re-direct, the non-par provider request follows the standard UM process. However emergency medical services provided by non-par providers for our members do not require an authorization.

We recognize, particularly when working with complex physical or behavioral health conditions, Enrollees may have existing relationships or specialized needs that fall outside of our

contracted network. These steps include assessing the quality of the provider, documenting expectations, coordinating care, and monitoring and assessing the care provided.

Because out-of-network providers are not credentialed with us, we may lack information about their qualifications. Therefore, prior to authorizing services, we first review and verify the provider's qualifications using a variety of methods including state and federal registries for sanctions, internal and external consultation and review of publicly-available databases.

Once a provider's qualifications have been verified and evaluated, we negotiate a single-case agreement with the provider clearly outlining the scope of what is authorized and terms of the agreement including that the provider must work directly with WellCare for services beyond the initial scope. Upon execution of the single-case agreement, we provide a WellCare-issued provider identification number to the providers, which is needed to access our systems

EXPEDITED AUTHORIZATIONS

Our UM team has an Expedited Team handles both in-network and out-of-network provider authorizations with a focus on timely, accurate turnarounds. The team monitors requests to ensure timely review and resolution of all requests. The team utilizes standard reports that are generated at regular intervals during the weekdays and on weekends/holidays.

ENSURING SERVICES ARE NOT ARBITRARILY OR INAPPROPRIATELY DENIED OR REDUCED IN AMOUNT, DURATION, OR SCOPE

WellCare of Kentucky has a process for a Medical Director to review specialty referrals, Inpatient stays and Outpatient services when established criteria does not reflect medical necessity which ensures appropriate utilization decisions are made. Our policies and procedures ensure covered services are furnished in an amount, duration and scope (42 CFR 440.230) and align with an Enrollee's person-centered needs and care planning goals. We do not arbitrarily deny or reduce benefits in amount, scope or duration solely because of an Enrollee's diagnosis, type of illness or condition or if services are provided by an in- or out-of-network provider.

To ensure appropriate utilization denial decisions, a Medical Director or Dr. Shaps may collaborate telephonically or in person with the PCP or attending physician.

The Medical Directors have access to board certified specialists for consultation if necessary when making a utilization decision in determining medical necessity.

Board-certified physicians are the only reviewers permitted to deny any request based on medical necessity. Additional board-certified medical directors support pharmacy PA requests on an ongoing basis. Our clinical reviewers are pharmacists and physicians who use their professional judgment to approve or deny requests based on clinical parameters. One hundred percent of our reviewing pharmacists hold a PharmD degree and are permitted to approve requests. These pharmacists may deny requests for administrative reasons only (i.e., missing clinical information) but not for medical necessity.

x. How the Vendor will use its Utilization Management Committee to support Utilization Management activities.

WellCare of Kentucky's Medical Director Dr. Shaps, oversees and exercises operating authority over the UM Program in the state and chairs the UMAC, a multidisciplinary committee comprising a range of providers within the WellCare of Kentucky network (e.g., Family Medicine, Internal Medicine, Pediatrics, Behavioral Health, etc.) and across the regions in which we operate. The UMAC includes executive and senior leadership from WellCare's departments such as Utilization Management, Care Management, Quality, Provider Relations, Network and Pharmacy. The UMAC gives providers a mechanism for actively participating in the review and approval of the health plan's clinical coverage guidelines. Additionally, the UMAC:

- Reviews and approves clinical policies, medical necessity criteria, treatment protocols as well as UM policies and procedures on an annual basis and more frequently as necessary
- Providing peer review of all professional and technical activities
- Provides feedback for WellCare's preferred drug list
- Evaluates performance of our vendor's utilization management performance
- Holds responsibility for reviewing UM activities and performance including identifying positive and negative utilization trends
- Provide recommendations to our QIC
- Reviews the UM program description and work plan on an annual basis

WellCare's external UMAC providers are charged with representing their peers throughout the state. This includes providing feedback regarding WellCare's current externally facing policies, performance of vendors, including the effectiveness of the vendor interacting with our provider network, and evaluating the overall utilization management performance of the plan. The services they evaluate include both Inpatient and Outpatient care, and includes both physical and behavioral health. Our external providers' feedback help shape future policy, take our local network into consideration and ultimately help improve member outcomes. For example, Dr. Donald Wilson, an Obstetrician/Gynecologist who works at Primary Plus in Lewis County provided direction for the utilization of 17-P, a medication used to prevent preterm birth, in rural Kentucky.

WellCare understands that improved member outcomes and the continued success of our performance in the Kentucky needs input from our provider partners. Quarterly meetings, along with ad hoc meetings, help us to enhance our outputs with affect both internal and external stakeholders. For instance, during a quarterly UMAC meetings Dr. William Mitchell, from the University of Kentucky, has provided useful advice regarding the approach to appeals that are frequently overturned and how to evaluate services provided to retro-eligible members. These meeting have helped to build relationships with our providers and strengthen our footprint in Kentucky. Our UMAC members continue to push us for improvement and are valued members of the WellCare team and WellCare community.

- Attachment C.10.b.vi WellCare Parity Submission Form (Provided Electronically)

11. Monitoring and Oversight

C.11. MONITORING AND OVERSIGHT

a. **Describe the Vendor's proposed approach to internal monitoring of operations to ensure compliance with this Contract.**

b. **Describe the Vendor's proposed approach to providing oversight of its Subcontractors, including examples of actions the Vendor takes when a Subcontractor is found to be non-compliant or when performance improvement opportunities are identified.**

C.11. MONITORING AND OVERSIGHT

WellCare of Kentucky complies with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 21 Monitoring and Oversight of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

As we have been an active participant in the Commonwealth of Kentucky for 8 years , we actively participate in all scheduled meetings, respond quickly to Department inquiries and findings from monitoring and oversight activities, respond to requests for corrective action plans, provide reports within the timeline required by and as requested by the Department, among other activities.

a. Describe the Vendor's proposed approach to internal monitoring of operations to ensure compliance with this Contract.

WellCare of Kentucky is committed to partnering and exchanging information and ideas with the Department of Medicaid Services in a shared effort to ensure compliance in the Medicaid Program. **WellCare of Kentucky's Chief Compliance Officer, Rebecca Randall, has been with our plan since the launch of the Kentucky Medicaid Managed Care Program in 2011** and serves as the primary contract for and facilitates communications between Contractor leadership and the Department relating to Contract compliance issues. As mandated under Section 9.2, she oversees WellCare's contract implementation of and evaluates any actions required to correct a contractual deficiency or noncompliance with the contractual requirements. Rebecca reports directly to the WellCare of Kentucky's Chief Operations Officer, Ben Orris. Members of our Fraud, Waste and Abuse team and the Special Investigations Unit team also have regular meetings with DMS' Program Integrity Team and have direct access to DMS staff to discuss cases they refer to DMS.

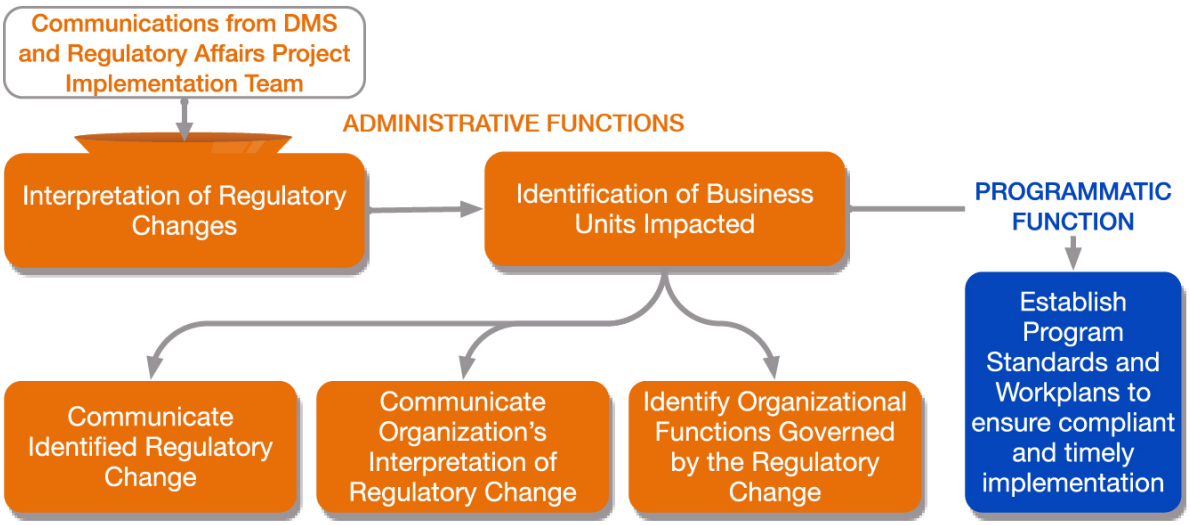


Figure C.11-1 Internal Compliance Monitoring Workflow

ADMINISTRATIVE FUNCTIONS

Our internal compliance monitoring program is closely aligned with the Centers for Medicaid Services (CMS) Model Compliance Program. Administratively, we work towards:

- Establishing a process for distributing and communicating new regulatory changes and contract modifications across the enterprise (including vendors); and
- Creating accountability for receiving regulatory information, operationalizing the regulatory requirements and monitoring performance against established standards (unless otherwise specified).

Examples of this include our established communication channel with DMS (KY_DMS_INQUIRY@wellcare.com) that ensures the regulatory team receives all communications (inquiries, directives, etc.) from the Department. The Regulatory Affairs Staff, led by Rebecca Randall, monitors this email box, Monday through Friday, 8:00 a.m. to 5:00 p.m. ET and is available during this time to respond immediately to any compliance related issues, concerns, complaints and/or inquiries. The Kentucky Regulatory Affairs Staff disseminates the information to appropriate accountable staff as needed. All entries are tracked until completed.

We also have a dedicated Regulatory Affairs Project Implementation Team that interprets regulatory changes and their potential impact to internal operational processes. This local team, led by WellCare of Kentucky's Chief Compliance Officer, Rebecca Randall, determines which business units are impacted and/or governed by the particular regulatory/contract change and provides the following, as depicted in **Figure C.11-1**:

- A synopsis of the identified regulation/contract change/legislation or the regulatory citation;
- the organization's interpretation of the regulation/contract change/legislation; and
- the identification of organizational functions governed by the regulatory change;

PROGRAMMATIC FUNCTIONS

Once new regulatory requirements are provided to impacted business unit(s).,the Regulatory Affairs Implementation Project team works closely with the various business units to establish program standards and work plans in accordance with specific regulations/contract requirements/legislation to ensure compliant and timely implementation.

The Regulatory Affairs team also documents changes through amendments to policies and procedures. New regulatory requirements are added when they become effective. All policies and procedures are reviewed annually (at minimum) by the Regulatory Affairs Team to ensure all regulatory requirements are documented and up to date.

Efforts are already underway to identify and interpret changes to the current contract defined in the RFP for this proposal which will take place upon contract award. Each identified change will follow our already established procedures for analyzing and implementing regulatory changes.

PROGRAM COMPLIANCE WITH STATE AND FEDERAL REQUIREMENTS

WellCare's compliance program is based on the seven elements of a compliance program which include:

1. Maintenance of standards and expectations of conduct in the form of a Code of Conduct and Business Ethics (“the Code” or “Code”),
2. Policies and procedures,
3. Education of our associates,
4. Maintenance of communication mechanisms to raise questions or report compliance concerns,
5. Monitoring of associate and company compliance with the internal policies and/or state or federal requirements,
6. Regular auditing, and
7. Use of appropriate discipline for instances of non-compliance.

Our program requires continual compliance with the rules, regulations and laws and encourages associates, members and providers to report suspected non-compliance through the maintenance of a non-retaliation policy.

WellCare of Kentucky has established a comprehensive compliance plan that further details each of the seven elements of our compliance program. WellCare of Kentucky submits its compliance plan as part of the annual EQRO Audit process and will also provide to the Department as needed as part of readiness review activities.

WellCare’s Compliance Department monitors all Board Members, Associates, Vendors, Contractors (Providers) and Subcontractors on a monthly basis. This monitoring includes review of Medicare/Medicaid Sanction Exclusion and Reinstatement reports, the List of Excluded Individuals and Entities, Medicare Opt-Out listings, System for Award Management Exclusions,

professional licensing actions and internal Provider performance monitoring through the collection and review of grievance and adverse event information.

DEDICATED COMPLIANCE PERSONNEL - LOCAL PRESENCE

In addition to Regulatory Affairs personnel, WellCare of Kentucky has a dedicated Market Compliance Director, Aubrey Harmon, who is located in Kentucky. Our Corporate Compliance department is responsible for promoting, executing and maintaining our compliance program and supports the culture of compliance required of all associates. Ms. Harmon functions as the local contact for the CCO and the Corporate Compliance department's functional units, and oversees the identification, tracking, mitigation, and reporting of operational compliance risks.

Ms. Harmon participates in executive team meetings and works with key business owners to develop a Compliance Risk Profile (CRP). The CRP is a continuous risk assessment of contractual and regulatory managed care obligations. Ms. Harmon reviews the risk assessment results and works collaboratively with business owners to determine requirements for which periodic monitoring will be performed by the business owner, and validated by the Market Compliance Officer.

WellCare's Corporate Chief Compliance Officer (CCO) oversees the operation, management, and execution of WellCare's compliance program, ensuring that the program is integrated into all operations of the organization. The CCO has a dedicated team of compliance professionals to provide oversight and monitoring of all activities.

WellCare of Kentucky also maintains a Market Compliance Oversight Committee (MCOC) that meets quarterly to identify and review key compliance risks, issues, and/or concerns related to legislative, regulatory, or contractual requirements, including those risks identified in the CRP. The MCOC promotes business engagement and open communication and coordination of compliance matters, regulatory notices, and compliance changes. Market Compliance Director, Aubrey Harmon chairs the MCOC, which consists of senior WellCare of Kentucky leaders including but not limited to, Bill Jones, State President, Ben Orris, COO, Terri Flanigan, Vice President, Field Health Services, and Bonnie Irvin, Vice President, Field Network Management.

WellCare's Chief Auditor is responsible for leading Internal Audit functions and reports to the Audit, Finance, and Regulatory Compliance Committee and has a dotted line reporting relationship to both the Chief Financial Officer and CCO. Audits may be conducted as part of an investigation of a reported issue or as a proactive means of monitoring regulatory compliance in areas of actual or potential risk. Specific to compliance, Internal Audit provides independent, objective assurance designed to add value and improve WellCare's operations by bringing a systematic and disciplined approach to evaluate the effectiveness of the organization's control, risk management, and compliance processes.

COMPANY-WIDE DEDICATION TO COMPLIANCE

Our compliance program also requires that all associates know and understand their individual responsibility to report all suspected incidences of noncompliance. Associates have easy access to numerous Corporate Compliance resources, including trainings, policies and procedures, our anti-fraud plan, our compliance plan and our Code of Conduct. WellCare's compliance reporting and inquiry system ensures efficient and confidential communication between the Compliance

Department, the CCO, associates, officers and directors, agents, first tier, downstream, and related entities, members, and other stakeholders. The Compliance Hotline and Web Portal are central components of WellCare's compliance reporting and inquiry system. By accessing the Compliance Hotline or Web Portal, associates and others can report compliance program violations 24/7. Hotline calls and web entries are reviewed by Compliance department staff and followed through with the assistance of department managers (e.g., Legal, Human Resources and Finance). Consistent with Compliance best practices, an independent third party vendor hosts the Hotline Web Portal, ensuring complete anonymity. Associates are obligated to report actual or suspected violations of the law or WellCare's Code of Conduct or policies. Callers who report violations may remain anonymous upon their request.

b. Describe the Vendor's proposed approach to providing oversight of its Subcontractors, including examples of actions the Vendor takes when a Subcontractor is found to be non-compliant or when performance improvement opportunities are identified.

SUBCONTRACTOR OVERSIGHT

WellCare recognizes and supports the enhanced oversight, transparency and reporting requirements for this new contract. Our Kentucky Subcontractor Oversight Team, led by Ben Orris, is supported by multiple subject matter experts across our company. As part of their negotiating and contracting processes, our National Network Performance Team ensures all required Kentucky-specific contract standards are included in our Kentucky subcontracts, and also aligns these standards with monetary performance incentives and penalties. In addition, our Network Performance Team handles initial subcontractor onboarding, including orientation to WellCare of Kentucky's processes and expectations, completion of pre-delegation documentation, and coordination of pre-delegation audits. Finally, our corporate Oversight Team uses their national purchasing experience to identify best practices from other markets, such as mobile Diabetic Retinal Exams, so that they can be incorporated to improve WellCare of Kentucky's operations and quality of care. They also periodically re-procure our subcontracts to ensure we are partnering with the strongest organizations and obtaining the best value for the subcontracted services.

After onboarding, the team continues to monitor performance. The Delegation Oversight team performs pre-delegation audits, monthly metric monitoring, annual audits, data analysis, and other focused audits of delegated subcontractors. The team uses a suite of audit and monitoring tools that are based on State and Federal requirements and National Committee for Quality Assurance (NCQA) accreditation standards.

Reporting deliverables, complaints and inquiries are tracked within LIONS and C360. In the instance of reports, each month, the Oversight Team generates a report of all deliverables due. If a Subcontractor is responsible for a regulatory report, the Regulatory Affairs team sends a reminder to the Subcontractor contact stating the due date. The report is to be delivered to the plan, with the appropriate attestation to accuracy, by the due date and the Regulatory Affairs team submits it to the Commonwealth. If a Subcontractor fails to deliver the report in a timely manner, they are subject to reimburse the plan for any penalties assessed by the Department. The issue is escalated internally to the Subcontractor management team who will determine if

further corrective action is warranted. Repeated violations of contractual obligations could be justification of contract termination.

Delegation Oversight uses a risk-based approach to determine the scope and frequency of post-delegation review by establishing an annual audit plan, conducting focused audits as needed, and ongoing monitoring activities. WellCare Delegation Oversight completed 781 in 2018; 80 of them specific to Kentucky Medicaid delegates. 88% of these audits were complete by December 31, 2018. Delegation Oversight initiates corrective action plans on delegated subcontractors as necessary and monitors their completion. If a delegated subcontractor fails to remediate the deficiency underlying the corrective action plan, WellCare imposes disciplinary action up to and including termination of the delegation agreement. Delegation Oversight's activities are managed through the company's governance tool, Compliance 360 (C360), which enables accurate tracking and reporting.

In addition to a formal annual audit, WellCare regularly monitors all delegated subcontractors through monthly scorecards. The results of these monitoring and oversight activities are discussed directly with the delegated subcontractors and the Kentucky Regulatory Affairs Team through Joint Operating Committee (JOC) meetings. These meetings include discussions of any performance issues, including outstanding corrective action plans and the status of remediation efforts. More detailed information regarding our subcontractor monitoring and oversight follows.

MONITORING PERFORMANCE

A key component of subcontractor oversight is monitoring the quality of work performed by the subcontractor. We hold regular JOC meetings with our subcontractors to monitor performance level reports and scorecards, identify and address service and quality issues, and design and execute quality improvement initiatives. We typically hold these meetings monthly, but for subcontractors with broader member impact, such as Dental and Transportation, we hold them bi-weekly (and even more frequently if needed, such as during Contract implementation). Key examples of our monitoring approach and its connection to the quality of work performed by our subcontractors include:

- Regular reviews of subcontractor complaint and grievance data, as these can be indicators of quality issues such as inadequate access to care (e.g. inability to find a dentist specializing in sedation treatment in a rural area);
- Analysis of HEDIS results and other measures of population health and quality of care;
- Identification and execution of innovative strategies to close care gaps and improve quality of care such as Mobile Dental and Vision screenings; and
- Sharing these results with our key quality governing committees (e.g. QIC and UMAC) and utilizing the feedback to improve subcontractor performance.

Our quality monitoring through our JOCs is supplemented by our Delegation Oversight Team's independent review of metric driven scorecards. Our Delegation Oversight Team has

established core functional scorecards that include metrics required under our Contract, NCQA standards, and other regulatory guidance. Scorecard metrics reported include, but are not limited to, service levels for utilization management, claims, customer service, case management, credentialing, provider terminations, encounter data reporting, network access and availability, and applicable HEDIS measures (e.g. for dental and vision services).

A total of 173 scorecards were received and reviewed during 2017 for WellCare of Kentucky subcontractors; 179 in 2018. Scorecards are received from subcontractors each month (quarterly for credentialing activities) by the 10th day of the following month. A Delegation Oversight auditor with appropriate subject matter expertise conducts a review to assess compliance. In addition to monthly scorecard reviews, our Delegation Oversight Team audits all of our subcontractors annually, and more frequently if explicit risks or deficiencies have been identified. The results of these scorecard reviews and audits are shared with WellCare of Kentucky's Regulatory Affairs and Compliance teams and if potential noncompliance is identified, an appropriate plan of action is agreed upon, possibly including a formal corrective action plan. The corrective action plan is monitored by the WellCare of Kentucky's Regulatory Affairs and Compliance Teams. For CAPs issued in connection with a scorecard deficiency, the subcontractor is expected to show three (3) consecutive months of compliance before CAP closure is recommended.

TRIGGERS FOR INCREASING MONITORING ACTIVITIES, INTERVENTIONS AND CONTRACT COMPLIANCE ACTION

WellCare of Kentucky's approach to addressing Subcontractor performance issues is based on a progressive escalation process that spans across isolated events that can be quickly addressed by the subcontractor, to repeated issues of a significant nature requiring consequential action by WellCare of Kentucky. The following are the four key phases of our escalation process illustrated in **Figure C.11-2**, along with the "triggers" for increased monitoring activities, interventions and Contract compliance actions.

Figure C.11-2 Escalation Process Phases

Phase 1: Isolated Events that can be Quickly Addressed

As previously described, we have multiple mechanisms for becoming aware of emerging subcontractor performance issues, including metric / scorecard monitoring, complaints and grievances (including those from the Department), regularly scheduled subcontractor audits, member feedback from our Consumer Advisory Boards, JOC meetings with our subcontractors, and our WellCare of Kentucky Quality and Compliance governance meetings. After assessing the issue and confirming its impact, we request the subcontractor to identify and implement a remediation plan and our Compliance team will develop an Internal Action Plan (IAP) to track it to completion.

Example of Oversight and Correction

WellCare began receiving provider complaints in late 2017 regarding inaccurate payments being issued for claims in which the member had primary coverage through Medicare. Upon identifying this trend, WellCare was able to take examples of claims back to our claims department for additional review. Upon further research it was determined that these claims were being manually reviewed by a claim processor employed by one of our vendors. It was determined that the processor was not following the appropriate step action document for proper adjudication. Through additional training and quality assurance monitoring, WellCare was able to address this issue to ensure future claims reviewed by this processor were adjudicated correctly.

Phase 2: Focused Monitoring

For issues with broader impact across our members and providers, we initiate focused monitoring processes to ensure there is a clear plan of action and timeline for resolving the issue. Accordingly, the frequency and intensity of WellCare of Kentucky's oversight will be greater than in Phase 1. In 2018, 75 focused audits were completed at WellCare, with 4 of them specific to WellCare of Kentucky.

An example of a Phase 2 situation was our Dental subcontractor's challenges with collecting appropriate copays for members as the result of a new DMS regulation. After an escalated complaint was received from a dental provider, WellCare performed a focused review of our Dental subcontractor's process for adjudicating claims for members under the age of 19. After completion of this review it was determined that our subcontractor was inappropriately deducting copayment for dental claims for members under the age of 19 years (which is not allowed under the new regulation). We worked with our subcontractor to develop an action plan to remediate this issue and established a daily meeting series to ensure to review 1) the root cause of the issue and 2) develop a remediation plan to ensure future claim adjudication adheres to the regulation. As a result of this focused effort, our subcontractor was able to successfully implement scripting changes within their claims processing system to ensure future claims were not impacted.

Phase 3: Formal Corrective Action Plan

For more widespread and significant situations, we initiate formal corrective action plans (CAPs). One potential trigger for a formal CAP is a subcontractor's performance on their annual audit. We have developed comprehensive audit tools based on State and federal requirements (e.g. HIPAA), specific Kentucky contract requirements, NCQA standards, and Kentucky Medicaid policies. We require annual audits to demonstrate 100% compliance of all elements reviewed. Any annual audit with less than 100% results in a CAP. In 2018, WellCare issued 201 CAPs enterprise-wide with just 4 of them specific to WellCare of Kentucky.

A second potential trigger for a formal CAP is a focused review. Delegation Oversight may initiate a focused review at any time during the year, based on monitoring activities performed, high-risk areas identified (including those by regulatory agencies), or requests from WellCare of Kentucky leadership. Focus reviews are performed to identify the root cause and scope of potential noncompliance on a targeted topic. Examples of focused reviews conducted include,

but are not limited to, UM decision timeliness, UM denial rationales, encounter data completeness, member notifications, and EPSDT services. Findings are shared with WellCare of Kentucky leadership and communicated to the impacted subcontractor. If non-compliance is identified, a formal CAP is initiated and tracked. Evidence required for CAP closure is most often transactional data of at least three (3) consecutive months of compliance demonstrated in a file review, universe of transaction turn-around times, or other evidence of monitoring.

A third trigger for a CAP is a pattern of missed service level agreements on our monthly scorecard monitoring process. In this situation, the subcontractor is placed on a CAP and required to demonstrate three (3) consecutive months of compliance before CAP closure is recommended.

By way of example, in Q4 2017, WellCare became aware of an issue with our subcontractor, eviCore, regarding the notice of adverse benefit determination (NABD) letters. These are letters given to members notifying them that a prior authorization request for services has been denied. The NABD letters generated by eviCore did not contain the appropriate language block (1557 disclaimer) that was approved by the Kentucky Department for Medicaid Services and required by CMS.

WellCare's Delegation Oversight Department performed a focus audit of eviCore's denial letters in Q1 2018. Through the focus audit, WellCare identified that some letters were non-compliant with the 1557 disclaimer. These results were shared with the contract manager who issued a directive for a corrective action plan to have all corrected letters in place within 30 days of the focus audit findings. eviCore confirmed the updated letters were placed into production in July 2018.

WellCare continued to pull random samples to verify that eviCore has completed the corrective steps for full remediation of this issue. Our delegation oversight team also performed a follow up focus audit on the NABD letters in Q4 2018 which yielded no further concerns.

Phase 4: Continued Non-Performance/Material Non-Compliance

Phase 4 is reserved for the most significant situations that call into question whether the subcontractor can continue performing services for members and providers on behalf of WellCare of Kentucky. Examples of such situations include financial insolvency, material compliance findings such as fraud or exclusion from government health care programs, or the continued inability to remediate documented CAPs. If any of these scenarios occur, they will be closely monitored by WellCare of Kentucky leadership and our Delegation Oversight Committee. In the case of failure to remediate a CAP, we will impose disciplinary action, which may include financial penalties, until the issue is remedied. If the disciplinary actions and financial penalties fail to achieve the desired result, the subcontractor's delegation agreement may be terminated or revoked. In the case of insolvency or material non-compliance such as fraud or exclusion, we are required to immediately terminate the contract. We would both identify and implement a new/replacement subcontractor, or insource the delegated services, given careful consideration to the impact on our members and providers. In either scenario, once we determine that the subcontractor will no longer be able to provide the delegated services, we immediately notify the Department of the situation, member impact, and

immediate next steps, as well as establish a process for ongoing communication and updates. To date, we have not had to do this in Kentucky.

TECHNOLOGY SUPPORT OF PHASES AND ESCALATION PROCESS VIA C360

Our approach to addressing subcontractor performance via a progressive escalation process is supported by our compliance management system, C360. C360 manages all elements of the audit and oversight process, including communications, documentation and evidence, and the automatic assignment of CAPs for non-compliant elements. It also provides transparency to all management levels involved in the oversight of subcontractors and enables accurate tracking and reporting. Standard reporting includes monitoring and auditing activities performed, status of audits and monitoring plans, metrics on outstanding CAPs, and trending of subcontractor performance through scorecards.

12. Enrollee Services

WellCare
Beyond Healthcare. A Better You.

Best Places to Work™ IN KENTUCKY • 2019

C.12. ENROLLEE SERVICES

a. Describe the Vendor's operation of the Enrollee Services call center including:

i. How the Vendor will monitor and ensure full staffing during operational hours.

ii. Examples of training and resources provided to call center staff.

iii. Approach to using back-up staff to support increased call volumes, how the Vendor ensures such staff are trained and have the correct materials specific to the Kentucky Medicaid managed care program, and location of these staff.

b. Describe the Vendor's approach to Enrollee outreach and education, including the following at a minimum:

i. Overall approach to educating and engaging Enrollees about topics such as but not limited to Covered Services, accessing care, availability of the Population Health Management program, and improving overall health.

ii. Topics the Vendor proposes to be priority areas of focus for Enrollee outreach and education.

iii. Initiatives and education (health literacy) the Vendor will use to drive appropriate utilization and cost-effective health care services.

iv. Collaboration opportunities with other contracted MCOs, CHFS Departments, and community partners to support Enrollee needs through joint outreach and education.

c. Describe methods for communicating with Enrollees as follows:

i. Creative efforts to achieve high levels of Enrollee engagement (e.g., smart phone applications,) to educate Enrollees and to communicate information for their individual health issues.

ii. Approach to identifying, developing, and distributing materials that will be of most use to Enrollee populations, and efforts the Vendor proposes to target distribution to specific populations as appropriate.

iii. Methods of leveraging communications to meet the diverse needs and communication preferences of Enrollees, including individuals with limited English proficiency and diverse cultural and ethnic backgrounds, disabilities and regardless of gender, sexual orientation or gender identity.

d. Provide a summary of innovative methods and the Vendor's proposed outreach plan to assess the homeless population.

e. Describe the proposed approach to assess Enrollee satisfaction at each point of contact (call, online and in-person), including tools, frequency and process to measure trends, and use of findings to support ongoing program improvement.

f. Provide the following sample materials:

i. Draft Welcome Packet and Enrollee ID card aligned with the requirements of RFP Attachment C "Draft

ii. Sample Enrollee Handbook meeting the requirements of RFP Attachment C "Draft Medicaid Managed Care Contract and Appendices."

iii. Three (3) sample Enrollee materials with taglines and displaying ability to meet translation, accessibility and cultural competency requirements.

C.12. ENROLLEE SERVICES

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 12 Enrollee Services of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Leading Enrollee Satisfaction in Kentucky
With the highest Enrollee satisfaction scores of all the Kentucky Medicaid MCOs, our dedicated approach has made WellCare of Kentucky the plan of choice in the Commonwealth—with **over 80%** of Enrollees choosing our health plan as the best option.

Since 2011, we have dedicated our organization and staff to understanding and serving the needs of the people of Kentucky. Through our high-capacity communication channels and a robust staff of dedicated Enrollee Service Representatives (ESRs), we listen to our Enrollees to provide both first-call resolutions and connect those who need it to a deeper level of clinical support that addresses their immediate and long-term comprehensive, whole-person needs. Our outreach channels include a suite of digital smartphone applications connecting Enrollees to easily digestible information and access to our online wellness programs that empower self-sufficiency and healthy behaviors. Enrollee education and outreach extends to the materials we develop in both print and for our digital channels with specific health care needs and guidance in mind.

Lastly, led by our Chief Executive Officer (CEO), William Jones, WellCare of Kentucky has always been a boots-on-the-ground organization. With six regional offices spread across the Commonwealth supporting more than 430,000 Enrollees, our ESRs, coordination staff, community health workers (CHWs), and community engagement team rally our community partners around the Enrollee—creating a collaborative approach to comprehensive support through our Community Connections program that addresses social determinants of health (SDOH) along with their physical, behavioral, and pharmacy needs. The following section describes our Enrollee Services model and the dedicated staff that listen, engage, and follow through every day to help the people of Kentucky with their immediate and long-term healthcare needs.

a. Describe the Vendor's operation of the Enrollee Services call center

Available between the hours of 7:00 a.m. and 7:00 p.m. Eastern Time (ET) Monday through Friday, WellCare of Kentucky's operation of the Enrollee Services call center fully complies with the requirements of Section 22.1 Required Functions. With an average of 38,000 calls per month, our call center serves as a direct line of communication for when Enrollees need help with their questions, want to know how to best access their benefits, and for when they don't know where to turn. Our highly dedicated staff is trained to promptly assist the caller, address

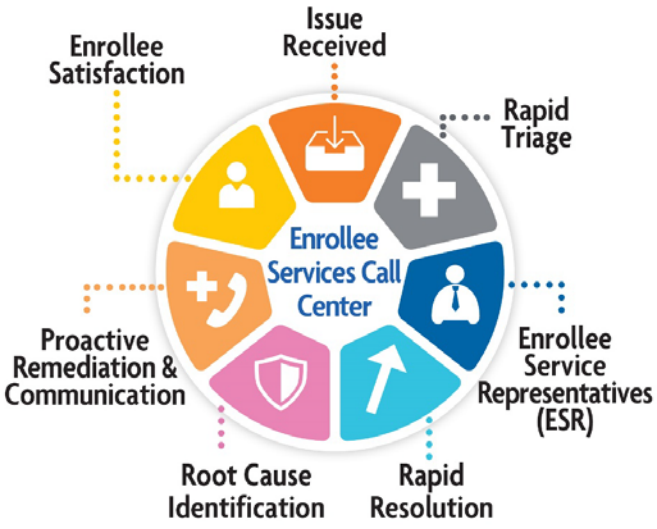
their immediate issues, facilitate follow-up with our care coordination team, and do so while providing superior customer service.

To properly support our Enrollees in the Commonwealth, WellCare of Kentucky's service delivery model for our Enrollee Services call center includes our Work-At-Home- Agent (WAHA) service model staffed by associates located in Kentucky. These Kentucky-based associates are fully trained and supervised virtually using all of our call center tools (i.e., call monitoring, call recording, queue management, etc.). Combined with CAREConnects, our award winning, proprietary agent desktop solution, our WAHA strategy enables us to deliver a localized approach to Enrollee Services through Kentucky-based associates. WAHA allows for rapid deployment during non-forecasted demands, seasonal peaks, hard to staff shifts and crisis management. This approach, supported by an outstanding training model, gives us access to a broad talent pool from which to recruit and hire, with no geographic restrictions. Supporting our team of WAHA staff, we have dedicated more than 170 Kentucky-trained ESRs working together in a single location who have been trained specifically on the Kentucky Medicaid program.

Since the beginning of managed care in the Commonwealth, we have annually exceeded the Health Call Center (HHC) standards set by the Utilization Review Accreditation Commission (URAC). Adhering to the contract requirements, we will continue to report our monthly call center performance, including abandonment rate, blockage rate, and average speed of answer for both our Enrollee Services call center and the Nurse Advice Line (NAL) to DMS.

The following describes the operations of the Enrollee Services call center.

Enrollee Service Representative Responsibilities: Serving as the first line of communication, ESRs are trained and qualified to respond to all inquiries and supply Enrollees with information on a wide range of topics, such as cost-sharing responsibilities, over-the-counter (OTC) medications available free of charge, instructions for changing their primary care physician (PCP), and helping them obtain a new Enrollee identification (ID) card. Following our established workflow process illustrated in **Figure C.12-1**, every ESR is trained to address and resolve the Enrollee's immediate issue or connect them to our internal clinical lines, such as the NAL, for triage and support provided by a qualified healthcare professional. The ESR informs every caller of their rights and responsibilities, collects updated demographic information, facilitates the Enrollee grievance process (and the filing of appeals when requested), responds to questions regarding the Enrollee Handbook and our other communication channels, and



C.12-1 Call Center Workflow

connects the Enrollee to the care coordination team whenever they require access to a specialized provider (e.g., special healthcare needs, long-term complex health conditions).

In addition, ESRs assist with access to services, such as scheduling EPSDT appointments, providing information or referring to support services in the community, such as the local WIC office for food assistance, or community support groups and health education programs associated with our population health program (i.e., tobacco cessation, Alcoholics Anonymous). ESRs inform callers about services they may not be aware they have access to, such as our valued-added services (VAS) for adult vision benefits, the financial incentives of our Healthy Rewards prevention program, home-delivered meals, health coaching for weight loss, and our Safelink smartphone program. In addition, we facilitate Enrollee access to non-emergency medical transportation (NEMT) if they do not qualify for the transportation services maintained by DMS. All callers receive follow-up support when necessary, which may include enrollment in our care coordination and population health programs to address their comprehensive, whole-person needs.

One-Call Resolution Standard: As illustrated in **Figure C.12-2**, our guiding principles drive our mission to provide a best-in-class experience so Enrollees feel comfortable and in charge of their healthcare experience and supported by their MCO every step of the way. Not only do our ESRs assist our more than 430,000 Enrollees in the Commonwealth with their physical health, behavioral health, pharmacy, and SDOH needs, but by working as an integrated unit, the Enrollee Services team resolves Enrollee calls on the first try nearly 90% of the time with no hold time, cold transfers, or additional numbers to call. We attribute this performance to our One Call Resolution standard. We treat every call as another opportunity to inform our Enrollees about how to best access their benefits and covered services and the channels available to do so. For example, we educate them on accessing the secure Enrollee portal and the MyWellCare smartphone application for self-service functions, which includes staying up-to-date with the action steps of their person-centered care plan to maintain health, attend appointments for preventive services, address care gaps with the help of their PCP, and address their SDOH needs through our Community Connections program's Community Connection Help Line (CCHL), which facilitates access to our local social services partners.

Better Access to Self-Service Convenience

In 2018, more than 3,500 Enrollees ordered ID cards online and more than 6,500 Enrollees changed their PCP using either the Enrollee portal or the MyWellCare smartphone application.

Figure C.12-2 Enrollee Services Guiding Principles

In the event that an Enrollee requests an issue be escalated to a supervisor, we have an established escalation process in place to ensure ultimate Enrollee satisfaction and resolution of their issue or question. In rare cases, we take complex issues offline to discuss possible resolutions before calling the Enrollee back in a timely manner with a solution.

Call Center Technology: CAREConnects is our customer relationship management tool that provides ESRs with a 360-degree view of the Enrollee. This data includes open care gaps, previous call history, call resolutions, PCP assignment, demographics, utilization history, claims history, medications and adherence, referrals to address SDOH through our Community Connections program, care coordinator assignment, and other pertinent information that facilitates their ability to resolve calls and connect them to follow-up care. CAREConnects generates guidance scripts and system alerts to help the ESR handle each call efficiently and appropriately. We document all call information into the system, including the purpose and resolution that will be accessible as part of the Enrollee history. CAREConnects helps ensure that our staff engages the right person at the right time for the right answer to assist Enrollees.

In addition, we leverage the Genesys® PureConnect™ Cloud platform, which powers our telephony environment with geographically redundant services connected to our WellCare Health Plan's 28 call centers across the country by dual 10 Gig fiber channel MPLS networks.

Call Routing Procedures: As an integrated call center with a "no wrong door" policy, we assist Enrollees with their comprehensive needs and bring in care coordinators, registered nurses from the NAL, or the licensed mental health clinicians (LMHCs) supporting the Behavioral Health Services Hotline whenever necessary. Our call center staff operates as a unified team, with 90% of calls resolved during the first conversation as part of our One Call Resolution standard. We leverage our high-capacity call center technology—including our award-winning proprietary desktop solution CAREConnects and our hosted Automated Call Distribution (ACD) system Interactive Intelligence (I3)—to ensure **Enrollees receive the right support, from the right specialist or representative, at the right time**. The ACD solution provides intelligent skills-based routing of telephone calls, voicemail, email, and internet-based interactions (e.g., text chats, web callback requests). The ACD solution includes a full-featured interactive voice response (IVR) functionality and speech recognition tools. Enrollees can use the IVR at any time and perform many service-related functions independent of a call center representative. Other key features of our ACD system include:

- *Virtual Hold:* In the event that call volume is high, callers are offered the option to remain on hold for the next available ESR or to receive a call back, without having to remain on the line and without losing their place in queue. This allows callers to go about their busy lives and eliminates the need to be on the line during an “on hold” situation.
- *Reporting Capabilities:* Our ACD system capabilities include generating reports on a daily, weekly, or monthly basis to monitor our call center performance and inform our workforce planning.

Warm Transfers and Escalations: CAREConnects enables our ESRs to add additional members of the Enrollee Services team to assist with a call, whether it be a qualified nurse from the NAL, a

care coordinator, or behavioral health clinician supporting the hotline. In addition, the ESR can add a WellCare of Kentucky patient care advocate (PCA) to the call to help address complaints, or a supervisor when the Enrollee requests that the call be escalated to a member of the management team.

Routing to Behavioral Health Services Hotline: As part of their training, ESRs learn to recognize verbal triggers that may indicate an emergent behavioral health issue. When this occurs, we activate the crisis button in CAREConnects to alert a call center supervisor of the situation and automatically generate a guidance script that directs the ESR to remain on the phone with the caller while simultaneously connecting to a behavioral health clinician supporting the Behavioral Health Services Hotline. Our ESR provides a warm hand-off, including caller background information regarding the purpose of the call. In addition, our Interaction Analyzer software performs call analysis to identify specific word and phrase combinations that indicate a serious emergency or potentially life-threatening situation. The hotline provides Enrollees with 24-hour support with drug and alcohol abuse and behavioral health concerns. Applying a person-centered approach to service, hotline representatives provide crisis triaging to assess the Enrollee's need for crisis services, urgent care, or connection to their care coordinator and multidisciplinary team (MDT) for immediate engagement.

Routing to the Nurse Advice Line (NAL): Our centralized NAL provides Enrollees with medical advice and direction twenty-four hours a day, seven days a week from qualified physicians, physician assistants, licensed nurse practitioners, and registered nurses. In addition to triaging, NAL staff educate Enrollees about appropriate utilization of services; **in 2019, NAL staff diverted 68% of Enrollees to a lower, appropriate level of care who were initially inclined to seek ED services. In 2019, 99% of calls were answered within 30 Seconds (80% or greater is required) with only 1.39% abandoned calls, much lower than the required 5%.**

Enrollee Engagement - Outbound Calls: Our Care Center located in Hazard, Kentucky is an outbound call center dedicated to contacting Enrollees with open care gaps and alerting them of upcoming recertification deadlines so they do not lose their eligibility and access to health services. The Care Center was born out of an innovation that was originally intended to support Kentucky HEALTH Enrollees who required assistance with navigating the obstacles of the 1115 Waiver program.

We took this opportunity to go on the offensive, and developed a proactive customer service approach that performs outbound calls to Enrollees at risk of a suspension. As a result of the delay and eventual suspension of Kentucky HEALTH, this team now focus on member outreach calls to address health needs of our most vulnerable and at risk members.

Language Access: We comply with all the requirements of 42 C.F.R. 438.10(d) and translate all materials, including digital content, to Spanish and other languages upon request, including Braille. The Enrollee Services call center is staffed with English and Spanish speaking representatives. We provide telephonic interpretation at no cost through our dedicated language line, which supports over 200 languages, including American Sign Language. On-demand, trained, and experienced interpreters provide a seamless language experience

addressing our Enrollees' courses of treatment, medical history, and health education. **The year-to-date average speed of answer for the language line is 6.6 seconds, meeting or exceeding the target 100% of the time.** We also arrange for in-person interpreters to support Enrollees at their medical appointments. In Bowling Green, for example, we have responded to the recent demand by our Somali-speaking Enrollees, providing interpreters and ensuring that language is not a barrier to accessing care.

i. How the Vendor will monitor and ensure full staffing during operational hours

WellCare of Kentucky continuously monitors our Enrollee Service call center staff and forecasts when we may need to increase staffing to ensure we exceed our service standards during operational hours. **Chief Operating Officer Ben Orris, is responsible for the oversight and monitoring of the call center to ensure DMS's standards are being met**, including ensuring staffing levels to meet the call volume needs. He has real time access to WellCare's Command Center, to monitor the service levels at any time. Additionally he is provided dashboard reports that detail the Kentucky call center's service levels five times throughout each day. Our operational Command Center is staffed by a centralized team of analysts who continually monitor the Kentucky call center volume capacity and performance. We invest in industry leading call center technology and tools to ensure we will always have a Kentucky-trained ESR available to assist Enrollees at this critical touchpoint. We also have cross-trained staff available to assist Enrollees.

PRECISE FORECASTING: NICE WORKFORCE MANAGEMENT TOOL

Our Command Center workforce analysts leverage the capabilities of our **NICE Workforce Management (NICE WFM)** platform which forecasts precise

daily staffing models and individual staff schedules based on historical call volumes including seasonal cycles such as enrollment periods, population size, call handling times, time of day, and other data to meet all contract requirements and deliver best-in-class customer service. To ensure we can absorb any unanticipated spikes in call volume, we add an additional 10% staffing capacity to our forecasts. We also monitor the average speed of answer, abandoned call rate, blocked call rate, average hold time, timely response to inquiries, accurate response to inquiries, and phone etiquette - all intended to provide first call resolution.

MONITORING PERFORMANCE: GENESYS WORKFORCE OPTIMIZATION TOOL

The Genesys Workforce Optimization tool generates service level data in 30-minute intervals, such as number of callers on hold, average speed of answer, abandonment rate, blockage rate, and other metrics against the number of ESRs available to assist Enrollees. When our performance measuring tool alerts the command center analysts of dips in service levels, they deploy a load-balancing action plan consisting of progressive step actions to return performance within service levels. A detailed description of this plan is included in our response to 12.a.iii. With an experienced team operating the call center combined with industry-leading technology, we have not only met the current American Accreditation Health Care Commission/URAC-designed Health Call Center Standard (HCC) for call center abandonment rate, blockage rate and average speed of answer for each of the past three quarters, but have

significantly exceeded these requirements. For example, the average rates over the past three quarters are as follows:

- Blockage rate=0% (10% is the requirement)
- Abandonment rate=1.5% (5% is the requirement)
- Average speed of answer=16 seconds (30 seconds is the requirement)

AFTER-HOURS SUPPORT

For Enrollees requiring assistance outside of our normal business hours, they can access the NAL and the Behavioral Health Services Hotline 24/7. We include these phone numbers on all printed materials, online, and via the MyWellCare smartphone application. Through our self-service Enrollee portal, which is available 24/7, Enrollees can order ID cards or handbooks, search for providers, and find information about benefits, covered and non-covered services. Our language line is available 24/7 with 2,000 interpreters, on call, capable of translating 200 languages including American Sign Language. Finally, Enrollees can leave a voicemail message, and an ESR will respond by the next business day.

ii. Examples of training and resources provided to call center staff.

We believe the first call is the only call a WellCare of Kentucky Enrollee should have to make to get the right answer or be connected to the care coordination team to help address their whole-person needs. To achieve and maintain our first-call resolution standard, ESRs begin training on their first day of hire and build upon their knowledge and skills through ongoing training courses related to both customer service skills and knowledge of Medicaid covered benefits. The rigorous training requirements through our learning and education hub—WellCare University— include more than 160 training hours and a score of 85% or higher on all assessments to successfully become a certified ESR supporting our Enrollees in the Commonwealth.

As a result, our comprehensive training curriculum transforms ESRs-in-training into Kentucky Medicaid experts capable of resolving calls while providing the highest level of customer services.

CALL CENTER STAFF TRAINING

The training provided to our call center staff includes the following foundational Kentucky Medicaid program modules:

Foundational Training. These training topics align our ESRs with WellCare's Enrollee-centered culture, federal rules and regulations, and compliance requirements. Topics include our code of conduct and business ethics; compliance policies and procedures; fraud, waste, and abuse (FWA); HIPAA compliance; quality performance; cultural competency (unconscious bias); and Enrollee rights and responsibilities. All WellCare of Kentucky staff members receive cultural competency training, including disability awareness, to effectively communicate with Enrollees based on their cultural and ethnic backgrounds, disabilities, genders, sexual orientations, and

gender identities. In addition, we require our providers to take a cultural competency course, available through our provider portal.

Functional Training. We educate ESRs on our call center technology and tools for assisting Enrollees with their various needs. We provide intensive training on our customer service management tool, CAREConnects—the core call center technology guiding ESRs through each call to a successful resolution. ESRs learn to identify care needs and schedule provider appointments during the same call; change an Enrollee's PCPs; order new ID Cards and handbooks; connect to the NAL and Behavioral Health Services Hotline; and activate the language line.

Kentucky Medicaid Program Training. We educate ESRs on the Kentucky Medicaid program, including the covered services and benefits. Topics include eligibility requirements; covered and carved-out services, such as non-emergency medical transportation; access to value-added services; our pharmacy program and medication assistance; the Department for Aging and Independent Living (DAIL) clients; and the future SKY program.

Table C.12-1 describes the additional training delivered through a blend of WellCare University modules and in-person instruction.

Table C.12-1 Additional Training

Component	Description
Instructor Training	Trainers lead in-person classroom and virtual instruction on enhancing the Enrollee experience through Kentucky Medicaid program expertise, mastering desktop technology, and effective engagement with individuals who are economically disadvantaged and culturally diverse. Skilled ESRs transition an Enrollee, regardless of their background, from call resolution to care gaps and schedule an appointment with a PCP.
E-Learning	WellCare University provides computer-based training modules for programmatic topics such as covered services, carved-out services, and EPSDT schedules. ESRs-in-training must score at least 85% on the knowledge and skills assessment as a condition of employment and to advance to the practical component of the training curriculum.
Supervised Experiential Training	Training leaders supervise in-person the ESRs-in-training as they begin assisting Medicaid Enrollees. They become certified and can take calls on their own after meeting production goals such as scoring 92% or higher on Customer Satisfaction Surveys and a 90% or higher on call quality.
Continuous Training	Annual training courses and scored assessments on Fraud, Waste, and Abuse, HIPAA, Cultural Competency, Compliance Policies and Procedures, and other topics. Supervisors also provide "on the floor" training to guide ESRs through more complex calls and provide in the moment feedback.

Component	Description
Cross Training	Our highest-performing ESRs are cross-trained with provider call-center curriculum, giving them the depth of knowledge to increases their skill level to resolve more complex calls.

CALL CENTER STAFF RESOURCES

As every contact with an Enrollee is an opportunity to educate and engage them in their health, ESRs assess Enrollee needs and provide them with the core managed care services listed in Section 22.1 Required Functions to meet those needs. For example, when a mother-to-be from Paducah calls searching for a provider, the ESR informs the Enrollee that an OB/GYN provider can serve as the PCP, completes the assignment, schedules an appointment, and orders a new ID card. The ESR transitions to informing the Enrollee about our Healthy Rewards program for pre-and postpartum incentives and refers her to the nearest WIC (Women, Infants, and Children) Program office. Before ending the call, the ESR assists the Enrollee with completing the Health Risk Assessment (HRA).

To successfully deliver these in-the-moment services, we provide ESRs with the following resources:

- *Knowledge Management Platform:* Our knowledge management platform guides ESRs through a response algorithm to address caller requests and provides easy to access program information about Kentucky Medicaid as well as the future SKY program, when implemented. For example, when a Perry County Enrollee calls with transportation needs, the ESR quickly identifies our Region 8 community partner, Pennyrile Allied Community Services (PACS), which provides transportation vouchers to assist Enrollees who do not qualify for NEMT services with their transportation needs to medical appointment, the grocery store, or community events.
- *CAREConnects:* Our premier customer service tool provides ESRs with guided scripts to manage a call from beginning to resolution, providing them with a complete view of the Enrollee's needs and the capabilities to meet them.
- *Integrated Platforms:* Our integrated system platforms with bi-directional information feeds enable coordination of Enrollee needs across all domains, providing all Enrollee-facing staff with the comprehensive, holistic view of their medical, pharmacy, behavioral health, and social needs. This includes Enrollee demographics, medical history, as well as clinical and behavioral health information comprising of diagnosis codes, claims, and authorization history.
- *Interaction Analyzer:* This tool recognizes word and phrase combinations signaling a possible crisis situation, and alerts the ESR to take appropriate action such as keeping the caller on the line, alerting a supervisor, and engaging the NAL or Behavioral Health Services Hotline.

In addition, our call center performance auditors monitor at least eight calls for each ESR per month to ensure optimal performance. For new staff, the auditors monitor three calls per ESR per week for the first 30 days. ESRs must demonstrate Kentucky Medicaid program knowledge, skill in navigating call center technology, and deliver exceptional customer service. Our supervisors recognize high-performing ESRs and facilitate their professional development with mentoring, coaching guidance, and opportunities for career advancement. We report all audit reports to the Customer Service Quality Improvement Workgroup for analysis and trending. Each quarter, our Quality Improvement Committee (QIC) reviews the reports and recommends corrective actions if necessary.

iii. Approach to using back-up staff to support increased call volumes, how the Vendor ensures such staff are trained and have the correct materials specific to the Kentucky Medicaid managed care program, and location of these staff.

As we described in Section a.i above, we leverage the capabilities of the NICE WFM platform to monitor call volumes throughout the day to ensure we maintain adequate staffing levels. For instances of unanticipated call volumes, our call center leaders activate a load-balancing action plan to prevent or quickly remediate any impacts to our performance. The plan consists of the following step actions:

- All call center supervisors and team leads log into the call center software and take calls.
- If needed, ESRs and community-based WAHAs (Work At Home Agents) flex their offline time, such as lunch breaks, to receive calls in queue.
- If further action is required, we activate call rollovers to the approximately 1,000 on-demand back-up ESRs who are cross-trained on the Kentucky Medicaid program and tested to Kentucky call center standards.
- Concurrently with these actions, call center analysts research, remediate, and restore the Kentucky call center to full strength and disable call rollovers.

With our investments in call center technology and our rapid response processes, we meet or exceed our service requirements and assist our Enrollees with their needs.

BACK-UP STAFF, TRAINING, MATERIALS, AND LOCATION

We have approximately 1,000 on-demand, Kentucky-trained, back-up staff located in the 28 WellCare enterprise call centers across the country to support our Kentucky call center during periods of unanticipated high call volumes including extreme situations such as natural disasters. Our back-up staff are cross-trained on the Kentucky Medicaid program and have successfully met all training requirements to expertly assist Kentucky Enrollees. Since back-up staff operate from the same CAREConnects system, leverage the same Kentucky Medicaid knowledge platform, follow the same guidance scripts and other Kentucky-specific reference materials, Kentucky Enrollees receive similar high quality levels of service and consistently accurate information as they do from our Kentucky ESRs.

b. Describe the Vendor's approach to Enrollee outreach and education, including the following at a minimum.

WellCare of Kentucky's approach to Enrollee outreach and education began even before the launch of managed care in 2011. Before the enrollment of a single Kentucky Enrollee, we were deeply rooted in the communities learning about the culture of the people, the geographic diversity of the regions, and the local social support organizations they trusted. Through learning about the people in the diverse regions across the Commonwealth, we developed the comprehensive Enrollee outreach and education program described in the following section.

i. Overall approach to educating and engaging Enrollees about topics such as but not limited to Covered Services, accessing care, availability of the Population Health Management program, and improving overall health.

For more than eight years, we have been helping Enrollees learn to eat healthier, exercise more, visit their providers for screenings, and seek care in appropriate settings and cost-effective ways—operating under the belief that all healthcare is local. Today, our education and engagement approach is driven by our conviction that all healthcare is also personal, and therefore, particular to an Enrollee's culture, language, beliefs, community, as well as their health conditions, co-morbidities, and SDOH needs.

Through multiple Enrollee touchpoints, we discuss covered services, accessing care, enrolling in our population health programs, and improving their overall health and quality of life. The following section describes our overall approach to education and engaging our Enrollees.

FACE-TO-FACE ENROLLEE ENGAGEMENT AND EDUCATION STAFFING ROLES

When managed care in the Commonwealth began in 2011, it was evident that reaching our Enrollees to engage them in their health was not going to be achieved through traditional outreach methods or mailing campaigns; it would be accomplished through very personal, face-to-face interactions, feet-on-the-street style education, and the co-location of our associates within the community. Through the following WellCare of Kentucky staff roles, we engage in multiple Enrollee touchpoints to provide education and guide their healthcare experience.

Patient Care Advocates: We staff eight Patient Care Advocates (PCA) who travel onsite at many of our high-volume practices throughout the regions of the Commonwealth to engage Enrollees at the primary care provider's office. As part of the education process, PCAs reinforce health and wellness, schedule follow-up appointments and annual exams, escalate complex issues until resolution, and connect the Enrollee to local partners to address their SDOH through the Community Connections program. For example, if the Enrollee has diabetes, the PCA educates them on the importance of glucose monitoring and retinopathy exams, schedule the follow-up needed and remind them about our value-added benefit offering a pair of eyeglasses for adults.

Community Engagement Team: Our Community Engagement team engages Enrollees at our sponsored health fairs, back-to-school events, and other community events throughout the Commonwealth to educate them about their benefits, covered services, population health programs, and community resources. Often we learn at these events that Enrollees do not have

a comprehensive understanding of the services they are entitled to, including access the Community Connections Help Line (CCHL), available health and wellness programs, or coordination support with non-covered services such as NEMT or state-run programs such as the Health Access Nurturing Development Services (HANDS) program or First Steps early intervention programs.

Enrollee Outreach Coordinators: As part of our field-based team dedicated to supporting Enrollees in rural areas of the Commonwealth, our Enrollee outreach coordinators work with providers, community organizations, and homeless shelters to locate our high risk and disengaged Enrollees for enrollment in our care coordination and population health programs. Our outreach coordinators have located thousands of our Enrollees that cannot be engaged through phone calls, mailings, or text messages. Upon identification, we enroll them in care coordination and address their SDOH through our Community Connections partners.

Health Coaches: Our Health Coaches conduct continuous telephonic outreach to our most vulnerable Enrollees to coach and educate them on recommended critical screenings and preventive services, helping to bring awareness to Enrollee health needs and transform Enrollee lives since the program's inception in February 2019. In addition, we will expand our program to include two additional Health Coach teams comprised of local experts, focusing on smoking cessation, obesity and pre-diabetes/diabetes.

COMMUNITY ENGAGEMENT

Making a Local Impact on SDOH

Since launching the Community Connections program in Kentucky, we have connected more than 31,000 people to 165,000 services across the Commonwealth and have seen a direct impact in utilization of high-cost services for Enrollees engaged in the program, including a 26% reduction in emergency department visits, and a 53% decrease in inpatient spending.

Now a national model implemented at all our health plans across the country, the Community Connections program was developed specifically for the Kentucky market in 2011. We leverage this proven model with the unique innovations put forth by the Commonwealth to evaluate and improve Enrollee health and well-being. Our WellCare of Kentucky field-based community engagement team is responsible for continuing development of our grassroots, data-informed community partnerships throughout the Commonwealth that help our Enrollees address their SDOH. The team proactively works alongside local organizations to address social barriers and increase the strength of the local safety net infrastructure for each region. Our team members live locally in the communities they serve, many who have lived experience and understand the needs of our Enrollee population firsthand. Using social service data, the team identifies when and where services are needed and then mobilizes resources to develop the needed service.

TELEPHONIC OUTREACH

Within the first 30 days of enrollment, our ESRs call new Enrollees to conduct a brief HRA, confirm they have received their Welcome Kits, inquire about their present health concerns, and provide information about accessing their covered services, value-added services such as

the Healthy Living program, enrollment in population health programs based on their medical conditions, and offer to make their first PCP appointment. The following WellCare of Kentucky staff roles engage our Enrollees in ongoing telephonic outreach to provide education on their healthcare services.

Field Outreach Coordinators: The field outreach coordinators exclusively outreach to Enrollees with the purpose of enrolling them into our care coordination program. This dedicated team of staff is solely committed to connecting with Enrollees by using multiple data systems and connecting with an array of providers associated with the Enrollee's care. In 2018, the field outreach team reached more than 3,600 unable to contact Enrollees, of which 1,652 were enrolled into our care coordination program to better manage their physical, behavioral, pharmacy, and SDOH needs, co-morbidities, and chronic conditions.

Care Needs Coordinators: Our team of six care needs coordinators focuses on Enrollee engagement through telephonic outreach by leveraging our data analytics platform to identify those most in need of support. Care needs coordinators outreach Enrollees who are disengaged from medical care, have chronic conditions, and need of preventive services. Through this engagement process, we can bring Enrollees back into the managed care environment to better coordinate their services between all providers, including the MDT, and remove their barriers to care, while also providing vital education that places them back on a path toward wellness. Through careful guidance, care needs coordinators help non-compliant Enrollees previously disengaged with the healthcare system schedule and attend their PCP and specialty provider appointments and build trust that empowers them to improve their health.

Care Needs Coordinator Impact

An Enrollee, who was homeless, was identified as having a care need related to his medication adherence and recommended screenings and connected with a QI Care Needs Coordinator. Numbers to available resources were shared by our QI Care Needs Coordinator in addition to offers for a referral to Care Management. The Enrollee refused a referral to Care Management but he did have access to a telephone so our QI Care Needs Coordinator would call him periodically to check on him. Through the resource numbers provided, the Enrollee was able to find a stable place to live. On a subsequent call, the Care Needs Coordinator was able to help him get an appointment with his PCP, connect with Member Services to update his new address, and to obtain an insurance card. The Enrollee expressed that he felt he was now on a path to get his life on track.

Care Coordinators. Care coordinators use advanced clinical judgment and critical thinking skills to facilitate appropriate physical and behavioral healthcare and social services for Enrollees. They coordinate the care and services of selected Enrollee populations across the continuum of care and place Enrollees in the appropriate population health program based on their health conditions and personal goals. The care coordinator ensures that Enrollees receive appropriate, quality care that is cost-effective, working directly with the Enrollee while collaborating with the MDT to assess, plan, implement, coordinate, monitor, and evaluate services and outcomes to maximize the health of the Enrollee.

Health Coaches. An Enrollee-dedicated coach guides the Enrollee along the path to better health while providing education on healthy behaviors. Coaches use motivational interviewing techniques to engage the Enrollee and develop trust. We focus on motivating the Enrollee to receive consistent care from their PCP to avoid more costly services, providing education on appropriate prevention services, and maintaining the appointment adherence for chronic conditions. They work closely with Enrollees who have health literacy barriers to ensure they understand their care needs and assist with other barriers to care through referrals to our care management team and the Community Connections program. They have made nearly 5,000 outreach calls with more than 2,000 of them successful.

Care Center. In 2018, WellCare launched a dedicated Care Center in Hazard, Kentucky to perform outbound calls to Enrollees in the Kentucky HEALTH waiver program. This team was created to assist Enrollees who were at risk of losing their benefits for failure to pay premiums, not meeting the community engagement requirements, or were potentially eligible for medically frail status. With the suspension of Kentucky HEALTH, this team has been performing outreach to Enrollees who are approaching their recertification date or have unmet care needs.

Peer Support Specialists. Our peer support specialists support the Community Connections Help Line (CCHL) as a vital component of the Community Connections program. Specialists refer Enrollees (and non-Enrollees) to our community partners to address their SDOH. We identify needs based on resources accessed through the model, proactively designing programs to close care needs. **In Kentucky in 2019, WellCare of Kentucky completed 1,409 community activities, reaching 37,509 community stakeholders.**

DIRECT MAIL EDUCATION CAMPAIGNS

We recognize that the traditional process of mailing educational information to our Enrollees is still an effective component of a well-rounded engagement strategy. As such, we send the following printed Enrollee education materials by direct mail: New Enrollee Welcome Kit, Enrollee Letters, Wellness Exam Reminders, Birthday Cards, EPSDT Calendars, Periodicity Letters, Quarterly Newsletters, and Disease Education.

DIGITAL CHANNELS

We maintain a secure, Enrollee portal and the MyWellCare smartphone application to provide Enrollees with simple, modern channels of communication that allow us to easily engage them through education materials and self-service functions from the convenience of any web-enabled device. These applications enable the following functions:

- Enrollees can access the information distributed through our direct mailing campaigns, such as covered services, preventive care, and our Healthy Rewards program. They can easily replace an ID card, change their PCP, or find a provider based on specialty and location
- For immediate services in their community, Enrollees can identify the nearest urgent care center, order OTC health-related products, or learn more about employment opportunities through the WellCare Works program

- Leveraging text messages, we send notifications that alert our Enrollees to opportunities in the community to address their SDOH and preventive care educational information
- Our social media channels, including Facebook and Twitter, pushes out education information, stories, and tips via the web

ii. Topics the Vendor proposes to be priority areas of focus for Enrollee outreach and education.

We believe the topics proposed by DMS are the most critical and prevalent issues that we should continue to address through proactive outreach and education. By continuing to teach our Enrollees about the topics of population health, access to care, covered services, and improving overall health we can help them prevent the onset of health issues and connect them to the best resources for the management and treatment of existing conditions.

TOPIC #1: POPULATION HEALTH

Our primary goal is to identify and engage Enrollees in their own health using a variety of innovative outreach approaches described above, including face-to-face, telephonic, print materials, and through our digital channels like the MyWellCare smartphone app. We engage Enrollees in each population health program through personal health coaching, face-to-face meetings, peer support, and education on their value-added services that support healthy lifestyle changes. For example, our Healthy Rewards program provides financial incentives for Enrollees who complete preventive health, wellness, and PCP engagement milestones to promote better health outcomes and develop healthy behaviors. We teach Enrollees about accessing our innovative programs, such as MyStrength's online behavioral health coaching platform and the Pacify smartphone application that guides new and expecting mother's on a week-to-week basis with tips and education. The foundational elements of each population health program include access to health education on our public website, the Enrollee portal, the MyWellCare smartphone application, traditional health informational mailings, text messaging programs, and social media. Table **C.12-2** illustrates our population health programs and the associated outreach and education resources for each.

Table C-12.2 Population Health Programs Outreach and Education

Population Health Programs	
Asthma	Our Breath of Life Asthma Program embodies a holistic, comprehensive approach to promoting wellness, improving chronic condition management, and improving population health through collaboration with communities. Our outreach and education methods are facilitated by our care coordinators who connect with Enrollees to educate them on appointment reminders, online self-management tools, available peer support access, our Asthma app, and health coaching. Education materials include a guide for living an active, healthy lifestyle; understanding environmental factors; explanation of health conditions; and the importance of compliance with maintenance medications,

Population Health Programs	
Heart Disease	Our Heart Disease Program supports Enrollees' condition management through education, guidance, and support to learn more about their unique health concerns and to increase their ability to self-manage in accordance with their provider's treatment plan. Our outreach and education methods are facilitated by our care coordinators who connect with Enrollees to educate them on our self-management tools, peer support access, the importance of attending medical appointments with their PCP and specialists, and nutrition and activity guidance.
Diabetes	Our Diabetes Program aims to prevent diabetes from occurring through diet, exercise, medication adherence, and lifestyle changes, helping empower them to achieve positive health outcomes. We refer Enrollees to local resources through our Community Connection model, which can connect them to local partners for physical activity and healthy eating opportunities, and to community prevention programs. Our outreach and education methods are facilitated by our care coordinators who connect with Enrollees to educate them on our diabetes coaching solution which provides personal care through human interaction and technology. Health coaches teach Enrollees about diabetes symptoms, treatments, and tests.
Health Management	Our Obesity Program embodies a holistic, comprehensive approach to addressing one of the most common chronic diseases in Kentucky and is a major risk factor for development of debilitating diseases, such as diabetes and cardiovascular disease. Our outreach and education methods are facilitated by our care coordinators who connect with Enrollees to educate and enroll them in our six-month program working with a health coach. The health coach teaches them how to cook healthy meals and develop healthy lifestyle habits. Enrollees receive education materials on healthy eating choices, the benefits of exercise, and identifying diabetes symptoms. We also provide education about financial incentives for completing preventive care and A1C testing, as well as leveraging the MyStrength platform for online coaching and support at they learn new, healthier habits.
Tobacco Use	Our ACT for Tobacco program encourages Enrollees to actively commit to healthy lifestyles and supports those who are ready to quit tobacco. We integrate anti-tobacco education into programming for adolescent Enrollees and continue to offer options for all our young people to make the ongoing decision to stay tobacco-free. Our outreach and education methods are facilitated by our care coordinators who connect with Enrollees to educate them on MyStrength's self-directed online therapy to assist with anxiety, depression, or other substance use disorders that may be related; and the Healthy Rewards program for attending preventive appointments and screenings, as well engaging in healthy behaviors. We also inform Enrollees about accessing the Kentucky Tobacco Quitline for telephonic support and resources in their community. We also offer health coaching, motivational text messaging, and education information on our public website and the Enrollee portal.

Population Health Programs	
Cancer	Our Cancer Program approach includes interventions, goals, and expected outcomes that vary based on diagnosis, risk level, and various other factors. Our outreach and education methods are facilitated by our care coordinators who connect with Enrollees to educate them on the importance of following recommended treatment plans, managing side effects of treatment, taking medications, the impact of mental health, and general tips and guidance. We provide access to cancer education materials specific to their conditions and the care gaps they need to address.
Infant Mortality and Low Birth Weight	Our WellCare BabySteps program improves maternal health and birth outcomes through the delivery of services by multidisciplinary, integrated care coordination and care management services team. Our outreach and education methods are facilitated by our care coordinators who connect with Enrollees to educate them on our incentive program to encourage attendance at recommended prenatal and postpartum care appointments. We provide education materials on pregnancy, postpartum care, as well as access to the Pacify smartphone applicate where they can access the NAL, video chat with a lactation consultant or pediatric nutritionist.
Behavioral Health and Substance Use	Our comprehensive Opioid Misuse Prevention Program is for Enrollees who are over-using opioid medications or appear to be at risk of doing so. Our outreach and education methods are facilitated by our care coordinators who connect with Enrollees to educate them on access to treatment programs and local support groups, the MyStrength behavioral health platform, and peer support access.

TOPIC #2: ACCESSING CARE

We never assume our Enrollees know what services they have access to through their benefits or how to access those services. We use every in-person and telephonic touchpoint, as well as our direct mailings and digital communication channels, to teach and guide Enrollees about accessing their available services for medical issues and to address their SDOH. We consistently educate them on the importance of prevention visits, the role of a PCP, and how to distinguish a medical emergency from a routine visit to promote appropriate utilization of services.

From day one, we start with a Welcome Call, where we can connect Enrollees with a live service representative to schedule their first PCP visit. Enrollees receive our Welcome Kit, which includes the Enrollee Handbook and information on accessing providers in their community. We strive at all times, to maintain a consistent and thorough education process that drives Enrollee engagement and brings information to their fingertips in a simple to understand, digestible format. All of our Enrollee education materials can be directly mailed or accessed online through the portal, website, or smartphone application. In addition to engaging Enrollees to take advantage of the services available, we target specific issues, conditions, and populations with tailored education materials and discussions, such as the following:

- *OB/GYN:* We identify and provide early engagement education for our pregnant Enrollees that include prenatal and postpartum guidance. Identification occurs through the HRA, review of the premium file or examination of claims algorithms, all of which leads to assistance scheduling their first appointment with an OB/GYN provider. We promote our digital programs, including the Baby's First text messaging program and the Pacify smartphone application to provide additional guidance and prenatal support and coaching throughout the pregnancy and postpartum stages. Pacify includes 24/7 video access to certified dieticians and lactation consultants.
- *Appropriate ED Utilization:* Our emergency department (ED) Diversion program serves to educate and empower Enrollees to make the most informed decisions about their health, lower health care costs, and ensure that emergent medical care is available for individuals who are experiencing a physical or behavioral emergency. The Enrollee Handbook and ESRs help our Enrollees learn about the proper utilization of the ED and more appropriate alternatives for non-emergency care, such as local urgent care centers or accessing the NAL or Behavioral Health Services Hotline for triage and guidance. Our Enrollee Outreach Coordinators engage high-utilizers to enroll them in care coordination, teach them about accessing their PCP and prevention appointments, and how to locate alternatives to the ED in their community. The MyWellCare App also provides Enrollees with an easy-to-use search and mapping function that allows them to find the urgent care centers open at the time they are searching nearest to them.

TOPIC #3: COVERED BENEFITS AND OTHER SERVICES

Enrollees who learn about the benefits and services available to them are more likely to use them to get healthy and stay healthy. For example, we inform them about core benefits and our value-added services, such as eye glasses, OTC health and hygiene products, and our Safelink mobile phone program at every in-person, telephonic, digital, and print communication. Our communications team will continue to reinforce Enrollee education through outreach calls from the Care Center, our patient care advocates, and health coaches, while focusing on specific benefits our Enrollees may not be aware of, including the following:

- *Dental Care:* We recognize that dental care is a critical element of whole-person care, playing an important role in the overall health of an Enrollee. We proactively identify those Enrollees who require dental services and who have not received an annual exam or cleaning. Once identified, we work with our dental vendor, Avesis, by sending them a notification of the care gap and perform outreach to encourage service utilization.
- *WellCare Works:* Our community engagement team educates Enrollees about the WellCare Works program—an innovative platform that assists Enrollees in preparing for the workforce and finding a job suited to their experience. We provide one-on-one trainings, including webinars, summits with workforce agencies, and train community partners in an effort to increase education about the program at various Enrollee touchpoints.
- *Value-Added Services (VAS):* We educate Enrollees about not only their covered services and benefits, but also their value-added services that supplement our support through

additional benefits free of charge. These services help our Enrollees fill in critical gaps and not typically covered under the umbrella of traditional benefits that improve health outcomes. Our education topics include discussing access to home-delivered meals, the Healthy Rewards program, health coaching services, access to vision and dental care, job training, and financial education, to name a few.

TOPIC #4 IMPROVING OVERALL HEALTH

We focus on educating Enrollees about the benefits of preventive behaviors for staying healthy and preventing illness. From day one, we provide education on the importance of the PCP and maintaining a consistent relationship with their provider to address their needs while adhering to appointment schedules, treatments, and medications. ESRs and Enrollee-facing staff teach all Enrollees about the role of the PCP, what providers can be selected as a PCP, how to change their PCP using the call center, online portal, or smartphone application, how to schedule appointments, obtain referrals, and understand authorizations. As we auto-assign a PCP upon enrollment, we discuss these topics at the initial Welcome Call and provide clear instructions and education about the importance of maintaining PCP relationships in our print materials.

We tailor materials to our Enrollee populations, such as EPSDT calendars for child and adolescent health maintenance, and annual reminders for adult wellness exams. Enrollee outreach coordinators, health coaches, and care needs coordinators frequently engage with Enrollees one-on-one to provide information about prevention services and our Healthy Rewards incentive program, which rewards individuals for healthy behaviors like seeing their PCP. Enrollees receive a gift card for accessing preventive health screenings, PCP visits, Well-Child visits, prenatal care visits, well-women visits (including mammography, cervical cancer, and chlamydia screenings), diabetes HbA1c screenings and eye exams, and preventive dental care among others.

iii. Initiatives and education (health literacy) the Vendor will use to drive appropriate utilization and cost-effective health care services.

WellCare of Kentucky's Enrollee Services model includes initiatives and education (health literacy) that drive appropriate utilization and cost-effective healthcare services. Our general strategy focuses on implementing the following methods across all our communication channels to teach Enrollees how to properly utilize their managed care services and benefits, as depicted in **Figure C.12-3**:

Figure C.12-3 Components of Health Literacy

- Improving health literacy so that Enrollees feel empowered to access appropriate services and preventive services across the entire spectrum of care guided by our staff engagement, education materials, and communication channels.
- Teaching Enrollees to engage in self-care through adherence to PCP and specialty appointments, as well as through our digital apps and population health

programs that provide one-on-one and online health coaching to guide and support the Enrollee as they manage specific conditions.

- Empowering Enrollees with information that gives them the confidence to navigate the health system, address their comprehensive SDOH needs, and know when and how to contact us through their preferred communication channel whenever they need help.

The following initiatives are examples of how we achieve proper utilization and cost-effective healthcare services.

PROJECT IMPROVEMENT PLAN INITIATIVES

One of the biggest challenges in managed care is finding a way to effectively apply improved health literacy to make sure Enrollees understand how to properly use their services in a cost-effective manner. Through our project improvement plans (PIP), we identified the need to increase health literacy on the following topics:

- Proper use of urgent care centers, local health departments, and PCPs for vaccines
- Risks associated with tobacco use for an unborn child
- Importance of postpartum and dental care
- Appropriate management of COPD
- Available resources to assist with ongoing disease management
- Non-emergent ER utilization

Without knowledge on how to properly manage their health care, Enrollees are unlikely to make informed decisions to improve their health. To address this, we developed and distributed Enrollee-specific informational material, including targeted letters and newsletters for Enrollees to improve health literacy as part of the PIPs. Through telephonic outreach, our care needs coordinators educated Enrollees regarding dental, postpartum, and COPD care, and our care coordinators educated Enrollees with serious mental illness (SMI) on managing their behavioral health issues. We also implemented a 24/7 BabyLine staffed with nurses and available to offer support and answer questions through telephonic interactions with Enrollees. To support tobacco cessation, we referred Enrollees to the Kentucky Quit Line to access support resources in their community. Lastly, we expanded the Healthy Rewards program to include financial incentives for attending dental appointments, well-child visits, and adolescent well-care visits.

HEALTH LITERACY INITIATIVES

Enrollees cannot change inappropriate patterns of seeking care—or may not seek care at all—if they cannot understand healthcare concepts, know how to navigate the system properly, or access education materials and support in their preferred language. To prevent the onset of health disparities caused by low health literacy or jargon-filled materials, we implemented the following measures:

- *Health Literacy Advocate:* Trained in population health and disparities, our health literacy advocate trains associates on the correlations between health literacy and health disparities, and the influence of culture on Enrollees' attitudes about health and treatment.
- *Language Interpretation/Translation Services:* To ensure that speaking a language other than English, including American Sign Language, is never a barrier to understanding their health care, we provide certified oral and ASL interpretation as well as materials translation for all our Enrollees in Spanish and other languages upon request.
- *Accessible Education Materials:* In addition to ensuring materials are written at a sixth (6th) grade reading level, we use Krames easy-to-understand materials. Conveniently located in the Enrollee Handbook, the WellCare of Kentucky Dictionary educates Enrollees on common healthcare terms.
- *Cultural Competency:* All WellCare of Kentucky staff members are required to take cultural competency training to develop skills enabling them to interact effectively with diverse populations. We hire our Enrollee outreach coordinators from the same rural communities as our Enrollees and, combined with our community partners whom our Enrollees trust, we are able to educate them on how to access services appropriately. We also require providers to take cultural competency training accessed from the provider portal.
- *Kentucky Homeplace.* This University of Kentucky program, and a WellCare of Kentucky rural partner, consists of community health workers providing health literacy education to Enrollees (and non-WellCare Enrollees) so they can learn to navigate the healthcare system.

ENROLLEE ENGAGEMENT INITIATIVES

Our mix of engagement initiatives consist of phone calls, mail-outs, and push notifications to mobile devices encouraging Enrollees to follow discharge orders from a hospital or ED, educating them on alternative, cost-effective care sites such as nearby walk-in clinic or urgent care center, promoting preventive care through EPSDT calendars and tying in annual exams with health awareness months (e.g., mammograms in October during Breast Cancer Awareness month). Other initiatives include the following:

- *EOC Program (Enrollee Outreach Coordinators).* An intervention-based initiative, the EOC program consists of field-based outreach coordinators engaging high-utilizing Enrollees and enrolling them in care coordination. Through data sharing agreements, hospitals and other providers furnish reports of Enrollees who have presented for services including their most recent contact information for follow-up by our coordinators. They also notify us of admissions for coordinators to engage at the Enrollee bedside, educate on utilization, and enroll in care coordination. EOC's successful engagement and care coordination enrollment of high-utilizers has resulted in a **22% decline in admissions, a 20% decline in ED use, and a 17% reduction in medical expenses.**
- *Health Coaching.* Our care coaches, specialty-trained in engagement techniques, guide Enrollees towards appropriate utilization by encouraging medication adherence, promoting

appointment adherence for PCP and prevention visits, and providing lower-level, cost-effective alternatives to EDs such as walk-in clinics or urgent care centers.

- *Healthy Rewards Program.* Our incentive program reinforces proper utilization such as well-visits and annual screenings, with reward cards redeemable at local retailers. **In 2019, WellCare of Kentucky closed more than 43,500 care gaps through this program and distributed over $1,018,000 in rewards.**

iv. Collaboration opportunities with other contracted MCOs, CHFS Departments, and community partners to support Enrollee needs through joint outreach and education.

WellCare of Kentucky is a community-anchored, managed care organization (MCO) that values collaboration with our partners in the Commonwealth to support Enrollee needs through joint outreach and education. Since 2011, we have accepted every invitation to participate on state or local community taskforces and workgroups with other MCOs, the Cabinet for Health and Family Services (CHFS) departments, and our community partners. We have seen firsthand how these joint efforts have helped develop a more efficient, unified approach to managed care and we look forward to collaborating on future initiatives.

The following section includes examples of our collaborative efforts to support Enrollee needs through joint outreach and education and proposed initiatives for future discussion.

COLLABORATION WITH MCOs IN THE COMMONWEALTH

Our leadership and community relations teams maintain contact and communication with the other MCOs in the Commonwealth and participate alongside our MCO colleagues through community engagement events and through the Project Improvement Plans (PIP) organized by DMS. In addition, we also contribute alongside the other MCOs on nearly 60 different local coalitions, workgroups, and councils, including the Safety Net Alliance of Northern Kentucky, the Kentucky Coalition for Health Communities, and the Trimble County Health and Wellness Coalition. The following are just a few examples of collaborations that focused on developing education and engagement initiatives to support Enrollee needs:

Foster Care Training Presentation: Navigating Managed Care

As a leader in the development of innovative services and programs for our Enrollees in the foster care system, we led the development of a key training presentation with the other MCOs to help teach foster parents about the managed care environment and accessing their covered services. The training teaches common healthcare terminology, how to access help and support, the available benefits and specialty providers, and how to work with WellCare of Kentucky or other MCOs on any issues they may have while supporting their foster child. Prior to attending the presentation, many foster parents are unaware of the services available to them and appreciate help with learning how to navigate the system. A truly collaborative effort, our Senior Manager of Foster Care, LeAnn Magre (and potential SKY Provider Services Liaison) initiated a workgroup that included participants from each of the MCOs in the Commonwealth. The workgroup met on a monthly basis for more than a year, working together to develop the

curriculum and foster care tip sheet for parents and workers at the Department of Community Based Services (DCBS).

To maximize our engagement and spread this knowledge, we attend regional conferences and parent training sessions organized by the DBCS and other community-based organizations across the Commonwealth. In 2019, we served as the lead presenter for this training at four parent conferences held twice a year, as well as four parent support group trainings throughout Kentucky. Additional examples of collaboration include the following:

- *Passport Health Plan.* We teamed up with Passport Health Plan to support the FARMACY Program at the Letcher County Farmer's Market in Whitesburg. The program features local health providers educating Enrollees on healthy nutrition and writing prescriptions for the market's fresh fruits and vegetables. Together, our combined support enabled **more than 650 individuals from more than 220 families to obtain local produce.**
- *Kentucky HEALTH Forum.* Along with our MCO counterparts, we participated in the 2018 Kentucky HEALTH forum to provide information about how MCOs will support our Enrollees in the program.
- *MCO Joint Flyer.* Led and developed by DMS, we contributed our benefits information and distributed the MCO Benefits Flyer at events and provider offices. This one-stop-shop benefits document displays the benefits provided by each of the five MCOs in the Commonwealth, enabling Enrollees to easily and quickly grasp information regarding their particular MCO.

PROPOSED COLLABORATIONS

Our leadership and community relations team is proposing the following ideas for future MCO-driven collaborative efforts focusing on joint outreach and education to support Enrollee needs.

- *Rural Collaborative Health Fair.* We attend and participate at events across the Commonwealth to meet our Enrollees and share information while meeting them face-to-face in their community. Along with many of the other MCOs, we attend events such as the Kenton County Open Enrollment Health Resources Fair, the Readiness Health Fair in Spencer County, and the Eastern Kentucky University Health Fair in Clay County. Expanding on this engagement opportunity, we propose the development of a Collaborative Health Fair with the other MCOs that we that would enable us to bring information, screenings, and services to rural areas as a cohesive group. At times, each MCO attends local events and provides the same types of redundant services. Through collaboration, we could streamline this approach by pooling our resources together, with each MCO providing different type of clinical service or preventive screening at the Collaborative Health Fair. We would also include the help of the local health departments and any community partners that can contribute to the road show in each of the regions.
- *Mental Health First-Aid.* We propose working with the other MCOs to fund and host evidence-based Mental Health First-Aid training presentations at community events and

facilities in each region of the Commonwealth. This type of training is geared toward the lay-person to help them identify signs of behavioral health issues and crises.

- *Streamlined Crisis Services Access.* We recognize that DMS is seeking to streamline the disjointed mobile crisis support system in the Commonwealth. In addition to financial contributions, we would propose working with the MCOs to develop a single, accessible hotline capable of routing all Enrollees to the appropriate MCO Behavioral Health Services Line. This would eliminate the confusion sometimes caused by multiple numbers, and simplify the system down to a single, easily identifiable number to support Enrollees behavioral health needs and crises.

COLLABORATION WITH CHFS DEPARTMENTS

As stated, we regularly participate in workgroups and PIPs alongside the various departments of the CHFS, including DCBS and the Department for Behavioral Health, Developmental, and Intellectual Disabilities (DHBDID). The following includes just a few examples of our collaborative efforts on joint outreach and education initiatives to support Enrollee needs:

- *Smoking Cessation Guide.* In an effort led by DMS, we worked with the other MCOs over a period of six months to develop a smoking cessation guide based on a related collaborative PIP. As a result, all MCO network providers are provided with an easily digestible guide that includes the available tobacco cessation benefits and medications that each of the five MCO's offers on a single page. The guide also includes simple reminders, such as asking every Enrollee about tobacco use and instructions for providing the Quit Now Kentucky phone line information for telephone counseling, or contacting Quit Now Kentucky directly to have them contact the Enrollee. The provider guide also includes useful tips for applicable diagnosis codes and billing information.
- *Enrollee Newsletters.* Over the years, our thought leaders and clinical directors have participated in various PIPs with the CHFS departments and other MCOs to help advance the care and support for all the Enrollees in the Commonwealth regardless of the MCO providing that care. Examples include PIPs for antipsychotic medication use in children and adolescents, prenatal smoking, and reducing hospitalizations and ED visits. As an offshoot of these collaborations, we have taken some of the most important lessons, tips, and ideas from these meetings and incorporated them into useful information in our quarterly Enrollee newsletters. As an example, one of our 2019 newsletters includes educational information on the importance of annual checkups, skin cancer, asthma and allergy awareness, healthy recipes, information on our Community Connections resources, and advice for navigating managed care in the Commonwealth.
- *Behavioral Health Resource Provider Packets.* While not a direct Enrollee-facing material, our behavioral health resource provider packets were developed in collaboration with the other MCOs and DBHDID as a result of a PIP focused on addressing the physical health risks in the SMI population. Today, MCO providers, specifically PCPs, have a better understanding of how to screen, treat, refer, and manage SMI for our Enrollees. Providers can bring the

packet to appointments, and apply the targeted behavioral health screenings to identify physical and behavioral health risks with guidance on the appropriate next steps.

PROPOSED COLLABORATIONS

While we look forward to continuing all our collaborations with the various CHFS departments and other MCOs, we also propose adding a new outreach and education component to the PIP process. In the past, most of the PIP collaborations have been provider-focused, and include ideas, initiatives, and solutions to help our providers better serve our Enrollees. By adding an Enrollee-facing component to the PIP process, the MCOs can work with the various departments to develop a cohesive Enrollee engagement and education outreach approach focused on improving Enrollee health and quality outcomes.

Collaboration with Community Partners

We have developed creative partnerships for Enrollee outreach and education throughout the Commonwealth, including schools, homeless centers, youth service centers, family resource centers, public health departments, and other community and faith-based organizations. Since 2011, we have created and maintained hundreds of valuable relationships, and hold leadership positions on more than 20 local boards, including the Homeless and Housing Coalition of South Central Kentucky, Northfork Local Foods, the Housing Development Alliance, the Kentucky Faith-Based Coalition, and Pathfinders of Perry County, to name a few.

Our leadership and community relations team regularly develops and proposes new Enrollee-facing outreach and education initiatives in the local communities with our partners. The following includes just a few examples of some of our most exciting collaborations that support Enrollee needs.

- *Public Health Departments and County Schools.* WellCare of Kentucky provided a financial grant to expand the Marshall County Health Department's Team Ultra program to promote youth health and fitness. Through this program, we helped make it possible for more elementary and middle school children to participate in after-school activities that promote exercise, healthy behaviors, and nutrition. We refer school age Enrollees to the program, which increased PCP visits by 98% and decreased ED visits by 35%.
- *Kentucky Homeplace — Rural Access.* We supported and funded the Kentucky Homeplace initiative—an extension of the University of Kentucky's Center for Excellence in Rural Health. Through this support, we enabled community health workers to engage individuals with chronic diseases across 30 counties. The program provided health coaching, health literacy, and disease self-management combined with gas cards and transportation vouchers to help Enrollees attend medical and social services appointments. **As a result, the program experienced a decrease in ED visits and inpatient admissions resulting in a $1,615 PMPM reduction and an estimated total savings of more than $850,000 since 2016.**

PROPOSED COLLABORATIONS

In addition to the current collaborative efforts currently underway with our community partners, we are also proposing the following new initiatives for joint outreach and education that supports Enrollee needs:

- Green River District Health Department — smoking cessation
- Faith Community Pharmacy — better access to medications
- Northern Kentucky Independent District Health Department — oral health
- The Healing Place — behavioral health and SUD treatment support
- Family Health Centers — personal safety
- County Health Departments (Todd, Graves) — diabetes
- North Central District Health Department — baby showers for pregnant Enrollees
- True Up Louisville — foster care transitions
- Marshall County School District — behavioral health support
- Kentucky Faith-Based Coalitions — suicide prevention

c. Describe methods for communicating with Enrollees as follows:

i. Creative efforts to achieve high levels of Enrollee engagement (e.g., smart phone applications,) to educate Enrollees and to communicate information for their individual health issues.

To achieve high levels of Enrollee engagement, we develop creative solutions that educate our Enrollees and communicate information for their individual health issues in a format that is easily digestible and accessed using familiar, mobile technology right from the phone. Our digital communications team is dedicated to the ongoing development of new mobile solutions that keep pace with our Enrollees' adoption of new technology. The following suite of mobile applications and text messaging programs enable Enrollees to participate in their healthcare experience through the convenience of familiar mobile functionality.

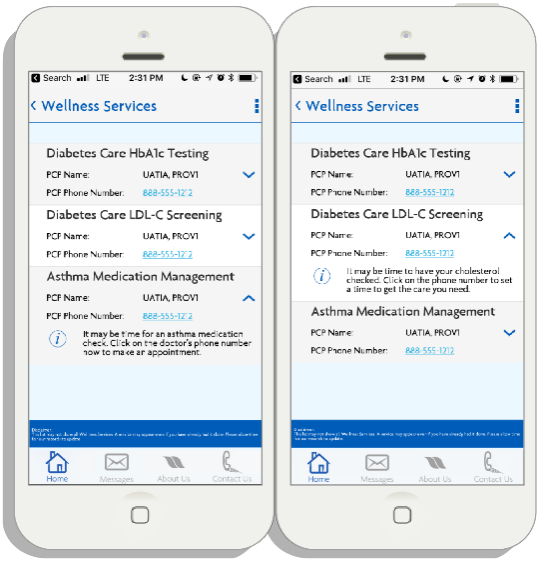


Figure C.12-4 MyWellCare App

MyWellCare Smartphone Application. Compatible with iOS and Android, and depicted in **Figure 12-4**, our mobile smartphone application helps Enrollees locate nearby urgent care centers, switch PCPs, and email their ID cards to providers. Enrollees with diabetes can opt-in to receive HbA1c test reminders

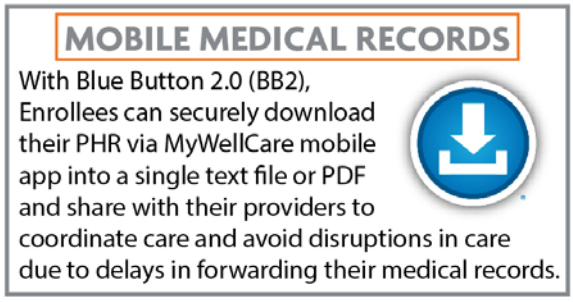
with their provider's phone number hyperlinked for a tap-to-dial appointment setting. **In 2018, there was a 200% increase in downloads of the MyWellCare smartphone app—the most popular functions include the provider search, Enrollee ID card, and PCP change.**

Text-to-Health. Text messaging empowers Enrollees to actively participate in improving their health through direct interactions received on their phone. Our Enrollee texting program increases engagement by conducting outreach through short message service (SMS) or text messaging. Enrollees, the parents of Enrollees (ages 3-20), and caregivers receive messages reminding them to schedule services, including well visits, breast cancer screenings, and medication reminders. Follow-up reminders are sent for Enrollees who continue to need their care needs addressed. Enrollees can contact us for assistance with scheduling appointments based on the texting outreach. **To date, we have launched nearly 1,000,000 text messages enterprise-wide since our texting campaign launched.**

Baby's First Text Messaging Program. Baby's First is our text messaging program offered to Mothers, who can easily sign-up with the help of their care coordinator or by texting BABY1 to 52406. Enrollees receive up to six text messages per week that provide guidance from birth to 15 months postpartum. Program guidance includes links to videos, questionnaires, and other resources that cover topics such as child development, daily care tips, vaccinations, wellness visit reminders, breastfeeding instructions, home safety measures, nutrition and healthy eating, developmental milestones, to name a few.

JOOL Health Coach. Last year, we collaborated on a new program for our foster care youth with JOOL Health Coach, a personal coaching smartphone application that encourages youth to check in with their peers and engage in healthcare services. With tailored program tracks specific to different populations, Enrollees have access to a transition-aged youth pathway for those with opioid use disorder/substance use disorder (OUD/SUD). JOOL includes OUD/SUD assessments, resources, and referral information to help youth and their families easily learn about their conditions and the local treatment options available in their community.

Mobile Medical Records. Blue Button 2.0 (BB2) technology enables Enrollees to securely store their health records and download to a file through the MyWellCare mobile app to coordinate care with providers.



Pacify Smartphone Program. At the touch of a button, Pacify offers expecting and new mothers unlimited 24/7 video access to certified dieticians and lactation consultants. Enrollees receive breastfeeding support and guidance from these specialized providers for any health issues their babies may be experiencing, such as colic, digestion, and transitioning to solid foods, to name a few. As part of our ongoing focus on continuous quality improvement and ensuring Enrollees receive the care they need, Pacify aims to improve health outcomes while also reducing costs to the healthcare system. Push

notifications include helpful alerts for health and safety tips beneficial to both mothers and their babies.

MyStrength. An online, evidence-based behavioral health therapy platform, MyStrength provides Enrollees with interactive clinical programs empowering them to address depression, anxiety, stress, substance use, chronic pain, and sleep challenges, while also supporting the physical (e.g., smoking cessation, diabetes) and spiritual aspects of whole-person care. MyStrength's integrated model includes computerized cognitive behavioral therapy (cCBT), mindfulness, motivational interviewing and Assertive Community Treatment (ACT) protocols with personalized pathways that facilitate user interaction, mood trackers, and additional tools to measure effectiveness and improvement, depicted in **Figure C.12-5**.

MyStrength has shown the following benefits upon implementation: a 43% rapid symptom reduction within the first two weeks of engagement, 83% as effective as face-to-face therapy at a fraction of the cost, and a 70% cost reduction in medical expenses for Enrollees.

Figure C.12-5 MyStrength Behavioral Health Therapy Platform

Enrollee Portal. Enrollees can access our secure portal from any device to access their personalized health care experience and self-service functions. For example, within the portal, Enrollees can complete an HRA, change PCPs, or check on the status of service authorizations. **In 2018, more than 6,500 Enrollees changed their PCP using either the Enrollee portal or the MyWellCare smartphone application.**

WellCare of Kentucky Website. Our mobile responsive website provides all the information in the Enrollee Handbook plus interactive functions such as the find-a provider tool for Enrollees to search by languages, gender, accessibility considerations, and more. Enrollees can download the Enrollee Handbook, learn about preventive care, locate a specialist or PCP using the find-a-provider tool, change their PCP, order a new ID card, or read our FAQs in the Enrollee Quick Tips section, which we developed from our experience transitioning Enrollees to managed care. Based on health literacy principles, the tool enables Enrollees to use non-medical terminology

to find physicians, such as "heart doctor" for a cardiologist. **In 2019, WellCare of Kentucky's public website received more than 178,541 unique views, and since 2018, more than 3,500 Enrollees have ordered ID cards online.**

New Enrollee Welcome Video: Our captioned, dynamic welcome video (based on location and Enrollee needs) is a recent innovation our team developed to engage Enrollees through a multi-media experience accessed from a new Enrollee welcome text (SMS) message. The four-minute video on WellCare's YouTube channel educates Enrollees about accessing information regarding their benefits and covered services, the role of a PCP (with a prompt to schedule an appointment), the purpose of the NAL, and accessing the CCHL to address their social resource needs.

AbleTo: The AbleTo program is a virtual CBT solution providing weekly coaching sessions with a coach and professional therapist to handle the behavioral health components of co-morbidities. The team helps the Enrollee set goals and build a program tailored to their personal needs. Coaching sessions occur twice a week at a time convenient to the Enrollee.

Fit4D: Supporting youth and adolescents with Type 1 and Type 2 diabetes, Fit4D is a support tool that includes chat messaging and push notifications. Through personalized education and coaching services, Fit4D supports Enrollees by teaching self-management behaviors and guidance for following treatment and care plan recommendations, as well as participating in preventive services. Health coaches speak to both the guardian and the Enrollee, or for older participants, help supplement diabetes treatment and education as Enrollees learn to manage treatment on their own.

MAP Health Management: This tool provides mobile peer support for SUD. MAP is a national vendor that matches Enrollees with a peer with the same lived experience as they go through detox and need support for their triggers. Addiction is a chronic disease—MAP's peer recovery support services extend the care continuum to match the chronic nature of the disease.

- Improve long-term engagement across SUD Enrollee populations to facilitate early intervention, motivate Enrollees to seek treatment when appropriate, reduce the impacts of relapse, and direct care needs such as readmission when appropriate
- Reduce out of network utilization for SUD treatment
- Capture and report on longitudinal outcomes data, including social determinants of health, on SUD populations and treatment programs

We understand that Enrollee engagement is key to recovery success, which is why providing this real-time, 24/7 access to support and the ability to triage for additional services is critical. This connectedness helps Enrollees feel less alone and isolated.

ii. Approach to identifying, developing, and distributing materials that will be of most use to Enrollee populations, and efforts the Vendor proposes to target distribution to specific populations as appropriate.

Our approach to identifying, developing, and distributing materials that will be of most use to our Enrollee populations includes both general materials that cover accessing basic services; and targeted education materials for specific Enrollee populations. The following information describes our approach:

- *Identify.* WellCare of Kentucky's health literacy advocate works with our Enrollee Services team to discuss the impact that our education materials have on increasing health literacy and improving Enrollee well-being and quality of life, as well as how it affects their decisions about seeking care and meeting with their PCP. Our Enrollee materials account for the various levels of health literacy to ensure they are culturally appropriate and inclusive of healthcare guidance, information, and instructions for accessing their benefits.
- *Develop.* We develop materials to educate Enrollees on how to navigate the managed care system so they can access benefits and services and learn to practice self-care. Our materials are written at the sixth-grade level in English and Spanish and are translated into prevalent non-English languages with short turnaround times. Our health literacy advocate (with training in health disparities) works with the Enrollee communications team to produce not only visually engaging materials but ones that are culturally accessible.
- *Distribute.* We distribute materials through print mailings, online information—including the public website, MyWellCare smartphone app, Enrollee portal, and social media—in-person, and by telephone. Knowing that many of our Enrollees prefer to engage with materials online through the portal, website, mobile application, we provide the following content to guide their healthcare experience: Instructions for what to do in a behavioral health emergency; Preventive health guide; Covered services; Free OTC products; SafeLink phone program; WellCare Works; Healthy Rewards program; Pharmacy services; Enrollee rights and policies; Helpful tips and information; Flu shot information; and How to access the NAL and Behavioral Health Services Hotline.

GENERAL ENROLLEE MATERIALS

We recognize that the traditional process of mailing educational information to our Enrollees is still an effective component of a well-rounded engagement strategy, which is why we make all materials available in print mailings and online through the public website, Enrollee portal, and the MyWellCare smartphone app. For new enrollees, we distribute an Enrollee Handbook, a Quick Start Guide, and ID card letters within the first five days of enrollment. These materials educate Enrollees about their covered services, the role of the PCP, how to access care that meets their whole-person needs, and enrolling in our population health programs. In addition, we send the following printed Enrollee education materials by direct mail:

- *New Enrollee Welcome Kit* — Mailed within the first five days of enrollment, the welcome kit includes the Enrollee Handbook, provider directory, and Enrollee ID card

- *Enrollee Letters* — Includes notifications of changes to the Kentucky Medicaid program, information about our Healthy Rewards program, and incentives that we provide for participating in prevention appointments and activities
- *Wellness Exam Reminders* — Highlights the importance of preventive care for children, adolescents, and adults
- *Disease-Specific Education* — Regarding conditions, such as asthma or juvenile diabetes that can be improved through self-directed care and maintaining a good relationship with the PCP, as well as attending appointments consistently
- *Quarterly Newsletters* — Covering a broad range of health-related topics, our quarterly newsletter includes information about our population health programs, alignment with monthly national health themes, such as asthma awareness, and information on the importance of accessing services, attending annual checkups, and sustaining a trusting relationship with PCPs. It also includes healthy recipes, health and exercise tips, local Community Connections resources, and contact information for WellCare of Kentucky and the NAL

TARGETED ENROLLEE MATERIALS

We develop and distribute materials promoting overall health and educating Enrollees on the importance of prevention and the programs we offer. These materials include the following:

- *Prevention Education* — Include brochures and booklets from the public domain, such as those produced by local health departments, the Commonwealth, or the Centers for Disease Control and Prevention (CDC). We also produce proprietary materials, such as our Healthy Rewards brochure that includes information on how to earn rewards for health behaviors and attending health check-ups with their PCP
- *Child and Adolescent Health* — Materials include EPSDT schedules, birthday cards that provide well-child visit reminders, individualized periodicity reminder letters, newsletter articles, and other materials
- *Maternal Health* — Education materials promoting maternal and child health include booklets such as Mommy and Baby Matters, Taking Care of Yourself and Your Baby, and Start Healthy Birth Outcomes
- *Adult Preventive Health* — Materials that promote adult preventive services include individualized periodicity reminder letters, newsletter articles, and brochures explaining the various annual preventive screenings, such as cervical cancer screenings

iii. Methods of leveraging communications to meet the diverse needs and communication preferences of Enrollees, including individuals with limited English proficiency and diverse cultural and ethnic backgrounds, disabilities and regardless of gender, sexual orientation or gender identity.

WellCare of Kentucky's Enrollee Services staff and call center have established methods of leveraging communication to meet the diverse needs and communication preferences of our

Enrollees across the eight regions of the Commonwealth. The methods listed below support individuals with limited English proficiency, diverse cultural and ethnic backgrounds, and disabilities regardless of gender, sexual orientation, or gender identity. We train all Enrollee-facing staff to confirm and document the Enrollee's preferred language at each interaction, ensuring their preference is available for all staff to adequately communicate with the Enrollee.

INTERPRETATION AND TRANSLATION RESOURCES

The Enrollee Services call center is fully staffed with both English and Spanish speaking ESRs. To support Enrollees with limited English proficiency, we also provide interpretation and translation resources that facilitate healthcare support and guidance in the comfort and familiarity of the Enrollee's preferred language. Our language line supports more than 200 languages through more than 2,000, on-demand, qualified interpreters experienced in healthcare language and terms. We translate all Enrollee materials into Spanish and can provide materials in large print, Braille, or DVD for Enrollees with a low level of literacy. For medical appointments, we provide an in-person interpreter to ensure the Enrollee can understand their physician and adequately communicate their concerns and questions. We train ESRs to seamlessly participate in three-way calls with American Sign Language interpreters using the Video Relay Service so that Enrollees who are deaf or hard of hearing will never be at a disadvantage when accessing information or services.

PERSONALIZED ENROLLEE EXPERIENCE

To personalize the healthcare experience for our Enrollees, we ensure cultural and diversity inclusion by documenting their language preferences and language needs where the native language is available and using this information across all channels (phone, print, materials). We note the preferences and needs in CAREConnects, and this information is visible to all Enrollee-facing staff, including care coordinators. For outbound communications, these needs and preferences are automatically absorbed into the logic of our system, which organizes the production of Enrollee communications. If an Enrollee’s language preference is Spanish, for example, we would send a letter about a Medicaid program change to the Enrollee already translated in Spanish; an Enrollee who opted-out of mailed, written materials would receive the communications about a Medicaid program change in the Enrollee portal if they had selected this option. For Enrollees needing oral or ASL interpretation, a pop-up alert informs ESRs that the Enrollee calling requires an interpreter, and they are able to respond quickly to meet their communications needs from the moment the Enrollee contacts us.

CULTURAL COMPETENCY: MEETING THE NEEDS OF OUR ENROLLEES

Our approach to meeting our Enrollees' needs considers their diverse cultural and ethnic backgrounds, disabilities, genders, sexual orientations, and gender identities. Our commitment to engaging Enrollees on their own cultural or personal terms begins with our leadership team who annually approves our cultural competency plan, which aligns with the national standards for Culturally and Linguistically Appropriate Services (CLAS). The plan is reviewed, updated, and approved by the Quality Improvement Committee (QIC) on an annual basis.

The following components of our approach support both diversity among our Enrollee population and our workforce:

- *Cultural Competency Training*: We require new associates to participate in cultural competency training within 30 days of hire, and annually thereafter, and pass an assessment as a condition of employment. ESRs, care coordinators, and other Enrollee-facing staff are prohibited by policy from direct Enrollee contact until they have demonstrated cultural proficiency. Market-specific training for Kentucky-facing associates includes learning how to pronounce names and surnames for the various Kentucky populations such as the Somalis in Northern Kentucky. Currently, all Enrollee Services staff have passed the requirement to recognize and respect our Enrollees' cultures, religions, primary languages, sexual orientation, and any other means of self-identification.
- *Unconscious Bias and Conscious Inclusivity Training*: In 2018, Senior Directors and above trained for a total of 2,000 hours on Conscious Inclusivity. Dr. Kellie McElhaney, Founding Director of the UC Berkeley Center for Equity, Gender, and Inclusion (EGAL), delivered the training which challenged our leaders to discover their biases while providing solutions to overcoming them.
- *CEO Action for Diversity and Inclusion*: In 2017 WellCare Health Plans CEO joined more than 650 CEOs in signing the CEO Action Pledge—the largest CEO-driven business commitment to advancing diversity and inclusion within the workplace. We celebrate diversity and inclusion in our work place through our growing number of affinity groups.
- *Associate Resource Groups*: WellCare supports six Associate Resource Groups (ARG), which are voluntary, staff-led groups united around a common affinity or personal identity. WellCare Health Plans currently has seven ARGs: African-American, Asian, Hispanic, LGBTQ, Persons with Disabilities, Women, and Veterans workgroups representing a powerful resource leveraged across the organization in various ways, such as:
    - Informing Enrollee communications to ensure relevance and understanding
    - Supporting recruiting and retention efforts to realize a diverse, high-performing and engaged workforce
    - Highlighting shifting trends that enable us to be of greater value to our provider partners
- *Diversity and Inclusion Achievements*: Our dedication to the diversity of our staff and the care for our Enrollees has garnered significant achievements that we celebrate, including the following examples:
    - *Corporate Equality Index*: WellCare scored a perfect 100% on the Corporate Equality Index—the national benchmarking tool for corporate policies and practices pertaining to lesbian, gay, bisexual, transgender, and queer employees.
    - *Best Places to Work*: WellCare of Kentucky was named "A top 10 Best Places to Work" in 2017 and 2018 by the Kentucky Chamber of Commerce, the Kentucky Society of Human Resource Management, and Lifestyle Health Plans.

- *Enrollee Satisfaction*: WellCare of Kentucky continues to lead all other MCOs in Enrollee satisfaction with eight out of ten new Enrollees actively choosing our health plan as their MCO over our competitors.

- *Health Literacy Training*: Our Health Literacy Advocate, with expertise in population health, provides intensive training for staff members on the correlations between health literacy, health disparities, and the role that culture plays on Enrollees' attitudes about health and treatment.

d. Provide a summary of innovative methods and the Vendor's proposed outreach plan to assess the homeless population.

A Path Forward: Housing Stability

Over 6,660 enrollees with WellCare of Kentucky have been connected to nearly 22,000 services through our homeless initiatives including 828 referrals for housing and 537 for education and employment assistance.

WellCare of Kentucky's grassroots Homeless Outreach Plan was established in 2011 to assess the homeless population, connect them to local organizations that address housing instability and domestic violence, and enroll them in our care coordination program to guide their healthcare experience.

In an effort to continually enhance and evolve our Homeless Outreach Plan, WellCare implemented our Homeless REACH program. The Homeless REACH program builds off of existing programs and weaves in new partnerships by combining high-powered, data-driven search engines with our call center and feet-on-the-street outreach activities to assist in rare cases where we cannot locate an Enrollee experiencing homelessness. We also utilize the collaborations with our grassroots partnerships in the community. The compassionate Homeless REACH program encompasses three key characteristics—**Partner-Locate-Connect**—to best serve our Enrollees.

The partner, locate and connect concepts flow throughout many of our successful homeless outreach initiatives.

- *PARTNER:* **Leveraging our local partnership and relationships to identify Enrollees experiencing housing instability facilitated by our Community Connections program and the deep community partner connections we have developed throughout the Commonwealth.**

- *LOCATE:* Utilizing a powerful data warehouse to integrate information from our internal sources, state enrollment files, the Community Connections database, external vendors, public records, and the Homeless Management Information System (HMIS) developed by the Department of Housing and Urban Development (HUD) to help locate Enrollees.

- *CONNECT:* Using the partnerships that we have developed, our Community Engagement partners implement solutions that resolve housing instability with help from our local partners and the members of the community we work with every day to assist the most vulnerable individuals in need of care, support, and guidance.

PARTNER: COMMUNITY PARTNERSHIPS

WellCare of Kentucky maintains a local presence throughout the Commonwealth with the work of our Community Engagement Partners responsible for developing and maintaining local partnerships that address our Enrollees SDOH needs, such as housing permanency. **In 2018, our dedicated community engagement team spanned the Commonwealth participating in more than 260 homeless and domestic violence-related activities across all eight regions and working side-by-side with over 50 front-line organizations.**

Through our partnerships with homeless coalitions, local shelters, and homeless organizations, it is possible for WellCare of Kentucky to keep our finger on the pulse of the challenges our homeless Enrollees face and in turn better serve our Enrollees and the communities in which they live. Through these efforts, the Community Connections program drives the continual development of our partnerships, allowing us to connect Enrollees to help when and where they need it most. Our partners include the following organizations:

- Westcare Homeless Shelter
- House Abuse Shelter
- Boulware Mission, Inc.
- BRASS (Barren River Area Safe Space)
- Children Exposed to Violence Coalition
- Chrysalis House
- Coalition for the Homeless
- Community Assistance & Referral Service, Inc. (CAReS)
- Community Connect Stand Down (HUD Continuum of Care)
- Community S.H.I.E.L.D.
- Daniel Pitino Shelter
- DOVES of Gateway
- East Kentucky Dream Center
- Emergency Shelter of NKY
- Family Nurturing Center
- Father Bradley Shelter for Women and Children
- Greenhouse17
- Homeless and Housing Coalition of South Central Kentucky
- Bethany
- Hope House
- HOTEL INC
- Housing Development Alliance
- Kentucky Coalition Against Domestic Violence
- Letcher County Homeless Council
- Lexington-Fayette Domestic Violence Prevention Board
- Over my Head
- Paducah Cooperative Ministries
- Safe Harbor of Northeast Kentucky, Inc.
- Salvation Army Richmond Corps
- SecondChance Mission
- The Dressing Room
- The Gentry House
- The Hope Center
- Turning Point Domestic Violence Shelter
- Welcome House
- Women’s Crisis Center, Inc.

To strengthen our local partnerships and expand access to resources for our Enrollees, the Community Connections program actively participates in the development of community programs by accepting and maintaining leadership positions on the boards of local organizations. Our internal Community Engagement Partners are active members of the following boards:

- *Chairperson of the Board* —The Homeless and Housing Coalition of South Central Kentucky
- *Secretary of the Board* —Housing Development Alliance
- *Board Member* — Coalition for the Homeless
- *Board Member* — Continuum of Care Advisory Board

FUNDING FOR LOCAL ORGANIZATIONS TO COMBAT HOMELESSNESS

As illustrated in **Table C.12-3**, WellCare of Kentucky recognizes that funding for community organizations is often limited and we provide investments that help sustain and provide capacity for those organizations that assist Enrollees with overcoming social barriers.

Table C.12-3 Funding for Community Organizations that Address Homelessness

Organization	Program	Description
Homeless and Housing Coalition of South Central Kentucky	Room in the Inn	WellCare provided a sponsorship to the Homeless and Housing Coalition of South Central Kentucky to begin the first season of Room in the Inn Bowling Green, which is a winter shelter program where homeless guests are housed for the night in area churches. Funds were used to purchase initial cots and needed supplies to get the program started. HOTEL INC, a member of the Homeless and Housing Coalition of South Central Kentucky, acted as fiscal agent. Room in the Inn is now operating as a stand-alone non-profit organization.
Community Connect Stand Down (HUD Continuum of Care)	Healthcare Screenings for the Homeless	Agencies and volunteers from throughout Warren County came together at the Salvation Army to explain their services and provide screenings and assistance to homeless and precariously housed individuals. WellCare Community Engagement Partner served on the planning committee and arranged for a variety of healthcare screenings to take place that day.
Coalition for the Homeless	Multiple	A variety of Coalition for Homeless Events over the years including “Stand Down” and “Give-a-Jam to End Homelessness!”

Organization	Program	Description
WestCare	Outreach	In 2015, WestCare men and women's shelters and connected WellCare Enrollees with case management through WellCare. WestCare notified a WellCare case manager by phone when an individual requested case management. This was an effort to assure healthcare needs are met for our Enrollees and reduce the Unable to Contact rate.
Welcome House	Northern Kentucky Street Medicine	WellCare provided funding to the Street Medicine program beginning in Kenton County. The program connected homeless individuals where they are to provide basic services. Funding provided means for technology, mentoring/training, and pharmacy costs. This was a new initiative for the organization.
The Dressing Room	Homeless Outreach	The mission of The Dressing Room, operated by Federated Charities, is to serve as a community clothing closet, collecting donations of gently used and new clothing and redistributing to low and moderate-income families, including those experiencing homelessness, at no cost.
Over My Head	Financial Assistance and WellCare Works	Over My Head is a Homeless Shelter and community organization providing services and supports to low income and homeless individuals. This funding is for financial support programming and administrative costs for the Enrollee level data exchange. They provide monthly data for all WellCare Enrollees accessing WellCare Works.
Daniel Pitino Shelter	Financial Assistance	The Daniel Pitino Shelter provides emergency and transitional housing, and primarily serves the GRADD region (Daviess, Henderson, Union, Webster, McLean, Ohio, and Hancock).
The Gentry House	WellCare Works	The agency's front line staff is trained on platform functions, in order to support our Enrollees in their employment and/or volunteerism search.
Brighton Center, Women's Crisis Center, Kenton County Library, Covington Schools, Targeted Assessment,	Community Impact Council	Through a WellCare facilitated Community Impact Council, these organizations are creating an awareness project around homelessness in the area.

Organization	Program	Description
Emergency Shelter of NKY, Erlanger Schools		
Boulware Mission, Inc.	Bus Tokens	Funding was to support transportation for homeless to decrease the barrier of limited affordable transportation for homeless individuals needing access to other service organizations and employment opportunities.

LOCATE: FINDING ENROLLEES THROUGH A DATA DRIVEN APPROACH

Accessing our internal data, WellCare of Kentucky has been able to identify Enrollees that have addresses listed as a shelter or as "homeless." Our team is then able to partner with these shelters to locate our Enrollees and connect with them in real time. This allows us to meet Enrollees where they are, ensuring they receive needed medical, behavioral, and social services support.

WellCare of Kentucky has identified more than 2,400 Enrollees experiencing homelessness or unstable housing situations. Today, nearly 800 Enrollees have been located and enrolled in our care coordination program.

Another data-driven method we use is partnering with homeless organizations to analyze Homeless Management Information System (HMIS) data. The purpose and impact of collaborating with HMIS agencies is multifold. Through data sharing with HMIS systems, we can identify our Enrollees who are experiencing homelessness or are at risk of homelessness. Often, these individuals are our Unable to Contact (UTC), Unable to Engage (UTE), or Loss to Care (LTC) population. In addition, this segment of Enrollees tends to be among our highest utilizers of ED services, whose needs could be better addressed in the PCP office. Often these Enrollees do not know who their MCO is, or how to navigate the health system.

Our current Kentucky HMIS partner is the Coalition for the Homeless. They have been the voice for the homeless in Louisville for the past 25 years and bring together thirty different agencies that address the issues facing the homeless through three approaches: (1) educating, (2) advocating, and (3) coordinating. Our Community Connections program began our partnership with the Coalition in 2014 to discuss the impact of social service accessibility for the homeless and its overall impact on the health of the most vulnerable citizens of Louisville.

Working in partnership with HUD, the Coalition is responsible for coordinating care, delegating HUD funding, and overseeing and coordinating the use of the HMIS to organize data regarding the homeless in Louisville and the resources available. Our Community Connections team plays an active role in the Coalition's efforts through attending the Continuum of Care (CoC) monthly meetings to continue learning about the HMIS process. In 2018, WellCare of Kentucky provided additional funding to the Coalition that contributed to their Point in Time (PIT) Count and Rx:

Housing Fund initiatives, and provided a match for the Youth Homelessness Prevention Demonstration Grant.

Data collection efforts of the HMIS database have shown that between November 2018 and October 2019, more than 200 WellCare of Kentucky Enrollees were referred to more than 600 services—with 350 of those service referrals made to a homeless day center and more than 170 for housing assistance. We are able to use this specific data in real time to assist our homeless enrollees.

CONNECT: CONNECTING ENROLLEES WITH AVAILABLE SERVICES

We recognize that homelessness is often a result of complex behavioral health conditions and co-morbidities that, when left untreated, may worsen due to the effects of housing instability. We also know that Enrollees experiencing homelessness have specific challenges such as accessing services, cycling between homelessness, shelters, hospitals, and correctional and mental health facilities, and may be victims of domestic violence. Upon successful outreach, a WellCare of Kentucky care coordinator works with the Enrollee to refer them to Section 8 housing and connect them to community programs and resources that provide housing-related assistance and address their comprehensive SDOH needs.

We use the HUD definition to define homelessness, which includes individuals in emergency shelters or residing in transitional housing, those discharging from a mental health or substance abuse treatment facility or prison who previously had no residence, and those fleeing a domestic violence housing situation. Through the following methods of the REACH program, we identify and connect our Enrollees to available resources within the community:

COMMUNITY CONNECTIONS HELP LINE (CCHL)

The Community Connections Help Line (CCHL) is our empathy-based call center staffed by Peer Coaches and Peer Liaisons who guide and assist Enrollees in removing social barriers. These peer-support coordinators, hired through workforce innovation programs, represent many diverse cultures, including individuals with disabilities, seniors, caregivers, students, veterans, and military families. They have first-hand experience navigating social services or have "lived" experience, such as being a former Medicaid Enrollee.

Using a database of 330,000 resources, these experts help Enrollees achieve independence by connecting them with organizations that offer a variety of benefits. We refer Enrollees to social resources that can assist them with everything from housing and transportation to child care and clothing. Powered by the My Family Navigator database, **the CCHL provides access to more than 200 local organizations with homelessness-related services and more than 130 organizations providing support for victims of domestic violence.** To assist individuals fleeing a domestic violence situation and prevent homelessness from occurring, our network includes more than 1,100 organizations providing transitional and permanent housing support and shelter.

As former Ticket-to-Work and Welfare-to-Work beneficiaries, peer coaches leverage their lived experience to skillfully identify primary causes of Enrollee SDOH-related issues. For example, a peer coach could uncover that the mother calling for housing support is actually experiencing domestic violence and should be referred to a domestic violence shelter, such as Turning Point

in Eastern Kentucky that covers Floyd, Johnson, Magoffin, Martin, and Pike Counties. As many individuals experiencing domestic violence require basic housing items and necessities for their fresh start, we provided a grant to this organization that assisted individuals with new cookware supplies.

Since launching, more than 6,450 Enrollees have been referred to nearly 19,000 services in Kentucky through the CCHL. **In 2018, we made more than 14,000 service referrals to assist individuals with housing and housing-related needs.**

COMMUNITY PARTNER STORY - HOTEL INC: STREET MEDICINE OUTREACH

One of our longest-standing partnerships is with HOTEL INC, a community-based non-profit organization that provides the citizens of Warren County with pathways to stable housing, community resources, and quality food. Since we began funding the HOTEL INC program in 2013 to support outreach efforts focused on homelessness, the organization has expanded to four teams that perform "Street Medicine" outreach multiple days per week to provide basic health assessments and follow-up care. The program connects individuals and provides transportation to local clinics and care coordination services for further engagement.

The HOTEL INC team remains a key strategic partner for identifying and referring WellCare of Kentucky Enrollees experiencing homelessness. Our combined data sharing efforts provide us with insight on the health conditions of our Enrollees, including the following:

- Individuals have an average of 3.1 chronic conditions (46% diagnosed with hypertension, 35.4% diagnosed with asthma, 22.5 % diagnosed with diabetes, and 61.9% diagnosed with obesity)
- Individuals have an average of 1.6 behavioral health diagnoses (43.4% depression, 55.3% some other mental illness, 7.6% SMI, 17.9% bipolar disorder, and 31.1% SUD)

In 2017, HOTEL INC opened their first respite home program, with funding assistance from our Community Connections program. The home helps bridge the gap from an inpatient hospital discharge to permanent housing with the goal of preventing readmissions and re-occurring visits to the ED. Supporting the program, the Street Medicine team provides health checks and medical care as needed. The respite program provides a safe location for pre-op, pre- and post-recovery for colonoscopies, and respite for an individual who has a virus that is contagious to others or may cause additional health problems if not properly addressed.

HOTEL INC Street Medicine Team
Since 2013, WellCare of Kentucky's Community Connections program has invested more than $80,000 in HOTEL INC, ensuring that continued care and attention is given to some of the most at-risk populations throughout the Commonwealth and among our Enrollee membership.

Our partnership includes a HIPAA-compliant data sharing agreement in which we track our Enrollees' utilization of HOTEL services (e.g., food, housing, or a second referral to a domestic violence shelter), and correlate these services with decreased ED utilization and increased PCP visits to quantify the medical cost savings of providing social supports. We automatically upload Enrollee data into our predictive analytics tool to proactively identify a potential social or

clinical crisis and coordinate the resources and services to stabilize the Enrollee before it becomes an issue.

From August of 2016 through July of 2019, HOTEL INC has provided 883 WellCare of Kentucky Enrollees with more than 16,800 services to address housing instability and other SDOH needs. From 2017 to 2018, these Enrollees experienced a 10.5% reduction in ED costs, an 18.4% reduction in flu-related encounters, and a 5.8% reduction in total costs amounting to $560-PMPY.

Enrollee Story: A Place to Call Home

A 63-year old Enrollee with hypertension and paralysis due to stroke was referred by the utilization management team to transitions care management because of his frequent admissions and ED utilization, which were the result of COPD and pneumonia. The Enrollee was homeless and living on his cousin's porch for two years because of cramped housing conditions inside the residence. He slept in his wheelchair, which caused fluid to build up in his right leg. He is estranged from his other family, a sister and brother who live in Nicholasville. He was not interested in going to a skilled nursing facility and was deemed competent to make his own decisions. Immediately upon assignment, the transitions care coordinator, Susan, began calling to find local housing options to help with the Enrollee's urgent housing needs. The search was extensive. Susan used a housing resource guide she had gathered from her time as a care coordinator. Susan found an opening at Emerson Center Apartments and assisted him in completing the application paperwork. She also helped order him a birth certificate required to complete the application process. He was approved for a handicapped unit with amenities.

At the time of hospital discharge, Albert's apartment was not ready. The UK Hospital CATS program, Bluegrass Care navigators agreed to pay for hotel stay until he was able to move in. For an electric wheelchair to help his mobility, Susan contacted HDI CATS (Center for Assistive Technology Services) that aids individuals with assistive devices, who donated an electric wheelchair. The company also donated a grabber to help the Enrollee pick things up off of the floor and a tool to help take off clothing. A hospital bed was provided through New Moon Medical. Emerson Center donated a transfer bench to get in and out of the shower. The community service, Paramedical program, department of the local fire department, also Susan to assist with the Enrollee's move to the new residence and with transportation. Home Depot in Lexington donated wood that would be used to build a ramp on his porch to help Albert get his electric wheelchair from the porch to the sidewalk. Other donations were made from various people locally, including two WellCare of Kentucky care coordinators, to ensure that Albert had furniture, dishes, utensils, glasses, towels and washcloths, sheets and comforters. His assigned field case manager, Lowell set him up with Bluegrass Mobile, a local primary care physician that can come to the home for visits and with a home health agency for skilled nursing and physical therapy. He was also enrolled in the frozen meal program with GA foods in addition to his food stamps. Susan helped arranged deliveries from God's Pantry. He was provided a free phone from the phone assistance program.

The Enrollee has been able to turn his life around. With the stability and the independence he desired, the assistive medical equipment, healthy food options, and accessible medical care he has been able to succeed in managing his health and has truly found a place to call home.

e. Describe the proposed approach to assess Enrollee satisfaction at each point of contact (call, online and in-person), including tools, frequency and process to measure trends, and use of findings to support ongoing program improvement.

WellCare of Kentucky is an MCO intently focused on listening and responding to the voice of the Enrollee to drive program improvements, enhance the Enrollee healthcare experience, and increase their satisfaction. Through our feedback capture tools, such as surveys, we assess Enrollee satisfaction at each point of contact: the call center, online, and in-person. We believe Enrollees having a positive experience with their MCO are more likely to engage in their health. Through our Enrollee-centered approach, we have earned the highest Enrollee satisfaction scores of all Kentucky Medicaid MCOs as measured by the CAHPS surveys in 2017 and 2019 and the highest rated MCO in Quality since 2016 according to NCQA scores. In addition to having the highest quality rating, we also have the highest percentage of ratings of a 4 or higher in the 2019 – 2020 report, see **Figure C.12-5**. We believe this level of satisfaction is reflected in the improvement of 91% of our HEDIS measures year-over-year from 2013 to 2019 and in the fact that we lead the Commonwealth in 24 out of 70 HEDIS measures for 2019.

#1 MCO for Enrollee Satisfaction
As a result of our tailored hands-on approach to empowering Enrollees, we have improved our CAHPS scores from 86.51% in 2014 to 88.89% in 2019 while experiencing significant growth, and have the highest Enrollee satisfaction in the Commonwealth as measured by the CAHPS survey in 2017 - 2019.

WHAT WE MEASURE IN OUR SURVEYS

We vary our feedback capture tools to measure Enrollee satisfaction via the methods they interact with us, as the following examples illustrate: *Call center*- We deploy surveys calibrated to measure their experience contacting our call center using a scoring methodology from 1– Very Dissatisfied to 5 – Very Satisfied; *In-person*- Also using a 5-point scale, these surveys enable Enrollees to evaluate their experience engaging us in-person. Their level of satisfaction would encompass interpersonal factors such as body language, active listening, and even cultural competency if, for example, avoiding direct eye contact signals respect for the Enrollee. We will be implementing this survey tool in Kentucky under the new contract; *On-line*- Our online survey, accessed from the Find-a-Provider search feature, gauges Enrollee satisfaction with a search tool to find providers via an online channel. In addition to this survey, we are developing survey tools for all online channels such as live chat, MyWellCare mobile app, the Enrollee portal and other methods for implementation under the new contract.

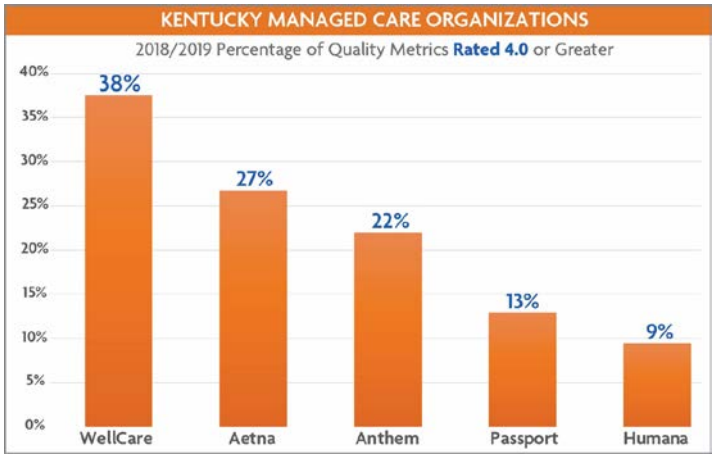


Figure C.12-5 *WellCare Percentage of Quality Metrics*

In response to these surveys, we identify areas of improvement and implement solutions corresponding to the method of interaction. Solutions for call center and in-person interactions include remedial training of ESRs including cultural competency refreshers or simplifying the IVR navigation process to connect with a live ESR. Corresponding solutions with their online experience center on ease of use, accuracy, and functionality. By varying the feedback capture methods, we gain a broad vantage point into the Enrollee experience, their satisfaction, and align appropriate solutions. For all surveys, Enrollees can submit verbatim messages if they wish to elaborate on the experience as well as express their willingness to recommend WellCare of Kentucky to others (Net Promoter Score).

To be sure, in addition to these surveys, Enrollees can use any communications channel they prefer to express their satisfaction, and they have more choices than ever to make their voices heard. In addition to the survey tools described above, Enrollees can:

- Contact our call center at any time during operating hours, reach us through live chat, or call their Care Coordinator, our local Grievance Coordinator, or their provider.
- Send us letters or contact us through the MyWellCare mobile application, send emails or text messages, or use the secure Enrollee portal.
- Speak in-person with their Care Coordinator, provider, or visit us at any one of our 6 community-based offices located throughout the Commonwealth.

We act on Enrollee feedback via these channels with same urgency and rigor as through our survey tools.

HOW WE USE THE INFORMATION GATHERED

Our data analysts aggregate the satisfaction scores, gather the verbatim feedback, and provide monthly reports to the Customer Service Quality Improvement Committee (CSQIC). The CSQIC, which includes Kentucky market leaders, reviews summaries of actual Enrollee feedback as well as trends, overall satisfaction, and net promoter scores. This information is reported to the Quality Management Committee quarterly for root cause analysis and resolution. Additionally, the Executive Leadership Team listens to live Enrollee calls to hear the voice of the Enrollee first-hand and support solutions which drive a positive Enrollee experience and increase their satisfaction. Please see **Table C.12-4:** Approach to Assessing Enrollee Satisfaction for an illustration of our feedback capture processes.

PROGRAM IMPROVEMENTS

Through our committees and workgroups, we design solutions aligned with Enrollee feedback as these examples illustrate:

- *Call center authentication.* In late 2019, Enrollees expressed concern that our up front, verification screening prompts were too onerous. In response, we implemented a new tool (ANI Match) that enables Enrollees calling from a “known number” to bypass the HIPAA protection screens and proceed directly to one final verification screen/query. As a result, authentication rates have increased two-fold, and we have seen a three-fold increase in our Enrollees' use of self-service functions.

- *Balance billing.* When Enrollees made us aware that providers were balance billing them, we launched a dedicated Enrollee Services team to personally assist Enrollees with balance billing issues and educated the providers, resulting in reducing balance billing-related grievances by 91% in three months.
- *Find-a-provider search tool.* Based on Enrollee feedback captured through our online survey regarding the find-a-provider tool, we expanded the number of radius miles for providers in rural areas and enhanced the tool functionality to identify providers, such as Internal Medicine providers or specialists, who also serve as PCPs.
- *Communications preferences.* Enrollees told us that they want options regarding how we communicate with them. Some prefer direct mail or phone calls or communications via their handheld devices. Consequently, we launched an initiative to capture every Enrollees' preferences and engage them based on their selection. We know that Enrollees who make affirmative decisions on how they want to be contacted are more likely to respond to communications received through their preferred method.

Our extensive focus on listening to our Enrollees and driving operational improvements elevates our performance and leads to more satisfied Enrollees. For example, **our 2018 Medicaid Enrollee post-call satisfaction rate was 94.8%.** In addition, from 2016-2018 we experienced the following Enrollee satisfaction quality improvements:

- Obtaining Enrollee information increased by 4.8%.
- Ease of reaching health plan call center over the phone increased by 15.5%.
- Overall satisfaction with health plan's call center services increased by 11.3%.
- Helpfulness of WellCare of Kentucky's Enrollee Services associates in obtaining referrals increased by 7.4%.

Hazard Care Center Enrollee Satisfaction

By going the extra step with helping Enrollees maintain Medicaid eligibility and connect them to needed services, our call center has earned a 99.3% Enrollee satisfaction rate.

ENROLLEE FOCUS GROUPS

The more opportunities we offer Enrollees to communicate their experience with us, the more we learn how to better serve them, even beyond their health to their everyday living needs such as food or housing. To provide yet another channel for feedback, we are organizing Enrollee focus groups throughout 2020 led by our newly-hired Director of Enrollee Experience. These forums will enable us to continue learning about our Enrollees' experience and needs, ensuring we invest in resources and drive operational improvements to provide the best managed care environment leading to happier, healthier Enrollees.

Table C.12-4: Approach to Assessing Enrollee Satisfaction

Point of Contact	Method	Feedback Tool/Frequency	Process
Call center: Inbound and outbound calls	Telephonic	Post call surveys offered after each inbound/outbound call	• Our "live after survey" tool consists of Enrollee Services Reps (ESR) contacting, within one business day, Enrollees with scores of 1 or 2 reflecting high dissatisfaction. • The CSQIC analyzes monthly reports that flow up the Quality Improvement Committee (QIC) for trending, root cause analysis, and solutions development. • Under the new contract, Enrollees will have an option to connect live with an ESR at end of the survey for additional feedback.
Online	Enrollee website provider search, live chat, mobile app, text/email, Enrollee portal, etc.	• Find-a-provider survey tool offered to Enrollees after each search transaction. • For the new contract, we are developing surveys for all other digital channels (live chat, mobile app, Enrollee portal etc.) to be offered to Enrollees after each online interaction.	• After each search transaction, Enrollees are offered a survey to evaluate their satisfaction with the provider search tool. • Results for all digital channels flow through CSQIC, QIC and the Digital Communications team to implement solutions enhancing Enrollees' digital experience.
In-person	Face-to-face	We will be implementing a survey tool under the new contract to be offered to Enrollees after each in-person interaction with our staff.	• Staff logs each in-person interaction in CAREConnects (CRM) that generates an outbound follow-up call to survey Enrollees about their in-person experience. Survey results flow through CSQIC and QIC.
Additional Methods of Measuring Enrollee Satisfaction			
CAHPS	Telephonic, in writing	CAHPS Survey Tool	CSQIC, QIC, and Kentucky market leaders review customer service results

Point of Contact	Method	Feedback Tool/Frequency	Process
			for trending, analysis, root cause, and develop PIPs, if needed.
Grievances and Appeals process	Telephonic, in writing, online, in-person, or through providers.	Our Grievances and Appeals platform enables systematic processing and issue resolution within the required deadlines.	Quarterly, the UMAC, CSQI, and QIC review and discuss trends, barriers, and opportunities for improvement and assign workgroups to conduct root cause analysis and drive process improvements.

f. Provide the following sample materials:

i. Draft Welcome Packet and Enrollee ID card aligned with the requirements of the Draft Medicaid Managed Care Contract and Appendices
ii. Sample Enrollee Handbook meeting the requirements of the Draft Medicaid Managed Care Contract and Appendices.
iii. Three (3) sample Enrollee materials with taglines and displaying ability to meet translation, accessibility and cultural competency requirements

WellCare of Kentucky has provided the following attachments as requested by DMS:

- **Attachment C 12.f.i-1 Draft Enrollee ID Card**
- **Attachment C 12.f.i-2 Draft Enrollee ID Card Letter**
- **Attachment C 12.f.i-3 Draft Provider Directory (provided electronically)**
- **Attachment C 12.f.ii-1 Sample Enrollee Handbook (provided electronically)**
- **Attachment C 12.f.ii-2 Sample Enrollee Handbook in Spanish (provided electronically)**
- **Attachment C 12.f.iii-1 Sample Enrollee Material Quick Start Guide Brochure**
- **Attachment C 12.f.iii-2 Sample Enrollee Material OTC Catalogue (provided electronically)**

Dear Member:

We're glad you're with us. We want you to have everything you need to make sure you get the care and attention you deserve. Helping you get the most out of your plan is our number one priority. Attached is your member identification (ID) card, the key to accessing your plan benefits.

- Keep your card safe and carry it with you at all times;
- Please check to make sure the spelling of your name is correct; and
- See important phone numbers on the back of the card.

What's Next? Take Charge Of Your Health

Visit www.wellcare.com/Kentucky to:

- Register/Log in to your Member Portal;*
- Review benefit information
- Find a provider or pharmacy; and
- View your Member Handbook and Provider Directory.

On the Member Portal you can:

- View/Print your ID card;
- Request your plan materials;
- Find info about your Primary Care Provider (PCP)
- Chat live with a Customer Service representative.

*New Members – allow 24 hours after your coverage starts to register on the Member Portal.

Things to Remember:

- Call the Kentucky Department for Medicaid Services at **1-800-635-2570** to let them know if:
  - Your address or phone number change
  - You get other health insurance
  - Your income changes
  - Your family size changes
- In a true emergency, go to the nearest emergency room or call **911**.

Have questions? We have answers!

Here are just a few things our Customer Service representatives can help with:

- Choose or change your PCP;
- Info about benefits
- Order a paper copy of your Member Handbook or Provider Directory

Do you have questions or would you like to receive materials in Braille, audio, large print or another language? If so, call Customer Service at **1-877-389-9457** (TTY **711**) and we'll send them to you at no cost. We can help you Monday–Friday, 7 a.m. to 7 p.m.

Sincerely,
WellCare of Kentucky

2019 WellCare of Kentucky

Quick Start Guide

WellCare
Beyond Healthcare. A Better You.

KY9CADBRO25310E_0000

Attachment C.12.f.iii-1 Sample Enrollee Material Quick Start Guide Brochure

Ready to take charge of your healthcare but aren't sure where to begin? Try starting with these steps:

Check your member ID card.

Your member ID card has information you'll need:

- Your member ID number
- Your primary care doctor's (PCP's) name and contact information
- Important phone numbers

Be sure to carry this card with you at all times.

Get to know your doctor.

Your PCP is your partner in health. See your PCP during your first 90 days as a member to be on top of your health. You can also request to change your PCP on our website. It's easy! Visit **www.wellcare.com/Kentucky**.

If you need help choosing a PCP, we can help. Call us at **1-877-389-9457** (TTY **711**).

Sign up for OTC.

Our most popular extra benefit is the OTC or over-the-counter benefit. Every month you can order $10 worth of items and have them sent right to your home. Choose things like diapers, vitamins, cold remedies, toothbrushes and more. We'll send monthly shipments to your home totaling as much as $120 each year. Ways to order:

- Call us toll-free at **1-877-389-9457** (TTY **711**) and talk to one of our team members or use our automated service
- Go to our website at **www.wellcare.com/Kentucky** and log in to our member portal

Covered Benefits

With WellCare of Kentucky, you get benefits like:

- ☑ **Physician office visits**
  $3 co-pay
- ☑ **Pharmacy services**
  $1 co-pay preferred and non-preferred generic
  $4 co-pay preferred brand name
- ☑ **Behavioral health services**
  $3 co-pay
- ☑ **Family planning services**
  $0 co-pay for:
  - Annual visit
  - Contraception and supplies
  - Family planning and HIV counseling
  - Lab tests and pregnancy testing
- ☑ **Vision (adults 21 and over)**
  - 1 exam per year
  - 1 pair of eyeglasses per 24 months

Healthy Rewards

The Healthy Rewards Program rewards you for taking steps that help you live a healthy life. To learn more about WellCare of Kentucky's Healthy Rewards Program, or if you have questions, give us a call or go online. Our toll-free number is **1-877-389-9457** (TTY **711**) and our website is **www.wellcare.com/Kentucky**.

Would you like to see the full list of healthy behaviors that earns rewards? Just visit the Healthy Rewards Program section on our website. Go to **www.wellcare.com/Kentucky** in the Medicaid section.

Did You Know?

If you're pregnant, let us know. Call us at **1-877-389-9457** (TTY **711**) so we can let you know about WellCare of Kentucky's great extra benefits such as:

Birthing Center and Licensed Midwife Services

Giving mothers options when it comes to childbirth.

Unlimited Visits for Maternity Care

Unlimited prenatal visits and unlimited postpartum visits for the first 4 weeks after your child is born.

Healthy Pregnancy

Complete one prenatal physician visit within your first trimester and receive your choice from the following: stroller, car seat, playpen or diapers.

WellCare® Beyond Healthcare. A Better You.

Healthy Rewards Program

We want to reward you for joining our Healthy Rewards Program and taking steps to improve or maintain your health!

How preventive health checkups improve long-term health

Your healthcare provider is your best partner in keeping you healthy. He or she will test you for things like high blood pressure and diabetes. If they find a problem, they can treat you before your symptoms get worse. When a problem is found early, treatment could be as simple as a small change in your diet! Want some more good news? Just by completing those checkups, you earn more on your Healthy Rewards card!

What is the Healthy Rewards Program?

The Healthy Rewards Program recognizes your efforts in taking small steps that help you live a healthy life. By seeing your provider and completing health checkups detailed in the chart, you can start earning rewards.

Prepaid Debit Card or Gift Card

You can use your Healthy Rewards Prepaid Debit Card or Gift Card to buy healthy items you use every day.

How to Get Your Rewards

To start earning rewards, please go to **www.wellcare.com/Kentucky** and log in to the secure member portal. Once you are logged in, click on the *Healthy Rewards* link to notify us that you've completed an activity.

You can also call Customer Service to notify us or if you have questions about the program. You can reach us at **1-877-389-9457** (TTY **711**). We're here for you Monday–Friday, 7 a.m. to 7 p.m. Visit us any time at **www.wellcare.com/Kentucky**.

WellCare of Kentucky complies with all applicable federal civil rights laws. We do not exclude or treat people in a different way based on race, color, national origin, age, disability or sex.

If English is not your first language, we can translate for you. We can also give you info in other formats. That includes Braille, audio and large print. Just give us a call toll-free. You can reach us at **1-877-389-9457**. For TTY, call **711**.

13. Enrollee Selection of Primary Care Provider (PCP)

C.13. ENROLLEE SELECTION OF PRIMARY CARE PROVIDER (PCP)

a. **Describe the Vendor's proposed approach to helping Enrollees to identify and make voluntary selections of PCPs, within specified timeframes, who meet their needs, ensure continuity of care. Include information about differences in the Vendor's approach, if any, to supporting Enrollees without Supplemental Security Income (SSI), Enrollees who have SSI and Non-Dual Eligible, and Enrollees under Guardianship through the selection process.**

b. **Describe the Vendor's PCP auto-assignment algorithm for Enrollees who do not make a voluntary selection, including how the Vendor will ensure an Enrollee's continuity of care.**

c. **Describe the Vendor's approach for processing provider change requests, to include:**
   i. Enrollee request after initial assignment,
   ii. For cause,
   iii. When Enrollees regain eligibility,
   iv. When the Provider is terminated, and
   v. For a Provider request.

d. **Describe the Vendor's approach to identifying, outreaching to, and educating Enrollees who do not receive services from their PCP within one (1) year of enrollment with the PCP. What information and support will the Vendor provide to Enrollees to obtain services?**

C.13. ENROLLEE SELECTION OF PRIMARY CARE PROVIDER (PCP)

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 23.0 Enrollee Eligibility, Enrollment, and Disenrollment of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix,** provided electronically.

Helping our Enrollees identify and select PCPs is a WellCare of Kentucky core competency we have been delivering successfully since 2011 yet never stop trying to improve. Our process for Enrollee-PCP alignment prioritizes Enrollee choice made in the most streamlined and efficient way possible. We are at 100% of network adequacy, so there is a high-quality PCP for every Enrollee who needs one. When Enrollees do not make a voluntary selection at the time of applying for Medicaid, our algorithm generates the best possible matches based on criteria most important to Enrollees' health and continuity of care such as prior PCP relationship, family members assigned to the PCP, the time and distance standards and other factors. Our Enrollees need strong patient-provider relationships to help them understand and navigate complex medical needs within a trusted environment, and we maintain those existing relationships or facilitate new ones. We believe that our network in general, and our PCP network in particular, are reasons why more Enrollees choose WellCare than any other MCO in Kentucky.

a. Describe the Vendor's proposed approach to helping Enrollees to identify and make voluntary selections of PCPs, within specified timeframes, who meet their needs, ensure continuity of care. Include information about differences in the Vendor's approach, if any, to supporting Enrollees without Supplemental Security Income (SSI), Enrollees who have SSI and Non-Dual Eligible, and Enrollees under Guardianship through the selection process.

WellCare of Kentucky's policies and procedures governing the PCP assignment process aligns with Section 23.0 Enrollee Selection of Primary Care Provider.

WellCare of Kentucky empowers our Enrollees to make voluntary PCP selections because voluntarily selecting a PCP is an affirmative decision to take charge of one's health. When processing enrollment files, we preserve Enrollees' PCP choices if they are in network. The majority of our PCPs are Board Certified in Family and Internal Medicine, General Practice, Pediatrics, and Geriatrics. However, Enrollees may select as their PCP an Advanced Practice Registered Nurse, Physician Assistant, or specialized in Obstetrics and Gynecology. Enrollees with chronic illnesses or with long-standing relationships with providers may choose other specialists as PCPs.

If the Enrollee does not make a voluntary PCP selection during the application process, our standard practice is to auto-assign a PCP within 24-Hours. This assignment is a preliminary selection designed to begin facilitating the Enrollee-PCP relationship quickly.

Despite the practices employed by other Managed Care Organizations, our **preliminary PCP assignment does not inhibit or limit the Enrollee** in any way. Enrollees are free to receive care from any provider they choose, even if that provider is not their assigned PCP. Our preliminary PCP assignment does not limit Enrollees from seeing any PCP they choose, including PCPs they are not assigned to. Our goal is that every Enrollee have an assigned medical home they have chosen and providers they have strong relationships with. Our commitment to unfettered choice empowers us to make initial PCP assignments immediately upon enrollment and then educate Enrollees about their options for changing PCPs if they are unsatisfied in any way. We communicate this information in our handbook and other materials specifying Enrollees' right to change PCPs at any time without a 30-Day or 90-Day restriction for changing a PCP selection. This process applies to all Enrollees who are required to have a PCP, whether they have SSI, or are enrolled in a non SSI eligibility category. However, Medicare Dual eligible Enrollees, Foster Child Enrollees, or Guardianship Enrollees are not assigned a PCP through this process.

If an Enrollee requests a reassignment after being preliminarily assigned a PCP, we acknowledge that the reassignment is retroactively effective to the date of the Enrollee's assignment to us. Changes requested after 30 days are effective on the first of the following month. Our DMS-approved algorithm prioritizes previous PCP relationships in its logic as well as other rules described later in our response to 13.b.

GUARDIANSHIP CLIENTS (DAIL)

Our enrollment systems identify adult guardianship clients on the HIPAA 834 transaction file, and we understand that DAIL staff are authorized to make PCP selections on their behalf. These **Enrollees can change PCPs at any time** with or without cause, and our process allows for PCP

changes without limitations. Furthermore, because these Enrollees frequently move from one placement to another, brief absences for medical services outside their county of residence not exceeding one month do not constitute a change in the county of residence.

REPORTING

In accordance with our policies and procedures, we submit a quarterly report to DMS with the number of eligible individuals assigned a PCP. We notify Enrollees, in writing, of PCP assignments, including Providers' names and office telephone numbers. In addition, on the first day of each month, we furnish our PCPs with a roster of Enrollees who have selected or been assigned to his or her care.

PCP ASSIGNMENT NOTIFICATION

Within five (5) days of a PCP assignment, whether self-selected or assigned, we send an ID card and letter with the PCP name, address, and phone number as well as instructions to contact us if they wish to change PCPs. New Enrollees also receive an Enrollee Welcome Kit within five (5) Days consisting of an Enrollee Handbook and Provider Directory, which contain information about the PCP assignment process and how to establish the PCP relationship.

RESOURCES FOR PCP IDENTIFICATION

To help Enrollees understand the PCP assignment process soon after enrollment, we provide Enrollees with a handbook detailing the importance of maintaining a PCP relationship and informing them of their right to change PCPs at any time. In addition, we also furnish a Provider Directory listing all participating providers in their region by county and specialty. Through our public website, Enrollees can use the find-a-provider tool to get the most current information on providers by location, name, specialty, or other keywords.

ASSISTED, VOLUNTARY PCP SELECTION

WellCare of Kentucky's new Enrollee Welcome Calls provide Enrollees an option to connect with a live Enrollee Services Representative (ESR) for PCP selection. The ESR conducts a new Enrollee onboarding needs assessment consisting of a Health Risk Assessment to identify any immediate clinical needs, capturing communications preferences (mail, phone, text) including language needs, previous PCP relationships, and other criteria. In this manner, new Enrollees learn that making voluntary PCP selections within the broader context of their health needs, background, and circumstances ensure a better match. In addition, ESRs educate Enrollees on continuity of care considerations in the PCP selection process, advising Enrollees to avoid disruptions in care by changing PCPs during a course of treatment, and they also assist Enrollees with scheduling an appointment to establish the relationship.

SELF-SERVICE, VOLUNTARY PCP SELECTION

Offering self-service options for voluntary PCP selection encourages Enrollee self-sufficiency. We empower Enrollees to take charge of an important health care decision by providing PCP selection via the secure Enrollee portal and the MyWellCare mobile application. Enrollees who self-select their PCPs are more likely to access them.

b. Describe the Vendor's PCP auto-assignment algorithm for Enrollees who do not make a voluntary selection, including how the Vendor will ensure an Enrollee's continuity of care.

When an Enrollee does not make a voluntary PCP selection during the Medicaid application, we activate our algorithm which prioritizes previous PCP relationships at the very top of the logic hierarchy for continuity of care purposes. Our proprietary auto assignment algorithm also includes a preference for Providers receiving the highest quality scores and our processes ensure that PCPs are willing to accept new Enrollees before they are assigned. Enrollees with certain health conditions also have the option to select a specialist or subspecialist as their PCP.

Our DMS-approved auto-assignment algorithm is aligned with Section 23.3 Enrollees without SSI:

- Review of previous PCP history using both internal claims and claim history provided by DMS for new enrollees
- The PCP is active, participates in the Medicaid program, and has an open panel
- Time/distance logic: 30 miles or 30 minutes aligned with accessibility standards as outlined in Section 28.4 Provider Network Access and Adequacy
- Needs of children and adolescents to be under the care of a pediatric/adolescent specialist
- Needs of children from the same household will be assigned to have a common medical home
- Special medical needs such as pregnancy
- Language needs
- Area of residence – access to transportation

Finally, we apply quality, cost efficiency, and Patient Centered Medical Home status and generate scores to ensure we assign Enrollees to high quality PCPs as follows:

- Scores of 3.75-5 (first preference)
- Scores of 3-3.75 (second preference)
- Scores of 2-3 (third preference)
- Scores of 0-2 (fourth preference)

ALGORITHM PERFORMANCE

Enrollee and provider satisfaction scores can indicate an effective PCP selection process. **We earned #1 NCQA Customer Satisfaction in 2016-2019 among all Medicaid MCOs. We also scored the highest of all MCOs on 24 key HEDIS measures**. Our performance in these areas validate strong Enrollee-PCP alignment and a good algorithm match. We apply rigorous quality control analysis to identify trends and flow reports to the Quality Improvement Committee for recommendations on algorithm improvements, if necessary.

c. Describe the Vendor's approach for processing provider change requests

Our approach to provider change requests begins with following all contract requirements and federal regulations. Our policies and procedures as stipulated in policy C6EN MD-006 governing the PCP assignment process aligns with this section and Section 23.0 Enrollee Selection of

Primary Care Provider. We maintain an open access network and believe that not restricting Enrollees' abilities to choose or change PCP assignments results in Enrollees being served by providers they have a positive relationship with and receiving the care necessary to improve their health outcomes. Even though the contract permits us to limit Enrollees from changing PCPs in certain scenarios, we value the Enrollee-PCP relationship and accordingly, our guidelines for changing PCPs are less restrictive than those outlined in Section 23.6 Primary Care Provider Changes.

The tools we use to process change requests are designed to process information promptly and accurately with no administrative burden for the Enrollee or PCP. We process Enrollee change requests in writing, telephonically through our customer service agents or digitally through our online Enrollee portal or MyWellCare mobile app.

During any change in PCP, the initial PCP is responsible for the Enrollee's care until the effective date of the new assignment. To ensure Enrollee continuity of care, we assist with the transition of Medical Records to the new PCP in accordance with applicable contract requirements and federal regulations. Our process is time-tested and frequently evaluated for efficiency and accuracy. Our process, as described above, is consistent for all the change requests below.

i. Enrollee request after initial assignment,

As previously discussed, we honor Enrollees' right to change the PCP at any time for any reason; therefore, our approach is to accept all change requests following initial assignment.

ii. For cause,

We process Enrollee change requests after the initial assignment at any time for any of these for cause reasons. We assign a new PCP according to contract requirements and our criteria noted above to make the best possible match.

- Enrollee was denied access to needed services
- Poor quality of care
- PCP is not qualified to treat condition

We recognize that negative experiences with a PCP can lead an Enrollee to disconnect from their care. When we become aware of these situations, our trained staff encourages Enrollees to create a primary care relationship with their new PCP and important points to consider in their new selection.

iii. When Enrollees regain eligibility,

Our Enrollment and Eligibility System (EES) recognizes on the incoming 834 enrollment file Enrollees who have been reinstated following a minor interruption in coverage; in these instances, we assign back to the original PCP for continuity of care. As always, we will process a change request at any time if the Enrollee desires a different PCP.

iv. When the Provider is terminated

We assist Enrollees in selecting new PCPs in cases of provider terminations. A termination triggers a letter to Enrollees notifying them of the termination, according to the below

timeframes, and provides Enrollee guidance on the options available to them to facilitate a PCP change including live agent call, MyWellCare App or through the Enrollee portal

- For voluntary terminations, we notify within 30-Days prior to the effective date or as soon as the Provider notifies WellCare of Kentucky if fewer than 30-Days.
- For involuntary terminations, within 15-Days prior to the effective date

To avoid disruptions in care and Enrollee abrasion we brief our Enrollee Services Reps to prepare for increased call volumes and provide them with information to better transition our Enrollees seamlessly.

v. For a Provider request.

PCPs have the right to request an Enrollee's disenrollment from their practice (request must be in writing) under the following circumstances:

- Incompatibility of the PCP/patient relationship
- Non-utilization of services within the past year of enrollment in the PCP's practice provided the PCP furnishes documentation of six unsuccessful attempts by mail and phone on six separate occasions during the year
- Inability of PCP to meet Enrollee's medical needs

We acknowledge that Federal regulations protect Enrollees from being reassigned by their PCP on the basis of the following:

- Change in health status or need for treatment
- Utilization of services
- Diminished mental capacity
- Disruptive behavior resulting from special health care impairing PCP's ability to furnish services to Enrollee or others
- Race, gender, disability, color, national origin, age, or gender

Enrollees have the right to file grievances regarding transfer to a new PCP.

d. Describe the Vendor's approach to identifying, outreaching to, and educating Enrollees who do not receive services from their PCP within one (1) year of enrollment with the PCP. What information and support will the Vendor provide to Enrollees to obtain services?

PCP REASSIGNMENT

Because we are committed to facilitating the relationship between Enrollees and their PCPs, we regularly employee algorithms to identify whether Enrollees are receiving their regularly scheduled preventive care and whether they are receiving it from their assigned PCP or another provider within the provider group or organization the PCP belongs to. In the event that an Enrollee is identified as not having received services within the past year, or not having received them from their assigned PCP or his/her peers, WellCare employs a reassignment process. When an Enrollee has not received services for a year, we conduct a claims analysis with a 24-month look-back period to identify if the Enrollee has received services from the assigned PCP, a PCP within that practice, or if the Enrollee has received services from any other provider who is eligible to serve as a PCP. We will reassign the Enrollee to the PCP providing the services to

ensure that, moving forward, their assigned PCP is reflective of the providers they have implicitly been using as their PCP, even if they had not formally requested a PCP change.

For Enrollees who have not engaged with their assigned PCP, or any other PCP, we will perform telephonic outreach to address the importance of having a medical home, and will work with the Enrollee to schedule the first appointment.

Our primary goal in all of this is not to enforce an original PCP assignment, but to ensure the Enrollee has the freedom to receive care from the provider of their choice, and we will pro-actively alter our initial assignment to conform to the demonstrated preferences of the Enrollee.

14. Enrollee Grievances and Appeals

C.14. ENROLLEE GRIEVANCES AND APPEALS

Describe the Vendor's proposed Enrollee Grievances and Appeals process, including a summary of methods for the following:

a. **Compliance with State and Federal requirements.**

b. **Process for Expedited Review.**

c. **Involvement of Enrollees and their caregivers in the process.**

d. **Tracking grievances and appeals received by type and trending results for use in improving operations.**

e. **Reviewing overturned decisions to identify needed changes.**

C.14. ENROLLEE GRIEVANCES AND APPEALS

a. Compliance with State and Federal requirements

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 24.0 Enrollee Grievances and Appeals of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically. Additionally, we have shaded specific citations from the Draft Contract in our narrative to confirm our compliance.

In Kentucky, WellCare has been successfully resolving grievances and appeals for Enrollees for eight years. We rank first in Enrollee satisfaction and we have an overall Enrollee choice rate of nearly 80%. Our philosophy is that grievances and appeals provide valuable feedback about our operation, so we review them each month in our executive team meeting. This gives management direct access to any new or potentially troubling trends.

From 2017 to 2019 WellCare of Kentucky saw a 3% improvement in first call resolutions

Our **Enrollee-friendly process** leverages our Medicaid experience across the nation resolving grievances, appeals, and state fair hearings in compliance with NCQA, state, and federal Medicaid requirements using a process designed for rapid and thorough resolution. The program protects Enrollees' rights and employs industry-leading technology to capture, log, document, track, resolve, report, and trend every grievance and appeal from beginning to end.

We define a grievance and appeal using the 42 C.F.R. § 438.400(b) definitions and cited in the MCO contract. Our Enrollee grievances and appeals system enables us to track a grievance, a plan level appeal, and access to a State Fair Hearing. We offer a **"no wrong door"** approach to filing Enrollee grievances and appeals, and train all associates on how to correctly receive and manage them. Providers and subcontractors receive similar training.

Highly qualified and experienced locally based Enrollee grievance and appeal coordinators comprise the WellCare Kentucky Enrollee Grievance and Appeal Team, overseen by Enrollee Services Manager Elizabeth Starr, LCSW. To ensure timeliness standards, a team of other full-time coordinators, clinicians, and operational leads support the coordinators within our

corporate headquarters in Tampa. WellCare of Kentucky executives, including Medical Director Howard Shaps, MD, MBA, further support the process, with full authority to initiate any action necessary to address Enrollee grievances and appeals.

Nationally, WellCare has a team of 380 highly qualified staff who handle grievances and appeals. This staffing includes coordinators, intake specialists, quality auditors, clinical experts, operational team leads, and managers. Because we offer an in-house pharmacy, behavioral health, and physical health program, our clinical experts include pharmacy medical directors, staff psychiatrists, registered nurses and medical directors of varied specialties. If necessary, we have external physician advisors for a similar specialist review that is arranged to ensure our Enrollees have unbiased access to the care they need.

Locally, our WellCare of Kentucky staff includes seven full -time Kentucky-based grievance and appeals coordinators who manage and adjudicate Enrollee issues; and work in tandem with full-time clinical experts who have the clinical expertise in treating Enrollees to resolve grievances and appeals in accordance with Kentucky contract requirements and Commonwealth and federal laws.

TIMELY PROCESSING OF ENROLLEE GRIEVANCE AND APPEAL REQUESTS

WellCare of Kentucky views every inbound Enrollee call as an opportunity to interact and collect valuable feedback for improving our internal processes and achieving high Enrollee satisfaction. Our goal is efficient issue resolution with minimal burden to Enrollees, parents, and caregivers. We review issues as they arise and make every effort to prevent them from reoccurring. We never discourage our Enrollees from exercising their rights to file formally, but work hard to resolve issues at the point of contact.

In 2017, WellCare of Kentucky exceeded Department requirements, averaging 20.4 calendar days to close standard Enrollee appeals

In accordance with section 24.2 of the Draft Contract, WellCare of Kentucky has a timely and organized Grievance and Appeals Process with written policies and procedures for resolving Grievances filed by Enrollees. We follow all regulatory timeliness guidelines for routine and urgent grievance and appeal processing in accordance with 42 C.F.R. 438 subpart F, 907 KAR 17:010 and other applicable CMS and Department requirements. Our process allows identification of access-to-care grievances (e.g., appointment or prescription delays) that come through standard channels and prioritize them for a rapid response. **We are currently compliant with Enrollee grievance and appeals timeliness standards in Kentucky and all of our Medicaid states.**

Strategy One: Resolving Calls in "One Touch"

Industry-leading technology supports our Enrollee grievance and appeals process, ensuring each grievance and appeal is appropriately documented and resolved with root cause analysis of both the individual issue and emerging trends. Using this continuous loop, WellCare of Kentucky **"Solves the Cycle"** to reduce grievances and appeals and improve Enrollee satisfaction, depicted in **Figure C.14-1**. Our Enrollee Service Representatives (ESRs) are specifically trained on Kentucky Medicaid Managed Care program requirements and empowered to resolve each Enrollee contact at the **first point of escalation 100% of the time**

with escalation teams who receive an additional 80 hours of training on the resolution of Enrollee issues. We use a tiered escalation process and word recognition software to automatically flag and route escalated calls to this team for resolution. For example, if an Enrollee mentions a word indicating severe displeasure, the system generates a flag and a supervisor joins the call, as it is happening to prevent a grievance. The success of our "one-touch" Enrollee process is demonstrated by our **2019 first call resolution rate of 86% across all of our Medicaid plans**. We also use machine learning and artificial intelligence solutions to predict the likelihood that an action will result in a grievance or appeal and take proactive measures to address the matter at that time.

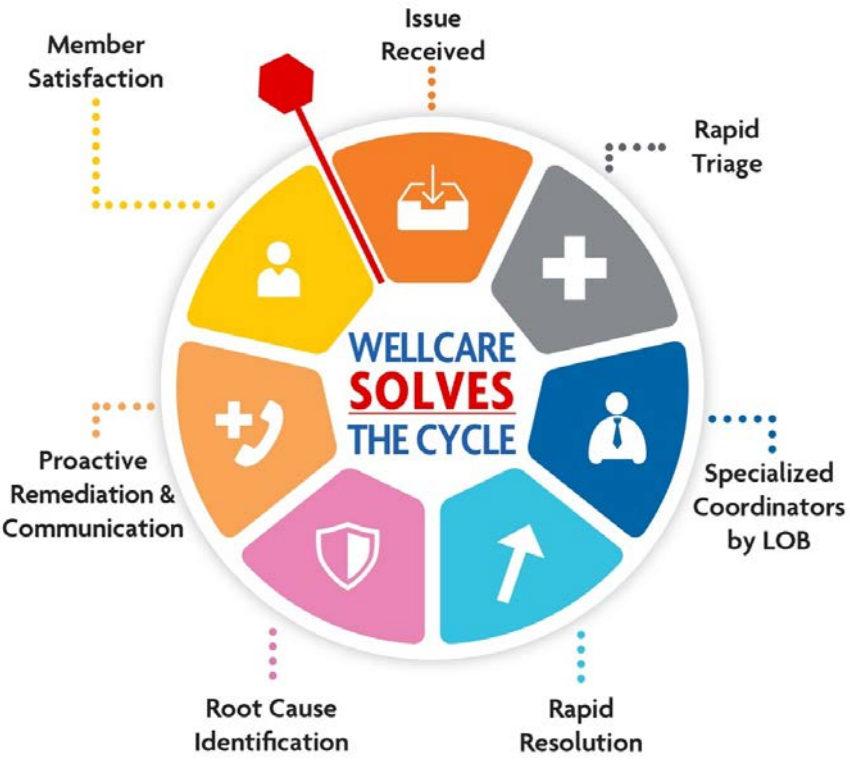

Figure C.14-1 Continuous "Solve the Cycle Process

Strategy Two: Proactively Engaging With Enrollees to Address Issues

We also resolve Enrollee issues at the lowest level of escalation through active in-person engagement where the ESR helps resolve issues before they become a grievance or appeal. Proactive engagement efforts involve care managers who are Enrollee advocates empowered to resolve or escalate issues and community partners (e.g., advocates) who have direct links to WellCare subject matter experts to resolve Enrollee issues.

Strategy Three: collaboration across WellCare

The Grievance and Appeals department collaborates across our organization using our grievance and appeal system to resolve Enrollee grievances and appeals quickly and at the lowest level of escalation. We make every attempt to diffuse issues by resolving them in a timely, efficient, and effective manner at the first point of escalation. In the rare case that a request is reviewed and overturned through the State Fair Hearing proceedings, Dr. Shaps collaborates with our utilization management team, and appeals and grievance staff to review the determination and assess the underlying reason that WellCare of Kentucky's position was not accepted. They use this assessment to address the need for any changes to our policies, procedures, reference materials, and communications, to ensure the remediation of issues, and to eliminate the need for future similar reviews.

Our ability to meet and exceed timeliness standards is the result of the well-defined processes we have developed in Kentucky. These include:

- Mining historical data to understand the volume of grievances and appeals we can expect. This intelligence informs the number of associates we employ to perform WellCare KY grievance and appeals functions.
- Staffing accordingly, training our dedicated Kentucky associates, and cross training others on Kentucky-specific requirements so we have trained staff for unexpected increases in enrollee grievance and appeal volume.
- Establishing Service Level Agreements (SLAs) based on Kentucky timeliness requirements and setting team and individual goals aligned to those requirements
- Reporting to Quality Improvement Director, Laura Betten, the Utilization Management Medical Advisory (UMAC) Committee, Customer Service Quality Improvement (CSQIW) Committee, Quality Improvement (QIC) Committee, and DMS the volume, nature, and resolution status of grievances and appeals
- Conducting independent, internal audits to identify and cure deficiencies
- Collaborating with DMS on Kentucky audits and external quality review audits
- Embedding Kentucky requirements into our grievance and appeal system with workflow requirements and business rules to reduce the reliance on manual processing instructions. For example, the system generates the acknowledgment letter automatically, improving our ability to comply with acknowledgement contractual requirements.

WellCare of Kentucky operates a single platform for complaint resolution - both grievances and appeals. This integrated workflow management system delivers real-time monitoring for each step in the process from intake to resolution, allowing grievance and appeals coordinators in Kentucky to resolve cases according to established standards. The system processes grievances and appeals using a standardized approach. It incorporates automation, machine learning, and artificial intelligence, reading context and sentiment and employing standardized and automated communication throughout. Our grievance and appeal system automation facilitates:

- Case creation and assignment
- Real-time case tracking
- Reminders for aging cases
- Supervisor dashboard alerts and escalation for expiring cases
- Production of regulatory reports and audits
- Integrated document and image storage
- Acknowledgment and resolution letters, requests for information, and case status letters
- Root cause classification and tracking for identification and process improvement

Process for Acknowledging Receipt of Enrollee Appeals and Grievances

We acknowledge the receipt of each grievance and appeal (including oral appeals) in accordance with the Section 24.2 of the Draft Contract and 42 C.F.R §§ 438.406(b)(1) and 438.228(a). Upon receipt of a grievance or appeal, one of our Kentucky-based grievance and appeals coordinators triages the case within our grievance and appeal system for rapid resolution. Our intake coordinators receive comprehensive training on how to recognize and categorize requests as grievances, standard or expedited appeals. Grievances and appeals may

come from multiple sources, including a primary care provider or care manager that submits them on behalf of the Enrollee, with his or her consent. The system automatically issues an acknowledgement letter with a copy going to the provider or other representative acting on the Enrollee's behalf, and updates the grievance or appeal record. Within that letter, we encourage Enrollees to submit additional information to support their request for appeal, and inform them of their right to review the case file during the appeals process. For standard requests, we provide written acknowledgement within five calendar days of receipt. We acknowledge expedited requests via trackable mail within 24 hours.

Our acknowledgment letters use easy-to-understand language that meets grade level plus industry health-literacy levels. We create them in the Enrollee's language with instructions on alternative languages and formats and the availability of an Enrollee advocate to assist. Our acknowledgement letters also encourage the enrollee to submit any additional information they feel can support their case, and of their right to review their case file at any time.

Protocols, Procedures, Staffing Levels, and Requirements for Appeals and Grievance Review

Protocols and procedures for reviewing Enrollee appeals and grievances are as follows:

- Individuals that make decisions on grievances and appeals, including the Kentucky-based grievance and appeal coordinators and clinicians, must not have been involved in any previous level of review or decision-making; they also cannot be a subordinate of any such individual.
- Grievance or appeals involving clinical issues must be reviewed by individuals who have the appropriate clinical expertise in treating the Enrollee's condition or disease
- Persons reviewing the grievance or appeal must take into account all comments, documents, records and other information submitted by the Enrollee/representative without regard to whether such information was submitted or considered in the Adverse Benefit Determination
- An authorized representative (including provider) or legal guardian may request an appeal or file a grievance on behalf of the Enrollee, with the Enrollee's consent
- Correspondence will be conducted in a manner that meets applicable notification standards using Department templates for all Enrollee grievance and appeal notices

In accordance with Section 24.2 of the Draft Contract, we maintain a copy of every grievance or appeal file for a minimum of 10 years, and have a strict policy that prevents retaliation for providers requesting a grievance or appeal, or assisting Enrollees through the grievance and appeal process.

Enrollee Grievance Process

Figure C.14-2 Enrollee Grievances Process Milestones

Figure C.14-2 highlights the grievance process flow**.** Enrollee grievances include dissatisfaction with any aspect of care, outside of an Adverse Benefit Determination. The Enrollee, or their representative with written consent, may file a grievance at any time. Multiple avenues exist for submission of grievances orally or in writing, illustrated in **Figure C.14-3**. These include our call center, website, care managers, PCP or other provider, subcontractors, community partners, and advocates. Grievances are initially triaged by the associate who received the issue, such as the ESR, to determine if it is service-related (i.e. accessibility, Enrollee education) or clinical-related in nature. The grievance and appeal platform integrates with our CAREConnects platform. The ESR enters the ticket using CAREConnects and then the grievance and appeal system picks it up as a grievance. We strive to resolve issues at this step if we can, for example if an Enrollee is calling about obtaining a timely specialist appointment, ESR will resolve it by calling the specialist and scheduling an appointment.

Our Kentucky-based grievance and appeals coordinators record the date and time of call, the Enrollee's contact information, and a detailed explanation of the grievance into our grievance and appeal system. Entry into the system serves as a timestamp for tracking final resolution of the grievance. If the issue is not resolved at time of the contact, the associate forwards it on the same day to the grievance department, along with all supporting documentation, for review, referral, resolution, and reporting. Written grievances go directly to the grievance department. In accordance with Kentucky Medicaid guidelines, WellCare acknowledges grievances within five calendar days.

The grievance coordinator takes responsibility for reviewing and resolving the grievance. If it requires research or input by another department, the coordinator collaborates to research and collect facts from all parties in accordance with our Enrollee Grievance Policy and Procedure. Facilitated by our grievance and appeal system, we ensure that resolution of grievances involves the appropriate staff (or clinical professional with appropriate expertise in treating the Enrollee's condition or disease for clinical grievances), that they or their subordinate have not been involved in prior levels of review or decision-making, and that grievances are resolved as expeditiously as the Enrollee's health requires. If the grievance involves a Medical Necessity determination, Denial or expedited resolution or clinical issue, the coordinator contacts the local Kentucky Quality Improvement department, overseen by Quality Improvement Director Laura Betten, RN. There, it is heard by health care professionals who have the appropriate clinical expertise to make a determination, forwarding it to Dr. Shaps if necessary for final decision. If the QI department determines a grievance requires immediate medical review, a clinical professional with appropriate clinical expertise reviews and resolves it as expeditiously as the Enrollee's health requires.

Our grievance coordinators uses the **automatic alerts and dashboards in our system to track open grievances and ensure resolution** in a timely manner. Depending on the nature of the grievance, provider relations, network management, and population health management teams work collaboratively to resolve each issue. Upon resolution, the assigned coordinator notifies the Enrollee in writing as to the resolution and notifies him or her of the opportunity to submit an appeal to WellCare if dissatisfied with the resolution of a grievance. The grievance coordinator updates the grievance and appeal system, which maintains a dated summary of the grievance including reason, resolution at each level, who conducted the review, key dates associated with the request (e.g., receipt date, date acknowledged, date resolved), and final resolution. We will submit a policy noting any new requirements to DMS for review and approval and update it at least annually.

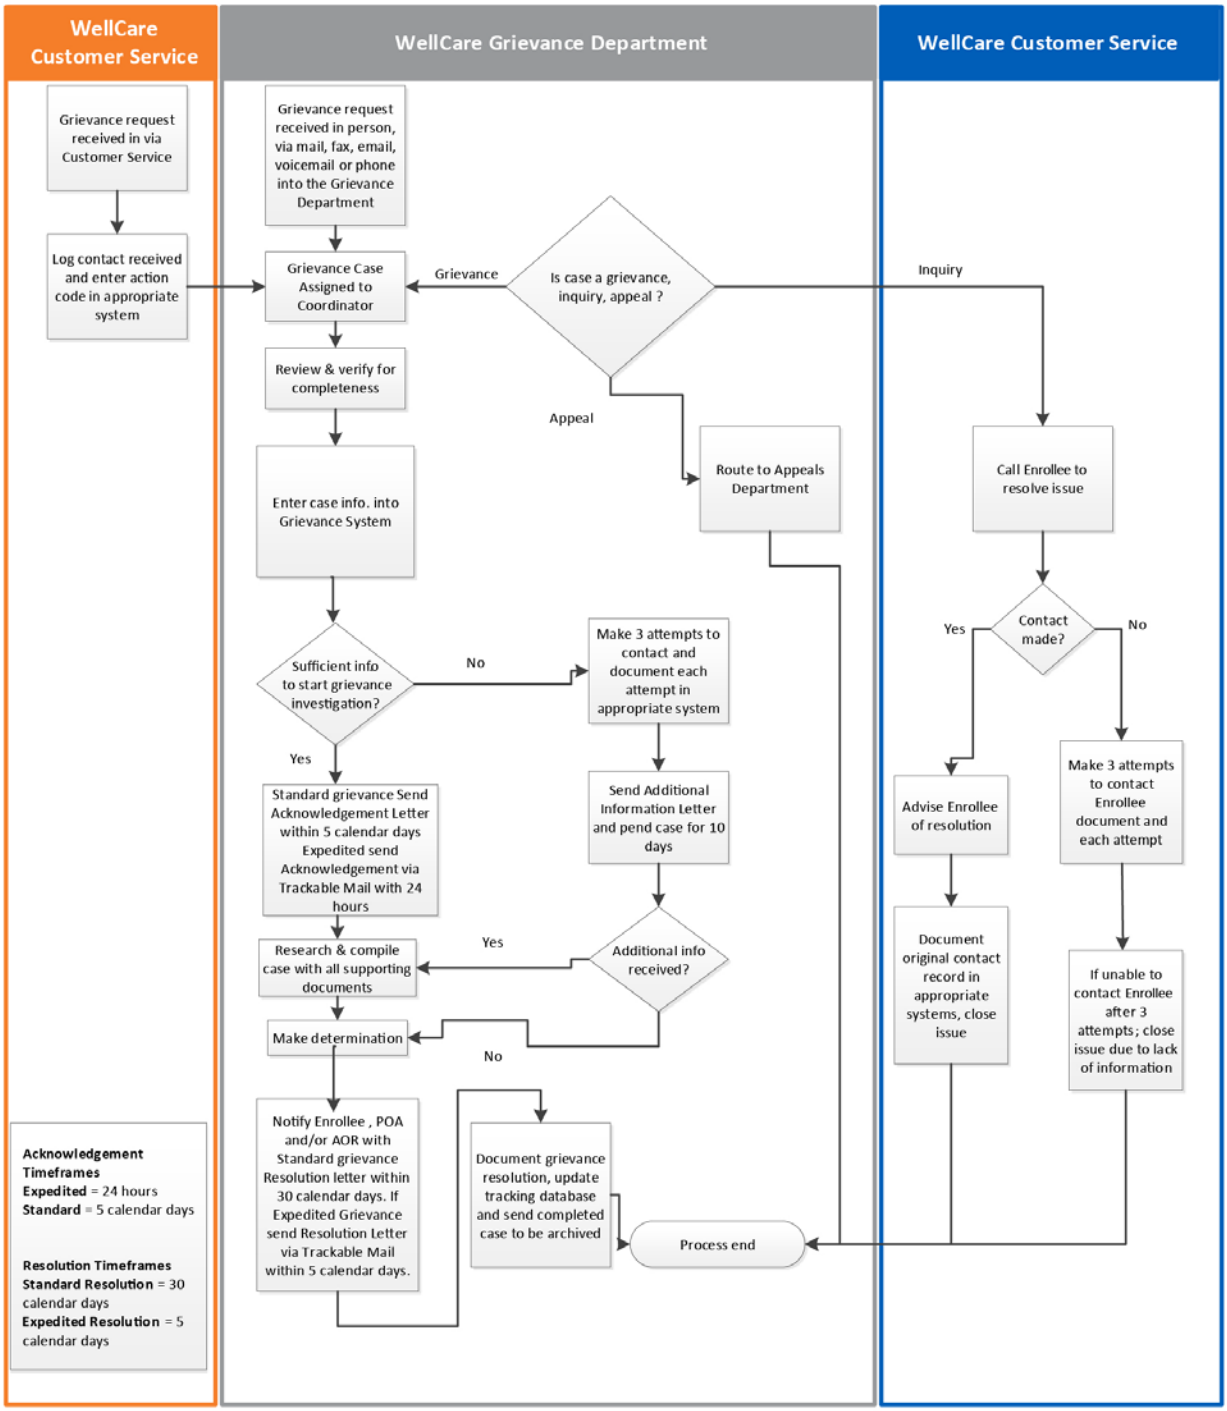

Figure C.14-3 Enrollee Grievance Process

Figure C.14-4 depicts the Enrollee Standard and Expedited Appeals process flow described below.

Enrollee Standard Appeals Process

Enrollee appeals result from a disagreement about service denial, reduction, suspension, or termination through a Notice of Adverse Benefit Determination (NABD). WellCare receives

appeals submitted by Enrollees in writing and via fax. We are also in the process of implementing functionality to accept appeals through our website. Enrollees or their authorized representatives have 60 calendar days from the date on the NABD to file an appeal request. In accordance with our Enrollee Appeal Policy and Procedure, **we track, acknowledge, route, and resolve all appeals in our grievance and appeal system, which fully integrates with our care management system.**

To ensure timely and appropriate resolution of an appeal, Kentucky grievance and appeal coordinators have the support of dedicated enterprise-level appeals RNs and coordinators, quality assurance staff, and department leaders. They complete reviews for clinical cases, and all cases of children under the age of 21, in collaboration with a board-certified physician, psychologist, therapist, or other approved clinical professionals as appropriate, based on the type of appeal. Our reviewers may provide peer-to-peer review support, upon request from an Enrollee's provider prior to the final appeal decision; or they may initiate outreach to the provider to discuss supporting documentation. In accordance with federal and Kentucky regulations, our internal review process allows providers to present new or additional information about the Enrollee's health at any time during the review so we can evaluate previously denied, reduced, or suspended services. Enrollees receive a copy of their complete case file upon request at no charge. WellCare of Kentucky will continue services while an appeal is pending, in line with federal requirements.

Reviewers have the option to have cases reviewed by our Appeals Committee, in which case Dr. Shaps will engage the committee to evaluate whether the determination is in the best interests of the Enrollee.

If the original adverse action is overturned in part or in whole, we authorize the services as rapidly as the Enrollee's health condition requires We also provide for continuation of services, in accordance with 42 C.F.R. 438.420, while the Appeal is pending. In accordance with Section 24.2 of the Draft Contract, WellCare of Kentucky ensures that a grievance or appeal is addressed and notice is given as expeditiously as the Enrollee's health requires. We resolve all cases no later than 30 calendar days from the date of the request. The reviewer enters the resolution in the grievance and appeal system, verbally notifies the Enrollee and the provider when the request is pre-service in nature, and sends formal written notification as to whether the original decision was approved or upheld. The written notice includes the date the review was completed and the reason(s) for the determination in easy to understand language, as required in 42 CFR 438.10. Our grievance and appeal system shares this information with our CareCentral clinical platform to automate the authorization process.

Upon completing the review, the reviewer updates the grievance and appeal system, which maintains a dated summary of the issue or request including who conducted the review, who made the final determination, key dates associated with the request (i.e., receipt date, date acknowledged, date resolved), and final resolution. We will submit a policy noting any new requirements to DMS, and will continue to submit our Enrollee Appeal Policy to DMS for review and approval, in accordance with Section 24.2 of the MCO contract.

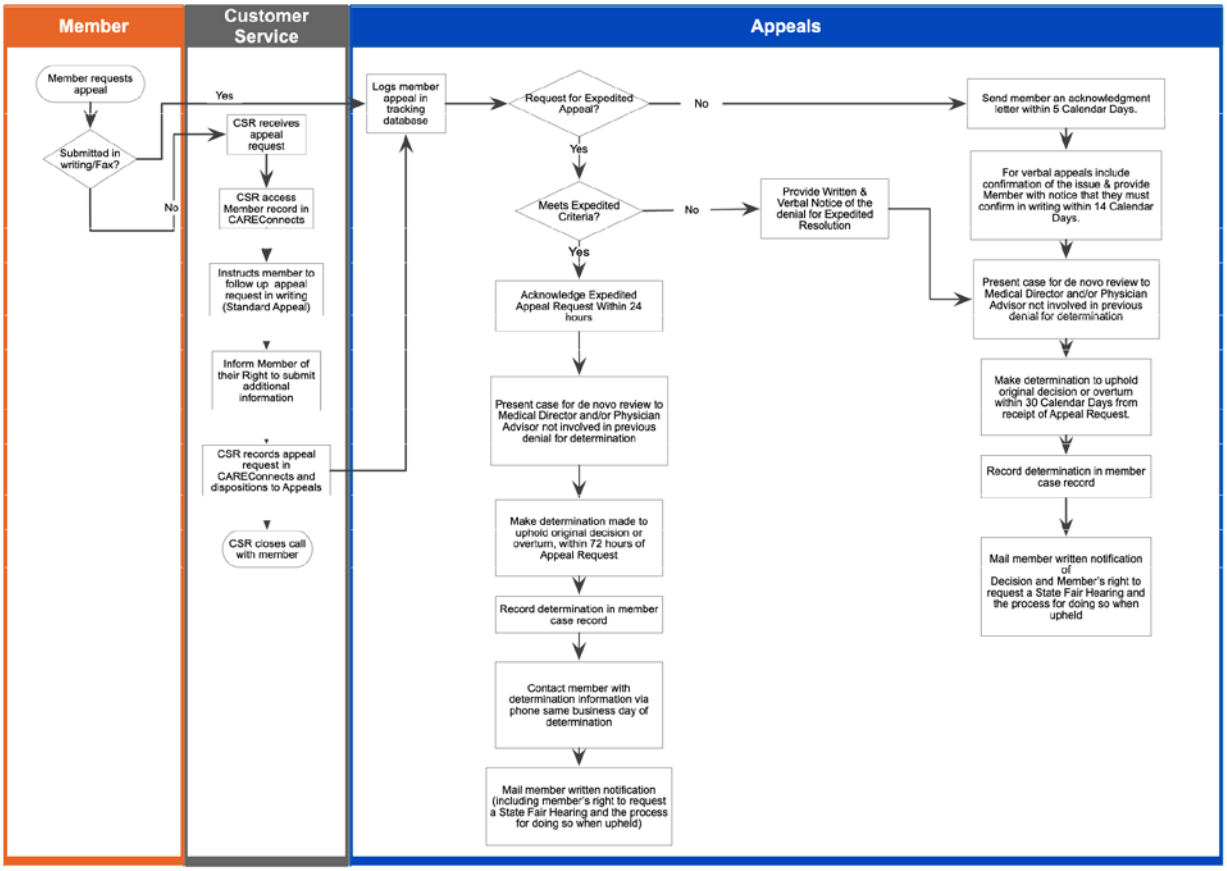

Figure C.14-4 Enrollee Standard and Expedited Appeals Process

b. Process for Expedited Review

If a medical director determines that allowing the time for a standard resolution, described above, could seriously jeopardize the Enrollee's health, life, or ability to attain, maintain, or regain maximum function, we expedite the appeal review. In addition, upon request of the Enrollee or Enrollee's provider, we carefully track these appeals to ensure that we meet the Commonwealth's timeliness standard of three business days using the grievance and appeal system alert flags. A qualified health professional makes the determination to expedite processing. If the expedited request is denied, the Appeals Department attempts to notify the Enrollee immediately by phone and issues a decision in writing within 24-hours of receipt. The case is presented for review to the medical director or a physician advisor not involved in previous denial for determination. Following this review, the medical director or physician advisor determine whether to uphold or overturn the original decision within 72 hours of the appeal request. The same day that this determination is made, it is documented in the Enrollee case record, and the Enrollee is notified by phone. The Enrollee is also mailed written notification of the decision, including the Enrollee's right to request a State Fair Hearing if the original decision is upheld, and the process for doing so.

STATE FAIR HEARINGS

An Enrollee may initiate a State Fair Hearing in the following instances, in accordance with Section 24 of the Draft Contract:

- WellCare of Kentucky fails to resolve an appeal within 30 days,
- The Enrollee exhausts WellCare of Kentucky's internal appeal process
- if he or she is dissatisfied with an Adverse Benefit Determination within 120 days of WellCare of Kentucky's final appeal decision, as provided for in 42 C.F.R. 438.408.
- An Adverse Benefit Determination that denies or limits an authorization of a requested service or reduces, suspends, or terminates a previously authorized service.

If the enrollee's appeal decision regarding and adverse benefit determination is upheld, the final determination notice includes the Enrollee's rights to request a State Fair Hearing within 120 days of the final appeal decision. If the Enrollee requests a State Fair Hearing, WellCare of Kentucky will furnish all documentation and will participate in the Hearing in accordance with 907 KAR 17:010 and any other applicable state or federal guidelines.

c. Involvement of Enrollees and their caregivers in the process.

We recognize that **Enrollees have a voice** and a right to understand how to engage when they feel that their needs are not met. We go to great lengths to educate Enrollees, families, caregivers, and authorized representatives about the grievance and appeals process through an array of awareness efforts, including initial education and ongoing outreach.

New Enrollee Materials: **Within five business days of enrollment**, we send a New Enrollee Welcome Packet, which includes the Enrollee Handbook to inform Enrollees and their families of their grievance and appeal rights, and how to access them. Within the Handbook and on our website, we specifically spell out grievance and appeals processes including:

- Enrollee right to a grievance or appeal and the difference between them
- How to file a grievance by phone, writing, or via our website
- How to request an appeal of services denied, reduced, suspended, or terminated
- How to request expedited appeals
- How to appoint a representative to file a grievance or appeal on their behalf

Our support extends beyond just supplying education through printed and online materials. Call center staff, care managers (CMs), providers, and community partners all receive training on our grievance and appeal process so they can educate and assist Enrollees and their representatives as needed.

Enrollee Call Center: Enrollee Services Representatives are often an Enrollee's first contact with us. These associates receive training and have call scripts to guide them as they inform Enrollees about the grievance and appeals process and assist them with filing, as requested.

Care Managers: For Enrollees enrolled in care management, our "no wrong door" process requires CMs to educate Enrollees and their families on the grievance and appeals process. Additionally, CMs may submit grievances or appeals on the Enrollee's behalf, if desired.

Providers: Providers are often the Enrollee's first line of information for Adverse Benefit Determinations so we comprehensively train them on Enrollee grievance and appeals rights, including the provider's right to request an appeal verbally or in writing on behalf of the Enrollee with written consent.

Special Assistance: We make necessary accommodations to assist Enrollees who may have impaired hearing, impaired vision, or speak a language other than English with filing an appeal or grievance (e.g., completing forms or taking procedural steps). This includes, but is not limited to, providing interpreter services at no cost to the Enrollee and toll-free numbers that have adequate TTY/TTD and interpreter capability.

d. Tracking grievances and appeals received by type and trending results for use in improving operations.

Grievance and appeal data play a critical role in our WellCare KY QI program. We want to know if an Enrollee is unhappy with his or her care, or with the treatment, he or she receives. Using our grievance and appeal system, **we continuously track and trend data to identify trends and make program improvements.** This ultimately reduces the number of grievances and appeals. Given the rich source of information found in these trends, we report the findings to various committees, both quarterly and year-over-year. This includes the UMAC Committee, CSQI Committee, and QI Committee. These committees review and discuss trends, barriers, and opportunities for improvement and assign workgroups to conduct root cause analysis and drive process improvements such as education or internal remedial training. We also use our grievance and appeal data to assess the performance of our subcontractors and identify areas for additional monitoring. Community Advisory Groups (CAGs) also review grievance and appeal trends, Enrollee satisfaction data, and other information to help identify and address potential operational issues.

e. Reviewing overturned decisions to identify needed changes.

WellCare of Kentucky recognizes that to continuously improve, we must resolve the Enrollee, parent, or caregiver concern, and focus on the root cause of the individual issue, monitoring for emerging trends. We do this by trending and analyzing our grievance and appeal data to identify potential systemic issues. We act proactively to find and prevent issues before they affect Enrollees. Associates dedicated to reducing Enrollee grievances and appeals comprise our Root Cause Analysis (RCA) team, led by Operations Manager, Rhia Aponte. The team uses our grievance and appeal system to enhance root cause tracking, streamlining identification, and initiating preventive measures as part of our standard grievance and appeal workflow. Our RCA team does not wait for a grievance or appeal to occur. Instead, they open an RCA case upon identification of an issue and begin creating a remediation plan. Any subsequent grievances and appeals are associated with the same RCA case to further inform their understanding of the issue and drive process improvement. The UMAC, CSQI, and QI Committees receive a summary report of RCA team activities.

Using Results to Drive Improvements: Through our disciplined approach, we have made significant improvements in our Enrollees' experiences. For example, the RCA team identified an issue of providers balance billing our Enrollees. In response, we implemented an Enrollee

Services team to provide personal assistance to Enrollees with balance billing problems; and conducted provider education through our claims team. Additionally, our grievance and appeal system may identify key words as dissatisfaction and create a grievance for review. If the review proves that there is no complaint, we will close accordingly; otherwise, we will submit it as a grievance.

15. Marketing

C.15. MARKETING

a. Provide a summary of the Vendor's Marketing and distribution plan, describing the following at a minimum:

i. The system of control over the content and form of all Marketing materials.

ii. The methods and procedures to log and resolve Marketing Grievances.

iii. The verification and tracking process to ensure Marketing materials and activities have been approved by the Department and adhere as required by Section 25.1 "Marketing Activities" and Section 4.4 "Approval of Department" for the Vendor and its Subcontractors.

b. Describe the Vendor's understanding of the populations in the Commonwealth and define how it will adapt its Marketing materials to reach the various populations and audiences.

C.15. MARKETING

WellCare of Kentucky complies and will continue to comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 15 Marketing of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix,** provided electronically.

WellCare of Kentucky deeply values the privilege to serve the Enrollees in Kentucky Medicaid and the opportunity to provide enhanced access to providers and services while improving health outcomes. From our launch in 2011, we recognized that each Enrollee has unique needs and the best way for us to serve them is by understanding each Enrollee, the communities in which they reside and the community of providers and stakeholders nearby. This objective of understanding our Enrollees led us to establish our six regional offices and hire staff across the Commonwealth. This strategy and commitment optimizes our ability to appreciate what works and what does not in each community, to increase potential for face-to-face interactions with Enrollees and providers, and to demonstrate that we really are Kentuckians serving Kentuckians.

a. Provide a summary of the Vendor's Marketing and distribution plan, describing the following at a minimum:

WellCare of Kentucky complies and will continue to comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 15 Marketing of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix.**

WELLCARE OF KENTUCKY - AN MCO OF CHOICE

Following our philosophical approach to meeting Enrollees where they are, WellCare of Kentucky has the highest MCO voluntary choice rate of all other MCOs in the Commonwealth with 80% of Enrollees voluntarily selecting us. In addition to a large network of satisfied providers, we believe Enrollees choose us because of how we support them with their health and beyond. It is both rewarding and humbling that we have outperformed our competitors during the last three open enrollment periods.

Our Marketing approach consists of promoting the WellCare of Kentucky brand during the annual open enrollment period. We deliver our "choice" message during open enrollment to inform eligible Enrollees that we are an MCO option for their personal health care needs, and we provide information to help them understand their choice.

Beyond Healthcare, A Better You: We are committed to Enrollees' wellbeing, which includes alleviating unmet needs impeding them from participating fully in their lives. We have developed a system of support through our Community Connections Help Line and local community partnerships to serve our Enrollees with their food, housing, or even employment needs. WellBeing, in Figure C.15-1, our warm and fuzzy brand icon, is a symbol of our commitment to the total health of our Enrollees helping them down the path to a better, healthier life.

Figure C.15-1 WellBeing

Our Community Relations Specialists (CRS) embody our community-based, service-oriented approach. They span the Commonwealth from Paducah to Lexington to Hazard proudly representing WellCare of Kentucky in the community and focusing on what is really important and adds the most value: assisting Enrollees with their needs and supporting our community partners. Our leaders, top to bottom, embrace this broader view of Marketing, **and so do our Enrollees who, on the most recent CAHPS, scored us higher than all other MCOs for Enrollee satisfaction.**

We conduct Marketing activities in all eight (8) Commonwealth regions and distribute DMS approved culturally accessible materials aligned with 42 C.F.R. 438.10 which we translate to Spanish. Our Marketing program's policies and procedures mirror 42 C.F.R. 438.104 and contract requirements, and built-in controls ensure adherence to all rules and regulations. We have a user-friendly grievance process for Enrollees dissatisfied with any aspect of our Marketing program and attain resolution within 30 days.

MARKETING PLAN

Our Marketing plan combines DMS-approved mass media Marketing directed at Enrollees during open enrollment throughout the Commonwealth with community-based activities close to Enrollees and community partners. Our two-prong approach reaches Enrollees with our focused message of "choice" during open enrollment. Beyond the open enrollment period, our community-based team engages Enrollees and community partners all year round.

Open Enrollment Marketing Campaign

We know how important it is for Enrollees to know their MCO choices during the annual open enrollment period so they can select the MCO which best meets their needs. Accordingly, during this period, we focus our Marketing messages and resources on the value and benefits of choosing WellCare of Kentucky. Our large-scale mass media advertising campaign during open enrollment is customized to reach Enrollees in each of the eight (8) regions and includes the following activities (please see **Table C.15-1**):

- Out of home advertising - Billboards on main roads in both urban and rural areas; public transportation bus shelters along routes to providers, shopping sites, and government offices (Social Security, DMS, and WIC).

- Targeted use of radio, especially in rural areas, to close the gap on Medicaid recipients living in areas that may lack widespread internet connections.
- Increased use of digital ads on Facebook, Instagram, and other social sites using a simple message with a "click" option to get more specific information on WellCare of Kentucky, value added benefits, and open enrollment resources
- Advertising in Spanish to reach the growing number of Hispanic residents

Our Marketing team engages Enrollees at community events and educates Enrollees about WellCare of Kentucky benefits and services and helps them make an informed choice of MCOs. They provide information about open enrollment dates, the lock-in period, and other information to assist Enrollees with navigating the open enrollment period whether they

choose us as their MCO or not. For questions about eligibility and enrollment, we refer to the Assisters and will help Enrollees locate Assisters in their communities if one is not present at the event.

"Always On" Marketing Team

After open enrollment, we continue to engage with our communities focusing on health education and healthy behaviors, especially focused on local area needs and disparities. We attend and sponsor events such as back-to-school events and health fairs where we can continue to demonstrate to our Enrollees and communities our commitment to better health. With a service-oriented approach, and knowledge of community resources, our Community Relations Reps assist Enrollees and non-Enrollees alike who may have social barriers and direct them to our Community Connections Help Line for referrals to social services organizations to provide support with housing, food, or safety needs. At the community level, we support our community partners' events helping them communicate their health and wellness messages to a wider audience. For example, events we sponsored illustrated in **Table C.15-2**, focused on some of the Commonwealth's priority areas from Section 34.2 Conditions and Populations in the Draft Contract, thereby aligning our support with community partners and DMS.

Table C.15-2 Events Supporting DMS Health Priority Areas

Focus Area	Event	Description	Region
Heart health	Bullitt County Health Department	Healthy Hearts Wear Red Luncheon	3
Obesity	YMCA Kids Day	Healthy eating habits	2
Cancer	Go Red for Women	Breast cancer awareness	3
Mental health	Marshall County High School	Grief counseling	1
Maternal and infant health	Expectant Parents Fair	Baby shower	4
Tobacco cessation	University of KY	Conference	5

Overall, the Marketing team participated in over 200 community events and meetings since last year across all eight (8) regions. Please see **Table C.15-3** for a partial list of our community participation throughout the Commonwealth. Just as important is our community collaborations. For example, we participate in monthly meetings with the Assisters and Family Resource and Youth Services Centers Coordinators (FRYSC) in Frankfort to discuss how to better educate Enrollees about resources and supports. At one meeting we presented information about our WellCare Works program thus providing key information for the Assisters to communicate to Enrollees searching for this type of information.

Table C.15-3 Statewide Marketing Events

Regions	Events
1	W KY Health and Wellness Summit; Paducah Health and Wellness Summit; Murray State University Independent Youth Empowerment Conference
2	YMCA Kids Day; 2018 Dust Bowl; Light of Chance Breathe Program
3	Grayson County Health Fair; Go Red for Heart Health; Park DuValle Give A Smile Health Fair; Healthy Hearts Wear Red; Healthy Start 502 Fathers baby shower;
4	Expectant Parents Fair; Stand for Children Day; World Refugee Day; WKU Medical Center Health and Wellness Expo; Special Needs Expo; OH Baby expectant Parent fair
5	Eastern Kentucky Health Fair; Child Abuse Prevention Family Day; LexEnd Poverty; Lexington Homeless Stand Down; 21st Annual Mountain Fest Health Fair
6	Silver Grove Back to School; OPE Health Resource Fair; FRCYS Regional Meeting
7	Community Baby Shower; Expungement Fair NKY; Child abuse prevention conference in Morehead
8	EKU Health Fair; KY Moms Baby Shower; MCHC Health Fair; Black Gold Festival; American Lung Association Lung Force Expo; Christmas for Charity ARH Center

TRAINING

WellCare of Kentucky has not been sanctioned for a Marketing violation at any time since the beginning of Medicaid managed care in 2011. We believe this record is due, in part, to our training program which prepares our Marketing Reps to conduct business fully aware of the rules and never at risk of breaking them.

Marketing Reps must successfully complete a 40-hour enterprise-level training course upon hire and annual refreshers thereafter as a condition of employment:

WellCare Policies and Procedures - These topics bring them into alignment with the WellCare Way so they effectively represent our values in the community. Topics include our Mission, Values and Vision; Code of Conduct and Business Ethics, HIPAA, and other topics.

Compliance Training - These topics instruct them on being compliant in the field. Topics include Fraud Waste and Abuse, Anti-kickback statute, federal regulations governing Medicaid, and other topics.

Cultural Competency - These topics prepare our CRS to honor our Enrollees' diversity and learn to communicate effectively with Enrollees speaking different languages and from diverse cultures.

Brandon Lau, Medicaid Marketing Director provides Marketing training for the CSRs. The training includes developing knowledge of all the prohibitions in Section 25.2 Marketing Rules

of the Draft Contract. In addition, a situational learning component provides opportunities for the CSRs to apply their knowledge to likely scenarios in the field. For example, CSRs must respond correctly to a scenario in which an Enrollee asks about Medicaid eligibility. The CSRs must know to direct the Enrollee to DCBS.

WellCare of Kentucky ensures that Enrollee gift cards or value-added benefits meet the requirements of Social Security Act §1128A, the Contract and any other applicable federal and state laws. We acknowledge that approval of these benefits by DMS shall not be construed as superseding federal or state law.

i. The system of control over the content and form of all Marketing materials.

WellCare of Kentucky's Marketing materials comply with 42 C.F.R. 438.10 and Section 22.6 Enrollee Information Materials in the Draft Contract. WellCare of Kentucky's Chief Compliance Officer, Rebecca Randall, has direct oversight of the Marketing materials approvals process as well as ensuring all Marketing-related activities comply with DMS contract requirements and state and federal regulations.

We use only Marketing materials which DMS has approved in writing, and we have an internal multi-level review process to ensure our materials, as well as those of our delegated subcontractors, not only comply with Marketing rules and regulations but are culturally aligned with our Kentucky Medicaid Enrollees. Our Medicaid Marketing Material Review and Approval Process (Policy C6-SS-003) governs our system of control over the content, form, and distribution of all Marketing materials and establishes these controls over our subcontractors' activities. Through this process, designated staff review the materials on three (3) separate occasions before submitting for DMS approval:

The Medicaid Marketing Director, or a designate, submits a written materials request through Papyrus, a project management tracking system to request, track, and manage the material development process.

Papyrus creates a job order, assigns a unique tracking number (e.g., WCKY12345), and routes the job order to the product development team to develop the Marketing copy.
The team develops written copy at the required sixth grade reading level as determined by Flesch-Kincaid; ensures the document adheres to the 12-point font size requirements; selects culturally appropriate images aligned with the diversity of Kentucky Medicaid Enrollees; and selects a format corresponding to the purpose of the material: tri-fold brochure, postcards, flyer etc.

The team routes the draft written materials to the job requester for initial approval.
If the job requester approves, the product team uploads the job into the Regulatory Affairs SharePoint site which generates an alert that a new job is in queue to be reviewed.
A Regulatory Affairs Specialist, or designee, reviews the materials for Kentucky Medicaid specific compliance elements including but not limited to: sixth grade reading level; minimum of 12 point font size; grammatical or typographical errors; culturally appropriate images; appropriate format aligned with job purpose and message; compliance with contract

requirements, policies, procedures, and other guidelines; and functioning phone numbers and web links.

If the Specialist determines the materials are compliant, the Specialist adds the job to the Materials Review weekly agenda for review by the Materials Review Committee. The committee is led by Rebecca Randall, Chief Compliance Officer, and includes leaders from Marketing, Quality, Population Health Management, Provider Relations, Network, Pharmacy, and Operations.

If the Committee approves the material, the Specialist uploads the job request to the DMS SharePoint site and follows the DMS procedures by indicating if the request for approval is a resubmission, entering the number and name of the materials to be reviewed, and attesting that the submission for approval includes the following:

- Confirmation of readability,
- Intended audience,
- Reason for expedited request (if expedited), proposed distribution date,
- Purpose,
- Translation certificate, and
- Is error free.

If the request is for an expedited review, the Specialist provides one of the DMS-defined criteria for expedited review.
If the Specialist determines prior to the Materials Review Committee meeting that the materials do not comply or the Materials Reviews Committee does not approve the material, the job is returned to the Product team specifying the deficiencies or reasons for non-approval. The Specialist works with the Product team to remediate any issues preventing submission for approval and resubmits once corrections or modifications are made.
Once material is approved by DMS and notification is received by the Regulatory Affairs Specialist, the approval record is archived in our SharePoint library. All approved materials reference the unique tracking number as well as the date approved by DMS. This process is followed for all of WellCare's delegated subcontractors. By contract, subcontractors are required to submit all applicable material to the Regulatory Affairs Department prior to use to obtain DMS approval.

ii. The methods and procedures to log and resolve Marketing Grievances

We respond to Marketing Grievances through established policies and procedures that recognize Enrollees' fundamental rights to express dissatisfaction and have their concerns addressed and resolved expeditiously, respectfully, and in a cultural competent manner. We also respond to and resolve grievances originating from DMS, other agencies, providers, or from any other source, with the same urgency and diligence as we do for Enrollee grievances. Although we have not logged any Marketing Grievances since 2017, we have a NCQA certified Grievance process which complies with all DMS requirements and is designed to identify, receive and respond, track, review, report, and resolve all expressions of dissatisfaction.

(WellCare of Kentucky provides a detailed description of our process in our response to Question C.14 "Enrollee Grievances and Appeals.")

If the Enrollee or other entities express a grievance in the field to Marketing staff (e.g., a community event, provider visit, etc.) or through the typical intake process through the Enrollee Services line, we attempt “on the spot” or First Call resolution. If resolved, the grievance is logged into our grievances and appeals workflow management system.

If the grievance is not resolved on the same day, we activate the formal grievance process through the grievances and appeals Coordinator who logs the grievance and initiates the process of acknowledging, tracking, and resolving the grievance within 30 days.

After logging the grievance, the Coordinator routes the case to the appropriate functional areas responsible for Marketing materials (VP of Marketing) or a customer service complaint (VP of Enrollee Services) for resolution.

Our Customer Service Quality Improvement Committee and the Quality Improvement Committee review any Marketing grievances, analyze trends, and conduct root cause analysis to drive operational improvements regarding our materials, activities, or the conduct of our Community Relations Specialists.

If during the grievance resolution process we discover a true marketing violation, our Customer Service Quality Improvement Committee and Quality Improvement Committee will refer the matter to our Regulatory and Compliance Department for corrective action. Depending on the level of severity, corrective actions may include retraining of associates, disciplinary actions (including termination) and the imposition of penalties and/or sanctions if the violation was attributed to one of our subcontractors.

iii. The verification and tracking process to ensure Marketing materials and activities have been approved by DMS and adhere as required by Section 25.1 “Marketing Activities” and Section 4.4 “Approval of Department” for the Vendor and its Subcontractors.

WellCare of Kentucky's policies and procedures governing Marketing materials submission and approvals process ensure that we and our subcontractors adhere to Section 25.1 Marketing Activities and Section 4.4 Approval of Department in the Draft Contract. We acknowledge that general health education materials do not require prior approval by DMS, and we ensure, through our policies and procedures, that such materials comply with this Contract and state and federal regulations and laws. We further acknowledge that we are subject to penalties for materials found to be non-compliant as set forth in Appendix B Remedies for Violation, Breach, or Non-Performance of Contract.

As previously stated, neither WellCare of Kentucky, nor any of our subcontractors, has never been sanctioned for a Marketing violation from contract inception in 2011. With our proven processes and single point of accountability for our materials and activities, we are confident that we will maintain this perfect record during the new contract period.

VERIFICATION AND TRACKING PROCESS

As described in Section 15.a.i, our experienced Regulatory Affairs team manages a rigorous, systematic process ensuring all materials created by WellCare or any of our subcontractors, comply with all DMS contract requirements, state and federal regulations as well as our internal quality control standards before we submit to DMS for approval.

We apply this rigor to the verification and tracking process for submission of materials and proposed activities for approval through the state-defined process utilizing DMS's SharePoint site and managed through our Regulatory Affairs SharePoint site as described below:

After submitting the material for review and approval from DMS, the Regulatory Affairs Specialist enters the date of submission and the DMS assigned tracking number on the internal Regulatory Affairs SharePoint site.

We limit job requestors and other non-Regulatory Affairs staff to "read-only" access to the Regulatory Affairs site ensuring the original copy is not edited post submission to DMS. We do however provide visibility into the status of the jobs such as whether they are under review or approved/not approved.

We do not provide subcontractors with access to the Regulatory Affairs site.

When the review is complete, DMS notifies us in writing through a DMS generated email with the following approval decisions which trigger our subsequent actions:

1. **Approved** - We update the status in our Regulatory Affairs SharePoint site and notify the job requester. We route the job to the fulfillment team for posting (advertising) or printing (written materials). An example is provided in **Figure C.15-2**. For verification, all written materials include a job number and approval date. The material is stored on the Approved Marketing and Member Material SharePoint Site and distributed to the applicable functional area for use.

Figure C.15-2 Sample Written Material

2. **Not Approved** - We update the status within the Regulatory Affairs SharePoint site and notify the job requester. The job **will not be fulfilled** and materials **will not be disseminated to Enrollees**. The job is marked "closed" in Papyrus, our project management tracking system.
3. **Needs Clarification** - We contact the job requester and provide DMS's questions/notes. We change status to "Pending WellCare Review" in the Regulatory Affairs SharePoint site accordingly.
4. **Withdrawal** - We request DMS to withdraw the request for approval. We indicate "Withdrawn" status in the Regulatory Affairs SharePoint site.

   By limiting access to materials under DMS review to designated Regulatory Affairs staff, we effectively prevent unapproved materials from being accessed, fulfilled, or distributed prior to DMS disposition. These controls also apply to subcontractors who, at all times, are at

arm's length from our materials. We provide materials to subcontractors only when they have been approved.

b. Describe the Vendor's understanding of the populations in the Commonwealth and define how it will adapt its Marketing materials to reach the various populations and audiences.

Since 2011, we have been serving Medicaid Enrollees throughout the Commonwealth and know that they are not one, undifferentiated cohort. They are children, mothers, and adults who may speak Spanish or other languages. Some live in the highlands of Eastern Kentucky or downtown Louisville. Thus, to reach our Enrollees wherever they live or languages they speak requires adapting not only our materials but our approach.

IN THEIR OWN LANGUAGE

We know that language could be one of the biggest barriers to participating in one's health care and that poorly translated materials prevent effective communication. We translate all Marketing materials to Spanish using only certified translators. In addition, the messages in our health promotions items such as toothbrushes floss, and first aid kits are also in Spanish. We translate to other languages upon request including Braille and produce DVDs for Enrollees with low literacy. We can also develop translated materials to keep in stock in a language not yet meeting the 5% threshold if there is a need. With our community-based presence throughout the Commonwealth, our Marketing team, field-based clinical teams, the Provider Relations team, or providers themselves could help us identify populations we need to engage in their own language with ready-made materials.

DIGITAL COMMUNICATIONS

More and more of our Enrollees rely on digital communications to obtain or respond to information. For example, there was a 135% increase in the MyWellCare mobile app downloads from 2018-2019. Adapting our approach from materials to digital keeps pace with technology that facilitates communications. Through our digital channels, we communicate information about benefits, such as our Healthy Rewards incentive as well as information about open enrollment, recertification due dates, or even a prompt to schedule their annual exam.

PERSON TO PERSON

For populations living in more rural, remote areas of the Commonwealth, adapting to a person-to-person approach is more effective than adapting materials. Our marketing team, for example, engages Enrollees in the eastern part of the Commonwealth at events such as the Black Gold Festival, health fairs, and other community gatherings. Our approach includes working through our network of community partners, such as Kentucky Homeplace, to communicate with Enrollees. We have adapted to this approach understanding that some Enrollees rely on community or faith-based organizations they trust for information and guidance. Educating our partners about our benefits and services and Medicaid program information is one of the most effective channels to reach some Enrollees.

We also adapt a high-touch approach when we believe it will be more effective than distributing materials. For example, at the Annual Hispanic Latino Health Education Fair in

Lexington, our Marketing team brought a Spanish-speaking interpreter to the event. The interpreter engaged Spanish speakers in conversations about WellCare of Kentucky and community resources, such as housing and education with greater detail than could be communicated with materials. Adapting our approach is also vital to improving health outcomes. For example, in Bowling Green, we have Enrollees who are Somali refugees in our Care Coordination program. With limited English proficiency and isolated from the community at large, the most effective method to engage them is in person with interpreters from their own community. Interpreters accompany our Care Coordinators for home visits and together they educate Enrollees about refills, making and keeping appointments, and even accompany Enrollees to provider appointments with the Care Coordinator.

16. Enrollee Eligibility, Enrollment and Disenrollment

WellCare Launches Digital Life Coach Program for At-Risk Foster Youth in Kentucky

WellCare
Beyond Healthcare. A Better You.

C.16. ENROLLMENT ELIGIBILITY, ENROLLMENT, AND DISENROLLMENT

a. **Describe the approach to meeting the DMS's expectation and requirements outlined in RFP Draft Medicaid Managed Care Contract and Appendices "Draft Medicaid Managed Care Contract and Appendices."**

b. **Detail any limitations and/or issues with meeting the DMS's expectations or requirements and the Vendor's proposed approach to address such limitations and/or issues.**

C.16. ENROLLMENT ELIGIBILITY, ENROLLMENT, AND DISENROLLMENT

a. Describe the approach to meeting the DMS's expectation and requirements outlined in RFP Draft Medicaid Managed Care Contract and Appendices "Draft Medicaid Managed Care Contract and Appendices."

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 26.0 Enrollee Eligibility, Enrollment, and Disenrollment of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

WellCare acknowledges that DMS has authority over the provisions and policies outlined in Section 26 governing Enrollment Eligibility, Enrollment, and Disenrollment. We specifically acknowledge DMS:

- Has the exclusive right to determine eligibility and enrollment without appeal by the MCO [26.1]
- Ensures an equitable distribution of Enrollees across the participating MCOs through its assignment algorithm [26.2]
- Reserves the right to re-evaluate and modify the Auto-Assignment algorithm anytime for any reason [26.5]
- Will provide written notice to WellCare of Kentucky of any modification of the Auto-Assignment algorithm before the implementation of such modification [26.5]
- May develop MCO enrollment limitations based on quality, cost, competition, and adverse selection [26.5]
- In addition, we recognize that DMS has primary responsibility for receiving, validating, and processing annual redeterminations as well as accepting and processing changes reported by the Enrollee. However, we are also committed to making any reasonable accommodations or providing necessary assistance to persons protected by the Americans with Disabilities Act in order to assist DMS with redeterminations and changes [26.12]

PROCESSING ENROLLMENT FILES SINCE 2011

We have been processing HIPAA 834 transaction files in Kentucky since the first days of managed care in 2011 in increasing numbers, processing approximately 450 million Enrollee transactions since 2016. Although we focus on technical execution, we do not lose sight that the enrollment files contain our Enrollees and that their ability to access benefits and receive the right level of care is subject to our performance.

We accept all Enrollees whether they selected us or were assigned to us through DMS's auto-assignment logic, and we personalize the Enrollee experience based on enrollment file information. For example, if an Enrollee is pregnant and indicated as such on the enrollment file, the processing of the file will route them to our CareCentral system for Care Coordination assignment where a Care Coordinator will work with them on getting the best care for their pregnancy. If the Enrollee is a child, we know to communicate to the caregiver directly and not directly with the child.

GENERAL ENROLLMENT PROVISIONS

In accordance with Section 26.3 General Enrollment Provisions**,** we do not discriminate against potential Enrollees on the basis of an individual's health status, need for health services, race, color, religion, sex, sexual orientation, gender identity, disability or national origin, and we do not use any policy or practice that has the effect of discriminating on the basis of an Enrollee's health status, need for health services, race, color, religion, sex, sexual orientation, gender identity, disability or national origin.

ENROLLMENT PROCEDURES

Enrollment and Eligibility System

The features of our Enrollment and Eligibility System (EES) process demonstrate our current capabilities while reinforcing that we are already prepared to serve Medicaid Enrollees under a future contract.

- *Systems Interface –* Our systems have been successfully interfacing with DMS since 2011, and our processes are calibrated to DMS's file transfer protocols.
- *EES Team–*Experienced Kentucky-trained operators/analysts facilitate the enrollment transactions and remediate file discrepancies usually within 24-Hours.
- *Category Recognition -* Our EES identifies all Kentucky aid categories including demographic information, and special flags such as: **Enrollees with guardianship codes** for prompt health needs assessment and outreach to the Department of Assisted/Integrated Living (DAIL) for Care Coordination; **Priority populations needing immediate services**, e.g., pregnant Enrollees for rapid downstream integration with our Care Management portal, CareCentral, and our Enrollee service platform, CAREConnects, to facilitate immediate evaluation by our Care Coordination team.
- *Agile -* We adjust our business processes to adapt to DMS changes, such as the recent redesign of the 834 for the Kentucky HEALTH implementation. We participated in over 18 months of joint design, planning, and 834 file testing. As a result, over the course of a single weekend we were able to seamlessly transition to loading an 834 format which contained more than 63 new different data elements and was, on average, 66% larger than the previous 834 file.
- *Capacity -* Since 2011 we have grown from 113,000 to more than 430,000 Enrollees, absorbing the growth and executing larger volumes of transactions without disruptions in service. Our excess system capacity will absorb additional enrollment under the new contract without the need for any incremental investment.

Confirmation Letter and Identification Card

Onboarding our new Enrollees timely and helping them become active in their health is a top priority. We design our business processes for consistent, reliable performance, sending Enrollees their ID card and confirmation letter within five Business Days and ensuring they receive the materials within three days of mailing. In 2019, **we met this timeliness requirement close to 99% of the time so that our Enrollees from Paducah to Ashland could quickly activate their benefits and engage in their care.** To ensure Enrollees always have an identification card when they present for services, we provide self-service options for them to obtain their cards through our secure Enrollee portal and MyWellCare mobile application.

Our confirmation letters include all the information required in **the contract.** In addition to the required information, the mailing also includes:

- A copy of the provider directory for their region
- A Healthy Rewards brochure explaining the incentives program for preventive healthcare
- An Over the Counter program booklet explaining the program benefits
- A Quick Start Guide delivering key enrollment information to Enrollees' fingertips for successful onboarding to WellCare of Kentucky

ENROLLMENT ELIGIBILITY FILE AND ENROLLMENT PERIOD

We begin covering services based on the effective date provided on the eligibility file. For most Enrollees, DMS provides an effective date that is the first day of the calendar month in which the eligibility transaction is sent. Exceptions to this standard processing are newborns and presumptively eligible (PE) Enrollees. When DMS sends newborns or PE Enrollees on the eligibility file, they indicate that coverage should begin on the date of birth and date of eligibility determination, respectively. In all cases, WellCare of Kentucky begins covering services based on the effective date provided by DMS on the eligibility file.

We process enrollment files upon receipt acknowledging the HIPAA 834 file as the source of truth for all new, terminated, and changed Enrollees and notify DMS of discrepancies. Each month, we submit a current roster from our enrollment production environment to DMS for comparison and identification of Enrollees who need to be added or terminated. Outside the formal mismatch process, we perform routine ad hoc analyses to ensure the information received on the 834 file meets DMS regulations and is aligned with Kentucky HEALTHNET.

If Enrollees report address changes, we advise them to contact DCBS. We monitor the 834 file for 60 days, and if the address change does not appear by the 60th day, we send DMS a report of unverified address changes.

PERSONALIZING THE ENROLLEE EXPERIENCE

WellCare of Kentucky maintains continuous open enrollment for newly eligible Enrollees and accepts all Enrollees regardless of our enrollment levels as we have during this contract period.

We built our excellent reputation in Kentucky based on our dedication to understanding our Enrollees and delivering personalized solutions for them. We not only enroll all the eligible

populations listed in this Section**,** but we correctly match them with their corresponding benefits plan, value-added benefits, and their particular circumstances. For example,

- *SSI (non-dual)*: Given their prevalent health conditions, we refer to Care Coordination, identify courses of treatment, and match Enrollees with a corresponding PCP with appropriate specialty/experience.
- *Dual Eligibles*: We work with Medicare providers to coordinate care, reduce overutilization, minimize service duplications, and manage cost of care.
- *Retroactively Eligible*: When Enrollees receive medical services prior to their application for Medicaid coverage, they are typically allowed to request retroactive coverage up to 3 months prior to their application date. This pattern of retroactive coverage has become a standard operating procedure given our affiliates' experience across 11 other Medicaid states. We cover all Medically Necessary services during the retroactive coverage period without a Prior Authorization. Additionally, if an Enrollee has been retroactively assigned, we routinely waive our timely filing requirements.
- *Newborn infants*: We create a temporary ID for every newborn for providers to reference if service authorizations are needed. Once the hospital has reported the delivery to DMS and DMS has sent the permanent Medicaid ID, we load the newborn's effective enrollment date set to the date of birth. This ensures all costs are associated with the newborn's permanent Medicaid ID.
- *Communications Access*: We are committed to supporting the language or access needs of our Enrollees to ensure they understand the enrollment process including processes such as recertification. We provide a language line with on-demand, certified interpreters supporting over 200 languages including American Sign Language. We translate all materials to Spanish and can translate to other languages as well, including Braille, or produce materials in large print. For Enrollees with low literacy, we produce videos.

PERSONS INELIGIBLE FOR ENROLLMENT

Since we use the 834 file as the sole source of truth for enrollment and disenrollment, we typically do not experience interactions with excluded populations. However, in some circumstances, Enrollees may transition to an excluded population. In these circumstances we have programs in place to ensure we cover the costs of covered services provided to the Enrollee during the first 30 days of transition, including physicians, physician assistants, APRNs, or any other medical services that are not included in the nursing home facility per diem rate.

Enrollee Request For Disenrollment

Enrollees have the right to switch MCOs within contract regulations, and we educate and assist Enrollees with the process, such as informing that a request can be made orally or in writing and the various regulatory provisions governing a disenrollment request:

- If the request is made during the 90-Day change period, we inform Enrollees about the change period provisions allowing them to change without cause and for any reason and instruct them on how to disenroll via the DMS disenrollment process.
- If the request is made outside the 90-Day lock-in period, we educate Enrollees on the for cause reasons as provided in 42 CFR 438.56 and instruct the Enrollee to contact the DMS

Contract Compliance Officer for a State Fair Hearing if the request to disenroll is not granted.

We encourage the Enrollee to make the disenrollment request to DMS, since DMS is responsible for enrollment and disenrollment; however, in the event the disenrollment request is submitted directly to our staff, we submit that request to DMS for a determination.

WellCare of Kentucky Request for Disenrollment

In accordance with the provisions of this Section, WellCare of Kentucky does not request disenrollment of an Enrollee based on an adverse change in the Enrollee's health, or because of the Enrollee's utilization of medical services, diminished mental capacity, or uncooperative or disruptive behavior resulting from his or her special needs, except when his or her continued enrollment with us seriously impairs our ability to furnish services to either this particular Enrollee or other Enrollees.

We educate Enrollees regarding their responsibilities and understand it is sometimes necessary for an MCO to request Enrollee disenrollment if the Enrollee:

- Is found guilty of Fraud
- Is abusive or threatening
- Is admitted to a nursing facility for more than 31 Days
- Is incarcerated in a correctional facility
- No longer qualifies for Medical Assistance per DMS guidelines
- Cannot be located

If we disenroll for any of these reasons, we follow the DMS process of submitting our disenrollment requests in writing including the reasons for our request and, if applicable, the reasonable steps taken to educate Enrollees about their behavior.

CONTINUITY OF CARE UPON DISENROLLMENT

All Enrollees can expect for WellCare of Kentucky to cover the costs of Medically Necessary Covered Services without requiring prior approval. If an out-of-network provider is furnishing the services, we will offer a single case agreement. When appropriate, Care Coordinators will transition the Enrollee to a network provider and assist with appointment coordination with the new provider and furnish updated care plan information.

We understand that disenrollment decisions and their timing are determined by DMS. Our primary responsibilities during a disenrollment request center on serving and educating the member where appropriate, providing DMS accurate information to support their decision, and above all, ensuring the Enrollee's continuity of care if DMS determines the disenrollment request will be granted.

b. Detail any limitations and/or issues with meeting the DMS's expectations or requirements and the Vendor's proposed approach to address such limitations and/or issues.

As a long-term incumbent plan within the Kentucky market since 2011, we have met all the requirements of this Section. **We will continue to do so under the new contract with no limitations or issues.** If we do encounter issues, we are an innovative MCO who develops

creative solutions that not only benefit WellCare of Kentucky but the entire Medicaid managed care system as we detail in the next Section.

INNOVATIVE SOLUTIONS

Incarcerated Enrollees Since 2015, DMS has been providing information on the 834 file indicating when an Enrollee is incarcerated. The incarceration periods are reported to DMS by Enrollees or correctional facilities and, when received on the 834 file, we cease paying claims for the Enrollee. During our evaluation of this data, we learned that often we are not alerted of the incarceration until months, or sometimes years, after the Enrollee was first incarcerated, and occasionally we do not receive correct discharge dates.

To learn sooner when Enrollees are incarcerated and determine more accurately the dates of admission and discharge, we developed a proprietary Artificial Intelligence solution that uses claims data and case notes to identify Enrollees likely receiving services while incarcerated. We then verify that information through the Kentucky Department of Corrections online database to confirm incarceration periods. We are currently developing a process to provide this information and documentation to DMS. This proprietary process will allow DMS to confirm that Enrollees are incarcerated weeks or months ahead of the current process, resulting in decreased costs and increased enrollment accuracy.

Locating Enrollees

All state Medicaid agencies face a constant challenge ensuring that Enrollees update their address and other contact information timely. DMS operated a multi-year initiative to suspend Enrollees unable to be contacted in an attempt to improve contact information accuracy. Because maintaining contact with our Enrollees is essential to ensuring they receive the proper care and services, we have developed a powerful search function to locate hard to reach Enrollees, establish their addresses, and determine if they are deceased. We mine our data warehouse for phone numbers and physical addresses. The data aggregator examines:

- Claims data
- Information from Care Coordinator's notes
- Pharmacy Benefits Manager (CVS) and contracted pharmacy information
- Commonwealth enrollment files
- HUD’s Homeless Management Information Systems
- External information vendors such as LexisNexis
- Public records

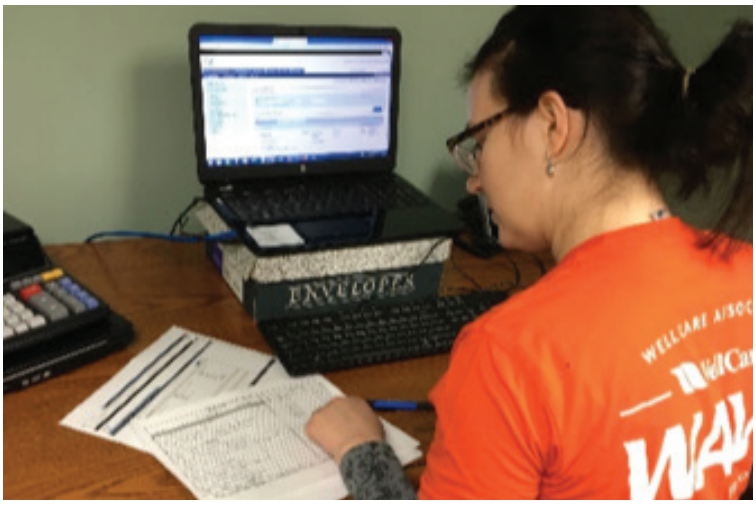
From our data mining, if we determine the Enrollee is deceased, we notify DMS as timely as we can, consistent with Section 26.17. For other Enrollees, we generate a list of phone numbers and last known addresses and attempt to reach Enrollees telephonically or in-person through our field-based teams. If we make telephonic contact, we verify physical addresses and inform the Enrollee of their responsibility to notify DMS of their change. We do not attempt to notify DMS immediately, but monitor the 834 for evidence that the member appropriately reported their change. If the 834 is not updated to reflect the updated address or contact information within 60 days, we then report that updated information to DMS as required by Section 26.7 of the contract.

WellCare's Recertification Care Center - Avoiding Disenrollment

We know that access to benefits and services, continuity of care, courses of treatment and more are at risk if Enrollees miss their annual recertification requirement. Given our recognition of the problem, we created a Care Center in Hazard which employs local customer service agents to engage Enrollees prior to their recertification date. The Care Center enables us to proactively outreach to Enrollees in multiple scenarios, including recertification.

Using a combination of outbound calls, written letters, and text messaging, we have dramatically increased successful recertifications for our Enrollees. During the first 11 months of operation, we were able to outreach to households containing more than 32,000 Enrollees who were within 15 days of losing Medicaid eligibility and had not yet recertified. Even though we were contacting Enrollees who had not responded to previous communications from DMS and now had fewer than two weeks to recertify, we were able to achieve a **recertification rate of 82%** for this population, thereby maintaining continuity of services and reducing enrollment/disenrollment churn.

17. Provider Services



WellCare®
Beyond Healthcare. A Better You.

C.17. PROVIDER SERVICES

a. Summarize the Vendor's overall approach to Provider Services, including initiatives and processes for providing effective services to providers to support the Kentucky Medicaid program. In the response, address the following at a minimum:

i. A description of how provider representatives engage with providers initially and on an ongoing basis, including level of local presence and onsite visits to provider locations.

ii. Description of formal committees, workgroups, or other forums, if any, in which Providers can receive updates and instruction from the Vendor and offer input about the overall program and Vendor initiatives.

iii. Methods and metrics used to collect provider feedback and to measure overall provider satisfaction, including frequency of doing so.

iv. Methods the Vendor will use to minimize provider complaints and escalations to the Department.

b. Describe the Vendor's proposed Provider Services call center, including an overview of the following at a minimum:

i. Approach to assuring the call center is fully staffed during required timeframes.

ii. Location of proposed operations.

iii. How the Vendor will meet and monitor call center standards, and how the Vendor will use monitoring results to adjust operations, as needed.

c. Provide an overview of the Vendor's proposed provider website, including examples of information that will be provided through the website and any functionality that will be included to communicate with providers.

Provide sample screenshots of provider websites currently maintained by the Vendor.

d. Provide a proposed table of contents for the Provider Manual and a brief description of the type of information the Vendor will communicate via the manual.

e. Provide the Vendor's proposed approach to provider orientation and education.

f. Describe the Vendor's support of providers in Medicaid enrollment and credentialing, including the following:

i. Methods for assisting providers who are not enrolled in Medicaid with the enrollment process

ii. Proposed process for conduct of credentialing until such time that a Credentialing Verification Organization (CVO) is contracted by the Department.

iii. Proposed process for transitioning credentialing activities to and coordinating with the Department's contracted CVO(s) to educate and assist Providers in completing the credentialing process with the CVO(s).

iv. Approach for a timely contracting determination of providers upon receipt of information from a CVO that a provider's credentialing is complete, specifying timeframe for uploading a credentialed and contracted provider into the claims payment system to allow for payment of adjudicated claims

Include copies of the Vendor's proposed credentialing policies and procedures, and procedures for coordination with the CVO(s)

g. Provide the Vendor's proposed approach for processing provider grievances and appeals. Include at a minimum:

i. The overall process to include description of interaction with providers, required correspondence and timeframes for acknowledging and resolving grievances and appeals.

ii. Process for tracking reasons for grievances and appeals to identify trends, and how the Vendor will use this information to improve internal operations, provider relations, and provider satisfaction.

iii. Process for ensuring transparency to DMS of grievance and appeal types, resolutions, and any Vendor actions to decrease such grievances or appeals in the future.

C.17. PROVIDER SERVICES

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 27 Provider Services of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

a. Summarize the Vendor's overall approach to Provider Services, including initiatives and processes for providing effective services to providers to support the Kentucky Medicaid program. In the response, address the following at a minimum:

Having built and maintained a comprehensive and diverse statewide network of more than 34,500 contracted providers over our eight years as an MCO for Kentucky's Medicaid Managed Care program, WellCare of Kentucky has developed a trusting relationship with our network providers by ensuring they have the support they need to provide the highest quality of care to the Enrollees they serve. In doing so we have **earned #1 NCQA Customer Satisfaction from 2016 to 2019 among all Medicaid MCOs**. Over that time we have developed and refined our Provider Engagement Model, one that combines "high touch" with "high tech" through a combination of the most extensive physical presence of any MCO in the Kentucky Medicaid Managed Care Program along with 24/7 provider support available through multiple channels. It includes:

- Six regional offices throughout the Commonwealth staffed with experienced and dedicated provider relations representatives who live, work, and understand the communities they serve
- Community-deployed Quality, Operations and Care Coordination staff dedicated to supporting network providers and available to assist in meeting program quality goals and resolving payment issues at the individual provider or system level
- Multiple avenues for communicating with the network and hearing from providers, including webinars, our Provider Advisory Panel, Provider Summits, regular onsite visits to provider offices and provider surveys

- A call center staffed by highly trained agents enabling providers to quickly get the support they need, when they need it
- A streamlined provider portal with enhanced claims, authorization, Enrollee profile and live chat functionality that reduces administrative burden for providers

The success of our Provider Engagement Model is demonstrated by the results of our annual Provider Satisfaction survey, which showed that **91.6% of our providers would recommend WellCare of Kentucky to other providers.** We achieved these results by directly engaging our providers face-to-face, hosting summits and webinars to educate providers on new initiatives, listening to their feedback and implementing changes such as improving our online provider portal and refining authorization rules to reduce administrative burden.

"WellCare has become the easiest managed care organization to do business with. We have monthly meetings with several members of the WellCare team. Every meeting is attended by the Provider Relations Manager, Provider Relations Representative, as well as any additional WellCare support staff we request to resolve issues. In between meetings, they are always available by phone or email to address any problems that arise....There are very few MCOs that provide the face-to-face outreach such as this to assist with questions and concerns."

– DALE SUTTLES, PRESIDENT, SUNRISE CHILDREN'S SERVICES

i. A description of how provider representatives engage with providers initially and on an ongoing basis, including level of local presence and onsite visits to provider locations.

Our Provider Engagement Model has evolved since our initial program implementation, when our original provider relations staff began visiting providers across the Commonwealth to educate them on the concept of managed care. During the launch of Medicaid Managed Care, it quickly became clear that providers in Kentucky were looking for a more personal experience with their managed care companies. Understanding the need to establish a closer connection to our provider partners, we established six regional offices across Kentucky, see **Figure C.17-1**, enhancing our ability to be in touch with the communities we serve.

Today WellCare of Kentucky's dedicated Provider Engagement Team consists of 51 associates in a variety of roles with a wealth of experience engaging with providers across the Commonwealth. Provider Relations Manager Anthony Piagentini leads a team of 15 Provider Relations (PR) Representatives, four Hospitals Services Specialists, three Provider Relations Managers and a Hospital Services Manager all serving our provider network out of our regional offices. **In 2019 alone, our PR Representatives made over 6,600 personal visits to provider offices that comprise our network of health care practitioners and facilities across Kentucky.**

Figure C.17-1 WellCare of Kentucky Presence

The centerpiece of our Provider Engagement Model is the **PR Representative**. Our PR Representatives are based throughout the Commonwealth, working out of our six regional offices. These individuals serve as the primary point-of-contact for network providers focusing on primary care, behavioral health, and specialty care. **Our PR Representatives live in the areas they serve, are invested in their communities, and are familiar with the issues, challenges, patterns of care and culture of those areas.** Some of our PR Representatives have worked for our program since its inception, and many have worked in and alongside the provider practices and facilities they support. For example, we have recruited PR Representatives from Appalachian Regional Healthcare (ARH) and Baptist Health. Every provider has a dedicated PR Representative responsible for supporting his or her practice or center.

Upon joining our network, a newly-contracted provider is contacted by a PR Representative who provides an orientation, explains their role as a primary point of contact and advocate for the provider, and discusses with them how they can best support the provider on an ongoing basis. The PR Representative is fully accountable to their provider relationships and serves as the primary point of contact for each provider. They are the key owner of the relationship and the provider's advocate to ensure they receive the support they need when they need it.

PR Representatives work in partnership with our **Quality Practice Advisers (QPAs)** to help engage practices to improve quality measures and provide more cost-efficient care. QPAs are trained nurses who review HEDIS measures, clinical practice guides and leave toolkits that support ongoing quality improvement activities. WellCare of Kentucky Senior Director of Quality Laura Betten leads a team of 16 QPAs and three managers who support our providers from our regional offices. Like our PR Representatives, QPAs live and work in the regions they serve. They are assigned to specific practices and are aligned with the provider relations team. They frequently make joint meetings with providers to provide the best possible services to providers in their offices in the most efficient manner. **In 2019 alone, WellCare of Kentucky's QPAs made over 6,000 visits to provider offices to advance the Commonwealth's quality measures.**

QPAs are trained on DMS' priority measures and collaborate with providers to ensure they understand their quality progress reports. On a monthly basis, the Provider Relations, Network Management, Care Management, and QPA teams hold a "P360" huddle meeting reviewing our top providers' performance in quality and cost measures by region. These meetings focus on a 360 degree view of the practices, including all aspects of quality and cost, and include interdisciplinary teams such as pharmacy and clinical teams. Through P360 huddle meetings, the team reviews the practice panel clinical performance, including a heat map of care gaps. They then use that information to focus on certain practices or develop condition/service specific campaigns. The team collaborates to develop a targeted plan for each provider to enhance practice quality and outcomes.

Aligning Goals for Higher Performance and Higher Provider Satisfaction

PR Representatives and QPAs are the primary provider-facing roles within WellCare of Kentucky, working directly with providers to facilitate a positive relationship with WellCare and to increase our overall quality performance through provider-specific initiatives. While previously QPAs and PR Representatives might visit a provider's office separately, WellCare recently realigned our Provider Engagement Team structure so QPAs and PR reps could conduct more joint meetings with providers. This increased communication between the PR team and QPA team and resulted in more efficient and effective visits for providers.

The collaboration between the PR team and QPA team extends to all facets of our operations. For example, the PR and QPA Directors have a standing bi-weekly meeting to discuss ongoing initiatives. This also includes shared responsibility related to goals and objectives. The PR team has the same quality goal as the QPA team and the QPA team has the same provider satisfaction goals of the PR team. This level of collaboration, from goals, through leadership, into daily activity in the field demonstrates our commitment to the best provider experience in the industry.

Understanding that different types of providers face unique challenges, WellCare of Kentucky has four specialized PR Representatives called **Hospital Service Specialists (HSS)** dedicated solely to supporting the more than 130 hospitals in our network. HSS team members are typically recruited from institutions so they are more familiar with their operating model and their unique support needs.

Based on feedback from facilities and recognizing the need not only for hospital-specific support at the local level but also coordination of institutional issues at the regional and statewide levels, we reorganized our provider relations structure in 2018. Prior to this each HSS team member was assigned to a regional manager who also managed PR Representatives. Given the significant differences in the focus areas of institutions versus professional practices, we reorganized the team so that all HSSs reported to a dedicated hospital services manager. This approach allowed us to more rapidly spot emerging trends within our hospital network and address them before they cause abrasion.

The HSS team typically conducts monthly Joint Operating Committee meetings with each institution in which an interdisciplinary team from both the institution and WellCare of Kentucky work collaboratively to review financial performance, quality metrics, pharmacy utilization, and to plan for future initiatives.

"I have seen many instances of us being able to identify concerns as quickly as they occur. One example is an issue we were having with the base code for IV Therapy. At a JOC meeting with Tabatha Nelson, HSS, at Ephraim McDowell Medical Center, their team shared with us examples of claim denials for a missing base code. They brought in their IV Therapy expert and we discussed at length what their expectations were. That same week I proceeded to see my other HSS's send us single claim issues from other facilities with the same concern. This issue could have very easily been overlooked due to the sporadic examples being sent to each of our four HSSs. Due to the fact that our Hospital Services is all on one team, we were able to identify that we had a trend amongst several facilities. This allowed us to work with our internal partners and correct the edit and reprocess the impacted claims. "

– CATHY DAVIS, HOSPITAL SERVICES MANAGER, WELLCARE OF KENTUCKY

To ensure effective and efficient support of all issues, PR Representatives and HSSs engage various professionals at WellCare of Kentucky who are tasked to perform specific functions on behalf of network providers. In addition to QPAs, these include **Operations Account Representatives (OARs), Patient Care Advocates (PCAs), Provider Operations Coordinators (POCs), Practice Transformation Specialists, and the Claims Resolution Team:**

- *Operations Account Representatives (OARs)* are experienced claim professionals who conduct billing education and are empowered to efficiently resolve issues, including the ability to perform real-time, on-site claims adjustments at provider offices. OARs monitor claim utilization and denial rates and provide one-on-one training when billing errors are identified. This is especially helpful to rural providers and critical access hospitals, where limited staff resources are focused on patient care. This ensures that these critical providers do not suffer from delayed payments. OAR team members attend calls with providers and meet face-to-face during events like our Provider Summits to make adjustments and correct issues in real-time if possible.
- *Patient Care Advocates (PCAs)* provide local support of our quality improvement program. PCAs are WellCare of Kentucky employees who are physically located in select network provider offices and are focused on connecting Enrollees to care including accessing detailed Enrollee and provider reports and scheduling appointments for targeted Enrollees with identified gaps in care including immunizations, ADHD follow-up, asthma medication adherence and EPSDT well child visits. Through our HEDIS and care gap discussions with providers, we found many were engaged and eager to address gaps in care but lacked resources needed to conduct Enrollee outreach and follow up. PCAs address this need. Our PCA program is both a service enhancement for providers and a best practice.
- *Provider Operations Coordinators (POCs)* work to assure accurate and timely loading of all provider contracts and demographic data. They routinely reconcile provider rosters with our systems to make updates needed to provider records. They interface directly with providers along with PR Representatives.
- *Practice Transformation Specialists* act in a consulting role for practices interested in improving their overall practice model. They work onsite at provider offices assisting them to evolve their business model to successfully achieve cost and quality goals associated with value-based purchasing (VBP) agreements.

- *Claims Resolution Team (CRT)* members research complex claim issues including applicable state and federal policy to ensure the market is accurately applying claims policies. The team is engaged any time we encounter a claims dispute trend where there is conflicting information or ambiguity on how the policy should be applied and we need to do more comprehensive research on the appropriate implementation of payment policy.

While there are many different roles on the support team, and these roles make the team more productive, the PR Representative remains the primary point of contact to streamline and enhance the provider experience. For instance, when a provider brings a claims issue to his or her PR Representative, the PR Representative begins by researching the issue to determine the cause of the problem. It could be a contract issue, a configuration problem, an authorization issue, or a provider error. Depending on the root cause, a different team of experts within WellCare will fix the problem. Instead of being bounced from one WellCare employee to the next, the provider can rely on their PR Representative to be their central point of contact no matter which issue caused the claims problem.

It is this dedication to prompt, direct, and accountable provider service--from a coordinated team of highly skilled, locally-based provider relations representatives--that has resulted in 91.6% of Kentucky providers saying they would recommend WellCare of Kentucky to other physician practices. Going forward, we are committed to maintaining that standard and continuing to look for new ways to better support our providers in delivering the highest quality care to Kentucky Medicaid Enrollees.

ii. Description of formal committees, workgroups, or other forums, if any, in which Providers can receive updates and instruction from the Vendor and offer input about the overall program and Vendor initiatives.

We offer a variety of modes through which providers can interface with WellCare representatives for instruction and updates as well as to offer input on WellCare initiatives. These include our Provider Advisory Panels, Provider Summits, Joint Operating Committee meetings, Webinars, and Technical Advisory Committee Meetings. Through these channels we are able to understand and respond to the changing needs of our providers.

Provider Advisory Panel: Under the direction of Provider Network Director Bonnell Irvin, WellCare of Kentucky has created a Provider Advisory Panel comprised of providers from all eight regions, organized and facilitated by Provider Relations. The Provider Advisory Panel serves as a consulting resource to WellCare of Kentucky in policy and operational matters, and further strengthens the bridge between WellCare and the provider community. We identify potential provider panel members from recommendations by the respective

Providers Asked	WellCare Responded
Faster Provider Enrollment	✓
Reduction in authorization requirements	✓
Enhanced provider portal, more self service functions	✓
Add skilled hospital billing professionals	✓
Access to claims experts in the field	✓

region's Provider Relations team. The panel members consist of PCPs and specialists who are independent providers not connected to hospitals.

Depending on the agenda of the panel, WellCare of Kentucky representatives may include our Medical Directors, Provider Relations Manager, and their team members. The agendas are created by collaboration of the Network Management leadership team in concert with Provider Relations. We hold Provider Advisory Panel meetings quarterly in each of our six regional offices. Although we prefer to have all attendees available in the office, at times we connect our providers virtually via video teleconference to avoid the need for excessive travel and to ensure we have representation from across Kentucky. All panel recommendations and meeting outcomes are reviewed for consideration by WellCare's Kentucky leadership team.

Provider Summits: Each year WellCare of Kentucky hosts multiple regional provider summits across the Commonwealth. Summit agendas include general presentations from leadership, presentations from key departments that impact all providers (portal, case management, claims, for example), a Q&A session with our leadership, and breakout sessions on individual topics such as Waiver implementation, regulatory changes, and plan highlights such as our work with Community Connections claims adjustments, behavioral health and quality improvement. In 2019, 471 providers attended our regional summits. WellCare of Kentucky has hosted these provider summits every year since the launch of the Medicaid Managed Care program.

Joint Operating Committees: For our large provider groups and hospitals, we hold regularly occurring JOCs with formal agendas to review comprehensive performance metrics and mutually identify opportunities to improve overall success of the partnership and performance under value-based payment (VBP) arrangements.

Based on discussions at JOC meetings, WellCare created a hospital surge report that shows facilities a quick picture of common denial reasons, total paid and total denied claims. Along with the report, we provide best practices to improve operational processes to reduce denied claims.

Webinars: Throughout the year, WellCare hosts bi-weekly webinars on a variety of topics that inform and update our provider partners on both WellCare initiatives and Department or Commonwealth initiatives that may impact providers. For instance, we conducted a number of webinars prior to the launch of KY Health. We collect feedback from attendees that enables us to identify additional educational or training needs and develop future trainings targeted to meet those needs. Some topics we've developed based on feedback from our providers have been our pharmacy preferred product list and authorization procedures.

Technical Advisory Committee Meetings: Representatives from WellCare of Kentucky's leadership team attend all Technical Advisory Committee (TAC) Meetings. Attendance at these meetings allows us to listen to important feedback from providers that we have used to take positive action. For instance, in a recent Hospital TAC meeting, DMS and the Hospital TAC discussed changing the timeframe for altered authorizations after an outpatient procedure when there were unforeseen adjustments made during the procedure that required an authorization. Immediately after the meeting, WellCare was able to coordinate with our

Utilization Management team to alter our post-procedure authorization timely-filing guidelines to comply with DMS' direction. We were able to implement the change more rapidly because we attended the TAC meeting and had researched the solution prior to DMS issuing their final decision.

iii. Methods and metrics used to collect provider feedback and to measure overall provider satisfaction, including frequency of doing so.

WellCare closely monitors provider satisfaction in order to continually improve the provider experience and ultimately assist providers in better serving our Enrollees. We use a "no wrong door" approach to feedback from providers, using a variety of different methods to measure provider satisfaction and gather the critical information necessary to make these improvements. These include annual provider satisfaction surveys, as well as data collected from post-call surveys, provider summits, and feedback on our provider portal.

Annual Provider Satisfaction Survey: Our annual Provider Satisfaction Survey is conducted by SPH Analytics (SPHA), a National Committee for Quality Assurance (NCQA) certified survey vendor. This survey is designed to support NCQA standards for health plan accreditation, as well as ensure our provider satisfaction program remains compliant with key reporting requirements. The survey helps identify opportunities for improvement by asking providers for feedback on a variety of topics, including:

- Other health plans (comparative rating)
- Finance issues
- Utilization and quality management
- Network/coordination of care
- Pharmacy
- Health plan call center service staff
- Provider service representatives

The survey also includes a free form section where providers can provide unrestricted feedback about any topic relevant to them. Results are then correlated to identify the items most important to overall provider satisfaction.

Post-call satisfaction survey: At the end of each call from a provider to our call center, providers are offered the opportunity to complete a survey on their interaction to assess the effectiveness and convenience of the interaction and offer feedback. The results of these surveys are reviewed on a monthly basis by the Kentucky Provider Relations team who develop action plans for improvement. Provider representatives also follow up directly with a provider who has expressed dissatisfaction in order to remediate any issue. This process for collection of feedback, analyzing feedback and individually following up on each issue with the individual provider allows us to measure satisfaction and make adjustments on an ongoing basis.

Provider Summit Feedback: We distribute surveys to attendees of our annual provider summits which provides valuable insight into our providers' satisfaction with this forum, as well as input on what training topics providers would like to learn about, what functionality and tools they would like to see, and what WellCare could do to more effectively support them. For example,

the results of our Provider Summit survey from our Lexington summit showed that 90% of our attendees "Agreed" or "Strongly Agreed" that the summit met their expectations.

Provider Portal Feedback: We collect real-time feedback on our Find-A-Provider tool to enhance the user experience with this tool or the website as a whole. Content, navigational and search improvements have been made as a result of this feedback. Based on survey feedback, we expanded the number of radius miles for providers in rural areas and enhanced specialist searches by adding additional key words to the database. As an enhancement, at transaction confirmation time the user will be asked to complete a survey on the effectiveness and convenience of the transaction. Results will be analyzed and reported to the appropriate areas within the organization, including Provider Relations.

Provider Meetings, Workgroups, and Committees: We capitalize on our Joint Operating Committee, Provider Advisory Panel, and Provider Summits, as well as our participation in the Kentucky Primary Care Association and Kentucky Hospital Association meetings to be aware of and address provider concerns. For example in a recent Provider Advisory Panel meeting a provider questioned how their staff could see the coordination of benefit information we have on file for their assigned enrollees; our monthly provider portal training includes training on COB availability, so we invited the provider and their staff to the next training session. Additionally, based off recent feedback we have made adjustments to training and communication related to a variety of issues:

- Peer comparison reports – WellCare has been doing this but we have focused in on certain provider types and are now expanding this process across a broader audience
- Reviewing report timeliness and seeing how we can improve it so it is more 'real-time'
- Conducting internal meetings related to UM procedures on small physicians who perform infrequent services requiring authorization but have zero history of overturns. Considering creative expansion of our Gold-card program.

iv. Methods the Vendor will use to minimize provider complaints and escalations to the Department.

Our entire approach to provider services, from the way our PR Representatives engage providers at the local level and take accountability for resolving any issues from initiation through resolution, to the way our management structure is set up to spot trends and proactively address them, to the multiple open channels of two-way communication between WellCare and our providers, is set up to minimize complaints and escalations to DMS. Our involvement in TAC meetings, our careful consideration of legislative changes or new Department requirements, our engagement with providers to understand the pain points they may experience as a result of changes or the training and education they may need to adapt--all of these serve to reduce provider abrasion and decrease the likelihood of widespread or ongoing issues that reach DMS level.

Our team also closely monitors Grievances and Appeals trends, claims denial trends, and every metric of provider satisfaction on an ongoing basis. When we discover issues affecting multiple providers, we conduct regular status meetings to resolve systemic operational problems until those issues are resolved. The first escalation step if there is an identified trend that can't be

solved at the PR Representative level is to document the issue in our internal Network and Provider Operations Call (NPOC) log. This log documents each issue along with the responsible person and a timeline for completion. This is reviewed on a standing monthly call with our Provider Relations and Operations leadership. If the issue has a longer resolution timeline or requires coordination with enterprise resources, it is escalated to Chief Operating Officer Ben Orris and Provider Network Director Bonnell Irvin.

Although this is the formal escalation process, our entire leadership team, including Plan President Bill Jones, attends our Provider Summits, where they interact with providers. At each of these forums, our leadership team shares their direct email address and phone number. Any provider is welcome to email or call our leadership team directly to escalate a problem. This is reflective of our “no wrong door” philosophy on collecting and addressing provider issues.

We also carefully consider how changes we make in our own operating model may affect our providers and proactively plan to ensure that those changes do not result in provider escalations to DMS. WellCare of Kentucky has a weekly meeting reviewing any potential changes which are planned for our operating model. This leadership team meeting includes Provider Relations leadership to evaluate any possible impacts to providers. Once we establish that any change could impact providers, our Market Analytics team generates a report that estimates the impact to providers broken down by vendor. Depending on the type of change and total impact, we use a combination of tools to communicate any change impacting providers once the change is approved by DMS. This includes:

- Provider portal notification
- Mass mailing
- Provider Relations or HSS representative on-site training
- Leave-behind print material during office visits
- Webinars

We develop a custom communication plan using any or all of these techniques depending on the extent of the proposed change. For example, if the change has a small impact to a handful of providers, we may simply educate the PR team, create a one-page leave behind document and incorporate that messaging into our regularly scheduled visits to the impacted offices while leaving the collateral with the office. For more comprehensive changes that impact many providers, we would use almost all of the above-mentioned communication tactics. We have also adjusted our communication and implementation timeline depending on the complexity of the change. For more complex changes, we offer more time until implementation to prepare providers properly for the impact to their operations.

b. Describe the Vendor’s proposed Provider Services call center, including an overview of the following at a minimum:

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 27.2, Provider Services Call Center of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Offering the best experience for providers who interact with us is a top priority, with a focus on satisfaction, quality and first-call resolution. Our provider call center is staffed by highly trained agents with broad-based experience handling provider inquiries. They assist providers with all manner of inquiries including eligibility, prior authorizations, referrals, claims (medical, behavioral, pharmacy), fraud and abuse hotline referrals, current network status and the administration of out-of-network services. Our call center staff is backed by systems and processes that enable us to continually meet or exceed DMS' service level requirements. The result is a seamless experience that enables providers to quickly get the support they need, when they need it.

WellCare of Kentucky has maintained a Provider Call Center satisfaction rate of over 88% since 2016.

i. Approach to assuring the call center is fully staffed during required timeframes.

WellCare of Kentucky operates a fully-staffed call center Monday through Friday 8:00 am – 6:00 pm Eastern Standard Time, including federal holidays. During normal business hours, callers can bypass the IVR system and speak directly to a live representative at any time. Providers also may contact us through our Live Chat web service via the provider portal during normal business hours of operation. This web service gives portal users the ability to contact us in real-time and ask a question or discuss an issue they are having and receive immediate support without interrupting their workflow.

We employ sophisticated oversight processes to staff appropriately so that we can achieve our service metrics and be available to our providers when they need us. We use the NICE workforce management system to facilitate adequate staffing. NICE uses a proprietary formula that takes into account variables such as average handle time, time of day, projected mailings, enrollment periods, population size, and historical performance to predict call volume and project required staffing. This tool enables us to forecast call volumes, schedule representatives, control call traffic between locations, perform staffing analysis, and report on key performance indicators (KPI). To deliver accurate call volume forecasting and staffing, intervals of 30 minutes are used to understand arrival patterns. By monitoring and analyzing each half hour through our Customer Service Command center, we are able to apply appropriate staffing levels to meet the callers' needs in a timely manner. NICE allows us to effectively and efficiently develop weekly, monthly, annual, and multi-year planning scenarios that accurately forecast the impact of changes in key performance drivers on our call centers' service quality and staffing requirements.

ii. Location of proposed operations.

Our WellCare of Kentucky's service delivery model for provider inbound and outbound calls includes our Work-At-Home- Agent (WAHA) service model staffed by associates located in Kentucky. These Kentucky based associates residents are fully trained and supervised virtually using all of our call center tools (i.e., call monitoring, call recording, queue management, etc.). Combined with CAREConnects, our award winning, proprietary agent desktop solution, our WAHA strategy enables us to deliver a localized approach to provider support through Kentucky-based associates. WAHA allows for rapid deployment during non-forecasted demands, seasonal peaks, hard to staff shifts and crisis management. In addition, staff can be

easily localized in any region within the state. This approach, supported by an outstanding training model, gives us access to a broad talent pool from which to recruit and hire, with no geographic restrictions.

Supporting the Kentucky team is our South Carolina based call center whose team members are fully trained on Kentucky Medicaid benefits and services. The South Carolina team is trained on all aspects of the Kentucky Medicaid program and are equipped to handle all provider inquiries including claims, authorizations, benefits and eligibility questions.

iii. How the Vendor will meet and monitor call center standards, and how the Vendor will use monitoring results to adjust operations, as needed.

Quickly responding to providers in need of assistance is crucial in helping them maintain their work flow and productivity. Chief Operating Officer Ben Orris, is responsible for the oversight and monitoring of the call center to ensure DMS' standards are being met. He has real time access to WellCare's Command Center, to monitor the service levels at any time. Additionally he is provided dashboard reports that detail the Kentucky call center's service levels five times throughout each day.

In order to meet the high call center standards demanded by DMS and our network providers, our Kentucky operations are supported by WellCare Command Center operations. The WellCare Command Center is made up of a centralized team of associates dedicated to full-time monitoring of capacity and performance across all of our local call center locations nationwide. This team monitors average speed of answer, abandoned call rate, blocked call rate, average hold time, timely response to inquiries, accurate response to inquiries and phone etiquette. The Command Center is the control center for all provider services functions and performance, providing real-time monitoring of service levels and coordinates action in order to achieve our service level targets.

The Command Center features numerous display screens which display data and trends including, but not limited to, calls in each queue, length of time callers have been waiting to speak to a representative, and number of representatives available to assist callers. Command Center management monitors service levels and adjusts operations as necessary to ensure service level requirements are continuously met. Because weather can pose threats to our operations, the Command Center continuously displays and monitors the weather to identify any potential impacts and rebalance workloads as needed so there is no threat to service level performance.

All possible actions are taken to prevent service level issues, but the team has documented contingencies that can be enacted immediately when they do occur. These contingencies allow us to re-route call traffic to other trained agents where pockets of agent availability exist. We also adjust skilling strategies so that prioritization can be applied to queues in need, and as necessary, subsidize staffing by pulling trained agents from work types that aren't tied to real-time demand. All of this is accomplished through direct communication and highly effective partnership with our sites. The command center team is actively engaged with local Kentucky Management team when these contingencies are put in place throughout the day.

As we do today, WellCare will continue to meet the following performance standards as measured by monthly averages for the provider services and pharmacy call centers:

- Call abandonment rate of less than five percent (5%)
- Eighty percent (80%) of calls are answered by a live voice within thirty (30) seconds, and the remaining twenty percent (20%) are answered by a representative with an additional thirty (30) seconds. “Answer” is defined as response to each caller who requests to speak to a live representative
- Accurate response to call center phone inquiries by call center representatives is ninety percent (90%) or higher
- One hundred (100) percent of call center open inquiries are resolved within seventy-two (72) hours

Additionally, all voice messages left during non-business hours are returned within one business day. The process we employ to assure all return calls to providers are timely include checking voicemail box on a daily basis at the start of each business day. Callbacks are completed daily with three attempts made to the provider. A daily summary is sent to Provider Relations leadership with updates on voicemail received and completed. The standard Call Monitoring Quality Assurance process that is in place for inbound calls is performed on outbound calls to ensure quality and timeliness of resolution.

c. ***Provide an overview of the Vendor’s proposed provider website, including examples of information that will be provided through the website and any functionality that will be included to communicate with providers.***
Provide sample screenshots of provider websites currently maintained by the Vendor

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 27.3, Provider Services Website of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in Attachment X Contract Compliance Matrix, provided electronically.

Offering providers and their staff multiple ways to interact with us improves service delivery for our Enrollees and reduces administrative burden on providers. Available 24/7, our secure provider portal serves as a one stop shop for providers and their staff to process transactions and get real-time information at the time that works best for them, improving the efficiency of our providers and allowing them to focus on treating their patients, our Enrollees. Our Section 508 and HIPAA-compliant secured portal has transactional capability, informational resources and self-service tools specifically for our network providers and is compliant with all Department requirements.

The portal gives our providers access to a variety of tools and information as shown in **Table C.17-1.**

Table C.17-1 Provider Web Portal Functionality

Provider Web Portal Functionality	
Enrollee Information	• Eligibility verification with applicable co-payment amounts – allows providers to confirm an Enrollee's PCP assignment, health plan and co-payment information • Pharmacy utilization • Inpatient admission log • Membership panel assignment report • Interfaces with our service management platform, CareCentral, to reflect Enrollee care gaps • Unable to contact – if we've been unable to contact the Enrollee for 30 days, we let the provider know and ask if they have updated information • HEDIS information and tools
Claims	• No-cost electronic claims (both single claims and batch) submission via direct data entry. Includes real time HIPAA EDI compliance check supporting Strategic National Implementation Process (SNIP) data validation with error responses • Check claim status • Edit and rebill a claim (corrected claim) • Submit a dispute or appeal • Save a draft of a claim
Authorization Support	• Prior authorization submission • Check authorization requirements • Check status of prior authorization
Training	Complete assigned training modules such as Provider Orientation, Cultural Competency: Provider Program, Secure Provider Portal Overview, Interactive HEDIS Online Portal Training
Visit Checklist	A tool that combines our appointment agenda with additional information for the providers to take to an Enrollee meeting. The person who checks eligibility can easily print this or create a PDF for the practice management software and make it available to the provider when they meet with the Enrollee. When the visit is done provider offices can use this same service to tell us about care gaps and health conditions electronically, allowing us to more quickly get this vital information to manage an Enrollee's health. The checklist contains information including: • Open care gaps • Inpatient visits • Prescription use • Historical health conditions

Provider Web Portal Functionality	
	• Participation in service and disease management
Preferences	• Providers can also choose to go paperless for specified correspondences
Control their Accounts	• Providers control how has access to their accounts and at what level – they can create individual sub-accounts for staff members, assign roles that keep separate billing and medical accounts
Submit Demographic Changes	• Providers are able to submit changes of address, telephone numbers, hours of operation, open/closed panels and providers who join or leave the practice
Additional Information	• Provider Message Centers: Allow for delivery of self-service ad hoc reports to requesting providers as well as important notices • Resource Center: A gateway to the forms most commonly used by providers, quick reference guides and other helpful information such as "how to" job aids • Care Gap Submission Tool: Allows providers to electronically submit medical records to our Quality Improvement staff to help providers identify and better manage care gaps for Enrollees. It also allows providers to correct and view previously submitted medical records • Links to CHFS, DMS, and the CVO(s) • Information on how to file an appeal and obtain prior authorizations

Our provider portal is also connected to our integrated Care Management system, which allows us to share the outcomes of health screens, EPSDT information, social determinants of health obstacles, Enrollee assessments, care plans, and multi-disciplinary team contacts with providers. Providers can also view open and pending care needs through the portal and notify us when those care needs are closed through encounters, claims, EMR interchange or submission of supplement medical record information. They can also view appointment agendas, which allow our physician partners to understand, in a single report, everything that they need to address for each Enrollee during an appointment including all known diagnoses and associated care needs derived from evidence-based guidelines.

Because we value the opinions and ideas of our providers and their staff to improve our relationships, we recently completely redesigned our secure provider portal based on feedback from providers and their staff. Though we use industry standard processes for developing requirements, when building and testing the portal (as with all outward-facing systems), we enlisted the aid of focus groups consisting of all types of provider groups from across the country. Their initial feedback, coupled with their participation in the design and testing processes, was vital to our producing a portal that addressed the unique and particular issues they have to deal with on a daily basis, and made it easier for them to do business with us.

Innovation

The redesigned portal now features live chat functionality enabling users to connect with a provider support representative in real-time to inquire about the status of claims. Using the chat for claims inquiries enables providers to reach the front of the queue ahead of those waiting on a phone line so they can receive immediate assistance including real-time claims adjustment without interrupting their workflow. Providers also have the ability to print and review chat transcripts. In the coming months, we will be expanding chat capability to enable providers to inquire about authorizations, Enrollee benefits and eligibility, as well as to get live assistance with any registration, login or technical issues related to the web portal. As we look toward the future, we will continue to seek ways to add functionality to the portal that reduce administrative burden and improve our providers' experience with us.

SAMPLE SCREENSHOTS

From the provider portal home screen users can quickly navigate to see authorizations and referrals, look up claim status, and access trainings, as shown in **Figure C.17-2.**

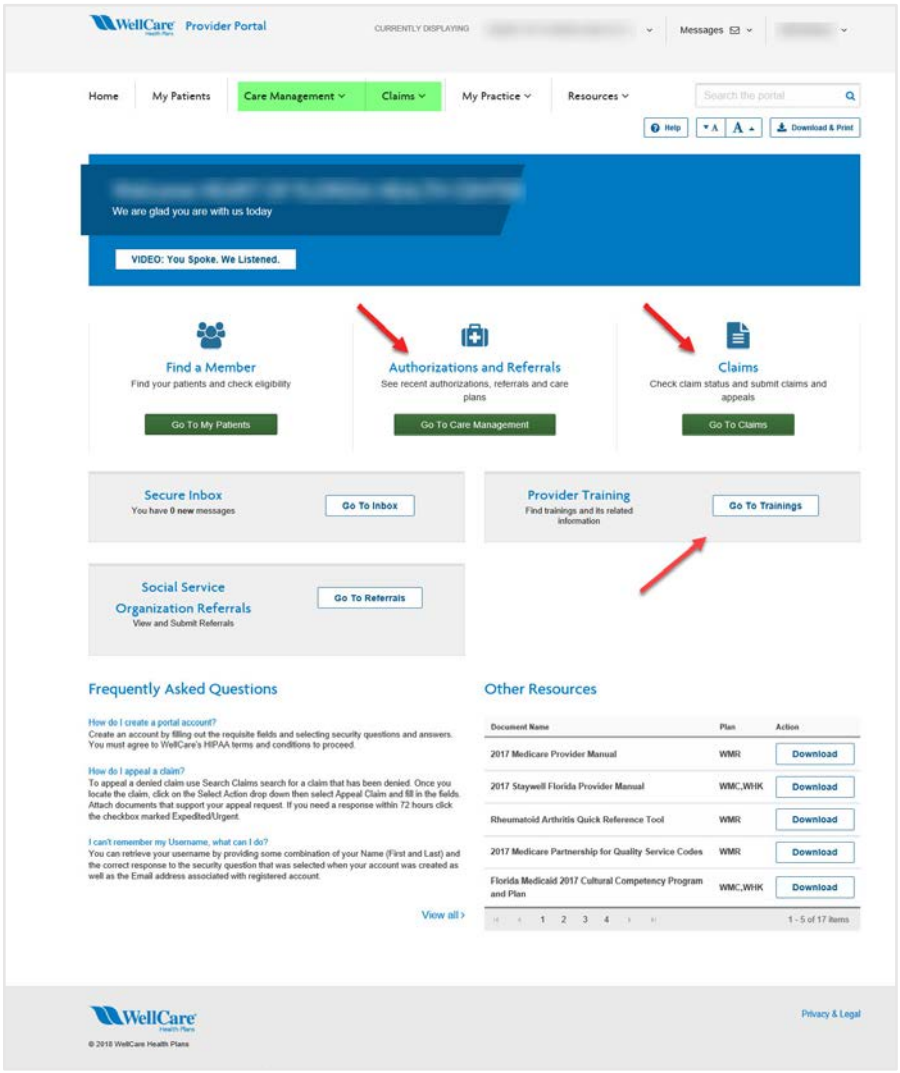


Figure C.17-2 Provider Web Portal Home Screen

The provider portal hosts a searchable database of provider training modules accessible at any time, as shown in **Figure C.17-3.**

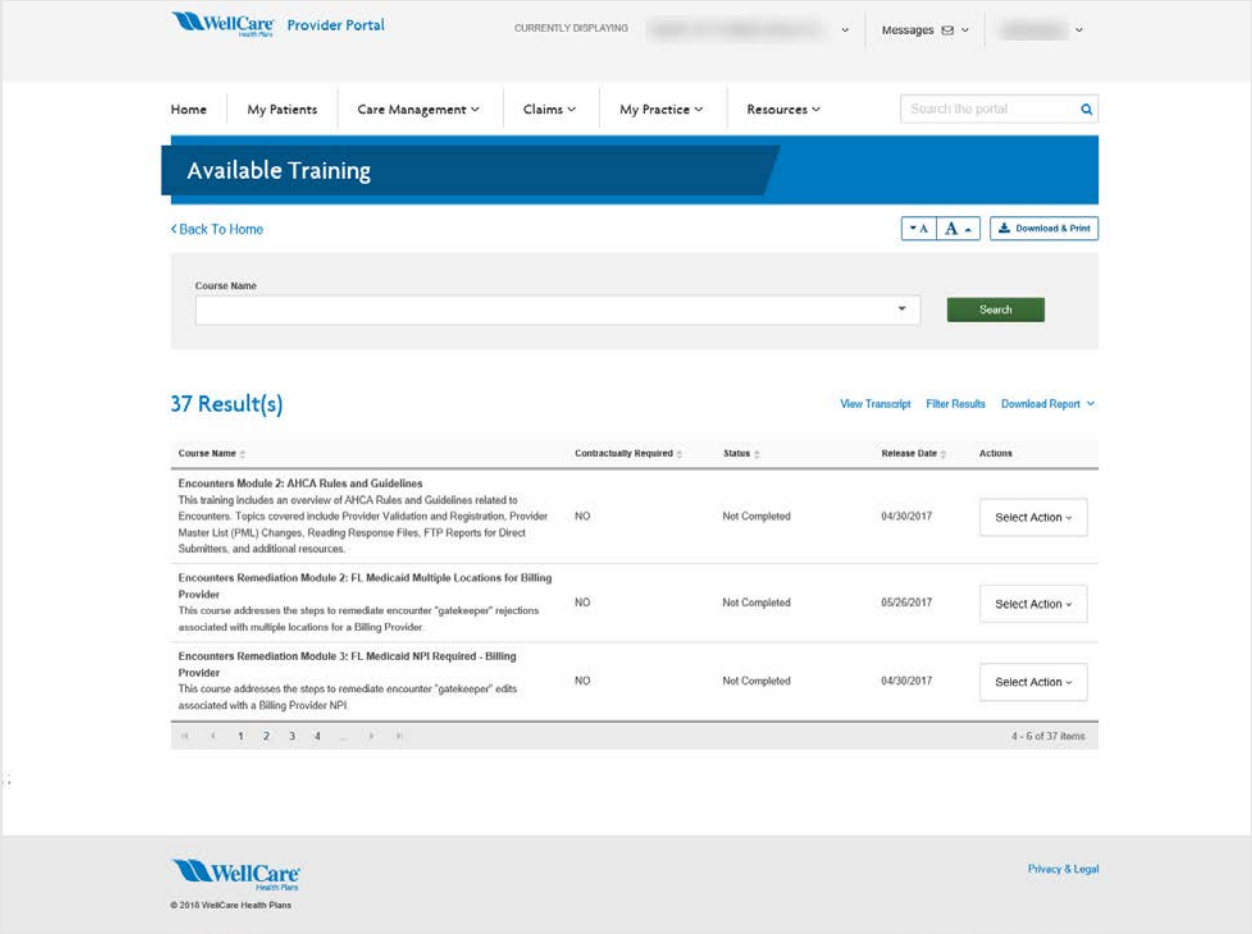

Figure C.17-3 Provider Training

Providers can search for and check the status of claims using the portal, as shown in **Figure C.17-4.**

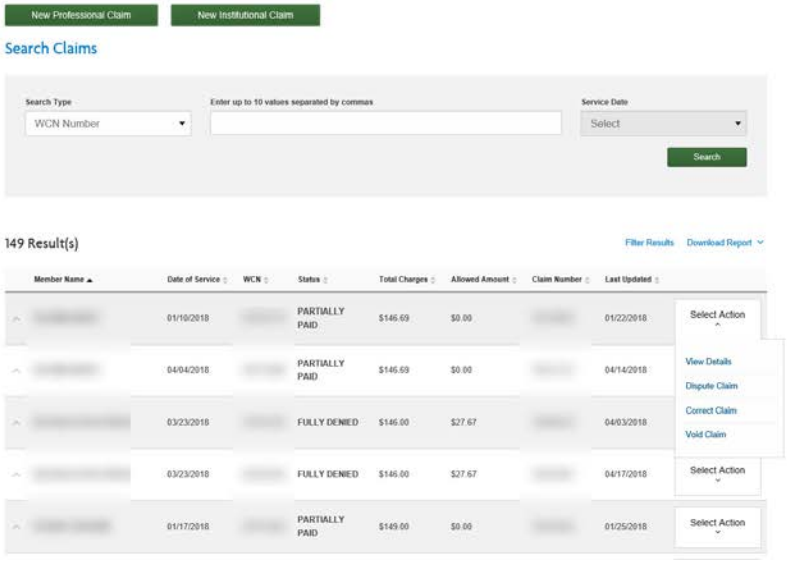

Figure C.17-4 Claims Search

d. Provide a proposed table of contents for the Provider Manual and a brief description of the type of information the Vendor will communicate via the manual.

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 27.4 Provider Manual and Communications of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in our **Attachment X Contract Compliance Matrix**, provided electronically.

As we do today, we will continue to maintain and distribute to all contracted providers the WellCare of Kentucky Provider Manual, a comprehensive resource of program information that providers may reference at any time. We issue newly-contracted providers a Provider Manual within five business days from inclusion of the provider in our network and provide online access to the Provider Manual and any changes or updates. The Provider Manual and all provider materials are available both online and in hard copy format upon request of the provider. The Table of Contents for our Provider Manual, with separate dedicated sections for BH and Pharmacy, includes:

- Provider rights and responsibilities
- Provider and Enrollee Administrative Guidelines
- Covered Services
- Enrollee rights and responsibilities and cost-sharing requirements
- Information for PCPs about Advance Medical Directives and their responsibilities for informing Enrollees
- WellCare Policies and Procedures

- Information for accessing the WellCare program materials through the Call Center, Website, and Provider Portal
- Provider credentialing and recredentialing
- Provider and Enrollee Grievances and Appeals process
- Claims submission process and requirements
- Provider Program Integrity requirements and reporting suspected Fraud and Abuse
- Utilization Management, Care Coordination, and Disease Management
- Prior Authorization procedures
- Medicaid federal and state laws and regulations
- Overview of the QAPI program
- Overview of value-based payment (VBP) models
- Standards for preventive health services
- Delegated Entities
- Behavioral Health
- Pharmacy
- WellCare of Kentucky Resources

As we currently do for our existing contract, we will submit the Provider Manual to DMS for approval, including any provided by a Subcontractor for direct services, and any updates to the Provider Manual, prior to publication and distribution to providers. Please see **Attachment C.17.d Provider Manual**, provided electronically, for our current WellCare of Kentucky Provider Manual. We will also prepare and issue provider communications as necessary to inform providers about our policies, initiatives or other information. WellCare of Kentucky understands that DMS will approve provider communications prior to distribution only if they change or amend the way the WellCare of Kentucky conducts business with the provider or when there are material changes to the Medicaid managed care program (e.g., changes to federal and state laws, provider notification of a rate change).

e. Provide the Vendor's proposed approach to provider orientation and education.

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in **Section 27.5, Provider Orientation and Education** of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Effective training is a critical element of supporting our network providers and improving quality of care for Enrollees. We employ a blended training delivery model that includes classroom, Provider's office, web courses, reference tools such as the Provider Manual, and real-time interactive web meetings. Our provider training modules are in place to support compliance, improve provider performance and quality, ensure understanding of Department requirements and enhance provider satisfaction. These modules are delivered upon initial training and are all available through the provider portal.

In accordance with DMS' contract requirements, we conduct initial orientation for all providers within 30 days after WellCare places a newly contracted provider on an active status. Our PR

Representatives conducted 356 orientation training sessions with our providers in 2018 through several mediums, including in-person, online, and over the phone.

Our New Provider Orientation covers the following topics:

- WellCare Overview
- Kentucky Medicaid Program Overview
- Provider Resources
- Provider Portal
- Provider & Enrollee Rights and Responsibilities
- WellCare's Compliance Program
- Covered Services, EPSDT Services
- Utilization Management, Case/Disease Management, Transition of Care
- PCP Notification of Admissions
- Quality Improvement Program
- Claims and Encounter Data Submission
- Appeals
- Grievances

Providers are given other training tools, including manuals; quick reference guides and resource guides with step-by-step instructions for routine activities such as claims submission and authorization requests; provider bulletins and newsletters; and clinical coverage and practice guidelines. We ensure that all providers receive initial and ongoing education to operate in full compliance with the Contract and all applicable Federal and Commonwealth requirements, and that all providers receive targeted education for specific issues identified by WellCare or DMS.

Through our comprehensive Provider Engagement Model, described earlier, we also offer a number of channels through which providers can receive ongoing education and training. These include monthly visits with their PR Representatives and QPAs, Provider Summits, the provider portal and our popular ongoing webinars. Throughout the year, our Provider Relations team hosts bi-weekly webinars on a variety of topics that inform and update our provider partners on both WellCare initiatives and Department or Commonwealth initiatives that may impact providers. Topics change frequently and vary based on market conditions. For example, when certain program changes go live, we talk about the impact these changes will have on providers. Through our provider summits and other provider engagement activities we also collect feedback that enables us to identify additional topics for future webinars. Recent provider webinar topics have included:

- WellCare Provider Portal
- Kentucky HEALTH Waiver
- DMS Mandated Copays
- P4Q Program/Appointment Agendas
- Community Connections Program
- Quality/HEDIS/Care Gaps
- WellCare Works Program

In 2018, we had an average attendance of more than 200 providers for each webinar. Our initial webinar on the Kentucky HEALTH Waiver drew more than 400 attendees, prompting us to hold a number of follow-up webinars on the topic to meet the demand of our network providers for this important information.

f. Describe the Vendor's support of providers in Medicaid enrollment and credentialing, including the following:

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 27.7 Provider Credentialing and Recredentialing and Appendix J Credentialing Process of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in Attachment X Contract Compliance Matrix, provided electronically.

Since first developing the provider network to serve Medicaid Managed Care enrollees in Kentucky, we have worked not only to ensure that our providers met the criteria necessary to provide the quality of care demanded by the Commonwealth, but to make the process of submitting that criteria and joining the network as seamless and efficient as possible.

In the effort to continue to do so, we support DMS' goal to reduce administrative burden on providers through the establishment of a centralized credentialing process. Since 2015, we have worked closely and successfully with many of our State partners on transitioning to a centralized provider credentialing model. For example, we collaborated with the State of Georgia in the development and implementation of an NCQA-certified centralized credentialing process using a credentialing verification organization (CVO). We have also worked with CVOs in our Texas, New York, Arkansas, and Arizona health plans. In Illinois, WellCare has supported the effort of the Department of Healthcare and Family Services to enable providers to submit credentialing applications via the web-based IMPACT system.

Our extensive experience working in multiple markets, each with distinct processes enables WellCare of Kentucky to be an effective partner with DMS in the effort to streamline the credentialing processes for providers under Medicaid managed care. We look forward to consulting, collaborating, and sharing best practices with DMS to accomplish this goal.

i. Methods for assisting providers who are not enrolled in Medicaid with the enrollment process.

Our locally-based PR Reps and POCs are educated about Kentucky Medicaid enrollment as part of their training and work directly with providers to answer any questions related to the enrollment application. They ensure providers have the appropriate links to complete and submit the enrollment forms, and assist new providers to ensure all required information is included in the submission to the state in order for the provider to receive prompt assignment of a KY Medicaid provider ID number. They also help providers select the appropriate key items such as provider type, or taxonomy codes as defined by the state as well as explain other items based on how the state uses these data elements as well as how the state uses the information for enrollment and transmission to MCOs. This assists providers in avoiding any delays in the loading process and allows claims to process correctly immediately upon enrollment.

ii. Proposed process for conduct of credentialing until such time that a Credentialing Verification Organization (CVO) is contracted by the Department.

Until the transition to a CVO, WellCare of Kentucky will continue to conduct credentialing of providers as it does today, in compliance with (NCQA), KRS 205.560(12), 907 KAR 1:672 and other applicable state regulations and federal laws. Our provider credentialing process is critical to ensuring our Enrollees receive quality health care from providers who have been evaluated and verified as having met the standards required to become part of our network. Our process fully supports DMS' goal to contract with health plans that have comprehensive, quality-driven provider networks. Furthermore, our credentialing process ultimately serves to ensure that enrollees have access to appropriate, medically necessary services in a timely manner and in the most appropriate setting, achieving the best possible quality outcomes while containing costs.

WellCare currently complies with DMS' Draft Medicaid Managed Care Contract requirements by credentialing or recredentialing providers within 90 days of receipt of all relative information from the provider, or 45 days if the provider is providing substance use disorder services.

In 2018, WellCare of Kentucky credentialed 1,802 providers with an average turnaround time of 13.43 days.

CREDENTIALING PROCESS

WellCare of Kentucky maintains documented policies and procedures for credentialing, recredentialing and between-cycle monitoring and maintenance of providers. At least annually, or as needed, we review our policies and procedures in order to make any changes necessary to maintain compliance with applicable state and federal accreditation requirements as well as our internal compliance program and code of conduct and business ethics. Our policies and procedures related to credentialing and recredentialing are formally reviewed and approved by our Quality Improvement Committee (QIC). WellCare's Credentialing Committee is a subcommittee of the Quality Improvement Committee overseen by WellCare of Kentucky Medical Director Howard Shaps. It is comprised of a combination of seasoned health care professionals with broad experience in the industry and specific local experience including WellCare's Chief Medical Officer, community physician participants, provider relations and corporate resources that run the company's overall credentialing process.

As per NCQA standards, clean credentialing files are reviewed and approved at least twice per week by the Medical Director. During the monthly Credentialing Committee meeting, the committee is presented a listing of all providers approved by the Medical Director during the prior month. The Credentialing Committee then focuses on reviewing and discussing individual credentialing applications that contain potential issues. This process allows credentialing application turnaround time to remain low. In addition, the Quality Improvement Committee reviews the meeting minutes of the Credentialing Committee on a quarterly basis.

We perform credentialing and recredentialing for every independent practitioner and organizational provider in our network. Initial credentialing is conducted prior to the effective date of the provider's provider contract, and recredentialing is conducted every three years.

Providers are required to be credentialed prior to being listed as a participating network provider of care or services to our Enrollees.

Application and Initial Steps. The credentialing process begins with completion and submission of a credentialing application from a provider. For independent practitioners in Kentucky we use the KAPER-1 or CAQH Universal Credentialing Application Form. When a credentialing application is received from a provider, the application and all corresponding documentation is submitted into the WellCare workflow/tracking system. Once the application is determined to be complete, a credentialing specialist reviews it for completeness and performs the necessary verifications.

The credentialing specialists perform primary and secondary source verifications in accordance with NCQA guidelines. Primary source verification is documented verification by an entity that conferred or issued a credential (e.g., medical school, a residency program, or a licensing board) that an individual's statement of possession of the credential is true. Secondary source verification is documented verification of a credential through obtaining a verification report from an entity listed as an acceptable secondary source, on the basis of a statement from that entity that they have performed the primary source verification.

Credentialing Requirements. WellCare's credentialing requirements adhere to those criteria listed in Appendix J in the Medicaid Managed Care Contract and are also listed in our attached Credentialing and Recredentialing Policies and Procedures document.

Approval Process. Upon receipt of a completed, verified credentialing application from an independent practitioner or organizational provider (which includes, as applicable, a site inspection evaluation), our Medical Director reviews the application and supporting documentation. Providers who meet our established "clean file" criteria are approved by our Medical Director, and these files are presented in list format at each meeting of the Credentialing Committee.

If a file does not meet established criteria for "clean" files (e.g., there is a licensure issue or the site inspection did not meet all requirements), the file is presented to the Credentialing Committee for review and recommendation. When the determination is favorable to the provider, the approval is forwarded to our Quality Improvement Committee (QIC). In the event the Credentialing Committee recommends a denial decision, we notify the provider of the reasons and, as applicable, offer the right to appeal. The minutes of the Credentialing Committee are provided to the QIC. The QIC forwards to our Board of Directors the minutes of the Credentialing Committee as well as a report containing the decisions of our Medical Director and the Credentialing Committee.

When a provider's application is approved (by the Medical Director or the Credentialing Committee, as applicable), the credentialing database is updated with the active status of the provider, the credentialing approval date, and the recredentialing due date. Based on the credentialing decision date and the active status of the provider in the credentialing database, a credentialing specialist prepares and sends a letter to the provider advising the provider of the approval. The letter includes the specialty/scope of services the provider has been approved for and advises the provider of the requirement for recredentialing every three years.

Recredentialing Process. WellCare performs recredentialing for providers, including practitioners and organizational providers, at least every three years. Recredentialing information is collected under a current, signed and dated attestation of correctness and completeness. Providers entering their recredentialing timeframe are notified in writing by the Credentialing Department. This written notice includes a recredentialing application and instructions on how to complete and submit it. Once the application is received by the Credentialing Department, the information is verified via primary source verification and clean files are presented and reviewed by the Medical Director for approval. Any provider who has issues identified during their recredentialing process will be presented to the Credentialing Committee for review prior to being approved to continue serving in WellCare's network.

In-between Cycle Monitoring: Providers are monitored on an ongoing routine basis. At the time of initial credentialing and on a monthly basis thereafter, the Credentialing Department reviews any sanctioning action taken against providers by state and federal regulatory bodies. This monitoring includes review of Medicaid/Medicaid Sanction Exclusion and Reinstatement reports, the List of Excluded Individuals and Entities, Medicare Opt-Out listings, System for Award Management Exclusions and professional licensing actions. If a network provider is identified as having lost his or her license to practice medicine for any reason, the provider is automatically terminated from the network. If a provider has been subject to disciplinary action but their license is not terminated, the details of the disciplinary action is presented to the Credentialing Committee for a recommendation and decision on the provider's continued network participation.

iii. Proposed process for transitioning credentialing activities to and coordinating with the Department's contracted CVO(s) to educate and assist Providers in completing the credentialing process with the CVO(s).

We strongly support the efforts of DMS to streamline processes for providers enrolling in the Kentucky Medicaid Managed Care program. With the transition to centralized credentialing, it will be critical to educate providers about the credentialing verification organization (CVO) process to assure they are able to effectively navigate it and reap the benefits of the reduced administrative burden. Providers will be impacted on a rolling basis as they are up for recredentialing and they transition to the new process.

To provide consistent information to providers and their office teams about the credentialing and recredentialing process, WellCare of Kentucky will seek to partner with the other MCOs, DMS, and DMS' CVO(s) to develop shared content. Together, we have the opportunity to promote DMS' collaborative efforts, minimize provider burden, deliver consistent instructions, and improve provider satisfaction.

Since 2015, nationally WellCare has affiliates have worked closely and successfully with many of our state partners on transitioning to a centralized provider credentialing model. For example, our Georgia affiliate collaborated with the State of Georgia in the development and implementation of an NCQA-certified centralized credentialing process using a CVO. Our affiliates have also worked with CVOs in Texas, New York, Arkansas, and Arizona health plans. In Illinois, WellCare supported the effort of the Department of Healthcare and Family Services to

enable Providers to submit credentialing applications via the web-based IMPACT system. Our extensive experience working in multiple markets, each with distinct processes enables us to be an effective partner with the DMS in the effort to streamline the credentialing processes for providers under Medicaid managed care. We look forward to consulting, collaborating, and sharing best practices to accomplish this goal.

EDUCATING PROVIDERS

We are developing a multi-pronged provider education strategy to implement prior to the go-live date that will leverage online information and materials, webinars, and the work of our provider relations staff. This approach will ensure that all potential providers and current providers have easy access to the necessary information to complete the credentialing and recredentialing process with the CVO(s).

Provider Manual

Our Provider Manual will provide contact information for the CVO(s) and a description of the credentialing and recredentialing process, including roles and responsibilities of the provider, CVO(s), and MCOs. We will work with the CVO(s) to incorporate other information to assist providers in navigating the credentialing and recredentialing processes, such as checklists and other aides. We will submit any updates to the Provider Manual related to information about the CVO process to DMS for review and approval prior to publication or distribution.

Online Information

Our providers and their office staff are busy. Administrative activities, such as credentialing and recredentialing, may occur outside of regular business hours. We therefore will ensure that they will have 24-hour access to information and aides on our and subcontractors' public and private provider websites.

On the public-facing page on our website, we will post links to the CVO(s) website(s) for easy access to application materials. To promote consistency, we will include information similar to that in the Provider Manual describing the credentialing and recredentialing processes and all parties' roles and responsibilities. We will add responses to our Frequently Asked Questions (FAQ) page which will speak to the CVO(s) process. We will update these as new questions or issues are identified to best meet the needs of our providers.

To further assist providers as they begin to navigate the process of completing applications, we will work with the CVO(s) to develop job aides that provide detailed explanations and examples of the types of information that must be provided to the CVO(s). These job aides will be available on our public website and provider portal to enable easy access for new and existing providers.

We will incorporate informational items and reminders about the credentialing and recredentialing processes into our provider newsletters with the CVO(s) contact information and links to the CVO(s) website(s).

Provider Engagement Team

Our PR Representatives, OARs, POCs, and other Provider Engagement Team members are the frontline points of contact for potential and current network providers and will receive training on the role of the CVO(s) and the processes for credentialing and recredentialing. To support this training, these staff members will have access to online materials and talking points that will help them to address provider questions and know how to route complaints raised by providers related to the CVO process.

Webinars

WellCare's Network Management staff members will conduct live webinars to educate potential providers on the process for credentialing and contracting to become Medicaid providers enrolled in WellCare of Kentucky's network. Through these live webinars, providers will be able to engage with the Network Management staff and get their questions answered in real-time. In addition, we will post materials from the webinars online so they can be accessed by providers while they work through the application process.

iv. Approach for a timely contracting determination of providers upon receipt of information from a CVO that a provider's credentialing is complete, specifying timeframe for uploading a credentialed and contracted provider into the claims payment system to allow for payment of adjudicated claims.
Include copies of the Vendor's proposed credentialing policies and procedures, and procedures for coordination with the CVO(s)

Under the CVO process, WellCare will monitor a daily file from the CVO to identify newly credentialed providers who have not engaged with WellCare of Kentucky for contracting. WellCare will make the decision to contract with a provider within 30 days of receiving the verified credentialing information from the CVO file.

Once a contract has been executed, Network Management will send the contract to Provider Operations, who will initiate the retrieval of the CVO credentialing documents from the Fiscal Agent's website using the file and the Application Tracking Number (ATN). POCs will load the provider into the claims payment system. Within 10 days of an executed contract with a provider, our systems will be updated to include the accepted provider as a participating provider in our network. If any additional time beyond the 10 days is needed, WellCare will notify the provider. This time will not exceed an additional 15 days.

Claims Payment Policy

In accordance with Commonwealth requirements, WellCare of Kentucky's policy is to pay claims submitted by providers with a valid Medicaid Provider identification number as of the date of credentialing. We will continue to honor this policy to assure continuity of care for our Enrollees without worry of payment for our providers. Therefore, regardless of the load date, claims with dates of service on or after the credentialing date submitted by a Medicaid provider will be paid. WellCare not require a provider to appeal or resubmit any clean claim submitted during the time period between the provider's credentialing application date and the completion of our credentialing process.

VENDOR'S PROPOSED CREDENTIALING POLICIES AND PROCEDURES

Please see **Attachment C.17.f.iv Kentucky Credentialing and CVO Transition Policies and Procedures**, provided electronically, for our proposed credentialing policies and procedures, and procedures for coordination with the CVO(s).

g. Provide the Vendor's proposed approach for processing provider grievances and appeals. Include at a minimum:

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 27.10 Provider Grievances and Appeals of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in Attachment X Contract Compliance Matrix, provided electronically.

WellCare maintains a comprehensive provider Grievances and Appeals program designed for rapid and thorough resolution. Our goal is to improve access to care, quality and cost effectiveness, but the complexity of health care delivery sometimes necessitates that issues receive a second review. Our mission is to resolve all provider grievances and appeals accurately and timely to maintain strong partnerships as we work together towards improved outcomes for our providers and Enrollees. Our defined process protects provider rights, and is supported by industry-leading tools and technology such as iCAREPath, our customized workflow management system, ensuring every provider Grievance and Appeal is appropriately documented and resolved from beginning to end. In order to continuously improve, we must not only resolve the concern being raised, but focus on the root cause of the issue as well as monitor for emerging trends. We analyze and trend this rich data set to identify systemic issues leading to proactive measures to prevent future sources of dissatisfaction. We "Solve the Issues" see **Figure C.17-5** before providers are impacted.

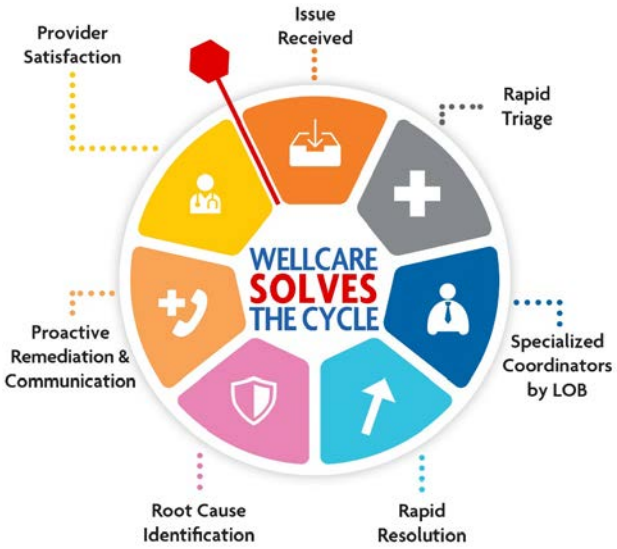

Figure C. 17-5 WellCare Solves the Cycle

i. The overall process to include description of interaction with providers, required correspondence and timeframes for acknowledging and resolving grievances and appeals.

To most effectively leverage our best-in-class resolution process, we provide options for our providers to reach us in the way they want to. Our Provider Engagement Team offers providers rapid, thorough resolution of issues through:

- Their local PR Representatives responsible for the overall provider relationship.
- OARs equipped with the technology and authority to adjust claims and resolve issues while in the provider's office.

- QPAs and Care Coordinators who work directly with providers with a sole focus of improving health outcomes.
- Specialized units in our contact center for first call resolution of provider issues and real-time adjustments for simple low dollar claims issues and an offline team designed to handle the complex issues to ensure our providers only call once.
- Digital preferences are captured for providers to ensure they can register with our portal. From there, they can contact us and receive communications their way via email or portal notifications.

We strive for the real-time resolution of provider complaints. Our PR Representatives appropriately clarify matters, provide additional information, or rectify misinformation while the provider is on the phone. Tools for rapid resolution include our Provider Claims Support team that handles high-level claims inquiries and a Provider Escalation team for escalated calls. Our advanced speech analytics system automatically alerts a supervisor in real time to join a call to further facilitate first call resolution when the system detects a change in speech patterns or specific verbiage.

If the provider wishes to proceed with a formal complaint, they are instructed on their rights. Once received, complaints are categorized as either grievances or appeals depending on whether an adverse determination is involved. The Provider Claims Support team uses the iCAREPath platform which performs data enrichment to validate measures such as timely filing, duplicate submissions and more to ensure the case receives proper treatment from the beginning.

iCAREPath drives our ability to process grievance and appeal requests within expected timeframes. The platform delivers real-time workforce management monitoring, allowing coordinators to resolve cases according to established standards. Once the case enters the iCAREPath system, we process grievances and appeals using a standardized approach that includes automation, machine learning, and artificial intelligence. It reads the context and sentiment with standardized and automated communications throughout the process, through:

- Automatic case creation through the consumption of digital submission (fax, email, web)
- Auto assignment of cases to staff based on associate availability and skillset
- Real time tracking of cases and the current stage of development
- Automatic reminders for aging cases including supervisor dashboard alerts and automatic escalation for expiring cases
- Auto population of reporting elements to produce regulatory reports and audits
- Document and image storage residing inside the application
- Workflow requirements and business rules residing within the platform to reduce the reliance on manual processing instructions
- Automatic generation of acknowledgment letters, requests for information, and case status letters within timeliness standards
- Automated letter development and fulfillment of resolution letters
- Enhanced root cause tracking to streamline identification and process improvement

Appeals are thoroughly investigated and a new review is performed by WellCare staff not involved in the original adverse decision. Once a resolution is developed, the provider is promptly provided written notice of the outcome and further administrative remedies if applicable.

WellCare resolves provider grievances or appeals and provides written notification of the resolution that is received by the provider within 30 days. If the grievance or appeal is not resolved within 30 days, WellCare will request a 14-day extension from the provider.

ii. Process for tracking reasons for grievances and appeals to identify trends, and how the Vendor will use this information to improve internal operations, provider relations, and provider satisfaction.

We continuously review provider grievance and appeal outcomes to identify trends and operational or clinical opportunities to improve the provider experience using a defined process that includes data mining, monitoring, analytics and dedicated staff. Each month our Root Cause Analysis (RCA) team gathers data from the previous month's grievances and appeals to:

- Perform analytics, looking for trends and prioritize emerging issues for root cause analysis
- Conduct root cause analysis and develop remediation plans
- Present recommendations to assigned committees
- Drive performance improvement initiatives
- Monitor grievances and appeals to ensured expected outcomes are achieved

Our overriding objective in the self-audit process is to drive performance improvement processes and improve outcomes by:

- Decreasing the number of denial decisions that are reversed by identifying the root cause and creating operational and education solutions to improve interrater reliability
- Improving the effectiveness and quality of our operational processes by identifying claim processing and billing errors and initiating education
- Identifying potential systemic issues and remediating them before they become grievances or appeals
- Increasing provider satisfaction with the services provided by working across multiple departments to resolve Member and provider concerns

The findings from these self-audits are reported quarterly to the Utilization Management Medical Advisory Committee, Customer Service Quality Improvement Committee, and Quality Improvement Committee. Data regarding trends, barriers and opportunities for improvement are discussed and analyzed with workgroups assigned to conduct root cause analysis and drive process improvements.

Our system has enhanced root cause tracking to streamline identification and initiate preventive measures as part of our standard grievance and appeal workflow. iCAREPath captures, tracks, and reports the status and resolution of all provider grievances and appeals, including associated documentation, from receipt to resolution, regardless of source or network status. **We use this data to identify opportunities to improve our performance in functional areas** such as medical management, administrative services, provider network

development, and education material clarity. This allows us to address not only issues affecting individual provider satisfaction, but to also identify and address potential trends in the delivery system as a whole. When trends are identified, prompt steps are taken to mitigate those issues that lead to provider grievances and appeals.

We continuously review patterns and trends and make adjustments as appropriate to avoid provider abrasion and improve satisfaction. Based on our experience unpaid claims are frequently the reason for provider appeals. To address this, we instituted our "one touch" resolution process with a specialized group of highly trained agents in place for call escalation who are empowered to make real time adjustment to a claim if an error is detected.

In Kentucky, we will use our "one touch" resolution process and RCA team to ensure providers are paid timely and accurately.

New initiatives we have undertaken as a result of root cause analysis and provider feedback include:

- Outbound call unit established to proactively educate provider offices on balance billing issues and work with them to identify root cause and underlying issues
- OARS established with ability to adjust claims in real time and on-site at the Provider's office
- Dedicated phone escalation team to quickly resolve provider issues
- Implementation of a repeat caller alert flag that alerts the Provider Support Service Center associate to escalate an inquiry if it is not fully resolved during the call

Specific examples of improvements as a result of self-audits include:

- *Authorization Submission:* Our appeals team noticed a significant spike in Provider appeals related to lack of prior authorizations in Kentucky, prompting measures to be implemented to educate certain high volume providers on the correct method to submit prior authorization requests. Provider training was conducted with providers who had high volumes of appeals. We took the opportunity to clarify and update processes in our Provider Manual and Quick Reference Guides in all Medicaid states. The combination of training and revised provider materials reduced the appeal rates by 23% in Kentucky and 15% for our New York plan from 2015 to 2016.
- *Encounter Data:* Our Illinois Encounter Operations Team used our Provider Scorecard to identify an issue with a local IPA in Kane County who was not meeting completeness and accuracy service levels. The encounters operations manager reached out to the local PR Rep to coordinate outreach to the IPA. Together they were able to guide the IPA through the data correction and resubmission process for $1.3 million in claims, bringing them into compliance before the State's deadline and resolving 97% of the IPA's errors.
- *Chiropractor Appeal:* In another recent local example, we were receiving a high level of appeals from chiropractors related to our payments related to the use of a claim modifier. This included many overturned appeals and overturned independent external reviews. Our claims resolution team reviewed this in depth and it revealed that our clinical coverage guidelines were indeed not in line with national guidelines. We updated our clinical guidelines, resulting in an elimination of these appeals and more satisfied providers.

iii. Process for ensuring transparency to DMS of grievance and appeal types, resolutions, and any Vendor actions to decrease such grievances or appeals in the future.

To ensure ongoing transparency with DMS, WellCare of Kentucky will continue to submit a monthly Provider Appeals and Grievance Activity report to DMS. The report includes the number and types of grievances and appeals received; disposition of all grievances and appeals, status, and final outcomes; Number of grievances and appeals resolved by type of resolution; the type of service and dollar amount for all overturned denials; and the average turnaround times for resolution by type of grievance or appeal based on quarterly totals.

DECREASING FUTURE GRIEVANCES AND APPEALS

In addition to our iCAREPath platform, WellCare invested in a dedicated Root Cause Analysis (RCA) team fully dedicated to reducing Grievances and Appeals. We have a multi-pronged approach designed to reduce complaints across the board. WellCare employs dedicated specialists that have a direct line into our complaint organizations but are embedded in the supporting department. This means that a person searching for a root cause on a claim-related complaint resides in and is fully versed in claims; they do however, have the connection and accountability to the complaint organization.

We have also created a RCA Analytics and Governance team. This team serves two purposes:

- *Validation of the RCA Specialists' research and remediation:* WellCare finds this to be an important, two-step process. It covers research into how a breakdown occurred, or how to eliminate confusion in areas where there was no error made by WellCare. This process would not be effective if we did not govern the remediation. WellCare takes the approach of separating the RCA case from the original complaint for one reason: the RCA case will remain open until the cause is fully remediated. Even after the original complaint is closed, WellCare continues to hold itself accountable until an adequate remediation is identified and implemented. The proposed remediation is presented for approval and the governance team approves the remediation or rejects it back for a more impactful remediation to be proposed.
- *Analytics and Reporting:* WellCare does not wait for a complaint to occur before starting an RCA case. Once we are aware there is an issue, we open an RCA case. This gives us an axiom for our issue management. We begin crafting a remediation immediately and work towards proactive solutions, such as reprocessing a batch of claims before a Provider has to submit a dispute or to call us. We may also communicate to impacted Enrollees before they are even aware of an issue. As complaints come in, they are associated to the RCA case to understand and measure the true impact as a way to improve.

WellCare appreciates that no MCO can fully avoid complaints and grievances, but we work to discover and remediate them before the impact takes place.

C.17 Provider Services

- Attachment C.17.d Provider Manual (Provided Electronically)
- Attachment C.17.f.iv Kentucky Credentialing and CVO Transition Policies and Procedures (Provided Electronically)

18. Provider Network

WellCare®
Beyond Healthcare. A Better You.

C.18. PROVIDER NETWORK

a. Provide the Vendor's proposed Provider Network development strategy to ensure a comprehensive statewide network across all provider types. The Vendor's strategy must describe the following:

i. Innovative approaches to recruit providers and to develop and maintain the Vendor's provider network to ensure network adequacy standards and highest quality care, including.

1. Strategies to recruit providers in traditionally underserved as well as non-urban areas, by health need, and to overcome expected accessibility challenges.
2. Strategies and methods to address workforce shortages and network gaps, included proposed initiatives to collaborate with the Department and other contracted MCOs to develop innovative solutions to meet the healthcare needs of Enrollees.
3. Strategies for contracting with providers in bordering states to help address network adequacy challenges, including lessons learned and successes or challenges with this approach

ii. Approach to providing out-of-network care when timely access to a Network Provider is not possible, including the Vendor's approach to supporting Enrollees in accessing such care.

iii. Approach to ensure Network Providers are physically accessible and have accommodations for Enrollees with physical or mental disabilities.

iv. Approach to ensure a comprehensive network to address the needs of all Enrollees, including the provision of services in a culturally sensitive and linguistically appropriate manner.

v. Strategies the Vendor will implement to ensure the network adequacy and access standards are met if actual Enrollment exceeds projected Enrollment.

b. If Subcontractors will provide Covered Services, describe how network development efforts will be coordinated with the Vendor's provider network development strategy and how the Vendor will monitor the Subcontractor's activities and ensure transparency of these activities to the Department.

c. Describe the Vendor's approach to use telehealth services to improve access. Include the following at a minimum.

i. Criteria for recognized sites.

ii. Education efforts to inform providers and Enrollees.

iii. Whether reimbursement will be available to the presenting site as well as the consulting site or only the consulting site. Include any requirements or limitations on reimbursement.

iv. Lessons learned and successes or challenges with implementation of telehealth services for other programs the Vendor has served and that the Vendor will consider for provision of telehealth services in Kentucky.

d. Describe the Vendor's provider contracting strategies, including processes for determining if a provider meets all contracting requirements (at the time of enrollment and on an ongoing basis), as well as processes for corrective action and termination.

Include copies of the Vendor's proposed contract templates for individual practitioners and for facilities as attachments

e. Demonstrate progress toward developing network capabilities for statewide access by providing evidence of existing contracts or signed Letters of Intent with providers by provider type (for the Vendor and Subcontractor). Include the following information at a minimum:

i. A Microsoft Excel workbook by provider type listing every provider that has signed a contract or Letter of Intent, including the provider's name, specialty(ies), address and county(ies), Medicaid Region(s) served, whether the provider is accepting new patients, accessibility status for individuals with disabilities, language spoken, and the provider's Medicaid Identification Number(s).

ii. A summary Microsoft Excel worksheet with total provider counts by provider type by Medicaid region and county.

iii. A statewide Geographic Access report of all providers with LOIs color coded by provider type by Service Region.

f. Describe proposed Enrollee to provider ratios by provider type, as well as the Vendor's methodology for considering a provider's FTE when calculating network adequacy standards.

g. Describe the Vendor's proposed methods for ongoing monitoring and assessment to ensure compliance with network adequacy and access to care standards, including tools used, the frequency of reviews, and how the Vendor will use findings to address deficiencies in the Provider Network. The response should also address how the Vendor monitors appointment availability and wait times.

Provide samples of tools and/or reports

h. Describe how the Vendor would respond to the network termination or loss of a large provider group or health system. Include information about the following at a minimum:

i. Notification to the Department and Enrollees.

ii. Transition activities and methods to ensure continuity of care.

iii. Analyses the Vendor will conduct to assess impact to network adequacy and access, and how the Vendor will address identified deficiencies.

C.18. PROVIDER NETWORK

a. Provide the Vendor's proposed Provider Network development strategy to ensure a comprehensive statewide network across all provider types. The Vendor's strategy must describe the following:

WellCare of Kentucky will comply with the Department of Medicaid Services' (DMS) expectations and requirements as specified in Section 28.0, Provider Network of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

WellCare of Kentucky embraces the Commonwealth's fundamental vision that ease of access to integrated, high quality health care services is crucial to Enrollee health, wellness, and satisfaction. Since 2011, our focus has been on developing and maintaining a comprehensive network that provides all of our Kentucky Medicaid Managed Care Enrollees access to the care they need, when they need it. **Today we deliver high quality healthcare for more than 430,000 Medicaid Enrollees through the largest and most comprehensive network of all the Kentucky MCOs, one that includes:**

- Approximately 5,500 Primary Care Providers
- More than 1,700 Pediatricians
- More than 26,000 Specialists
- More than 130 Hospitals
- 14 Community Mental Health Centers
- More than 260 Federally Qualified Health Centers/Rural Health Clinics
- More than 1,400 Pharmacies

Our Provider Network team is led by Director Bonnell Irvin, and she is supported by Candice Bowen for provider contracting and Anthony Piagentini for provider services. Our network has been built to consider current and anticipated Medicaid enrollment, expected utilization of services given the characteristics and health care needs of our Medicaid Enrollees, and the number and types of providers required to provide the necessary services to those Enrollees, taking into account the numbers of network providers who are not accepting new Medicaid patients. It considers the geographic location, language and culture of our network providers and our Enrollees, considering distance, travel time, the means of transportation ordinarily used by our Enrollees, and whether the location provides physical access for our Enrollees with disabilities. Our philosophy since inception has been to meet the providers where they are and our six regional offices and dispersed provider relations team reflects this approach. We conduct provider summits across the Commonwealth and seek opportunities for our provider relations staff to meet with providers face to face.

Our network includes every hospital today that was in our original network in 2011. In fact, we are the only Medicaid MCO in the Commonwealth to keep a contract with Appalachian Regional health system **to ensure access to care for Enrollees in Region 8 since launch**. We

have never and will never turn providers away, having maintained a contractual relationship with every contracted provider in our original network and only grown from there.

We retain providers by doing more than simply signing a contract with them.

We value our provider partnerships, offering providers **opportunities to increase revenue** by improving the quality of care they provide. **We engage providers through our regionally-based Provider Relations staff** who personally visit providers to ensure they get the operational support they need to serve their Medicaid Enrollees. We also **wrap community supports around Enrollees** encouraging them to actively participate in their care and reducing the missed appointments that are costly for Medicaid providers. WellCare of Kentucky continues to maintain the largest Medicaid network in the Commonwealth because **we stand alongside our provider partners.**

Maintaining a comprehensive network of providers that deliver high quality care requires rigorous oversight to ensure that providers are meeting Enrollee needs and program requirements. It involves engaging with and supporting providers in meeting those requirements. It also means continually looking for new and innovative ways to broaden our network and extend access to underserved areas. Our processes for provider network management combine these elements and ultimately serve one purpose: to ensure that Enrollees have access to the highest quality care in a timely manner and in the most appropriate setting, achieving the best possible quality outcomes.

i. Innovative approaches to recruit providers and to develop and maintain the Vendor's provider network to ensure network adequacy standards and highest quality care, including.

We continually evaluate our network to ensure that we maintain network adequacy standards and seek innovative approaches to recruit additional providers to our network in order to expand access to the highest quality care for our Medicaid Enrollees. Our Network Management team reviews GeoAccess and network adequacy reports on a monthly and quarterly basis by provider and facility specialty type. Reports on current Enrollee distribution, provider/Enrollee ratio by specialty, and proximity standards are maintained and cross-referenced during these processes. The team also utilizes real-time Quest Analytics reports to understand the network of all Medicare providers by county and specialty within Kentucky to cross-reference these Medicare provider details with the Kentucky Medicaid roster. If we determine that a provider (with a needed GeoAccess specialty) has recently received their Kentucky Medicaid ID, the Network Management team will actively recruit the provider to join the WellCare of Kentucky provider network.

If a needed provider specialty is identified but not available in the current Kentucky Medicaid roster, the team will utilize the Medicare providers listed in the Quest Analytics data to recruit them to first obtain a Kentucky Medicaid ID and subsequently a WellCare of Kentucky participation agreement. In addition to our Network Management team, every day our regionally-based Provider Relations (PR) Representatives and other field-based associates use their local knowledge to identify providers who are new to the area and initiate contracting discussions in the effort to maintain and broaden our network.

We also strive to look for innovative solutions that take us beyond mere compliance with network access and availability standards, especially in traditionally underserved areas. One innovative method to recruit additional providers to our network and increase access to care was our recent contracting efforts with **Fast Pace Urgent Care Clinics.** In order to increase access to primary care providers in areas of need, WellCare recently entered into a value-based purchasing (VBP) arrangement with 18 Fast Pace locations across the Commonwealth. Fast Pace would not typically contract with an MCO to provide primary care services at their urgent care centers under standard Medicaid reimbursement rates. However by entering into an agreement where Fast Pace can realize increased revenue for meeting quality and cost-efficiency goals, they were motivated to join our Medicaid network. While we met access to care requirements in these areas prior to contracting with Fast Pace, 3,400 of our Medicaid Enrollees are now assigned to Fast Pace and can more conveniently access primary care services closer to home.

1. *Strategies to recruit providers in traditionally underserved as well as non-urban areas, by health need, and to overcome expected accessibility challenges.*

Through our eight years of providing access to care for our Medicaid Enrollees, WellCare has gained extensive insight into the health needs of traditionally underserved and non-urban areas of Kentucky. We have developed or are exploring several strategies to mitigate access barriers due to provider shortages, including:

- *Identifying Medicare Providers to Recruit:* When we find a gap in access for a Medicaid recipient, we look at the Quest Analytics tool to see if there is a Medicare provider of the provider type needed that is not listed on the KY State file. If located, we approach the practice by phone or in person in an effort to convince them to see Medicaid patients. If necessary, we may offer an additional financial incentive such as a higher rate or VBP contract to take on the additional population of Enrollees.
- *Physician Extenders:* WellCare extends access to services through contracts with mid-level provider types including licensed social workers, physician assistants and nurse practitioners who often are more available in rural communities, subject to geographic restrictions and license. We also partner with educational institutions and have been successful in supporting recruitment efforts for nurse practitioners, physician assistants and nurse midwives.

Extending Access to OUD Services

Recognizing the need to expand care for Opioid Use Disorder (OUD) treatment in underserved areas, WellCare of Kentucky donated $100,000 to Volunteers of America to build a new addiction treatment program for new and expectant mothers in rural areas with no resources. We also provided hyper-local grants totaling $35,000 to OUD Recovery Programs across Kentucky such as Addiction Recovery Care (ARC).

- *"Gold Carding" of Specialist Providers:* Enrollees have limited access to certain specialist providers throughout Kentucky, especially in rural areas. Dermatologists are a particularly sought-after specialist for our Enrollees. In many cases, seeing a dermatologist entails two visits: first for an initial consult, after which the dermatologist must obtain and authorization to perform a procedure, and the second visit for the procedure itself. Understanding that this created an administrative burden on these providers and delayed care for our Enrollees in rural areas, WellCare of Kentucky reviewed authorization requests from these dermatologists and found that the rate of denial of authorization was less than one percent. As a result, we have begun a process to "gold card" our dermatologists which will allow them to treat our Enrollees during the first visit without obtaining an authorization for treatment from WellCare. We will continually review this process to ensure it is successful and achieves the expected outcomes.

Under the new contract, we look forward to continuing to develop new ideas for around the Commonwealth and with input from DMS in achieving our shared goal of making all services more widely available and accessible to our Enrollees residing in these areas.

2. *Strategies and methods to address workforce shortages and network gaps, included proposed initiatives to collaborate with DMS and other contracted MCOs to develop innovative solutions to meet the healthcare needs of Enrollees.*

Perhaps no factor is more impactful on health outcomes than lack of access to care due to shortages in the healthcare workforce. According to the Association of American Medical Colleges, Kentucky ranks 40th in the United States in its physician workforce per 100,000 people. WellCare has a history of supporting workforce development efforts. For example, in conjunction with the **University of Kentucky Center for Excellence in Rural Health**, WellCare of Kentucky provided $180,000 in funding for scholarship programs aimed at increasing the number of doctors and nurses working in primary medicine and psychiatry in Eastern Kentucky.

While there is no single answer to solving workforce shortages, WellCare is increasingly looking to develop and support initiatives that address this issue. One innovative approach to addressing gaps in the provider network and overcoming physician shortages is **Community Paramedicine**. Community paramedicine extends access to care by expanding the role of Emergency Medical Service (EMS) personnel to fill gaps in primary care availability and mitigate transportation barriers by providing home-based care. Community paramedicine providers can provide a number of services including assessment services such as taking vital signs, medication compliance and blood pressure readings; prevention services such as

immunizations and in-home fall prevention; and primary treatment such as wound care and medication administration, as well as referral to medical and social services.

With the recent passing of House Bill 106, WellCare is excited to support the expansion of community paramedicine programs that further extend access to care in underserved areas of Kentucky. In fact, WellCare is among the first managed care organizations to create a care management model around community paramedicine that serves patients in need and establishes an effective financial model for municipalities and states to make it sustainable, pragmatic and workable. The model deploys an integrated care team with the community paramedic into areas with workforce shortages to provide physical and behavioral health, lab draws, and to assess the home for environmental health risks.

Paramedicine: Hometown Medics Program

Through our Hometown Medics program, currently being implemented in our North Carolina market, WellCare will provide educational grants and job placement for combat medics and Navy corpsmen transitioning from military service to the community paramedicine field. Under a physician, ARNP or medical director's supervision and orders, graduates of this program will provide our Enrollees with health evaluation and management services in their home, including diagnostic testing, screening for chronic diseases and unmet social needs, intravenous therapy, wound care and many other services. This innovative rural health solution aims to reduce costly and uncomfortable ED visits and readmissions for certain diseases and conditions.

As part of the effort, in our other markets WellCare is recruiting and covering training and certification costs for medically trained military veterans or transitioning military personnel to step into community paramedicine positions, providing an elegant solution for staff needs, while addressing veteran employment challenges. There's also a financial benefit to the community, both from a cost-savings perspective from a recruiting standpoint, and because it can help stimulate the local economy as far as workforce development. With the expansion of paramedicine in Kentucky and in collaboration with DMS and other MCOs, WellCare will look to bring this model to the Commonwealth.

Innovation in Access to Care: LifeCare

WellCare saw a level of care gap for behavioral health services for adolescents who weren't necessarily needing hospitalization, but were challenging to manage at home. Our behavioral health lead and Network Management team recruited Tennessee-based LifeCare to bring virtual hospitalization to the Commonwealth. WellCare entered into a pilot with LifeCare to provide the FITT Program of virtual residential treatment for youth living with caregivers in a community setting. This is an intensive in-home program partnering with families to resolve crises, avoid out-of-home placement and provide skills for future crisis prevention.

In many of our other markets, WellCare has also worked with providers to establish "clinic days" to address workforce shortages and address network gaps, and we will actively look to recruit specialists from larger health systems in more densely populated areas of Kentucky to

establish satellite clinics for providing care one or two days a week in areas of need. This strategy can be combined with an alternative payment arrangement, as we do in our Hawaii market, where we incentivize providers to offer clinic days on islands with limited access by offering a higher reimbursement rate. We plan to approach the University of Kentucky and The Medical Center in Bowling Green to consider this approach in some of our rural Western Kentucky counties in partnership with **ARcare**, a multi-location FQHC.

Additionally, we've embraced telehealth as a method for addressing workforce shortages and increasing access to primary and specialty care in many of our markets, including Kentucky. We support the Commonwealth's objective to increase the use of telehealth in conjunction with the passing of Senate Bill 112 that expands telehealth coverage and payment parity for telehealth services, and are fully prepared to work with DMS toward these goals. We are also open and willing to collaborate with DMS and other MCOs through our DMS Operations Meetings and our involvement in the Kentucky Association of Health Plans. We look forward to the opportunity to discuss collaborative solutions that address workforce shortages in the Commonwealth.

3. *Strategies for contracting with providers in bordering states to help address network adequacy challenges, including lessons learned and successes or challenges with this approach.*

Contracting with providers outside the borders of the Commonwealth is crucial in addressing network adequacy challenges and serving the specific needs of Enrollees in areas where those needs cannot be met by Kentucky providers. Based on those needs our network contracting department identified two academic medical centers, **Vanderbilt University Medical Center** and the **University of Cincinnati**, who offer specialized tertiary and quaternary services that are needed by our Enrollees in western Kentucky (served by Vanderbilt University Medical Center) and northern Kentucky (served by University of Cincinnati Medical Center). These cross-border providers are closer to home for many of our Enrollees than in-state facilities so it is imperative that we offer them as a choice to our Enrollees. We also contract with **Children's' Hospital of Cincinnati Medical Center (CCHMC)**, one of the leading children's' hospitals in the nation. They offer specialty pediatric and primary care services for many of our children located in northern Kentucky, as well as across the Commonwealth.

Additionally, we contract with out-of-state acute care hospitals such as **Cabel Huntington** in Huntington, West Virginia and **Deaconess Hospital** in Evansville, Indiana to supplement our in-state network and to offer easier access to emergency services, women's health, pediatrics and specialty services such as neurosciences and cardiovascular. It is important to us that our Enrollees have convenient access to services they need.

Expanding Our Network to Ensure Access to Vital Care

WellCare's Transitional Care Coordinator at University of Kentucky Hospital visited two adolescent Enrollees that both had been admitted with Eating Disorders and Malnutrition. Both needed intensive inpatient residential treatment, however it was quickly determined that there were no residential facilities in Kentucky that could treat an adolescent eating disorder. The Transitional Care Coordinator worked with the Network Management team to identify an appropriate placement. While some facilities were available in the private sector, they would not consider a Medicaid child. The team reached out to Center for Discovery, an organization with facilities in Chicago, Atlanta and Orlando that specializes in this type of treatment. Center for Discovery wanted to help but did not have a Kentucky Medicaid MAPP number and had been told it was a long process.

At that point the Transitional Care Coordinator reached out to the Network Management and Regulatory departments to see what could be done to secure the proper credentialing for this facility. The facility was gracious enough to work with WellCare of Kentucky and we began working them through that process. With the help from our partners at DMS we were able to complete that process within a few days. The Network Management team signed a Single Case Agreement with the provider paving the way for the Enrollees to enter treatment.

Our Network Management team plays a vital role in cases like the one above where challenges exist not just in finding appropriate care for a service not available within the Commonwealth but in quickly securing the proper credentials necessary to provide that care. In these cases, the Network Management team assists the out-of-state provider by directing them to the Kentucky Medicaid Provider Enrollment Portal. They also assist the provider with completing the required forms if needed, and review the completed application for completeness prior to submission. Additionally, Network Management staff will make calls on behalf of the provider to the Medicaid Provider Enrollment Customer Services line, sharing the basics of the issue and at all times protecting against the disclosure of PHI, and verbally requesting expedited handling of the application as needed.

ii. Approach to providing out-of-network care when timely access to a Network Provider is not possible, including the Vendor's approach to supporting Enrollees in accessing such care.

While our goal is to maintain a comprehensive provider network that makes services available to our Enrollees that exceed required access and availability standards, we recognize there are instances when a needed service is not available in-network. On these occasions, our Utilization Management and Service Management Teams establish appropriate and timely referrals and arrangements to ensure seamless transitions and transfers to a qualified out-of-network provider. In these cases, our Network Management team executes a single-case, non-participating agreement with the provider for the specific case, and works to recruit them into our network to eliminate a future need for such arrangements.

If our network is unable to provide medically necessary covered services to a particular Enrollee within our network we move swiftly to provide services to Enrollees via out-of-network

providers. If out-of-network care is required, we attempt to locate a provider in the same geographic area as the Enrollee. If one is unavailable, we will transport the Enrollee to another part of the Commonwealth or out-of-state to access services as necessary. If the medical service requires an overnight stay, lodging and meals are covered. We make every effort to ensure that the most appropriate arrangements are made for the Enrollee in each circumstance, and have well-developed and well-tested processes to ensure these out of network services are coordinated and delivered in a timely fashion. Our clinical colleagues assist with appointment scheduling and pass cases along to our Utilization Management team to ensure appointment approval. Our Network Contracting team is available to create agreements, if necessary, to ensure for service reimbursement.

Supporting Enrollees in Accessing Out-of-Network Care. We educate Enrollees on how to access an out-of-network provider when medically necessary. WellCare's customer service representatives, Enrollee advocates and service managers receive training and education to coordinate benefits and assist Enrollees with primary insurance and other third-party liability. WellCare representatives also facilitate the transfer of records and arrange for transportation for the Enrollee to the out-of-network provider as needed. For example, we have worked with Children's Hospital of Philadelphia to secure treatment for a pediatric patient with many rare and complex conditions.

iii. Approach to ensure Network Providers are physically accessible and have accommodations for Enrollees with physical or mental disabilities.

WellCare remains committed to ensuring our network providers are physically accessible and have accommodations for Enrollees with physical or mental disabilities. To address issues related to accessibility for Enrollees with physical disabilities, we capture information about the physical accessibility of provider's office during our initial credentialing and contracting activities, including compliance with ADA standards. We publish physical accessibility information in our provider directories, so Enrollees and their caregivers can see it when selecting a provider.

Going the Extra Mile to Enable Enrollees with Disabilities to Access Care

Not only do we ensure providers have the proper access for Enrollees with disabilities, we work to make sure Enrollees are able to overcome barriers due to disabilities that prevent them from getting to their appointments. In Region 7, a WellCare Care Coordinator identified an Enrollee who uses a wheelchair for mobility who could not get to her PCP appointments because her house did not have a ramp. Through our Community Connections program, we partnered with a Christian biker group who built a wheelchair ramp onto the Enrollee's home. She can now see her doctor and also attend church and social events.

Partnership efforts like this not only benefit the Enrollee in enabling them to get to their appointments but also benefit providers in reducing no-shows, one of the key reasons why many providers drop out of a Medicaid program. By supporting our networks with community programs that coordinate access, we also sustain and build our provider network.

WellCare also serves over 100,000 Enrollees with serious mental illness (SMI) nationwide, and understands the importance of contracting with providers who have experience providing

services to individuals with mental disabilities. We work to recruit physicians based on experience, references, referrals from other providers, and qualifications that include education and training on individuals with developmental disabilities. We are also working in other markets on partnerships aimed at training and sharing of best practices and successful approaches to best serving these individuals. Approach to ensure a comprehensive network to address the needs of all Enrollees, including the provision of services in a culturally sensitive and linguistically appropriate manner.

WellCare administers Medicaid programs in some of the most culturally and ethnically diverse areas of the country, including Hawai`i and New York. Our Medicaid Enrollees in Kentucky include many of the Commonwealth's refugees as well. Our network management capabilities allow us to build and maintain provider networks for the more than 17% of our Medicaid Enrollees for whom English is not their primary language as well as our culturally and ethnically diverse membership.

Our recruitment strategy is focused on contracting with providers who are committed to caring for the Kentucky Medicaid program's population and who share the cultural and linguistic demographics of our membership. Upon contracting with WellCare of Kentucky, providers indicate the languages spoken in their office. This information is uploaded into our provider data systems and used to help Enrollees, other providers and WellCare staff in identifying providers who speak their language. Languages Spoken is an advanced search feature of our Find-a-Provider Tool on our Enrollee website and mobile application.

Even with a diverse network of providers, there are times when Enrollees must see providers who do not speak their language. In these cases, we provide in-person and telephonic language translation resources at no cost to the Enrollee or provider. When necessary, we train our staff to activate our language line, which has more than 2,000 interpreters on call 24/7 to translate more than 200 languages. Training includes teaching Enrollee service representatives to participate seamlessly in three-way calls with ASL interpreters via Video Relay Service so that hard of hearing or deaf Enrollees are never at a disadvantage in accessing information or services.

iv. *Approach to ensure a comprehensive network to address the needs of all Enrollees, including the provision of services in a culturally sensitive and linguistically appropriate manner.*

We ensure access to services in a culturally sensitive and linguistically appropriate manner by ensuring that our network providers and their staff receive ongoing education, training and support in culturally and linguistically appropriate service delivery. During their initial visit with newly-contracted network providers, our PR representatives provide cultural competency training and materials which covers the following objectives:

- Defines cultural competence as it relates to healthcare
- Defines Culturally Linguistically Appropriate Services (CLAS) objectives and WellCare's program components
- Identifies how company materials support cultural competency

- Identify the tools and resources WellCare uses to deliver on CLAS objectives
- Identifies the provider's role in delivering culturally competent care and services

Our cultural competency training program is accessible through the Provider Manual, provider portal, and provider newsletters. We also provide a link on our website to the Health Resources and Services Administration (HRSA) Cultural Competence website which provides a self-study module for which providers can obtain continuing education credit. The site also offers high-quality tools for improving spoken and written communications with patients, reducing health disparities and improving cultural competency.

v. *Strategies the Vendor will implement to ensure the network adequacy and access standards are met if actual Enrollment exceeds projected Enrollment.*

As an incumbent CMO, we have a well-developed and field-tested infrastructure for managing statewide enrollment growth. Our success in maintaining access standards is due to our multi-pronged, proactive network management strategy which emphasizes ongoing readiness activities and implementation of rapid response protocols during periods of unexpected enrollment growth.

- *Maintain Excess Provider Network Capacity:* Over our eight years serving Kentucky Enrollees, we have successfully implemented network development policies and procedures which are proactive rather than reactive to growth. We accomplish this by aiming to exceed access standards by building in excess capacity, so if we do experience an influx of new Enrollees, we can provide a smooth transition for Enrollees while maintaining geographic access and appointment availability standards. If we identify a deficiency in meeting access standards, our Network Management team promptly develops a detailed action plan, which includes attempting to contract with any available providers whose inclusion in our network would expand access to care. The team identifies potential providers via Enrollee requests, provider referrals, researching competitive data, or through their knowledge of the community.
- *Monitor Enrollment and Provider Network Capacity:* As part of our proactive network management processes, we continually monitor enrollment and provider network trends. Specifically, our data analytics analyze monthly enrollment and disenrollment data by region, county, and ZIP code. We also examine auto-enrollment data and “Enrollee choice” reports to study broad market trends across the Commonwealth. We also monitor the adequacy of our provider network to anticipate future needs by reviewing GeoAccess reports, appointment availability audit reports, and other network-related data, such as firsthand feedback from PR Representatives and provider complaints. We also compare our contracted provider network to the universe of available Medicaid providers using the state’s most current Medicaid provider listing. We synthesize this data to guide our recruiting and retention efforts. As we aggregate and review all of this information, trends in membership, access, and network availability become apparent. We immediately create action plans to account for predicted trends, preparing us to accommodate a potential influx in Enrollees.

- *Initiate and Maintain Open Communications with DMS:* As changes in state or federal policy can have a significant impact on enrollment, WellCare's dedicated actuary maintains regular communications with DMS to continually stay abreast of likely or pending administrative or legislative changes that may affect enrollment.
- *Rapid Response Protocols:* When we predict or experience a rapid increase in growth or a sudden influx of new Enrollees, WellCare implements a series of rapid response protocols and processes that engage staff and providers to effectively maintain access standards. These actions include:
    - *Provider Relations:* Locally based PR Representatives at our six regional offices throughout the Commonwealth contact providers with closed panels and work with them to open their panel to accommodate the growth. PR Representatives also work with providers to extend their hours as a way to expand appointment availability. In order to communicate and educate providers on the increase in enrollment, we run "banner messages" on our provider portal, provide other information on this site to inform network providers regarding enrollment growth trends, and facilitate a connection with the provider and their PR Representative. On a case-by-case basis, we negotiate a single case agreement so that an Enrollee's health care needs will be met within geographic access and appointment availability standards if access to a particular type of provider is not available through our contracted network.
    - *Enrollee Services:* WellCare has the staff resources and experienced leadership to quickly assess expected Enrollee service needs and implement protocols to prepare customer service staff when we experience rapid growth or a surge in enrollment. Activities include increasing call center staff ratios, cross-training staff in other units to support the increased demand, and training cross-functional teams in Health Services to meet increased requests for prior authorization approvals.
    - *Claims and Utilization Management:* Our Network Management department alerts our Claims and Utilization Management departments about the expected increase in Enrollees so staff is prepared to respond quickly to a likely surge in claims and requests for prior authorization approvals, ensuring timely and prompt payment. In the event of a sudden influx of a large group of Enrollees, we will institute strategies designed to ensure continuity of care.
    - *Health Services:* Our Network Management department also engages nurses, care coordinators and Health Services department staff to communicate pending enrollment expansions and to learn of any concerns and how to mitigate any potential risks to a smooth transition for new Enrollees.

We have used this approach to successfully respond to an increase in Enrollee enrollment without any adverse effects on our performance in meeting access standards or operational service level standards. In 2012, we absorbed a total of 64,000 Enrollees after the sudden withdrawal of another MCO from the Kentucky market. In 2014, we absorbed approximately 100,000 Members due to Medicaid expansion, many in the first few months of the year, exceeding the predictions made by DMS. In both cases, we relied on our excess network capacity, close monitoring of our existing network, rapid response protocols and open lines of communication with DMS to successfully ensure access to care for the additional Enrollees.

b. If Subcontractors will provide Covered Services, describe how network development efforts will be coordinated with the Vendor's provider network development strategy and how the Vendor will monitor the Subcontractor's activities and ensure transparency of these activities to DMS.

WellCare of Kentucky understands that we are solely responsible for providing a network of Covered Services as described in Draft Medicaid Managed Care Contract Section 30, Covered Services. We have developed and continue to maintain a robust network of providers and facilities to deliver needed covered services to our Enrollees. For the following Covered Services, WellCare of Kentucky employs a subcontractor:

- *Dental:* The subcontractor for our 1,333 dentists is Avesis Dental
- *Vision:* The subcontractor for our 1,463 vision providers is Avesis Vision

WellCare of Kentucky has had a successful partnership with Avesis Dental for over six years and Avesis Vision since we began serving Medicaid Enrollees in the Commonwealth.

COORDINATION OF WELLCARE OF KENTUCKY AND SUBCONTRACTOR NETWORK DEVELOPMENT STRATEGIES

The WellCare of Kentucky Network Management team reviews the annual Network Development Plan of each subcontractor in coordination with the annual review and ongoing update of our overall recruitment plan. We coordinate recruitment protocols and practices with that of our subcontractors by holding them accountable through written contracts and audits, to the same standards of compliance for: network adequacy for geographic access and appointment timeliness and availability; NCQA or other credentialing criteria, as appropriate, and protocols for maintaining current licenses and other relevant credentialing criteria; and performance standards to which WellCare of Kentucky are held in DMS contract requirements and in federal statute. Our subcontractors also attend Technical Advisory Committee (TAC) meetings with WellCare of Kentucky leadership and other Commonwealth healthcare stakeholders. Subcontractors must submit their related network development policies and procedures to WellCare of Kentucky for review.

OVERSIGHT AND MONITORING OF NETWORK DEVELOPMENT ACTIVITIES OF SUBCONTRACTORS

WellCare Vendor Manager Jaime Wayne has oversight of Avesis' network development activities. Mr. Wayne and our Compliance Oversight Team monitor network development activities of Avesis using the same reporting tools (such as GeoAccess software) for evaluating compliance with benchmarks for network adequacy, and also rely on feedback (such as Enrollee and provider grievances/complaints) to evaluate subcontractors' network development activities and outcomes. The most recently reviewed quarterly Network Adequacy reports for quarters 3 and 4 of 2019 for both our dental and vision networks have been provided as **Attachment C.18.b-1 Dental Quarterly Network Adequacy Report**, **Attachment C.18.b-2 Dental After Hours Quarterly Network Adequacy Report**, **Attachment C.18.b-3 Vision Quarterly Network Adequacy Report** and **Attachment C.18.b-4 Vision AfterHours Quarterly Network Adequacy Report**, provided electronically. These reports are conducted utilizing a "secret shopper" survey methodology in which anonymous callers attempt to contact in-

network dental and vision providers to schedule appointments within contractually required timeframes. Conducted quarterly, they are shared with our Delegation Oversight team, Network Management department and Kentucky leaders during monthly Joint Operating Committee meetings.

WellCare also monitors the network adequacy of our dental and vision provider networks through real-time tableau reports that can be reviewed by the Contract Oversight Team at any time. We have included a sample of this reporting dashboard which offers a high level view of network adequacy across the Commonwealth. This reporting dashboard also allows us the opportunity to drill down to review adequacy at a county level as well. Please refer to **Attachment C.18.b-5 Sample Reporting Dashboard**. Our Avesis contract vendor manager, Jamie Wayne, conducts monthly Joint Operations Committee (JOC) meetings with our Kentucky leadership team consisting of Compliance Oversight, Network Management and Operations to review real-time metrics including but not limited to network adequacy. A sample agenda from November 2019 is included as **Attachment C.18.b-6 Sample JOC Agenda**.

Through these efforts, WellCare ensures that all contractual obligations are met or exceeded.

We also require subcontractors to provide advance notification to WellCare of Kentucky of a decision to close network enrollment for new provider contracts, to reopen network enrollment, or to close a provider panel.

As changes in state or federal policy can have a significant impact on enrollment, WellCare of Kentucky maintains regular communications with DMS to continually stay abreast of likely or pending administrative or legislative changes that may affect enrollment.

c. Describe the Vendor's approach to use telehealth services to improve access. Include the following at a minimum.

Telehealth services offer the benefit of expanding access to care for all Kentucky Medicaid Enrollees, including those who live in rural and underserved areas, have complex conditions or schedules that can make travel difficult, or simply prefer the convenience or privacy afforded by telehealth access. Today WellCare of Kentucky has an established telehealth presence in the Commonwealth. **In 2018, we paid claims to providers for over 6,800 telehealth services for over 20 different types of services**. We have also been active in the telehealth discussion in the Commonwealth, having participated in Kentucky Telehealth Board meetings for several years as well as the Telehealth Task Force resulting from SB 112, and having provided comments to DMS regarding its telehealth regulation (907 KAR 3:170).

We support the Commonwealth's objective to increase the use of telehealth in conjunction with the passing of Senate Bill 112 that expands telehealth coverage and payment parity for telehealth services, and are fully prepared to work with DMS toward these goals. **We are particularly excited to leverage telehealth capabilities as a component of substance use disorder (SUD) treatment.** A required component of SUD treatment for those receiving medication assisted treatment (MAT) is that individuals receive psychological counseling in addition to the medication. Many Enrollees who need SUD treatment are employed (part-time or full-time) or are parents who lack funds to pay for childcare. Some lack transportation or face

transportation challenges, even with the non-emergency medical transportation benefit. This makes attending regular, in-person counseling sessions extraordinarily challenging.

We recognize DMS' expansion of its SUD treatment scope on July 1, 2019. Included in this initiative is the creation of Behavioral Health Services Organization (BHSO) Tier II providers who provide outpatient SUD treatment including MAT. One component of this initiative is to enable narcotic treatment programs (NTPs) in Kentucky, which historically have used methadone as the MAT medication, to participate in Kentucky's Medicaid program and be paid for MAT. As part of the initiative, DMS added methadone to the covered MAT medications.

We intend to utilize the telehealth option for Enrollees receiving SUD treatment (particularly from BHSO Tier II providers) in order to enable them to receive counseling where most convenient for the Enrollee including their home, job, or elsewhere. WellCare of Kentucky already covers psychotherapy via telehealth; however, utilization has not been substantial. In partnership with DMS' expanded SUD treatment initiative, we plan to promote (to providers and Enrollees) the option to use telehealth for the counseling/psychotherapy component of SUD treatment.

We also understand the rural nature of the Kentucky landscape and the transportation barriers Enrollees have for getting to a specialist appointment. As a priority based on need, we will work with Rheumatologists, Endocrinologists, and Dermatologists to open up access through telemedicine for these Enrollees.

The possible uses of telehealth are almost limitless and we've only addressed a few initiatives that we plan to target and prioritize. However, WellCare has a broad base of experience to draw upon in developing and launching telehealth initiatives. With Kentucky's telehealth expansion, we are very excited about employing what we've done in other markets in the Kentucky market as well as continually exploring new options.

i. Criteria for recognized sites.

The establishment of guidelines and standards for telehealth is an important element of ensuring effective and secure delivery of quality healthcare. Our criteria for recognized telehealth sites in the Commonwealth is as follows:

- The provider must be currently enrolled and in good standing with Kentucky's Medicaid program
- The provider must be licensed in Kentucky to receive reimbursement for telehealth services under Medicaid
- The provider must not be currently listed on the Kentucky DMS Provider Terminated and Excluded Provider List
- The provider must not be currently listed on the U.S. Department of Health and Human Services, Office of Inspector General List of Excluded Individuals and Entities
- The provider must demonstrate that their technology is secure and HIPAA compliant
- The provider must demonstrate appropriate quality-of-care protocols and patient confidentiality guidelines.

As the use in telehealth expands in the Commonwealth, we will work to ensure that our standards are in alignment with evolving Commonwealth and federal regulations regarding telehealth sites.

ii. Education efforts to inform providers and Enrollees.

Through our national model for telehealth, WellCare has made investments to educate Enrollees on telehealth opportunities and train providers on telehealth access and reimbursement policies. WellCare of Kentucky will leverage that experience and work with DMS and our network partners to examine opportunities to promote the expansion of telehealth under the new regulations through direct education of our provider and Enrollee communities.

EDUCATION EFFORTS TO INFORM PROVIDERS

In our markets today, WellCare PR Representatives proactively identify and meet face to face with providers, primary care physicians, healthcare organizations, and local facilities (e.g., schools) in to encourage, discuss, and support enabling their facilities and practices for telehealth services. We educate providers on the logistics, payment options, eligibility, technology, implementation, and best practices involved. We also provide education and one-on-one conversations to inform providers about our reimbursement policy, coverage policies and the potential benefits of telehealth for both Enrollees and providers.

Our outreach efforts also inform providers of our documentation and billing requirements, both of which require minimal modification to providers' current operational practices. We explain potential cost savings for providers engaged in telehealth resulting from missed appointments and the potential opportunity for increased reimbursement by offering additional and/or non-traditional appointment times. We believe this continuing effort to educate providers will increase access to telehealth services for our Enrollees.

Going forward, we will introduce these efforts to our Kentucky providers. We will also educate providers on the new telehealth regulations and provide versions of our in-person educational presentations in a variety of forums including breakout sessions at our annual Provider Summits; on both our public website and provider portal; and through our popular bi-weekly Webinar series.

Demonstrating the Value Telehealth to Providers and Enrollees

A fourteen-year old boy living with Asperger's Syndrome becomes depressed and withdrawn when his father unexpectedly dies. Instead of his mother having to take off work and drive an hour (due to traffic) each way to a therapist appointment, he is able to have his sessions at home via a secured portal with our tele-behavioral health provider. The use of telehealth in this case has allowed the boy to really open up with this therapist and has eliminated any barriers that may have resulted in missing appointments. The boy participates in weekly counseling sessions via telehealth directly from his home. The benefits of telehealth go beyond improved access and convenience. His mother said that he is very comfortable with the service and he is doing much better; the boy described the service as wonderful. We have used this case study as a model to educate our Enrollee, provider and case management communities on the value of telehealth.

EDUCATION EFFORTS TO INFORM ENROLLEES

Because telehealth is an innovative approach for receiving care, many Enrollees and their families are not familiar with this treatment option. In order to educate Enrollees about telehealth in the Commonwealth, WellCare provide telehealth information and resources through the following channels:

- Enrollee Handbook
- Enrollee Services Representatives
- Care Coordinators
- Periodic Mailings such as Newsletters
- Enrollee Web Portal
- MyWellCare Mobile App

Additionally, WellCare is updating our provider directory to provide Enrollees with information on providers who offer telehealth services.

iii. Whether reimbursement will be available to the presenting site as well as the consulting site or only the consulting site. Include any requirements or limitations on reimbursement.

Under certain conditions, WellCare will make reimbursement available to the presenting site as well as the consulting site. As an example, WellCare has, to a limited extent, reimbursed the presenting site for a telehealth consultation using HCPCS code Q3014 (“Telehealth facility fee"). Going forward, WellCare intends to expand utilization of this model by engaging with local health departments (LHDs) to act as presenting sites for telehealth consultations.

LHDs already provide care to our Enrollees, but we envision using them in this scenario as conduits to specialty care in particular (dermatology and ophthalmology, for example) as well as to substance use disorder treatment. As LHDs are located statewide (in all 120 counties) this will be especially beneficial for our Enrollees in rural areas. The LHD would need to demonstrate they possess secure, HIPAA-compliant technology in order to host consultations.

Related to this WellCare intends to embrace the “store and forward” telehealth option. This option can be used for radiology consultations (CT-scans, MRIs, MRAs, X-rays) in which a clinical expert reviews the given image and provides an assessment to the provider who is treating the Enrollee. The consult can occur while the Enrollee is still present in the treating provider’s office or later at a more convenient time for both the treating provider and the clinical/radiology expert. In this scenario, WellCare will reimburse the treating provider for any procedures or services rendered during the office visit as well as reimburse the clinical consultant for the assessment. The provider who transmits the radiology image to the clinical consultant will need to demonstrate they possess secure, HIPAA-compliant technology for the transmission.

iv. *Lessons learned and successes or challenges with implementation of telehealth services for other programs the Vendor has served and that the Vendor will consider for provision of telehealth services in Kentucky.*

WellCare has developed a multi-faceted strategy to expand the use of telehealth that builds on national research, as well as our experience in the Commonwealth and in our other markets. We have experience with both hub-and-spoke models and direct-to-consumer models of telehealth, and have worked alongside our state partners as they transitioned to new models. For example, in our Florida market, we adapted quickly to the new direct-to-consumer model, engaging providers across the state to rapidly build an enhanced telehealth network for Enrollee access to PCPs, specialty providers, and behavioral health providers. As we've implemented telehealth services in Florida and other markets, we've gained valuable insight into the challenges involved in doing so, including startup costs, lack of awareness about telehealth on the part of Enrollees and lack of provider education around telehealth benefits and billing procedures.

Bringing Telehealth into the Home

At our Florida health plan, we partner with IMPOWER, an Orlando-based, non-profit organization providing behavioral health and child well-being services. Enrollees attend telehealth appointments to receive e-prescribed controlled medications and engage in behavioral health treatment with clinicians from their homes, using a smartphone, tablet, or laptop device. We were able to arrange services via telehealth for a homebound autistic child in need of psychiatric care. Her parents were thrilled at the approach, as it would have normally required her to be transported by ambulance to her office visits that were traumatic to the child and exasperated her behaviors. This case was important in demonstrating the importance of removing the previous definitions of hub and spoke and allowing telehealth to be delivered in and Enrollee's home.

One challenge many providers face in offering telehealth services are the startup costs necessary to equip their practices to become telehealth sites. **WellCare is addressing this challenge** through direct funding as well as incentive-based contracting. In August 2017, we partnered with Metro West Nursing and Rehab Center, a 120-bed skilled nursing facility (SNF) in Orlando, to facilitate access to physician services via telehealth during evenings, nights, weekends and holidays when nationally about 70% of all SNF-to-hospital transfers occur. The program enables a qualified physician to perform a virtual examination at the resident's bedside using audio, video and monitoring technology. The goal of this program is to prevent avoidable acute admissions and readmissions of SNF residents by providing the opportunity to effectively evaluate a resident's medical condition and accurately differentiate those residents that truly need acute care services from those that can and should remain and be treated in the SNF. WellCare supported the program by making a one-time technology payment to the facility to offset the cost of operationalizing the program and by

To address technological barriers to telehealth in Kentucky, WellCare is supporting the work our partner, SOAR (Shaping Our Appalachian Region) is doing to increase access to broadband internet in rural areas of the Commonwealth.

offering a value-based payment directly to the facility where the virtual visit through telehealth resulted in an avoided and unnecessary hospital admission.

WellCare has also had success in partnering with other organizations to develop and fund startup costs for initiatives that extend access to healthcare through telehealth. In a collaboration with the Georgia Partnership of Telehealth and Appling HealthCare Systems, WellCare of Georgia helped open two new school-based health centers at Appling County Elementary and Appling County High School. Launched in 2015, WellCare provided the funding to equip each school with telehealth systems that allow school nurses to connect students and faculty to healthcare providers at Appling HealthCare System via a video conference. This program was able to help children receive much-needed access to care in rural areas of the state. As a true community partnership, this collaboration was able to positively impact healthcare in the Appling school district.

Another challenge to implementing telehealth programs is reluctance on the part of providers to integrate telehealth into their clinical practice. While payment parity laws reduce concerns over reimbursement and increase adoption, providers still must be informed about the benefits of providing telehealth both for their practices and for the Medicaid Enrollees they serve. **WellCare is addressing this challenge** by educating providers on how offering telehealth services has the potential to reduce missed appointments and enable providers to increase revenue by offering non-traditional appointment times, as well as the benefits of providing an alternative to in-person visits for patients on occasions when coming into the practice would be inconvenient. By also educating providers about documentation and billing requirements, we can further reduce provider reluctance to offering these services and increase adoption of telehealth.

Lack of awareness of telehealth on the part of Enrollees is another challenge in implementing telehealth services and increasing access to care. **WellCare is addressing this challenge** through our communication efforts to make our Enrollees not only aware of telehealth generally, but to connect them to telehealth providers directly. As described above, this includes providing telehealth information and resources through our Enrollee Handbook, MyWellCare Mobile App, Enrollee Web Portal, as well as through our care coordinators and Enrollee Services Representatives. More directly, we can connect Enrollees with telehealth services by providing them with information on providers who offer telehealth services on our provider directory.

As the Commonwealth moves forward with its expansion of telehealth under SB 112, WellCare looks forward to the opportunity to leverage our experience and knowledge to replicate our success with these methods in Kentucky. By engaging in partnerships with organizations to create and fund new telehealth initiatives, using incentive-based contracting as a vehicle for engaging providers to practice telehealth, and educating both providers and Enrollees in the benefits of telehealth, WellCare can help the Commonwealth realize the potential of this innovative healthcare delivery model: to enable all Enrollees across Kentucky, no matter where they live, to access the care they need when they need it.

d. Describe the Vendor's provider contracting strategies, including processes for determining if a provider meets all contracting requirements (at the time of enrollment and on an ongoing basis), as well as processes for corrective action and termination. Include copies of the Vendor's proposed contract templates for individual practitioners and for facilities as attachments.

WellCare of Kentucky follows all NCQA standards for contracting and credentialing. Kentucky legislation dictates the offering of participation agreements to any willing provider (AWP) in the Commonwealth of Kentucky who is eligible for credentialing per NCQA standards. We will continue to comply with this mandate and with the contract requirements in Section 28.2, Network Providers to Be Contracted.

Once a request for a network participation is received from a provider, our Network Management team collects all documentation required to produce the contract documents. However, before the contract is initiated, Network Management policy requires that we verify the provider: a) is not on the Medicare Excluded Provider List, and b) is registered as a business with the Kentucky Secretary of State. Required credentialing documentation is sent along with the new provider contract, and must be returned with the signed agreement. This process includes authorization to check the provider's CAQH, medical liability and property liability coverage, licensure by Kentucky and the OIG, as well as scheduled Site Inspection and Evaluation for unaccredited facilities. The site inspection confirms that requirements for physical accessibility, proximity to bus lines, secure medical record and medicine storage, fire extinguishers and sprinkler systems, and emergency preparedness and evacuation plans are met.

WellCare monitors our network providers on an ongoing basis to ensure that they continue to meet contractual requirements. This includes ongoing review of CMS provider standards and excluded provider updates, as well as detailed reviews of multiple compliance sources at the time of recredentialing, and review of monthly reports from OIG, SAMS (System for Award Management), Medicare and Medicaid exclusion lists, and Medication Dispensary, among others, which are cross-referenced against our participating provider directory. If a provider is identified as being on any of these reports, WellCare initiates actions to term the provider and to notify affected Enrollees.

CORRECTIVE ACTION AND TERMINATION

We also review Enrollee grievances and appeals trends, results from site evaluations, quality of care investigations, and results of medical record reviews to monitor our network providers. When performance or compliance issues are identified, we will make every effort to bring the provider into compliance with required standards and avoid a termination that would disrupt our network. For instance, in 2017 a provider of short-term residential substance abuse services did not meet the 80% passing score on their Behavioral Health Medical Record Review (BH MRR) in 2017. The BH MRR audit evaluates the documentation practices of BH providers who are contracted with WellCare of Kentucky. WellCare then issued a Corrective Action Plan outlining required changes needed to be made within 90 days. The provider made the required changes and passed the follow-up audit.

In some cases, upholding Department and WellCare standards means that a provider must be terminated from the network. In these cases, WellCare provides a written notice to the provider of the decision to terminate which includes the reason for the termination and the effective date of termination. The notice also informs the provider about their right to appeal the decision, and provides information on how to request an appeal. Concurrently, we notify DMS of any decision to terminate a network provider as well as any Enrollees affected by the termination in accordance with the requirements in Section 28.10, Termination of Network Providers, of the Draft Medicaid Managed Care Contract.

Please see **Attachment C.18.d Contract Templates for Individual Practitioners and Facilities**, provided electronically, for our contract templates for individual practitioners and facilities.

e. Demonstrate progress toward developing network capabilities for statewide access by providing evidence of existing contracts or signed Letters of Intent with providers by provider type (for the Vendor and Subcontractor). Include the following information at a minimum.

Our network **exceeds all Department requirements for access to care**, and we continually monitor to ensure we uphold those standards. We include the following documents attesting to the capabilities of our existing statewide provider network as **Attachments C.18.e.i Provider Listing, C.18.e.ii Provider Count, and C.18.e.iii Provider Geographic Access Report**, provided electronically.

i. A Microsoft Excel workbook by provider type listing every provider that has signed a contract or Letter of Intent, including the provider's name, specialty(ies), address and county(ies), Medicaid Region(s) served, whether the provider is accepting new patients, accessibility status for individuals with disabilities, language spoken, and the provider's Medicaid Identification Number(s).

WellCare of Kentucky's provider listing is included as **Attachment C.18.e.i Provider Listing**, provided electronically.

ii. A summary Microsoft Excel worksheet with total provider counts by provider type by Medicaid region and county.

WellCare of Kentucky's provider count worksheet is included as **Attachment C.18.e.ii Provider Count**, provided electronically.

iii. A statewide Geographic Access report of all providers with LOIs color coded by provider type by Service Region.

WellCare of Kentucky's Geographic Access report is included as **Attachment C.18.e.iii Provider Geographic Access Report.**

f. Describe proposed Enrollee to provider ratios by provider type, as well as the Vendor's methodology for considering a provider's FTE when calculating network adequacy standards.

WellCare regularly evaluates our Primary Care Provider ratio to assure we are continually in compliance with contract section 29.7A, which limits the Enrollee to PCP ratio to no more than

1,500 members assigned to any single PCP. Our Enrollee to provider ratio is applied to providers who can serve as a PCP, which includes providers with specialties in family practice, general practice, pediatricians, internal medicine, advanced registered nurse practitioners, physician assistants and OB GYN within the Kentucky market.

The ratio is determined either at the provider's requested panel size, or up to the maximum limit of 1,500 Enrollees per provider, adjusted for the number of days per week they are in the office. If a provider indicates two days or fewer, their maximum capacity is set to 600, if they indicate four days or more, their maximum capacity is set to 1,500, and if they indicate 3 days, their maximum capacity is set to 900. This process accounts for FTE differences among providers and limits the number of members we assign to providers not practicing full time to assure members can get access to their primary care provider.

If a provider prescribes a maximum panel size during their enrollment through our Network Development department, or any time thereafter, limits are placed in the system to close the providers practice to any additional member assignments once that limit is reached. Likewise, once a provider reaches the limit of 1,500 our monitoring process stops the assignment of additional Enrollees until the panel size drops below the 1,500 Enrollee level maximum. The 1,500 member limit is adjusted based on information submitted on their practice roster, their provider add letter or on their initial enrollment application.

Each month individual provider volume is measured against a threshold to assure the system is functioning appropriately and to ensure the Enrollee assignment doesn't exceed the maximum 1,500 Enrollee limit or the predefined limit determined by the provider. We monitor these assignments with a panel report by unique provider, illustrated by A snapshot sample is shown **in Figure C.18-1**.

Figure C.18-1 Sample Provider to Enrollee Assignments Report

In addition, WellCare regularly reviews our global Enrollee to provider ratios to assure we are not seeing material swings, and to validate the 1:1,500 ratio is never approached. We measure the PCP to Enrollee threshold against our Medicaid TANF/CHIP, ABD and ACA Expansion populations, but remove the Foster Care population as they are currently not being assigned a PCP. For all other specialties, our entire population is used when reviewing our ratios. An example of the report we use to monitor the global rations is provided in Figure C.18-2.

Specailties/Provider Type	Members	Provider (30hr FTE)	Ratio / FTE

Figure C.18-2 Global Ration Monitoring Report

g. Describe the Vendor's proposed methods for ongoing monitoring and assessment to ensure compliance with network adequacy and access to care standards, including tools used, the frequency of reviews, and how the Vendor will use findings to address deficiencies in the Provider Network. The response should also address how the Vendor monitors appointment availability and wait times. Provide samples of tools and/or reports.

Over the past eight years, WellCare of Kentucky has built and maintained a network that exceeds DMS' standards for providing timely access to care for all of the Commonwealth's Medicaid Enrollees. Continual and consistent monitoring of our provider network is vital to our efforts, enabling us to identify and quickly remediate any gaps in order to ensure that standards are kept and access to care is maintained. Our comprehensive ongoing monitoring and development of our network providers allows us to maintain and exceed Enrollees' satisfaction, access to care, and comply with DMS contract requirements for adequacy and access to care standards.

Assessing the adequacy of our provider network is a continuous process. Our Network Integrity Team performs monthly evaluations of the network using the tools and data sets described

below to identify potential gaps and the need for expansion activities. Our ongoing activities allow us to identify opportunities as they arise to respond proactively with enhancement strategies. WellCare's Network Integrity Team is responsible for collecting and analyzing network data, through the methods described below. Led by Provider Network Director Bonnell Irvin, our Network Management Team holds monthly Network Management and Development meetings to assess all provider types and identify if there are any issues, gaps in the network or other barriers to accessing care as well as any provider concerns that may impact their ongoing willingness to serve our Enrollees. While our leadership meets monthly to strategically address network compliance, our Kentucky-based staff, including PR Representatives, Service Managers, Enrollee Services and Enrollee Advocates, initiate action immediately to remove barriers to care for our Enrollees. We use the following tools, reports, and resources to monitor our network:

- *Monthly GeoAccess® Reports and Quest Cloud Analysis:* GeoAccess reports, as shown in **Figure C.18-3**, evaluate that time and distance standards are being adequately met at the provider level to meet the needs of Enrollees in each region. We run these reports using DMS-defined access standards. GeoAccess results are the key element reviewed during the quarterly Enrollee Access to Care committee meeting and an actionable plan results from the analysis.

Figure C.18-3 Monthly GeoAccess Report ***(as of 1/18/2020)***

- *Zip Code Analysis for Enrollees without Access:* An analysis of Enrollees without access to specific specialties at the zip code level. The zip code analysis ensures that potential Enrollees in all applicable zip codes can be properly served.
- *Out-of-Network Monitoring:* On a monthly basis, the Health Services and Network Teams' out-of-network reports are reviewed to identify any trends that indicate access issues within the network. In such cases, this information will be assigned to Provider Relations for remediation.
- *Enrollee and Provider Grievances/Complaints:* Our associates (Enrollee Advocates, Enrollee Services Representatives and Service Managers) review, log and categorize grievances and complaints by cause, disposition and type for review and follow-up. Grievance/complaint information is shared with WellCare's Network Integrity and Quality Improvement Teams to monitor access to care, used by our Network Management team to identify the need and opportunities for expanding access to care, and allows our Provider Relations Team to follow-up and work with providers.

- *Enrollee and Provider Satisfaction Surveys:* WellCare conducts annual surveys which include key questions about the quality and adequacy of our provider network. Our Quality Improvement Team reviews the results of the survey and shares the results with our Network Management and Provider Relations teams to identify areas of opportunities for additional contracting as well as service improvements.

  Additionally, our health plans participate in the Consumer Assessment of Health Providers and Systems (CAHPS®) survey conducted annually by an independent National Committee for Quality Assurance (NCQA) certified vendor. Through this tool, we evaluate data related to Enrollees' perceptions of quality of care and service, including getting needed care and getting that care quickly. **For example, WellCare of Kentucky's 2018 HEDIS measure for Children Getting Appointments as Soon as Needed was the highest in the Commonwealth**.

- *Closed Panel Reports:* Our Provider Relations Team review monthly closed panel reports, as shown in **Figure C.18-4**, to identify providers with recently closed panels. PR Representatives outreach to each provider in an attempt to have them re-open their panel. Closed panel percentages are reviewed by specialty to determine if additional providers are needed. Our PR Representatives also visit our provider groups to review and verify their details, including panel status. We also have a Provider Accuracy Audit in place that samples network data reporting for analyzing and reporting on the information reported to us, including panel status.

Figure C.18-4 Closed Panel Report

- *Out-of-Network Paid Claims:* The Network Management and Provider Relations teams monitor out-of-network paid claim reports to identify providers that are not currently contracted with WellCare and understand where there may be a network gap. This information is shared with the Network Management team to target recruitment activities.

- *Knowledgeable Associates:* Our locally-based PR Representatives and Community Relations Staff act as key resources for identifying gaps in the network. Our associates know their regions and are encouraged to immediately escalate to leadership any situation in which a provider is not available or does not exist to adequately meet an Enrollee's needs. As a result, we understand the provider landscape across each region of the Commonwealth, and we couple that with our understanding of the basic and specialized needs of our Medicaid Enrollees.

- *Quality Improvement Committee (QIC):* We hold quarterly QIC meetings attended by the following departments: Quality Improvement, Network Management, Regulatory, Health

Services, Executive Leadership, Credentialing, Appeals and Grievances, Claims, Medical Economics, Compliance, and Enrollee Services. During this meeting the Network Team reports on the state of the Network, including any gaps to be filled and other access and availability issues; provides information on barriers and action plans to address those barriers; and receives feedback from our internal partners on any network concerns. The Network Team uses this feedback to identify areas of opportunity within the management and execution of the Network and, when necessary, implements changes.

REMEDIATION OF ANY DEFICIENCIES

Our Network Management Team works quickly to address any deficiencies identified during the course of our network monitoring activities using a variety of methods:

- *Targeted Outreach:* We outreach to local providers to fill identified network gaps. Our field-based PR Representatives and Network Management staff personally contact non-contracted providers to determine impediments to contracting and look across borders to recruit out-of-state providers in bordering states with natural referral patterns.
- *Target Medicare Providers:* As described above, we use Quest Analytics tool to see if there is a Medicare provider of the provider type needed that is not listed on the KY State file. If located, we approach the practice by phone or in person in an effort to convince them to see Medicaid patients. If necessary, we may offer an additional financial incentive, including value-based payment (VBP) contracts, to take on the additional population of Enrollees.
- *Offer Incentives:* When deficiencies are related to lack of access to a specific provider type in a specific area, we may initiate an investment opportunity by giving incentives such as VBP contracts to providers to expand into the area.
- *Single Case Agreements:* Our Network Contracting team fills individual gaps using a single case agreement with an out-of-network provider, seek an alternative delivery method for that service and work with the Enrollee to find an appropriate alternative. This ensures seamless care for our Enrollees in places where there is a lack of any specific provider contract.
- *Existing Patterns of Care:* Our Network Integrity team closely reviews patterns of care to develop an understanding of provider referrals within each region and outreach to providers outside of those regions to support those patterns. In doing so we identified an out-of-network laboratory that several of our hospitals were using for a specific type of genetic testing. After evaluating the referral pattern, our Network Contracting team reached out and secured a contract with this laboratory.
- *Leverage Provider Partnerships:* Our Network Management and Provider Relations teams encourage partner network providers to extend hours and to expand access during initial contracting and ongoing conversations with the network. We have contracts with providers that offer increased reimbursement for providing after-hours care. To increase accessibility in Bowling Green, KY, for example, we negotiated a rate to allow Graves Gilbert Clinic to establish weekend hours for Enrollees.

APPOINTMENT AVAILABILITY AND WAIT TIMES

WellCare's network providers are contractually required to comply with appointment access standards. Providers who continuously fail to meet contract requirements, following active, supported remediation efforts, may be terminated. We have processes in place to monitor, and resolve any issues with, the timeliness of appointment access within our network. These include **Appointment Accessibility Surveys.** Our Network Integrity Team partners with an external vendor to conduct these telephone surveys to assess appointment availability, appointment wait time, and after-hours coverage. We re-audit any providers who fall short of standards and follow-up with a corrective plan as needed. Findings are shared with the Provider Relations Team to ensure appropriate follow-up and education is provided to providers failing to meet accessibility standards. We also review the aforementioned closed panel reports, out-of-network paid claims reports, as well as the Enrollee and Provider Satisfaction Surveys and the CAHPS® survey.

Our comprehensive monitoring program has shown results, with PCP and Specialty appointment availability through the 3rd quarter of 2019, far exceeding our goal of 90% compliance as shown in **Table C.18-1**. Telephonic surveys measured the ability to schedule appointments within 30 days for routine care and 48 hours for urgent care.

Table C.18-1 Telephonic Survey Results (through Q3 2019)

Provider Type	Urgent	Routine
PCPs	95.20%	98.00%
Pediatricians	98.41%	95.24%
Specialty Care Providers	86.42%	93.83%

h. Describe how the Vendor would respond to the network termination or loss of a large provider group or health system. Include information about the following at a minimum:

WellCare of Kentucky will comply with DMS' expectations and requirements as specified in Section 28.10, Termination of Network Providers of the Draft Medicaid Managed Care Contract and Appendices and confirmed by each requirement in **Attachment X Contract Compliance Matrix**, provided electronically.

Our network monitoring program ensures providers are meeting Enrollee needs and program requirements. When performance or compliance issues are identified, we make every effort to bring the provider into compliance with required standards and avoid a termination that would disrupt our network. In some cases, however, upholding Department and WellCare standards may mean that a provider must be terminated from the network. **While we have never lost a hospital or large provider group in our eight years as a Medicaid MCO in the Commonwealth**, in the event of a network termination or loss of a large provider group or health system, ensuring minimal disruption becomes is top priority and WellCare has a formal plan in place to execute on all critical processes. Our responsibility to our Enrollees, DMS and the public

requires that in all aspects of network management and retention we are prepared to take steps to maintain the integrity and long-term, high performance of our provider network.

i. Notification to the Department and Enrollees.

Swift and proactive communication of the loss or termination of a large provider group or health system to both DMS and Enrollees is a critical step in maintaining network integrity and access to care. In accordance with DMS requirements in these events, WellCare notifies DMS by email within three business days of the termination. WellCare notifies Enrollees who have received a service from the terminating provider within the previous six months by mail within 15 days of the action taken if it is the Enrollee's primary care physician and within 30 days for any other provider. If the terminated provider was a contracted PCP, the notice includes information about selecting or being auto-assigned to a new PCP and how WellCare will assist the Enrollee to transition care to the newly assigned PCP. If the provider was a specialist, the notice includes information about how WellCare will assist the Enrollee to transition care to another specialist.

Concurrently, WellCare of Kentucky will provide a written notice to the provider of the decision to terminate which includes the reason for the termination and the effective date of termination. The notice also informs the provider about their right to appeal the decision, and provides information on how to request an appeal.

In 2018, our Special Investigations Unit (SIU) investigated a Durable Medical Equipment (DME) provider in our South Carolina affiliate provider network that was discovered to be using pre-signed copies of blank physicians' orders for WellCare members to receive Back Orthotics. The investigation also revealed that employees of the DME provider were completing the physicians' orders and also making addendums to members Medical Records. The investigation identified an overpayment of over $10,000. SIU coordinated with WellCare's South Carolina's market associates recommending that this provider be terminated. The market and SIU discussed the findings in this case and the market initiated a 'For Cause Termination' of the provider. This case was also referred to the state Medicaid Fraud Control Unit for investigation. WellCare made arrangements to move members with ongoing needs from this provider (such as rental equipment) to other DME vendors in network so they would not be impacted by the termination.

ii. Transition activities and methods to ensure continuity of care.

The provider-Enrollee relationship is an important cornerstone of care, and the relationship is even more critical for vulnerable populations. In the event of a provider termination or the loss of large health system, our top priority is ensuring continuity of care and continuing access to services for Enrollees. WellCare of Kentucky takes pride in working with our community and Enrollee outreach teams to prepare them for Enrollee discussions and questions. In addition to the 24-hour availability of our Enrollee portal and our outbound calls, Enrollees may contact Enrollee services, care managers or our Enrollee outreach team for assistance with PCP assignment and transition of care when a provider is terminated. In the case of a hospital termination, we review open authorizations for Enrollees that extend past the termination date so we can insure there is no lapse in treatment and we can transition care to another in

network provider if appropriate. For our Enrollees with more complex care needs, our care coordinators call the Enrollee directly to help them during the transition and ensure that authorizations are transferred and that any other needs, such as DME or other life-sustaining equipment, are taken care of and coordinated between the Enrollee and new provider at this time.

We encourage and facilitate Enrollee choice and we believe our broad network is why more Enrollees in Kentucky choose WellCare of Kentucky than any other MCO. When Enrollees do not make a proactive choice, our auto-assignment process assigns Enrollees to a new PCP. This algorithm includes the capacity to use prior relationship, family assignment, language spoken, travel and distance standards, and PCP quality tiers when auto-assigning a PCP. Upon assignment or selection of a new PCP, Enrollees are mailed a new Enrollee ID card. Enrollees may change PCPs at any time by contacting Enrollee services or through the secure Enrollee portal.

For example, in 2015 and 2016, our Illinois affiliate identified quality and performance issues at an independent practice association (IPA) that had more than 8,000 assigned members. Under the leadership of our affiliate's medical director, the provider engagement team developed an improvement plan, holding numerous coaching sessions over a period of months to improve quality. At the point that it became apparent the IPA was unwilling or unable to work with our affiliate to remediate the identified performance issues, the decision was made to terminate the IPA’s contract and our affiliate worked to successfully transition members to another practice. The emphasis during the termination process was to guarantee a smooth and uneventful transition for the Enrollees by establishing a team to manage the transition of services. The team identified high quality providers who were eligible and willing to assume additional Enrollees, matched Enrollees with a geographically proximate, high quality and culturally appropriate provider to minimize travel time and ensure a seamless transition. Personal outreach was made by Provider Relations Representatives to confirm capacity and develop a detailed Enrollee reassignment plan.

Enrollees with open authorizations or in a current course of treatment were systematically identified so Care Coordinators could begin working on transition plans. These Enrollees were tiered by acuity levels and plans to proactively reach out to complex and medically fragile Enrollees were made. Notification letters were sent to those Enrollees assigned to a terminated PCP, in a course of treatment or with open authorizations. Prior to sending the letter, Enrollee Services associates were provided a list of the identified high quality PCPs to facilitate PCP choice when Enrollees called. Enrollees who did not make a proactive PCP choice were manually reassigned to high quality PCPs in accordance with an established reassignment plan. Because of the advance work of our affiliate, Enrollees were moved seamlessly with no disruption to their care.

iii. Analyses the Vendor will conduct to assess impact to network adequacy and access, and how the Vendor will address identified deficiencies.

During our eight-year partnership with DMS, WellCare of Kentucky has not lost any large provider groups. However in the event of a loss or termination of a large provider group, our Network Management team runs GeoAccess reports to determine the effect of the loss on

network adequacy and access standards. If we identify deficiencies in the network, we use a variety of methods to address the deficiencies, including:

- Reaching out to local providers in the affected area who are not contracted with WellCare of Kentucky to bring them into the network, working to remove any barriers to contracting which may have existed and in some case offering incentive-based contracts
- Using the Quest Analytics tool to see if there is a Medicare provider in the area that is not listed on the KY State file that we may approach to join our Medicaid network
- Sign single-case agreements with out-of-network providers in the area until such time as the deficiency is remediated

The team also reviews Enrollee requests, provider referrals, competitive data, and works with PR Representatives and their knowledge of the local provider community to identify and contract with providers in the area to ensure that we maintain network access and adequacy standards.
